B, K, and L); and (iv) the retirement of the currently-effective Reliability Standards COM-001-1.1, EOP-008-1 (Requirement R1), and COM-002-2 as listed in the Implementation Plans.

As required by Section 39.5(a)<sup>5</sup> of the Commission's regulations, this petition presents the technical basis and purpose of proposed Reliability Standards COM-001-2 and COM-002-4, a summary of the development history for each proposed Reliability Standard (Exhibits M and N), and a demonstration that the proposed Reliability Standards meet the criteria identified by the Commission in Order No. 672<sup>6</sup> (Exhibits F and G). The NERC Board of Trustees adopted proposed Reliability Standards COM-001-2 and COM-002-4 on November 7, 2012 and May 6, 2014 respectively.

## **I. EXECUTIVE SUMMARY**

Proposed Reliability Standards COM-001-2 and COM-002-4 replace and improve upon the currently effective COM-001-1.1 and COM-002-2 Reliability Standards to establish requirements for communication capabilities and communications protocols necessary to maintain reliability. Proposed COM-001-2 establishes a clear set of requirements for what communications capabilities various functional entities must maintain for reliable communications.

Proposed COM-002-4 requires entities to have or create a set of documented communications protocols that include certain minimum mandatory protocols. Proposed COM-002-4 improves communications surrounding the issuance of Operating Instructions by employing predefined communications protocols, thereby reducing the possibility of

---

<sup>5</sup> 18 C.F.R. § 39.5(a) (2014).

<sup>6</sup> The Commission specified in Order No. 672 certain general factors it would consider when assessing whether a particular Reliability Standard is just and reasonable. *See Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards*, Order No. 672, FERC Stats. & Regs. ¶ 31,204, at P 262, 321-37, *order on reh'g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006).

miscommunication that could lead to action or inaction harmful to the reliability of the Bulk Electric System. In addition to setting predefined communications protocols, the proposed Reliability Standard requires use of the same protocols regardless of the current operating condition. In other words, the same protocols apply during normal, alert, and Emergency operating conditions, negating the need to identify the current operating condition to determine if a different set of protocols applies. Proposed COM-002-4 also requires entities to reinforce the use of the documented communication protocols through training, assessing adherence by operating personnel to the documented communication protocols, and providing feedback to those operating personnel on their use of the protocols. During Emergencies, operating personnel must use the documented communication protocols for three-part communications without exception, since clear communication is essential to providing swift and coordinated response to events that are directly impacting the reliability of the Bulk Electric System.

Proposed Reliability Standards COM-001-2 and COM-002-4 address all of the pertinent Commission directives from Order No. 693 associated with the Commission's approval of COM-001-1.1 and COM-002-2.<sup>7</sup> The revisions made to proposed COM-002-4 also address Recommendation No. 26 from the final report issued by the U.S.-Canada Power System Outage Task Force to "[t]ighten communications protocols, especially for communications during alerts and emergencies."<sup>8</sup>

---

<sup>7</sup> *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, 72 Fed. Reg. 16416, FERC Stats. & Regs. ¶ 31,242, at PP 487-93, 502-04, 508, 512, 514-15, 531-32, 534, 535, and 540, *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

<sup>8</sup> U.S.-Canada Power System Outage Task Force, *Final Report on the August 14, 2003 Blackout in the United States and Canada: Causes and Recommendations*, April 2004 ("Blackout Report"). On August 15, 2003, President George W. Bush and then-Prime Minister Jean Chrétien directed the creation of a Joint U.S.-Canada Power System Outage Task Force to investigate the causes of the blackout and ways to reduce the possibility of future outages. The U.S.-Canada Task Force convened, investigated the causes of this blackout, and recommended actions to prevent future widespread outages.

Proposed COM-001-2 satisfies the Commission’s directives and improves upon Reliability Standard COM-001-1.1 by adding Generator Operators and Distribution Providers as applicable entities. Proposed COM-001-2 also identifies specific requirements for telecommunications capabilities for use in all operating conditions that reflect the roles of the applicable entities and their impact on Reliable Operation. Proposed COM-001-2 further includes adequate flexibility in its language for compliance with the Reliability Standard to permit the adoption of new technologies and cost-effective solutions.

Proposed COM-002-4 also satisfies the Commission’s directives and improves upon the previous Reliability Standard COM-002-2 by adding Distribution Providers as an applicable entity in the proposed Reliability Standard. Proposed COM-002-4 also meets the Commission’s directive to require “tightened communications protocols, especially for communications during alerts and emergencies” by establishing a baseline set of mandatory protocols and focusing certain requirements on zero-tolerance responsibility for failure to use or misuse of the protocols for three-part communications during Emergency conditions. Under proposed COM-002-4, all applicable entities must use the same set of protocols during all operating conditions, establishing communication uniformity as much as practical on a continent-wide basis.

For the reasons discussed in this Petition, NERC respectfully requests that the Commission approve the proposed Reliability Standards as just, reasonable, not unduly discriminatory or preferential, and in the public interest.

## **III. BACKGROUND**

### **A. Regulatory Framework**

By enacting the Energy Policy Act of 2005,<sup>10</sup> Congress entrusted the Commission with the duties of approving and enforcing rules to ensure the reliability of the Nation’s Bulk-Power System, and with the duties of certifying an ERO that would be charged with developing and enforcing mandatory Reliability Standards, subject to Commission approval. Section 215(b)(1)<sup>11</sup> of the FPA states that all users, owners, and operators of the Bulk-Power System in the United

---

<sup>9</sup> Persons to be included on the Commission’s service list are identified by an asterisk. NERC respectfully requests a waiver of Rule 203 of the Commission’s regulations, 18 C.F.R. § 385.203 (2014), to allow the inclusion of more than two persons on the service list in this proceeding.

<sup>10</sup> 16 U.S.C. § 824o (2012).

<sup>11</sup> *Id.* § 824(b)(1).

States will be subject to Commission-approved Reliability Standards. Section 215(d)(5)<sup>12</sup> of the FPA authorizes the Commission to order the ERO to submit a new or modified Reliability Standard. Section 39.5(a)<sup>13</sup> of the Commission’s regulations requires the ERO to file with the Commission for its approval each Reliability Standard that the ERO proposes should become mandatory and enforceable in the United States, and each modification to a Reliability Standard that the ERO proposes should be made effective.

The Commission has the regulatory responsibility to approve Reliability Standards that protect the reliability of the Bulk-Power System and to ensure that such Reliability Standards are just, reasonable, not unduly discriminatory or preferential, and in the public interest. Pursuant to Section 215(d)(2) of the FPA<sup>14</sup> and Section 39.5(c)<sup>15</sup> of the Commission’s regulations, the Commission will give due weight to the technical expertise of the ERO with respect to the content of a Reliability Standard.

#### **B. NERC Reliability Standards Development Procedure**

The proposed Reliability Standards were developed in an open and fair manner and in accordance with the Commission-approved Reliability Standard development process.<sup>16</sup> NERC develops Reliability Standards in accordance with Section 300 (Reliability Standards

---

<sup>12</sup> *Id.* § 824o(d)(5).

<sup>13</sup> 18 C.F.R. § 39.5(a).

<sup>14</sup> 16 U.S.C. § 824o(d)(2).

<sup>15</sup> 18 C.F.R. § 39.5(c)(1).

<sup>16</sup> *Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards*, Order No. 672 at P 334, FERC Stats. & Regs. ¶ 31,204, *order on reh’g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006) (“Further, in considering whether a proposed Reliability Standard meets the legal standard of review, we will entertain comments about whether the ERO implemented its Commission-approved Reliability Standard development process for the development of the particular proposed Reliability Standard in a proper manner, especially whether the process was open and fair. However, we caution that we will not be sympathetic to arguments by interested parties that choose, for whatever reason, not to participate in the ERO’s Reliability Standard development process if it is conducted in good faith in accordance with the procedures approved by FERC.”).

Development) of its Rules of Procedure and the NERC Standard Processes Manual.<sup>17</sup> In its order certifying NERC as the Commission's Electric Reliability Organization, the Commission found that NERC's proposed rules provide for reasonable notice and opportunity for public comment, due process, openness, and a balance of interests in developing Reliability Standards<sup>18</sup> and thus satisfies certain of the criteria for approving Reliability Standards.<sup>19</sup> The development process is open to any person or entity with a legitimate interest in the reliability of the Bulk-Power System. NERC considers the comments of all stakeholders, and a vote of stakeholders and the NERC Board of Trustees is required to approve a Reliability Standard before the Reliability Standard is submitted to the Commission for approval.

#### **IV. Reliability Standard Version History and Commission Directives**

This section presents the version history of each Reliability Standard beginning with the version 0 Reliability Standards and the associated Commission directives from Order No. 693. NERC has also included relevant discussion from the Order No. 693 proceeding that has relevance to both the directives and the standards development work of the standard drafting teams to revise the COM-001 and COM-002 Reliability Standards. Discussion of the proposed Reliability Standards and how the proposed Reliability Standards satisfy the Commission directives is included below in section V of this Petition.

##### **A. History of COM-001-1 and Associated Commission Directives**

NERC originally implemented Reliability Standard COM-001-0 (Telecommunications) on April 1, 2005.<sup>20</sup> The version 0 Reliability Standard sought to ensure coordinated

The NERC *Standard Processes Manual* is available at [http://www.nerc.com/comm/SC/Documents/Appendix\\_3A\\_StandardsProcessesManual.pdf](http://www.nerc.com/comm/SC/Documents/Appendix_3A_StandardsProcessesManual.pdf).

<sup>18</sup> 116 FERC ¶ 61,062 at P 250.

<sup>19</sup> Order No. 672 at PP 268, 270.

<sup>20</sup> See NERC Apr. 4, 2006 *Petition for Approval of Reliability Standards*, Docket No. RM06-16-000 at 33.

telecommunications among operating entities and established general telecommunications requirements for operating entities, including equipment testing and coordination. COM-001-0 also: (i) established English as the common language between and among operating personnel; and (ii) set the policy for using the NERCnet telecommunications system.<sup>21</sup> COM-001-0 applied to Transmission Operators, Balancing Authorities, Reliability Coordinators and NERCNet user organizations.<sup>22</sup> NERC submitted COM-001-0 in its original petition for approval of its proposed Reliability Standards.<sup>23</sup> NERC subsequently submitted a petition<sup>24</sup> to include a revised version 1 of the COM-001 Reliability Standard to add missing compliance elements.<sup>25</sup>

On May 11, 2006, Commission staff issued its *Staff Preliminary Assessment of the North American Electric Reliability Council's Proposed Mandatory Reliability Standards* ("Preliminary Assessment").<sup>26</sup> In the Preliminary Assessment, Commission staff made the following summary comments regarding COM-001-0:

- COM-001-0 does not contain specific or minimum adequacy, redundancy and diverse routing requirements for telecommunications facilities;
- the applicability section does not specify that Generator Operators are subject to telecommunications requirements; and
- COM-001-0 contains no Compliance Measures or Levels of Non-Compliance.

---

<sup>21</sup> NERCNet is a Wide Area Network using Frame Relay as its communications medium. It supports the Interregional Security Network, Interchange Distribution Calculator and the Reliability Coordinator Information System. NERCnet has been used by NERC since 1997 to allow Reliability Coordinators, Transmission Operators, and Balancing Authorities and NERCnet user organizations to share Real-time operating reliability data.

<sup>22</sup> "NERCnet User Organizations" are defined in COM-001-1.1, Attachment 1 as "[us]ers of NERCnet who have received authorization from NERC to access the NERC network are considered users of NERCnet resources. To be granted access, users shall complete a User Application Form and submit this form to the NERC Telecommunications Manager."

<sup>23</sup> See NERC Apr. 4, 2006 *Petition for Approval of Reliability Standards*, Docket No. RM06-16-000.

<sup>24</sup> See NERC Nov. 16, 2006 *Petition for Approval of Reliability Standards*, Docket Nos. RM06-16-000 and RM07-03-000.

<sup>25</sup> The Commission approved an errata change to COM-001-1 by delegated letter order on May 13, 2009. As a result, the currently effective and enforceable version of COM-001 is COM-001-1.1. See *N. Am. Elec. Reliability Corp.*, Docket No. RD09-2-000 (2009) (delegated letter order).

<sup>26</sup> See *Staff Preliminary Assessment of the North American Electric Reliability Council's Proposed Mandatory Reliability Standards*, May 11, 2006, Docket No. RM06-16-000.

Commission staff explained in the Preliminary Assessment that COM-001 contains a general requirement to provide “adequate and reliable” telecommunications facilities for all applicable operating entities. Commission staff concluded that COM-001-0 does not contain specific or minimum requirements on adequacy, redundancy and diverse routing of the telecommunications facilities necessary to ensure the exchange of operating information, both internally and among operating entities. Staff explained that leaving the specification of what constitutes adequate and reliable telecommunication facilities to operating entities could lead to claims by operating entities that they comply with the Reliability Standard when in fact they still may not have “adequate” telecommunications facilities for use during real-time normal and Emergency operations.<sup>27</sup> Further, Commission staff noted that while COM-001 has a redundancy and diverse routing requirement, it is effective only “where applicable,” and no specification is provided regarding the circumstances where the requirement actually is applicable.

The Commission approved COM-001-1 in Order No. 693, but the Commission issued certain directives to improve the Reliability Standard including the additional of certain entities to the applicability of the standard and identification of specific requirements for telecommunications facilities.<sup>28</sup>

#### **B. History of COM-002-2 and Associated Directives**

Reliability Standard COM-002-0 was implemented on April 1, 2005. The stated purpose of the Reliability Standard was to:

To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications and that these communications capabilities are staffed and available for addressing a real-time emergency condition. To ensure communications by operating personnel are effective.

---

<sup>27</sup> *Id.* at 42-43.

<sup>28</sup> Order No. 693 at PP 487-93, 502-04, 508.

COM-002-0 applied to Reliability Coordinators, Balancing Authorities, Transmission Operators, and Generator Operators. Reliability Standard COM-002-1 was developed in November 2006 to replace COM-002-0. COM-002-1 added additional detail on the communications requirements between and among operating entities and included specific situations that require communications with other operating entities. COM-002-1 contained two Requirements. Requirement R1 required each Transmission Operator, Balancing Authority, and Generator Operator to have communications (voice and data links) with appropriate Reliability Coordinators, Balancing Authorities, and Transmission Operators. The communications had to be staffed and available for addressing a real-time emergency condition. In addition, each Balancing Authority and Transmission Operator had to notify its Reliability Coordinator and affected Balancing Authorities and Transmission Operators “of any condition that could threaten the reliability of its area or when firm load shedding is anticipated.” Requirement R2 required each Reliability Coordinator, Transmission Operator, and Balancing Authority to use three-part communications. Each entity was required to issue directives in a clear, concise, and definitive manner; ensure the recipient of the directive repeats the information back correctly; and acknowledge the response as correct or repeat the original statement to resolve any misunderstandings.<sup>29</sup>

NERC submitted COM-002-1 in its original petition for approval of its proposed Reliability Standards.<sup>30</sup> In its subsequent November 15, 2006 petition, NERC submitted COM-002-2, which supersedes the version 1 Reliability Standard. COM-002-2 adds Measures and Levels of Non-Compliance to the version 1 Reliability Standard.

---

<sup>29</sup> Of particular note, the Reliability Standard did not place any obligation on the receiver of a communication. The responsibility for ensuring proper understanding was placed on the issuer.

<sup>30</sup> See NERC Apr. 4, 2006 *Petition for Approval of Reliability Standards*, Docket No. RM06-16-000 at 32-33.

The Preliminary Assessment issued by FERC staff also identified shortcomings in the COM-002-2 Reliability Standard. Commission staff stated that the standard did not contain a requirement that appropriate operating actions be assessed and approved first and then implemented in normal and emergency operating conditions in which reliability could be impacted beyond a local area. Commission staff noted in its explanation “[e]ffective communications with proper communications protocols among the operating entities are essential for maintaining reliable system operations.”

Commission staff’s comments relied heavily on recommendations made in the Blackout Report. The Blackout Report included 46 specific recommendations to address the primary causes of the blackout to help prevent or minimize the scale of future blackouts. The Blackout Report also identified eight factors that were common to some of the eight major outage occurrences from the 1965 Northeast Blackout through the 2003 blackout, including “ineffective communications.”<sup>31</sup> In particular, Recommendation No. 26 reads: “[t]ighten communications protocols, especially for communications during alerts and emergencies. Upgrade communication system hardware where appropriate.” Recommendation No. 26 continues:

NERC should work with reliability coordinators and control area operators to improve the effectiveness of internal and external communications during alerts, emergencies, or other critical situations, and ensure that all key parties, including state and local officials, receive timely and accurate information. NERC should task the regional councils to work together to develop communications protocols by December 31, 2004, and to assess and report on the adequacy of emergency communications systems within their regions against the protocols by that date.<sup>32</sup>

The Blackout Report explained that on August 14, 2003, “reliability coordinator and control area communications regarding conditions in northeastern Ohio were in some cases ineffective,

---

<sup>31</sup> Blackout Report at 107.

<sup>32</sup> *Id.* at 141, 161.

unprofessional, and confusing.” The Blackout Report concluded that ineffective communications contributed to a lack of situational awareness and precluded effective actions to prevent the cascade. The Blackout Report also stated “[c]onsistent application of effective communications protocols, particularly during alerts and emergencies, is essential to reliability.”<sup>33</sup>

In its Preliminary Assessment, Commission staff interpreted the Blackout Report recommendation’s reference to “effective communications” with “tightened communications protocols” among operating entities to include two key components: (i) effective communications that are delivered in clear language via pre-established communications paths among pre-identified operating entities, and (ii) communications protocols which clearly identify that any operating actions with reliability impact beyond a local area or beyond a Reliability Coordinator’s area must be communicated to the appropriate Reliability Coordinator for assessment and approval prior to their implementation to ensure reliability of the interconnected systems.<sup>34</sup> Commission staff concludes that the requirements in COM-002-1 fulfill the “effective communications” component of the Blackout Report recommendation, but do not meet the call for “tightened communications protocols.” Specifically, the Commission states that COM-002-1, or other Reliability Standards, do not contain a requirement that the appropriate operating actions in normal and emergency operating conditions that may have reliability impact beyond a local area or Reliability Coordinator’s area must be assessed and approved by the Reliability Coordinator, before implementation by the operating entities.<sup>35</sup>

In its comments to the Preliminary Assessment, NERC stated that it did not believe that “tightened communications protocols” should include the requirement that “the appropriate

---

<sup>33</sup> *Id.* at 161.

<sup>34</sup> Preliminary Assessment at 43-44.

<sup>35</sup> *Id.* at 44.

operating actions...*must be assessed and approved* by the reliability coordinator, before being implemented by the operating entities.”<sup>36</sup> NERC further argued that other NERC standards (e.g., EOP-001 and TOP-001) require the Transmission Operator, Balancing Authority, and Reliability Coordinator to coordinate their emergency operating plans and communicate actions with one another. However, NERC did state, without elaboration, that it “agrees with the need for development of additional standards addressing consistent communications protocols among personnel responsible for the reliability of the Bulk-Power System.”

The Commission ultimately approved COM-002-2 in Order No. 693, but the Commission issued certain directives to improve the Reliability Standard including adding Distribution Providers as an applicable entity in the Reliability Standard and requiring NERC to create tightened communications protocols, especially for communications during alerts and emergencies.<sup>37</sup> Section V includes a summary of these directives along with how the proposed Reliability Standard satisfies the directives.

### **C. Revisions to COM Reliability Standards**

#### **1. History of Project 2006-06**

Project 2006-06 – Reliability Coordination was established to ensure that reliability-related Requirements that are applicable to the Reliability Coordinator are clear, measurable, unique and enforceable, and to ensure that this set of Requirements is sufficient to maintain

---

<sup>36</sup> NERC Jun. 26, 2006 *Comments to Preliminary Assessment*, Docket No. RM06-16-000 at 120 (quoting Preliminary Assessment) (emphasis added).

<sup>37</sup> In addition, the Commission suggests NERC consider certain comments in the Standards Development Process. The Commission asks NERC to consider the American Public Power Association’s (“APPA”) comments regarding the Measures and Levels of Non-Compliance when revising the Reliability Standard. APPA notes that the Levels of Non-Compliance for COM-002-2 are inadequate in two respects: (1) reliability coordinators are not included in any Level of Non-Compliance and (2) the Levels of Non-Compliance for transmission operators and balancing authorities in Compliance D.2 do not reference Requirements R1 and R2. Order No. 693 at P 533. The Commission also suggest that NERC consider comments by Santa Clara, FirstEnergy and Six Cities regarding specific new improvements to the Reliability Standards. Order No. 693 at 536-39.

reliability of the Bulk Electric System. Revisions to the COM-001 and COM-002 Reliability Standards were included within the project scope in order to modify the currently-effective Reliability Standards, COM-001-1.1 and COM-002-2, to address the applicable directives in Order No. 693, while adequately addressing the communication needs of Reliability Coordinators. The project resulted in two proposed Reliability Standards, COM-001-2 and COM-002-3.

## 2. History of Project 2007-02

The purpose of Project 2007-02 – Operating Personnel Communications Protocols was to create a new Reliability Standard that requires real time system operators to use standardized communication protocols during normal and emergency operations to improve situational awareness and shorten response time.<sup>38</sup> The Project drafted Reliability Standard COM-003-1 to accomplish this goal. The Project ultimately resulted in the combination of COM-002-3 from Project 2006-06 and draft COM-003-1 into a single proposed Reliability Standard, COM-002-4.

## V. JUSTIFICATION FOR APPROVAL

As discussed in Exhibits F and G and below, the proposed Reliability Standards, COM-001-2 and COM-002-4, satisfy the Commission’s criteria in Order No. 672 and are just, reasonable, not unduly discriminatory or preferential, and in the public interest. The following section separately provides: (i) the purpose of the proposed Reliability Standards; (ii) a description of the requirements in each of the proposed Reliability Standards, the technical basis supporting the requirements, and a description of proposed defined terms; (iii) a discussion of

---

<sup>38</sup> See Standard Authorization Request, available at [http://www.nerc.com/pa/Stand/Project%20200702%20Operating%20Personnel%20Communications/SAR\\_Project\\_2007-02\\_Comm\\_Protocols\\_1st\\_Posting\\_15Mar07.pdf](http://www.nerc.com/pa/Stand/Project%20200702%20Operating%20Personnel%20Communications/SAR_Project_2007-02_Comm_Protocols_1st_Posting_15Mar07.pdf).

how the proposed Reliability Standards satisfy the outstanding Commission directives from Order No. 693; and (iv) a discussion of the enforceability of the proposed Reliability Standards.

**A. Proposed Reliability Standard COM-001-2**

1. Purpose of Proposed Reliability Standard

Proposed Reliability Standard COM-001-2 revises the currently effective COM-001-1.1 Reliability Standard. The purpose of proposed Reliability Standard COM-001-2 is to establish requirements for Interpersonal Communication capabilities necessary to maintain reliability. Proposed COM-001-2 applies to Reliability Coordinators, Balancing Authorities, Transmission Operators, Generator Operators, and Distribution Providers.

2. Requirements, Technical Basis and Defined Terms

The proposed Reliability Standard includes eleven requirements and two new defined terms, “Interpersonal Communication” and “Alternative Interpersonal Communication,” which collectively provide a comprehensive approach to establishing communications capabilities necessary to maintain reliability. The defined terms used in the requirements of proposed COM-001-2 are:

**Interpersonal Communication** – Any medium that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication** – Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.

These definitions provide clarity that an entity’s communication capability must be redundant and that each of the capabilities must not utilize the same medium. The new definitions, therefore, improve upon the language used in the current COM-001-1.1 Reliability Standard, which states “[e]ach Reliability Coordinator, Transmission Operator and Balancing

Authority shall provide *adequate and reliable* telecommunications facilities for the exchange of Interconnection and operating information.” COM-001-1.1, Requirement R1, Part R1.4 states that “[w]here applicable, these facilities shall be redundant and diversely routed.” Use of the defined terms eliminates the need to use the ambiguous phrases “adequate and reliable” and “redundant and diversely routed, which were identified in the Preliminary Assessment as potentially creating ambiguity in the Reliability Standard.

Requirements R1-R6 address the Interpersonal Communication capability and Alternative Interpersonal Communication capability of the Reliability Coordinator, Transmission Operator, and Balancing Authority. Each functional entity has a requirement to have an Interpersonal Communication capability and to designate an Alternative Interpersonal Communication capability with certain other functional entities as follows:

Requirements R1 and R2 require the Reliability Coordinator to have Interpersonal Communication capability (R1) and designate Alternative Interpersonal Communication capability (R2) with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and each adjacent Reliability Coordinator within the same Interconnection.

Requirement R3 requires each Transmission Operator to have Interpersonal Communication capability with: (i) its Reliability Coordinator; (ii) each Balancing Authority within its Transmission Operator Area; (iii) each Distribution Provider within its Transmission Operator Area; (iv) each Generator Operator within its Transmission Operator Area; (v) each adjacent Transmission Operator synchronously connected; and (vi) each adjacent Transmission Operator asynchronously connected.

Requirement R4 requires each Transmission Operator to designate Alternative Interpersonal Communication capability with: (i) its Reliability Coordinator; (ii) each Balancing

Authority within its Transmission Operator Area; (iii) each adjacent Transmission Operator synchronously connected; and (iv) each adjacent Transmission Operator asynchronously connected.

Requirement R5 requires each Balancing Authority to have Interpersonal Communication capability with: (i) its Reliability Coordinator; (ii) each Transmission Operator that operates Facilities within its Balancing Authority Area; (iv) each Distribution Provider within its Balancing Authority Area; (v) each Generator Operator that operates Facilities within its Balancing Authority Area; and (vi) each Adjacent Balancing Authority.

Requirement R6 requires each Balancing Authority to designate Alternative Interpersonal Communication capability with: (i) its Reliability Coordinator; (ii) each Transmission Operator that operates Facilities within its Balancing Authority Area; and (iii) each Adjacent Balancing Authority.

Requirements R7 and R8 require each Distribution Provider and Generator Operator, respectively, to have Interpersonal Communication capability with: (i) its Balancing Authority; and (ii) its Transmission Operator.

Requirement R9 requires the Reliability Coordinator, Transmission Operator, and Balancing Authority to test its Alternative Interpersonal Communication capability, initiate repair, or designate a replacement alternative communication capability within two hours following the test.

Requirement R10 requires the same entities to notify the entities identified in Requirements R1, R3, and R5 of the detection of a failure of its Interpersonal Communication capability that lasts 30 minutes or longer. The notification must occur within 60 minutes of the detection of the failure. The standard drafting team determined that 60 minutes was a reasonable

timeframe for completing the notification. Some commenters in the standards development process expressed concern in meeting the 60-minute notification timeframe upon the loss of their Interpersonal Communication capability. However, the standard drafting team responded that the notification requirement applies to the Balancing Authority, Reliability Coordinator and Transmission Operator, which are required to have an Alternative Interpersonal Communication capability, and should have the ability to accomplish the required notification.

Finally, Requirement R11 requires the Distribution Provider and Generator Operator to consult with its Balancing Authority and Transmission Operator, upon detecting a failure of its Interpersonal Communication capability, to determine a mutually agreeable action for the restoration of its Interpersonal Communication capability. This requirement provides a means for the Distribution Provider and Generator Operator to have an understanding with the Balancing Authority and Transmission Operator of how the restoration of the Interpersonal Communication capability will occur, providing the necessary awareness to all of the status of the Interpersonal Communication capability.

### 3. Improvements Reflected in Proposed COM-001-2

Proposed COM-001-2 improves the currently-effective Reliability Standard by: (1) eliminating terms that do not adequately specify the desired actions that Reliability Coordinators, Balancing Authorities, and Transmission Operators are expected to take in relation to their telecommunication facilities; (2) clearly identifying the need for applicable entities to be capable of Interpersonal Communication and Alternative Interpersonal Communication, as those terms are defined and proposed for approval; (3) not requiring specific technology or systems to be utilized; and (4) including the Distribution Provider and Generator Operator as covered functional entities.

First, proposed COM-001-2 eliminates ambiguous terms used in COM-001-1 that do not adequately specify the desired actions that Reliability Coordinators, Balancing Authorities, and Transmission Operators are expected to take with respect to each's telecommunication facilities. For example, Requirement R1 of COM-001-1 includes the phrase "shall provide adequate and reliable telecommunications facilities." Entities explained during the Standards Development Process that "adequate and reliable" could lend itself to multiple interpretations. The Commission also raised concern over this phrase in the Preliminary Assessment prior to the issuance of Order No. 693. Rather than using the term "adequate," the proposed standard now specifies the communications capability requirements between entities by function and condition in Requirements R1 through R8. The term "reliable" is replaced by a specific requirement for testing (Requirement R9), along with two new requirements for notification of a failure of an applicable entity's communication capability (Requirements R10 and R11). Further, use of two new proposed defined terms – "Interpersonal Communication" and "Alternative Interpersonal Communication" – resolves the ambiguity caused by the phrases "adequate and reliable" and "redundant and diversely routed" communications in COM-001-1. COM-001-2 instead requires the applicable entities to have a clearly defined Interpersonal Communication capability and an Alternative Interpersonal Communication capability, in addition to specifying, under what conditions, those entities that must have the capability.

Second, proposed COM-001-2 clearly identifies the need to be capable of both Interpersonal Communication and Alternative Interpersonal Communication. By clearly identifying the capability needs, the proposed Reliability Standard eliminates the inferred need for redundant, emergency telecommunication facilities. In contrast, Requirement R2 of COM-001-1, states "[s]pecial attention shall be given to emergency telecommunications facilities and

equipment not used for routine communications.” While this language contains an inference that some equipment is maintained for uses other than routine communications, the requirement is not clear about what capabilities must be maintained. The new term “Alternative Interpersonal Communication” clarifies this language to explicitly require Interpersonal Communication capabilities that does not utilize the same infrastructure as the communications infrastructure for day-to-day operations.

Third, the use of word “capability” in the proposed Reliability Standard ensures the standard is technologically agnostic, allowing for future changes in technology and advances in communication to be employed without requiring a change to the Reliability Standard.

Lastly, the proposed Reliability Standard expands the applicability of the Reliability Standard to cover Distribution Providers and Generator Operators. These functional entities are now required to have an Interpersonal Communication capability with the listed entities in Requirements R7 and R8, respectively. This is directly responsive to directives in Order No. 693, as discussed below.

#### 4. Proposed COM-001-2 Satisfies the Commission’s Directives

In Order No. 693, the Commission issued three directives to NERC to modify certain aspects of the currently effective COM-001-1 Reliability Standard. Each is explained in turn, along with how the proposed Reliability Standard satisfies the directive.

The Commission reaffirmed its position taken in the *Notice of Proposed Rulemaking* that “Generator Operators” and “Distribution Providers” should be included as applicable entities in COM-001-1 to ensure there is no reliability gap during normal and emergency operations.<sup>39</sup> The Commission argued that during a blackstart when normal communications may be disrupted, it is

---

<sup>39</sup> *Id.* at PP 487-93.

essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators. In developing requirements for these newly applicable entities, the Commission noted that the revised Reliability Standard could establish an appropriate range of requirements for telecommunication facilities that reflect their respective roles on Reliable Operation of the Bulk-Power System.

The Commission also issued additional directives to revise COM-001-1<sup>40</sup> to: (i) identify specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation; and (ii) include adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions.<sup>41</sup>

Proposed COM-001-2 meets all three of the Commission's directives issued in Order No. 693. First, NERC has included "Generator Operators" and "Distribution Providers" as covered applicable entities pursuant to the Commission's directive.

Second, proposed COM-001-2 meets the Commission's directive to "identify specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation." The proposed Reliability Standard sets requirements to have "Interpersonal Communication" capability and "Alternative Interpersonal Communication" capability, where noted in the requirements, without limitation on the operating condition for each of the applicable entities (*see* Requirements R1-R8). By setting parameters for the types of communications capabilities and setting requirements for maintaining capabilities between certain functional entities, the proposed

---

<sup>40</sup> *Id.* at PP 502-04.

<sup>41</sup> *Id.* at P 508 (summarizing Commission directives on COM-001-1).

Reliability Standard sets a clear baseline for communications capability during all operating conditions. In addition, the proposed Reliability Standard includes requirements for notifying other functional entities of the loss or failure of certain communications capabilities, further ensuring that entities are aware of the communications capabilities of other functional entities.

Lastly, the proposed Reliability Standard uses terminology that has sufficient flexibility for entities to adopt new technologies and cost-effective solutions. The requirements purposely use the word “capability” in a general sense in order to remain agnostic on the specific technology an entity must use, allowing opportunity for the adoption of new technology and cost-effective solutions that may become available for use in the future.

5. Revisions to Reliability Standard COM-001-1.1

Exhibit C to this petition contains an “Implementation Plan and Mapping Document” for proposed COM-001-2 that describes the associated retirement of currently effective COM-001-1.1 and provides a detailed mapping of how the requirements in COM-001-1.1 translate into proposed COM-001-2. In summary, proposed COM-001-2 will retire all Requirements of COM-001-1.1 upon proposed COM-001-2 becoming effective with the exception of Requirement R4. Requirement R4 of COM-001-1.1 will be retired by proposed Reliability Standard COM-002-4 because this Requirement was referred to Project 2007-02 for inclusion in COM-003-1, which addressed communications protocols. Of particular note in the Implementation Plan, the standard drafting team concluded that Requirement R5 in COM-001-1.1 is redundant with EOP-008-1, Requirement R1 and, therefore, has not been carried forward in proposed COM-001-2. As a result, NERC proposes EOP-008-1, Requirement R1 for retirement.

Additionally, Requirement R6 of COM-001-1.1 is also being proposed for retirement, which requires adherence to certain policies and requirements when using NERCnet.<sup>42</sup> Specification of the types of tools to be employed and requirements for interfacing with these tools are best handled by NERC internal policies. This approach preserves NERC's ability to be responsive to new technologies and improvements in security of the tool without having to modify a Reliability Standard to do so. The development of tools should support registered entities in meeting the intent of a Reliability Standard without creating a burden on acquisition of specific technology or tools. NERC is currently transitioning NERCnet to industry. Industry will take on the network infrastructure upgrade and future maintenance and enhancements. This transition will be complete prior to the effective date of COM-001-2. Policies and requirements for use of the new tool will be addressed internally by NERC as part of the new program.

**B. Proposed Reliability Standard COM-002-4**

1. Purpose of Proposed Reliability Standard

Proposed Reliability Standard COM-002-4 revises the currently effective COM-002-2 Reliability Standard and the Board-adopted COM-002-3 Reliability Standard.<sup>43</sup> The purpose of proposed Reliability Standard COM-002-4 is to improve communications for the issuance of Operating Instructions with predefined communications protocols to reduce the possibility of miscommunication that could lead to action or inaction harmful to the reliability of the Bulk Electric System. The proposed Reliability Standard combines proposed Reliability Standard

---

<sup>42</sup> See *infra* FN 21.

<sup>43</sup> The Board-adopted COM-002-3 Reliability Standard is proposed for retirement in the Implementation Plan because the proposed Reliability Standard has been combined with proposed COM-003-1 to create proposed COM-002-4. COM-002-3 has not been submitted to the Commission for approval, therefore, the currently effective version of COM-002 in the United States is COM-002-2.

COM-002-3 and the former draft COM-003-1 into a single standard that addresses communications protocols for operating personnel in Emergency and non-emergency conditions.

## 2. Standard Development History

The standard drafting team conducted eight comment and ballot periods in arriving at the final industry-approved language in the proposed COM-002-4 Reliability Standard. Over that time, the standard drafting team responded to comments and revised the draft Reliability Standard based on the consensus view of the standard drafting team following each consideration of comments. In addition to the required steps outlined in the Standards Development Process, the standard drafting team conducted stakeholder outreach in order to arrive at a draft Reliability Standard that meets the stated purpose of the Reliability Standard, addresses the Commission's directives, and represents consensus in industry, including:

- a full-day “Communications in Operations” technical conference held February 14-15, 2013 to gather industry input on a consensus communications standard approach;
- a survey distributed to a sample of industry experts by the Director of Standards Development and the Standards Committee Chair requesting feedback on the draft standard in preparation for the eighth additional ballot; and
- consultation on the use of the term “Reliability Directive” in the COM-002-4 standard with the Project 2007-03 Real-time Transmission Operations standard drafting team and the Project 2006-06 Reliability Coordination standard drafting team.

In addition to the outreach above, the standard drafting team received input from the NERC Board of Trustees on two occasions. On August 15, the Board adopted a resolution,<sup>44</sup> which requested input from NERC's Reliability Issues Steering Committee (“RISC”), the Independent Experts Review Panel, and NERC management to inform the Board and provide

---

<sup>44</sup> See *Draft Minutes of the Board of Trustees*, August 15, 2013 at 3-4, available at <http://www.nerc.com/gov/bot/Agenda%20highlights%20and%20Minutes%202013/BOT0813m-draft-complete.pdf>.

input into the standard development process. These inputs were provided to the standard drafting team for its consideration and to the Operating Committee, with a request that the Operating Committee provide its input to as well. Responses from RISC, the Independent Experts Review Panel, NERC management, and the Operating Committee are included in Exhibit O.

At its November 7, 2013 meeting, the Board of Trustees adopted a resolution for the further development of the COM-003-1 Reliability Standard.<sup>45</sup> The resolution provided additional recommendations to the standard drafting team on the development of a subsequent revised draft.

### 3. Requirements, Technical Basis, and Defined Terms

Following posting six of the proposed COM-002-4 Reliability Standard, NERC staff prepared a “strawman” draft that combined the COM-002-3 and draft COM-003-1 Reliability Standards. The “strawman” provided a starting point for the standard drafting team to edit and adjust as it deemed appropriate based on its own expertise and from the feedback industry provided during the Standards Development Process.

In proposed COM-002-4, the same protocols are required to be used in connection with the issuance of Operating Instructions for *all* operating conditions – *i.e.*, non-emergency and Emergency communications. However, the proposed Reliability Standard employs the phrase “Operating Instruction during an Emergency” in certain Requirements (R5, R6, R7) to provide a demarcation for what is subject to a zero-tolerance compliance approach and what is not. This separation in the requirement structure is necessary to draft Violation Severity Levels to match

---

<sup>45</sup> See Resolution for Agenda Item 8.i: Operating Personnel Communication Protocols, Nov. 7, 2013, available at <http://www.nerc.com/gov/bot/Agenda%20highlights%20and%20Mintues%202013/Board%20COM%20Resolution%2011.7.13%20v1%20AS%20APPROVED%20BY%20BOARD.pdf>.

each compliance approach described in the Board’s resolution. Where “Operating Instruction during an Emergency” is not used, an entity will be assessed under a compliance approach that focuses on whether an entity meets the initial training Requirement (either R2 or R3) and whether an entity performed the assessment and took corrective actions according to Requirement R4.

An entity should expect its operating personnel that issue and receive Operating Instructions to use the entity’s documented communication protocols for the issuance and receipt of all Operating Instructions. An entity reinforces its use of the documented communication protocols through training, assessing adherence by its operating personnel to the documented communication protocols, and providing feedback to those operating personnel on their use of the protocols. During Emergencies, operating personnel must use the documented communication protocols for three-part communications without exception, since clear communication is essential to providing swift and coordinated response to events that are directly impacting the reliability of the Bulk Electric System.

**a) Definition of “Operating Instruction”**

The current draft of COM-002-4 no longer includes the term “Reliability Directive,” which was included in previous postings as a subset within the definition of “Operating Instruction.”<sup>46</sup> The proposed definition of “Operating Instruction” reads as follows:

---

<sup>46</sup> On November 21, 2013, the Commission issued a Notice of Proposed Rulemaking, which proposes to remand certain proposed TOP and IRO standards. *Monitoring System Conditions- Transmission Operations Reliability Standard Transmission Operations Reliability Standards Interconnection Reliability Operations and Coordination Reliability Standards*, NOPR, 145 FERC ¶ 61,158 (2013). The TOP/IRO NOPR is available at: [http://www.nerc.com/FilingsOrders/us/FERCOrdersRules/NOPR\\_TOP\\_IRO\\_RM13-12\\_RM13-14\\_RM13-15\\_20131121.pdf](http://www.nerc.com/FilingsOrders/us/FERCOrdersRules/NOPR_TOP_IRO_RM13-12_RM13-14_RM13-15_20131121.pdf). The proposed remand includes the defined term “Reliability Directive.” FERC’s proposal to remand the term “Reliability Directive” raised possible complications with the draft COM-002-4 Reliability Standard, which used the proposed definition. The standard drafting team consulted on the use of the term “Reliability Directive” in the COM-002-4 Reliability Standard with the Project 2007-03 Real-time Transmission Operations and the Project 2006-06 Reliability Coordination Standard Drafting Teams to ask whether they believed

A command by operating personnel responsible for the Real-time operation of the interconnected Bulk Electric System to change or preserve the state, status, output, or input of an Element of the Bulk Electric System or Facility of the Bulk Electric System. (A discussion of general information and of potential options or alternatives to resolve Bulk Electric System operating concerns is not a command and is not considered an Operating Instruction.)

A “command” as used in the definition refers to both oral and written commands by operating personnel. The standard drafting team purposely did not modify the word “command” with either “oral” or “written” in order to maintain its broader meaning. Instead, in the requirements of COM-002-4, the standard drafting team has specified “oral” or “written” as needed to define which types of Operating Instructions are covered by the requirement. The definition also includes a clarifying note in parentheses that general discussions are not considered Operating Instructions. This clarification was requested by and supported by industry for inclusion in the definition itself.

#### **b) Applicability**

In addition to Balancing Authorities, Reliability Coordinators, and Transmission Operators, proposed COM-002-4 applies to Distribution Providers and Generator Operators. The standard drafting team added these entities in the Applicability section because they can be and in many cases are the recipients of Operating Instructions. The standard drafting team determined that not including these entities would leave a gap in a communications standard that addresses operating personnel. The addition of Distribution Providers as an applicable entity also

---

removal of the term would cause concerns. Both teams agreed that the COM-002-4 standard did not need to require a specific protocol to identify “Reliability Directives” as such and that the definition of “Operating Instruction” could be used absent the term Reliability Directive in COM-002-4 to set the protocols. This would leave the TOP and IRO standard drafting teams the flexibility to address the issues surrounding the term “Reliability Directive” in response to the FERC TOP/IRO NOPR.

responds to FERC's directive in Order No. 693 to add them as applicable entities to the communications standard.

Recognizing that Generator Operators and Distribution Providers typically only receive Operating Instructions, the standard drafting team proposed that only Requirements R3 and R6 apply to these entities. Under proposed COM-002-4, Distribution Providers and Generator Operators are required to: (i) train operators prior to receiving an Operating Instruction; and (ii) use three part communication when receiving an Operating Instruction during an Emergency. The Measures for the requirements related to these applicable entities show that Distribution Providers and Generator Operators can demonstrate compliance for use of three-part communication when receiving an Operating Instruction during an Emergency by providing an attestation from the issuer of the Operating Instruction (i.e., a voice recording is not required). If a Distribution Provider or Generator Operator never receives an Operating Instruction, the requirements in proposed COM-002-4 would not apply. In both Requirements R3 and R6, qualifying language triggering performance based on the "receipt" of an Operating Instruction is included. This construct makes certain that appropriate entities are trained and able to use three-part communication for reliability purposes.

**c) Requirements in Proposed COM-002-4**

Proposed COM-002-4 has seven requirements that require certain entities to develop predefined communications protocols for the issuance of Operating Instructions. Each requirement and its Parts are discussed in detail below along with the technical basis for the inclusion of the requirement in the proposed Reliability Standard.

**Requirement R1**

Requirement R1 requires entities that can *both issue and receive* Operating Instructions to have documented communications protocols that include a minimum set of elements, outlined in Parts 1.1 through 1.6 of the Requirement. Because Operating Instructions affect Facilities and Elements of the Bulk Electric System, the communication of those Operating Instructions must be understood by all involved parties, especially when those communications occur between functional entities. An EPRI study reviewed nearly 400 switching mishaps by electric utilities and found that roughly 19% of errors (generally classified as loss of load, breach of safety, or equipment damage) were due to communication failures.<sup>47</sup> This was nearly identical to another study of dispatchers from 18 utilities that found that 18% of the operators' errors were due to communication problems.<sup>48</sup> The necessary protocols include the use of the English language unless agreed to otherwise (except for internal operations), protocols for use of a written or oral single-party to multiple-party burst Operating Instruction, three-part communications (including a protocol for taking an alternate action if a response is not received or if the Operating Instruction was not understood by the receiver), specification of instances that require time identification, and specification of nomenclature for Transmission interface Elements.

Requirement R1 provides consistency among communications protocols and promotes effective communications, while also allowing flexibility for entities to develop additional communications protocols based on its own operating environment. The inclusion of the elements in Parts 1.1 through 1.6 are necessary to improve communications protocols and drive uniformity.

---

<sup>47</sup> Beare, A., Taylor, J. *Field Operation Power Switching Safety*, WO2944-10, Electric Power Research Institute.

<sup>48</sup> Bilke, T., *Cause and prevention of human error in electric utility operations*, Colorado State University, 1998.

The term “documented communication protocols” in R1 refers to a set of required protocols specific to the applicable entity and the entities with whom they must communicate. An entity should include as much detail as it believes necessary in its documented communication protocols,<sup>49</sup> but the documented communication protocols must address all of the applicable Parts of Requirement R1. Where an entity does not already have a set of documented communications protocols that meet the Parts of Requirement R1, the entity must develop the necessary communications protocols. Entities may also adopt the documented protocols of another entity as its own communications protocols, but the entity must maintain its own set of documented communications protocols to meet Requirement R1. Each part of Requirement R1 is discussed below:

*1.1. Require its operating personnel that issue and receive an oral or written Operating Instruction to use the English language, unless agreed to otherwise. An alternate language may be used for internal operations.*

Use of English language has been carried forward from COM-001-1.1, Requirement R4 as an essential protocol. As noted above, retirement of this requirement in COM-001-1.1 was specifically referred to Project 2007-02. Part 1.1 continues to permit the issuer and receiver to use an agreed to alternate language. This has been retained since use of an alternate language, on a case-by-case basis, may serve to better facilitate effective communications where the use of English language may create additional opportunities for miscommunications. Part 1.1 requires the use of English language (unless agreed to otherwise) when issuing oral or written<sup>50</sup> Operating

---

<sup>49</sup> On September 19, 2012, the NERC Operating Committee issued a Reliability Guideline entitled: “System Operator Verbal Communications – Current Industry Practices.” As stated on page one, the purpose of the Reliability Guideline “. . . is to document and share current verbal Bulk Electric System communications practices and procedures from across the industry that have been found to enhance the effectiveness of system operator communications programs.” This guideline serves as an additional source of information on best practices that entities can draw on in creating the documented communications protocols. The guideline is available at: [http://www.nerc.com/comm/OC/Reliability%20Guideline%20DL/Reliability\\_Guideline\\_Final\\_2012.pdf](http://www.nerc.com/comm/OC/Reliability%20Guideline%20DL/Reliability_Guideline_Final_2012.pdf).

<sup>50</sup> An example of a written Operating Instruction is a switching order.

Instructions. This creates a standard language (either English or an agreed upon alternate language) for use when issuing commands that could change or preserve the state, status, output, or input of an Element of the Bulk Electric System or Facility of the Bulk Electric System. Part 1.1 also clarifies that an alternate language can be used internally within the organization. The wording of the Part has been modified slightly from the language in COM-001-1.1, Requirement R4 to incorporate the term “Operating Instruction,” which defines the communications that require the use of the documented communications protocols.

*1.2. Require its operating personnel that issue an oral two-party, person-to-person Operating Instruction to take one of the following actions:*

- *Confirm the receiver’s response if the repeated information is correct.*
- *Reissue the Operating Instruction if the repeated information is incorrect, if the receiver does not issue a response, or if requested by the receiver.*
- *Take an alternative if a response is not received or if the Operating Instruction was not understood by the receiver.*

*1.3. Require the receiver of an oral two-party, person-to-person Operating Instruction to take one of the following actions:*

- *Repeat the Operating Instruction and wait for confirmation from the issuer that the repetition was correct.*
- *Request that the issuer reissue the Operating Instruction.*

Part 1.2 requires communications protocols for the use of three-part communications for oral two-party, person-to-person Operating Instructions *by the issuer*. Part 1.3 requires communications protocols for the use of three-part communications for oral two-party, person-to-person Operating Instructions *by the receiver*. This carries forward the requirement to use three-part communications in COM-002-2 and COM-002-3 and also adds an option in Part 1.2 for the issuer to take an alternative action to resolve the issue if the receiver does not respond or understand the Operating Instruction. The addition of this third bullet, which is not included in

COM-002-2, serves to clarify in the requirement language itself that the issuing entity can take alternate action in lieu of reissuance, if necessary.

Three-part communication reduces the opportunity for confusion and misunderstanding when issuing and receiving Operating Instructions during all operating conditions. Because three-part communication is included as a protocol for both non-emergency conditions and Emergency conditions, there will be no mental “transition” between protocols when operating conditions shift from non-emergency to Emergency. The documented communication protocols for the operating personnel will remain the same during transitions through all operating conditions. Further, the formal requirement for three-part communication in an entity’s documented communications protocols will create a heightened sense of awareness in operating personnel that the task they are about to execute is critical, and recognize the risk to the reliable operation of the Bulk Electric System is increased if the communication is misunderstood.

*1.4. Require its operating personnel that issue a written or oral single-party to multiple-party burst Operating Instruction to confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction.*

This Part requires specific communications protocols for the issuance of an Operating Instruction using a one-way burst messaging system. One-way burst messaging systems are used to issue Operating Instructions to many entities at once. Because the use of three-part communications is not practical when utilizing this type of communication, a separate protocol was added to the proposed Reliability Standard. During the Standards Development Process, many entities expressed concern that if one-way burst messaging systems were not addressed, it would imply that three part communication would be required for all participants in the burst message.

*1.5. Specify the instances that require time identification when issuing an oral or written Operating Instruction and the format for that time identification.*

This Part requires entities to identify the instances where time identification is required when issuing an oral or written Operating Instruction. Clarifying time and time zone (where necessary) contributes to reducing misunderstandings and reduces the risk of a grave error during BES operations, especially when communicating across time zones or specifying an action that will take place at a future time. The Part forces entities to name the instances in the documented communications protocols themselves if time identification is used. The standard drafting team chose this method of identification in lieu of requiring time identification to maintain flexibility for the entity in designing its communications protocols, but also providing clarity in the documented communications protocols where it is used.

*1.6. Specify the nomenclature for Transmission interface Elements and Transmission interface Facilities when issuing an oral or written Operating Instruction.*

Similarly to Part 1.5, Part 1.6 does not prescriptively require the use of nomenclature for Transmission interface Elements and Transmission interface Facilities when issuing an oral or written Operating Instruction. The standard drafting team opted to require entities to identify the nomenclature, if it is used. This Part limits the scope to only Transmission interface Elements or Transmission interface Facilities (*e.g.*, tie lines and tie substations). This ensures that communicating parties are readily familiar with each other's interface Elements and Facilities, eliminating hesitation and confusion when referring to equipment for the Operating Instruction. This shortens response time and improves situational awareness. It also permits entities to jointly develop the nomenclature for their interface.

### **Requirements R2 and R3**

Requirement R2 requires each Balancing Authority, Reliability Coordinator, and Transmission Operator to conduct initial training for each of their operating personnel

responsible for the Real-time operation of the Bulk Electric System on the entity's documented communication protocols.

Requirement R3 requires Distribution Providers and Generator Operators to conduct initial training on three part communication for each of their operating personnel who can receive an oral two-party, person-to-person Operating Instruction prior to that individual operator receiving an oral two-party, person-to-person Operating Instruction. Distribution Providers and Generator Operators would have to train their operating personnel prior to placing them in a position to receive an oral two-party, person-to-person Operating Instruction. Operating Personnel that would never be in a position to receive an oral two-party, person-to-person Operating Instruction, therefore, would not need initial training unless their circumstance changes.

Initial training is included in proposed COM-002-4 in response to the NERC Board of Trustees resolution, which directs that a training requirement be included. Additionally, requiring entities that issue and or receive Operating Instructions to conduct initial training with their operating personnel will ensure that all applicable operators will be trained in three-part communication. This training will reduce the possibility of a miscommunication, which could eventually lead to action or inaction harmful to the reliability of the Bulk Electric System. Ongoing training beyond initial training would fall under an entities' training program in PER-005 or could be separately listed as a type of corrective action under Requirement R4. Training is also mentioned by Commission staff in its Preliminary Assessment as an important aspect to effective communications.<sup>51</sup>

#### **Requirement R4**

---

<sup>51</sup> Preliminary Assessment at 43 (citing Blackout Report at 161 which provides that lack of situational awareness can result from, among other things, inadequate operator training).

Requirement R4 requires Balancing Authorities, Reliability Coordinators, and Transmission Operators to, at least once every 12 months, assess adherence by its operating personnel to the documented communication protocols in Requirement R1 and to provide feedback to its operating personnel on their performance. This also includes any corrective action taken, as appropriate, to address deviations from the documented protocols. Requirement R4 also requires the aforementioned entities to assess the effectiveness of their documented communications protocols and make changes, as necessary, to improve the effectiveness of the protocols. An entity may determine that corrective action beyond identification of the misuse of the documented communications protocols to the operating personnel is not necessary, therefore, the phrase “as appropriate” is included in the Requirement R4 language to indicate that whether to take additional corrective action is determined by the entity and not dictated by the Requirement for all instances of a misuse of a documented communication protocol. In almost all cases found by an entity, NERC expects that an entity will have some form of corrective action such as ongoing scheduled training.

Most entities currently engage in some type of assessment activity for their operating personnel and provide operators with performance feedback on their adherence to the entity’s documented protocols. Doing so, provides entities an opportunity to evaluate the performance of their operating personnel and take corrective actions where necessary, which could prevent a miscommunication from occurring and thus possibly prevent an event which could be harmful to the reliability of the Bulk Electric System.

The associated Measure M4 for Requirement R4 lists the types of evidence that an entity can provide to demonstrate compliance and explains when an entity should show the corrective actions taken. Of particular interest is any corrective action taken where the miscommunication

is the sole or partial cause of an Emergency and the entity has opted to take a corrective action. While the Measure lists out this particular set of circumstances to highlight the importance, the Measure does not modify the Requirement to *require* corrective action.

Requirement R4 is the primary mechanism for implementation of the documented communication protocols in proposed COM-002-4 for non-emergency conditions. In order to meet its obligations under Requirement R4, an entity must be actively employing its documented communications protocols. However, the requirement also extends to assessing the use of communications protocols during Emergency communications. Specifically, this requirement compels entities to assess the adherence of its operating personnel to the pre-defined communication protocols, provide feedback to its operating personnel based on their performance, and implement corrective action to address deviations from those protocols or general ineffectiveness where necessary. Requirement R4 also aims to ensure that the documented protocol remains current and effective to address potential reliability issues that could be caused by non-inclusion of a communication protocol not otherwise required by Requirement R1.

The creation of an assessment obligation and a protocol effectiveness review process that arises at least once every twelve (12) months provides a short evaluation and correction cycle for entities. By providing feedback to operators on a regular basis, these entities can evaluate performance and take necessary corrective action in a timely manner. Specification that the review must occur “at least once every twelve (12) months” also does not preclude entities from employing processes that provide feedback in an even shorter timeframe or multiple times per year as part of their process design.

The language of the requirement clearly and explicitly delineates the obligations and expectations entities must meet. Requirement R4 requires that each entity maintain a successful program and measure its own compliance with its documented communications protocols. Requirement R4 intentionally does not specify a specific type of review to execute or mandate that corrective actions be taken. Entities are better equipped to design an appropriate program to meet their own operating environment and determine whether a corrective action is necessary. Because almost all entities have these types of programs in place today, this approach also provides an efficient means of establishing an assessment program by building on the programs currently in use. The primary purpose of Requirement R4 is to provide assurance that an entity is using its documented communications protocols, engaging its operators, and periodically reviewing its communications for improvement. The program required in Requirement R4 requires applicable entities to conduct retrospective review of their communications practices based on predefined documented communications protocols through an assessment design of their choosing and requires corrective actions be taken if the entity deems a corrective action necessary. As a result, Requirement R4 contains clear, unambiguous directions regarding the obligations placed on the entity.

The assessment process embodied in Requirement R4 has also been used in other Commission-approved NERC Reliability Standards. For example, Commission-approved Reliability Standard FAC-003-3 requires applicable entities to have in place “documented maintenance strategies or procedures or processes or specifications it uses to prevent the encroachment of vegetation into the MVCD of its applicable lines.” Entities are required to identify “the existence of a vegetation condition that is likely to cause a Fault at any moment,” and to remedy the problematic conditions. Requirement R5 states “... the applicable

Transmission Owner or applicable Generator Owner *shall take corrective action* to ensure continued vegetation management to prevent encroachments.” This risk-based requirement obligates applicable entities to create a current “documented maintenance strategy” to prevent vegetation encroachment, identify certain constraints, assess the possibility of a potential encroachment based on the documented strategy, and take necessary corrective action to ensure continued vegetation management.

In addition, Commission-approved Reliability Standard PRC-005-2 requires that applicable entities “establish a Protection System Maintenance Program (“PSMP”) for its Protection Systems,” and then implement and follow these PSMPs to achieve ideal intended performance. Applicable entities should subsequently “demonstrate efforts to correct identified Unresolved Maintenance Issues”. These standards also require applicable entities to develop a tailored baseline target for performance and retroactively measure compliance based on adherence to this predefined standard.

Additionally, Commission-approved Reliability Standard PRC-006-1 requires applicable entities to document certain criteria regarding the creation of islands and develop an underfrequency load-shedding (“UFLS”) program to arrest declining frequency, assist recovery of frequency following underfrequency events, and provide last resort system preservation measures. The Reliability Standard requires entities to conduct various assessments to determine conformity with the UFLS program created pursuant to Requirement R3 of that Reliability Standard. While a corrective action element is not included in the Reliability Standard language itself, NERC did clarify during regulatory approval, to the satisfaction of the Commission, that the language of PRC-006-1 anticipated corrective action.

### **Requirements R5 and R6**

Requirement R5 requires entities that issue oral two-party, person-to-person Operating Instructions during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, to use three-part communication or take an alternate action if the receiver does not respond or if the receiver did not understand the Operating Instruction. The language of Requirement R5 specifically excludes written or oral single-party to multiple-party burst Operating Instructions to make clear that three-part communication is not required when issuing Operating Instructions in this manner. Requirement R5 applies to each Balancing Authority, Reliability Coordinator, and Transmission Operator since these are the entities that would be in a position to issue oral two-party, person-to-person Operating Instructions during an Emergency.

Requirement R6 requires entities that receive an oral two-party, person-to-person Operating Instruction during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, to repeat (not necessarily verbatim) the Operating Instruction and receive confirmation from the issuer that the response was correct, or request that the issuer reissue the Operating Instruction. Requirement R6 includes the same clarifying language as Requirement R5 for the exclusion of single-party to multiple-party burst Operating Instructions. Requirement R6 applies to each Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator since these are the entities that would be in a position to receive oral two-party, person-to-person Operating Instructions during an Emergency.

The use of three-part communication when issuing and receiving Operating Instructions is always important because a miscommunication could create an Emergency. However, the use of three-part communication is critically important if an Emergency condition already exists, as further action or inaction could increase the harmful effects to the Bulk Electric System. Clear

communication is essential to providing swift and coordinated response to events that are directly impacting the reliability of the Bulk Electric System.

### **Requirement R7**

Requirement R7 requires that when a Balancing Authority, Reliability Coordinator, or Transmission Operator issues a written or oral *single-party to multiple-party burst Operating Instruction* during an Emergency, it must confirm or verify that at least one receiver of the Operating Instruction received the Operating Instruction. Because written or oral single-party to multiple-party burst Operating Instruction during an Emergency are excluded from Requirements R5 and R6, this separate Requirement is necessary to specify the performance an entity must meet to demonstrate clear communication for the use of written or oral single-party to multiple-party burst Operating Instructions during an Emergency. This prevents a gap in the means used to issue an Operating Instruction during an Emergency. This requirement is necessary because without confirmation from at least one receiver, the issuer has no way of confirming if the Operating Instruction was transmitted and received by any of the recipients. Therefore, the issuer cannot know whether to resend the Operating Instruction, wait for the recipient to take an action, or take an alternate action because the recipient cannot perform the action. As a best practice, an entity can opt to confirm receipt from more than one recipient, which is why the requirement states “at least one.”

#### 4. Improvements Reflected in COM-002-4

Proposed COM-002-4 includes a number of improvements over the currently effective Reliability Standard COM-002-2. These include: (i) removing the ambiguity surrounding the meaning of “directive” in COM-002-2; (ii) specifying specific minimum protocols that must be included and used by all applicable entities; (iii) mandating initial training for operating

personnel; and (iv) adding a process for entities to assess adherence to the documented communication protocols and take corrective action.

First, proposed COM-002-4 replaces the term “directive” in COM-002-2 with a new defined term “Operating Instruction.” Use of the defined term clarifies the types of commands covered by the proposed Reliability Standard, which now includes all commands “by operating personnel responsible for the Real-time operation of the interconnected Bulk Electric System to change or preserve the state, status, output, or input of an Element of the Bulk Electric System or Facility of the Bulk Electric System.” It was not clear whether the term “directive” referred to either non-emergency and emergency directives, or just emergency directives. This ambiguity was the subject of the interpretation request to COM-002-2 adopted by the Board of Trustees in 2012.<sup>52</sup>

Second, proposed COM-002-4 adds additional mandatory communications protocols in Requirement R1 beyond the use of three-part communication covered by COM-002-2 and the use of English language found in COM-001-1.1, Requirement R4. The proposed Reliability Standard adds protocols for: the issuance of a written or oral single-party to multiple-party burst Operating Instruction; specification of the instances that require time identification when issuing an oral or written Operating Instruction and the format for that time identification; and

---

<sup>52</sup> On October 1, 2009, a clarification was requested by the ISO-RTO Council of Requirement R2 of COM-002-2, specifically asking whether “directives” are limited to actions requested during actual and anticipated emergency operating conditions, or whether routine operating instructions are also considered “directives.” The interpretation of Reliability Standard COM-002-2, approved by the NERC Board of Trustees on February 9, 2012, clarifies that COM-002-2 R2 does not specify the conditions under which a directive is issued, nor does it define directive. It only provides that the requirements be followed when a directive is issued to address a real-time emergency. Routine operating instructions during normal operations would not require the communications protocols for repeat backs as specified in R2. The NERC Board of Trustees rescinded approval of the interpretation in conjunction with its adoption and successful implementation of proposed COM-002-4 since the proposed Reliability Standard no longer uses the lower case term “directive.” See Agenda Item 8c of the May 7, 2014 Board of Trustees Meeting, *available at* [http://www.nerc.com/gov/bot/Agenda%20highlights%20and%20Mintues%202013/board\\_agenda\\_package\\_May\\_2014.pdf](http://www.nerc.com/gov/bot/Agenda%20highlights%20and%20Mintues%202013/board_agenda_package_May_2014.pdf).

specification of the nomenclature for Transmission interface Elements and Transmission interface Facilities when issuing an oral or written Operating Instruction. Proposed COM-002-4 also includes specific communications protocols for the entity receiving an Operating Instruction, which is not present in COM-002-2. COM-002-2, by contrast, places the responsibility for ensuring proper three-part communication on the issuing entity only.

Third, for the first time, the COM-002 Reliability Standard will include requirements to provide initial training to operating personnel who issue and receive Operating Instructions. While many entities reported during the Standards Development Process that they already conduct training of their operating personnel, the inclusion of these requirements codifies the expectation that all operating personnel be trained on the documented communications protocols prior to being placed in a position to issue or receive an Operating Instruction. As FERC staff noted in its Preliminary Assessment and as reflected in the Blackout Report, lack of situational awareness can result from, among other things, inadequate operator training.<sup>53</sup>

Finally, the proposed COM-002-4 Reliability Standard adds a requirement for entities to assess adherence to the documented communication protocols and take corrective action. This aspect of the proposed Reliability Standard codifies good operating practice to review operator communications and provide feedback to the operating personnel. The requirement will also require entities to assess the effectiveness of their documented communications protocols and determine if additional protocols should be specified based on the observed use of the protocols in its operating environment. Such a requirement is not present in the prior version of the COM-002 Reliability Standard.

##### 5. Proposed COM-002-4 Satisfies the Commission's Directives

---

<sup>53</sup> See Preliminary Assessment at 43 (citing Blackout Report at 161).

In Order Nos. 693, the Commission issued directives to NERC to modify certain aspects of COM-002-2. Exhibit J of this Petition provides a list of the directives and an explanation of the standard drafting team's consideration of each directive. In short, the Commission directed NERC to include Distribution Providers as an applicable entity in the Reliability Standard. The Commission stated, "during both normal and emergency operations, it is essential that the transmission operator, balancing authority and reliability coordinator have communications with distribution providers."

Second, the Commission directed NERC to include a requirement for the Reliability Coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities, including how to determine whether an action needs to be assessed by the reliability coordinator. This directive was addressed outside of the revisions to COM-002-2. It was addressed by modifications to IRO-005 and has been reassigned to Project 2014-03.

Third, the Commission directed NERC to either modify the COM-002-2 Reliability Standard to require "tightened communications protocols, especially for communications during alerts and emergencies" or develop a new Reliability Standard to meet Blackout Report Recommendation No. 26. The following is a discussion of the outstanding directives addressed by proposed COM-002-4:

*Addition of Distribution Providers* (Order No. 693, P 512 and 540 (Part 1)): As noted above in the discussion of Requirements R3 and R6 and the Applicability section, Distribution Providers have been added to the coverage of proposed COM-002-4. Coverage within the requirements has been limited to their position as "receivers" of Operating Instructions.

*Tightened Communication Protocols* (Order No. 693, P 531, 534, 535, 540 (Part 3)):

Proposed COM-002-4 satisfies the Commission’s directive regarding establishing “tightened communication protocols” through the various improvements listed in the section above.

Proposed COM-002-4 improves communications protocols for the issuance of Operating Instructions in order to reduce the possibility of miscommunication that could lead to action or inaction harmful to the reliability of the Bulk Electric System. The proposed Reliability Standard adds clarity to the scope of covered commands with the use of the new defined term “Operating Instruction. Proposed COM-002-4 also includes additional mandatory protocols that establish communication uniformity as much as practical on a continent-wide basis, while still maintaining flexibility for entities to employ additional protocols based on its own operating environment. The proposed Reliability Standard also “tightens communications protocols” by employing clear, zero-tolerance approaches for miscommunications of Operating Instructions issued during Emergencies and by mandating an assessment process aimed at reducing the number of repeat misuses of communication protocols by operating personnel.

### **C. Enforceability of Proposed Reliability Standards**

The proposed Reliability Standards, COM-001-2 and COM-002-4 include Measures that support each requirement to help ensure that the requirements will be enforced in a clear, consistent, non-preferential manner and without prejudice to any party. The proposed Reliability Standards also include VRFs and VSLs for each requirement. The VRFs and VSLs for the proposed Reliability Standards comport with NERC and Commission guidelines related to their assignment. A detailed analysis of the assignment of VRFs, the VSLs for proposed COM-001-2 and COM-002-4 are included as Exhibit K and Exhibit L.

## **VI. CONCLUSION**

For the reasons set forth above, NERC respectfully requests that the Commission:

- approve the proposed Reliability Standards and other associated elements included in Exhibits A and B;
- the new definitions, as noted herein;
- the VRFs and VSLs (Exhibits A, B, K, and L);
- approve the Implementation Plans included in Exhibits C and D; and
- approve the retirement of the currently effective Reliability Standards COM-001-1.1, EOP-008-1 (Requirement R1), and COM-002-2, as proposed in the Implementation Plans.

Respectfully submitted,

/s/ William H. Edwards

**Exhibit A**

**Proposed Reliability Standard COM-001-2**

## A. Introduction

1. **Title:** **Communications**
2. **Number:** COM-001-2
3. **Purpose:** To establish Interpersonal Communication capabilities necessary to maintain reliability.
4. **Applicability:**
  - 4.1. Transmission Operator
  - 4.2. Balancing Authority
  - 4.3. Reliability Coordinator
  - 4.4. Distribution Provider
  - 4.5. Generator Operator
5. **Effective Date:** The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

## B. Requirements

- R1. Each Reliability Coordinator shall have Interpersonal Communication capability with the following entities (unless the Reliability Coordinator detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*
  - 1.1. All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.
  - 1.2. Each adjacent Reliability Coordinator within the same Interconnection.
- R2. Each Reliability Coordinator shall designate an Alternative Interpersonal Communication capability with the following entities: *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*
  - 2.1. All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.
  - 2.2. Each adjacent Reliability Coordinator within the same Interconnection.
- R3. Each Transmission Operator shall have Interpersonal Communication capability with the following entities (unless the Transmission Operator detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*
  - 3.1. Its Reliability Coordinator.
  - 3.2. Each Balancing Authority within its Transmission Operator Area.

- 3.3. Each Distribution Provider within its Transmission Operator Area.
  - 3.4. Each Generator Operator within its Transmission Operator Area.
  - 3.5. Each adjacent Transmission Operator synchronously connected.
  - 3.6. Each adjacent Transmission Operator asynchronously connected.
- R4.** Each Transmission Operator shall designate an Alternative Interpersonal Communication capability with the following entities: *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*
- 4.1. Its Reliability Coordinator.
  - 4.2. Each Balancing Authority within its Transmission Operator Area.
  - 4.3. Each adjacent Transmission Operator synchronously connected.
  - 4.4. Each adjacent Transmission Operator asynchronously connected.
- R5.** Each Balancing Authority shall have Interpersonal Communication capability with the following entities (unless the Balancing Authority detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*
- 5.1. Its Reliability Coordinator.
  - 5.2. Each Transmission Operator that operates Facilities within its Balancing Authority Area.
  - 5.3. Each Distribution Provider within its Balancing Authority Area.
  - 5.4. Each Generator Operator that operates Facilities within its Balancing Authority Area.
  - 5.5. Each Adjacent Balancing Authority.
- R6.** Each Balancing Authority shall designate an Alternative Interpersonal Communication capability with the following entities: *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*
- 1.1. Its Reliability Coordinator.
  - 1.2. Each Transmission Operator that operates Facilities within its Balancing Authority Area.
  - 1.3. Each Adjacent Balancing Authority.
- R7.** Each Distribution Provider shall have Interpersonal Communication capability with the following entities (unless the Distribution Provider detects a failure of its Interpersonal Communication capability in which case Requirement R11 shall apply): *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*
- 7.1. Its Balancing Authority.
  - 7.2. Its Transmission Operator.
- R8.** Each Generator Operator shall have Interpersonal Communication capability with the following entities (unless the Generator Operator detects a failure of its Interpersonal

Communication capability in which case Requirement R11 shall apply): *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

**8.1.** Its Balancing Authority.

**8.2.** Its Transmission Operator.

**R9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test its Alternative Interpersonal Communication capability at least once each calendar month. If the test is unsuccessful, the responsible entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communication capability within 2 hours. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations, Same-day Operations]*

**R10.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall notify entities as identified in Requirements R1, R3, and R5, respectively within 60 minutes of the detection of a failure of its Interpersonal Communication capability that lasts 30 minutes or longer. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

**R11.** Each Distribution Provider and Generator Operator that detects a failure of its Interpersonal Communication capability shall consult each entity affected by the failure, as identified in Requirement R7 for a Distribution Provider or Requirement R8 for a Generator Operator, to determine a mutually agreeable action for the restoration of its Interpersonal Communication capability. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

### **C. Measures**

**M1.** Each Reliability Coordinator shall have and provide upon request evidence that it has Interpersonal Communication capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with each adjacent Reliability Coordinator within the same Interconnection, which could include, but is not limited to:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R1.)

**M2.** Each Reliability Coordinator shall have and provide upon request evidence that it designated an Alternative Interpersonal Communication capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with each adjacent Reliability Coordinator within the same Interconnection, which could include, but is not limited to:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R2.)

- M3.** Each Transmission Operator shall have and provide upon request evidence that it has Interpersonal Communication capability with its Reliability Coordinator, each Balancing Authority, Distribution Provider, and Generator Operator within its Transmission Operator Area, and each adjacent Transmission Operator asynchronously or synchronously connected, which could include, but is not limited to:
- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communication. (R3.)
- M4.** Each Transmission Operator shall have and provide upon request evidence that it designated an Alternative Interpersonal Communication capability with its Reliability Coordinator, each Balancing Authority within its Transmission Operator Area, and each adjacent Transmission Operator asynchronously and synchronously connected, which could include, but is not limited to:
- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R4.)
- M5.** Each Balancing Authority shall have and provide upon request evidence that it has Interpersonal Communication capability with its Reliability Coordinator, each Transmission Operator and Generator Operator that operates Facilities within its Balancing Authority Area, each Distribution Provider within its Balancing Authority Area, and each adjacent Balancing Authority, which could include, but is not limited to:
- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R5.)
- M6.** Each Balancing Authority shall have and provide upon request evidence that it designated an Alternative Interpersonal Communication capability with its Reliability Coordinator, each Transmission Operator that operates Facilities within its Balancing Authority Area, and each adjacent Balancing Authority, which could include, but is not limited to:
- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R6.)
- M7.** Each Distribution Provider shall have and provide upon request evidence that it has Interpersonal Communication capability with its Transmission Operator and its Balancing Authority, which could include, but is not limited to:

- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R7.)
- M8.** Each Generator Operator shall have and provide upon request evidence that it has Interpersonal Communication capability with its Balancing Authority and its Transmission Operator, which could include, but is not limited to:
- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R8.)
- M9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it tested, at least once each calendar month, its Alternative Interpersonal Communication capability designated in Requirements R2, R4, or R6. If the test was unsuccessful, the entity shall have and provide upon request evidence that it initiated action to repair or designated a replacement Alternative Interpersonal Communication capability within 2 hours. Evidence could include, but is not limited to: dated and time-stamped test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R9.)
- M10.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it notified entities as identified in Requirements R1, R3, and R5, respectively within 60 minutes of the detection of a failure of its Interpersonal Communication capability that lasted 30 minutes or longer. Evidence could include, but is not limited to: dated and time-stamped test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R10.)
- M11.** Each Distribution Provider and Generator Operator that detected a failure of its Interpersonal Communication capability shall have and provide upon request evidence that it consulted with each entity affected by the failure, as identified in Requirement R7 for a Distribution Provider or Requirement R8 for a Generator Operator, to determine mutually agreeable action to restore the Interpersonal Communication capability. Evidence could include, but is not limited to: dated operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R11.)

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance Enforcement Authority**

The Regional Entity shall serve as the Compliance Enforcement Authority (CEA) unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases, the ERO or a Regional Entity approved by FERC or other applicable governmental authority shall serve as the CEA.

## 1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

## 1.3. Data Retention

The Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator for Requirements R1, R2, R9, and R10, Measures M1, M2, M9, and M10 shall retain written documentation for the most recent twelve calendar months and voice recordings for the most recent 90 calendar days.
- The Transmission Operator for Requirements R3, R4, R9, and R10, Measures M3, M4, M9, and M10 shall retain written documentation for the most recent twelve calendar months and voice recordings for the most recent 90 calendar days.
- The Balancing Authority for Requirements R5, R6, R9, and R10, Measures M5, M6, M9, and M10 shall retain written documentation for the most recent twelve calendar months and voice recordings for the most recent 90 calendar days.
- The Distribution Provider for Requirements R7 and R11, Measures M7 and M11 shall retain written documentation for the most recent twelve calendar months and voice recordings for the most recent 90 calendar days.
- The Generator Operator for Requirements R8 and R11, Measures M8 and M11 shall retain written documentation for the most recent twelve calendar months and voice recordings for the most recent 90 calendar days.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, or Generator Operator is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

## 1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	The Reliability Coordinator failed to have Interpersonal Communication capability with one of the entities listed in Requirement R1, Parts 1.1 or 1.2, except when the Reliability Coordinator detected a failure of its Interpersonal Communication capability in accordance with Requirement R10.	The Reliability Coordinator failed to have Interpersonal Communication capability with two or more of the entities listed in Requirement R1, Parts 1.1 or 1.2, except when the Reliability Coordinator detected a failure of its Interpersonal Communication capability in accordance with Requirement R10.
R2	N/A	N/A	The Reliability Coordinator failed to designate Alternative Interpersonal Communication capability with one of the entities listed in Requirement R2, Parts 2.1 or 2.2.	The Reliability Coordinator failed to designate Alternative Interpersonal Communication capability with two or more of the entities listed in Requirement R2, Parts 2.1 or 2.2.
R3	N/A	N/A	The Transmission Operator failed to have Interpersonal Communication capability with one of the entities listed in Requirement R3, Parts 3.1, 3.2, 3.3, 3.4, 3.5, or 3.6, except when the Transmission Operator detected a failure of its Interpersonal Communication capability in accordance with Requirement R10.	The Transmission Operator failed to have Interpersonal Communication capability with two or more of the entities listed in Requirement R3, Parts 3.1, 3.2, 3.3, 3.4, 3.5, or 3.6, except when the Transmission Operator detected a failure of its Interpersonal Communication capability in accordance with Requirement R10.
R4	N/A	N/A	The Transmission Operator failed to designate Alternative Interpersonal Communication capability with one of the entities listed in Requirement R4, Parts 4.1, 4.2, 4.3, or 4.4.	The Transmission Operator failed to designate Alternative Interpersonal Communication capability with two or more of the entities listed in Requirement R4, Parts 4.1, 4.2, 4.3, or 4.4.

**Standard COM-001-2 — Communications**

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R5	N/A	N/A	The Balancing Authority failed to have Interpersonal Communication capability with one of the entities listed in Requirement R5, Parts 5.1, 5.2, 5.3, 5.4, or 5.5, except when the Balancing Authority detected a failure of its Interpersonal Communication capability in accordance with Requirement R10.	The Balancing Authority failed to have Interpersonal Communication capability with two or more of the entities listed in Requirement R5, Parts 5.1, 5.2, 5.3, 5.4, or 5.5, except when the Balancing Authority detected a failure of its Interpersonal Communication capability in accordance with Requirement R10.
R6	N/A	N/A	The Balancing Authority failed to designate Alternative Interpersonal Communication capability with one of the entities listed in Requirement R6, Parts 6.1, 6.2, or 6.3.	The Balancing Authority failed to designate Alternative Interpersonal Communication capability with two or more of the entities listed in Requirement R6, Parts 6.1, 6.2, or 6.3.
R7	N/A	N/A	The Distribution Provider failed to have Interpersonal Communication capability with one of the entities listed in Requirement R7, Parts 7.1 or 7.2, except when the Distribution Provider detected a failure of its Interpersonal Communication capability in accordance with Requirement R11.	The Distribution Provider failed to have Interpersonal Communication capability with two or more of the entities listed in Requirement R7, Parts 7.1 or 7.2, except when the Distribution Provider detected a failure of its Interpersonal Communication capability in accordance with Requirement R11.

## A. Introduction

1. **Title:** ~~Telecommunications~~Communications
2. **Number:** COM-001-~~1~~2
3. **Purpose:** ~~Each Reliability Coordinator, Transmission Operator and Balancing Authority needs adequate and reliable telecommunications facilities internally and with others for the exchange of Interconnection and operating information~~To establish Interpersonal Communication capabilities necessary to maintain reliability.
4. **Applicability:**
  - 4.1. Transmission ~~Operators~~Operator
  - 4.2. Balancing ~~Authorities~~Authority
  - 4.3. Reliability ~~Coordinators~~Coordinator
  - 4.4. ~~NERCNet User Organizations.~~
5. ~~Effective Date:~~ May 13, 2009
  - 4.4. Distribution Provider
  - 4.5. Generator Operator
5. **Effective Date:** The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

## B. Requirements

- ~~R1.~~ Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information:
- ~~R1.1.~~ Internally.
- R1. Between shall have Interpersonal Communication capability with the following entities (unless the Reliability Coordinator ~~and its~~ detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*
- ~~R1.2.~~ All Transmission Operators and Balancing Authorities.
- ~~R1.3.~~ With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability.
- ~~R1.4.~~ Where applicable, these facilities shall be redundant and diversely routed.
- 1.1. Each within its Reliability Coordinator, Transmission Operator, and Balancing Authority shall manage, alarm, test and/or actively monitor vital telecommunications facilities. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications Area.

~~R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide a means to coordinate telecommunications among their respective areas. This coordination shall include the ability to investigate and recommend solutions to telecommunications problems within the area and with other areas.~~

~~1.2. Unless agreed to otherwise, each Each adjacent Reliability Coordinator within the same Interconnection.~~

~~R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real shall designate an Alternative Interpersonal Communication capability with the following entities: [*Violation Risk Factor: High*] [*Time Horizon: Real-time generation control and operation of the interconnected Bulk Electric System: Operations*]~~

~~R3. 2.1. All Transmission Operators and Balancing Authorities may use an alternate language for internal operations.~~

~~Each within its Reliability Coordinator, Area.~~

~~2.2. Each adjacent Reliability Coordinator within the same Interconnection.~~

~~R3. Each Transmission Operator shall have Interpersonal Communication capability with the following entities (unless the Transmission Operator detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): [*Violation Risk Factor: High*] [*Time Horizon: Real-time Operations*]~~

~~3.1. Its Reliability Coordinator.~~

~~3.2. Each Balancing Authority within its Transmission Operator Area.~~

~~3.3. Each Distribution Provider within its Transmission Operator Area.~~

~~3.4. Each Generator Operator within its Transmission Operator Area.~~

~~3.5. Each adjacent Transmission Operator, and synchronously connected.~~

~~3.6. Each adjacent Transmission Operator asynchronously connected.~~

~~R4. Each Transmission Operator shall designate an Alternative Interpersonal Communication capability with the following entities: [*Violation Risk Factor: High*] [*Time Horizon: Real-time Operations*]~~

~~4.1. Its Reliability Coordinator.~~

~~4.2. Each Balancing Authority within its Transmission Operator Area.~~

~~4.3. Each adjacent Transmission Operator synchronously connected.~~

~~4.4. Each adjacent Transmission Operator asynchronously connected.~~

~~R5. Each Balancing Authority shall have Interpersonal Communication capability with the following entities (unless the Balancing Authority detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): [*Violation Risk Factor: High*] [*Time Horizon: Real-time Operations*]~~

~~5.1. Its Reliability Coordinator.~~

- 5.2. Each Transmission Operator that operates Facilities within its Balancing Authority Area.
- 5.1.5.3. ~~Each Distribution Provider within its Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities Area.~~
- 5.4. ~~Each NERCNet User Organization~~Generator Operator that operates Facilities within its Balancing Authority Area.
- 5.5. Each Adjacent Balancing Authority.
- R6. Each Balancing Authority shall ~~adhere to~~ designate an Alternative Interpersonal Communication capability with ~~the requirements~~ following entities: *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*
- 1.1. Its Reliability Coordinator.
- 1.2. Each Transmission Operator that operates Facilities within its Balancing Authority Area.
- 1.3. Each Adjacent Balancing Authority.
- R7. Each Distribution Provider shall have Interpersonal Communication capability with the following entities (unless the Distribution Provider detects a failure of its Interpersonal Communication capability in Attachment which case Requirement R11 shall apply): *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*
- 7.1-COM-001, “NERCNet Security Policy.”. Its Balancing Authority.
- 7.2. Its Transmission Operator.
- R8. Each Generator Operator shall have Interpersonal Communication capability with the following entities (unless the Generator Operator detects a failure of its Interpersonal Communication capability in which case Requirement R11 shall apply): *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*
- 8.1. Its Balancing Authority.
- 8.2. Its Transmission Operator.
- R9. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test its Alternative Interpersonal Communication capability at least once each calendar month. If the test is unsuccessful, the responsible entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communication capability within 2 hours. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations, Same-day Operations]*
- R10. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall notify entities as identified in Requirements R1, R3, and R5, respectively within 60 minutes of the detection of a failure of its Interpersonal Communication capability that lasts 30 minutes or longer. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

R11. Each Distribution Provider and Generator Operator that detects a failure of its Interpersonal Communication capability shall consult each entity affected by the failure, as identified in Requirement R7 for a Distribution Provider or Requirement R8 for a Generator Operator, to determine a mutually agreeable action for the restoration of its Interpersonal Communication capability. [*Violation Risk Factor: Medium*] [*Time Horizon: Real-time Operations*]

### C. Measures

M1. Each Reliability Coordinator, ~~Transmission Operator and Balancing Authority~~ shall have and provide upon request evidence that it has Interpersonal Communication capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with each adjacent Reliability Coordinator within the same Interconnection, which could include, but is not limited to ~~communication facility test procedure documents, records of testing, and maintenance records for communication facilities;~~

- physical assets, or equivalent that will be used to confirm that it manages, alarms, tests and/or actively monitors vital telecommunications facilities. (Requirement 2 part 1)
- ~~The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request~~ dated evidence that could include, but is not limited to, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings or, transcripts of voice recordings, or electronic communications, or equivalent, that will be used to determine compliance to Requirement 4. (R1.)

~~M1.~~M2. Each Reliability Coordinator, ~~Transmission Operator and Balancing Authority~~ shall ~~have and provide upon request its current operating instructions and procedures, either electronic or hard copy that will be used to confirm that it meets Requirement 5.~~ shall have and provide upon request evidence that it designated an Alternative Interpersonal Communication capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with each adjacent Reliability Coordinator within the same Interconnection, which could include, but is not limited to:

- ~~The NERCnet User Organization shall have and provide upon request evidence that could include, but is not limited to documented procedures~~ physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings or, transcripts of voice recordings, or electronic communications. (R2.)

M3. Each Transmission Operator shall have and provide upon request evidence that it has Interpersonal Communication capability with its Reliability Coordinator, each Balancing Authority, Distribution Provider, and Generator Operator within its Transmission Operator Area, and each adjacent Transmission Operator asynchronously or synchronously connected, which could include, but is not limited to:

- physical assets, or

- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, electronic communications, or electronic communication. (R3.)
- M4.** Each Transmission Operator shall have and provide upon request evidence that it designated an Alternative Interpersonal Communication capability with its Reliability Coordinator, each Balancing Authority within its Transmission Operator Area, and each adjacent Transmission Operator asynchronously and synchronously connected, which could include, but is not limited to:
- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R4.)
- M5.** Each Balancing Authority shall have and provide upon request evidence that it has Interpersonal Communication capability with its Reliability Coordinator, each Transmission Operator and Generator Operator that operates Facilities within its Balancing Authority Area, each Distribution Provider within its Balancing Authority Area, and each adjacent Balancing Authority, which could include, but is not limited to:
- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R5.)
- M6.** Each Balancing Authority shall have and provide upon request evidence that it designated an Alternative Interpersonal Communication capability with its Reliability Coordinator, each Transmission Operator that operates Facilities within its Balancing Authority Area, and each adjacent Balancing Authority, which could include, but is not limited to:
- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R6.)
- M7.** Each Distribution Provider shall have and provide upon request evidence that will be used it has Interpersonal Communication capability with its Transmission Operator and its Balancing Authority, which could include, but is not limited to:
- physical assets, or
  - dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R7.)

M8. Each Generator Operator shall have and provide upon request evidence that it has Interpersonal Communication capability with its Balancing Authority and its Transmission Operator, which could include, but is not limited to determine if it adhered:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R8.)

M2-M9. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it tested, at least once each calendar month, its Alternative Interpersonal Communication capability designated in Requirements R2, R4, or R6. If the test was unsuccessful, the entity shall have and provide upon request evidence that it initiated action to the (User Accountability and Compliance) requirements in Attachment 1 COM-001. (Requirement 6) repair or designated a replacement Alternative Interpersonal Communication capability within 2 hours. Evidence could include, but is not limited to: dated and time-stamped test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R9.)

M10. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it notified entities as identified in Requirements R1, R3, and R5, respectively within 60 minutes of the detection of a failure of its Interpersonal Communication capability that lasted 30 minutes or longer. Evidence could include, but is not limited to: dated and time-stamped test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R10.)

M11. Each Distribution Provider and Generator Operator that detected a failure of its Interpersonal Communication capability shall have and provide upon request evidence that it consulted with each entity affected by the failure, as identified in Requirement R7 for a Distribution Provider or Requirement R8 for a Generator Operator, to determine mutually agreeable action to restore the Interpersonal Communication capability. Evidence could include, but is not limited to: dated operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R11.)

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance ~~Monitoring Responsibility~~ Enforcement Authority**

~~NERC shall be responsible for compliance monitoring of the Regional Reliability Organizations~~

~~Regional Reliability Organizations shall be responsible for compliance monitoring of all other entities~~

The Regional Entity shall serve as the Compliance Enforcement Authority (CEA) unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases, the ERO or a Regional Entity approved by FERC or other applicable governmental authority shall serve as the CEA.

## 1.2. Compliance Monitoring and ~~Reset Time Frame~~ Enforcement Processes

~~One or more of the following methods will be used to assess compliance:~~

- ~~— Self certification (Conducted annually with submission according to schedule.)~~
- ~~— Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)~~
- ~~— Periodic Audit (Conducted once every three years according to schedule.)~~
- ~~— Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 calendar days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case by case basis.)~~

~~The Performance Reset Period shall be 12 months from the last finding of non-compliance.~~

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

## 1.3. Data Retention

~~For Measure 1 each~~ The Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall keep data or evidence ~~to show~~ compliance for the previous two calendar years plus the current year. as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- ~~• For Measure 2 each~~ The Reliability Coordinator, Transmission Operator for Requirements R1, R2, R9, and Balancing Authority R10, Measures M1, M2, M9, and M10 shall ~~keep~~ retain written documentation for the most recent twelve calendar months and voice recordings for the most recent 90 calendar days of historical data (evidence).
- ~~• For Measure 3, each Reliability Coordinator, The~~ Transmission Operator, for Requirements R3, R4, R9, and R10, Measures M3, M4, M9, and M10 shall retain written documentation for the most recent twelve calendar months and voice recordings for the most recent 90 calendar days.
- ~~• The~~ Balancing Authority shall have its current operating instructions and procedures to confirm that it meets Requirement 5. for Requirements R5, R6, R9, and R10, Measures M5, M6, M9, and M10 shall retain written documentation for the most recent twelve calendar months and voice recordings for the most recent 90 calendar days.
- ~~• For Measure 4, each~~ The Distribution Provider for Requirements R7 and R11, Measures M7 and M11 shall retain written documentation for the most

recent twelve calendar months and voice recordings for the most recent 90 calendar days.

- The Generator Operator for Requirements R8 and R11, Measures M8 and M11 shall retain written documentation for the most recent twelve calendar months and voice recordings for the most recent 90 calendar days.

If a Reliability Coordinator, Transmission Operator, Balancing Authority and NERCnet User Organization shall keep 90 days of historical data (evidence).

If an entity, Distribution Provider, or Generator Operator is found non-compliant the entity, it shall keep information related to the ~~noncompliance~~ non-compliance until ~~found compliant~~ mitigation is complete and approved or for two years plus the current year time specified above, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor.

The Compliance ~~Monitor~~ Enforcement Authority shall keep the last ~~periodic~~ audit report records and all requested and submitted subsequent ~~compliance~~ audit records.

#### 1.4. Additional Compliance Information

Attachment 1 — COM-001 — NERCnet Security Policy

#### ~~2. Levels of Non-Compliance for Transmission Operator, Balancing Authority or Reliability Coordinator~~

~~2.1. Level 1: Not applicable.~~

~~2.2. Level 2: Not applicable.~~

~~2.3. Level 3: There shall be a separate Level 3 non-compliance, for every one of the following requirements that is in violation:~~

~~2.3.1 The Transmission Operator, Balancing Authority or Reliability Coordinator used a language other than English without agreement as specified in R4.~~

~~2.3.2 There are no written operating instructions and procedures to enable continued operation of the system during the loss of telecommunication facilities as specified in R5.~~

~~2.4. Level 4: Telecommunication systems are not actively monitored, tested, managed or alarmed as specified in R2.~~

#### ~~3. Levels of Non-Compliance — NERCnet User Organization~~

~~3.1. Level 1: Not applicable.~~

~~3.2. Level 2: Not applicable.~~

~~3.3. Level 3: Not applicable.~~

~~3.4. Level 4: Did not adhere to the requirements in Attachment 1 COM-001, NERCnet Security Policy.~~

None.

## **Attachment 1 — COM-001 — NERCnet Security Policy**

### **Policy Statement**

The purpose of this NERCnet Security Policy is to establish responsibilities and minimum requirements for the protection of information assets, computer systems and facilities of NERC and other users of the NERC frame relay network known as “NERCnet.” The goal of this policy is to prevent misuse and loss of assets.

For the purpose of this document, information assets shall be defined as processed or unprocessed data using the NERCnet Telecommunications Facilities including network documentation. This policy shall also apply as appropriate to employees and agents of other corporations or organizations that may be directly or indirectly granted access to information associated with NERCnet.

The objectives of the NERCnet Security Policy are:

- To ensure that NERCnet information assets are adequately protected on a cost effective basis and to a level that allows NERC to fulfill its mission.
- To establish connectivity guidelines for a minimum level of security for the network.
- To provide a mandate to all Users of NERCnet to properly handle and protect the information that they have access to in order for NERC to be able to properly conduct its business and provide services to its customers.

### **NERC’s Security Mission Statement**

NERC recognizes its dependency on data, information, and the computer systems used to facilitate effective operation of its business and fulfillment of its mission. NERC also recognizes the value of the information maintained and provided to its members and others authorized to have access to NERCnet. It is, therefore, essential that this data, information, and computer systems, and the manual and technical infrastructure that supports it, are secure from destruction, corruption, unauthorized access, and accidental or deliberate breach of confidentiality.

### **Implementation and Responsibilities**

— This section identifies the various roles and responsibilities related to the protection of NERCnet resources.

#### **NERCnet User Organizations**

Users of NERCnet who have received authorization from NERC to access the NERC network are considered users of NERCnet resources. To be granted access, users shall complete a User Application Form and submit this form to the NERC Telecommunications Manager.

#### **Responsibilities**

It is the responsibility of NERCnet User Organizations to:

- Use NERCnet facilities for NERC authorized business purposes only.
- Comply with the NERCnet security policies, standards, and guidelines, as well as any procedures specified by the data owner.
- Prevent unauthorized disclosure of the data.
- Report security exposures, misuse, or non-compliance situations via Reliability Coordinator Information System or the NERC Telecommunications Manager.
- Protect the confidentiality of all user IDs and passwords.
- Maintain the data they own.
- Maintain documentation identifying the users who are granted access to NERCnet data or applications.
- Authorize users within their organizations to access NERCnet data and applications.

- ~~Advise staff on NERCnet Security Policy.~~
- ~~Ensure that all NERCnet users understand their obligation to protect these assets.~~
- ~~Conduct self assessments for compliance.~~

### **User Accountability and Compliance**

~~All users of NERCnet shall be familiar and ensure compliance with the policies in this document.~~

~~Violations of the NERCnet Security Policy shall include, but not be limited to any act that:~~

- ~~Exposes NERC or any user of NERCnet to actual or potential monetary loss through the compromise of data security or damage.~~
- ~~Involves the disclosure of trade secrets, intellectual property, confidential information or the unauthorized use of data.~~
  - ~~Involves the use of data for illicit purposes, which may include violation of any law, regulation or reporting requirement of any law enforcement or government body.~~

**Exhibit B**

**Proposed Reliability Standard COM-002-4**

## A. Introduction

1. **Title:** Operating Personnel Communications Protocols
2. **Number:** COM-002-4
3. **Purpose:** To improve communications for the issuance of Operating Instructions with predefined communications protocols to reduce the possibility of miscommunication that could lead to action or inaction harmful to the reliability of the Bulk Electric System (BES).
4. **Applicability:**
  - 4.1. **Functional Entities**
    - 4.1.1 Balancing Authority
    - 4.1.2 Distribution Provider
    - 4.1.3 Reliability Coordinator
    - 4.1.4 Transmission Operator
    - 4.1.5 Generator Operator
5. **Effective Date:** The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

## B. Requirements

- R1. Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall develop documented communications protocols for its operating personnel that issue and receive Operating Instructions. The protocols shall, at a minimum: [*Violation Risk Factor: Low*][*Time Horizon: Long-term Planning*]
  - 1.1. Require its operating personnel that issue and receive an oral or written Operating Instruction to use the English language, unless agreed to otherwise. An alternate language may be used for internal operations.
  - 1.2. Require its operating personnel that issue an oral two-party, person-to-person Operating Instruction to take one of the following actions:
    - Confirm the receiver's response if the repeated information is correct.
    - Reissue the Operating Instruction if the repeated information is incorrect or if requested by the receiver.

- Take an alternative action if a response is not received or if the Operating Instruction was not understood by the receiver.
- 1.3. Require its operating personnel that receive an oral two-party, person-to-person Operating Instruction to take one of the following actions:
    - Repeat, not necessarily verbatim, the Operating Instruction and receive confirmation from the issuer that the response was correct.
    - Request that the issuer reissue the Operating Instruction.
  - 1.4. Require its operating personnel that issue a written or oral single-party to multiple-party burst Operating Instruction to confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction.
  - 1.5. Specify the instances that require time identification when issuing an oral or written Operating Instruction and the format for that time identification.
  - 1.6. Specify the nomenclature for Transmission interface Elements and Transmission interface Facilities when issuing an oral or written Operating Instruction.
- R2.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall conduct initial training for each of its operating personnel responsible for the Real-time operation of the interconnected Bulk Electric System on the documented communications protocols developed in Requirement R1 prior to that individual operator issuing an Operating Instruction. *[Violation Risk Factor: Low][Time Horizon: Long-term Planning]*
- R3.** Each Distribution Provider and Generator Operator shall conduct initial training for each of its operating personnel who can receive an oral two-party, person-to-person Operating Instruction prior to that individual operator receiving an oral two-party, person-to-person Operating Instruction to either: *[Violation Risk Factor: Low][Time Horizon: Long-term Planning]*
- Repeat, not necessarily verbatim, the Operating Instruction and receive confirmation from the issuer that the response was correct, or
  - Request that the issuer reissue the Operating Instruction.
- R4.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall at least once every twelve (12) calendar months: *[Violation Risk Factor: Medium][Time Horizon: Operations Planning]*
- 4.1. Assess adherence to the documented communications protocols in Requirement R1 by its operating personnel that issue and receive Operating Instructions, provide feedback to those operating personnel and take corrective action, as deemed appropriate by the entity, to address deviations from the documented protocols.
  - 4.2. Assess the effectiveness of its documented communications protocols in Requirement R1 for its operating personnel that issue and receive Operating Instructions and modify its documented communication protocols, as necessary.

- R5.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator that issues an oral two-party, person-to-person Operating Instruction during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, shall either: *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*
- Confirm the receiver's response if the repeated information is correct (in accordance with Requirement R6).
  - Reissue the Operating Instruction if the repeated information is incorrect or if requested by the receiver, or
  - Take an alternative action if a response is not received or if the Operating Instruction was not understood by the receiver.
- R6.** Each Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator that receives an oral two-party, person-to-person Operating Instruction during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, shall either: *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*
- Repeat, not necessarily verbatim, the Operating Instruction and receive confirmation from the issuer that the response was correct, or
  - Request that the issuer reissue the Operating Instruction.
- R7.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator that issues a written or oral single-party to multiple-party burst Operating Instruction during an Emergency shall confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction. *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*

### **C. Measures**

- M1.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall provide its documented communications protocols developed for Requirement R1.
- M2.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall provide its initial training records related to its documented communications protocols developed for Requirement R1 such as attendance logs, agendas, learning objectives, or course materials in fulfillment of Requirement R2.
- M3.** Each Distribution Provider and Generator Operator shall provide its initial training records for its operating personnel such as attendance logs, agendas, learning objectives, or course materials in fulfillment of Requirement R3.
- M4.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall provide evidence of its assessments, including spreadsheets, logs or other evidence of feedback, findings of effectiveness and any changes made to its documented communications protocols developed for Requirement R1 in fulfillment of

Requirement R4. The entity shall provide, as part of its assessment, evidence of any corrective actions taken where an operating personnel's non-adherence to the protocols developed in Requirement R1 is the sole or partial cause of an Emergency and for all other instances where the entity determined that it was appropriate to take a corrective action to address deviations from the documented protocols developed in Requirement R1.

- M5.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issued an oral two-party, person-to-person Operating Instruction during an Emergency, excluding oral single-party to multiple-party burst Operating Instructions, shall have evidence that the issuer either: 1) confirmed that the response from the recipient of the Operating Instruction was correct; 2) reissued the Operating Instruction if the repeated information was incorrect or if requested by the receiver; or 3) took an alternative action if a response was not received or if the Operating Instruction was not understood by the receiver. Such evidence could include, but is not limited to, dated and time-stamped voice recordings, or dated and time-stamped transcripts of voice recordings, or dated operator logs in fulfillment of Requirement R5.
- M6.** Each Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator that was the recipient of an oral two-party, person-to-person Operating Instruction during an Emergency, excluding oral single-party to multiple-party burst Operating Instructions, shall have evidence to show that the recipient either repeated, not necessarily verbatim, the Operating Instruction and received confirmation from the issuer that the response was correct, or requested that the issuer reissue the Operating Instruction in fulfillment of Requirement R6. Such evidence may include, but is not limited to, dated and time-stamped voice recordings (if the entity has such recordings), dated operator logs, an attestation from the issuer of the Operating Instruction, memos or transcripts.
- M7.** Each Balancing Authority, Reliability Coordinator and Transmission Operator that issued a written or oral single or multiple-party burst Operating Instruction during an Emergency shall provide evidence that the Operating Instruction was received by at least one receiver. Such evidence may include, but is not limited to, dated and time-stamped voice recordings (if the entity has such recordings), dated operator logs, electronic records, memos or transcripts.

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance Enforcement Authority**

As defined in the NERC Rules of Procedure, "Compliance Enforcement Authority" means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

#### **1.2. Data Retention**

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to

provide other evidence to show that it was compliant for the full time period since the last audit.

Each Balancing Authority, Distribution Provider, Generator Operator, Reliability Coordinator, and Transmission Operator shall each keep data or evidence for each applicable Requirement for the current calendar year and one previous calendar year, with the exception of voice recordings which shall be retained for a minimum of 90 calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Balancing Authority, Distribution Provider, Generator Operator, Reliability Coordinator, or Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

## A. Introduction

- ~~1. Title: Communication and Coordination~~
1. Title: Operating Personnel Communications Protocols
2. Number: COM-002-~~24~~
- ~~3. Purpose: To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications and that these communications capabilities are staffed and available for addressing a real-time emergency condition. To ensure communications by operating personnel are effective.~~
3. Purpose: To improve communications for the issuance of Operating Instructions with predefined communications protocols to reduce the possibility of miscommunication that could lead to action or inaction harmful to the reliability of the Bulk Electric System (BES).
4. Applicability:
  - 4.1. Functional Entities
    - 4.1.1 Balancing Authority
    - 4.1.2 Distribution Provider
    - ~~4.1.4.1.3 Reliability Coordinators~~Coordinator
  - ~~4.2. Balancing Authorities.~~
    - ~~4.3.4.1.4~~ Transmission OperatorsOperator
    - ~~4.4.4.1.5~~ Generator OperatorsOperator
- ~~5. Effective Date: January 1, 2007~~
5. Effective Date: The standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

---

## B. Requirements

- R1. Each ~~Transmission Operator~~, Balancing Authority, Reliability Coordinator, and Transmission Operator shall develop documented communications protocols for its operating personnel that issue and receive Operating Instructions. The protocols shall, at a minimum: [Violation Risk Factor: Low][Time Horizon: Long-term Planning]

- 1.1. Require its operating personnel that issue and receive an oral or written Operating Instruction to use the English language, unless agreed to otherwise. An alternate language may be used for internal operations.
  - 1.2. Require its operating personnel that issue an oral two-party, person-to-person Operating Instruction to take one of the following actions:
    - Confirm the receiver’s response if the repeated information is correct.
    - Reissue the Operating Instruction if the repeated information is incorrect or if requested by the receiver.
    - Take an alternative action if a response is not received or if the Operating Instruction was not understood by the receiver.
  - 1.3. Require its operating personnel that receive an oral two-party, person-to-person Operating Instruction to take one of the following actions:
    - Repeat, not necessarily verbatim, the Operating Instruction and receive confirmation from the issuer that the response was correct.
    - Request that the issuer reissue the Operating Instruction.
  - 1.4. Require its operating personnel that issue a written or oral single-party to multiple-party burst Operating Instruction to confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction.
  - 1.5. Specify the instances that require time identification when issuing an oral or written Operating Instruction and the format for that time identification.
  - 1.6. Specify the nomenclature for Transmission interface Elements and Transmission interface Facilities when issuing an oral or written Operating Instruction.
- R2. Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall conduct initial training for each of its operating personnel responsible for the Real-time operation of the interconnected Bulk Electric System on the documented communications protocols developed in Requirement R1 prior to that individual operator issuing an Operating Instruction. [Violation Risk Factor: Low][Time Horizon: Long-term Planning]
- R3. Each Distribution Provider and Generator Operator shall ~~have communications (voice and data links) with~~ conduct initial training for each of its operating personnel who can receive an oral two-party, person-to-person Operating Instruction prior to that individual operator receiving an oral two-party, person-to-person Operating Instruction to either: [Violation Risk Factor: Low][Time Horizon: Long-term Planning]
- Repeat, not necessarily verbatim, the Operating Instruction and receive confirmation from the issuer that the response was correct, or
  - Request that the issuer reissue the Operating Instruction.

R4. Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall at least once every twelve (12) calendar months: *[Violation Risk Factor: Medium][Time Horizon: Operations Planning]*

R1.4.1. Assess adherence to the documented communications protocols in Requirement R1 by its operating personnel that issue and receive Operating Instructions, provide feedback to those operating personnel and take corrective action, as deemed appropriate Reliability Coordinators, Balancing Authorities, and Transmission Operators. Such communications shall be staffed and available for addressing a real-time emergency condition by the entity, to address deviations from the documented protocols.

4.2. Assess the effectiveness of its documented communications protocols in Requirement R1 for its operating personnel that issue and receive Operating Instructions and modify its documented communication protocols, as necessary.

R5. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator, and all other potentially affected Balancing Authorities and Transmission Operators through predetermined communication paths of any condition that could threaten the reliability of its area or when firm load shedding Transmission Operator that issues an oral two-party, person-to-person Operating Instruction during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, shall either: *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*

- 5.1. Confirm the receiver's response if the repeated information is anticipated-correct (in accordance with Requirement R6).
- Reissue the Operating Instruction if the repeated information is incorrect or if requested by the receiver, or
- Take an alternative action if a response is not received or if the Operating Instruction was not understood by the receiver.

R6. Each Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator that receives an oral two-party, person-to-person Operating Instruction during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, shall either: *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*

- Repeat, not necessarily verbatim, the Operating Instruction and receive confirmation from the issuer that the response was correct, or
- Request that the issuer reissue the Operating Instruction.

R2.R7. Each Balancing Authority, Reliability Coordinator, and Transmission Operator, and Balancing Authority shall issue directives in a clear, concise, and definitive manner; that issues a written or oral single-party to multiple-party burst Operating Instruction during an Emergency shall ensure the recipient of the directive repeats the information back correctly; and shall acknowledge the response as correct or repeat

~~the original statement to resolve any misunderstandings, confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction. [Violation Risk Factor: High][Time Horizon: Real-time Operations]~~

### C. Measures

- ~~M1. Each Transmission Operator, Balancing Authority and Generator Operator shall have communication facilities (voice and data links) with appropriate Reliability Coordinators, Balancing Authorities, and Transmission Operators and shall have and provide as evidence, a list of communication facilities or other equivalent evidence that confirms that the communications have been provided to address a real-time emergency condition. (Requirement 1, part 1)~~
- ~~M1. The~~Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall have and provide upon request its documented communications protocols developed for Requirement R1.
- ~~M2. Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall provide its initial training records related to its documented communications protocols developed for Requirement R1 such as attendance logs, agendas, learning objectives, or course materials in fulfillment of Requirement R2.~~
- ~~M3. Each Distribution Provider and Generator Operator shall provide its initial training records for its operating personnel such as attendance logs, agendas, learning objectives, or course materials in fulfillment of Requirement R3.~~
- ~~M4. Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall provide evidence of its assessments, including spreadsheets, logs or other evidence of feedback, findings of effectiveness and any changes made to its documented communications protocols developed for Requirement R1 in fulfillment of Requirement R4. The entity shall provide, as part of its assessment, evidence of any corrective actions taken where an operating personnel's non-adherence to the protocols developed in Requirement R1 is the sole or partial cause of an Emergency and for all other instances where the entity determined that it was appropriate to take a corrective action to address deviations from the documented protocols developed in Requirement R1.~~
- ~~M5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issued an oral two-party, person-to-person Operating Instruction during an Emergency, excluding oral single-party to multiple-party burst Operating Instructions, shall have evidence that the issuer either: 1) confirmed that the response from the recipient of the Operating Instruction was correct; 2) reissued the Operating Instruction if the repeated information was incorrect or if requested by the receiver; or 3) took an alternative action if a response was not received or if the Operating Instruction was not understood by the receiver. Such evidence could include, but is not limited to, operator logs, dated and time-stamped voice recordings, or dated and time-stamped transcripts of voice recordings, or dated operator logs in fulfillment of Requirement R5.~~
- ~~M6. Each Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator that was the recipient of an oral two-party, person-to-person~~

Operating Instruction during an Emergency, excluding oral single-party to multiple-party burst Operating Instructions, shall have evidence to show that the recipient either repeated, not necessarily verbatim, the Operating Instruction and received confirmation from the issuer that the response was correct, or requested that the issuer reissue the Operating Instruction in fulfillment of Requirement R6. Such evidence may include, but is not limited to, dated and time-stamped voice recordings (if the entity has such recordings), dated operator logs, an attestation from the issuer of the Operating Instruction, memos or transcripts.

~~M2.M7.~~ Each Balancing Authority, Reliability Coordinator and Transmission Operator that issued a written or oral single or multiple-party burst Operating Instruction during an Emergency shall provide evidence that the Operating Instruction was received by at least one receiver. Such evidence may include, but is not limited to, dated and time-stamped voice recordings (if the entity has such recordings), dated operator logs, electronic communications, or other equivalent evidence that will be used to determine if it notified its Reliability Coordinator, and all other potentially affected Balancing Authorities and Transmission Operators of a condition that could threaten the reliability of its area or when firm load shedding was anticipated. (Requirement 4.1)records, memos or transcripts.

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance ~~Monitoring Responsibility~~ Enforcement Authority**

~~Regional Reliability Organizations shall be responsible for compliance monitoring.~~

#### **1.2. ~~Compliance Monitoring and Reset Time Frame~~**

~~One or more of the following methods will be used to assess compliance:~~

- ~~— Self-certification (Conducted annually with submission according to schedule.)~~
- ~~— Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)~~
- ~~— Periodic Audit (Conducted once every three years according to schedule.)~~
- ~~— Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)~~

~~The Performance Reset Period shall be 12 months from the last finding of non-compliance.~~

As defined in the NERC Rules of Procedure, “Compliance Enforcement Authority” means NERC or the Regional Entity in their respective roles of monitoring and enforcing compliance with the NERC Reliability Standards.

**1.3.1.2. Data Retention**

~~Each Balancing Authority, Transmission Operator and Generator Operator shall keep evidence of compliance for the previous two calendar years plus the current year. (Measure 1)~~

~~Each~~The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

~~Each Balancing Authority, Distribution Provider, Generator Operator, Reliability Coordinator, and Transmission Operator shall each keep data or evidence for each applicable Requirement for the current calendar year and one previous calendar year, with the exception of voice recordings which shall be retained for a minimum of 90 calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.~~

~~If a Balancing Authority and, Distribution Provider, Generator Operator, Reliability Coordinator, or Transmission Operator shall keep 90 days of historical data. (Measure 2).~~

~~If an entity is found non-compliant the entity, it shall keep information related to the noncompliance non-compliance until found compliant mitigation is complete and approved or for two years plus the current year time period specified above, whichever is longer.~~

~~Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor.~~

~~The Compliance Monitor~~Enforcement Authority shall keep the last periodic audit report records and all requested and submitted subsequent compliance audit records.

**Compliance Monitoring and Assessment Processes**

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

**1.4.1.3. Additional Compliance Information**

None.

~~2. Levels of Non-Compliance for Transmission Operator and Balancing Authority:~~

~~2.1. Level 1: Not applicable.~~

~~2.2. Level 2: Not applicable.~~

~~2.3. Level 3: Not applicable.~~

~~2.4. Level 4: Communication did not occur as specified in R1.1.~~

~~3. Levels of Non-Compliance for Generator Operator:~~

~~3.1. Level 1: Not applicable.~~

~~3.2. Level 2: Not applicable.~~

~~3.3. Level 3: Not applicable.~~

~~3.4. Level 4: Communication facilities are not provided to address a real-time emergency condition as specified in R1.~~

# Implementation Plan and Mapping Document

## COM-001-2 Communications

### Requested Approval

COM-001-2 – Communications

Definition: Interpersonal Communication

Definition: Alternative Interpersonal Communication

### Requested Retirement

COM-001-1.1 – Telecommunications, except Requirement R4

Requirement R4 is being revised for inclusion in Standard COM-002-4, Operating Personnel Communications Protocols and will be requested for retirement upon the effective date COM-002-4.

### Prerequisite Approvals

None.

### Defined Terms in the NERC Glossary

The RCSDT proposes the following new definitions:

**Interpersonal Communication:** Any medium that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.

### Conforming Changes to Requirements in Already Approved Standards

The RCSDT proposes retiring COM-001-1.1 Requirement R5 as it is redundant with EOP-008-0, Requirement R1 as well as EOP-008-1 Requirement R1.

### Revisions to Approved Standards and Definitions

The RCSDT revised the COM-001-1.1 standard proposes retiring four Requirements (R1, R4, R5, and R6). The COM-001-1.1 standard, Requirement R1 is proposed for replacement with COM-001-2, Requirements R1, R2, R3, R4, R5, R6, R7, and R8 to achieve clarity to which entities are required to have to reliable communications. Requirement R2 in COM-001-1.1 will become Requirement R9 in COM-001-2. Requirement R3 in COM-001-1.1 is included within Requirement R1 of COM-001-2. Requirement R4 will remain effective until its inclusion in COM-002-4 that is currently under development in Project 2007-02 – Operating Personnel Communication Protocols. Requirement R5 in COM-001-1.1 is redundant with EOP-008-0, Requirement R1 and EOP-008-1, Requirement R1 and is

proposed for retirement upon the effective date of COM-001-2. The COM-001-1.1 standard, Requirement R6 is proposed for retirement as it is an ERO procedural requirement and does not impact reliability. Requirements R10 and R11 are new requirements. Changes were made to eliminate redundancies between standards (existing and proposed), to align with the ERO Rules of Procedure and to address known issues and certain directives in FERC Order 693.

### **Applicable Entities**

- Reliability Coordinator
- Balancing Authority
- Transmission Operator
- Generator Operator
- Distribution Provider

### **Effective Date**

#### **New or Revised Standards**

COM-001-2      The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

#### **Standard for Retirement**

COM-001-1.1, Requirements R1, R2, R3, R5, and R6      Midnight of the day immediately prior to the Effective Date of COM-001-2 in the particular Jurisdiction in which the new standard is becoming effective. Note: Requirement R4 will remain effective until its inclusion in the standard COM-002-4 currently under development.

## New or Revised Definitions

**Interpersonal Communication** – The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

**Alternative Interpersonal Communication** – The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

**Revisions or Retirements to Already Approved Standards**

The following tables identify the sections of approved standards that shall be retired or revised when this standard becomes effective. If the drafting team is recommending the retirement or revision of a requirement, that text is [blue](#).

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1.1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p><b>COM-001-2</b></p> <p><b>R1.</b> Each Reliability Coordinator shall have Interpersonal Communication capability with the following entities (unless the Reliability Coordinator detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R1.1.</b> All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.</p> <p><b>R1.2.</b> Each adjacent Reliability Coordinator within the same Interconnection.</p> <p><b>R2.</b> Each Reliability Coordinator shall designate an Alternative Interpersonal Communication capability with the following entities: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R2.1.</b> All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.</p> <p><b>R2.2.</b> Each adjacent Reliability Coordinator within the same Interconnection.</p> <p><b>R3.</b> Each Transmission Operator shall have Interpersonal</p>

	<p><b>R4.3.</b> Each adjacent Transmission Operator synchronously connected.</p> <p><b>R4.4.</b> Each adjacent Transmission Operator asynchronously connected.</p>
<p><b>Notes:</b> The requirements were made clearer as to which capabilities specific entities were required to have to reliable communications.</p>	
<p><b>COM-001-1.1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p><b>COM-001-2</b></p> <p><b>R5.</b> Each Balancing Authority shall have Interpersonal Communication capability with the following entities (unless the Reliability Coordinator detects a failure of its Interpersonal Communication capability in which case Requirement R10 shall apply): <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R5.1.</b> Its Reliability Coordinator.</p> <p><b>R5.2.</b> Each Transmission Operator that operates Facilities within its Balancing Authority Area.</p> <p><b>R5.3.</b> Each Distribution Provider within its Balancing Authority Area.</p> <p><b>R5.4.</b> Each Generator Operator that operates Facilities within its Balancing Authority Area.</p> <p><b>R5.5.</b> Each Adjacent Balancing Authority.</p> <p><b>R6.</b> Each Balancing Authority shall designate an Alternative Interpersonal Communication capability with the following entities: <i>[Violation Risk Factor: High][Time Horizon: Real-time</i></p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p><i>Operations]</i></p> <p><b>R6.1.</b> Its Reliability Coordinator.</p> <p><b>R6.2.</b> Each Transmission Operator that operates Facilities within its Balancing Authority Area.</p> <p><b>R6.3.</b> Each Adjacent Balancing Authority.</p> <p><b>R7.</b> Each Distribution Provider shall have Interpersonal Communication capability with the following entities (unless the Reliability Coordinator detects a failure of its Interpersonal Communication capability in which case Requirement R11 shall apply): <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R7.1.</b> Its Transmission Operator.</p> <p><b>R7.2.</b> Its Balancing Authority.</p> <p><b>R8.</b> Each <b>Generator Operator</b> shall have Interpersonal Communication capability with the following entities (unless the Reliability Coordinator detects a failure of its Interpersonal Communication capability in which case Requirement R11 shall apply): <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R8.1.</b> Its Balancing Authority.</p> <p><b>R8.2.</b> Its Transmission Operator.</p>
<p><b>Notes:</b> The requirements we made clearer as to which capabilities specific entities were required to have for reliable interpersonal communications. Requirements R7 and R8 were created to address the FERC directive (Order No. 693, P508) to “(1) expand the applicability to include generator operators and distribution providers and includes Requirements for their telecommunications facilities;”</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1.1</b></p> <p><b>R2.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall <b>manage, alarm, test and/or actively monitor vital telecommunications facilities. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications.</b> <i>[Violation Risk Factor: Medium]</i></p>	<p><b>COM-001-2</b></p> <p><b>R9.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall <b>test its Alternative Interpersonal Communication capability at least once each calendar month. If the test is unsuccessful, the responsible entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communication capability within 2 hours.</b> <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>
<p><b>Notes:</b></p>	
<p><b>COM-001-1.1</b></p> <p><b>R3.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall <b>provide a means to coordinate telecommunications among their respective areas. This coordination shall include the ability to investigate and recommend solutions to telecommunications problems within the area and with other areas.</b> <i>[Violation Risk Factor: Lower]</i></p>	<p><b>COM-001-2</b></p> <p><b>R1.</b> Each Reliability Coordinator shall have Interpersonal Communication capability with the following entities: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R1.1.</b> All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.</p> <p><b>R1.2.</b> Each adjacent Reliability Coordinator within the same Interconnection.</p>
<p><b>Notes:</b></p>	
<p><b>COM-001-1.1</b></p> <p><b>R4.</b> Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use</p>	<p><b>None - retire</b></p> <ul style="list-style-type: none"> <li>▪ This requirement is being vetted by the OPCPSDT in Project</li> </ul>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. <i>[Violation Risk Factor: Medium]</i></p>	<p>2007-02 – Operating Personnel Communication Protocols (COM-002-4). This requirement and measure will be removed from COM-001-1.1 upon the effective date of COM-002-4.</p>
<p><b>Notes:</b></p>	
<p><b>COM-001-1.1</b></p> <p><b>R5.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities. <i>[Violation Risk Factor: Lower]</i></p>	<p><b>EOP-008-0</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have a plan to continue reliability operations in the event its control center becomes inoperable. The contingency plan must meet the following requirements:</p> <ul style="list-style-type: none"> <li><b>R1.1.</b> The contingency plan shall not rely on data or voice communication from the primary control facility to be viable.</li> <li><b>R1.2.</b> The plan shall include procedures and responsibilities for providing basic tie line control and procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.</li> <li><b>R1.3.</b> The contingency plan must address monitoring and control of critical transmission facilities, generation control, voltage control, time and frequency control, control of critical substation devices, and logging of significant power system events. The plan shall list the critical facilities.</li> </ul>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p><b>R1.4.</b> The plan shall include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.</p> <p><b>R1.5.</b> The plan shall include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.</p> <p><b>R1.6.</b> The plan shall include procedures and responsibilities for providing annual training to ensure that operating personnel are able to implement the contingency plans.</p> <p><b>R1.7.</b> The plan shall be reviewed and updated annually.</p> <p><b>R1.8.</b> Interim provisions must be included if it is expected to take more than one hour to implement the contingency plan for loss of primary control facility.</p> <p><b>EOP-008-1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. This Operating Plan for backup functionality shall include the following, at a minimum: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]</p> <p><b>1.1.</b> The location and method of implementation for providing backup functionality for the time it takes to restore the</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p>primary control center functionality.</p> <p><b>1.2.</b> A summary description of the elements required to support the backup functionality. These elements shall include, at a minimum:</p> <p><b>1.2.1.</b> Tools and applications to ensure that System Operators have situational awareness of the BES.</p> <p><b>1.2.2.</b> Data communications.</p> <p><b>1.2.3.</b> Voice communications.</p> <p><b>1.2.4.</b> Power source(s).</p> <p><b>1.2.5.</b> Physical and cyber security.</p> <p><b>1.3.</b> An Operating Process for keeping the backup functionality consistent with the primary control center.</p> <p><b>1.4.</b> Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup functionality.</p> <p><b>1.5.</b> A transition period between the loss of primary control center functionality and the time to fully implement the backup functionality that is less than or equal to two hours.</p> <p><b>1.6.</b> An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include at a minimum:</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p><b>1.6.1.</b> A list of all entities to notify when there is a change in operating locations.</p> <p><b>1.6.2.</b> Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.</p> <p><b>1.6.3.</b> Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.</p>
<p><b>Notes:</b> The RCSDT proposes retiring COM-001-1.1, Requirement R5 as it is redundant with EOP-008-0, Requirement R1 as well as EOP-008-1 Requirement R1.</p>	
<p><b>COM-001-1.1</b></p> <p><b>R6.</b> Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001, “NERCNet Security Policy.” <i>[Violation Risk Factor: Lower]</i></p>	<p><b>None – retire</b></p>
<p><b>Notes:</b> The RCSDT is recommending that R6 be retired. This is an ERO procedural issue and should not be in a reliability standard. It should be included in the ERO Rules of Procedure.</p>	
<p><b>None</b></p>	<p><b>New Requirement</b></p> <p><b>R10.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall notify entities as identified in Requirements R1, R3, and R5, respectively within 60 minutes of the detection of a failure of its Interpersonal Communication</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	capability that lasts 30 minutes or longer. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]</i>
None	<p><b>New Requirement</b></p> <p><b>R11.</b>Each Distribution Provider and Generator Operator that detects a failure of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority to determine a mutually agreeable action to restore the Interpersonal Communication capability. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>

**Implementation Plan COM-002-4**

## Implementation Plan

### Operating Personnel Communications Protocols

#### COM-002-4

#### Standards Involved

Approval:

- COM-002-4 – Operating Personnel Communications Protocols

Retirements:

- COM-001-1.1 Requirement R4 – Telecommunications
- COM-002-2 – Communication and Coordination
- COM-002-3 – Communication and Coordination

#### Prerequisite Approvals

None

#### Revisions to Glossary

The following term is proposed for addition to the NERC Glossary of Terms:

#### Operating Instruction —

A command by operating personnel responsible for the Real-time operation of the interconnected Bulk Electric System to change or preserve the state, status, output, or input of an Element of the Bulk Electric System or Facility of the Bulk Electric System. (A discussion of general information and of potential options or alternatives to resolve Bulk Electric System operating concerns is not a command and is not considered an Operating Instruction.)

#### Applicable Entities

Balancing Authority  
Distribution Provider  
Generator Operator  
Reliability Coordinator  
Transmission Operator

#### Conforming Changes to Other Standards

None

**Effective Date**

COM-002-4 and the definition of “Operating Instruction” shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date that the standard is approved by an applicable governmental authority or as otherwise provided for in a jurisdiction where approval by an applicable governmental authority is required for a standard to go into effect. Where approval by an applicable governmental authority is not required, the standard shall become effective on the first day of the first calendar quarter that is twelve (12) months after the date the standard is adopted by the NERC Board of Trustees or as otherwise provided for in that jurisdiction.

**Retirement of Existing Standards:**

COM-001-1.1 Requirement R4, COM-002-2, and COM-002-3, as applicable, shall be retired at midnight of the day immediately prior to the effective date of COM-002-4 in the particular jurisdiction in which the new standard is becoming effective.

Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.</p>	<p><b>COM-002-4</b></p> <p>R1. Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall have documented communications protocols. The protocols shall, at a minimum: <i>[Violation Risk Factor: Low][Time Horizon: Long-term Planning]</i></p> <p>1.1. Require the issuer and receiver of an oral or written Operating Instruction to use the English language, unless agreed to otherwise. An alternate language may be used for internal operations</p>
<p><b>Notes:</b> Moved COM-001-1 R4 into COM-002-4 Requirement R1 Part 1.1 and modified language to include the defined term "Operating Instruction."</p>	

## COM-002-2 to COM-002-3

Board Approved Standard	Proposed Replacement Requirement(s)
<p>COM-002-2</p> <p>R1. Each Transmission Operator, Balancing Authority, and Generator Operator shall have communications (voice and data links) with appropriate Reliability Coordinators, Balancing Authorities, and Transmission Operators. Such communications shall be staffed and available for addressing a real-time emergency condition. <i>[Violation Risk Factor: High]</i></p> <p>R1.1 Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator, and all other potentially affected Balancing Authorities and Transmission Operators through predetermined communication paths of any condition that could threaten the reliability of its area or when firm load shedding is anticipated. <i>[Violation Risk Factor: High]</i></p>	<p>The Project 2006-06 SDT proposed retiring COM-002-2, R1 and R1.1 during the development of proposed standard COM-002-3. The following rationale was provided by that drafting team in the Implementation Plan for Draft 6 of Project 2006-06. The same rationale continues to apply for the current version of COM-002-4:</p> <p>“The communications requirements of R1 are addressed in existing COM-001-1.1 as well as the proposed COM-001-2 requirements. Additionally, IRO-010-1a addresses data provisions.</p> <p>The Project 2006-06 SDT contends that COM-002-2, R1.1 is a low level facilitating requirement that is more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. Examples include:</p> <ul style="list-style-type: none"> <li>• EOP-002-1, R3 – outlines BA to RC communications. IRO-001-1, R3 requires adequate telecommunication for the Reliability Coordinator to direct actions of multiple entities, including TOPs and BAs.</li> <li>• TOP-001-1, R3 requires adequate telecommunications facilities for the TOP, BA, and GOP to be able to receive directives from the RC.</li> <li>• TOP-001-1, R5 requires communications between TOPs and RCs for emergency situations.</li> </ul>

Board Approved Standard	Proposed Replacement Requirement(s)
	<ul style="list-style-type: none"> <li>• TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC.</li> <li>• TOP-006-1, R1 requires adequate telecommunications for the GOP to inform the BA and TOP of resources. The BA and TOP will then inform the RC, other TOP and BAs of all transmission and generation available for use.</li> <li>• PER-001-1, R1 and PER-004-1, R1 set forth the staffing requirements.”</li> </ul>
<p><b>Notes:</b> None. The rationale provided above is available at the following hyperlink: <a href="#">Project 2006-06 Draft 6 Implementation Plan</a></p>	
<p>COM-002-2</p> <p>R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall issue directives in a clear, concise, and definitive manner; shall ensure the recipient of the directive repeats the information back correctly; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. <i>[Violation Risk Factor: Medium]</i></p>	<p>COM-002-3</p> <p>The Project 2006-06 expanded COM-002-2 R2 into three requirements in COM-002-3:</p> <p><b>R1.</b> When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p><b>R2.</b> Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive, shall repeat, restate, rephrase or recapitulate the Reliability Directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>

Board Approved Standard	Proposed Replacement Requirement(s)
	<p><b>R3.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive shall either:  <i>[Violation Risk Factor: High] [Time Horizon: Real-Time]</i></p> <ul style="list-style-type: none"> <li>• Confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate, or</li> <li>• Reissue the Reliability Directive to resolve any misunderstandings.</li> </ul>
<p><b>Notes:</b> The Project 2006-06 expanded the list of responsible entities to include the DP and GOP and subdivided the requirement to improve clarity.</p>	

## COM-002-3 to COM-002-4

Board Approved Standard	Proposed Replacement Requirement(s)
<p>COM-002-3</p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>	<p>COM-002-4</p> <p>None</p>
<p><b>Notes:</b> The Project 2007-02 SDT removed the term “Reliability Directive” in order to avoid complications that may result from the Notice of Proposed Rulemaking issued by the Federal Energy Regulatory Commission on November 21, 2014 proposing to remand the</p>	

Board Approved Standard	Proposed Replacement Requirement(s)
<p>definition of “Reliability Directive”. COM-002-4 uses the defined term Operating Instruction to define the circumstances when documented communications protocols must be used, and uses the phrase “Operating Instruction during an Emergency” to designate Operating Instructions that would have qualified as Reliability Directives. The Project 2007-02 SDT coordinated with the Project 2009-02 Real time Operations team and Project 2006-06 SDT and all parties agreed that requirement for an issuer to identify a command as a Reliability Directive is not a communication protocol, and will be considered by each team for future modifications.</p>	
<p>R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive, shall repeat, restate, rephrase or recapitulate the Reliability Directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive shall either: <i>[Violation Risk Factor: High] [Time Horizon: Real-Time]</i></p> <ul style="list-style-type: none"> <li>• Confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate, or</li> </ul> <p>Reissue the Reliability Directive to resolve any misunderstandings.</p>	<p>R1. Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall develop documented communications protocols for its operating personnel that issue and receive Operating Instructions. The protocols shall, at a minimum: <i>[Violation Risk Factor: Low][Time Horizon: Long-term Planning]</i></p> <p>1.1 Require its operating personnel that issue and receive an oral or written Operating Instruction to use the English language, unless agreed to otherwise. An alternate language may be used for internal operations.</p> <p>1.2. Require the issuer of an oral two-party, person-to-person Operating Instruction to wait for a response from the receiver. Once a response is received, or if no response is received, require the issuer to take one of the following actions:</p> <ul style="list-style-type: none"> <li>• Confirm the receiver’s response if the repeated information is correct.</li> <li>• Reissue the Operating Instruction if the repeated information is incorrect or if requested by the receiver.</li> </ul>

Board Approved Standard	Proposed Replacement Requirement(s)
	<ul style="list-style-type: none"> <li>• Take an alternative action if a response is not received or if the Operating Instruction was not understood by the receiver.</li> </ul> <p>1.3 Require its operating personnel that receive an oral two party, person-to-person Operating Instruction to take one of the following actions:</p> <ul style="list-style-type: none"> <li>• Repeat, not necessarily verbatim, the Operating Instruction and receive confirmation from the issuer that the response was correct.</li> <li>• Request that the issuer reissue the Operating Instruction.</li> </ul> <p>1.4 Require its operating personnel that issue a written or oral single-party to multiple-party burst Operating Instruction to confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction.</p> <p>1.5 Specify the instances that require time identification when issuing an oral or written Operating Instruction and the format for that time identification.</p> <p>1.6 Specify the nomenclature for Transmission interface Elements and Transmission interface Facilities when issuing an oral or written Operating Instruction.</p> <p>R2. Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall conduct initial training for each of its operating personnel responsible for the Real-time operation of the interconnected Bulk Electric System on the</p>

Board Approved Standard	Proposed Replacement Requirement(s)
	<p>documented communications protocols developed in Requirement R1 prior to that individual operator issuing an Operating Instruction. <i>[Violation Risk Factor: Low][Time Horizon: Long-term Planning]</i></p> <p>R3. Each Distribution Provider and Generator Operator shall conduct initial training for each of its operating personnel who can receive an oral two-party, person-to-person Operating Instruction prior to that individual operator receiving an oral two-party, person-to-person Operating Instruction to either: <i>[Violation Risk Factor: Low][Time Horizon: Long-term Planning]</i></p> <ul style="list-style-type: none"> <li>• Repeat, not necessarily verbatim, the Operating Instruction and receive confirmation from the issuer that the response was correct, or</li> <li>• Request that the issuer reissue the Operating Instruction.</li> </ul> <p>R4. Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall at least once every twelve (12) calendar months: <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning]</i></p> <p style="padding-left: 40px;">4.1. Assess adherence to the documented communications protocols in Requirement R1 by its operating personnel that issue and receive Operating Instructions, provide feedback to those operating personnel and take corrective action, as deemed appropriate by the entity, to address deviations from the documented protocols.</p>

Board Approved Standard	Proposed Replacement Requirement(s)
	<p>4.2. Assess the effectiveness of its documented communications protocols in Requirement R1 for its operating personnel that issue and receive Operating Instructions and modify its documented communication protocols, as necessary.</p> <p>R5. Each Balancing Authority, Reliability Coordinator, and Transmission Operator that issues an oral two-party, person-to-person Operating Instruction during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, shall either: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <ul style="list-style-type: none"> <li>• Confirm the receiver’s response if the repeated information is correct (in accordance with Requirement R6).</li> <li>• Reissue the Operating Instruction if the repeated information is incorrect or if requested by the receiver, or</li> <li>• Take an alternative action if a response is not received or if the Operating Instruction was not understood by the receiver.</li> </ul> <p>R6. Each Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator that receives an oral two-party, person-to-person Operating Instruction during an</p>

Board Approved Standard	Proposed Replacement Requirement(s)
	<p>Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, shall either: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <ul style="list-style-type: none"> <li>• Repeat, not necessarily verbatim, the Operating Instruction and receive confirmation from the issuer that the response was correct, or</li> <li>• Request that the issuer reissue the Operating Instruction.</li> </ul> <p>R7. Each Balancing Authority, Reliability Coordinator, and Transmission Operator that issues a written or oral single-party to multiple-party burst Operating Instruction during an Emergency shall confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p>
<p><b>Notes:</b> COM-002-3 Requirements R2 and R3 were moved into COM-002-4. The Project 2007-02 SDT has developed COM-002-4 to provide more stringent communication requirements during Emergencies and Alerts as well as establish communication protocols for non-Emergency/non-alert communications that occur between entities.</p>	

**Exhibit F**

**Order No. 672 Criteria COM-001-2**

## Exhibit F

### Order No. 672 Criteria

In Order No. 672,<sup>1</sup> the Commission identified a number of criteria it will use to analyze Reliability Standards proposed for approval to ensure they are just, reasonable, not unduly discriminatory or preferential, and in the public interest. The discussion below identifies these factors and explains how the proposed Reliability Standard has met or exceeded the criteria:

**1. Proposed Reliability Standards must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve that goal.<sup>2</sup>**

The proposed standard achieves the specific reliability goal of establishing requirements for Interpersonal Communication and Alternative Interpersonal Communication capabilities necessary to maintain reliability. First, proposed COM-001-2 eliminates ambiguous terms used in COM-001-1 that do not adequately specify the desired actions that Reliability Coordinators, Balancing Authorities, and Transmission Operators are expected to take with respect to each's telecommunication facilities. The proposed Reliability Standard includes two new defined terms, "Interpersonal Communication" and "Alternative Interpersonal Communication," which

---

<sup>1</sup> *Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards*, Order No. 672, FERC Stats. & Regs. ¶ 31,204, *order on reh'g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006).

<sup>2</sup> Order No. 672 at P 321. The proposed Reliability Standard must address a reliability concern that falls within the requirements of section 215 of the FPA. That is, it must provide for the reliable operation of Bulk-Power System facilities. It may not extend beyond reliable operation of such facilities or apply to other facilities. Such facilities include all those necessary for operating an interconnected electric energy transmission network, or any portion of that network, including control systems. The proposed Reliability Standard may apply to any design of planned additions or modifications of such facilities that is necessary to provide for reliable operation. It may also apply to Cybersecurity protection.

Order No. 672 at P 324. The proposed Reliability Standard must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve this goal. Although any person may propose a topic for a Reliability Standard to the ERO, in the ERO's process, the specific proposed Reliability Standard should be developed initially by persons within the electric power industry and community with a high level of technical expertise and be based on sound technical and engineering criteria. It should be based on actual data and lessons learned from past operating incidents, where appropriate. The process for ERO approval of a proposed Reliability Standard should be fair and open to all interested persons.

collectively provide a comprehensive approach to establishing communications capabilities necessary to maintain reliability. The defined terms used in the requirements of proposed COM-001-2 are:

**Interpersonal Communication** – Any medium that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication** – Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.

These definitions provide clarity that an entity’s communications capabilities must be redundant and that each of the capabilities must not utilize the same medium. The new definitions, therefore, improve upon the language used in the current COM-001-1.1 Reliability Standard, which states “[e]ach Reliability Coordinator, Transmission Operator and Balancing Authority shall provide *adequate and reliable* telecommunications facilities for the exchange of Interconnection and operating information.” COM-001-1.1, Requirement R1, Part R1.4 states that “[w]here applicable, these facilities shall be redundant and diversely routed.” Use of the defined terms eliminates the need to use the ambiguous phrases “adequate and reliable” and “redundant and diversely routed, which were identified in the Preliminary Assessment as potentially creating ambiguity in the Reliability Standard.

Second, proposed COM-001-2 clearly identifies the need to be capable of both Interpersonal Communication and Alternative Interpersonal Communication. Requirements R1-R6 address the Interpersonal Communication capability and Alternative Interpersonal Communication capability of the Reliability Coordinator, Transmission Operator, and Balancing Authority.

Third, the use of word “capability” in the proposed Reliability Standard ensures the standard is technologically agnostic, allowing for future changes in technology and advances in communication to be employed without requiring a change to the Reliability Standard. Lastly, the proposed Reliability Standard expands the applicability of the Reliability Standard to cover Distribution Providers and Generator Operators. These functional entities are now required to have an Interpersonal Communication capability with the listed entities in Requirements R7 and R8, respectively.

**2. Proposed Reliability Standards must be applicable only to users, owners and operators of the bulk power system, and must be clear and unambiguous as to what is required and who is required to comply.<sup>3</sup>**

The proposed Reliability Standard applies to Transmission Operators, Balancing Authorities, Reliability Coordinators, Distribution Providers, and Generator Operators. The proposed Reliability Standard is clear and unambiguous as to what is required and who is required to comply. As noted above, the Requirements use two newly defined terms to clearly define the required capability needed to support the Requirements. The Requirements also clearly provide the communication capability necessary for each applicable entity.

**3. A proposed Reliability Standard must include clear and understandable consequences and a range of penalties (monetary and/or non-monetary) for a violation.<sup>4</sup>**

---

<sup>3</sup> Order No. 672 at P 322. The proposed Reliability Standard may impose a requirement on any user, owner, or operator of such facilities, but not on others.

Order No. 672 at P 325. The proposed Reliability Standard should be clear and unambiguous regarding what is required and who is required to comply. Users, owners, and operators of the Bulk-Power System must know what they are required to do to maintain reliability.

<sup>4</sup> Order No. 672 at P 326. The possible consequences, including range of possible penalties, for violating a proposed Reliability Standard should be clear and understandable by those who must comply.

The Violation Risk Factors (“VRF”) and Violation Severity Levels (“VSL”) for the proposed Reliability Standard comport with NERC and Commission guidelines related to their assignment. The assignment of the severity level for each VSL is consistent with the corresponding Requirement and will ensure uniformity and consistency in the determination of penalties. The VSLs do not use any ambiguous terminology, and support uniformity and consistency in the determination of similar penalties for similar violations. For these reasons, the proposed Reliability Standard includes clear and understandable consequences.

**4. A proposed Reliability Standard must identify clear and objective criterion or measure for compliance, so that it can be enforced in a consistent and non-preferential manner.<sup>5</sup>**

The proposed Reliability Standard contains Measures that support the Requirements by clearly identifying what is required and how the requirements will be measured for compliance. The Measures, contained in Section C of the proposed COM-001-2 Reliability Standard, are as follows:

**M1.** Each Reliability Coordinator shall have and provide upon request evidence that it has Interpersonal Communication capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with each adjacent Reliability Coordinator within the same Interconnection, which could include, but is not limited to:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R1.)

**M2.** Each Reliability Coordinator shall have and provide upon request evidence that it designated an Alternative Interpersonal Communication capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with each adjacent Reliability Coordinator within the same Interconnection, which could include, but is not limited to:

- physical assets, or

---

<sup>5</sup> Order No. 672 at P 327. There should be a clear criterion or measure of whether an entity is in compliance with a proposed Reliability Standard. It should contain or be accompanied by an objective measure of compliance so that it can be enforced and so that enforcement can be applied in a consistent and non-preferential manner.

- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R2.)

**M3.** Each Transmission Operator shall have and provide upon request evidence that it has Interpersonal Communication capability with its Reliability Coordinator, each Balancing Authority, Distribution Provider, and Generator Operator within its Transmission Operator Area, and each adjacent Transmission Operator asynchronously or synchronously connected, which could include, but is not limited to:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communication. (R3.)

**M4.** Each Transmission Operator shall have and provide upon request evidence that it designated an Alternative Interpersonal Communication capability with its Reliability Coordinator, each Balancing Authority within its Transmission Operator Area, and each adjacent Transmission Operator asynchronously and synchronously connected, which could include, but is not limited to:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R4.)

**M5.** Each Balancing Authority shall have and provide upon request evidence that it has Interpersonal Communication capability with its Reliability Coordinator, each Transmission Operator and Generator Operator that operates Facilities within its Balancing Authority Area, each Distribution Provider within its Balancing Authority Area, and each adjacent Balancing Authority, which could include, but is not limited to:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R5.)

**M6.** Each Balancing Authority shall have and provide upon request evidence that it designated an Alternative Interpersonal Communication capability with its Reliability Coordinator, each Transmission Operator that operates Facilities within its Balancing Authority Area, and each adjacent Balancing Authority, which could include, but is not limited to:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R6.)

**M7.** Each Distribution Provider shall have and provide upon request evidence that it has

Interpersonal Communication capability with its Transmission Operator and its Balancing Authority, which could include, but is not limited to:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R7.)

**M8.** Each Generator Operator shall have and provide upon request evidence that it has Interpersonal Communication capability with its Balancing Authority and its Transmission Operator, which could include, but is not limited to:

- physical assets, or
- dated evidence, such as, equipment specifications and installation documentation, test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R8.)

**M9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it tested, at least once each calendar month, its Alternative Interpersonal Communication capability designated in Requirements R2, R4, or R6. If the test was unsuccessful, the entity shall have and provide upon request evidence that it initiated action to repair or designated a replacement Alternative Interpersonal Communication capability within 2 hours. Evidence could include, but is not limited to: dated and time-stamped test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R9.)

**M10.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it notified entities as identified in Requirements R1, R3, and R5, respectively within 60 minutes of the detection of a failure of its Interpersonal Communication capability that lasted 30 minutes or longer. Evidence could include, but is not limited to: dated and time-stamped test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R10.)

**M11.** Each Distribution Provider and Generator Operator that detected a failure of its Interpersonal Communication capability shall have and provide upon request evidence that it consulted with each entity affected by the failure, as identified in Requirement R7 for a Distribution Provider or Requirement R8 for a Generator Operator, to determine mutually agreeable action to restore the Interpersonal Communication capability. Evidence could include, but is not limited to: dated operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R11.)

**5. Proposed Reliability Standards should achieve a reliability goal effectively and efficiently — but do not necessarily have to reflect “best practices” without regard to implementation cost or historical regional infrastructure design.<sup>6</sup>**

---

<sup>6</sup> Order No. 672 at P 328. The proposed Reliability Standard does not necessarily have to reflect the optimal method, or “best practice,” for achieving its reliability goal without regard to implementation cost or historical regional infrastructure design. It should however achieve its reliability goal effectively and efficiently.

The proposed Reliability Standard achieves the reliability goal effectively and efficiently in accordance with Order No. 672. The proposed Reliability Standard establishes communications capabilities and redundant communications capabilities necessary to maintain reliability. For certain applicable entities, i.e., Distribution Providers and Generator Operators, a redundant capability has not been mandated, but a Requirement to determine a mutually agreeable action for the restoration of its Interpersonal Communication capability has been included for when the applicable entity detects a failure of its Interpersonal Communication capability. This construct ensures that the communications capabilities necessary to maintain reliability are reflected in the proposed Reliability Standard while striking an appropriate balance on which applicable entities must have redundant capabilities as part of the mandatory Reliability Standard.

**6. Proposed Reliability Standards cannot be “lowest common denominator,” i.e., cannot reflect a compromise that does not adequately protect Bulk-Power System reliability. Proposed Reliability Standards can consider costs to implement for smaller entities, but not at consequences of less than excellence in operating system reliability.<sup>7</sup>**

The proposed Reliability Standard does not reflect a “lowest common denominator” approach. On the contrary, the Reliability Standard establishes requirements for mandatory redundancies in communications capabilities necessary to maintain reliability and the testing of

---

<sup>7</sup> Order No. 672 at P 329. The proposed Reliability Standard must not simply reflect a compromise in the ERO’s Reliability Standard development process based on the least effective North American practice — the so-called “lowest common denominator” — if such practice does not adequately protect Bulk-Power System reliability. Although FERC will give due weight to the technical expertise of the ERO, we will not hesitate to remand a proposed Reliability Standard if we are convinced it is not adequate to protect reliability.

Order No. 672 at P 330. A proposed Reliability Standard may take into account the size of the entity that must comply with the Reliability Standard and the cost to those entities of implementing the proposed Reliability Standard. However, the ERO should not propose a “lowest common denominator” Reliability Standard that would achieve less than excellence in operating system reliability solely to protect against reasonable expenses for supporting this vital national infrastructure. For example, a small owner or operator of the Bulk-Power System must bear the cost of complying with each Reliability Standard that applies to it.

those communications capabilities. The proposed Reliability Standard does not represent a compromise that does not adequately protect Bulk-Power System reliability.

- 7. Proposed Reliability Standards must be designed to apply throughout North America to the maximum extent achievable with a single Reliability Standard while not favoring one geographic area or regional model. It should take into account regional variations in the organization and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.<sup>8</sup>**

The proposed Reliability Standard applies throughout North America and does not favor one geographic area or regional model.

- 8. Proposed Reliability Standards should cause no undue negative effect on competition or restriction of the grid beyond any restriction necessary for reliability.<sup>9</sup>**

Proposed Reliability Standard COM-001-2 has no undue negative effect on competition. Since the proposed Reliability Standard only concerns communications capabilities, it also does not unreasonably restrict transmission or generation operation on the Bulk-Power System.

- 9. The implementation time for the proposed Reliability Standard is reasonable.<sup>10</sup>**

---

<sup>8</sup> Order No. 672 at P 331. A proposed Reliability Standard should be designed to apply throughout the interconnected North American Bulk-Power System, to the maximum extent this is achievable with a single Reliability Standard. The proposed Reliability Standard should not be based on a single geographic or regional model but should take into account geographic variations in grid characteristics, terrain, weather, and other such factors; it should also take into account regional variations in the organizational and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.

<sup>9</sup> Order No. 672 at P 332. As directed by section 215 of the FPA, FERC itself will give special attention to the effect of a proposed Reliability Standard on competition. The ERO should attempt to develop a proposed Reliability Standard that has no undue negative effect on competition. Among other possible considerations, a proposed Reliability Standard should not unreasonably restrict available transmission capability on the Bulk-Power System beyond any restriction necessary for reliability and should not limit use of the Bulk-Power System in an unduly preferential manner. It should not create an undue advantage for one competitor over another.

<sup>10</sup> Order No. 672 at P 333. In considering whether a proposed Reliability Standard is just and reasonable, FERC will consider also the timetable for implementation of the new requirements, including how the proposal balances any urgency in the need to implement it against the reasonableness of the time allowed for those who must comply to develop the necessary procedures, software, facilities, staffing or other relevant capability.

The proposed effective date for the Reliability Standard appropriately balances the urgency to implement the standard against the time needed by those who must comply to develop necessary procedures and capabilities in support of the proposed Reliability Standard. To allow entities adequate and reasonable time to comply with the proposed Reliability Standard, the effective date is first day of the second calendar quarter beyond the date that the proposed Reliability Standard is approved.

**10. The Reliability Standard was developed in an open and fair manner and in accordance with the Commission-approved Reliability Standard development process.<sup>11</sup>**

The proposed Reliability Standard was developed in accordance with NERC's Commission-approved, ANSI- accredited processes for developing and approving Reliability Standards. Exhibit M includes a summary of the Reliability Standard development proceedings, and details the processes followed to develop the Reliability Standard. These processes included, among other things, multiple comment periods, pre-ballot review periods, and balloting periods. Additionally, all meetings of the standard drafting team were properly noticed and open to the public.

**11. NERC must explain any balancing of vital public interests in the development of proposed Reliability Standards.<sup>12</sup>**

---

<sup>11</sup> Order No. 672 at P 334. Further, in considering whether a proposed Reliability Standard meets the legal standard of review, we will entertain comments about whether the ERO implemented its Commission-approved Reliability Standard development process for the development of the particular proposed Reliability Standard in a proper manner, especially whether the process was open and fair. However, we caution that we will not be sympathetic to arguments by interested parties that choose, for whatever reason, not to participate in the ERO's Reliability Standard development process if it is conducted in good faith in accordance with the procedures approved by FERC.

<sup>12</sup> Order No. 672 at P 335. Finally, we understand that at times development of a proposed Reliability Standard may require that a particular reliability goal must be balanced against other vital public interests, such as environmental, social and other goals. We expect the ERO to explain any such balancing in its application for approval of a proposed Reliability Standard.

NERC has identified no competing public interests regarding the request for approval of the proposed Reliability Standard. No comments were received that indicated the proposed Reliability Standards conflict with other vital public interests.

**12. Proposed Reliability Standards must consider any other appropriate factors.<sup>13</sup>**

No other factors relevant to whether the proposed Reliability Standard is just and reasonable were identified.

---

<sup>13</sup> Order No. 672 at P 323. In considering whether a proposed Reliability Standard is just and reasonable, we will consider the following general factors, as well as other factors that are appropriate for the particular Reliability Standard proposed.

**Exhibit G**

**Order No. 672 Criteria COM-002-4**

## Exhibit G

### Order No. 672 Criteria

In Order No. 672,<sup>1</sup> the Commission identified a number of criteria it will use to analyze Reliability Standards proposed for approval to ensure they are just, reasonable, not unduly discriminatory or preferential, and in the public interest. The discussion below identifies these factors and explains how the proposed Reliability Standard has met or exceeded the criteria:

**1. Proposed Reliability Standards must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve that goal.<sup>2</sup>**

Proposed Reliability Standard COM-002-4 achieves the specific reliability goal of improving communications for the issuance of Operating Instructions. Proposed COM-002-4 accomplishes this purpose by requiring the use of predefined communications protocols to reduce the possibility of a miscommunication that could lead to action or inaction harmful to the reliability of the Bulk Electric System. The proposed Reliability Standard combines proposed Reliability Standard COM-002-3 and the former draft COM-003-1 into a single standard that addresses communications protocols for operating personnel in Emergency and non-emergency conditions.

---

<sup>1</sup> *Rules Concerning Certification of the Electric Reliability Organization; and Procedures for the Establishment, Approval, and Enforcement of Electric Reliability Standards*, Order No. 672, FERC Stats. & Regs. ¶ 31,204, *order on reh'g*, Order No. 672-A, FERC Stats. & Regs. ¶ 31,212 (2006).

<sup>2</sup> Order No. 672 at P 321. The proposed Reliability Standard must address a reliability concern that falls within the requirements of section 215 of the FPA. That is, it must provide for the reliable operation of Bulk-Power System facilities. It may not extend beyond reliable operation of such facilities or apply to other facilities. Such facilities include all those necessary for operating an interconnected electric energy transmission network, or any portion of that network, including control systems. The proposed Reliability Standard may apply to any design of planned additions or modifications of such facilities that is necessary to provide for reliable operation. It may also apply to Cybersecurity protection.

Order No. 672 at P 324. The proposed Reliability Standard must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve this goal. Although any person may propose a topic for a Reliability Standard to the ERO, in the ERO's process, the specific proposed Reliability Standard should be developed initially by persons within the electric power industry and community with a high level of technical expertise and be based on sound technical and engineering criteria. It should be based on actual data and lessons learned from past operating incidents, where appropriate. The process for ERO approval of a proposed Reliability Standard should be fair and open to all interested persons.

In proposed COM-002-4, the same protocols are required to be used in connection with the issuance of Operating Instructions for *all* operating conditions – *i.e.*, non-emergency and Emergency communications. An entity should expect its operating personnel that issue and receive Operating Instructions to use the entity’s documented communication protocols for the issuance and receipt of all Operating Instructions. An entity reinforces its use of the documented communication protocols through training, assessing adherence by its operating personnel to the documented communication protocols, and providing feedback to those operating personnel on their use of the protocols. During Emergencies, operating personnel must use the documented communication protocols for three-part communications without exception, since clear communication is essential to providing swift and coordinated response to events that are directly impacting the reliability of the Bulk Electric System. In addition to Balancing Authorities, Reliability Coordinators, and Transmission Operators, proposed COM-002-4 applies to Distribution Providers and Generator Operators. The standard drafting team added these entities in the Applicability section because they can be and in many cases are the recipients of Operating Instructions.

**2. Proposed Reliability Standards must be applicable only to users, owners and operators of the bulk power system, and must be clear and unambiguous as to what is required and who is required to comply.<sup>3</sup>**

The proposed Reliability Standard applies to Balancing Authorities, Reliability Coordinators, Transmission Operators, Distribution Providers, and Generator Operators. The

---

<sup>3</sup> Order No. 672 at P 322. The proposed Reliability Standard may impose a requirement on any user, owner, or operator of such facilities, but not on others.

Order No. 672 at P 325. The proposed Reliability Standard should be clear and unambiguous regarding what is required and who is required to comply. Users, owners, and operators of the Bulk-Power System must know what they are required to do to maintain reliability.

proposed Reliability Standard is clear and unambiguous as to what is required and who is required to comply. The proposed Reliability Standard proposes a clear set of required protocols (Requirement R1). It also mandates initial training on the protocols (Requirements R2 and R3). As noted above, entities are further required to assess their protocols for effectiveness and assess their operating personnel's adherence to the documented communication protocols (Requirement R4).

The language of Requirement R4 clearly and explicitly delineates the obligations and expectations entities must meet. Requirement R4 requires that each entity maintain a successful program and measure its own adherence to its documented communications protocols. Requirement R4 intentionally does not specify a specific type of review to execute or mandate that corrective actions be taken. Entities are better equipped to design an appropriate program to meet their own operating environment and determine whether a corrective action is necessary. Because almost all entities have these types of programs in place today, this approach also provides an efficient means of establishing an assessment program by building on the programs currently in use. The primary purpose of Requirement R4 is to provide assurance that an entity is using its documented communications protocols, engaging its operators, and periodically reviewing its communications for improvement. The program required in Requirement R4 requires applicable entities to conduct retrospective review of their communications practices based on predefined documented communications protocols through an assessment design of their choosing and requires corrective actions be taken if the entity deems a corrective action necessary.

**3. A proposed Reliability Standard must include clear and understandable consequences and a range of penalties (monetary and/or non-monetary) for a violation.<sup>4</sup>**

The Violation Risk Factor (“VRF”) and Violation Severity Level (“VSL”) for the proposed Reliability Standard comport with NERC and Commission guidelines related to their assignment. The assignment of the severity level for the VSLs is consistent with the corresponding Requirement and will ensure uniformity and consistency in the determination of penalties. The VSLs do not use any ambiguous terminology, and supports uniformity and consistency in the determination of similar penalties for similar violations. For these reasons, the proposed Reliability Standard includes clear and understandable consequences.

**4. A proposed Reliability Standard must identify clear and objective criterion or measure for compliance, so that it can be enforced in a consistent and non-preferential manner.<sup>5</sup>**

The proposed Reliability Standard contains Measures that support the Requirements by clearly identifying what is required and how the requirements will be measured for compliance. The Measures, contained in Section C of the proposed COM-002-4 Reliability Standard, are as follows:

**M1.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall provide its documented communications protocols developed for Requirement R1.

**M2.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall provide its initial training records related to its documented communications protocols developed for Requirement R1 such as attendance logs, agendas, learning objectives, or course materials in fulfillment of Requirement R2.

---

<sup>4</sup> Order No. 672 at P 326. The possible consequences, including range of possible penalties, for violating a proposed Reliability Standard should be clear and understandable by those who must comply.

<sup>5</sup> Order No. 672 at P 327. There should be a clear criterion or measure of whether an entity is in compliance with a proposed Reliability Standard. It should contain or be accompanied by an objective measure of compliance so that it can be enforced and so that enforcement can be applied in a consistent and non-preferential manner.

**M3.** Each Distribution Provider and Generator Operator shall provide its initial training records for its operating personnel such as attendance logs, agendas, learning objectives, or course materials in fulfillment of Requirement R3.

**M4.** Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall provide evidence of its assessments, including spreadsheets, logs or other evidence of feedback, findings of effectiveness and any changes made to its documented communications protocols developed for Requirement R1 in fulfillment of Requirement R4. The entity shall provide, as part of its assessment, evidence of any corrective actions taken where an operating personnel's non-adherence to the protocols developed in Requirement R1 is the sole or partial cause of an Emergency and for all other instances where the entity determined that it was appropriate to take a corrective action to address deviations from the documented protocols developed in Requirement R1.

**M5.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issued an oral two-party, person-to-person Operating Instruction during an Emergency, excluding oral single-party to multiple-party burst Operating Instructions, shall have evidence that the issuer either: 1) confirmed that the response from the recipient of the Operating Instruction was correct; 2) reissued the Operating Instruction if the repeated information was incorrect or if requested by the receiver; or 3) took an alternative action if a response was not received or if the Operating Instruction was not understood by the receiver. Such evidence could include, but is not limited to, dated and time-stamped voice recordings, or dated and time-stamped transcripts of voice recordings, or dated operator logs in fulfillment of Requirement R5.

**M6.** Each Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator that was the recipient of an oral two-party, person-to-person Operating Instruction during an Emergency, excluding oral single-party to multiple-party burst Operating Instructions, shall have evidence to show that the recipient either repeated, not necessarily verbatim, the Operating Instruction and received confirmation from the issuer that the response was correct, or requested that the issuer reissue the Operating Instruction in fulfillment of Requirement R6. Such evidence may include, but is not limited to, dated and time-stamped voice recordings (if the entity has such recordings), dated operator logs, an attestation from the issuer of the Operating Instruction, memos or transcripts.

**M7.** Each Balancing Authority, Reliability Coordinator and Transmission Operator that issued a written or oral single or multiple-

party burst Operating Instruction during an Emergency shall provide evidence that the Operating Instruction was received by at least one receiver. Such evidence may include, but is not limited to, dated and time-stamped voice recordings (if the entity has such recordings), dated operator logs, electronic records, memos or transcripts.

**5. Proposed Reliability Standards should achieve a reliability goal effectively and efficiently — but do not necessarily have to reflect “best practices” without regard to implementation cost or historical regional infrastructure design.<sup>6</sup>**

The proposed Reliability Standard achieves the reliability goal effectively and efficiently in accordance with Order No. 672. The proposed Reliability Standard expands on the mandated documented protocols to be used through Requirement R1, but does not provide an exhaustive list of all possible protocols that could be employed by an entity as part of its overall documented communications protocols. This achieves the reliability goal of tightening communications protocols while allowing entities to add additional protocols, as necessary and appropriate for the operating environment. NERC has also developed a guideline of current industry practices on system operator verbal communications (Exhibit Q) to assist entities in developing “best practices” to support their documented communications protocols. Further, the requirements for training are tailored to only *initial* training since entities currently conduct ongoing training pursuant to the PER-005 Reliability Standard. In addition, Requirement R4 includes flexibility for entities to design their assessment process and determine corrective actions necessary to address deviations from the protocols in order to leverage the existing processes each entity utilizes today to accomplish the same tasks. In aggregate, COM-002-4 provides an efficient and effective means to achieve the reliability goal of improving communications for the issuance of Operating Instructions.

---

<sup>6</sup> Order No. 672 at P 328. The proposed Reliability Standard does not necessarily have to reflect the optimal method, or “best practice,” for achieving its reliability goal without regard to implementation cost or historical regional infrastructure design. It should however achieve its reliability goal effectively and efficiently.

**6. Proposed Reliability Standards cannot be “lowest common denominator,” *i.e.*, cannot reflect a compromise that does not adequately protect Bulk-Power System reliability. Proposed Reliability Standards can consider costs to implement for smaller entities, but not at consequences of less than excellence in operating system reliability.<sup>7</sup>**

The proposed Reliability Standard does not reflect a “lowest common denominator” approach. This proposed Reliability Standard is the result of multiple industry ballots and revisions that reflect an active comment and response process between industry and the standard drafting team. NERC held a technical conference and did considerable amounts of outreach to regulatory staff, industry and NERC’s technical committees in order to arrive at the final language in the proposed Reliability Standard. The standard drafting team also received input from the NERC Board of Trustees, NERC’s Reliability Issues Steering Committee (“RISC”), the Independent Experts Review Panel, and NERC management during the standard development process. The result of these efforts was a stronger final proposed Reliability Standard that protects the Reliability of the Bulk-Power System, achieved industry approval, and provides means of improving the effectiveness of communications practices.

**7. Proposed Reliability Standards must be designed to apply throughout North America to the maximum extent achievable with a single Reliability Standard while not favoring one geographic area or regional model. It should take into account regional variations in the organization and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns,**

---

<sup>7</sup> Order No. 672 at P 329. The proposed Reliability Standard must not simply reflect a compromise in the ERO’s Reliability Standard development process based on the least effective North American practice — the so-called “lowest common denominator” — if such practice does not adequately protect Bulk-Power System reliability. Although FERC will give due weight to the technical expertise of the ERO, we will not hesitate to remand a proposed Reliability Standard if we are convinced it is not adequate to protect reliability.

Order No. 672 at P 330. A proposed Reliability Standard may take into account the size of the entity that must comply with the Reliability Standard and the cost to those entities of implementing the proposed Reliability Standard. However, the ERO should not propose a “lowest common denominator” Reliability Standard that would achieve less than excellence in operating system reliability solely to protect against reasonable expenses for supporting this vital national infrastructure. For example, a small owner or operator of the Bulk-Power System must bear the cost of complying with each Reliability Standard that applies to it.

**and regional variations in market design if these affect the proposed Reliability Standard.<sup>8</sup>**

The proposed Reliability Standard applies throughout North America and does not favor one geographic area or regional model.

**8. Proposed Reliability Standards should cause no undue negative effect on competition or restriction of the grid beyond any restriction necessary for reliability.<sup>9</sup>**

Proposed Reliability Standard COM-002-4 has no undue negative effect on competition. Since the proposed Reliability Standard only concerns the use of documented protocols for communication, it also does not unreasonably restrict transmission or generation operation on the Bulk-Power System.

**9. The implementation time for the proposed Reliability Standard is reasonable.<sup>10</sup>**

The proposed effective date for the Reliability Standard appropriately balance the urgency to implement the standard against the time needed by those who must comply to develop necessary procedures and protocols in support of the proposed Reliability Standard. To allow covered Entities adequate and reasonable time to comply with the proposed Reliability Standard, the effective date is twelve (12) months following the date that the standard is approved.

---

<sup>8</sup> Order No. 672 at P 331. A proposed Reliability Standard should be designed to apply throughout the interconnected North American Bulk-Power System, to the maximum extent this is achievable with a single Reliability Standard. The proposed Reliability Standard should not be based on a single geographic or regional model but should take into account geographic variations in grid characteristics, terrain, weather, and other such factors; it should also take into account regional variations in the organizational and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.

<sup>9</sup> Order No. 672 at P 332. As directed by section 215 of the FPA, FERC itself will give special attention to the effect of a proposed Reliability Standard on competition. The ERO should attempt to develop a proposed Reliability Standard that has no undue negative effect on competition. Among other possible considerations, a proposed Reliability Standard should not unreasonably restrict available transmission capability on the Bulk-Power System beyond any restriction necessary for reliability and should not limit use of the Bulk-Power System in an unduly preferential manner. It should not create an undue advantage for one competitor over another.

<sup>10</sup> Order No. 672 at P 333. In considering whether a proposed Reliability Standard is just and reasonable, FERC will consider also the timetable for implementation of the new requirements, including how the proposal balances any urgency in the need to implement it against the reasonableness of the time allowed for those who must comply to develop the necessary procedures, software, facilities, staffing or other relevant capability.

**10. The Reliability Standard was developed in an open and fair manner and in accordance with the Commission-approved Reliability Standard development process.<sup>11</sup>**

The proposed Reliability Standard was developed in accordance with NERC's Commission-approved, ANSI- accredited processes for developing and approving Reliability Standards. Exhibit N includes a summary of the Reliability Standard development proceedings, and details the processes followed to develop the Reliability Standard. These processes included, among other things, multiple comment periods, pre-ballot review periods, and balloting periods. Additionally, all meetings of the standard drafting team were properly noticed and open to the public.

**11. NERC must explain any balancing of vital public interests in the development of proposed Reliability Standards.<sup>12</sup>**

NERC has identified no competing public interests regarding the request for approval of the proposed Reliability Standard. No comments were received that indicated the proposed Reliability Standards conflict with other vital public interests.

**12. Proposed Reliability Standards must consider any other appropriate factors.<sup>13</sup>**

---

<sup>11</sup> Order No. 672 at P 334. Further, in considering whether a proposed Reliability Standard meets the legal standard of review, we will entertain comments about whether the ERO implemented its Commission-approved Reliability Standard development process for the development of the particular proposed Reliability Standard in a proper manner, especially whether the process was open and fair. However, we caution that we will not be sympathetic to arguments by interested parties that choose, for whatever reason, not to participate in the ERO's Reliability Standard development process if it is conducted in good faith in accordance with the procedures approved by FERC.

<sup>12</sup> Order No. 672 at P 335. Finally, we understand that at times development of a proposed Reliability Standard may require that a particular reliability goal must be balanced against other vital public interests, such as environmental, social and other goals. We expect the ERO to explain any such balancing in its application for approval of a proposed Reliability Standard.

<sup>13</sup> Order No. 672 at P 323. In considering whether a proposed Reliability Standard is just and reasonable, we will consider the following general factors, as well as other factors that are appropriate for the particular Reliability Standard proposed.

No other factors relevant to whether the proposed Reliability Standard is just and reasonable were identified.

**Exhibit H**

**Rationale and Technical Justification COM-002-4**

# Project 2007-02, COM-002-4 Operating Personnel Communications Protocols Rationale and Technical Justification

## Background and Justification for COM-002-4 Requirements

The purpose of the proposed COM-002-4 Reliability Standard is to improve communications for the issuance of Operating Instructions with predefined communications protocols to reduce the possibility of miscommunication that could lead to action or inaction harmful to the reliability of the Bulk Electric System (BES). The proposed Reliability Standard combines COM-002-3 and former draft COM-003-1 into one standard that addresses communications protocols for operating personnel in Emergency, alert and non-emergency conditions. The Operating Personnel Communications Protocols Standard Drafting Draft (OPCP SDT) believes that one communications protocols standard that addresses emergency and non-emergency situations will improve communications because operating personnel will not need to refer to a different set of protocols during the different operating conditions. A single standard will improve consistency of communications and mitigate confusion during stressful emergency situations. As a result of the combination, the standard has been numbered as COM-002-4 to maintain the consecutive numbering of the standards (e.g., COM-001, COM-002) since the combined standard will replace COM-002-2 and COM-002-3, where necessary.

In preparing COM-002-4, the OPCS SDT considered industry comments and also drew from a variety of other resources including:

- the NERC Board of Trustees' November 7<sup>th</sup>, 2013 Resolution for Operating Personnel Communication Protocols, discussed below;<sup>1</sup>
- a survey distributed to a sample of industry experts by the Director of Standards Development and the Standards Committee Chair requesting feedback on the draft standard in posting 8;
- consultation on the use of the term "Reliability Directive" in the COM-002-4 standard with the Project 2007-03 Real-time Transmission Operations Standard Drafting Team and the Project 2006-06 Reliability Coordination Standard Drafting Team; and
- a full-day "Communications in Operations" technical conference held February 14-15, 2013 to gather industry input on a consensus communications standard approach.

<sup>1</sup> *Resolution for Agenda Item 8.i: Operating Personnel Communication Protocols*, NERC Board of Trustees Meeting, Nov. 7, 2013, available at:

<http://www.nerc.com/gov/bot/Board%20of%20Trustees%20Quarterly%20Meetings/Board%20COM%20Resolution%2011.7.13%20v1%20AS%20APPROVED%20BY%20BOARD.pdf>.

### *Structure of the COM-002-4 Draft*

In response to the Board of Trustees direction to draft a combined COM-002 and COM-003 standard that addresses, at a minimum certain protocols, NERC staff prepared a “strawman” draft standard and provided it as a starting point for the standard drafting team to edit and adjust as it deemed appropriate. The structure of posting 8 of COM-002-4 reflects the minimum elements listed by the Board in its resolution (see below for detail on the Board resolution). The structure also allows for the implementation of a compliance/enforcement approach also described by the Board’s resolution that maintains the current requirement that entities should be accountable for incorrect use of communication protocols in connection with emergency communications, without exception.

In COM-002-4, the same protocols are required to be used in connection with the issuance of Operating Instructions for all operating conditions – i.e. non-emergency, alert, and Emergency communications. However, the standard uses the phrase “Operating Instruction during an Emergency” in certain Requirements (R5, R6, R7) to provide a demarcation for what is subject to a zero-tolerance compliance/enforcement approach and what it not. This is necessary to allow the creation of Violation Severity Levels for each compliance/enforcement approach. Where “Operating Instruction during an Emergency” is not used, an entity will be assessed under a non-zero tolerance compliance/enforcement approach that focuses on whether an entity met the initial training Requirement (either R2 or R3) and/or whether an entity performed the assessment and took corrective actions according to Requirement R4.

Separately listing out Requirements R5, R6, and R7 and using “Operating Instruction during an Emergency” in them does not require a different set of protocols to be used during Emergencies or mandate the identification of a communication as an “Operating Instruction during an Emergency.” The same protocols are required to be used in connection with the issuance of Operating Instructions for all operating conditions. Their use is measured for compliance/enforcement differently using the operating condition as an indicator of which compliance/enforcement approach applies.

For example, an entity should expect its operating personnel that issue and receive Operating Instructions to use the documented communication protocols for all Operating Instructions. The way that they reinforce that with its operating personnel is through training, assessing adherence by its operating personnel to the documented communication protocols and providing feedback those operating personnel on their use of the protocols. During Emergencies, operating personnel must use the communication protocol without exception, since clear communication is essential to providing swift and coordinated response to events that are directly impacting the reliability of the BES.

### *Definition of “Operating Instruction”*

The current draft of COM-002-4 does not include the term “Reliability Directive,” which was included in previous postings as a subset within the definition of “Operating Instruction.”

The proposed definition of “Operating Instruction” in COM-002-4 reads as follows:

A command by operating personnel responsible for the Real-time operation of the interconnected Bulk Electric System to change or preserve the state, status, output, or input of an Element of the Bulk Electric System or Facility of the Bulk Electric System. (A discussion of general information and of potential options or alternatives to resolve Bulk Electric System operating concerns is not a command and is not considered an Operating Instruction.)

The OPCP SDT debated whether to remove the term “Reliability Directive” in response to comments suggesting it should be removed from the definition of “Operating Instruction” and in light of FERC’s issuance of the TOP/IRO NOPR, which proposes to remand the definition of “Reliability Directive.” A detailed description of the FERC action is included in the section below titled “Developments Following Posting 7.”

In order to avoid unnecessary complications, the OPCP SDT consulted on the use of the term “Reliability Directive” in the COM-002-4 standard with the Project 2007-03 Real-time Transmission Operations and the Project 2006-06 Reliability Coordination Standard Drafting Teams to ask whether they believed removal of the term would cause concerns. Both teams agreed that the COM-002-4 standard did not need to require a protocol to identify Reliability Directives as such and that the definition of Operating Instruction could be used absent the term Reliability Directive in COM-002-4 to set the protocols. The OPCP SDT ultimately voted to remove the term and incorporate the phrase “Operating Instruction during an Emergency” in the Requirements where it was needed to preserve the structure created to ensure that only an Operating Instruction issued during an Emergency is subject to a zero-tolerance compliance/enforcement approach.

A “command” as used in the definition refers to both oral and written commands by operating personnel. In the requirements of COM-002-4, the OPCP SDT has specified “oral” or “written” as needed to define which Operating Instructions are covered by the requirement. The definition continues to clarify that general discussions are not considered Operating Instructions.

### *Applicability*

In addition to Balancing Authorities, Reliability Coordinators, and Transmission Operators, the proposed standard applies to Distribution Providers and Generator Operators. The OPCP SDT added these Functional Entities in the Applicability section because they can be and are on the receiving end of some Operating Instructions. The OPCP SDT determined that it would leave a gap to not cover them in a communications standard that addresses operating personnel. The addition of Distribution Providers as an applicable entity also responds to FERC’s directive in Order No. 693 to add them as applicable entities to the communications standard.

Recognizing that Generator Operators and Distribution Providers typically only receive Operating Instructions, the OPCP SDT proposed that only Requirements R3 and R6 apply to these Functional Entities. In response to the comments and the NERC Board Resolution, the OPCP SDT revised the standard to clarify that DPs and GOPs are required to a) train their operators prior to receiving an Operating Instruction, and b) use three part communication when receiving an Operating Instruction during an Emergency. In addition, the measures have been revised to show that a DP or GOP can demonstrate compliance for use of three-part communication when receiving an Operating Instruction during an Emergency by providing an attestation from the issuer of the Operating Instruction (i.e., a voice recording is not required). If a DP or GOP never receives an Operating Instruction, no requirement in COM-002-4 would apply to them. In both Requirements R3 and R6, qualifying language that discusses the “receipt” of an Operating Instruction is included to make this point clear. This construct ensures that appropriate entities are trained and able to use three-part communication for reliability purposes, while seeking to minimize the compliance burden on DPs and GOPs.

### *Requirements in COM-002-4*

#### **Requirement R1**

Requirement R1 requires entities that can both issue and receive Operating Instructions to have documented communications protocols that include a minimum set of elements, outlined in Parts 1.1 through 1.6 of the requirement. Because Operating Instructions affect Facilities and Elements of the Bulk Electric System, the communication of those Operating Instructions must be understood by all involved parties, especially when those communications occur between Functional Entities. An EPRI study reviewed nearly 400 switching mishaps by electric utilities and found that roughly 19% of errors (generally classified as loss of load, breach of safety, or equipment damage) were due to communication failures.<sup>2</sup> This was nearly identical to another study of dispatchers from 18 utilities representing nearly 2000 years of operating experience that found that 18% of the operators’ errors were due to communication problems.<sup>3</sup> The necessary protocols include the use of the English language unless agreed to otherwise (except for internal operations), protocols for use of a written or oral single-party to multiple-party burst Operating Instruction, specification of instances that require time identification, nomenclature for Transmission interface Elements, and three-part communications (including a protocol for taking an alternate action if a response is not received or if the Operating Instruction was not understood by the receiver).

The OPCP SDT drafted Requirement R1 to ensure consistency among communications protocols while also allowing flexibility for entities to develop additional communications protocols. The OPCP SDT determined that the inclusion of the elements in Parts 1.1 through 1.6 are necessary to improve communications protocols but are not overly prescriptive. The OPCP SDT determined that this

<sup>2</sup> Beare, A., Taylor, J. *Field Operation Power Switching Safety*, WO2944-10, Electric Power Research Institute.

<sup>3</sup> Bilke, T., *Cause and prevention of human error in electric utility operations*, Colorado State University, 1998.

approach is the best way to promote effective communications while maintaining flexibility for entities to include additional communications protocols based on its own operating environment.

It should be noted that requiring the use of alphanumeric clarifiers has been removed in this posting. Several entities have provided the comment that it is unnecessary to include them in a requirement, and pointed to the fact that the lack of use has not been shown to contribute to any investigated event. The drafting team agreed to remove the term, and NERC will continue to monitor events to determine if these clarifiers should be added in a future modification to the standard.

The term *documented communication protocols* in R1 refers to a set of required protocols specific to the Functional Entity and the Functional Entities they must communicate with. An entity should include as much detail as it believes necessary in their documented protocols, but they must address all of the applicable parts of Requirement R1. Where an entity does not already have a set of documented protocols that meet the parts of Requirement R1, the entity must develop the necessary communications protocols. Entities may also adopt the documented protocols of another entity as its own communications protocols, but the entity must maintain its own set of documented communications protocols to meet Requirement R1.

On September 19, 2012, the NERC Operating Committee issued a Reliability Guideline entitled: “System Operator Verbal Communications – Current Industry Practices.” As stated on page one, the purpose of the Reliability Guideline “. . . is to document and share current verbal BES communications practices and procedures from across the industry that have been found to enhance the effectiveness of system operator communications programs.” This guideline serves as an additional source of information on best practices that entities can draw on in creating the documented communications protocols.

Each part of Requirement R1 is discussed below:

*1.1. Require its operating personnel that issue and receive an oral or written Operating Instruction to use the English language, unless agreed to otherwise. An alternate language may be used for internal operations.*

The OPCP SDT has included this part to carry forward the same use of English language included in COM-001-1.1, Requirement R4. Retirement of this Requirement in COM-001-1.1 was specifically referred to this Project 2007-02. The requirement continues to permit the issuer and receiver to use an agreed to alternate language. This has been retained since use of an alternate language on a case-by-case basis may serve to better facilitate effective communications where the use of English language may create additional opportunities for miscommunications. Part 1.1 requires the use of English language when issuing oral or written (e.g. switching orders) Operating Instructions. This creates a standard language (unless agreed to otherwise) for use when issuing commands that could change or preserve the state, status, output, or input of an Element of the Bulk Electric System or Facility of the Bulk Electric System. It also clarifies that an alternate language can be used internally

within the organization. The phrase has been modified slightly from the language in COM-001-1.1, Requirement R4 to incorporate the term “Operating Instruction,” which defines the communications that require the use of the documented communications protocols.

*1.2. Require its operating personnel that issue an oral two-party, person-to-person Operating Instruction to take one of the following actions:*

- *Confirm the receiver’s response if the repeated information is correct.*
- *Reissue the Operating Instruction if the repeated information is incorrect, if the receiver does not issue a response, or if requested by the receiver.*
- *Take an alternative if a response is not received or if the Operating Instruction was not understood by the receiver.*

*1.3. Require the receiver of an oral two-party, person-to-person Operating Instruction to take one of the following actions:*

- *Repeat the Operating Instruction and wait for confirmation from the issuer that the repetition was correct.*
- *Request that the issuer reissue the Operating Instruction.*

The OPCP SDT has included part 1.2 to require communications protocols for the use of three-part communications for oral two-party, person-to-person Operating Instructions *by the issuer*. The OPCP SDT has included part 1.3 to require communications protocols for the use of three-part communications for oral two-party, person-to-person Operating Instructions *by the receiver*. This carries forward the requirement to use three-part communications in COM-002-2 and COM-002-3 and also adds an option in part 1.2 for the issuer to take an alternative action to resolve the issue if the receiver does not respond or understand the Operating Instruction. The addition of this third bullet serves to clarify in the requirement language itself that the issuing entity can take alternate action in lieu of reissuance if necessary.

The reliability benefits of using three-part communication (Requirement R1, parts 1.2 and 1.3) are threefold:

1. The removal of any doubt that use of the documented communication protocols is required when issuing or receiving Operation Instructions. This will reduce the opportunity for confusion and misunderstanding during all operating conditions.
2. There will be no mental “transition” between protocols when operating conditions shift from non-emergency to Emergency. The documented communication protocols for the operating personnel will remain the same during transitions through all conditions.
3. The formal requirement for three-part communication will create a heightened sense of awareness in operating personnel that the task they are about to execute is critical, and

recognize the risk to the reliable operation of the BES is increased if the communication is misunderstood.

*1.4. Require its operating personnel that issue a written or oral single-party to multiple-party burst Operating Instruction to confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction.*

The OPCP SDT has included this part to require communications protocols for an issuer for the use of a one-way burst messaging system. The drafting team has included this because the use of three-part communications is not practical when utilizing this type of communication. Therefore, it is necessary to include a different set of protocols for these situations. In addition, many entities expressed concern that if one-way burst messaging systems were not addressed, it would imply that three part communication would be required for all participants. For this reason, the drafting team chose to address one-way burst messaging systems.

*1.5. Specify the instances that require time identification when issuing an oral or written Operating Instruction and the format for that time identification.*

The OPCP SDT has included this part to add necessary clarity to Operating Instructions to reduce the risk of mistakes. Clarifying time and time zone (where necessary) contributes to reducing misunderstandings and reduces the risk of a grave error during BES operations, especially when communicating across time zones or specifying an action that will take place at a future time. Note that an action that is to occur immediately would not be required to have time identification, unless the entity specified that requirement in its communication protocols.

*1.6. Specify the nomenclature for Transmission interface Elements and Transmission interface Facilities when issuing an oral or written Operating Instruction.*

Project 2007-03 chose to eliminate TOP-002-2a, Requirement R18 when it developed TOP-002-3. This Requirement stated “Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.” COM-002-4, while reintroducing the concept of line identifiers, limits the scope to only Transmission interface Elements or Transmission interface Facilities (e.g. tie lines and tie substations). This ensures that both parties are readily familiar with each other’s interface Elements and Facilities, eliminating hesitation and confusion when referring to equipment for the Operating Instruction. This shortens response time and improves situational awareness. It also permits entities to jointly develop the nomenclature for their interface.

### **Requirements R2 and R3**

Requirement R2 requires the entities listed in Requirement R1 (i.e. each Balancing Authority, Reliability Coordinator, and Transmission Operator) to conduct initial training for each of their operating personnel responsible for the Real-time operation of the Bulk Electric System on the entity's documented communication protocols.

Requirement R3 requires Distribution Providers and Generator Operators to conduct initial training on three part communication for each of their operating personnel who can who can receive an oral two-party, person-to-person Operating Instruction prior to that individual operator receiving an oral two-party, person-to-person Operating Instruction. Distribution Providers and Generator Operators would have to train their operating personnel prior to placing them in a position to receive an oral two-party, person-to-person Operating Instruction. Operating Personnel that would never be in a position to receive an oral two-party, person-to-person Operating Instruction, therefore, would not need initial training unless their circumstance changes. The purpose of the language in Requirement R3, is to minimize the training burden, and demonstration of compliance, to only those operating personnel that can receive an oral two-party, person-to-person Operating Instruction.

The OPCP SDT has included an initial training requirement in the standard in response to the NERC Board of Trustees resolution, which directs that a training requirement be included in the COM-002-4 standard. Additionally, requiring entities who issue and or receive Operating Instructions to conduct initial training with their operating personnel will ensure that all applicable operators will be trained in three-part communication. The OPCP SDT believes this training will reduce the possibility of a miscommunication, which could eventually lead to action or inaction harmful to the reliability of the Bulk Electric System. Ongoing training would fall under an entities training program in PER-005 or could be listed as a type of corrective action under Requirement R4.

#### **Requirement R4**

Requirement R4 requires Balancing Authorities, Reliability Coordinators, and Transmission Operators to, at least once every 12 months, assess adherence by its operating personnel to the documented communication protocols in Requirement R1 and to provide feedback to its operating personnel on their performance. This also includes any corrective action taken, as appropriate, to address deviations from the documented protocols. It also requires the aforementioned entities to assess the effectiveness of their documented communications protocols and make changes, as necessary, to improve the effectiveness of the protocols. An entity may determine that corrective action beyond identification of the misuse of the documented communications protocols to the operating personnel is not necessary, therefore, the phrase "as appropriate" is included in the Requirement R4 language to indicate that whether to take additional corrective action is determined by the entity and not dictated by the Requirement for all instances of a misuse of a documented communication protocol.

Requiring entities to assess, identify and provide feedback to its operating personnel, was also included in the November 7, 2013 NERC Board of Trustees resolution as an element to include in the standard. Further, the OPCP SDT believes that it is good operating practice for an entity to periodically

evaluate the effectiveness of their protocols and improve them when possible. Most entities currently engage in some type of assessment activity for their operating personnel. Additionally, the OPCP SDT also believes it is good operating practice to provide operators with performance feedback on their adherence to the entity's documented protocols. Doing so, provides entities an opportunity to evaluate the performance of their operating personnel and take corrective actions where necessary, which could prevent a miscommunication from occurring and thus possibly prevent an event which could be harmful to the reliability of the Bulk Electric System.

The associated Measure M4 for Requirement R4 lists the types of evidence that an entity can provide to demonstrate compliance and also explains when an entity should show the corrective actions taken. Of particular interest is any corrective action taken where the miscommunication is the sole or partial cause of an Emergency and the entity has opted to take a corrective action. While the Measure lists out this particular set of circumstances to highlight the importance, the Measure does not modify the Requirement to require corrective action. Again, to reiterate, whether a corrective action is necessary is best determined by the entity based on the facts and circumstances of the particular communication.

### **Requirements R5 and R6**

Requirement R5 requires entities that issue oral two-party, person-to-person Operating Instructions during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, to use three-part communication or take an alternate action if the receiver does not respond or if the Operating Instruction was not understood by the receiver. The language of Requirement R5 specifically excludes written or oral single-party to multiple-party burst Operating Instructions to make clear that three-part communication is not required when issuing Operating Instructions in this manner. Requirement R5 applies to each Balancing Authority, Reliability Coordinator, and Transmission Operator since these are the entities that would be in a position to *issue* oral two-party, person-to-person Operating Instructions during an Emergency.

Requirement R6 requires entities that receive an oral two-party, person-to-person Operating Instruction during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, to repeat (not necessarily verbatim) the Operating Instruction and receive confirmation from the issuer that the response was correct or request that the issuer reissue the Operating Instruction. Requirement R6 includes the same clarifying language as Requirement R5 for the exclusion of single-party to multiple-party burst Operating Instructions. Requirement R6 applies to each Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator since these are the entities that would be in a position to *receive* oral two-party, person-to-person Operating Instructions during an Emergency

The use of three-part communication when issuing and receiving Operating Instructions is always important because a miscommunication could create an Emergency. An entity should expect its operating personnel that issue and receive Operating Instructions to use the documented communication

protocols for all Operating Instructions. The way that they reinforce that with its operating personnel is through training, assessing adherence by its operating personnel to the documented communication protocols and providing feedback those operating personnel on their use of the protocols. However, the use of three-part communication is critically important if an Emergency condition already exists, as further action or inaction could cause exponentially increase the harmful effects to the BES. Clear communication is essential to providing swift and coordinated response to events that are directly impacting the reliability of the BES.

### **Requirement R7**

Requirement R7 requires that when a Balancing Authority, Reliability Coordinator, or Transmission Operator issues a written or oral single-party to multiple-party burst Operating Instruction during an Emergency, it must confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction. Because written or oral single-party to multiple-party burst Operating Instruction during an Emergency are excluded from Requirements R5 and R6, this separate Requirement is necessary to specify the standard an entity must meet to demonstrate clear communication for the use of written or oral single-party to multiple-party burst Operating Instructions during an Emergency. This prevents leaving a gap in the types of communications used during an Emergency.

The OPCP SDT believes this requirement is necessary because without confirmation from at least one receiver, the issuer has no way of confirming if the Operating Instruction was transmitted and received by any of the recipients. Therefore, the issuer cannot know whether to resend the Operating Instruction, wait for the recipient to take an action, or take an alternate action because the recipient cannot perform the action. As a best practice, an entity can opt to confirm receipt from more than one recipient, which is why the requirement states “at least one.”

## **NERC Board’s Resolution**

At its November meeting, the Board passed a resolution that directs the Standards Committee and the standard drafting team “to continue development of a combined COM-002 and COM-003 standard that addresses, at a minimum, the following:

- Draws on the Operating Committee Guideline for good communication practice;
- Includes an essential set of communications protocols to be used by all entities that would be included in an entity’s overall communications protocol approach;
  - The protocol should at a minimum require the use of three-part communications for

- (i) emergency and alert communications (“Emergency Communications”) and (ii) non-emergency communications that change or preserve the state, status, output, or input of the Bulk Electric System (“Non-Emergency Communications”);
- Requires training and periodic review of communications subject to the communications protocols; and
- Requires each entity to (i) periodically self assess its effectiveness in implementing the communications protocols, (ii) self identify any necessary changes to the entity’s protocols based upon experience and the results of periodic review, and (iii) provide feedback to its operators regarding their adherence to the protocols.”

The resolution further directs the standard drafting team to “consider the following compliance/enforcement approach:

- Maintain the current requirement that entities should be accountable for incorrect use of communication protocols in connection with Emergency Communications, without exception.
- For all other use of communication protocols in connection with Non-Emergency Communications, the standard should provide that compliance with the standard should only entail assessing whether an entity has: (i) adopted a communications protocol consistent with the foregoing; (ii) implemented training and periodic review of communications subject to the protocols; and (iii) implemented a process to (x) periodically self assess its effectiveness in implementing the communications protocols, (y) self identify any necessary changes to the entity’s protocols based upon experience and the results of periodic review, and (z) provide feedback to its operators regarding their adherence to the protocols.”

On November 21, 2013, the Commission issued the TOP/IRO NOPR, which proposes to remand the proposed TOP and IRO standards.<sup>4</sup> In the TOP/IRO NOPR, the Commission raises a concern that NERC “has removed critical reliability aspects that are included in the currently-effective standards without adequately addressing these aspects in the proposed standards.” For the term “Reliability Directive”, FERC states that the undefined term “reliability directive” used in prior standards does not appear to be limited to a specific set of circumstances. FERC continues that, in contrast, application of the proposed definition of “Reliability Directive” appears to require compliance with transmission operator directives only in emergencies, not normal or pre-emergency times. FERC states that directives from a reliability coordinator or transmission operator should be mandatory at all times, and not just during emergencies (unless contrary to safety, equipment, regulatory or statutory requirements). FERC states that the transition from normal to emergency operation can be sudden and indistinguishable until recognized, often after the damage is done. FERC has requested additional explanation from NERC and requested comments on its proposal to remand the term “Reliability Directive” along with the TOP and IRO standards. FERC will take final action on its proposal at time to be determined in the future.

FERC’s proposal to remand the term “Reliability Directive” raised possible complications with the draft COM-002-4 standard in Posting 7 since that term was included. Should the term be remanded by FERC, the COM-002-4 standard could contain a term that is no longer acceptable. In order to avoid unnecessary complications, the OPCP SDT consulted on the use of the term “Reliability Directive” in the COM-002-4 standard with the Project 2007-03 Real-time Transmission Operations and the Project 2006-06 Reliability Coordination Standard Drafting Teams to ask whether they believed removal of the term would cause concerns. Both teams agreed that the COM-002-4 standard did not need to require a protocol to identify Reliability Directives as such and that the definition of Operating Instruction could be used absent the term Reliability Directive in COM-002-4 to set the protocols. This would leave the TOP and IRO standard drafting teams the flexibility to address the issues surrounding the term “Reliability Directive” in response to the FERC TOP/IRO NOPR.

**Exhibit I**

**Frequency Asked Questions Document COM-002-4**

# Project 2007-02 Posting 8

## Frequently Asked Questions Guide

### General Questions

#### 1. What were the inputs that drove the development of posting 8 of Project 2007-02?

- The NERC Board of Trustees' November 7<sup>th</sup>, 2013 Resolution for Operating Personnel Communication Protocols, discussed below;
- Two separate surveys distributed to a sample of industry experts by the Director of Standards Development and the Standards Committee Chair requesting feedback on the draft standard; and
- Consultation on the use of the term "Reliability Directive" in the COM-002-4 standard with the Project 2007-03 Real-time Transmission Operations Standard Drafting Team and the Project 2006-06 Reliability Coordination Standard Drafting Team.
- Industry stakeholder comments from previous drafts of Project 2007-02.

#### 2. Why was the term "Reliability Directive" removed from the definition of Operating Instruction?

The OPCP SDT debated whether to remove the term "Reliability Directive" in response to comments suggesting it should be removed from the definition of "Operating Instruction" and in light of FERC's issuance of the TOP/IRO Notice of Proposed Rulemaking (NOPR), which proposes to remand the definition of "Reliability Directive" along with the proposed TOP and IRO standards. To avoid unnecessary complications with the timing of the NOPR and posting 8, the OPCP SDT consulted with the Project 2007-03 Real-time Transmission Operations and the Project 2006-06 Reliability Coordination Standard Drafting Teams to ask whether they believed removal of the term "Reliability Directive" in the COM-002-4 standard would cause concerns. Both teams agreed that the COM-002-4 standard did not need to require a protocol to identify Reliability Directives as such and that the definition of Operating Instruction could be used absent the term Reliability Directive in COM-002-4 to set the protocols. The OPCP SDT ultimately voted to remove the term. The OPCP SDT also decided to incorporate the phrase "Operating Instruction during an Emergency" in certain Requirements, where needed, to identify Requirements that are subject to a zero-tolerance compliance/enforcement approach.

#### 3. Why does this standard apply to Generator Operators and Distribution Providers?

The OPCP SDT included these Functional Entities in the Applicability section because they can be and are on the receiving end of some Operating Instructions. The OPCP SDT determined that it would leave a gap

to not cover them in a standard that addresses communications protocols for operating personnel. The inclusion of Distribution Providers as an applicable entity also responds to FERC's directive in Order No. 693 to add them as applicable entities to the communications standard. The inclusion of Distribution Providers and Generator Operators is also consistent with the currently approved COM-002-3 standard, which the Board directed be combined with COM-003-1.

Recognizing that Generator Operators and Distribution Providers typically only receive Operating Instructions, the OPCP SDT proposed that only Requirements R3 and R6 apply to these Functional Entities.

#### 4. What does the term *documented communications protocols* refer to?

The term *documented communication protocols* in R1 refers to a set of required protocols specific to the Functional Entity and the Functional Entities they must communicate with. An entity should include as much detail as it believes necessary in their documented protocols, but they must address all of the applicable parts of Requirement R1. Where an entity does not already have a set of documented protocols that meet the parts of Requirement R1, the entity must develop the necessary communications protocols. Entities may also adopt the documented protocols of another entity as its own communications protocols, but the entity must maintain its own set of documented communications protocols to meet Requirement R1.

#### 5. Is this a “zero tolerance” standard

The standard uses the phrase “Operating Instruction during an Emergency” in certain Requirements (R5, R6, R7) to provide a demarcation for what is subject to a “zero tolerance” compliance/enforcement approach and what is not. This is necessary to allow the creation of Violation Severity Levels for each compliance/enforcement approach. **Where “Operating Instruction during an Emergency” is not used, an entity will be assessed under a compliance/enforcement approach that focuses on whether or not an entity met the initial training Requirement (either R2 or R3) and whether or not an entity performed the assessment and took corrective action according to Requirement R4.** The proposed COM-002-4 does not contain a Requirement to adhere to all documented communications protocols during non-Emergency conditions. Under COM-002-4, the assessment and training documentation will provide auditors assurance that responsible entities are using their documented communications protocols and taking corrective actions, as necessary.

Separately listing out Requirements R5, R6, and R7 and using “Operating Instruction during an Emergency” in them does not require a different set of protocols to be used during Emergencies or mandate the identification of a communication as an “Operating Instruction during an Emergency.” The same protocols are required to be used in connection with the issuance of Operating Instructions for all operating conditions. Compliance/enforcement is measured differently using the operating condition as an indicator of which compliance/enforcement approach applies.

**6. Do any of the proposed requirements require the use of three-part communication when issuing or receiving an Operating Instruction outside of an Emergency?**

Compliance with the standard during non-Emergencies is based on whether or not an entity met the initial training Requirement (either R2 or R3) and whether or not an entity performed the assessment and took corrective action according to Requirement R4. An instance of an Operating Instruction outside of an Emergency not using three-part communication, or any of the other protocols in Requirement R1, is not in and of itself a violation of any requirement of COM-002-4. However, an entity will need be using three-part communication when issuing or receiving an Operating Instruction outside of an Emergency in order to complete the assessment of adherence to the entities' documented communications protocols.

**7. Why are entities required to assess the adherence of its operating personnel to the documented communication protocols the entity developed and provide feedback?**

Requiring entities to assess and provide feedback to its operating personnel, was also included in the November 7, 2013 NERC Board of Trustees' resolution as an element to include in the standard. Further, the OPCP SDT believes that it is good operating practice for an entity to periodically evaluate the effectiveness of their protocols and improve them when possible. Most entities currently engage in this type of assessment activity for their operating personnel. This assessment and feedback activity by the entity improves reliability as it provides a shorter evaluation and correction cycle than a traditional audit cycle, while reducing the associated compliance burden as well.

Additionally, the OPCP SDT believes it is good operating practice to provide operators with performance feedback on their adherence to the entity's documented protocols. Doing so, provides entities an opportunity to evaluate the performance of their operating personnel and take corrective actions where necessary, which could prevent a miscommunication from occurring and thus possibly prevent an event which could be harmful to the reliability of the Bulk Electric System.

**8. Should the BA, RC, and TOP provide their protocols to the GOPs and DPs and each other?**

While an entity may choose to provide their protocols to entities to which they communicate, there is not a mandatory and enforceable requirement that they do so.

**9. Why is the standard not applicable to Transmission Owners?**

Please refer to the Functional Model, found at <http://www.nerc.com/pa/Stand/Pages/FunctionalModel.aspx>. In the document, the following is provided for the Transmission Operator:

*The Transmission Operator operates or directs the operation of transmission facilities, and maintains local-area reliability, that is, the reliability of the system and area for which the Transmission Operator has responsibility. The Transmission Operator achieves this by operating the transmission system within its purview in a manner that maintains proper voltage profiles and System Operating Limits, and honors transmission equipment limits established by the Transmission Owner. The Transmission Operator is under the Reliability Coordinator's direction respecting wide-area reliability considerations, that is, considerations beyond those of the system and area for which the Transmission Operator has responsibility and that include the systems and areas of neighboring Reliability Coordinators. The Transmission Operator, in coordination with the Reliability Coordinator, can take action, such as implementing voltage reductions, to help mitigate an Energy Emergency, and can take action in system restoration.*

The following is provided for the Transmission Owner:

*The Transmission Owner owns its transmission facilities and provides for the maintenance of those facilities. It also specifies equipment operating limits, and supplies this information to the Transmission Operator, Reliability Coordinator, and Transmission Planner and Planning Coordinator. In many cases, the Transmission Owner has contracts or interconnection agreements with generators or other transmission customers that would detail the terms of the interconnection between the owner and customer.*

While the Transmission Owner owns the facilities, the Transmission Operator operates the facilities, and as such is subject to this standard. In the case where a Transmission Owner operates facilities, that Transmission Owner is bundled with a Reliability Coordinator or Transmission Operator, and as such would be covered by the standard.

**10. If an entity cannot complete a task included in an Operating Instruction, are they non-compliant?**

COM-002-4 deals with communication protocols, not actions taken by any entity. If an entity does not take action on an Operating Instruction, it may be a violation of another standard, but is not a violation of COM-002-4.

**11. A GOP contacts its TOP and notifies the TOP that a generator is about to trip due to a tube leak. Is this considered an Operating Instruction?**

No. This is not a command; it is simply relaying information about the generator to the Transmission Operator.

**12. If a Distribution Provider cannot operate a BES Element, would this standard apply to them?**

Distribution Providers are applicable entities for this standard. However, if they never receive an Operating Instruction due to their particular circumstance, they would not need to prove compliance with Requirements R3 and R6.

**Requirement R1 and Measure M1****13. Pursuant to R1, is it correct that an oral two-party, person-to-person Operating Instruction requires three part communication, but a single-party to multiple-party burst Operating Instruction message only requires two part communication?**

Yes. Since the use of three-part communications is not practical when issuing a single-party to multiple-party burst Operating Instruction, it is necessary to include a different set of protocols for these situations.

**14. Can you provide some examples of what is meant by written Operating Instructions as contemplated in Requirement R1 Parts 1.1 and 1.4 - 1.6?**

One example of a written Operating Instruction is a written switching order. Another example is an Operating Instruction issued by using a text message.

**15. Please explain how the current draft does not conflict with TOP-002 R18 (uniform line identifiers)?**

Project 2007-03 chose to eliminate TOP-002-2a, Requirement R18 when it developed TOP-002-3. This Requirement stated "Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network." COM-002-4, while reintroducing the concept of line identifiers, limits the scope to only Transmission interface Elements or Transmission interface Facilities (e.g. tie lines and tie substations) for Operating Instructions. This supports both parties being familiar with each other's interface Elements and Facilities, minimizing hesitation and confusion when referring to equipment for the Operating Instruction.

**16. Can you explain what "specify when time identification required"? Is this just for entities in multiple time zones?**

The OPCP SDT has included this part to add necessary clarity to Operating Instructions to reduce the risk of miscommunications. The inclusion of "specify when time identification required" allows for an entity to evaluate its particular circumstances and communications to determine when it may be appropriate to use time identification in its Operating Instructions. The drafting recognized from comments the need to provide this flexibility while still requiring an entity to address this part in its documented communication protocols. Clarifying time and time zone (where necessary) contributes to reducing misunderstandings and reduces the risk of a grave error during BES operations. This is not exclusively for entities in multiple

time zones, but Operating Instructions between entities in multiple time zones is one example of instances that may need time identification when issuing and receiving Operating Instructions.

**17. Why did the drafting team remove the protocol requiring alphanumeric clarifiers?**

Based on feedback from industry and consideration of the NERC Board resolution, the drafting team chose to remove alphanumeric clarifiers as a required protocol. Entities are free to include it in their documented communication protocols.

**18. Why is there a requirement for the use of the English language?**

The drafting team included this part to carry forward the same use of English language included in COM-001-1, Requirement R4 and to retire this requirement from COM-001. The requirement continues to permit the issuer and receiver to use an agreed to alternate language. This has been retained since use of an alternate language on a case-by-case basis may serve to better facilitate effective communications where the use of English language may create additional opportunities for miscommunications. Part 1.1 requires the use of English language when issuing oral or written (e.g. switching orders) Operating Instructions. This creates a standard language (unless agreed to otherwise) for use when issuing commands that could change or preserve the state, status, output, or input of an Element of the Bulk Electric System or Facility of the Bulk Electric System. It also clarifies that an alternate language can be used internally within the organization. The phrase has been modified slightly from the language in COM-001-1, Requirement R4 to incorporate the term "Operating Instruction," which defines the communications that require the use of the documented communications protocols.

**Requirements R2 and R3 and Measures M2 and M3**

**19. Is there an obligation on the part of the entity issuing an Operating Instruction to ensure the receiving operator is trained to receive it?**

No. It is the responsibility of the receiving entity to ensure that their operator has received training prior to receiving an Operating Instruction.

**20. Why is there a requirement to conduct initial training?**

The OPCP SDT has included an initial training requirement in the standard in response to the NERC Board of Trustees' resolution, which directs that a training requirement be included in the COM-002-4 standard. Additionally, requiring entities that issue and/or receive Operating Instructions to conduct initial training with their operating personnel will ensure that all applicable operators will be trained in three-part communication. The OPCP SDT believes this training will reduce the possibility of a miscommunication, which could eventually lead to action or inaction harmful to the reliability of the Bulk Electric System. Ongoing training would fall under an entity's training program in PER-005 or could be listed as a type of corrective action under Requirement R4. As such, this requirement is not in conflict with PER-005, but complements it.

**21. Current operating personnel issue and receive Operating Instructions now and thus it is not possible to train them on documented protocols \*prior\* to their issuing or receiving their first Operating Instruction. If training takes place before the enforcement date for COM-002-4, would an entity meet the expectations of Requirement R2 and/or R3?**

Yes.

#### **Requirement R4 and Measure M4**

**22. Would you please provide more specificity as to how the R.4.1 and 4.2 assessments may be performed?**

An entity could perform an assessment by listening to random samplings of each of their operating personnel issuing and/or receiving Operating Instructions. If there were instances where an Operator deviated from the entity's protocols, the entity would provide feedback to the operator in question in any method it sees as appropriate. An example would be counseling or retraining the operator on the protocols.

An entity could assess the effectiveness of its protocols by reviewing instances where operators deviated from those protocols and determining if whether the deviations were caused by operator error or by flaws in the protocols that need to be changed.

**23. Doesn't Measure M4 extend beyond the scope of the requirement when it addresses communications which deviated from the protocol and contributed to an emergency?**

The purpose of COM-002-4 is "To improve communications for the issuance of Operating Instructions with predefined communications protocols to reduce the possibility of miscommunication that could lead to action or inaction harmful to the reliability of the Bulk Electric System (BES)." If the deviation from the protocol contributed to an emergency, the purpose of this standard was not met. The entity must determine what caused that deviation and address any necessary corrective actions.

#### **Requirements R5 and R6 and Measures M5 and M6**

**24. What is defined as an Emergency and who is responsible for declaring when an Emergency begins and ends?**

The NERC Glossary of Terms defines Emergency as "Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System." It is expected that these are abnormal and rare circumstances. There is not an expectation that an Emergency be declared. For further information, please refer to Question 15.

**25. Is it a violation of R5 if three-part communication is not used, but an alternative action is taken?**

If an operator issues an Operating Instruction during an Emergency and, based on the response from the receiver, or lack thereof, chooses to take an alternative action, that operator has satisfied Requirement R5 and is not in violation.

**26. How does the SDT envision operators differentiating, during Real-time, between Emergency Operating Instructions and non-emergency Operating Instructions? Are the operators to explicitly say "this is an Emergency Operating Instruction"?**

Separately listing out Requirements R5, R6, and R7 and using "Operating Instruction during an Emergency" in them does not require a different set of protocols to be used during Emergencies or mandate the identification of a communication as an "Operating Instruction during an Emergency." The same protocols are required to be used in connection with the issuance of Operating Instructions for all operating conditions. Their use is measured for compliance/enforcement differently using the operating condition as an indicator of which compliance/enforcement approach applies. In other words, it is not the drafting team's expectation that the operator must differentiate between Emergency and non-Emergency Operating Instructions.

**27. Does this standard require TOPs to provide evidence of another parties' compliance in Measure M6?**

No. The Measures provide various options that the drafting team considered as ways to demonstrate compliance for Requirement R6. It is not an exhaustive list, and in no way places an expectation on any entity that they must provide evidence of another party's compliance. It simply provides a few options to consider.

**28. Can you provide an example of an alternative action being taken?**

The following scenario is provided as an example of an alternative action:

A Transmission Operator (TOP) calls a Generator Operator (GOP) to reduce generation due to an Emergency. The GOP does not respond verbally. At that point the TOP could:

- Ask if the GOP understood the Operating Instruction (alternative action).
- Hang up and redial the GOP, assuming that the communication line was dead (alternative action),
- Request a different generator that is effective to reduce (alternative action);
- or
- Call a different contact at the GOP (alternative action)

**29. Must the receiver repeat the Operating Instruction back verbatim?**

No. The Operating Instruction does not have to be repeated verbatim. The issuer must confirm that the receiver's response of the Operating Instruction was correct.

**Table of Issues and Directives COM-002-4**

## Table of Issues and Directives

Project 2007-02

Operating Personnel Communications Protocols

Table of Issues and Directives Associated with COM-002-4

Source	Directive Language	Disposition	Section and/or Requirement(s)
FERC Order No. 693, P 512 and 540 (Part 1)	512. The Commission finds that, during both normal and emergency operations, it is essential that the transmission operator, balancing authority and reliability coordinator have communications with distribution providers. In response to APPA, as discussed above, any distribution provider that is not a user, owner or operator of the Bulk-Power System would not be required to comply with COM-002-2, even though the Commission is requiring the ERO to modify the Reliability Standard to include distribution providers as applicable entities. APPA's concern that 2,000 public power systems would have to be added to the compliance registry is misplaced, since, as we explain in our Applicability discussion above, we are approving NERC's registry process, including the registry criteria. Therefore, we adopt our proposal to require	Distribution Providers have been included as applicable entities in COM-002-4	Applicability 4.1.2 Requirements R3 and R6

# Violation Risk Factor and Violation Severity Level Justifications

## COM-001-2 - Communications

### Violation Risk Factor and Violation Severity Level Justifications

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in: COM-001-2 – Communications

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

The Reliability Coordination Standard Drafting Team (SDT) applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSL for the requirements under this project.

#### **NERC Criteria – Violation Risk Factors**

##### ***High Risk Requirement***

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

##### ***Medium Risk Requirement***

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

***Lower Risk Requirement***

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

**FERC Violation Risk Factor Guidelines**

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:<sup>1</sup>

***Guideline 1 – Consistency with the Conclusions of the Final Blackout Report***

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:<sup>2</sup>

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities

<sup>1</sup> North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").

<sup>2</sup> Id. at footnote 15.

- Appropriate use of transmission loading relief

***Guideline 2 – Consistency within a Reliability Standard***

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

***Guideline 3 – Consistency among Reliability Standards***

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

***Guideline 4 – Consistency with NERC’s Definition of the Violation Risk Factor Level***

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC’s definition of that risk level.

***Guideline 5 – Treatment of Requirements that Co-mingle More Than One Obligation***

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC’s VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC’s Reliability Standards and implies that these requirements should be assigned a “High” VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are eleven requirements in the standard. None of the eleven requirements were assigned a “Lower” VRF. Requirements R1-R8 are assigned a “High” VRF while the other three requirements are assigned a “Medium” VRF.

**NERC Criteria – Violation Severity Levels**

Violation Severity Levels (VSLs) define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple “degrees” of noncompliant performance, and may have only one, two, or three VSLs.

Violation severity levels should be based on the guidelines shown in the table below:

Lower	Moderate	High	Severe
<p>Missing a minor element (or a small percentage) of the required performance</p> <p>The performance or product measured has significant value as it almost meets the full intent of the requirement.</p>	<p>Missing at least one significant element (or a moderate percentage) of the required performance.</p> <p>The performance or product measured still has significant value in meeting the intent of the requirement.</p>	<p>Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component.</p> <p>The performance or product has limited value in meeting the intent of the requirement.</p>	<p>Missing most or all of the significant elements (or a significant percentage) of the required performance.</p> <p>The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.</p>

**FERC Order of Violation Severity Levels**

FERC’s VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

***Guideline 1 – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance***

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

***Guideline 2 – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties***

A violation of a “binary” type requirement must be a “Severe” VSL.

Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

***Guideline 3 – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement***

VSLs should not expand on what is required in the requirement.

***Guideline 4 – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations***

... unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

**VRF and VSL Justifications**

VRF Justifications – COM-001-2, R1-R6	
Proposed VRF	High
NERC VRF Discussion	
FERC VRF G1 Discussion	Guideline 1- Consistency w/ Blackout Report: N/A
FERC VRF G2 Discussion	Guideline 2- Consistency within a Reliability Standard: Each requirement specifies which functional entities that are required to have Interpersonal Communication capability and Alternative Interpersonal Communication capability. The VRFs for each requirement are consistent with each other and are only applied at the Requirement level.
FERC VRF G3 Discussion	Guideline 3- Consistency among Reliability Standards: These requirements are facility requirements that provide communications capability between functional entities. There are no similar facility requirements in the standards. The approved VRF for COM-001-1.1, R1 (which proposed R1-R6 replaces) is High and therefore the proposed VRF for R1-R6 is consistent.
FERC VRF G4 Discussion	Guideline 4- Consistency with NERC Definitions of VRFs: Failure to have Interpersonal Communication capability and Alternative Interpersonal Communication capability could limit or prevent communication between entities and directly affect the electrical state or the capability of the Bulk Power System and could lead to Bulk Power System instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.
FERC VRF G5	Guideline 5- Treatment of Requirements that Co-mingle More than One

# Violation Risk Factor and Violation Severity Level Justifications

## COM-001-2 - Communications

### Violation Risk Factor and Violation Severity Level Justifications

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in: COM-001-2 – Communications

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

The Reliability Coordination Standard Drafting Team (SDT) applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSL for the requirements under this project.

#### **NERC Criteria – Violation Risk Factors**

##### ***High Risk Requirement***

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

##### ***Medium Risk Requirement***

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

***Lower Risk Requirement***

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

**FERC Violation Risk Factor Guidelines**

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:<sup>1</sup>

***Guideline 1 – Consistency with the Conclusions of the Final Blackout Report***

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:<sup>2</sup>

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities

<sup>1</sup> North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").

<sup>2</sup> Id. at footnote 15.

- Appropriate use of transmission loading relief

***Guideline 2 – Consistency within a Reliability Standard***

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

***Guideline 3 – Consistency among Reliability Standards***

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

***Guideline 4 – Consistency with NERC’s Definition of the Violation Risk Factor Level***

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC’s definition of that risk level.

***Guideline 5 – Treatment of Requirements that Co-mingle More Than One Obligation***

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC’s VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC’s Reliability Standards and implies that these requirements should be assigned a “High” VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are eleven requirements in the standard. None of the eleven requirements were assigned a “Lower” VRF. Requirements R1-R8 are assigned a “High” VRF while the other three requirements are assigned a “Medium” VRF.

**NERC Criteria – Violation Severity Levels**

Violation Severity Levels (VSLs) define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple “degrees” of noncompliant performance, and may have only one, two, or three VSLs.

Violation severity levels should be based on the guidelines shown in the table below:

Lower	Moderate	High	Severe
<p>Missing a minor element (or a small percentage) of the required performance</p> <p>The performance or product measured has significant value as it almost meets the full intent of the requirement.</p>	<p>Missing at least one significant element (or a moderate percentage) of the required performance.</p> <p>The performance or product measured still has significant value in meeting the intent of the requirement.</p>	<p>Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component.</p> <p>The performance or product has limited value in meeting the intent of the requirement.</p>	<p>Missing most or all of the significant elements (or a significant percentage) of the required performance.</p> <p>The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.</p>

**FERC Order of Violation Severity Levels**

FERC’s VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

***Guideline 1 – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance***

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

***Guideline 2 – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties***

A violation of a “binary” type requirement must be a “Severe” VSL.

Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

***Guideline 3 – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement***

VSLs should not expand on what is required in the requirement.

***Guideline 4 – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations***

... unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

**VRF and VSL Justifications**

VRF Justifications – COM-001-2, R1-R6	
Proposed VRF	High
NERC VRF Discussion	
FERC VRF G1 Discussion	Guideline 1- Consistency w/ Blackout Report: N/A
FERC VRF G2 Discussion	Guideline 2- Consistency within a Reliability Standard: Each requirement specifies which functional entities that are required to have Interpersonal Communication capability and Alternative Interpersonal Communication capability. The VRFs for each requirement are consistent with each other and are only applied at the Requirement level.
FERC VRF G3 Discussion	Guideline 3- Consistency among Reliability Standards: These requirements are facility requirements that provide communications capability between functional entities. There are no similar facility requirements in the standards. The approved VRF for COM-001-1.1, R1 (which proposed R1-R6 replaces) is High and therefore the proposed VRF for R1-R6 is consistent.
FERC VRF G4 Discussion	Guideline 4- Consistency with NERC Definitions of VRFs: Failure to have Interpersonal Communication capability and Alternative Interpersonal Communication capability could limit or prevent communication between entities and directly affect the electrical state or the capability of the Bulk Power System and could lead to Bulk Power System instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.
FERC VRF G5	Guideline 5- Treatment of Requirements that Co-mingle More than One

VRF Justifications – COM-001-2, R1-R6

## Project 2007-02 – Operating Personnel Communications Protocols

### VRF and VSL Justifications

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in COM-002-4 Operating Personnel Communications Protocols.

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

The Operations Personnel Communications Protocol Standard Drafting Team applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSLs for the requirements under this project:

### NERC Criteria - Violation Risk Factors

#### **High Risk Requirement**

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a

cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

### **Medium Risk Requirement**

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

### **Lower Risk Requirement**

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

## **FERC Violation Risk Factor Guidelines**

### **Guideline (1) — Consistency with the Conclusions of the Final Blackout Report**

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief

#### **Guideline (2) — Consistency within a Reliability Standard**

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

#### **Guideline (3) — Consistency among Reliability Standards**

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

#### **Guideline (4) — Consistency with NERC's Definition of the Violation Risk Factor Level**

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC's definition of that risk level.

**Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation**

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC's VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC's Reliability Standards and implies that these requirements should be assigned a "High" VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

VRFs for COM-002-4:

There are seven requirements in COM-002-4, draft 2. Requirements R1,R2, and R3 are assigned a "Low" VRF. R1 now reads: *"Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall develop documented communications protocols for its operating personnel that issue and receive Operating Instructions. The protocols shall, at a minimum:"* R2 now reads: *" Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall conduct initial training for each of its operating personnel responsible for the Real-time operation of the interconnected Bulk Electric System on the documented communications protocols developed in Requirement R1 prior to that individual operator issuing an Operating Instruction."* R3 now reads: *" Each Distribution Provider and Generator Operator shall conduct initial training for each of its operating personnel who can receive an oral two-party, person-to-person Operating Instruction prior to that individual operator receiving an oral two-party, person-to-person Operating Instruction to either:"* Requirement R4 is assigned a "Medium" VRF. R4 now reads: *"Each Balancing Authority, Reliability Coordinator, and Transmission Operator shall at least once every twelve (12) calendar months:* This Requirement warrants a VRF of "Medium" because R4 is a requirement in an operations planning time frame that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, a violation of this requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures. *" Requirement R5, R6 and R7 are assigned a "High" VRF. R5 now reads: *" Each Balancing Authority, Reliability Coordinator, and Transmission Operator that issues an oral two-party, person-to-person Operating Instruction during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, shall either:"* R6 is a new requirement which reads *"Each Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator that receives an oral two-party, person-to-person Operating Instruction during an Emergency, excluding written or oral single-party to multiple-party burst Operating Instructions, shall either:"* R7 is a new requirement which reads *"Each Balancing Authority, Reliability Coordinator, and Transmission Operator that issues a written or oral single-party to multiple-party burst Operating Instruction during an Emergency shall confirm or verify that the Operating Instruction was received by at least one receiver of the Operating Instruction."* These Requirements warrant VRFs of "High" because failure to use the communications protocols during an emergency could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.*

### **NERC Criteria - Violation Severity Levels**

Violation Severity Levels (VSLs) define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple “degrees” of noncompliant performance and may have only one, two, or three VSLs.

Violation severity levels should be based on the guidelines shown in the table below:

Lower	Moderate	High	Severe
<p>Missing a minor element (or a small percentage) of the required performance</p> <p>The performance or product measured has significant value as it almost meets the full intent of the requirement.</p>	<p>Missing at least one significant element (or a moderate percentage) of the required performance.</p> <p>The performance or product measured still has significant value in meeting the intent of the requirement.</p>	<p>Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component.</p> <p>The performance or product has limited value in meeting the intent of the requirement.</p>	<p>Missing most or all of the significant elements (or a significant percentage) of the required performance.</p> <p>The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.</p>

**FERC Order on Violation Severity Levels**

In its June 19, 2008 Order on Violation Severity Levels, FERC indicated it would use the following four guidelines for determining whether to approve VSLs:

### **Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance**

Compare the VSLs to any prior Levels of Non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when Levels of Non-compliance were used.

### **Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties**

Guideline 2a: A violation of a “binary” type requirement must be a “Severe” VSL.

Guideline 2b: Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

### **Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement**

VSLs should not expand on what is required in the requirement.

### **Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations**

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

The drafting team will complete the following table, providing of analysis and justification for each VRF and VSL, for each requirement.

VRF and VSL Justifications – COM-002-4, R1	
Proposed VRF	Low
NERC VRF Discussion	R1 is a requirement in a Long-term Planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system The VRF for this requirement is “Low,” which is consistent with NERC guidelines.
FERC VRF G1 Discussion	<b>Guideline 1- Consistency w/ Blackout Report:</b> R1 establishes communications protocols, which is consistent with FERC guideline G1.
FERC VRF G2 Discussion	<b>Guideline 2- Consistency within a Reliability Standard :</b> The requirement has sub-requirements that are of equal importance and similarly address communication protocols; only one VRF was assigned so there is no conflict.
FERC VRF G3 Discussion	<b>Guideline 3- Consistency among Reliability Standards:</b> This requirement calls for the development of documented communications protocols by entities that will both issue and receive “Operating Instructions” that reduce the possibility of miscommunication which could eventually lead to action or inaction harmful to the reliability of the bulk electric system.
FERC VRF G4 Discussion	<b>Guideline 4- Consistency with NERC Definitions of VRFs:</b> Failure to utilize communication protocols properly could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of the requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is “ Low,” which is consistent with NERC guidelines for similar requirements.
FERC VRF G5 Discussion	<b>Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation:</b> COM-002-4 Requirement R1 contains only one objective which is to document clear, formal and universally applied communication protocols that reduce the possibility of miscommunication which could

VRF and VSL Justifications – COM-002-4, R1			
		lead to action or inaction harmful to the reliability of the bulk electric system. Since the requirement has only one objective, only one VRF was assigned.	
Proposed VSL			
Lower	Moderate	High	Severe
<p>The responsible entity did not specify the instances that require time identification when issuing an oral or written Operating Instruction and the format for that time identification, as required in Requirement R1, Part 1.5</p> <p>OR</p> <p>The responsible entity did not specify the nomenclature for Transmission interface Elements and Transmission interface Facilities when issuing an oral or written Operating Instruction, as required in Requirement R1, Part 1.6.</p>	<p>The responsible entity did not require the issuer and receiver of an oral or written Operating Instruction to use the English language, unless agreed to otherwise, as required in Requirement R1, Part 1.1. An alternate language may be used for internal operations.</p>	<p>The responsible entity did not include Requirement R1, Part 1.4 in its documented communication protocols.</p>	<p>The responsible entity did not include Requirement R1, Part 1.2 in its documented communications protocols</p> <p>OR</p> <p>The responsible entity did not include Requirement R1, Part 1.3 in its documented communications protocols</p> <p>OR</p> <p>The responsible entity did not develop any documented communications protocols as required in Requirement R1.</p>

VRF and VSL Justifications – COM-002-4, R1

**VRF and VSL Justifications – COM-002-4, R1**

<b>VRF and VSL Justifications – COM-002-4, R1</b>	
<p><b>FERC VSL G1</b>            Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance</p>	<p>Based on the VSL Guidance, the SDT developed four VSLs based on misapplication or absence of common communication protocols, with varied VSLs based on the severity of the potential risk to the bulk electric system if the protocols were not used. If no communication protocols were addressed at all then the VSL is Severe.</p>
<p><b>FERC VSL G2</b>            Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties            Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent            Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language</p>	<p>Guideline 2a:            The VSL assignment for R1 is not binary.</p> <p>Guideline 2b:            The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.</p>

**VRF and VSL Justifications – COM-002-4, R1**

<p><b>FERC VSL G3</b> Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</p>	<p>The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement. In addition, the VSLs are consistent with Requirement R1.</p>
<p><b>FERC VSL G4</b> Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</p>	<p>The VSL is based on a single violation and not cumulative violations</p>
<p><b>FERC VSL G5</b> Requirements where a single lapse in protection can compromise computer network security, i.e., the ‘weakest link’ characteristic, should apply binary VSLs</p>	<p>Non CIP</p>

VRF and VSL Justifications – COM-002-4, R1	
<p><b>FERC VSL G6</b> VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence</p>	<p>Non CIP</p>

VRF and VSL Justifications – COM-002-4, R2	
<b>Proposed VRF</b>	Low
NERC VRF Discussion	R2 is a requirement in a Long-term Planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system The VRF for this requirement is “Low,” which is consistent with NERC guidelines.
FERC VRF G1 Discussion	<p><b>Guideline 1- Consistency w/ Blackout Report:</b> R2 establishes that entities who issue and receive Operating Instructions shall conduct initial training with their operating personnel to ensure that all applicable operators will be trained on their documented communication protocols established in Requirement R1. This training reduces the possibility of a miscommunication, which could eventually lead to action or inaction harmful to the reliability of the Bulk Electric System, which is consistent with FERC guideline G1.</p>
FERC VRF G2 Discussion	<p><b>Guideline 2- Consistency within a Reliability Standard :</b> Only one VRF is assigned for this requirement.</p>

VRF and VSL Justifications – COM-002-4, R2			
FERC VRF G3 Discussion	<p><b>Guideline 3- Consistency among Reliability Standards:</b>                      This requirement establishes that each Balancing Authority, Reliability Coordinator and Transmission Operator conduct initial training with each of its operating personnel responsible for the Real-time operation of the BES on documented communication protocols to reduce the possibility of miscommunication which could eventually lead to action or inaction harmful to the reliability of the bulk electric system. This VRF is consistent with other training requirements within the body of NERC Reliability Standards, including CIP-004-5.1 Requirements R1 and R2.</p>		
FERC VRF G4 Discussion	<p><b>Guideline 4- Consistency with NERC Definitions of VRFs:</b>                      Violation of the requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is “Low,” which is consistent with NERC guidelines for similar requirements.</p>		
FERC VRF G5 Discussion	<p><b>Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation:</b>                      COM-002-4 Requirement R2 contains only one objective which is to conduct initial training for each of its operating personnel responsible for the Real-time operation of the BES. Since the requirement has only one objective, only one VRF was assigned.</p>

## VRF and VSL Justifications – COM-002-4, R2

**FERC VSL G1**

Violation Severity Level  
Assignments Should Not Have  
the Unintended Consequence  
of Lowering the Current Level  
of Compliance

Based on the VSL Guidance, the SDT developed two VSLs. These VSLs were determined based on the potential consequences of an operator issuing an Operating Instruction without having first received training on the communication protocols. An operator who is not trained on the communication protocols could miscommunicate an Operating Instruction, which could put the BES in an undesirable state. This warrants a High VSL. An operator who is not trained on the communication protocols could miscommunicate an Operating Instruction during an Emergency, which could directly put the BES in an undesirable state. This warrants a Severe VSL.

Since training requirements were not in prior versions of COM-002, the introduction of this training requirement will not have the unintended consequence of lowering the current level of compliance.

**VRF and VSL Justifications – COM-002-4, R2**

<p><b>FERC VSL G2</b>          Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties          Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent          Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language</p>	<p>Guideline 2a:          The VSL assignment is not R2 binary.</p> <p>Guideline 2b:          The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.</p>

<p><b>FERC VSL G6</b> VSLs for cyber security requirements containing interdependent tasks of documentation and implementation should account for their interdependence</p>	Non CIP

VRF and VSL Justifications – COM 002-4, R3	
<b>Proposed VRF</b>	Low
NERC VRF Discussion	R3 is a requirement in a Long-term Planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system. The VRF for this requirement is “Low,” which is consistent with NERC guidelines.

VRF and VSL Justifications – COM 002-4, R3	
FERC VRF G1 Discussion	<p><b>Guideline 1- Consistency w/ Blackout Report:</b>                      R3 establishes that entities who only receive Operating Instructions shall conduct initial training with their operating personnel to ensure that all applicable operators will be trained in three part communication. This training reduces the possibility of a miscommunication, which could eventually lead to action or inaction harmful to the reliability of the Bulk Electric System, which is consistent with FERC guideline G1.</p>
FERC VRF G2 Discussion	<p><b>Guideline 2- Consistency within a Reliability Standard :</b>                      The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.</p>
FERC VRF G3 Discussion	<p><b>Guideline 3- Consistency among Reliability Standards:</b>                      This requirement establishes that Distribution Providers and Generator Operators conduct initial training with each of its operating personnel responsible for the Real-time operation of the BES on three part communication to reduce the possibility of miscommunication which could eventually lead to action or inaction harmful to the reliability of the bulk electric system. This VRF is consistent with other training requirements within the body of NERC Reliability Standards, including CIP-004-5.1 Requirements R1 and R2.</p>
FERC VRF G4 Discussion	<p><b>Guideline 4- Consistency with NERC Definitions of VRFs:</b>                      Failure to conduct initial training for individual operators on three part communication could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of the requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures. The VRF for this requirement is “Low,” which is consistent with NERC guidelines for similar requirements.</p>
FERC VRF G5 Discussion	<p><b>Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation:</b>                      COM-002-4 Requirement R3 contains only one objective which to conduct initial training with individual system operators on three part communication. Since the requirement has only one objective, only one VRF was assigned.</p>

VRF and VSL Justifications – COM 002-4, R4

**FERC VSL G1**

Violation Severity Level  
Assignments Should Not Have  
the Unintended Consequence  
of Lowering the Current Level  
of Compliance

Based on the VSL Guidance, the SDT developed four VSLs to establish the severity of an entity not assessing their operator's adherence to the entity's communications protocols and/or not assessing the effectiveness of those protocols at least once every 12 calendar months. If an entity evaluated the documented communications protocols developed in Requirement R1, but exceeded twelve (12) calendar months between evaluations then it is a "Low" VSL, since the performance or product measured has significant value as it almost meets the full intent of the requirement.

If an entity assessed adherence to the documented communications protocols in Requirements R1 by its operating personnel that issue and receive Operating Instructions but did not provide feedback to those operating personnel it is a "Medium" VSL. If an entity assessed adherence to the communications protocols by its operating personnel and provided feedback to those personnel but did not take corrective action, as appropriate, it is also a "Medium" VSL. If an entity assessed the effectiveness of its protocols for its operating personnel but did not modify its documented communication protocols, as necessary, it is also a "Medium" VSL. The value of "Medium" is justified based one significant element (or a moderate percentage) of the required performance is missing but the performance or product measured still has significant value in meeting the intent of the requirement.

If an entity did not assess adherence to the documented communications protocols in Requirements R1 by its operating personnel then it is a "High" VSL. If an entity did not assess the effectiveness of its documented communications protocols in Requirements R1 for its operating personnel it is a "High" VSL. The value of "High" is justified because the entity is missing more than one significant element (or is missing a high percentage) of the required performance.

If an entity did not assess adherence to the documented communications protocols by its operating personnel and it did not assess the effectiveness of its documented communications protocols in Requirement R1 for its operating personnel, then it is a "Severe" VSL. The value of "Severe" is justified because the performance measured does not meet the intent of the requirement.

VRF and VSL Justifications – COM 002-4, R5

**FERC VSL G1**

Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Based on the VSL Guidance, the SDT developed two VSLs based on the failure to use three part communication when issuing an Operating Instruction during an Emergency.

If an entity, when issuing an Operating Instruction during an Emergency, did not use three part communication or take an alternative action if the receiver does not respond, yet instability, uncontrolled separation, or cascading failures did not occur as a result, the entity violated the Requirement with a “Medium” VSL. The value of “Medium” is justified based one significant element (or a moderate percentage) of the required performance is missing but the performance or product measured still has significant value in meeting the intent of the requirement, which is to avoid action or inaction that is harmful to the reliability of the Bulk Electric System.

If an entity, when issuing an Operating Instruction during an Emergency, did not use three part communication or take an alternative action if the receiver does not respond, and instability, uncontrolled separation, or cascading failures occurred as a result, the entity violated the Requirement with a “Severe” VSL. The value of “Severe” is justified because the performance outcome does not meet the intent of the requirement.

**Exhibit M**

**Summary of Development History and Complete Record of Development COM-001-2**

## **Summary of Development History**

### **Project 2006-06 – Reliability Coordination**

The development record for proposed Reliability Standard COM-001-2 is summarized below.

#### **I. Overview of the Standard Drafting Team**

When evaluating a proposed Reliability Standard, the Commission is expected to give “due weight” to the technical expertise of the ERO.<sup>1</sup> The technical expertise of the ERO is derived from the reliability coordination standard drafting team (“SDT”). For this project, the standard drafting team consisted of industry experts, all with a diverse set of experiences. A roster of the team members is included in Exhibit P.

#### **II. Standard Development History**

##### **A. Standard Authorization Request Development**

Project 2006-06 – Reliability Coordination was initiated on December 18, 2006 as a SAR for revisions to existing standards. The SAR was posted for a 30-day comment period from January 15, 2007 to February 14, 2007. NERC received 11 sets of comments from more than 31 different individuals from more than 15 companies representing 9 of the 10 industry segments. Most commenters disagreed with the broad scope of the SAR since it included revisions to 27 standards. In response to the comments, NERC revised the purpose statement of the SAR and reduced the number of standards considered for revision from 27 to 10, narrowing the scope of the project.

A second draft of the SAR was posted for a comment period from March 19, 2007 to April 17, 2007. NERC received 19 sets of comments from 52 different individuals from

---

<sup>1</sup> Section 215(d)(2) of the Federal Power Act; 16 U.S.C. §824(d)(2) (2012).

approximately 40 companies in 8 of the 10 industry segments. In response to comments, NERC corrected references of “FERC NOPR” to “Order No. 693” and made small changes to the detailed and brief description of proposed changes. The SAR was approved by the Standards Committee and moved forward into development.

### **B. First Posting – Comment Period**

COM-001-2 was first posted for a 45-day comment period from August 5, 2008 to September 16, 2008. NERC received 29 sets of comments from more than 70 different individuals, including 50 companies and representing 8 of the 10 industry segments.<sup>2</sup> In response to comments, the SDT made the following changes to the draft COM-001-2 standard:

- Replaced “telecommunications facilities” with “interpersonal communications capabilities” to better reflect the intent of the SDT.
- Added the Transmission Service Provider (TSP), Load-serving Entity (LSE), and Purchasing-Selling Entity (PSE) to the list of entities in Requirement R3 that must use English Language for inter-entity communications.
- Added a time requirement to Requirement R2.
- Removed informational sentence from end of Requirement R3.
- Reworded the violation severity levels (VSLs) to match changes in the Requirements.
- Made other general language improvements to the Requirements and Measures.

### **C. Second Posting – Comment Period**

---

<sup>2</sup> COM-001-2 was posted along with six IRO (Interconnection Reliability Operations and Coordination) Reliability Standards that will be filed in a separate petition.

Second draft of the COM-001-2 standard was posted again for a 30-day public comment period from July 10, 2009 to August 9, 2009. NERC received 31 sets of comments from more than 87 different individuals from over 62 companies in 8 of the 10 industry segments. The SDT made the following changes to COM-001-2:

- Proposed definitions for “Interpersonal Communication” and “Alternative Interpersonal Communication.
- Revised the wording of Requirement R2 to add clarity and revised Requirement R3 to include the phrase “unless dictated by law...” to address legal requirements in some areas.
- Removed the mitigation plan from Requirement R1 and Measure M1.
- Added more VSLs for Requirement R2.
- Removed Distribution Provider and Generator Operator from the Data Retention section of Requirement R1.

#### **D. Third Posting – Comment Period**

The draft of the Reliability Coordination standard was posted for a third comment period from January 4, 2010 to February 18, 2010. There were 42 sets of comments from more than 150 different individuals from 50 companies representing all 10 of NERC’s industry segments. In response to comments, the SDT revised the definitions “Interpersonal Communication” and “Alternative Interpersonal Communication.” The SDT also extensively revised Requirement R1 (now R9), to more specifically delineate Interpersonal and Alternative Interpersonal Communication in tandem with the revisions of the definitions, and to specify the applicable entity responsibility. The VRF for this Requirement was changed to “Medium.”

#### **E. Fourth Posting – Formal Comment Period Initial Ballot**

A fourth draft of the standard was posted for a formal comment period from January 18, 2011 to March 7, 2011, with an initial ballot held from February 25, 2011 to March 7, 2011. All of the Reliability Coordination standards in Project 2006-06 were balloted together, and the standards received a quorum of 87.10% and an approval of 49.54%. During the formal comment period, 41 sets of comments were received from 168 different individuals from 112 companies representing 9 of the 10 industry segments. In response to comments, the SDT made the following changes to the standards:

- Addressed the applicability of the standards and implementation plans by aligning COM-001-2 to include the same entities and by removing LSE, PSE and TSP from the COM standards.
- Removed the phrase "to exchange Interconnection and operating information" in Requirements R1 through R8 to clarify that the intent of the capability is NOT for the exchange of data.
- Added a new Requirement R11 to COM-001 for clarity regarding responsibilities of the Distribution Provider and the Generator Operator when either entity experiences a failure of its Interpersonal Communication capability.
- Removed PSE and LSE from the COM-001-2 implementation plan.

As a result of the revisions, the SDT moved COM-001-2 to a successive ballot.

#### **F. Fifth Posting – Comment Period, Successive Ballot, and Non-Binding Poll**

Fifth draft of the COM-001-2 standard was posted for a comment period and non-binding poll of the VRFs and VSLs from January 9, 2012 to February 9, 2012, with a successive ballot and non-binding poll held from January 30, 2012 to February 9, 2012. COM-001-2 received a quorum of 81.82% and an approval of 54.64% with a 71.35% approval for the VRFs and VSLs.

The SDT received 62 sets of comments from 170 different individuals from approximately 106 companies representing 9 of 10 industry segments. In response to comments, the SDT made the following changes to COM-001-2:

- Removed “for the exchange of Interconnection and operating information” from the purpose statement.
- Made effective date language consistent with the current Standard Drafting Guidelines.
- Added a part to Requirements R3 and R4 to address synchronous and asynchronous connections.
- Changed wording in Requirement R11 from “Mutually agreeable time” to “mutually agreeable action.”
- Made conforming word changes and capitalizations and fixed typos.
- Made conforming changes to VSLs.

#### **G. Sixth Posting – Comment Period, Successive Ballot and Non-binding Poll, and Recirculation Ballot and Non-Binding Poll**

In the sixth posting, COM-001-2 was posted for a comment period and non-binding poll of the VRFs and VSLs from June 7, 2012 to July 6, 2012, with a successive ballot and non-binding poll of the VRFs and VSLs. COM-001-2 received a 75.37% quorum, and an approval of 72.16%, with a 73.71% approval for the VRFs and VSLs. The SDT received 41 sets of comments from 136 different individuals from 90 companies representing 9 of the 10 industry segments. Slight wording changes were made to the COM-001-2 Requirements and Measures, but none of the changes were substantive.

#### **H. Seventh Posting – Recirculation Ballot**

For the seventh and final posting, COM-001-2 was posted for a recirculation ballot from September 6, 2012 to September 17, 2012. COM-001-2 received industry approval with a quorum of 80.35% and an approval of 75.01%.

#### **I. Board of Trustees Approval**

The final drafts of the COM-001-2 and COM-002-3 standards were presented to NERC's Board of Trustees for approval on November 7, 2012. The Board of Trustees approved the standards, and NERC staff recommended that they be filed with applicable regulatory authorities.

Related Files

**Status:**  
 The Board of Trustees (BOT) adopted the IRO-002, IRO-005, and IRO-014 standards at their August 4, 2011 meeting. The standard IRO-001-3 was adopted by the BOT at their August 16, 2012 meeting. Standards COM-001-2 and COM-002-3 were BOT adopted on November 7, 2012. IRO-002-3, IRO-005-4, and IRO-014-2 were filed with applicable regulatory authorities for approval on April 16, 2013. NERC staff is preparing the filing for COM-001-2 and COM-002-3.

**Purpose/Industry Need:**  
 To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

Documents to be submitted for the FERC Filing of standards for Project 2006-06 - Reliability Coordination - IRO-002-3, IRO-005-4, IRO-014-2 (April 16, 2013)

# Standard Authorization Request Form

Title of Proposed Standard	Reliability Coordination (Project 2006-06)
Request Date	December 18, 2006

<b>SAR Requestor Information</b>	<b>SAR Type</b> <i>(Check a box for each one that applies.)</i>
Name            Ellis Rankin	<input type="checkbox"/> New Standard
Primary Contact    Ellis Rankin	<input checked="" type="checkbox"/> Revision to existing Standards – see list below
Telephone        214-743-6828 Fax                972-263-6710	<input type="checkbox"/> Withdrawal of existing Standard
E-mail            erankin@txued.com	<input type="checkbox"/> Urgent Action

**Purpose**  
The purpose of this set of standards is to ensure that the reliability coordinator has processes, procedures, plans, and can use their tools and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

COM-001 — Telecommunications  
COM-002 — Communications and Coordination  
IRO-001 — Reliability Coordination – Responsibilities and Authorities  
IRO-002 — Reliability Coordination – Facilities  
IRO-003 — Reliability Coordination – Wide Area View  
IRO-004 — Reliability Coordination – Operations Planning  
IRO-005 — Reliability Coordination – Current Day Operations  
IRO-007 — Monitoring the Wide Area  
IRO-008 — Reliability Coordinator Analyses and Assessments  
IRO-009 — Reliability Coordinator Actions to Operate Within IROLs  
IRO-010 — Reliability Coordinator Data Specification and Collection  
IRO-011 — Providing Data to the Reliability Coordinator  
IRO-012 — Procedures, Processes or Plans for Preventing and Mitigating IROLs  
IRO-013 — Reliability Coordinator Directives Relative to IROLs

ORG-024 — Reliability Coordinator Certification – System Analysis  
ORG-025 — Reliability Coordinator Certification – Emergency Operations  
ORG-026 — Reliability Coordinator Certification – Loss of Control Center Functionality  
ORG-027 — Reliability Coordinator Certification – Restoration

## Standards Authorization Request Form

---

PER-004 — Reliability Coordination – Staffing  
PRC-001 — System Protection Coordination

Several of the standards in this set are Version 0 standards. As the electric reliability organization begins enforcing compliance with reliability standards under Section 215 of the Federal Power Act in the United States and applicable statutes and regulations in Canada, the industry needs a set of clear, measurable, and enforceable reliability standards. The Version 0 standards, while a good foundation, were translated from historical operating and planning policies and guides that were appropriate in an era of voluntary compliance. The Version 0 standards and recent updates were put in place as a temporary starting point to stand up the electric reliability organization and begin enforcement of mandatory standards. However, it is important to update the standards in a timely manner, incorporating improvements to make the standards more suitable for enforcement and to capture prior recommendations that were deferred during the Version 0 translation.

### Industry Need

1. Provide an adequate level of reliability for the North American bulk power systems — the standards are complete and the requirements are set at an appropriate level to ensure reliability.
2. Ensure they are enforceable as mandatory reliability standards with financial penalties — the applicability to bulk power system owners, operators, and users, and as appropriate particular classes of facilities, is clearly defined; the purpose, requirements, and measures are results-focused and unambiguous; the consequences of violating the requirements are clear.
3. Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)
4. Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)
5. Satisfy the standards procedure requirement for five-year review of the standards.

### Brief Description

The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.

The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.

The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the “reliability coordinator” and the “transmission operator.”

The drafting team needs to verify that requirements exempt the real time-operator from

## Standards Authorization Request Form

---

liability when making a good faith effort at preserving reliability.

A challenge has been to require that entities have 'facilities' in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the 'certification' standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to 'have and maintain' the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back up power supply for critical operations, and shall maintain and test at least once per year."

The results of the Operating Committee study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.

This project also needs to be coordinated with the project for developing Transmission Operator and Balancing Authority standards (2007-06).

IRO-001 has some 'fill-in-the-blank' components to eliminate.

The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

***Reliability Functions***

<b>The Standard will Apply to the Following Functions</b> <i>(Check box for each one that applies.)</i>		
<input checked="" type="checkbox"/>	Reliability Coordinator	The entity that is the highest level of authority who is responsible for the reliable operation of the Bulk Electric System, has the Wide Area view of the Bulk Electric System, and has the operating tools, processes and procedures, including the authority to prevent or mitigate emergency operating situations in both next-day analysis and real-time operations. The Reliability Coordinator has the purview that is broad enough to enable the calculation of Interconnection Reliability Operating Limits, which may be based on the operating parameters of transmission systems beyond any Transmission Operator's vision.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within its metered boundary and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Authorizes valid and balanced Interchange Schedules.
<input checked="" type="checkbox"/>	Planning Authority	Plans the Bulk Electric System.
<input checked="" type="checkbox"/>	Resource Planner	Develops a long-term (>one year) plan for the resource adequacy of specific loads within a Planning Authority area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a long-term (>one year) plan for the reliability of transmission systems within its portion of the Planning Authority area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Provides transmission services to qualified market participants under applicable transmission service agreements
<input checked="" type="checkbox"/>	Transmission Owner	Owens transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Operates and maintains the transmission facilities, and executes switching orders.
<input checked="" type="checkbox"/>	Distribution Provider	Provides and operates the "wires" between the transmission system and the customer.
<input checked="" type="checkbox"/>	Generator Owner	Owens and maintains generation unit(s).
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) and performs the functions of supplying energy and Interconnected Operations Services.
<input type="checkbox"/>	Purchasing-Selling Entity	The function of purchasing or selling energy, capacity, and all necessary Interconnected Operations Services as required.

## Standards Authorization Request Form

---

<input type="checkbox"/>	Market Operator	Integrates energy, capacity, balancing, and transmission resources to achieve an economic, reliability-constrained dispatch.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission (and related generation services) to serve the end user.

**Reliability and Market Interface Principles**

<b>Applicable Reliability Principles</b> <i>(Check box for all that apply.)</i>	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
<b>Does the proposed Standard comply with all of the following Market Interface Principles?</b> <i>(Select 'yes' or 'no' from the drop-down box.)</i>	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

WECC	

**The drafting team will assist stakeholders in considering these comments in determining what changes to make to the standards:**

**COM-001-0 Telecommunications**

FERC NOPR

- Include Measures and Levels of Non-Compliance;
- Include generator operators and distribution provider as applicable entities; and
- Include requirements for communication facilities for use during emergency situations.

FERC Staff Report

- Lacks adequacy, redundancy and routing requirements
- Generation owners missing
- Expect new standard in November

V0 Industry Comments

- Redundant with Policy 5A, R1
- Many players missing
- Apply R1 to all but smallest entities

Violation Risk Factor Drafting Team Comments

- R6 – administrative requirement

**COM-002-1 Communications and Coordination**

FERC NOPR

- Include Measures and Levels of Non-Compliance;
- Include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities;
- Include distribution providers as applicable entities; and
- Require tightened communications protocols, especially for communications during alerts and emergencies.

FERC Staff Report

- Missing requirement for approval of actions
- Lack of compliance and measures
- Expect November update

V0 Industry Comments

- Voice with generators not required
- R1 – include reliability authority
- R2 – include sabotage and security
- R4 – clarify repeat back requirement with regard to emergency

**IRO-001-0 Reliability Coordination – Responsibilities and Authorities**

FERC NOPR

- Reflect the process set forth in the NERC Rules of Procedures; and
- Eliminate the regional reliability organization as an applicable entity.

FERC Staff Report

- RC not explicitly mentioned in Purpose

Regional Fill-in-the-Blank Team Comments

- Remove ", sub-region, or interregional coordinating group" from R1

## **SAR for Project 2006-06 Reliability Coordination – Attachment 1**

---

- Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another." from the Purpose section of the standard.

### V0 Industry Comments

- Inability to perform needs to be communicated
- What is meant by 'interest of other entity'?

### Violation Risk Factor Drafting Team Comments

- R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk.

## **IRO-002-0 Reliability Coordination – Facilities**

### FERC NOPR

- Include Measures and Levels of Non-Compliance and
- Modify Requirement R7 to explicitly require a minimum set of tools for the reliability coordinator.

### FERC Staff Report

- Lack of Measures & Compliance
- Expect new standard in November

### V0 Industry Comments

- R5 – define synchronized information system
- R7 – define 'adequate' tools and 'wide-area'
- Words such as 'easily understood' and 'particular emphasis' need to be tightened

## **IRO-005-1 Reliability Coordination – Current Day Operations**

### FERC NOPR

- Include Measures and Levels of Non-Compliance. We propose that the Measures and Levels of Non-Compliance specific to IROL violations should be commensurate with the magnitude, duration, frequency and causes of the violation.
- Further, as discussed above, we propose that the ERO conduct a survey on IROL practices and experiences.
- The Commission may propose further modifications to IRO-005-1 based on the survey results.

### FERC Staff Report

- Concern with timing of critical outage during initial correction period
- Ambiguous with respect to IROL limits
- Lack of Measures & Compliance

### Regional Fill-in-the-Blank Team Comments

- R14 has regional reference

### V0 Industry Comments

- R10, 11 & 12 – RA not empowered to do this

**SAR for Project 2006-06 Reliability Coordination – Attachment 1**

---

**IRO-014-1** Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators

FERC NOPR

- o No changes identified.

**IRO-015-1** Notifications and Information Exchange Between Reliability Coordinators

FERC NOPR

- o No changes identified.

**IRO-016-1** Coordination of Real-Time Activities Between Reliability Coordinators

FERC NOPR

- o No changes identified.

Violation Risk Factors Drafting Team Comments

- o R1.2.1 & R2 – ambiguous

**PER-004-0 Reliability Coordination – Staffing**

FERC NOPR

- o Include formal training requirements for reliability coordinators similar to those addressed under the personnel training Reliability Standard PER-002-0;
- o Include requirements pertaining to personnel credentials for reliability coordinators similar to those in PER-003-0; and
- o Include Levels of Non-Compliance and Measures that address staffing requirements and the requirement for five days of emergency training.

FERC Staff Report

- o Min. expectations and # of hours per year missing
- o Blackout Report items not addressed
- o Formal program not specified
- o Measures & Compliance missing

V0 Industry Comments

- o Calendar year timing increment
- o Other training needs to be defined

**PRC-001-0 System Protection Coordination**

FERC NOPR

- o Include Measures and Levels of Non-Compliance;
- o Include a requirement that relevant transmission operators and generator operators must be informed immediately upon the detection of failures in relays or protection system elements on the Bulk-Power System that would threaten reliable operation, so that these entities can carry out the appropriate corrective control actions consistent with those used in mitigating IROL violations; and
- o Clarify that, after being informed of failures in relays or protection system elements on the Bulk-Power System, transmission operators or generator operators shall carry out corrective control actions, i.e., returning the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes.

FERC Staff Report

- o Max. time period for corrective actions missing
- o Expect new standard in November

V0 Industry Comments

## **SAR for Project 2006-06 Reliability Coordination – Attachment 1**

---

- Effects on reliability may not be known
- Consistent terminology as to neighbor vs. affected
- Not all criteria moved over from policies

The following standards have been proposed for retirement because they will be displaced by IRO-007 and IRO-008 but are included here in the event their retirement is not approved:

### **IRO-003-1 — Reliability Coordination – Wide-Area View**

FERC NOPR

- Include Measures and Levels of Non-Compliance; and
- Include criteria to define the term “critical facilities” in a reliability coordinator’s area and its adjacent systems.

FERC Staff Report

- Need to define critical facilities
- Lack of Measures & Compliance
- Expect new standard in November

### **IRO-004-1 — Reliability Coordination – Operations Planning**

FERC NOPR

- Require the next-day analysis to identify effective control actions that can be implemented within 30 minutes during contingency conditions.

FERC Staff Report

- No system assessment required

VO Industry Comments

- Change ‘particular attention to’ to ‘to monitor’

The following standards are under development and have not yet been approved, so there are no FERC comments or stakeholder comments on a ‘finished’ standard. These standards will be reviewed and may be modified as needed to meet the goals identified in the purpose statement of this SAR:

IRO-007 — Monitoring the Wide Area

IRO-008 — Reliability Coordinator Operational Analyses and Real-Time Assessments

IRO-009 — Reliability Coordinator Actions to Operate Within IROLs

IRO-010 — Reliability Coordinator Data Specification and Collection

IRO-012 — Reliability Coordinator Processes, Procedures, or Plans for Preventing and Mitigating Reliability Operating Limits

ORG-020 — Reliability Coordinator Certification - Certification

ORG-021 — Reliability Coordinator Certification - Agreements

ORG-022 — Reliability Coordinator Certification - Personnel

ORG-023 — Reliability Coordinator Certification - Data Acquisition and Monitoring

ORG-024 — Reliability Coordinator Certification – System Analysis

ORG-025 — Reliability Coordinator Certification – Emergency Operations

ORG-026 — Reliability Coordinator Certification – Loss of Control Center Functionality

ORG-027 — Reliability Coordinator Certification – Restoration

The drafting team will reference these guidelines in determining what changes to make to the standards to bring them into conformance with the *Reliability Standards Development Procedure Manual, Version 6* and the *ERO Rules of Procedure*:

## **Standard Review Guidelines**

### **Applicability**

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

### **Purpose**

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

### **Performance Requirements**

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

### **Measurability**

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

## **Technical Basis in Engineering and Operations**

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

**Completeness**

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

**Consequences for Noncompliance**

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

**Clear Language**

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

**Practicality**

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

**Capability Requirements versus Performance Requirements**

In general, requirements for entities to have 'capabilities' (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to 'maintain' their capabilities.

**Consistent Terminology**

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a 'unique' definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the 'verb list' from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

**Violation Risk Factors (Risk Factor)**

**High Risk Requirement**

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

**Medium Risk Requirement**

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

**Lower Risk Requirement**

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

**Mitigation Time Horizon**

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

### **Violation Severity Levels**

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels may be applied for each requirement or combined to cover multiple requirements, as long as it is clear which requirements are included.

#### **The violation severity levels should be based on the following definitions:**

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

### **Compliance Monitor**

Replace, 'Regional Reliability Organization' with 'Electric Reliability Organization'

### **Fill-in-the-blank Requirements**

Do not include any 'fill-in-the-blank' requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

### **Requirements for Regional Reliability Organization**

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

**Effective Dates**

Must be 1<sup>st</sup> day of 1<sup>st</sup> quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan.

**Associated Documents**

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, 'Associated Documents'.

**Functional Model Version 3**

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

January 15, 2007

TO: REGISTERED BALLOT BODY

Ladies and Gentlemen:

**Announcement: Comment Periods Open for SAR to Modify Vegetation Management, SAR for Reliability Coordination and SAR and Standard to Modify Facility Ratings Standards**

The Standards Committee (SC) announces the following standards actions:

**SAR to Modify the Vegetation Management Standard FAC-003-1 Posted for 30-day Comment Period January 15–February 14, 2007**

The SAR for [Project 2007-07](#) proposes modifying the Vegetation Management standard FAC-003-1 to address concerns raised by FERC and stakeholders and to bring the standard into conformance with the ERO Rules of Procedure and the latest version of the *Reliability Standards Development Procedure*. Please use the [comment form](#) to provide comments on this SAR.

**SAR to Modify the Reliability Coordinator Standards Posted for 30-day Comment Period January 15–February 14, 2007**

The SAR for [Project 2006-06](#) proposes retiring, modifying, or adding to existing requirements for the reliability coordinator to ensure that the complete set of requirements addresses all the processes, procedures, plans, tools, and authorities the reliability coordinator needs to support the reliable operation of the interconnected bulk power systems. This project involves addressing concerns raised by FERC and stakeholders and also involves bringing the set of standards into conformance with the ERO Rules of Procedure and the latest version of the *Reliability Standards Development Procedure*. Please use the [comment form](#) to provide comments on this SAR.

**SAR and Standard to Modify the Facility Ratings Standards Posted for 45-day Comment Period January 15–February 28, 2007**

The SAR for [Project 2006-09](#) proposes modifying two Facility Ratings standards, FAC-008-1 and FAC-009-1, to address concerns raised by FERC and stakeholders and to bring the standard into conformance with the ERO Rules of Procedure and the latest version of the *Reliability Standards Development Procedure*. Because there were relatively few technical changes recommended for this set of standards, the revised standard, which combines FAC-008-1 and FAC-009-1, is posted for comment along with an implementation plan. Please use the [comment form](#) to provide comments on this SAR, standard and implementation plan.

**Standards Development Process**

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. If you have any questions, please contact me at 813-468-5998 or [maureen.long@nerc.net](mailto:maureen.long@nerc.net).

Sincerely,

*Maureen E. Long*

### Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

## **Comment Form — 1<sup>st</sup> Posting of Reliability Coordination SAR**

---

- The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

## Comment Form — 1<sup>st</sup> Posting of Reliability Coordination SAR

---

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments: Yes, there is a reliability need to revise the Standards identified in this SAR. Not all of the revisions described, however, are reliability related and in fact should not be included in the standards (e.g., exempting an operator from liability).

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: The Standard Drafting Team should not be given latitude to "include other improvements to the standards deemed appropriate by the drafting team." The purpose of the SAR is to identify the changes contemplated by the need for the Standard Revision. If there are changes that the SAR requestor would like to make to the Standard, they should be spelled out in the SAR. If the SAR requestor does not really know the changes that should be made to the standard, then the SAR should be withdrawn until the need for a SAR can be adequately justified.

The remainder of the SAR is very broad; perhaps too broad. The requestor should consider reducing the scope of the SAR to make specific changes to the standards, rather than try to consolidate all of the Standards in one swift stroke.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: Uncertain to say what they would be at this point.

## Comment Form — 1<sup>st</sup> Posting of Reliability Coordination SAR

Please use this form to submit comments on the Reliability Coordination SAR. Comments must be submitted by **February 14, 2007**. You may submit the completed form by e-mail to [sarcomm@nerc.com](mailto:sarcomm@nerc.com) with the words "Reliability Coordination" in the subject line. If you have questions, please contact Maureen Long at [maureen.long@nerc.net](mailto:maureen.long@nerc.net) or by telephone at 813-468-5998.

### Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

## **Comment Form — 1<sup>st</sup> Posting of Reliability Coordination SAR**

---

- The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments: The IRC agrees with the objective but does not agree with the process.

We agree there is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.

The SRC believes that the wide perspective proposed by this SAR could compromise the internal consistency within individual standards. Subject Matter experts created interrelated requirements in given areas. This SAR proposes to impose a vertically integrated prospective, linking standards in widely dispersed areas of operational expertise. While a review of the vertical integration is useful and in places needed, it is recommended that the results of the review should themselves be sent as recommended SARs for industry consideration by the SMEs for the individual standards, and not as a proposed ad hoc standard. Grouping them as proposed in the SAR may result in unintended disconnects within the other standards, and in the worst case result in an ongoing series of iterative SARs.

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: We do agree the standards should be consolidated and redundancies eliminated where appropriate.

However, it is not appropriate to include standards in this SAR that have not yet been approved. For example, it is not necessary to expand on the requirement to have facilities in place by adding a testing requirement. If an entity is required to have facilities in place and they are not maintained and available, they do not meet the requirement.

The "boiler plate" language that this "development may include other improvements deemed appropriate by the drafting team" is too vague and essentially opens the scope to include anything the drafting team wants to do with the standard. This is not appropriate. The scope should be specific and the drafting team should only focus on those specifics.

The SRC supports the approach of prioritizing and revising individual standards to include FERC's comments as part of the consideration process. Only a few standards should be revised at a time to make the process more manageable.

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments:

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: Please see our answer to question No. 3.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: This project involves the revision of 27 NERC Standards, not a small task by any measure. The extent of the proposed work and the necessary expertise is beyond what can be found in one single SAR team and drafting team.

We respectfully submit that the project be divided into as many SARs and teams as necessary with the work directed and monitored by the Standards Committee.

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments: We agree there is a general need to consolidate where necessary and clean up the standards. However, this SAR covers too large a swath of standards. It very confusing what the overall goal is. Additionally, we are concerned that the range of expertise required by this SAR will result in a drafting team that is too large and will result in little to no progress unless the drafting team is subdivided. If the drafting team is subdivided, then this SAR should be subdivided into other SARs.

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: We do agree the standards should be consolidated and redundancies eliminated where appropriate. However, it is not appropriate to include standards in this SAR that have not yet been approved.

It is not necessary to expand on the requirement to have facilities in place by adding a testing requirement. If an entity is required to have facilities in place and they are not maintained and available, they do not meet he requirement of having facilities in place.

The "boiler plate" language that this "development may include other improvements deemed appropriate by the drafting team is too vague and essentially opens the scope to include anything the drafting team wants to do with the standard. This is not appropriate. The scope should be specific and the drafting team should only focus on those specifics.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: Because of the overbroad nature of this SAR, the answer is likely yes. However, it is nearly impossible to determine all the additional required changes without missing important items. This SAR needs to be broken down to address individual standards.

### Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

### Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

## **Comment Form — 1<sup>st</sup> Posting of Reliability Coordination SAR**

---

- The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

## Comment Form — 1<sup>st</sup> Posting of Reliability Coordination SAR

---

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments:

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: We believe that the drafting needs to verify that requirements exempt the reliability coordinator real-time supervision, as well as the real-time operator from liability when making a good faith effort at preserving reliability.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

The WECC RCCWG believes that the FERC Staff Report suggestion that COM-001 "generation owners missing" should not translate to addition of generation owners in the applicability. "Generator Operator" is an applicable entity, but not "Generator Owner".

The WECC RCCWG believes the Reliability Coordination SAR should address those VO comments on requirements, when those specific are no longer part of the standard referenced in the VO comments identified in Attachment 1 of the SAR if those comments were not previously addressed. One example: posted "VO Industry Comments" suggest inclusion of sabotage and security in R2 of COM-002. That comment is no longer applicable to COM-002 R2 - the standard requirements have changed. That said, the comment intent should not be lost.

Yes

No

Comments:

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: Please see our answer to question No. 3.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: This project involves the revision of 27 NERC Standards, not a small task by any measure. The extent of the proposed work and the necessary expertise is beyond what can be found in one single SAR team and drafting team.

We respectfully submit that the project be divided into as many SARs and teams as necessary with the work directed and monitored by the Standards Committee.

Also, coordination with the Standards in development IRO-007-1 to IRO-010-1 that are also the object of a separate revision and commentary period should be taken care of.

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments: The IESO agrees with the objective but does not agree with the process. There is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments:

We agree with the intent to fill in the gaps and eliminate duplications among standards, and applaud the SDT for taking on this huge and challenging task. We are concerned, however, that the scope itself is too wide but yet not wide enough. Some of the listed standards are still being commented on, for example: IROL-007 to IRO-010, while some others had been commented on but are now in a dormant state, for example: the organization certification standards. These standards are not yet approved, and hence are subject to change and become moving targets for this holistic review task. The scope description does not suggest an approach to deal with ongoing changes to the standards identified. We are concerned that the wide scope and the massive task may not ensure that a one time change will cover all affected standards - those approved and those under development.

We suggest the SDT compare this approach to an alternative approach which is to revise a few standards at a time, on a priority basis and considering FERC's views on the status of the standards, thereby limiting the corresponding changes within a more manageable scope. Overtime, when all standards have gone through revisions, all corresponding changes will be duly made.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

## **Comment Form — 1<sup>st</sup> Posting of Reliability Coordination SAR**

---

There are likely additional standard revisions beyond those identified, but we find it's almost impossible to pre-determine which other standards will be affected as a result of changes to those identified in this SAR.

For example, changes currently proposed for IRO-007 to IRO-010 will precipitate corresponding changes to other affected standards, e.g. TOP-003, TOP-005, etc. However, we are unable to provide any specific list of standards that will require corresponding changes not knowing what changes will be made to the standards listed in the SAR.

Given the above, it should not be taken for granted that the list is exhaustive in terms of revisions required.

### Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments:

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: ATC agrees with the spirit of the SAR but believes that more details should be provided.

Identify which of the redundant requirements will be deleted.

Lastly ATC does not understand how a SDT can tackle the ORG -020 – 027 when these standards have not been approved by the board. In other words how can the SDT move forward on the scope when eight of the standards are still in being worked on? To approve the scope of the SAR references to ORG-020 – 027 should be deleted and considered out of bounds for the SDT.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

## Consideration of Comments on 1<sup>st</sup> Posting of Reliability Coordination SAR

---

The Reliability Coordination SAR Requesters thank all commenters who submitted comments on Draft 1 of the Reliability Coordination SAR. This SAR was posted for a 30- day public comment period from January 15 through February 14, 2007. The requesters asked stakeholders to provide feedback on the standard through a special standard Comment Form. There were 11 sets of comments, including comments from more than 31 different people from more than 15 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

While most stakeholders agreed with the reliability-related need to modify the standards addressed by this SAR, most stakeholders disagreed with the proposed scope of the original SAR and the drafting team made the following revisions to reduce the scope:

- Revised the purpose statement to more narrowly focus on the reliability-related purpose of revising the set of standards addressed by the SAR
- Removed the standards that were listed in the original SAR that are still under development, including the certification standards (ORG-020-1 through ORG-027-1), the Version 1 IROL Standards that are still under development (IRO-007-1 through IRO-013-1) and the standards that are identified in the Version 1 IROL Implementation Plan as proposed for retirement when the Version 1 IROL Standards become effective (IRO-003-1, IRO-004-1).
- Removed the paragraph that referenced facilities.
- Removed the paragraph that would have allowed the standard drafting team to make 'any' additions to requirements as long as those additions met stakeholder approval.
- Added more specificity to the drafting team's approach to modifying the set of standards identified in the SAR.

Based on the comments received, the drafting team is posting the revised SAR for another comment period.

In this "Consideration of Comments" document stakeholder comments have been organized so that it is easier to see the responses associated with each question. All comments received on the standards can be viewed in their original format at:

[http://www.nerc.com/~filez/standards/Reliability-Coordination\\_Project\\_2006-6.html](http://www.nerc.com/~filez/standards/Reliability-Coordination_Project_2006-6.html)

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Director of Standards, Gerry Adamski, at 609-452-8060 or at [gerry.adamski@nerc.net](mailto:gerry.adamski@nerc.net). In addition, there is a NERC Reliability Standards Appeals Process.<sup>1</sup>

---

<sup>1</sup> The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

**Index to Questions, Comments, and Responses**

- 1. Do you agree that there is a reliability-related need for the proposed revisions to this set of standards? If not, please explain in the comment area. .... 4
- 2. Do you agree with the scope of the SAR? If not, please explain in the comment area. 6
- 3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project? .....11

**Consideration of Comments on 1<sup>st</sup> Draft of the Reliability Coordination SAR**

1. Do you agree that there is a reliability-related need for the proposed revisions to this set of standards? If not, please explain in the comment area.

**Summary Consideration:** Most commenters indicated that they do believe that there is a reliability-related need for the proposed revisions to the standards.

Question #1			
Commenter	Yes	No	Comment
ISO/RTO Council ISO New England	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>The IRC and ISO-NE agrees with the objective but does not agree with the process.</p> <p>We agree there is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.</p> <p>The SRC believes that the wide perspective proposed by this SAR could compromise the internal consistency within individual standards. Subject Matter experts created interrelated requirements in given areas. This SAR proposes to impose a vertically integrated prospective, linking standards in widely dispersed areas of operational expertise. While a review of the vertical integration is useful and in places needed, it is recommended that the results of the review should themselves be sent as recommended SARs for industry consideration by the SMEs for the individual standards, and not as a proposed ad hoc standard. Grouping them as proposed in the SAR may result in unintended disconnects within the other standards, and in the worst case result in an ongoing series of iterative SARs.</p>
<p><b>Response:</b>                      The intent is not to develop a single standard from the list of standards.                      The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards.                      The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			
Midwest ISO Stakeholders Standards Collaboration Participants	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree there is a general need to consolidate where necessary and clean up the standards. However, this SAR covers too large a swath of standards. It very confusing what the overall goal is. Additionally, we are concerned that the range of expertise required by this SAR will result in a drafting team that is too large and will result in little to no progress unless the drafting team is subdivided. If the drafting team is subdivided,</p>

**Consideration of Comments on 1<sup>st</sup> Draft of the Reliability Coordination SAR**

<b>Question #1</b>			
<b>Commenter</b>	<b>Yes</b>	<b>No</b>	<b>Comment</b>
			then this SAR should be subdivided into other SARs.
<p><b>Response:</b> The SAR was revised to more clearly define the scope of work. The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			
Independent Electricity System Operator	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	The IESO agrees with the objective but does not agree with the process. There is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.
<p><b>Response:</b> The SAR was revised to more clearly define the scope of work. The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			
ITC Transmission	<input checked="" type="checkbox"/>		Yes, there is a reliability need to revise the Standards identified in this SAR. Not all of the revisions described, however, are reliability related and in fact should not be included in the standards (e.g., exempting an operator from liability).
<p><b>Response:</b> The SAR was revised to omit the reference to the liability exemption.</p>

Consideration of Comments on 1<sup>st</sup> Draft of the Reliability Coordination SAR

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

**Summary Consideration:** Most commenters disagreed with the scope of the original SAR and the drafting team made major modifications to reduce the scope of the SAR to only include standards that are already approved and to identify more specifically the range of changes contemplated to the standards that remain in the revised SAR.

Question #2			
Commenter	Yes	No	Comment
Hydro One Networks, Inc. Hydro Québec TransÉnergie		<input checked="" type="checkbox"/>	Please see our answer to question No. 3.
<b>Response:</b> Please see the response to question 3.			
ITC		<input checked="" type="checkbox"/>	<p>The Standard Drafting Team should not be given latitude to "include other improvements to the standards deemed appropriate by the drafting team." The purpose of the SAR is to identify the changes contemplated by the need for the Standard Revision. If there are changes that the SAR requestor would like to make to the Standard, they should be spelled out in the SAR. If the SAR requestor does not really know the changes that should be made to the standard, then the SAR should be withdrawn until the need for a SAR can be adequately justified.</p> <p>The remainder of the SAR is very broad; perhaps too broad. The requestor should consider reducing the scope of the SAR to make specific changes to the standards, rather than try to consolidate all of the Standards in one swift stroke.</p>
<p><b>Response:</b> The intent is not to develop a single standard from the list of standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The intent of the <i>original</i> SAR was to give the Standard Drafting Team enough latitude to address requirements that fall within a list of performance requirements. Looking to the future, the Standard Drafting Team cannot expand on the scope of its SAR but may develop a set of requirements that is smaller than the scope of the SAR. Based on stakeholder comments, the scope has been revised and is more clearly and more narrowly defined.</p>			
ISO/RTO Council ISO New England		<input checked="" type="checkbox"/>	<p>We do agree the standards should be consolidated and redundancies eliminated where appropriate.</p> <p>However, it is not appropriate to include standards in this SAR that have not yet been approved. For example, it is not necessary to expand on the requirement to have facilities in place by adding a testing requirement. If an entity is required to</p>

Consideration of Comments on 1<sup>st</sup> Draft of the Reliability Coordination SAR

Question #2			
Commenter	Yes	No	Comment
			<p>have facilities in place and they are not maintained and available, they do not meet the requirement.</p> <p>The "boiler plate" language that this "development may include other improvements deemed appropriate by the drafting team" is too vague and essentially opens the scope to include anything the drafting team wants to do with the standard. This is not appropriate. The scope should be specific and the drafting team should only focus on those specifics.</p> <p>The SRC supports the approach of prioritizing and revising individual standards to FERC's comments as part of the consideration process. Only a few standards should be revised at a time to make the process more manageable.</p>
<p><b>Response:</b> The SAR was revised to omit all of the standards that were listed in the original SAR but weren't approved (draft IROL Standards and the draft Certification Standards).</p> <p>The SAR was revised to omit the paragraph that referenced facilities. Note that there is a new performance objective in the revised SAR that indicates the resultant standards will have requirements to address the RC's facility capabilities.</p> <p>The intent of the <i>original</i> SAR was to give the Standard Drafting Team enough latitude to address requirements that fall within a list of performance requirements. Looking to the future, the Standard Drafting Team cannot expand on the scope of its SAR but may develop a set of requirements that is smaller than the scope of the SAR. Based on stakeholder comments, the scope has been revised and is more clearly and more narrowly defined. The drafting team revised the SAR to omit the 'boiler plate' language.</p> <p>The intent is not to develop a single standard from the list of standards. The SAR DT can recommend that the standards be revised in a specific sequence but the final determination of which standards are revised or developed first is a decision that belongs to the Standards Committee. The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards.</p>

Based on stakeholder comments, the scope has been revised and is more clearly and more narrowly defined. The drafting team revised the SAR to omit the 'boiler plate' language.</p>			
American Transmission Co.		<input checked="" type="checkbox"/>	<p>ATC agrees with the spirit of the SAR but believes that more details should be provided.</p> <p>Identify which of the redundant requirements will be deleted.</p> <p>Lastly ATC does not understand how a SDT can tackle the ORG -020 – 027 when these standards have not been approved by the board. In other words how can the SDT move forward on the scope when eight of the standards are still in being worked on? To approve the scope of the SAR references to ORG-020 – 027 should be deleted and considered out of bounds for the SDT.</p>
<p><b>Response:</b> The SAR drafting team will let the standard drafting team determine what requirements will be deleted.</p> <p>The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			

**Consideration of Comments on 1<sup>st</sup> Draft of the Reliability Coordination SAR**

Question #2			
Commenter	Yes	No	Comment
Independent Electricity System Operator	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree with the intent to fill in the gaps and eliminate duplications among standards, and applaud the SDT for taking on this huge and challenging task. We are concerned, however, that the scope itself is too wide but yet not wide enough.</p> <p>Some of the listed standards are still being commented on, for example: IROL-007 to IRO-010, while some others had been commented on but are now in a dormant state, for example: the organization certification standards. These standards are not yet approved, and hence are subject to change and become moving targets for this holistic review task.</p> <p>The scope description does not suggest an approach to deal with ongoing changes to the standards identified. We are concerned that the wide scope and the massive task may not ensure that a one time change will cover all affected standards - those approved and those under development.</p> <p>We suggest the SDT compare this approach to an alternative approach which is to revise a few standards at a time, on a priority basis and considering FERC's views on the status of the standards, thereby limiting the corresponding changes within a more manageable scope. Overtime, when all standards have gone through revisions, all corresponding changes will be duly made.</p>
<p><b>Response:</b> The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards. The SAR was modified to state that the standard drafting team will work with stakeholders to:</p> <ul style="list-style-type: none"> <li>- Eliminate redundancy in the requirements.</li> <li>- Identify requirements that should be moved into other SARs</li> <li>- Eliminate requirements that do not support bulk power system reliability</li> <li>- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.</li> <li>- Fill identified gaps in the requirements for Reliability Coordination</li> </ul> <p>The intent is not to develop a single standard from the list of standards. The SAR DT can recommend that the standards be revised in a specific sequence but the final determination of which standards are revised or developed first is a decision that belongs to the Standards Committee.</p>

Question #2			
Commenter	Yes	No	Comment
<p>The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards.</p>			
WECC Reliability Coordination Comments Work Group	<input checked="" type="checkbox"/>		We believe that the drafting needs to verify that requirements exempt the reliability coordinator real-time supervision, as well as the real-time operator from liability when making a good faith effort at preserving reliability.
<p><b>Response:</b> The drafting team removed the reference to liability from the SAR.</p>			
Salt River Project	<input checked="" type="checkbox"/>		
PSC of South Carolina	<input checked="" type="checkbox"/>		

**Consideration of Comments on 1<sup>st</sup> Draft of the Reliability Coordination SAR**

**3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?**

Question #3			
Commenter	Yes	No	Comment
ITC Transmission			Uncertain to say what they would be at this point.
Hydro One Networks, Inc. Hydro Québec TransÉnergie	<input checked="" type="checkbox"/>		<p>This project involves the revision of 27 NERC Standards, not a small task by any measure. The extent of the proposed work and the necessary expertise is beyond what can be found in one single SAR team and drafting team.</p> <p>We respectfully submit that the project be divided into as many SARs and teams as necessary with the work directed and monitored by the Standards Committee.</p>
<p><b>Response:</b> The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards.</p>			
Independent Electricity System Operator	<input checked="" type="checkbox"/>		<p>There are likely additional standard revisions beyond those identified, but we find it's almost impossible to pre-determine which other standards will be affected as a result of changes to those identified in this SAR.</p> <p>For example, changes currently proposed for IRO-007 to IRO-010 will precipitate corresponding changes to other affected standards, e.g. TOP-003, TOP-005, etc. However, we are unable to provide any specific list of standards that will require corresponding changes not knowing what changes will be made to the standards listed in the SAR.</p> <p>Given the above, it should not be taken for granted that the list is exhaustive in terms of revisions required.</p>
<p><b>Response:</b> The intent of the <i>original</i> SAR was to give the Standard Drafting Team enough latitude to address requirements that fall within a list of performance requirements. Looking to the future, the Standard Drafting Team cannot expand on the scope of its SAR but may develop a set of requirements that is smaller than the scope of the SAR. Based on stakeholder comments, the SAR DT eliminated the paragraph that would have allowed the Standard Drafting Team to expand the scope of activities to address new issues that may come up after the SAR is finalized. If new ideas are identified during standard drafting, the standard drafting team will need to revise its SAR or develop a new SAR to address those additional ideas.</p>			

**Consideration of Comments on 1<sup>st</sup> Draft of the Reliability Coordination SAR**

<b>Question #3</b>			
<b>Commenter</b>	<b>Yes</b>	<b>No</b>	<b>Comment</b>
WECC Reliability Coordination Comments Work Group	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>The WECC RCCWG believes that the FERC Staff Report suggestion that COM-001 "generation owners missing" should not translate to addition of generation owners in the applicability. "Generator Operator" is an applicable entity, but not "Generator Owner".</p> <p>The WECC RCCWG believes the Reliability Coordination SAR should address those V0 comments on requirements, when those specific are no longer part of the standard referenced in the V0 comments identified in Attachment 1 of the SAR if those comments were not previously addressed. One example: posted "V0 Industry Comments" suggest inclusion of sabotage and security in R2 of COM-002. That comment is no longer applicable to COM-002 R2 - the standard requirements have changed. That said, the comment intent should not be lost</p>
<p><b>Response:</b> The FERC comments are 'issues to consider' but are not directives for changes to the standards. The SAR was revised and any outdated V0 comments (or other organization or committee comments) comments have been removed.</p>			
Midwest ISO Stakeholders Standards Collaboration Participants	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>Because of the overbroad nature of this SAR, the answer is likely yes. However, it is nearly impossible to determine all the additional required changes without missing important items. This SAR needs to be broken down to address individual standards.</p>
<p><b>Response:</b> The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards. <p><b>Purpose</b>          To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.</p>
--

## Standards Authorization Request Form

---

### Brief Description

Most of the requirements in this set of standards were translated from Operating Policies as part of the Version 0 process. There have been suggestions for improving these requirements, and the drafting team will consider comments submitted by stakeholders, drafting teams and FERC in determining what changes should be proposed to stakeholders.

The drafting team will review all of the requirements in this set of standards and make a determination, with stakeholders, on whether to:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support bulk power system reliability).

### Detailed Description

The drafting team will review all of the requirements in the following set of standards:

- COM-001 — Telecommunications
- COM-002 — Communications and Coordination
- IRO-001 — Reliability Coordination – Responsibilities and Authorities
- IRO-002 — Reliability Coordination – Facilities
- IRO-005 — Reliability Coordination – Current Day Operations
- IRO-014 — Procedures to Support Coordination between Reliability Coordinators
- IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
- PER-004 — Reliability Coordination – Staffing
- PRC-001 — System Protection Coordination

For each existing requirement, the drafting team will work with stakeholders and:

- Eliminate redundancy in the requirements.
- Identify requirements that should be moved into other SARs
- Eliminate requirements that do not support bulk power system reliability
- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.

The standard drafting team will also:

- Coordinate with the drafting teams working on the SAR and standards for Transmission Operator and Balancing Authority standards (Project 2007-06).
- Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)
- Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)

This review of the set of identified standards will satisfy the standards procedure requirement to review each approved standard at least once every five years.

**Standards Authorization Request Form**

---

***Reliability Functions***

<b>The Standard will Apply to the Following Functions</b> <i>(Check box for each one that applies.)</i>		
<input checked="" type="checkbox"/>	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
<input checked="" type="checkbox"/>	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
<input checked="" type="checkbox"/>	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator Area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
<input checked="" type="checkbox"/>	Transmission Owner	Owns and maintains transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
<input checked="" type="checkbox"/>	Distribution Provider	Delivers electrical energy to the End-use customer.
<input checked="" type="checkbox"/>	Generator Owner	Owns and maintains generation facilities.
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) to provide real and reactive power.
<input type="checkbox"/>	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
<input type="checkbox"/>	Market Operator	Interface point for reliability functions with commercial functions.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the end-use customer.

**Reliability and Market Interface Principles**

<b>Applicable Reliability Principles</b> <i>(Check box for all that apply.)</i>	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
<b>Does the proposed Standard comply with all of the following Market Interface Principles?</b> <i>(Select 'yes' or 'no' from the drop-down box.)</i>	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

**The drafting team will assist stakeholders in considering these comments in determining what changes to make to the standards:**

**COM-001-0 Telecommunications**

FERC NOPR

- Include generator operators and distribution provider as applicable entities; and
- Include requirements for communication facilities for use during emergency situations.

V0 Industry Comments

- Many players missing
- Apply R1 to all but smallest entities

Violation Risk Factor Drafting Team Comments

- R6 – administrative requirement

**COM-002-1 Communications and Coordination**

FERC NOPR

- Include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities;
- Include distribution providers as applicable entities; and
- Require tightened communications protocols, especially for communications during alerts and emergencies.

V0 Industry Comments

- Voice with generators not required
- R1 – include reliability authority
- R2 – include sabotage and security
- R4 – clarify repeat back requirement with regard to emergency

**IRO-001-0 Reliability Coordination – Responsibilities and Authorities**

FERC NOPR

- Reflect the process set forth in the NERC Rules of Procedures; and
- Eliminate the regional reliability organization as an applicable entity.

Regional Fill-in-the-Blank Team Comments

- Remove ", sub-region, or interregional coordinating group" from R1
- Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another." from the Purpose section of the standard.

V0 Industry Comments

- Inability to perform needs to be communicated
- What is meant by 'interest of other entity'?

Violation Risk Factor Drafting Team Comments

- R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk.

## **SAR for Project 2006-06 Reliability Coordination – Attachment 1**

---

### **IRO-002-0 Reliability Coordination – Facilities**

FERC NOPR

- Modify Requirement R7 to explicitly require a minimum set of tools for the reliability coordinator.

V0 Industry Comments

- R5 – define synchronized information system
- R7 – define ‘adequate’ tools and ‘wide-area’
- Words such as ‘easily understood’ and ‘particular emphasis’ need to be tightened

### **IRO-005-1 Reliability Coordination – Current Day Operations**

FERC NOPR

- Propose that the ERO conduct a survey on IROL practices and experiences.
- The Commission may propose further modifications to IRO-005-1 based on the survey results.

V0 Industry Comments

- R10, 11 & 12 – RA not empowered to do this

### **IRO-016-1 Coordination of Real-Time Activities Between Reliability Coordinators**

Violation Risk Factors Drafting Team Comments

- R1.2.1 & R2 – ambiguous

### **PER-004-0 Reliability Coordination – Staffing**

FERC NOPR

- Include formal training requirements for reliability coordinators similar to those addressed under the personnel training Reliability Standard PER-002-0;
- Include requirements pertaining to personnel credentials for reliability coordinators similar to those in PER-003-0; and

V0 Industry Comments

- Calendar year timing increment
- Other training needs to be defined

### **PRC-001-0 System Protection Coordination**

FERC NOPR

- Include a requirement that relevant transmission operators and generator operators must be informed immediately upon the detection of failures in relays or protection system elements on the Bulk-Power System that would threaten reliable operation, so that these entities can carry out the appropriate corrective control actions consistent with those used in mitigating IROL violations; and
- Clarify that, after being informed of failures in relays or protection system elements on the Bulk-Power System, transmission operators or generator operators shall carry out corrective control actions, i.e., returning the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes.

V0 Industry Comments

- Effects on reliability may not be known
- Consistent terminology as to neighbor vs. affected
- Not all criteria moved over from policies

The drafting team will reference these guidelines in determining what changes to make to the standards to bring them into conformance with the *Reliability Standards Development Procedure Manual, Version 6* and the *ERO Rules of Procedure*:

## **Standard Review Guidelines**

### **Applicability**

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

### **Purpose**

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

### **Performance Requirements**

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

### **Measurability**

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

## **Technical Basis in Engineering and Operations**

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

**Completeness**

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

**Consequences for Noncompliance**

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

**Clear Language**

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

**Practicality**

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

**Capability Requirements versus Performance Requirements**

In general, requirements for entities to have ‘capabilities’ (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to ‘maintain’ their capabilities.

**Consistent Terminology**

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a ‘unique’ definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the ‘verb list’ from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

**Violation Risk Factors (Risk Factor)**

**High Risk Requirement**

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or

contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

**Medium Risk Requirement**

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

**Lower Risk Requirement**

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

**Time Horizon**

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

**Violation Severity Levels**

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels must be applied for each requirement and may be combined to cover multiple requirements, as long as it is clear which requirements are included and that all requirements are included.

**The violation severity levels should be based on the following definitions:**

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

**Compliance Monitor**

Replace, ‘Regional Reliability Organization’ with ‘Regional Entity’

**Fill-in-the-blank Requirements**

Do not include any ‘fill-in-the-blank’ requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

**Requirements for Regional Reliability Organization**

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

**Effective Dates**

Must be 1<sup>st</sup> day of 1<sup>st</sup> quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan.

**Associated Documents**

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, ‘Associated Documents’.

**Functional Model Version 3**

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

March 19, 2007

TO: REGISTERED BALLOT BODY

Ladies and Gentlemen:

**Announcement: Comment Periods Open for SAR for Reliability Coordination, SAR for Operating Personnel Communications Protocols, and Relay Loadability Standard**

**The Standards Committee (SC) announces the following standards actions:**

**SAR to Modify the Reliability Coordinator Standards (March 19–April 17, 2007)**

The Reliability Coordination SAR drafting team posted the second draft of its SAR for [Project 2006-06](#) for a 30-day comment period from March 19 through April 17, 2007.

The SAR proposes retiring, modifying or moving to other standards the Reliability Coordinator requirements contained within a set of ten already approved standards. The purpose of making these modifications is to ensure that the remaining requirements are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System. This project also involves addressing concerns raised by FERC and stakeholders and involves bringing the set of standards into conformance with the ERO Rules of Procedure and the latest version of the Reliability Standards Development Procedure. Please use the [comment form](#) to provide comments on this SAR.

**SAR for Project 2007-02 Operating Personnel Communications Protocols (March 19–April 17, 2007)**

The Operating Personnel Communications Protocols SAR for [Project 2007-02](#) is posted for a 30-day comment period from March 19 through April 17, 2007.

This SAR calls for the development of communications protocols for use by real-time system operators to improve situational awareness and shorten response time. The need for improved real-time communications protocols was identified during the investigation of the August 2003 Blackout. Please use the [comment form](#) to provide comments on this SAR.

**Transmission Relay Loadability Standard (March 19–April 17, 2007)**

The [Transmission Relay Loadability](#) drafting team posted the third draft of its standard for a 30-day comment period from March 19 through April 17, 2007. The drafting team is seeking comments on a change in the requirements that assigns responsibility for identifying certain critical facilities to the planning coordinator, in support of the latest approved version of the [Functional Model](#).

The standard codifies the relay loadability criteria embodied in the NERC Recommendation 8a, *Improve System Protection to Slow or Limit the Spread of Future Cascading Outages*, and U.S.–Canada Power System Outage Task Force Recommendation 21A, *Make More Effective and*

*Wider Use of System Protection Measures.* Please use the [comment form](#) to provide comments on this standard.

### **Standards Development Process**

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. If you have any questions, please contact me at 813-468-5998 or [maureen.long@nerc.net](mailto:maureen.long@nerc.net).

Sincerely,

*Maureen E. Long*

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: However, this is a large scope (a large amount of work) for the standard drafting team. Wherever possible, it is recommended that the drafting team list and explain the criteria it is using so that it may be easier to achieve stakeholder consensus where many related changes are made. With such a large scope the drafting team should consider carefully how the changes are balloted so ballots don't fail because stakeholders object to a minor subset of issues in a particular ballot.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this

## Comment Form — 2<sup>nd</sup> Posting of Reliability Coordination SAR

---

set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

Comments:

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

No additional comments

Comments:

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability.

It isn't clear what stakeholders will be involved to improve these standards. Is it the ballot body as a whole or some other forum? Since there is no drafting team roster, we are not sure who is working on this project and who are the stakeholders suggesting the changes to requirements.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: The FERC NOPR should not be used to change the standards. Items in the final order should be given due consideration.

Several of VO comments items are not clear. They are primarily bullet notes with no context. Is there additional information about these comments somewhere?

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

Comments:

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

No additional comments

Comments: We disagree with the assignment of Violation Severity Levels (VSL). The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. Yes/No requirements should not arbitrarily be counted as Severe violations. The proposed VSL breakdown in the SAR is not part of the Sanctions Guidelines and the proposed process has not been vetted in the industry.

## Comment Form — 2<sup>nd</sup> Posting of Reliability Coordination SAR

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments: We agree with excluding standards still under development.

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability. We do not see a listing of the drafting team members and it is unclear what stakeholders will be involved to improve these standards.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: The FERC NOPR should not be used to change the standards. Items in the final order should be considered.

Several of VO comments items are not clear. It would help if these fill comments were posted somewhere for reference.

We disagree with the assignment of Violation Severity Levels (VSL). VSLs should not be skewed to inflate the sanctions associated with a requirement. The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. The proposed breakdown in the SAR is not part of the Sanctions Guidelines and has not been vetted in the industry.

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

## **Comment Form — 2<sup>nd</sup> Posting of Reliability Coordination SAR**

---

\*If more than one Region or Segment applies, indicate the best fit for the purpose of these comments. Regional acronyms and segment numbers are shown on prior page.

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)

### Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

## **Comment Form — 1<sup>st</sup> Posting of Reliability Coordination SAR**

---

- The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

## Comment Form — 1<sup>st</sup> Posting of Reliability Coordination SAR

---

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments:

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: The FERC NOPR and FERC Staff comments under Standard PRC-001-0, System Protection Coordination, do not apply to Reliability Coordination. In fact, the current Standard, PRC-001-1, does not apply to Reliability Coordinators. This Standard should be removed from the scope of this SAR.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: The WECC RCCWG agrees with the overall approach. That said, there is currently another SAR in process that addresses communications protocols and paths. The referenced SAR, "Operating Personnel Communications Protocols" is also meant to address FERC comments relative to communications protocols. Having two separate SARs that address the same comment seems redundant.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

## Comment Form — 2<sup>nd</sup> Posting of Reliability Coordination SAR

---

Yes

No

Comments:

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

No additional comments

Comments: The WECC RCCWG believes that revision to each existing Standard, as a result of this SAR, should be individually balloted, instead of grouped together in one ballot on the entire group of changes.

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability.

It isn't clear what stakeholders will be involved to improve these standards. Is it the ballot body as a whole or some other forum? Since there is no drafting team roster, we are not sure who is working on this project and who are the stakeholders suggesting the changes to requirements.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: The FERC NOPR should not be used to change the standards. Items in the final order should be given due consideration.

Several of VO comments items are not clear. They are primarily bullet notes with no context. Is there additional information about these comments somewhere?

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

Comments:

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

No additional comments

Comments: We disagree with the assignment of Violation Severity Levels (VSL). The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. Yes/No requirements should not arbitrarily be counted as Severe violations. The proposed VSL breakdown in the SAR is not part of the Sanctions Guidelines and the proposed process has not been vetted in the industry.

To the extent that requirements are modified or moved, care should be taken to make sure that the two-way exchange of information between RC and TOP and RC and BA should be preserved.

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments:

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: The SAR needs to be further refined to identify those specific requirements that will be:

- 1) Reviewed as being duplicative
- 2) Considered being relocated
- 3) Considered being eliminated

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

## Comment Form — 2<sup>nd</sup> Posting of Reliability Coordination SAR

---

Yes

No

Comments: The SAR identified standards IRO-014 and IRO-015 on its first page but does not address these standards in Attachment 1. The SAR needs to be updated to either acknowledge that these two standards will not be changed or identify what needs to be corrected.

Attachment 1:

COM-001-0

NERC has a current effort to address communication facilities in standard EOP-008. This group needs to be aware of that effort and should insure that any change to COM-001 does not counter that effort of EOP-008.

How will this effort differ from the other NERC effort?

COM-002-1

NERC has a current effort to address communication protocol in emergencies with "Operating Personnel Communications Protocols." Similar to our previous comment this group needs to be aware of that effort and should insure that any change to COM-002 does not counter that groups efforts.

How will this effort differ from the other NERC effort?

IRO-001-0

Please provide additional information on the following bullet point:

"Reflect the process set forth in the NERC Rules of Procedures"

What specific sections of NERC Rules of Procedure will be reflected in IRO-001-0?

IRO-005-1

The first bullet point does not seem to fall within the goal of this SAR.

"Propose that the ERO conduct a survey of IROL practices and experiences."

This effort does not need to go through NERC Reliability Standards Development Process to be performed. NERC could take up this effort at any time and it will slow down this process if it is going to be included in this SAR.

PER-004-0

NERC has another group that is looking into to these concerns.

How will this effort differ from that effort?

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments: CECD feels that given the number of standards that IRO-007-1 and IRO-010-1 may impact [IRO-002-1 R2, IRO-002-1 R6, IRO-003-2, IRO-004-1 R4 and R5, IRO-005-2 R1, TOP-003-0 R1.2, TOP-005-1 R1] CECD disagrees with removing them from consideration. We do agree with the decision to exclude ORG-027-1.

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments:

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

We agree with the reduction of standards to be included in this body of work. However, we suggest PRC-001 should also be eliminated from this SAR.

The title of the SAR is Reliability Coordination, but the purpose is to ensure requirements applicable to the Reliability Coordinator are clear, etc., etc. The second part of the Purpose is to ensure that "this set of requirements" is sufficient... , referring back to the first part of the sentence. PRC-001 does not apply to the Reliability Coordinators and is out of place in this SAR.

PRC-001 should not be included in this SAR nor the resulting standard development work under this SAR. First, PRC-001 does not apply to Reliability Coordinators and there is already a significantly large amount of work related to Reliability Coordinators under this SAR. Second, the SDT's attention should not be redirected to system protection coordination among BAs, TOPs, and GOPs. We disagree if the intent of the Requestor is to make PRC-001 applicable to Reliability Coordinators under this SAR; If that is the intent we suggest it be done in a separate SAR activity.

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments: While IRO-007-1 through IRO-010-1 are currently open for a 30-day comment period until 4/20/07, this standards work plan effort should leave no stone unturned in developing quality standards. Consequently, IRO-007-1 through IRO-010-1 may contain requirements that are valuable and easily consolidated with the standards under review by this SAR. In addition, they may also contain duplicative requirements that could be consolidated as part of the review process of this SAR.

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: Rather than using the word quality to describe the outcome, the first bullet point above should say, "Modify the requirement to improve clarity and measureability while removing ambiguity." This way the drafting team could use a check list against each requirement to test whether it is clear, measureable, and unambiguous.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: Under the detailed description in the second paragraph, the SAR should be modified to include a line item to include "Improve clarity of, improve measureability of, and remove ambiguity from the requirements."

## Comment Form — 2<sup>nd</sup> Posting of Reliability Coordination SAR

---

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

Comments: This effort should leave no stone unturned in developing quality standards within the expertise and domain of this effort. Therefore, every effort must be made to ensure this round of work plan related standard revisions is as complete and all encompassing as is humanly possible to ensure to the extent possible that this standards process reaches a point that these standards are complete, accurate and only minor revisions are required to maintain them going forward. Tying the hands of the drafting team as suggested by "Several stakeholders" will only prolong the industry's work to achieve good, high quality requirements and standards. In addition, we should be using our resources as efficiently as possible. Allowing some latitude to the drafting teams to find and fix issues with standards that are related to the standards within their area of expertise and charge is a good thing to do at this point in the standards evolution process and conducive to the efficient use of resources. As a practical matter this process may never end, but it should reach a point that is much more manageable sooner rather than later.

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

No additional comments

### Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
  - o Modify the requirement to improve its quality
  - o Move the requirement (into another SAR or Standard or to the certification process or standards)
  - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

**You do not have to answer all questions. Enter All Comments in Simple Text Format.**

*Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.*

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments:

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

## **Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

The SAR to Modify Reliability Coordinator standards requesters thank all commenters who submitted comments on Draft 1 of the SAR. This SAR was posted for a 30-day public comment period from March 19 through April 17, 2007. The requesters asked stakeholders to provide feedback on the SAR through a special SAR Comment Form. There were 19 sets of comments, including comments from 52 different people from more than 40 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

Based on comments received, the drafting team made two changes to the SAR:

- Replaced references to the FERC NOPR with references to the FERC Order 693
- Added a bullet to the detailed description that says, "Improve clarity of, improve measureability of, and remove abiguity from the requirement" and revised the bullets in the brief description to match this language.

The drafting team is recommending that the Standards Committee authorize moving the SAR forward to the standard drafting stage of the standards process.

In this "Consideration of Comments" document stakeholder comments have been organized so that it is easier to see the responses associated with each question. All comments received on the standards can be viewed in their original format at:

[http://www.nerc.com/~filez/standards/Reliability-Coordination\\_Project\\_2006-6.html](http://www.nerc.com/~filez/standards/Reliability-Coordination_Project_2006-6.html)

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Director of Standards, Gerry Adamski, at 609-452-8060 or at [gerry.adamski@nerc.net](mailto:gerry.adamski@nerc.net). In addition, there is a NERC Reliability Standards Appeals Process.<sup>1</sup>

---

<sup>1</sup> The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

## Consideration of Comments for SAR to Modify Reliability Coordinator Standards

The Industry Segments are:

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities
- 4 — Transmission-dependent Utilities
- 5 — Electric Generators
- 6 — Electricity Brokers, Aggregators, and Marketers
- 7 — Large Electricity End Users
- 8 — Small Electricity End Users
- 9 — Federal, State, Provincial Regulatory or other Government Entities
- 10 — Regional Reliability Organizations, Regional Entities

**Index to Questions, Comments, and Responses**

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area. ....5

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements: .....8

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project? ..... 12

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach? ..... 14

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here. .... 18

**Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

**Summary Consideration:** Most stakeholders agreed with the modifications made to reduce the scope of this SAR.

Question #1			
Commenter	Yes	No	Comment
Entergy		<input checked="" type="checkbox"/>	<p>We agree with the reduction of standards to be included in this body of work. However, we suggest PRC-001 should also be eliminated from this SAR.</p> <p>The title of the SAR is Reliability Coordination, but the purpose is to ensure requirements applicable to the Reliability Coordinator are clear, etc., etc. The second part of the Purpose is to ensure that "this set of requirements" is sufficient... , referring back to the first part of the sentence. PRC-001 does not apply to the Reliability Coordinators and is out of place in this SAR.</p> <p>PRC-001 should not be included in this SAR nor the resulting standard development work under this SAR. First, PRC-001 does not apply to Reliability Coordinators and there is already a significantly large amount of work related to Reliability Coordinators under this SAR. Second, the SDT's attention should not be redirected to system protection coordination among BAs, TOPs, and GOPs. We disagree if the intent of the Requestor is to make PRC-001 applicable to Reliability Coordinators under this SAR; If that is the intent we suggest it be done in a separate SAR activity.</p>
<p><b>Response:</b> Requirement 2.2 in PRC-001 states:                      If a protective relay or equipment failure reduces system reliability, the Transmission Operator shall notify its Reliability Coordinator and affected Transmission Operators and Balancing Authorities. The Transmission Operator shall take corrective action as soon as possible.</p> <p>This is 'incomplete' because there is no requirement for the RC to use that information. The intent in including PRC-001 in this SAR was to 'complete' this requirement. As envisioned, the new requirement may go in one of the existing RC standards, or may go into a new standard – but because it is something for the RC to do, it seems appropriate to include the consideration of this requirement as part of the RC SAR.</p>			
FirstEnergy		<input checked="" type="checkbox"/>	<p>While IRO-007-1 through IRO-010-1 are currently open for a 30-day comment period until 4/20/07, this standards work plan effort should leave no stone unturned in developing quality standards. Consequently, IRO-007-1 through IRO-010-1 may contain requirements that are valuable and easily consolidated with the standards under review</p>

## Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #1			
Commenter	Yes	No	Comment
			by this SAR. In addition, they may also contain duplicative requirements that could be consolidated as part of the review process of this SAR.
<p><b>Response:</b> The Implementation Plan posted with IRO-007 through IRO-010 already calls for modification to some of the standards included in this SAR. However, the changes identified with the implementation plan for IRO-007 through IRO-011 are limited to those changes resulting from adoption of the proposed standards. If changes are needed to IRO-007 through IRO-010, they can be addressed with a new SAR.</p>			
Constellation	<input checked="" type="checkbox"/>		CECD feels that given the number of standards that IRO-007-1 and IRO-010-1 may impact [IRO-002-1 R2, IRO-002-1 R6, IRO-003-2, IRO-004-1 R4 and R5, IRO-005-2 R1, TOP-003-0 R1.2, TOP-005-1 R1] CECD disagrees with removing them from consideration. We do agree with the decision to exclude ORG-027-1.
<p><b>Response:</b> Please review the Implementation Plan posted with IRO-007 through IRO-010. The proposed changes to the list of standards you identified are limited to those changes resulting from adoption of the proposed standards. . If changes are needed to IRO-007 through IRO-010, they can be addressed with a new SAR.</p>			
MRO	<input checked="" type="checkbox"/>		We agree with excluding standards still under development.
<p><b>Response:</b> Thank you for your support – most commenters agreed with omitting all standards still under development.</p>

---

<b>Question #1</b>			
<b>Commenter</b>	<b>Yes</b>	<b>No</b>	<b>Comment</b>
SRP	<input checked="" type="checkbox"/>		
WECC RCCWG	<input checked="" type="checkbox"/>		

**Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:
- Modify the requirement to improve its quality
  - Move the requirement (into another SAR or Standard or to the certification process or standards)
  - Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

**Summary Consideration:** Most stakeholders agreed with this approach to reviewing the requirements in the standards associated with this SAR.

Question #2			
Commenter	Yes	No	Comment
SRP		<input checked="" type="checkbox"/>	The FERC NOPR and FERC Staff comments under Standard PRC-001-0, System Protection Coordination, do not apply to Reliability Coordination. In fact, the current Standard, PRC-001-1, does not apply to Reliability Coordinators. This Standard should be removed from the scope of this SAR.
<p><b>Response:</b> The FERC NOPR has now been replaced with FERC Order 693 and includes the following language regarding PRC-001-1:</p> <p>1449. The Commission approves Reliability Standard PRC-001-1 as mandatory and enforceable. In addition, the Commission directs the ERO to develop modifications to PRC-001-1 through the Reliability Standards development process that:</p> <p>(1) correct the references for Requirements and</p> <p>(2) include a requirement that upon the detection of failures in relays or protection system elements on the Bulk-Power System that threaten reliable operation, relevant transmission operators must be informed promptly, but within a specified period of time that is developed in the Reliability Standards development process, whereas generator operators must also promptly inform their transmission operators and</p> <p>(3) clarifies that, after being informed of failures in relays or protection system elements that threaten reliability of the Bulk-Power System, transmission operators must carry out corrective control actions, i.e., return a system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes after they receive notice of the failure.</p> <p>The existing PRC-001-1 Requirement 2.2 states:</p> <p>If a protective relay or equipment failure reduces system reliability, the Transmission Operator shall notify its Reliability Coordinator and affected Transmission Operators and Balancing Authorities. The Transmission Operator shall take corrective action as soon as possible.</p>			

**Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

Question #2			
Commenter	Yes	No	Comment
<p>This is 'incomplete' because there is no requirement for the RC to use that information. The intent in including PRC-001 in this SAR was to 'complete' this requirement. As envisioned, the new requirement may go in one of the existing RC standards, or may go into a new standard – but because it is something for the RC to do, it seems appropriate to include the consideration of this requirement as part of the RC SAR.</p>			
Ameren Services Midwest SCG	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability.</p> <p>It isn't clear what stakeholders will be involved to improve these standards. Is it the ballot body as a whole or some other forum? Since there is no drafting team roster, we are not sure who is working on this project and who are the stakeholders suggesting the changes to requirements.</p>
<p><b>Response:</b> The Reliability Standards Development Procedure will be used to collect stakeholder feedback. If the Standards Committee (SC) accepts this SAR, then the SC can either appoint the existing drafting team to work with stakeholders to make revisions to the standards, or the SC can have the standards staff send a notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions to let everyone know that the SC is seeking volunteers to work on a new drafting team. In either case, the drafting team will 'propose' revisions and post those for comment. NERC's standards staff will send an email notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions – the notice will tell people that some proposed revisions have been posted for comment and will seek feedback on the proposed revisions through a comment form – the same process as used to collect feedback on this SAR. The drafting team will use the responses to the questions on the comment form to determine which changes are supported by stakeholders, and will continue to make modifications until the drafting team feels that they have a set of proposed changes that meets the consensus of the stakeholders who participated in the comment periods.</p> <p>The drafting team that is working on the IROL standards submitted this Reliability Coordination SAR – the SC did not assign a separate drafting team to address the SAR comments. The roster for this team is posted on the related files page of the IROL standards. Here is a link to the roster: <a href="ftp://www.nerc.com/pub/sys/all_updl/standards/dt/GroupRoster_IROLSDT.pdf">ftp://www.nerc.com/pub/sys/all_updl/standards/dt/GroupRoster_IROLSDT.pdf</a></p>			
MRO	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability. We do not see a listing of the drafting team members and it is unclear what stakeholders will be involved to improve these standards.</p>
<p><b>Response:</b> The Reliability Standards Development Procedure will be used to collect stakeholder feedback. If the Standards Committee (SC) accepts this SAR, then the SC can either appoint the existing drafting team to work with stakeholders to make revisions to the standards, or the SC can have the standards staff send a notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions to let everyone know that the SC is seeking volunteers to work on a new drafting team. In either case, the drafting team will 'propose' revisions and post those</p>			

**Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

Question #2			
Commenter	Yes	No	Comment
<p>for comment. NERC's standards staff will send an email notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions – the notice will tell people that some proposed revisions have been posted for comment and will seek feedback on the proposed revisions through a comment form – the same process as used to collect feedback on this SAR. The drafting team will use the responses to the questions on the comment form to determine which changes are supported by stakeholders, and will continue to make modifications until the drafting team feels that they have a set of proposed changes that meets the consensus of the stakeholders who participated in the comment periods.</p> <p>The drafting team that is working on the IROL standards submitted this Reliability Coordination SAR – the SC did not assign a separate drafting team to address the SAR comments. The roster for this team is posted on the related files page of the IROL standards. Here is a link to the roster: <a href="ftp://www.nerc.com/pub/sys/all_updl/standards/dt/GroupRoster_IROLSDT.pdf">ftp://www.nerc.com/pub/sys/all_updl/standards/dt/GroupRoster_IROLSDT.pdf</a></p>			
FirstEnergy	<input checked="" type="checkbox"/>		Rather than using the word quality to describe the outcome, the first bullet point above should say, "Modify the requirement to improve clarity and measureability while removing ambiguity." This way the drafting team could use a check list against each requirement to test whether it is clear, measureable, and unambiguous.
<p><b>Response:</b> The drafting team has adopted this suggestion and modified the SAR so that the revised bullet now says:                      – <b>Modify the requirement to improve its clarity and measureability while removing ambiguity</b></p>			
Manitoba Hydro	<input checked="" type="checkbox"/>		However, this is a large scope (a large amount of work) for the standard drafting team. Wherever possible, it is recommended that the drafting team list and explain the criteria it is using so that it may be easier to achieve stakeholder consensus where many related changes are made. With such a large scope the drafting team should consider carefully how the changes are balloted so ballots don't fail because stakeholders object to a minor subset of issues in a particular ballot.
<p><b>Response:</b> Agreed.</p>			
WECC RCCWG	<input checked="" type="checkbox"/>		The WECC RCCWG agrees with the overall approach. That said, there is currently another SAR in process that addresses communications protocols and paths. The referenced SAR, "Operating Personnel Communications Protocols" is also meant to address FERC comments relative to communications protocols. Having two separate SARs that address the same comment seems redundant.
<p><b>Response:</b> There are a couple of standards that are in more than one 'project' in the Reliability Standards Work Plan 2007-2009. The coordinators working with the drafting teams for these projects are aware of this duplication and will 'hand off' requirements between one another to ensure that each requirement is addressed and that only one drafting team works on modifying each requirement.</p>

**Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

**Summary Consideration: The drafting team made the following modifications to the SAR based on stakeholder suggestions for additional revisions:**

- Replaced references to the FERC NOPR with references to the FERC Order 693
- Added a bullet to the detailed description that says, "Improve clarity of, improve measureability of, and remove abiguity from the requirement"

Question #3			
Commenter	Yes	No	Comment
MRO	<input checked="" type="checkbox"/>		<p>The FERC NOPR should not be used to change the standards. Items in the final order should be considered.</p> <p>Several of V0 comments items are not clear. It would help if these fill comments were posted somewhere for reference.</p> <p>We disagree with the assignment of Violation Severity Levels (VSL). VSLs should not be skewed to inflate the sanctions associated with a requirement. The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. The proposed breakdown in the SAR is not part of the Sanctions Guidelines and has not be vetted in the industry.</p>
<p><b>Response:</b> Agreed. The drafting team has modified the SAR to replace the references to the NOPR with references to FERC Order 693.</p> <p>The Version 0 comments are posted on the Approved Standards web page – here is the link to that set of comments: <a href="ftp://www.nerc.com/pub/sys/all_updl/standards/rs/Standards_V0_Industry_Comments_20060105.pdf">ftp://www.nerc.com/pub/sys/all_updl/standards/rs/Standards_V0_Industry_Comments_20060105.pdf</a></p> <p>The proposed breakdown in VSLs was not included in the Sanctions Guidelines – but it was supported by both the Standards Committee and the Compliance and Certification Committee on December 14, 2006. The Stanards Committee supported having drafting teams use the breakdown that appears in the SAR – and that breakdown was included in the Reliability Standards Development Work Plan 2007-2009.</p>			
Ameren Services Midwest SCG	<input checked="" type="checkbox"/>		<p>The FERC NOPR should not be used to change the standards. Items in the final order should be given due consideration.</p> <p>Several of V0 comments items are not clear. They are primarily bullet notes with no context. Is there additional information about these comments somewhere?</p>
<p><b>Response:</b> Agreed. The drafting team has modified the SAR to replace the references to the NOPR with references to FERC Order 693.</p>			

**Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

<b>Question #3</b>			
<b>Commenter</b>	<b>Yes</b>	<b>No</b>	<b>Comment</b>
The Version 0 comments are posted on the Approved Standards web page – here is the link to that set of comments: <a href="ftp://www.nerc.com/pub/sys/all_updl/standards/rs/Standards_V0_Industry_Comments_20060105.pdf">ftp://www.nerc.com/pub/sys/all_updl/standards/rs/Standards_V0_Industry_Comments_20060105.pdf</a>			
ATC LLC	<input checked="" type="checkbox"/>		The SAR needs to be further refined to identify those specific requirements that will be: 1) Reviewed as being duplicative 2) Considered being relocated 3) Considered being eliminated
<b>Response:</b> As envisioned, the standard drafting team will work with stakeholders (using the comment process) to propose and obtain stakeholder feedback on whether each requirement should be retired, moved, enhanced, etc.			
FirstEnergy	<input checked="" type="checkbox"/>		Under the detailed description in the second paragraph, the SAR should be modified to include a line item to include "Improve clarity of, improve measureability of, and remove ambiguity from the requirements."
<b>Response:</b> The drafting team adopted your suggestion and added the proposed bullet to the detailed description of the SAR.			
BPA	<input checked="" type="checkbox"/>		No comments at this time. We will comment when the standards are up for comment.

**Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

**Summary Consideration:** Stakeholders who responded to this question overwhelmingly indicated support for having firm boundaries on what could be changed with the associated standards by removing the open-ended language from the original SAR.

Question #4			
Commenter	Yes	No	Comment
BPA		<input checked="" type="checkbox"/>	
FirstEnergy	<input checked="" type="checkbox"/>		This effort should leave no stone unturned in developing quality standards within the expertise and domain of this effort. Therefore, every effort must be made to ensure this round of work plan related standard revisions is as complete and all encompassing as is humanly possible to ensure to the extent possible that this standards process reaches a point that these standards are complete, accurate and only minor revisions are required to maintain them going forward. Tying the hands of the drafting team as suggested by "Several stakeholders" will only prolong the industry's work to achieve good, high quality requirements and standards. In addition, we should be using our resources as efficiently as possible. Allowing some latitude to the drafting teams to find and fix issues with standards that are related to the standards within their area of expertise and charge is a good thing to do at this point in the standards evolution process and conducive to the efficient use of resources. As a practical matter this process may never end, but it should reach a point that is much more manageable sooner rather than later.
<b>Response:</b> Stakeholders overwhelmingly indicated support for having firm boundaries on what could be changed with the associated standards.			
ATC LLC	<input checked="" type="checkbox"/>		The SAR identified standards IRO-014 and IRO-015 on its first page but does not address these standards in Attachment 1. The SAR needs to be updated to either acknowledge that these two standards will not be changed or identify what needs to be corrected.  Attachment 1: COM-001-0 NERC has a current effort to address communication facilities in standard EOP-008. This

**Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

Question #4			
Commenter	Yes	No	Comment
			<p>group needs to be aware of that effort and should insure that any change to COM-001 does not counter that effort of EOP-008.</p> <p>How will this effort differ from the other NERC effort?</p> <p>COM-002-1                      NERC has a current effort to address communication protocol in emergencies with "Operating Personnel Communications Protocols." Similar to our previous comment this group needs to be aware of that effort and should insure that any change to COM-002 does not counter that groups efforts.                      How will this effort differ from the other NERC effort?</p> <p>IRO-001-0                      Please provide additional information on the following bullet point:                      "Reflect the process set forth in the NERC Rules of Procedures"                      What specific sections of NERC Rules of Procedure will be reflected in IRO-001-0?</p> <p>IRO-005-1                      The first bullet point does not seem to fall within the goal of this SAR.                      "Propose that the ERO conduct a survey of IROL practices and experiences."                      This effort does not need to go through NERC Reliability Standards Development Process to be performed. NERC could take up this effort at any time and it will slow down this process if it is going to be included in this SAR.</p> <p>PER-004-0                      NERC has another group that is looking into to these concerns.                      How will this effort differ from that effort?</p>
<p><b>Response:</b>                      The two coordinate operations standards highlighted (IRO-014 and IRO-015), did not have any suggestions from FERC for improvements, and they were not part of Version 0 so there were no suggestions for improvements to these standards from the Version 0 process.</p> <p>COM-001 and COM-002 both contain requirements that are assigned to several different functions – and both include a mix of 'preparedness' requirements as well as some 'real-time' notification requirements as well as some requirements that may end up being converted into a new standard for 'communications protocols'. The intent in including the standards in multiple projects was to ensure that each requirement was fully addressed and ended up where it belonged. The coordinators</p>			

**Consideration of Comments for SAR to Modify Reliability Coordinator Standards**

<b>Question #4</b>			
<b>Commenter</b>	<b>Yes</b>	<b>No</b>	<b>Comment</b>
			<p>supporting these projects are aware of this duplication and are working to ensure that there is a 'hand off' of requirements between teams to eliminate gaps and duplication.</p> <p>IRO-001 In Order 693, FERC explains what it meant by the bullet, 'Reflect the process set forth in the NERC Rules of Procedure':</p> <p style="padding-left: 40px;">896. In the NOPR, the Commission proposed to approve the Reliability Standard as mandatory and enforceable. In addition, as a separate action under section 215(d)(5), the NOPR proposed to direct the ERO to develop modifications to Requirement R1 to substitute "Regional Entity" for "regional reliability organization" and reflect NERC's Rules of Procedure for registering, certifying and verifying entities, including reliability coordinators.</p> <p>IRO-005-1 The bullet point you've highlighted may or may not be addressed by the drafting team. As envisioned, the results of a survey may prove useful in determining a need for additional modifications to the standards. Note that FERC Order 693 has replaced the NOPR and the SAR has been updated to reflect this. The survey is still identified in Order 693 – and FERC clarified that the intent of the survey is to determine if additional modifications to IRO-005 are necessary.</p> <p>PER-004 includes a mix of preparation and real-time requirements. The intent in placing the standard in more than one project is to ensure that each requirement is reviewed by an appropriate team, and that all requirements that are needed end up in an appropriate standard.</p>

## Consideration of Comments for SAR to Modify Reliability Coordinator Standards

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

**Summary Consideration:** The drafting team did not make any conforming changes to the SAR based on comments provided in response to question 5.

Question #5			
Commenter	Yes	No	Comment
Ameren Services			<p>We disagree with the assignment of Violation Severity Levels (VSL). The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. Yes/No requirements should not arbitrarily be counted as Severe violations. The proposed VSL breakdown in the SAR is not part of the Sanctions Guidelines and the proposed process has not been vetted in the industry.</p> <p>To the extent that requirements are modified or moved, care should be taken to make sure that the two-way exchange of information between RC and TOP and RC and BA should be preserved.</p>
<p><b>Response:</b> Violation Severity Levels identify how badly you missed the intent of a requirement – not all requirements lend themselves to 4 different VSLs. The guidelines for determining a VSL are just ‘guidelines’ – however these guidelines were endorsed by the SC and the CCC and the SDT would need a strong reason for not using these guidelines.</p>			
Midwest SCG			<p>We disagree with the assignment of Violation Severity Levels (VSL). ## Standards Authorization Request Form

---

### **Purpose**

To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

### **Brief Description**

Most of the requirements in this set of standards were translated from Operating Policies as part of the Version 0 process. There have been suggestions for improving these requirements, and the drafting team will consider comments submitted by stakeholders, drafting teams and FERC in determining what changes should be proposed to stakeholders.

The drafting team will review all of the requirements in this set of standards and make a determination, with stakeholders, on whether to:

- Modify the requirement to improve its clarity and measureability while removing ambiguity
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support bulk power system reliability).

### **Detailed Description**

The drafting team will review all of the requirements in the following set of standards:

- COM-001 — Telecommunications
- COM-002 — Communications and Coordination
- IRO-001 — Reliability Coordination – Responsibilities and Authorities
- IRO-002 — Reliability Coordination – Facilities
- IRO-005 — Reliability Coordination – Current Day Operations
- IRO-014 — Procedures to Support Coordination between Reliability Coordinators
- IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
- PER-004 — Reliability Coordination – Staffing
- PRC-001 — System Protection Coordination

For each existing requirement, the drafting team will work with stakeholders and:

- Eliminate redundancy in the requirements.
- Identify requirements that should be moved into other SARs
- Eliminate requirements that do not support bulk power system reliability
- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.
- Improve clarity of, improve measureability of, and remove ambiguity from the requirement

The standard drafting team will also:

- Coordinate with the drafting teams working on the SAR and standards for Transmission Operator and Balancing Authority standards (Project 2007-06).
- Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)
- Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)

This review of the set of identified standards will satisfy the standards procedure requirement to review each approved standard at least once every five years.

**Standards Authorization Request Form**

---

***Reliability Functions***

<b>The Standard will Apply to the Following Functions</b> <i>(Check box for each one that applies.)</i>		
<input checked="" type="checkbox"/>	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
<input checked="" type="checkbox"/>	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
<input checked="" type="checkbox"/>	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator Area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
<input checked="" type="checkbox"/>	Transmission Owner	Owens and maintains transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
<input checked="" type="checkbox"/>	Distribution Provider	Delivers electrical energy to the End-use customer.
<input checked="" type="checkbox"/>	Generator Owner	Owens and maintains generation facilities.
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) to provide real and reactive power.
<input type="checkbox"/>	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
<input type="checkbox"/>	Market Operator	Interface point for reliability functions with commercial functions.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the end-use customer.

**Reliability and Market Interface Principles**

<b>Applicable Reliability Principles</b> <i>(Check box for all that apply.)</i>	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
<b>Does the proposed Standard comply with all of the following Market Interface Principles?</b> <i>(Select 'yes' or 'no' from the drop-down box.)</i>	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

**The drafting team will assist stakeholders in considering these comments in determining what changes to make to the standards:**

**COM-001-0 Telecommunications**

FERC Order 693

- Include generator operators and distribution provider as applicable entities and include requirements for their telecommunications
- Include requirements for telecommunication facilities for use during normal and emergency conditions that reflect the roles of the applicable entities and their impact on reliable operation
- Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions

V0 Industry Comments

- Many players missing
- Apply R1 to all but smallest entities

Violation Risk Factor Drafting Team Comments

- R6 – administrative requirement

**COM-002-1 Communications and Coordination**

FERC Order 693

- Include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities;
- Include distribution providers as applicable entities; and
- Require tightened communications protocols, especially for communications during alerts and emergencies.

V0 Industry Comments

- Voice with generators not required
- R1 – include reliability authority
- R2 – include sabotage and security
- R4 – clarify repeat back requirement with regard to emergency

**IRO-001-0 Reliability Coordination – Responsibilities and Authorities**

FERC Order 693

- Reflect the process set forth in the NERC Rules of Procedures; and
- Eliminate the regional reliability organization as an applicable entity.

Regional Fill-in-the-Blank Team Comments

- Remove ", sub-region, or interregional coordinating group" from R1
- Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another." from the Purpose section of the standard.

V0 Industry Comments

- Inability to perform needs to be communicated
- What is meant by 'interest of other entity'?

Violation Risk Factor Drafting Team Comments

- R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the

## **SAR for Project 2006-06 Reliability Coordination – Attachment 1**

---

accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk.

### **IRO-002-0 Reliability Coordination – Facilities**

FERC Order 693

- Require a minimum set of tools that should be made available to reliability coordinators.

V0 Industry Comments

- R5 – define synchronized information system
- R7 – define ‘adequate’ tools and ‘wide-area’
- Words such as ‘easily understood’ and ‘particular emphasis’ need to be tightened

### **IRO-005-1 Reliability Coordination – Current Day Operations**

FERC Order 693

- Measures and Levels of Non-Compliance specific to IROL violations must be commensurate with the magnitude, duration, frequency and causes of the violations and whether these occur during normal or contingency conditions.
- Conduct a survey on IROL practices and experiences; the Commission may propose further modifications to IRO-005-1 based on the survey results.

V0 Industry Comments

- R10, 11 & 12 – RA not empowered to do this

### **IRO-016-1 Coordination of Real-Time Activities Between Reliability Coordinators**

Violation Risk Factors Drafting Team Comments

- R1.2.1 & R2 – ambiguous

### **PER-004-0 Reliability Coordination – Staffing**

FERC Order 693

- Include formal training requirements for reliability coordinators similar to those addressed under the personnel training Reliability Standard PER-002-0;
- Include requirements pertaining to personnel credentials for reliability coordinators similar to those in PER-003-0
- Consider the suggestions of FirstEnergy and Xcel:  
1413. FirstEnergy seeks revisions to the terms “shall have a comprehensive understanding” and “shall have extensive knowledge.” It states that it will be difficult for entities to demonstrate compliance with these terms. In addition, FirstEnergy suggests that the reliability coordinator staffing requirements should be located in the IRO Reliability Standards.  
1414. Xcel states that emergency training requirements should be expressed in hour increments rather than days to allow for flexibility in scheduling training and coordinating with rotating shift schedules.

V0 Industry Comments

- Calendar year timing increment
- Other training needs to be defined

### **PRC-001-0 System Protection Coordination**

FERC Order 693

## **SAR for Project 2006-06 Reliability Coordination – Attachment 1**

---

- Correct the references for Requirements
- Include a requirement that upon the detection of failures in relays or protection system elements on the Bulk-Power System that threaten reliable operation, relevant transmission operators must be informed promptly, but within a specified period of time whereas generator operators must also promptly inform their transmission operators
- Clarify that, after being informed of failures in relays or protection system elements that threaten reliability of the Bulk-Power System, transmission operators must carry out corrective control actions, i.e., return the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes after they receive notice of the failure

### **V0 Industry Comments**

- Effects on reliability may not be known
- Consistent terminology as to neighbor vs. affected
- Not all criteria moved over from policies

The drafting team will reference these guidelines in determining what changes to make to the standards to bring them into conformance with the *Reliability Standards Development Procedure Manual, Version 6* and the *ERO Rules of Procedure*:

## **Standard Review Guidelines**

### **Applicability**

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

### **Purpose**

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

### **Performance Requirements**

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

### **Measurability**

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

### **Technical Basis in Engineering and Operations**

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

### **Completeness**

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

**Consequences for Noncompliance**

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

**Clear Language**

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

**Practicality**

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

**Capability Requirements versus Performance Requirements**

In general, requirements for entities to have ‘capabilities’ (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to ‘maintain’ their capabilities.

**Consistent Terminology**

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a ‘unique’ definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the ‘verb list’ from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

**Violation Risk Factors (Risk Factor)**

**High Risk Requirement**

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

**Medium Risk Requirement**

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or

restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

**Lower Risk Requirement**

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

**Time Horizon**

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

**Violation Severity Levels**

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels must be applied for each requirement and may be combined to cover multiple requirements, as long as it is clear which requirements are included and that all requirements are included.

**The violation severity levels should be based on the following definitions:**

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Replace, ‘Regional Reliability Organization’ with ‘Regional Entity’

**Fill-in-the-blank Requirements**

Do not include any ‘fill-in-the-blank’ requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

**Requirements for Regional Reliability Organization**

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

**Effective Dates**

Must be 1<sup>st</sup> day of 1<sup>st</sup> quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan. The effective date should be linked to the NERC BOT adoption date.

**Associated Documents**

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, ‘Associated Documents’.

**Functional Model Version 3**

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

## Standards Authorization Request Form

---

### **Purpose**

To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

### **Brief Description**

Most of the requirements in this set of standards were translated from Operating Policies as part of the Version 0 process. There have been suggestions for improving these requirements, and the drafting team will consider comments submitted by stakeholders, drafting teams and FERC in determining what changes should be proposed to stakeholders.

The drafting team will review all of the requirements in this set of standards and make a determination, with stakeholders, on whether to:

- Modify the requirement to improve its clarity and measureability while removing ambiguity
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support bulk power system reliability).

### **Detailed Description**

The drafting team will review all of the requirements in the following set of standards:

COM-001 — Telecommunications  
COM-002 — Communications and Coordination  
IRO-001 — Reliability Coordination – Responsibilities and Authorities  
IRO-002 — Reliability Coordination – Facilities  
IRO-005 — Reliability Coordination – Current Day Operations  
IRO-014 — Procedures to Support Coordination between Reliability Coordinators  
IRO-015 — Notifications and Information Exchange Between Reliability Coordinators  
IRO-016 — Coordination of Real-time Activities between Reliability Coordinators  
PER-004 — Reliability Coordination – Staffing  
PRC-001 — System Protection Coordination

For each existing requirement, the drafting team will work with stakeholders and:

- Eliminate redundancy in the requirements.
- Identify requirements that should be moved into other SARs
- Eliminate requirements that do not support bulk power system reliability
- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.
- Improve clarity of, improve measureability of, and remove ambiguity from the requirement

The standard drafting team will also:

Coordinate with the drafting teams working on the SAR and standards for Transmission Operator and Balancing Authority standards (Project 2007-06).  
Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)  
  
Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)

This review of the set of identified standards will satisfy the standards procedure requirement to review each approved standard at least once every five years.

**Standards Authorization Request Form**

---

***Reliability Functions***

<b>The Standard will Apply to the Following Functions</b> <i>(Check box for each one that applies.)</i>		
<input checked="" type="checkbox"/>	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
<input checked="" type="checkbox"/>	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
<input checked="" type="checkbox"/>	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator Area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
<input checked="" type="checkbox"/>	Transmission Owner	Owens and maintains transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
<input checked="" type="checkbox"/>	Distribution Provider	Delivers electrical energy to the End-use customer.
<input checked="" type="checkbox"/>	Generator Owner	Owens and maintains generation facilities.
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) to provide real and reactive power.
<input type="checkbox"/>	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
<input type="checkbox"/>	Market Operator	Interface point for reliability functions with commercial functions.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the end-use customer.

**Reliability and Market Interface Principles**

<b>Applicable Reliability Principles</b> (Check box for all that apply.)	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
<b>Does the proposed Standard comply with all of the following Market Interface Principles?</b> (Select 'yes' or 'no' from the drop-down box.)	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

**The drafting team will assist stakeholders in considering these comments in determining what changes to make to the standards:**

**COM-001-0 Telecommunications**

FERC Order 693

- Include generator operators and distribution provider as applicable entities and include requirements for their telecommunications
- Include requirements for telecommunication facilities for use during normal and emergency conditions that reflect the roles of the applicable entities and their impact on reliable operation
- Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions

V0 Industry Comments

- Many players missing
- Apply R1 to all but smallest entities

Violation Risk Factor Drafting Team Comments

- R6 – administrative requirement

**COM-002-1 Communications and Coordination**

FERC Order 693

- Include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities;
- Include distribution providers as applicable entities; and
- Require tightened communications protocols, especially for communications during alerts and emergencies.

V0 Industry Comments

- Voice with generators not required
- R1 – include reliability authority
- R2 – include sabotage and security
- R4 – clarify repeat back requirement with regard to emergency

**IRO-001-0 Reliability Coordination – Responsibilities and Authorities**

FERC Order 693

- Reflect the process set forth in the NERC Rules of Procedures; and
- Eliminate the regional reliability organization as an applicable entity.

Regional Fill-in-the-Blank Team Comments

- Remove ", sub-region, or interregional coordinating group" from R1
- Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another." from the Purpose section of the standard.

V0 Industry Comments

- Inability to perform needs to be communicated
- What is meant by 'interest of other entity'?

Violation Risk Factor Drafting Team Comments

- R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the

## **SAR for Project 2006-06 Reliability Coordination – Attachment 1**

---

accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk.

### **IRO-002-0 Reliability Coordination – Facilities**

FERC Order 693

- Require a minimum set of tools that should be made available to reliability coordinators.

V0 Industry Comments

- R5 – define synchronized information system
- R7 – define ‘adequate’ tools and ‘wide-area’
- Words such as ‘easily understood’ and ‘particular emphasis’ need to be tightened

### **IRO-005-1 Reliability Coordination – Current Day Operations**

FERC Order 693

- Measures and Levels of Non-Compliance specific to IROL violations must be commensurate with the magnitude, duration, frequency and causes of the violations and whether these occur during normal or contingency conditions.
- Conduct a survey on IROL practices and experiences; the Commission may propose further modifications to IRO-005-1 based on the survey results.

V0 Industry Comments

- R10, 11 & 12 – RA not empowered to do this

### **IRO-016-1 Coordination of Real-Time Activities Between Reliability Coordinators**

Violation Risk Factors Drafting Team Comments

- R1.2.1 & R2 – ambiguous

### **PER-004-0 Reliability Coordination – Staffing**

FERC Order 693

- Include formal training requirements for reliability coordinators similar to those addressed under the personnel training Reliability Standard PER-002-0;
- Include requirements pertaining to personnel credentials for reliability coordinators similar to those in PER-003-0
- Consider the suggestions of FirstEnergy and Xcel:  
1413. FirstEnergy seeks revisions to the terms “shall have a comprehensive understanding” and “shall have extensive knowledge.” It states that it will be difficult for entities to demonstrate compliance with these terms. In addition, FirstEnergy suggests that the reliability coordinator staffing requirements should be located in the IRO Reliability Standards.  
1414. Xcel states that emergency training requirements should be expressed in hour increments rather than days to allow for flexibility in scheduling training and coordinating with rotating shift schedules.

V0 Industry Comments

- Calendar year timing increment
- Other training needs to be defined

### **PRC-001-0 System Protection Coordination**

FERC Order 693

## **SAR for Project 2006-06 Reliability Coordination – Attachment 1**

---

- Correct the references for Requirements
- Include a requirement that upon the detection of failures in relays or protection system elements on the Bulk-Power System that threaten reliable operation, relevant transmission operators must be informed promptly, but within a specified period of time whereas generator operators must also promptly inform their transmission operators
- Clarify that, after being informed of failures in relays or protection system elements that threaten reliability of the Bulk-Power System, transmission operators must carry out corrective control actions, i.e., return the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes after they receive notice of the failure

### **V0 Industry Comments**

- Effects on reliability may not be known
- Consistent terminology as to neighbor vs. affected
- Not all criteria moved over from policies

The drafting team will reference these guidelines in determining what changes to make to the standards to bring them into conformance with the *Reliability Standards Development Procedure Manual, Version 6* and the *ERO Rules of Procedure*:

## **Standard Review Guidelines**

### **Applicability**

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

### **Purpose**

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

### **Performance Requirements**

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

### **Measurability**

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

### **Technical Basis in Engineering and Operations**

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

### **Completeness**

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

**Consequences for Noncompliance**

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

**Clear Language**

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

**Practicality**

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

**Capability Requirements versus Performance Requirements**

In general, requirements for entities to have ‘capabilities’ (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to ‘maintain’ their capabilities.

**Consistent Terminology**

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a ‘unique’ definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the ‘verb list’ from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

**Violation Risk Factors (Risk Factor)**

**High Risk Requirement**

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

**Medium Risk Requirement**

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or

restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

**Lower Risk Requirement**

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

**Time Horizon**

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

**Violation Severity Levels**

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels must be applied for each requirement and may be combined to cover multiple requirements, as long as it is clear which requirements are included and that all requirements are included.

**The violation severity levels should be based on the following definitions:**

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Replace, ‘Regional Reliability Organization’ with ‘Regional Entity’

**Fill-in-the-blank Requirements**

Do not include any ‘fill-in-the-blank’ requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

**Requirements for Regional Reliability Organization**

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

**Effective Dates**

Must be 1<sup>st</sup> day of 1<sup>st</sup> quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan. The effective date should be linked to the NERC BOT adoption date.

**Associated Documents**

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, ‘Associated Documents’.

**Functional Model Version 3**

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

## Standard Authorization Request Form

Title of Proposed Standard	Reliability Coordination (Project 2006-06)
Request Date	December 18, 2006
Revised Date	May 1, 2007

SAR Requestor Information	SAR Type <i>(Check a box for each one that applies.)</i>
<b>Name</b> Ellis Rankin	<input type="checkbox"/> New Standard
<b>Primary Contact</b> Ellis Rankin	<input checked="" type="checkbox"/> Revision to existing Standards – see list below  COM-001 – Telecommunications COM-002 – Communications and Coordination IRO-001 – Reliability Coordination – Responsibilities and Authorities IRO-002 – Reliability Coordination – Facilities IRO-005 – Reliability Coordination – Current Day Operations IRO-014 – Procedures to Support Coordination between Reliability Coordinators IRO-015 – Notifications and Information Exchange Between Reliability Coordinators IRO-016 – Coordination of Real-time Activities between Reliability Coordinators PER-004 – Reliability Coordination – Staffing PRC-001 – System Protection Coordination
<b>Telephone</b> 214-743-6828 <b>Fax</b> 972-263-6710	<input checked="" type="checkbox"/> Withdrawal of existing Standard  Some requirements in the above standards
<b>E-mail</b> erankin@txued.com	<input type="checkbox"/> Urgent Action

**Purpose**

To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

**Brief Description**

Most of the requirements in this set of standards were translated from Operating Policies as part of the Version 0 process. There have been suggestions for improving these requirements, and the drafting team will consider comments submitted by stakeholders, drafting teams and FERC in determining what changes should be proposed to stakeholders.

The drafting team will review all of the requirements in this set of standards and make a determination, with stakeholders, on whether to:

- Modify the requirement to improve its **clarity and measureability while removing ambiguity**
- ~~Move the requirement (into another SAR or Standard or to the certification process or standards)~~
- Eliminate the requirement (either because it is redundant or because it doesn't support bulk power system reliability).

Deleted: quality ¶

**Detailed Description**

The drafting team will review all of the requirements in the following set of standards:

- COM-001 — Telecommunications
- COM-002 — Communications and Coordination
- IRO-001 — Reliability Coordination – Responsibilities and Authorities
- IRO-002 — Reliability Coordination – Facilities
- IRO-005 — Reliability Coordination – Current Day Operations
- IRO-014 — Procedures to Support Coordination between Reliability Coordinators
- IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
- PER-004 — Reliability Coordination – Staffing
- PRC-001 — System Protection Coordination

For each existing requirement, the drafting team will work with stakeholders and:

- Eliminate redundancy in the requirements.
- Identify requirements that should be moved into other SARs
- Eliminate requirements that do not support bulk power system reliability
- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.
- **Improve clarity of, improve measureability of, and remove ambiguity from the requirement**

The standard drafting team will also:

- Coordinate with the drafting teams working on the SAR and standards for Transmission Operator and Balancing Authority standards (Project 2007-06).
- Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)
- Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)

This review of the set of identified standards will satisfy the standards procedure requirement to review each approved standard at least once every five years.

Formatted: Bullets and Numbering

**Reliability Functions**

<b>The Standard will Apply to the Following Functions</b> <i>(Check box for each one that applies.)</i>		
<input checked="" type="checkbox"/>	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
<input checked="" type="checkbox"/>	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
<input checked="" type="checkbox"/>	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator Area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
<input checked="" type="checkbox"/>	Transmission Owner	Owns and maintains transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
<input checked="" type="checkbox"/>	Distribution Provider	Delivers electrical energy to the End-use customer.
<input checked="" type="checkbox"/>	Generator Owner	Owns and maintains generation facilities.
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) to provide real and reactive power.
<input type="checkbox"/>	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
<input type="checkbox"/>	Market Operator	Interface point for reliability functions with commercial functions.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the end-use customer.

**Reliability and Market Interface Principles**

<b>Applicable Reliability Principles</b> (Check box for all that apply.)	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
<b>Does the proposed Standard comply with all of the following Market Interface Principles?</b> (Select 'yes' or 'no' from the drop-down box.)	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

**The drafting team will reference these guidelines in determining what changes to make to the standards to bring them into conformance with the *Reliability Standards Development Procedure Manual, Version 6* and the *ERO Rules of Procedure*:**

## **Standard Review Guidelines**

### **Applicability**

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

### **Purpose**

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

### **Performance Requirements**

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

### **Measurability**

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

### **Technical Basis in Engineering and Operations**

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

### **Completeness**

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

**Consequences for Noncompliance**

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

**Clear Language**

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

**Practicality**

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

**Capability Requirements versus Performance Requirements**

In general, requirements for entities to have ‘capabilities’ (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to ‘maintain’ their capabilities.

**Consistent Terminology**

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a ‘unique’ definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the ‘verb list’ from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

**Violation Risk Factors (Risk Factor)**

**High Risk Requirement**

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

**Medium Risk Requirement**

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or

restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

**Lower Risk Requirement**

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

**Time Horizon**

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

**Violation Severity Levels**

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels must be applied for each requirement and may be combined to cover multiple requirements, as long as it is clear which requirements are included and that all requirements are included.

**The violation severity levels should be based on the following definitions:**

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Replace, 'Regional Reliability Organization' with 'Regional Entity'

**Fill-in-the-blank Requirements**

Do not include any 'fill-in-the-blank' requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

**Requirements for Regional Reliability Organization**

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

**Effective Dates**

Must be 1<sup>st</sup> day of 1<sup>st</sup> quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan. **The effective date should be linked to the NERC BOT adoption date.**

**Associated Documents**

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, 'Associated Documents'.

**Functional Model Version 3**

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

May 11, 2007

TO: REGISTERED BALLOT BODY

Ladies and Gentlemen:

**Announcement**  
**Nomination Periods Open for Two Drafting Teams**

**The Standards Committee (SC) announces the following standards actions:**

**Nominations for Project 2006-06 Reliability Coordination Standard Drafting Team (May 14–25, 2007)**

The Standards Committee authorized moving the [SAR for Reliability Coordination](#) forward to standard drafting and is seeking industry experts to serve on the Reliability Coordination Standard Drafting Team. This drafting team will work on modifications to the following standards:

- COM-001 — Telecommunications
- COM-002 — Communications and Coordination
- IRO-001 — Reliability Coordination – Responsibilities and Authorities
- IRO-002 — Reliability Coordination – Facilities
- IRO-005 — Reliability Coordination – Current Day Operations
- IRO-014 — Procedures to Support Coordination between Reliability Coordinators
- IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
- PER-004 — Reliability Coordination – Staffing
- PRC-001 — System Protection Coordination

If you are interested in serving on this standard drafting team, please complete this [nomination form](#) and return it to [sarcomm@nerc.netnet](mailto:sarcomm@nerc.netnet) by May 25, 2007 with “RC SDT Nomination” in the subject line.

**Nominations for Project 2007-18 Reliability-based Control SAR Drafting Team (May 14–25, 2007)**

The Standards Committee authorized posting the [SAR for Reliability-based Control](#) and is seeking industry experts to serve on the Reliability-based Control SAR Drafting Team. This SAR proposes to develop requirements to achieve the following objectives:

- To maintain Interconnection frequency within predefined frequency limits under all conditions (i.e., normal and abnormal), to prevent frequency-related instability; unplanned tripping of load or generation; or uncontrolled separation or Cascading outages that adversely impact the reliability of the Interconnection. (Work brought into this SAR from BAL-007 though BAL-011.)

REGISTERED BALLOT BODY

May 11, 2007

Page Two

- To support elimination of SOL/IROL violations caused by excessive (as determined by this standard) Area Control Error (“ACE”). (Could be a separate and individually balloted Standard.)
- To prevent Interconnection frequency excursions of short-duration attributed to the ramping of on and off-peak Interchange Transactions. (Could be a separate and individually balloted Standard.)
- To support timely transmission congestion relief by requiring corrective load/generation management within a defined timeframe when ACE is impacted by the curtailment of Interchange Transactions under transmission loading relief procedures. (Could be a separate and individually balloted Standard.)
- To address the directives of FERC Order 693.

If you are interested in serving on this SAR drafting team, please complete this [nomination form](#) and return it to [sarcomm@nerc.net](mailto:sarcomm@nerc.net) by May 25, 2007 with “RB Control SARDT Nomination” in the subject line.

**Standards Development Process**

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. If you have any questions, please contact me at 813-468-5998 or [maureen.long@nerc.net](mailto:maureen.long@nerc.net).

Sincerely,

*Maureen E. Long*

cc: Registered Ballot Body Registered Users  
Standards Mailing List  
NERC Roster

**A. Introduction**

1. **Title:** **Telecommunications**
2. **Number:** COM-001-2
3. **Purpose:** Each Reliability Coordinator, Transmission Operator and Balancing Authority needs adequate and reliable telecommunications facilities internally and with others for the exchange of Interconnection and operating information necessary to maintain reliability.
4. **Applicability:**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.
  - 4.3. Reliability Coordinators.
  - 4.4. Distribution Providers.
  - 4.5. Generator Operators.
5. **Effective Date:** **TBD**

**B. Requirements**

- R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations*]
- R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities of the failure of its normal telecommunications facilities, and shall verify that alternate means of telecommunications are functional. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations*]
- R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. [*Violation Risk Factor: Medium*] [*Time Horizon: Real-time Operations*]
- R4. Each Distribution Provider and Generation Operator shall have telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations and Operations Planning*]

**C. Measures**

- M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide evidence that it operationally tested, on a quarterly basis at a minimum,

alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.

- M2.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional.
- M3.** The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES.
- M4.** Each Distribution Provider and Generation Operator has telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.

#### **D. Compliance**

##### **1. Compliance Monitoring Process**

###### **1.1. Compliance Enforcement Authority**

Regional Entity

###### **1.2. Compliance Monitoring and Enforcement Processes**

Compliance Audits

Self-Certifications

- Spot Checking
- Compliance Violation Investigations

Self-Reporting

Complaints

###### **1.3. Data Retention**

The Reliability Coordinator, Transmission Operator and Balancing Authority shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

For the Measures, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall each keep the most recent three months of historical data (evidence).

If a Reliability Coordinator, Transmission Operator and Balancing Authority is found non-compliant it shall keep information related to the noncompliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

**1.4. Additional Compliance Information**

**None**

2. Violation Severity Levels

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last quarter.	The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 2 quarters.	The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 3 quarters.	The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 4 quarters.
R2	The Reliability Coordinator, Transmission Operator or Balancing Authority notified all impacted entities of the failure of their normal telecommunications facilities, but failed to verify the alternate means of telecommunications are functional.	The Reliability Coordinator, Transmission Operator or Balancing Authority notified some, but not all, impacted entities of the failure of their normal telecommunications facilities, and failed to verify the alternate means of telecommunications are functional.	N/A	The Reliability Coordinator, Transmission Operator or Balancing Authority failed to notify any impacted entities of the failure of their normal telecommunications facilities, and failed verify the alternate means of telecommunications are functional.

**Standard COM-001-2 — Telecommunications**

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R3	N/A	N/A	N/A	The responsible entity failed to provide evidence of concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System.
R4	N/A	N/A	N/A	The Distribution Provider or Generation Operator failed to have telecommunications facilities with its Transmission Operator and Balancing Authority

### Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
1	April 6, 2007	Requirement 1, added the word “for” between “facilities” and “the exchange.”	Errata
2	TBD	Revised per SAR for Project 2006-06, RCSDT	Revised

**A. Introduction**

1. **Title:** **Telecommunications**
2. **Number:** COM-001-~~24~~
3. **Purpose:** Each Reliability Coordinator, Transmission Operator and Balancing Authority needs adequate and reliable telecommunications facilities internally and with others for the exchange of Interconnection and operating information necessary to maintain reliability.
4. **Applicability:**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.
  - 4.3. Reliability Coordinators.
  - 4.4. Distribution Providers.
  - 4.5. Generator Operators.
  - ~~4.4. NERCNet User Organizations.~~
5. **Effective Date:** TBD ~~January 1, 2007~~

**B. Requirements**

~~R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information:~~

~~R1.1. Internally.~~

~~R1.2. Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities.~~

~~R1.3. With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability.~~

~~R1.4. Where applicable, these facilities shall be redundant and diversely routed.~~

~~R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis at a minimum, alternative manage, alarm, test and/or actively monitor vital telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]~~

R1.

R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities of the failure of its normal telecommunications facilities, and

The RC SDT contends that COM-001-1, R1 and its subrequirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher-level performance-based reliability requirements for each entity throughout the body of standards. (See Implementation Plan for examples.)

~~shall verify that alternate means of telecommunications are functional. provide a means to coordinate telecommunications among their respective areas. This coordination shall include the ability to investigate and recommend solutions to telecommunications problems within the area and with other areas *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*~~

**R3.** Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, ~~and~~ Balancing Authority, Generator Operator and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected ~~Bulk Electric System~~ BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

Requirement R3 is being incorporated into COM-003-1 by the Operations Personnel Communications Protocols SDT (Project 2007-02). It will be retired from this standard upon approval of COM-003-1.

~~**R4.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities.~~

The RC SDT is recommending that R4 be retired as it is redundant with EOP-008-0.

~~**R5.** Each NERCNet User Organization shall adhere to the requirements in Attachment 1 COM-001, "NERCNet Security Policy."~~

The RC SDT is recommending that R5 be retired. This is an ERO procedural issue and should not be in a reliability standard. It should be retired and included in the NERC Rules of Procedure.

**R4.** Each Distribution Provider and Generation Operator shall have telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. *[Violation Risk Factor: High][Time Horizon: Real-time Operations and Operations Planning]*

The new R4 was written to meet a FERC Directive from Order 693.

### C. Measures

~~**M1.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to communication facility test procedure documents, records of testing, and maintenance records for communication facilities or equivalent that will be used to confirm that it manages, alarms, tests and/or actively monitors vital telecommunications facilities. (Requirement 2 part 1)~~

**M1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide evidence that it operationally tested, on a quarterly basis at a minimum,

alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.

**M2.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional.

**M3.** The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES compliance to Requirement 4.

~~**M3.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request its current operating instructions and procedures, either electronic or hard copy that will be used to confirm that it meets Requirement 5.~~

~~**M4.** The NERCnet User Organization shall have and provide upon request evidence that could include, but is not limited to documented procedures, operator logs, voice recordings or transcripts of voice recordings, electronic communications, etc that will be used to determine if it adhered to the (User Accountability and Compliance) requirements in Attachment 1 COM-001. (Requirement 6)~~

**M4.** Each Distribution Provider and Generation Operator has telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.

## D. Compliance

### 1. Compliance Monitoring Process

#### 1.1. Compliance Enforcement Authority

#### ~~1.1. Compliance Monitoring Responsibility~~

~~NERC shall be responsible for compliance monitoring of the Regional Entity Reliability Organizations~~

~~Regional Reliability Organizations shall be responsible for compliance monitoring of all other entities~~

#### 1.2. Compliance Monitoring and Enforcement Processes ~~Reset Time Frame~~

Compliance Audits

Self-Certifications

~~One or more of the following methods will be used to assess compliance:~~

~~— Self-certification (Conducted annually with submission according to schedule.)~~

- Spot ~~Checking~~ Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- ~~Compliance Violation~~ Periodic Audit (Conducted once every three years according to schedule.)
- ~~Triggered~~ Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 calendar days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

### Self-Reporting

### Complaints

~~The Performance Reset Period shall be 12 months from the last finding of non-compliance.~~

## 1.3. Data Retention

~~The~~ For Measure 1 each Reliability Coordinator, Transmission Operator and, Balancing Authority shall keep data or evidence to show of compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

For the Measures, ~~previous two calendar years plus the current year.~~

~~For Measure 2~~ each Reliability Coordinator, Transmission Operator, and Balancing Authority shall each keep the most recent three months ~~90 days~~ of historical data (evidence).

~~If a~~ For Measure 3, each Reliability Coordinator, Transmission Operator and, Balancing Authority ~~shall have its current operating instructions and procedures to confirm that it meets Requirement 5.~~

~~For Measure 4,~~ each Reliability Coordinator, Transmission Operator, Balancing Authority ~~and NERCnet User Organization shall keep 90 days of historical data (evidence).~~

~~If an entity~~ is found non-compliant it the entity shall keep information related to the noncompliance until found compliant, ~~or for two years plus the current year, whichever is longer.~~

~~Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor.~~

The Compliance Enforcement Authority ~~Monitor~~ shall keep the last periodic ~~audit records~~ report and all requested and submitted subsequent audit ~~compliance~~ records.

**1.4. Additional Compliance Information**

None

2. Violation Severity Levels

<u>Requirement</u>	<u>Lower VSL</u>	<u>Moderate VSL</u>	<u>High VSL</u>	<u>Severe VSL</u>
<u>R1</u>	<u>The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last quarter.</u>	<u>The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 2 quarters.</u>	<u>The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 3 quarters.</u>	<u>The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 4 quarters.</u>

## **Attachment 1-COM-001 — NERCnet Security Policy**

### **Policy Statement**

The purpose of this NERCnet Security Policy is to establish responsibilities and minimum requirements for the protection of information assets, computer systems and facilities of NERC and other users of the NERC frame relay network known as “NERCnet.” The goal of this policy is to prevent misuse and loss of assets.

For the purpose of this document, information assets shall be defined as processed or unprocessed data using the NERCnet Telecommunications Facilities including network documentation. This policy shall also apply as appropriate to employees and agents of other corporations or organizations that may be directly or indirectly granted access to information associated with NERCnet.

The objectives of the NERCnet Security Policy are:

- To ensure that NERCnet information assets are adequately protected on a cost effective basis and to a level that allows NERC to fulfill its mission.
- To establish connectivity guidelines for a minimum level of security for the network.
- To provide a mandate to all Users of NERCnet to properly handle and protect the information that they have access to in order for NERC to be able to properly conduct its business and provide services to its customers.

### **NERC’s Security Mission Statement**

NERC recognizes its dependency on data, information, and the computer systems used to facilitate effective operation of its business and fulfillment of its mission. NERC also recognizes the value of the information maintained and provided to its members and others authorized to have access to NERCnet. It is, therefore, essential that this data, information, and computer systems, and the manual and technical infrastructure that supports it, are secure from destruction, corruption, unauthorized access, and accidental or deliberate breach of confidentiality.

### **Implementation and Responsibilities**

———— This section identifies the various roles and responsibilities related to the protection of NERCnet resources.

#### **NERCnet User Organizations**

Users of NERCnet who have received authorization from NERC to access the NERC network are considered users of NERCnet resources. To be granted access, users shall complete a User Application Form and submit this form to the NERC Telecommunications Manager.

#### **Responsibilities**

It is the responsibility of NERCnet User Organizations to:

- Use NERCnet facilities for NERC authorized business purposes only.
- Comply with the NERCnet security policies, standards, and guidelines, as well as any procedures specified by the data owner.

- ~~Prevent unauthorized disclosure of the data.~~
- ~~Report security exposures, misuse, or non-compliance situations via Reliability Coordinator Information System or the NERC Telecommunications Manager.~~
- ~~Protect the confidentiality of all user IDs and passwords.~~
- ~~Maintain the data they own.~~
- ~~Maintain documentation identifying the users who are granted access to NERCnet data or applications.~~
- ~~Authorize users within their organizations to access NERCnet data and applications.~~
- ~~Advise staff on NERCnet Security Policy.~~
- ~~Ensure that all NERCnet users understand their obligation to protect these assets.~~
- ~~Conduct self assessments for compliance.~~
- ~~User Accountability and Compliance~~
- ~~All users of NERCnet shall be familiar and ensure compliance with the policies in this document.~~
- ~~Violations of the NERCnet Security Policy shall include, but not be limited to any act that:~~
- ~~Exposes NERC or any user of NERCnet to actual or potential monetary loss through the compromise of data security or damage.~~
- ~~Involves the disclosure of trade secrets, intellectual property, confidential information or the unauthorized use of data.~~
- ~~Involves the use of data for illicit purposes, which may include violation of any law, regulation or reporting requirement of any law enforcement or government body.~~

## **Implementation Plan for COM-001-2 Telecommunications**

---

### **Prerequisite Approvals**

- IRO-002-2
- IRO-005-3

### **Conforming Changes to Requirements in Already Approved Standards**

- None

### **Revision Summary**

- The RC SDT revised the standard and is proposing retiring three requirements (R1, R5 and R6). Changes were made to eliminate redundancies between standards (existing and proposed), to align with the ERO Rules of Procedure and to address issues in FERC Order 693.

### **Effective Dates**

To be determined.

**Implementation Plan for COM-001-2  
Telecommunications**

**Revisions or Retirements to Already Approved Standards**

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p>The RC SDT contends that COM-001-1, R1 and its subrequirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. Examples include:</p> <p>IRO-001-1, R3 requires adequate telecommunication for the Reliability Coordinator to direct actions of multiple entities, including TOPs and BAs.</p> <p>TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC.</p> <p>TOP-001-1, R3 requires adequate telecommunications facilities for the TOP, BA, and GOP to be able to receive directives from the RC.</p> <p>TOP-006-1, R1 requires adequate telecommunications for the GOP to inform the BA and TOP of resources. The BA and TOP will then inform the RC, other TOP and BAs of all transmission and generation available for use.</p> <p>The retirement of this requirement also facilitates one of the FERC Order 693 directives for COM-001-1 to “includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions”.</p>
<p><b>Notes:</b> Based on the above information, the RC SDT recommends retiring R1 and its subrequirements.</p>	

**Implementation Plan for COM-001-2  
Telecommunications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R2.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall <b>manage, alarm, test and/or actively monitor vital telecommunications facilities. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications.</b> <i>[Violation Risk Factor: Medium]</i></p>	<p><b>COM-001-2:</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail. <del>manage, alarm, test and/or actively monitor vital telecommunications facilities. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications.</del> <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>
<p><b>Notes:</b> The RC SDT contends that the first sentence of COM-001-1, R2 is a low level facilitating requirements that is more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards as described in R1 above. We propose revising R2 as shown above.</p>	

**Implementation Plan for COM-001-2  
Telecommunications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b>  <b>R3.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide a means to coordinate telecommunications among their respective areas. This coordination shall include the ability to investigate and recommend solutions to telecommunications problems within the area and with other areas. <i>[Violation Risk Factor: Lower]</i></p>	<p><b>COM-001-2</b>  <b>R2.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities of failure of their normal telecommunications facilities, and verify the alternate means of telecommunications are functional. <b>provide a means to coordinate telecommunications among their respective areas. This coordination shall include the ability to investigate and recommend solutions to telecommunications problems within the area and with other areas.</b> <i>[Violation Risk Factor: Medium Lower][Time Horizon: Real-time Operations]</i></p>

**Implementation Plan for COM-001-2  
Telecommunications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R4.</b> Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. <i>[Violation Risk Factor: Medium]</i></p>	<p><b>COM-001-2</b></p> <p><b>R3.</b> Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, <del>and</del> Balancing Authority, Generator Operator and Distribution Provider shall use English as the language for <b>all inter-entity Bulk Electric System reliability</b> communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]</i></p>
<p><b>Notes:</b> COM-001 Requirement R3 is being incorporated into COM-003-1 by the Operations Personnel Communications Protocols SDT (Project 2007-02). It will be retired from this standard upon approval of COM-003-1.</p>	

**Implementation Plan for COM-001-2  
Telecommunications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R5.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities. <i>[Violation Risk Factor: Lower]</i></p>	<p><b>EOP-008-0</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have a plan to continue reliability operations in the event its control center becomes inoperable. The contingency plan must meet the following requirements:</p> <p><b>R1.1.</b> The contingency plan shall not rely on data or voice communication from the primary control facility to be viable.</p> <p><b>R1.2.</b> The plan shall include procedures and responsibilities for providing basic tie line control and procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.</p> <p><b>R1.3.</b> The contingency plan must address monitoring and control of critical transmission facilities, generation control, voltage control, time and frequency control, control of critical substation devices, and logging of significant power system events. The plan shall list the critical facilities.</p> <p><b>R1.4.</b> The plan shall include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.</p> <p><b>R1.5.</b> The plan shall include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.</p> <p><b>R1.6.</b> The plan shall include procedures and responsibilities for providing annual training to ensure that operating personnel are able to implement the contingency plans.</p> <p><b>R1.7.</b> The plan shall be reviewed and updated annually.</p> <p><b>R1.8.</b> Interim provisions must be included if it is expected to take more than one hour to implement the contingency plan for loss of primary control facility.</p>
<p><b>Notes:</b> The RC SDT proposes retiring COM-001-1 R5 as it is redundant with EOP-008-0 Requirement R1.</p>	

**Implementation Plan for COM-001-2  
Telecommunications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R6.</b> Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001, "NERCNet Security Policy." <i>[Violation Risk Factor: Lower]</i></p>	<p><b>None - retire</b></p>
<p><b>Notes:</b> The RC SDT is recommending that R6 be retired. This is an ERO procedural issue and should not be in a reliability standard. It should be included in the ERO Rules of Procedure.</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
	<p><b>COM-001-2</b></p> <p><b>R4.</b> <u>Each Distribution Provider and Generation Operator shall have telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Operations Planning]</i></u></p>
<p>Notes: This is a new requirement based on the following FERC Order 693 directive:</p> <p>“expands the applicability to include generator operators and distribution providers and includes Requirements for their telecommunications facilities”</p>	

**Implementation Plan for COM-001-2  
Telecommunications**

## **Comment Background and Questions for Reliability Coordination — Project 2006-06**

Comments must be submitted by **September 16, 2008**. If you have questions please contact Stephen Crutchfield at [stephen.crutchfield@nerc.net](mailto:stephen.crutchfield@nerc.net) or by telephone at 609-651-9455.

### **Background Information:**

The Reliability Coordination Standards Drafting Team was tasked with ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System. The SAR also called for revisions to the group of Standards based on FERC Order 693.

During the course of the project, the NERC Standard Staff revised the Reliability Standards Work Plan and noted several areas of overlapping scope between certain projects. The original SAR for Project 2006-6 called for revisions to PER-004 (Reliability Coordination – Staffing) and PRC-001 (System Protection Coordination). Based on the scope overlap of the teams involved, it was determined that PER-004 would best be served by moving all of the proposed scope to Project 2006-1, System Personnel Training. Similarly, it was determined that PER-004 would best be served by moving all of the proposed scope to Project 2007-6, System Protection.

The RC SDT has Standards that are impacted by the work of the IROL Standards Drafting Team and the standards that they have developed and the modifications they've proposed to some of the IRO standards. The RC SDT is recommending further revisions to the IRO standards and coordinated these changes with the IROL SDT. We have noted revisions made to the standards by the IROL SDT in our documents.

A summary of the proposed revisions to the Standards remaining in Project 2006-06 is:

### **COM-001-2**

The RC SDT revised the standard and is proposing retiring three requirements (R1, R5 and R6). Changes were made to eliminate redundancies between standards (existing and proposed), align with NERC's Rules of Procedure and to address issues in FERC Order 693.

### **COM-002-3**

The RC SDT proposes retiring this standard. The RC SDT contends that COM-002-2, R1 and its subrequirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. The Operations Communications Protocols SDT is addressing R2. They plan to modify the requirement and place the modified requirement in a new standard, COM-003-1. Requirement 2 will remain in place until COM-003-1 is approved.

### **IRO-001-2**

The RC SDT revised the standard and is proposing retiring several requirements (R1, R2, R4, R5, R6, R7 and R10). Changes were made to eliminate redundancies between standards (existing and proposed), align with NERC's Rules of Procedure and to address issues in FERC Order 693.

### **IRO-002-2**

The RC SDT revised the standard and is proposing retiring several requirements (R1, R3, R4, R5, R6, R7 and R8). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERC's Rules of Procedure and to address issues in FERC Order 693.

### **IRO-005-2**

Many of the requirements in this standard will be retired under the IROL SDT work plan. The RC SDT proposes retiring other requirements and moving R6 and R15 to IRO-001-2. This will retire or move all requirements in this standard. The RC SDT proposes retiring the standard.

### **IRO-014-2**

The RC SDT revised the standard and is proposing retiring two requirements (R3 and R4). New requirements were brought into this standard from IRO-015-1 (R1-R3) and IRO-016-1 (R1 and its sub requirements). Changes were made to eliminate redundancies between standards (existing and proposed), eliminate administrative items, align with NERC's Rules of Procedure and to address issues in FERC Order 693.

### **IRO-015-2**

The RC SDT recommends retiring Standard IRO-015 and moving all requirements to IRO-014-2.

### **IRO-016-2**

The RC SDT recommends retiring this Standard. The requirements listed in R1 and its sub-requirements were incorporated into IRO-014-2 as new requirements. The RC SDT recommends retiring R2 because it is a measure of performance of R1.

The Reliability Coordination Drafting Team would like to receive industry comments on the Requirements, Measures and Violation Severity Levels of this group of standards. Accordingly, we request that you submit your comments electronically by **September 16, 2008**.

## Comment Form — Reliability Coordination Project 2006-06

<p>I do not agree with the way IRO-001-2 R1 is written. In the present form the requirement may infer that directing action is not an action. It may also infer that the RC is only required to do "act "or "direct actions" but not both. The way it is written also leads to problems with the VSLs. Perhaps R1 can be edited along the lines of: R1. The Reliability Coordinator shall act to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. When required, the actions initiated by the Reliability Coordinator will include, but is not limited to, directing the actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area. I agree with the other Requirements in IRO-001-2 with the exception of the "High" Violation Risk Factor assigned to IRO-001-2 requirement R5. This should be a "Medium" VRF at the most. If the emergency has been mitigated, and the entities are not aware, they will still be operating to restrictions which means the grid is operating well within limits. Not notifying the entities that the problem has been mitigated may have some financial implications but it should not place the grid at risk.</p>
Yes
No
<p>IRO-001-2 R1 VSLs: You can not split "shall act" and "or direct actions" into separate VSLs. They are one and same. If the RC directs action then they have acted. If the RC failed to direct action or have failed to other wise act then they have failed to act appropriately. Perhaps the VSLs can be drafted along the lines of the following: IRO-001-2 R1 High VSL... The Reliability Coordinator's action was incomplete in that it failed to demonstrate a specific action to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. IRO-001-2 R1 Severe VSL... The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. IRO-001-2 R2 VSLs: (1) Entities may be justified in an intentional delay in respnding to an RC directive. A justified intential delay may due be equipment problems, a generators ramp rate or system voltage adjustments prior to large system reconfiguration or large transmission loading changes. (2) An entity cannot be faulted for not following an RC directive because to it would violate safety, equipment, regulatory or statutory requirements. Perhaps the VSLs can be drafted along the lines of the following: Moderate VSL... should be deleted. High VSL... The responsible enity followed the Reliability Coordinators directive but with an unjustified delay. Severe VSL... no edits required. IRO-001-2 R5 VSLs: Perhaps the VSLs can be drafted along the lines of the following to reflect to what degree the RC missed the mark: Lower VSL...The Reliability Coordinator failed to notify &lt;25% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated. Moderate VSL... The Reliability Coordinator failed to notify &gt;24% but &lt;50% of its impacted Transmission</p>

Operators and Balancing Authorities when the transmission system problem had been mitigated. High VSL... The Reliability Coordinator failed to notify >49% but <75% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated. Severe VSL... The Reliability Coordinator failed to notify >74% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated.

There is inconsistency between R3 and M3. In R3, there is a provision for agreement between entities (RC, TOP, BA, GOP, DP) to use a language other than English in their communications. In M3, that option is not presented. M3 should reflect what is written in R3.

While we agree that most of the requirements are redundancies that properly belong elsewhere, we are concerned that Requirement 4 and Requirement 8 are not properly represented elsewhere and should not be retired until they re-surface in another standard explicitly. We believe it is still very important for an RC to monitor their respective BAs reserves and CPS performance. Likewise in R8, while the frequency monitoring is a BA function, we think that it is important enough to also be included as an RC function explicitly.

M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.

No

(i) R1: Suggest to revise the conditions for all levels to read "...failed to operationally test the alternative communication facilities within the last..... (ii) R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affected entities, then the second condition should be an "OR". (iii) R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time operations by itself does not constitute a violation of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.

Yes

Yes

Yes

Yes

No

(i) R2: the phrase "act without intentional delay" is not necessary since the urgency of taking any actions as directed by the RC's are generally understood to be conveyed in the RC's directives. (ii) R3: Given R2 requires the responsible entities to comply with the RC directives, the part that says "immediately confirm the ability to comply with the directive or" is not needed. R3 should simply require the responsible entities to notify the RC upon recognition of the inability to perform the directive. (iii) The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).

No

Wording in some of the Measures needs to be revised to reflect changes to R2 and/or R3, if our proposed changes are accepted. Also, we suggest the Requirement numbers be referenced in the Measures.

No

(i) R1: There should not be any distinction made between an RC acting and an RC directing others to act. Failure to mitigate adverse reliability impacts a severe violation of the requirement. We therefore suggest to revise the High and Severe levels as: High if the RC did not act or direct actions to prevent an Adverse Reliability Impact; Severe if the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact. (ii) R2: The High VSL seems contradictory to the requirement, which already has provision of not fully complying with the RC directives due to safety, equipment, or regulatory or statutory requirements. (iii) R3: We have proposed some wording change to R3, which if adopted, would precipitate a need to revise the VSLs for R3 accordingly. (iv) R4 and R5: The VSLs for these

two requirements could be graded by assessing the number and/or timing of notifying the affected entities.
No
(i) R1: There is a duplicating requirement in TOP-005 R1.1. Suggest to eliminate one of the two. (ii) We do not agree with eliminating all of R5 to R8. There is a fundamental need for RCs to monitor its area, and even some portion of its adjacent areas to be aware of situations that require preventive and mitigating actions. While arguments can be made that requiring RCs to prevent and mitigate adverse reliability impacts would imply monitoring, the latter is a fundamental duty of any RCs to ensure system reliability. If monitoring is not explicitly stated as a requirement, then the same argument may be extended to training and operational facilities. We do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. Measuring can be illustrated, for example, by a compliance audit to review system logs and assess the extent to which an RC follows and assesses system conditions.
No
(i) M1: We suggest to change the word "letter" to "documented request" (ii) If our recommendations to retain some of R5 to R9, some measures will need to be provided.
No
(i) R1: The wording for Low VSL is contradictory (e.g. it determined and requested in the first part but did not request in the second part). Suggest to revise it. (ii) R1: We suggest to grade the VSLs according to the extent to which the percentage of data specification and/or the number of entities not requested. (iii) R2: The RC either has the right or it doesn't, and hence it's a binary requirement. The VSL should be developed accordingly. Further, the wording for the Severe VSL does not correspond to the requirement and measure. The condition should simply be that the Reliability Coordinator failed to demonstrate that it had the authority to veto planned outages to analysis tools, including final approvals for planned maintenance.
No
(i) R1: We not not agree with removing this requirement for the same reason given for the proposal to remove R5 to R8 from IRO-002 (see comments on 10 (ii), above). (ii) R8: We do not agree with completely removing this requirement, especially that part that requires an RC to monitor system frequency. While DCS and CPS are largely a BA's responsibility, the RC is the last line of defence for abnormal system performance and needs to monitor its BAs' performance including their ability to address large frequency deviations, and direct or take corrective actions as needed including requesting emergency assistance on the BAs' behalf and directing load shedding. (iii) R9: The second part of this requirement needs to be retained. IRO-004 covers operational planning, not current day operations. Coordinating pending generator and transmission facility outages is an essential and necessary task by the RC to ensure reliability. (iv) R11: The RC needs to monitor ACE, detect and identify the cause of any abnormal ACE, and direct its BAs to take necessary actions to return ACE to within a normal range. (v) R13: We do not agree with removing the latter part of R13. The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set exists is a necessary requirement for reliable operation.

No
We suggest to replace the word "impacted" with "other" since there is a preconception that the concerred RC makes an assessment of which other RCs are impacted by the coordinatred actions, which may not be the perspective of the other RCs who may in fact be impacted by any coordinated actions among other RCs.
No
Measure 1 actually contains a number of subrequirements that should be stipulated in R1, not M1. If indeed these are required, they should be stipulated in the Requirement section, not the Measures Section.
No
(i) R2: the High and Severe VSLs contradict with the requirement. We believe all of the "nots" should be removed. (ii) R6: The Low VSL should be a High since not agreeing to a plan but implementing one that has not been agreed to is a high violation of the requirement. (iii) The VSLs for R1 may need to be revised if our comments on M1 are adopted.

measures do not align with VSL's (see question 9)
No

R1 talks about "ahall act or direct actions to be taken". High VSL - failure to act. Severe VSL - failure to act and direct. Does "act" mean any action taken short of issuing a directive? Change Severe VSL to failure to act or direct and eliminate the High VSL all together. R2 delay in issuing a directive due to equipmnet problems should be included in the moderate VSL and the body of the requirement and in the measure. The High VSL should be removed because not following the directive for equipment failure is allowed per R2. R5 - Severe VSL should be changed to moderate VSL since the problem has been mitigated and the system is stable and it does not adversely impact reliability. M3 talks about the ability of reliability entities to meet a directive. What constitutes evidence that confirms you are able to immeidately comply with the directive? If the entity agrees to the directive and then is unable to comply due to events outside of their control, such as a CT not starting, do they meet the measure? If the entity, based on the circumstances at the time of the directive, agrees to comply in good faith are they compliant? The Lower VSL should be made N/A because it is not practical for an entity to immediately confirm they are able to meet the directive in all cases.

No

for R1, this should be 2 separate requirments and measures. R1 should have a methodology for determining what data is needed and then a R2 should be a requirement to request this data from the reliability entities.

Yes

add measures for R1 & R2 see question 10

We are a joint action agency registered on behalf of our member municipalities, who are all TDUs, neither own nor operate any Bulk Electric System facilities, and perform no real-time operations or operations planning for the BES. There are currently other standards that already apply to us that require us to have processes and means to communicate with our RC, BA, TOP, etc. The proposed modifications to this standard would now make our members subject to this standard as well, based on the DP registration designation. Given that, we believe there needs to be additional clarification of specifically what type of "telecommunications facilities" are required to be considered compliant with this standard. Maybe in the past when this standard applied to TOPs, BAs, and RCs, it was intuitive what type of telecommunications facilities they needed to communicate with each other. However, when you bring in small DPs, it doesn't seem so clear. Obviously we already communicate with our TOP and BA, and have done so for years. As written, the standard is ambiguous in terms of what more, if anything, we would have to put in place to satisfy this standard.

No

See comments on Question 1

No

Depends of what is meant by "telecommunications facilities"

Standard – IRO-001 R1 Requirement (including sub-requirements) The Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area Attributes of the requirement Binary Timing X Omission X Communication X Quality Other Discussion – 1. As currently worded it can be interpreted that any time an event occurs the RC would be in violation of the standard simply because they had failed “to prevent” an event. 2. This requirement does not have a “timing”

element included, although it implies timing based on the “duration of the event”. Including that “duration of the event” is problematic – it appears to imply that human intervention may provide a more timely response than relay operation, we would suggest more clarification about what the “duration” element of the requirement is intended to address (e.g. generation re-dispatch?). 3. There also appears to be a “quality” element included based on the mitigation of magnitude of the event. As a result we believe that timeliness, effectiveness and communication should be the basis of the VSLs. 4. The VSLs as differentiate between directing actions and acting. Practically, there is no difference. The RC is still giving the directive. It is just a matter of who is carrying it out. This is not a valid basis for differentiating between VSLs. We suggest the VSLs be defined based on actual system impact (i.e. Was the RC acting or directing actions to prevent or to mitigate?) and to either modify the requirement to remove timing aspects or to add the timing aspects to the VSLs. SDT Proposed Lower VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL N/A CEDRP Proposed VSL No Comment SDT Proposed High VSL The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. CEDRP Proposed VSL The Reliability Coordinator failed to act to prevent the magnitude or duration of Adverse Reliability Impacts. SDT Proposed Severe VSL The Reliability Coordinator failed to act and direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts CEDRP Proposed VSL The Reliability Coordinator failed to act and direct actions to mitigate the magnitude or duration of Adverse Reliability Impacts FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a “binary” requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Additional Compliance Elements Compliance Enforcement Authority NERC shall be responsible for compliance monitoring of the Regional Entity. Regional Entities shall be responsible for compliance monitoring of the Reliability Coordinators, Transmission Operators, Generator Operators, Distribution Providers, and Load Serving Entities. Compliance Monitoring Period and Reset Time Frame N/A Compliance Monitoring and Enforcement Processes: Compliance Audits Self-Certifications Spot Checking Compliance Violation Investigations Self-Reporting Complaints Data Retention Each applicable entity shall retain data and evidence for a rolling 12 months unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation. The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent compliance records. Additional Compliance Information None CAE Resource Pool Comments The Enforcement Authority Statement, “NERC shall be responsible for compliance monitoring of the Regional Entity.” Is not clear, if it is intended to encompass Regional Entities that perform RC functions is should be clearly stated, if not it should not be included in the Enforcement Authority section. Standard – IRO-001 R2 Requirement (including sub-requirements) Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall act without intentional delay to comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations

and Same Day Operations] Proposed Measure Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without delay to comply with the Reliability Coordinator's directives. Attributes of the requirement Binary Timing X Omission X Communication X Quality X Other The team would suggest “intentional delay” be eliminated from the requirement – e.g. “shall act to...”). To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. The measure and VSLs do not consider the exceptions for not following the RC objective. The drafting team should consider combining requirements R2 and R3. Thus, one VSL would become failure to notify the RC of the inability to comply. The drafting team could consider applying the numerical category of VSLs for some directives such as an order to redispatch. Obviously, it would not work well if the directive was to reconfigure the system. SDT Proposed Lower VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL The responsible entity followed the Reliability Coordinators directive with a delay not caused by equipment problems. CEDRP Proposed VSL The team does not agree that this is a valid VSL. SDT Proposed High VSL The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements. CEDRP Proposed VSL The team does not agree that this is a valid VSL. The word majority implies some ability to numerically measure the response to the directive. Thus, the drafting team should consider applying the numerical category of the VSL guidelines. SDT Proposed Severe VSL The responsible entity did not follow the Reliability Coordinators directive. CEDRP Proposed VSL The responsible entity did not follow the Reliability Coordinators directive, the directive would not have violated safety, equipment, regulatory, or statutory requirements, and responsible entity did not communicate the inability to follow the directive to the Reliability Coordinator. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a “binary” requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? No Standard - IRO-001 R3 Requirement (including sub-requirements) The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the Reliability Coordinator upon recognition of the inability to perform the directive. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, informed the Reliability Coordinator upon recognition of the inability to comply. Attributes of the requirement Binary Timing Omission Communication X Quality Other Discussion – The requirement appears to be based on communication and can be problematic by including the requirement to immediately

confirm the ability to comply, a directive can be issued to one entity or several entities at one time (e.g. conference call, all call, electronic notification) that may create several issues when attempting to process all confirmations, the requirement language presents a risk of being found out of compliance for following a directive but not providing an “immediate” confirmation to the RC. The CEDRP believes it to be a reasonable expectation that all entities will comply with reliability directives and notification should be made only on exception. The SDT should consider combining this requirement with R2. SDT Proposed Lower VSL The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator. CEDRP Proposed VSL See above discussion note SDT Proposed Moderate VSL N/A CEDRP Proposed VSL No comment SDT Proposed High VSL N/A CEDRP Proposed VSL No comment SDT Proposed Severe VSL The responsible entity failed to inform the Reliability Coordinator upon recognition of the inability to perform the directive. CEDRP Proposed VSL No comment FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a “binary” requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? As currently worded the CEDRP believe that the requirement should be changed to eliminate that “immediate confirmation” portion of the requirement 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? No Standard - IRO-001 R4 Requirement (including sub-requirements) Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area. Attributes of the requirement Binary Timing X Omission Communication X Quality Other Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. This requirement appears to fit the numerical category of the VSL guidelines best. SDT Proposed Lower VSL N/A CEDRP Proposed VSL The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. SDT Proposed Moderate VSL N/A CEDRP Proposed VSL The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. SDT Proposed High VSL N/A CEDRP Proposed VSL The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the Transmission Operators and Balancing Authorities within its Reliability

Coordination Area. SDT Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a “binary” requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard - IRO-001 R5 Requirement (including sub-requirements) Each Reliability Coordinator who identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when the real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area has been mitigated. Attributes of the requirement Binary Timing X Omission Communication X Quality Other Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. Measure 5 is written implying that there is an Adverse Reliability Impact. The drafting team should consider wording the measurement to consider that there may not be an Adverse Reliability Impact requiring a directive. The Commission in paragraph 27 of the VSL order has stated that multiple VSLs are preferable where possible. Suggest applying the numerical category of the VSL Guidelines based on the number of entities notified.. SDT Proposed Lower VSL: N/A CEDRP Proposed Lower VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. SDT Proposed High VSL: N/A CEDRP Proposed High VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. SDT Proposed Severe VSL: The Reliability

Coordinator failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated. CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a “binary” requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – IRO-002-2 R1 Requirement (including sub-requirements) Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load- Serving Entities, or adjacent Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a letter to Transmission Operators, Balancing Authorities, Transmission Owners, Generator Owners, Generator Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has requested the data required to support its reliability coordination tasks. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion – The VSLs attempt to measure the quality of the data requirements. They require the compliance auditor to judge if another RC has material impact and what data is administrative and what data is substantial. Given the typical length of a compliance audit, it is doubtful that the compliance auditor can make these types of judgments about the quality of the data and the material impact of another RC. The drafting team should consider applying numerical category of VSLs based on the number of entities the data request is made from. It is interesting that the measure also does not require any documentation of a data specification. SDT Proposed Lower VSL: The Reliability Coordinator demonstrated that it 1) determined its data requirements and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with a material impact on the Bulk Electric System in its Reliability Coordination Area but did not request the data from Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with minimal impact on the Bulk Electric System in its Reliability Coordination Area orr 2) determined its data requirements necessary to perform its reliability functions with the exceptions of data that may be needed for administrative purposes such as data reporting. CEDRP Proposed Lower VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from 25% or less of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. SDT Proposed Moderate VSL: The Reliability Coordinator demonstrated that it determined the majority but not all of its data

requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators. CEDRP Proposed Moderate VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 25% but less than or equal to 50% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. SDT Proposed High VSL: The Reliability Coordinator demonstrated that it determined 1) some but less than the majority of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators Or 2) all of its data requirements necessary to support its reliability coordination functions but failed to demonstrate that it requested data from two of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators. CEDRP Proposed High VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 50% but less than or equal to 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. SDT Proposed Severe VSL: The Reliability Coordinator failed to demonstrate that it 1) determined its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators Or 2) requested the data from three or more of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators. CEDRP Proposed Severe VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, Or, The Reliability Coordinator failed to determine data requirements to support its reliability coordination tasks. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a “binary” requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-002-2 R2 Requirement (including sub-requirements) Each Reliability Coordinator shall have the authority to veto planned outages to analysis tools, including final approvals for planned maintenance. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement 2. Attributes of the requirement Binary Timing Omission Communication Quality Other X Is this

requirement needed? R1 IRO-001-2 requires the RC to mitigate Adverse Reliability Impacts. R2 IRO-001-2 requires responsible entities to comply with the RC directives. Wouldn't the RC thus have the right to cancel all types of outages (i.e. analysis tools, transmission equipment, etc). FERC has stated in paragraph 112 of Order 693-A that an RC does not derive their authority from agreements but rather from FERC's approval of the standards. Barring the team's decision to remove this requirement, the Severe VSL is confusing. We have suggested different wording. SDT Proposed Lower VSL Reliability Coordinator has approval rights for planned outages of analysis tools but does not have approval rights for maintenance on analysis tools. CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL N/A CEDRP Proposed VSL No Comment SDT Proposed High VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Severe VSL Reliability Coordinator approval is not required for planned maintenance or planned outages. CEDRP Proposed VSL Reliability Coordinator does not approve planned maintenance or planned outages. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R1 Requirement (including sub-requirements) R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning] R1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. R1.2. Energy and capacity shortages. R1.3. Planned or unplanned outage information. R1.4. Voltage control, including the coordination of reactive resources for voltage control. R1.5. Coordination of information exchange to support reliability assessments. R1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. Proposed Measure M1. The Reliability Coordinator's System Operators shall have available for Real-time use, the latest approved version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators. M1.1 These Operating Procedures, Processes, or Plans shall address: M1.2 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. M1.3 Energy and capacity shortages. M1.4 Planned or unplanned outage information. M1.5 Voltage control, including the coordination of reactive resources for voltage control. M1.6 Coordination of information exchange to support reliability assessments. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. Attributes of the requirement Binary Timing Omission x Communication x Quality Other Discussion – The CEDRP has no recommendations regarding this requirement. SDT

Proposed Lower VSL: The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one or two of the subrequirements. CEDRP Proposed Lower VSL: No Comment SDT Proposed Moderate VSL: Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three or four of the subrequirements. CEDRP Proposed High VSL: No Comment SDT Proposed High VSL: The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address five of the subrequirements. CEDRP Proposed High VSL: No Comment SDT Proposed Severe VSL: The Reliability Coordinator failed to have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. CEDRP Proposed Severe VSL: No Comment FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a “binary” requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R2 Requirement (including sub-requirements) R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: [Violation Risk Factor: Lower] [Time Horizon: Real-time Operations and Operations Planning] R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s). R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s). Proposed Measure M2. The Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were: M2.1 Agreed to by all the Reliability Coordinators required to take the indicated action(s). M2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s). Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion – The High and Severe VSLs appear to use “not” incorrectly. SDT Proposed Lower VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL: The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action. CEDRP Proposed Moderate VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action. SDT Proposed High VSL: The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make

notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action CEDRP Proposed High VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action SDT Proposed Severe VSL: The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action and were not distributed to all Reliability Coordinators that are required to take action CEDRP Proposed Severe VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action and were distributed to all Reliability Coordinators that are required to take action FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a “binary” requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R3 XXX-XXX Requirement (including sub-requirements) R3. The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning] Proposed Measure M3. The Reliability Coordinator shall have evidence it made notifications and exchanged reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion: The VSLs appear to be appropriate. Since the only difference is the use of the “and” and “or”, we suggest emphasizing those words in bold. We read this more than once before we noticed the difference. SDT Proposed Lower VSL N/A CEDRP Proposed VSL N/A SDT Proposed Moderate VSL N/A CEDRP Proposed VSL N/A SDT Proposed High VSL: The Reliability Coordinator failed to make notifications or exchange reliability-related information with impacted Reliability Coordinators. CEDRP Proposed High VSL: The Reliability Coordinator failed to make notifications or exchange reliability-related information with impacted Reliability Coordinators. SDT Proposed Severe VSL: The Reliability Coordinator failed to make notifications and exchange reliability-related information with impacted Reliability Coordinators. CEDRP Proposed Severe VSL: The Reliability Coordinator failed to make notifications and exchange reliability-related information with impacted Reliability Coordinators. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a “binary”

requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R4 XXX-XXX Requirement (including sub-requirements)

R4. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted Reliability Coordinators. [Violation Risk Factor: Lower][Time Horizon: Real-time Operations] The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. Proposed Measure M4. The Reliability Coordinator shall have evidence it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators. Attributes of the requirement Binary Timing X Omission X Communication X Quality Other Discussion – This requirement is purely administrative and probably does not rise to a level of a reliability standard requirement. It is in essence redundant, with R1.1 IRO-014-2? It appears R1.1 addresses the same information that would be expected to be discussed in a weekly conference call. Should the drafting team disagree and retain this requirement, please consider applying multiple VSLs based on how often the RC participates in conference calls, how many they missed, or how many impacted RCs they participated in conference calls with. SDT Proposed Lower VSL: The Reliability Coordinator failed to participate in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators. CEDRP Proposed Lower VSL: The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators bi-weekly, Or the Reliability Coordinator failed to participate in one weekly conference call, Or the Reliability Coordinator agreed to participate in conference calls with 25% or less of the impacted Reliability Coordinators. SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators every third week, Or the Reliability Coordinator failed to participate in two weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 25% but less than or equal to 50% of the impacted Reliability Coordinators. SDT Proposed High VSL: N/A CEDRP Proposed High VSL: The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators fourth week, Or the Reliability Coordinator failed to participate in three weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 50% but less than or equal to 75% of the impacted Reliability Coordinators. SDT Proposed Severe VSL: N/A CEDRP Proposed Severe VSL: The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators at least every fifth week, Or the Reliability Coordinator failed to participate in four weekly conference calls, Or the Reliability Coordinator failed to agree to participate in any conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 75% but less than 100% of the impacted Reliability Coordinators. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a “binary” requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the

VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R5 XXX-XXX Requirement (including sub-requirements) R5. When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the impacted Reliability Coordinators. In the event that the issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] Proposed Measure The Reliability Coordinator shall have evidence that, in cases when an expected or actual reliability issue was detected, it has confirmed the existence of the issue with the impacted Reliability Coordinators. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion – This requirement is confusing in the way it is worded. We think it is trying to say that the RC should operate as though the reliability issue (should this be Adverse Reliability Impact) is detected until the issue is confirmed not to exist. The way it is worded might imply that if one doesn't confirm it to exist, operate as though it does. This leaves open the interpretation that a confirmation that it doesn't exist must still be operated to as though it does exist. The drafting team should consider splitting operating to prevent from operating to mitigate an existing event in the VSLs. SDT Proposed Lower VSL The Reliability Coordinator that detected an expected or actual reliability issue contacted the other Reliability Coordinator(s) to confirm that there was a problem but could not confirm that the problem existed and failed to operate as though the problem existed. CEDRP Proposed VSL N/A SDT Proposed Moderate VSL N/A CEDRP Proposed VSL N/A SDT Proposed High VSL N/A CEDRP Proposed VSL The Reliability Coordinator that detected an expected reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. SDT Proposed Severe VSL The Reliability Coordinator that detected an expected or actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. CEDRP Proposed VSL The Reliability Coordinator that detected an actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a “binary” requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R6 XXX-XXX Requirement (including sub-requirements) When an expected or actual reliability issue exists and the impacted Reliability Coordinators cannot agree on a mitigation plan, all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] Proposed Measure The affected Reliability Coordinators shall have evidence that, in cases when an expected or actual reliability issue existed and the impacted Reliability Coordinators could not agree on a mitigation plan, they implemented the mitigation plan developed by the Reliability Coordinator who has the reliability issue. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion: We are concerned the validity of this requirement, it may force an RC to implement a solution that they don't agree with and ultimately result in an Adverse Reliability Impact. The RC may not agree with the solution because it may not be reliable for their

footprint. They need to have the ability to veto mitigation plans that cause Adverse Reliability Impacts in their footprint without incurring a compliance violation. SDT Proposed Lower VSL The Reliability Coordinator did not agree on a mitigation plan and implemented a plan other than the one developed by the Reliability Coordinator who had the reliability issue. CEDRP Proposed VSL N/A SDT Proposed Moderate VSL N/A CEDRP Proposed VSL N/A SDT Proposed High VSL N/A CEDRP Proposed VSL N/A SDT Proposed Severe VSL The Reliability Coordinator did not agree on a mitigation plan and did not implement a mitigation plan. CEDRP Proposed VSL What if the RC is correct in disagreeing and the mitigation plan would have caused an Adverse Reliability Impact on their system? FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)?

No

The new R2 requirement is too verbose. We suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional. This clause is similar to the old requirement one that the drafting team appropriately struck. We tend to agree that striking R1 makes sense due to the drafting team's reasoning. However, we are not clear why the new R4 is necessary then. If the drafting team does not believe R1 is necessary shouldn't they respond to the FERC directive with the same reason why R4 is not really necessary? The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF. In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "... is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."

No

M4 does not appear to be worded as a measurement. If R4 is kept, we suggest the following modification: "The Distribution Provider and Generation Operator shall demonstrate the existence of its telecommunication systems identified in R4."

No

The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter." The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2.

Yes

Yes

Yes

No

New requirement R2 should omit act without intentional delay. The desired outcome is for the responsible entity to comply with the RC directive. Adding act without intentional delay only confuses the situation and adds questions. What is an intentional delay? The word act implies that the requirement is met simply if the responsible entity attempted to meet the directive but was unable to do so. That is already considered in with the clause that begins "unless such actions would violate ...". Thus, the word act is not necessary. The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not functioning properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that

the order will be followed unless it can't be followed because it will violated safety, equipment, statutory, or regulatory requirements. Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverst Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary.

No

Some compliance auditors have been taking the need for evidence to the extreme. We have encountered actual situations where if a measure states evidence shall be provided for requirements that are event based, the compliance auditor expected evidence even if no event occurred. For example, some RCs rarely issue directives. As M1 is written, some compliance auditors would require the RC to provide evidence that no reliability directives were issued. This is not possible. We suggest modifying the measurement to: Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordiantor Area if needed. If there were no directives issues (assuming there are no complaints or evidence to the contrary of the need to issue a directive), no evidence is necessary."

No

The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don't believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact. The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements. In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL. In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses "that, as a general rule, gradated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels". Given that it is possible to define gradated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.

No

New Requirement R1 is duplicate to the requirement TOP-005-1 R1.1. If the drafting team can't delete TOP-005-1 R1.1, they should notify other appropriate drafting teams of the need to remove the requirement. We do not agree with eliminating requirements R5, R6, R7, and R8 in their entirety. The requirements as they are written are problematic. However, we do believe that there is a need for a basic requirement to monitor the system. The requirements should be that the RC should compare actual system flows to SOLs and IROLs. While some will argue SOLs are not the responsibility of the RC, failure to monitor SOLs could cause the RC to miss unknown IROLs since an SOL can become an IROL. Several SOL violations in a given area also can be indicative of a broader system problem the RC should be addressing. We also do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. It is very easy to measure. As an example, a compliance auditor could select a day and an SOL or IROL and ask for the system flows from that day or hour etc. This is generally easy for any RC to produce with today's data archiving software. We believe that there should be a requirement that the RC have a state estimator and real-time contingency analysis as well (RTCA). The drafting team needs to be careful in the construction of these requirements to make them practical and measurable. For instance, making the requirement to have a state estimator and RTCA is measurable in that the compliance auditor can verify their existence but this is not stringent enough because they may only run once a week. At the same time, if we create a requirement that SE and RTCA must run every 5 minutes, we could inadvertently create a requirement that any missing 5 minute run of RTCA and SE could be construed as a violation. There also needs to be a requirement that there is a real-time assessment of voltage as well. New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.

No

Measure 1 should not focus on a letter as evidence. A more appropriate measure would be a data specification document and actual verification that data has been received. The letter or equivalent is only needed if data has not been supplied. Demonstration of the actual receipt the data would be easy. Requirement 2 is not needed and thus Measure 2 is not needed per paragraph 112 of Order 693-A. Additional measures are needed to address the proposed requirements in question 10.

No

For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not

seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in the their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document. We suggest that the VSLs should be: Severe: The RC did not determine it data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be deomstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be deomstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be deomstrated for greater than 25% and less than or eqal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be deomstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. R2 VSLs are not needed er paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.

No

R1 includes many requirements for monitoring the system that are important, measurable and should be retained. Monitoring is too critical to operating the system to completely eliminate these requirements. R4, R8 and R11 are problematic as currently written. However, there have been actual instances of a large BA intentionally operating short hundreds of MWs of energy. I believe this occurred during the summer of 1999. Thus, the RC should be monitoring the BAs ACE and directing the BA to correct it if it becomes too large. It is not necessary or even useful for the RC to monitor the BA CPS performance.

No

Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A. Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary? Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be address per R1.1. R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm. R6 appears to be a rewrite of requirements R1, R2 and their sub-requirements in IRO-016. We agree that those requirements do need to be written more succinctly or removed altogether. However, R6 does not accomplish the goal and only confuses that matter further. The reason the RCs may not be able to agree on a mitigation plan is that RC with the reliability issue may be requesting mitigations that the other RCs believe may cause them reliability issues. This requirement appears to suggest that the solution to a disagreement on the mitigation plan is cut and dried. Generally, the reason the disagreement arises is due to one RC not fully understanding the impact of their actions on another RC. The bottom line is that the RCs may have disagreements and there is no way to require a solution in these types of situations. Please revise R6 to require using the mitigation plan developed by the Reliability Coordinator who has the reliability issue provided

that the mitigation plan does not cause a reliability issue in the other region. As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance.

No

Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. There should be the single measurement to verify the Operating Processes, Procedures, and Plans have been developed and address the sub-requirements. This really points out the problem with making the criteria that must be considered in the Operating Processes, Procedures, and Plans sub-requirements in the first place. They aren't requirements of any sort. They represent criteria. The drafting team should consider making them a bulleted list without the Rs, then the drafting team won't feel compelled to write sub-measures that don't measure anything. We do not agree with M6 because we don't agree with R6.

No

For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed. We don't agree with the VSLs in R4 since we believe R4 should be struck. The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.

Yes

Yes

We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-2.

Group

Southern Company Transmission

Jim Busbin

Southern Company Services, Inc.

No

1.1 - In R1, we suggest that "operationally test by way of operator action" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities". 1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. The VSL

should be consistent with the language of the requirement. A very short, insignificant telecom outage with no notification could result in a severe violation as the requirement is presently written and VSL's applied. 1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated. 1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.

No

2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards. 2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. 2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements.

Yes

3.1 - The expanded list of entities recommended in comment 1.3 and 1.4 need to be included the VSLs 3.2 - The Severe VSL for R2 should be corrected. Add the word 'to' as follows: "...and failed to verify the ..."

No

4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3: 4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard. 4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2. 4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to measure. We suggest they be replaced with "the RC shall direct". 4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1). 4.6 - Grammatical changes are suggested. The revised requirement reads as follows: " To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications; to ensure that these communication capabilities are staffed and available for addressing a real-time emergency condition; and to ensure effective communications by operating personnel." 4.7 - At the Data Retention section, the reference to 'Requirement 3, Measure 3' should be consistent with the modified standard. The revised standard only has one requirement. 4.8 - The use of calendar days in the Data Retention section is inconsistent with related standards where 'months' are used.

No

5.1 - The measures need to be revised to match the new requirements.

No

6.1 - The severity levels need to be revised to match the new requirements.

No

7.1 - Applicability 4.2 - Transmission Operator should be plural. 7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per

Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process. 7.3 - In R2 insert the word "its" before Reliability Coordinator. 7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.

No

8.1 - In M2 and M3, Add Distribution Provider. 8.2 - In M2 add "intentional" between "without" and "delay". 8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator. 8.4 - In M5, change "has" to "had".

No

9.1 - R1 is a binary requirement and should have only a severe VSL. The RC either acts or he doesn't - If he fails to act, he fails to direct and mitigate the problem by default. 9.2 - R2 VSLs need to be rewritten to recognize that some directives may not be followed because of safety, regulatory or statutory requirements. 9.3 - Remove the Lower severity level in R3 to conform to changes in R3 and M3.

No

10.1 - We propose that R1 and R2 should be moved to the RC Certification Procedure and this standard retired. If this standard is not retired then we recommend Comments 10.2 and 10.3. 10.2 - At Requirement R2, the RC is given 'veto' authority. Is a standard an appropriate place to give this type of authority? 10.3 - The revised Purpose basically provides that the RC will have access to information and control of analysis tools. What is the correlation of information/control to veto authority/approval of planned maintenance?

No

11.1 - Moving R1 and R2 to the RC Certification Procedure, will eliminate measurement requirements.

No

12.1 - Moving R1 and R2 to the RC Certification Procedure, will eliminate VSL requirements.

Yes

13.1 - We agree with retiring this standard.

No

14.1 - R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? 14.2 - We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. 14.3 - We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly. 14.4 - R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous" or a

similar term. 14.5 - We suggest rewriting R5 to read: In the event that a reliability issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists. 14.6 - At Requirement R1, the use of the phrase "as a minimum" seems to add some flexibility for development of procedures, processes and plans. A negative consequence is that it introduces more ambiguity. The recommendation is to strike the phrase. 14.7 - At Requirement R1.6, consider the following: "Authority to act to prevent and mitigate instances 'that have the potential to cause' Adverse Reliability Impacts to other Reliability Coordinator Areas."
No
15.1 - In M1, delete "for Real-time use". 15.2 - Modify the measures to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
No
16.1 - In R2, severe should be "... and no action was taken by the RC". 16.2 - In R5, severe should also include "... or that the RC failed to operate as though the problem existed." 16.3 - Modify the VSLs to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
Yes
17.1 - We agree with the recommendation to retire IRO-015-2.
Yes
18.1 - We agree with the recommendation to retire IRO-016-2.
19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability.

Kathleen Goodman
ISO New England Inc.
No
ISO New England does not support the removal of Requirement 1. Also, we believe Requirement 3 is written such that it may pose an unnecessary requirement on the Hydro Quebec area given the terminology "inter-entity" and support further clarification.
No
See answer to #1.
No
ISO New England believes it is inefficient to have a (temporary) Standard with only one Requirement and recommend including this Requirement in COM-001, with COM-001 renamed to "Communications."
No
See response to Q#4
Yes and No
We believe the word "threat" should be replaced with "events" in Requirements 4 and 5.

Yes and No
Suggest changing with word "request" to "document" in Requirement 1.
Yes
Yes and No
As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.

Yes
The drafting team should consider expanding the second sentence of R3 to apply to internal communications of any affected entity not just BAs and TOPs.
Yes
Yes
Yes
Yes
No
PER-003 R1 does not specifically address delegated functions; therefore, this requirement is not redundant with IRO-001 R6 without changes to PER-003 to specifically deal with employees performing delegated functions.
Yes

No
The VSL for R2 does not seem consistent with the language in the requirement. It is not clear why the entity should be subject to a high VSL if the entity did not comply with an RC directive due to safety or regulatory prohibition, and made the RC aware of same.
No
IRO-002-1 R9, the deleted language of the second sentence is not adequately covered by the language in EOP-008-0 R1, unless those outages are tied to the loss of a control center. EOP-008-0 is in the process of being revised and this language could be included in the revision, but it isn't adequately addressed by the version 0 standard.

Directives that are mandatory under R2 of IRO-001-2 should have boundaries consistent with the proper role of an RC. For example, if an RC directs an LSE with a 15% planning reserve margin to execute purchase power agreements until its reserve margin is at least 20% and the

LSE refuses, then the LSE may have violated this standard. Other examples of improper RC directives are directives to increase coal inventories, buy firm fuel transportation rights, reconductor transmission lines, purchase spare equipment, etc. Granted entities may be able to conjure up a regulatory or statutory basis for refusing many improper RC directives but in some instances there may be no permissible grounds to refuse. The appropriate solution is to modify the standard to ensure that improper directives are never mandatory in the first place. Specifically, NERC is urged to state that RC directives are mandatory only if they pertain to specific categories such as: switching orders to reconfigure the BES, orders to postpone scheduled outages of BES equipment, orders to change generator output, orders to curtail transactions or orders to curtail load.

No

The M2 measure should not mandate compliance with RC directives that are improper as defined in my response to question 7.

My other concerns are addressed in the comments of the SERC OC Standards Review Group.

No

M3 should include providing evidence of concurrence to use a language other than English. This will better align the measure with the VSL language.

Yes

Yes

Yes

Yes

Yes

Yes
No
R1 states the RC must act OR direct. The R1 VSL's attempt to distinguish between act and direct. The requirement allows for either action. I suggest that the High VSL be removed and replaced by an N/A. The Severe VSL should be amended so that the words "act and direct" are replaced by the words "act OR direct" as is consistent with the requirement and the measure. R2: The moderate VSL introduces the phrase "equipment problems" for the first time in the Standard. "Equipment Problems" needs to be included in the Requirement, R2, and defined in the Measure for R2. R5: The Severe VSL needs to be moved to the Moderate category. This condition does not constitute an Adverse Reliability Impact that severely threatens the BES.
Yes
No
R1: The Requirement and VSL's mention that the RC will determine it's data needs. Yet the Measure for R1 does not mention this, it only mentions the RC requesting the data from it's member entities. This Measure needs to include a measure for how the RC determines it's data needs.

Yes and No

1.1 - In R1, we suggest that "operationally test" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities". 1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. 1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated. 1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.

Yes and No

2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards. 2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. 2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements

Yes and No

3.1 - The expanded list of entities recommended in comment 1.3 and 1.4 need to be included the VSLs

Yes and No

4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3: 4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard. 4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2. 4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to measure. We suggest they be replaced with "the RC shall direct". 4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1).

No

5.1 - The measures need to be revised to match the new requirements.

No

6.1 - The severity levels need to be revised to match the new requirements

Yes and No

7.1 - Applicability 4.2 - Transmission Operator should be plural. 7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process. 7.3 - In R2 insert the word "its" before Reliability Coordinator 7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.

Yes and No
8.1 - In M2 and M3, Add Distribution Provider. 8.2 - In M2 add "intentional" between "without" and "delay". 8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator. 8.4 - In M5, change "has" to "had".
Yes and No
9.1 - R1 is a binary requirement and should have only a severe VSL. The RC either acts or he doesn't - If he fails to act, he fails to direct and mitigate the problem by default. 9.2 - R2 VSLs need to be rewritten to recognize that some directives may not be followed because of safety, regulatory or statutory requirements. 9.3 - Remove the Lower severity level in R3 to conform to changes in R3 and M3.

Purpose Distribution Providers and Generator Operators were added to the applicability; the Purpose should be revised to reflect that.
Yes
Yes
No
Purpose Since Generator Operators were deleted from the applicability; the Purpose should be revised to reflect that and include Reliability Coordinators. The language is somewhat redundant, recommend it be simplified to "To ensure Balancing Authorities, Reliability Coordinators, and Transmission Operators communicate in an effective manner."
Yes
Yes
No
R4. and R5. Both of these Requirements use the phrase "without intentional delay" to describe the urgency of the notification to impacted entities. In both requirements we recommend the language be changed from "notify, without intentional delay" to "immediately notify".
No
M4. and M5. In both Measures, recommend "without intentional delay" be changed as described above for R4. and R5.
Yes
No
R2. This requirement provides authority to the Reliability Coordinator to veto planned outages and approve planned maintenance to "analysis tools". It is not clear in this standard what these "analysis tools" are. Per FERC Order 693, NERC was to identify a minimum set of analysis tools and the task was assigned to the Real-Time Tools Best Practices Task Force. Until the

tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.
No
M2 again "analysis tools" have not been identified.
No
Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.

We agree with the revisions, but recommend adding applicability to Distribution Providers and Generator Operators for data retention requirements.
Yes
M4 should be revised to reflect that each Distribution Provider and Generation Operator has evidence demonstrating the functionality of telecommunications facilities with the TOP and BA for the exchange of interconnection and operating information.
No
Recommend the following VSLs for R1: Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion. Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions. Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions. Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three

months on more than three separate occasions. Recommend the following VSLs for R2: Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion. Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions. Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions. Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions. Recommend the following VSLs for R4: Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority or Transmission Operator for the exchange of Interconnection and operating information. Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority and Transmission Operator for the exchange of Interconnection and operating information.

Yes

We note that this requirement really is "3-part communication" and will be moved to the new communications standard, COM-003-1.

Yes

No

The word "clear" is redundantly used in the High and Severe columns. Recommend that "Moderate" should read: "The Responsible Entity provided a directive in a clear, concise and definitive manner, but did not require the recipient to repeat the directive back to the originator." Recommend that "High" should read: "The Responsible Entity failed to issue a directive in a clear, concise and definitive manner while ensuring the recipient of the directive repeated the information back correctly with acknowledgment by the originator that the response was correct." Recommend that "Severe" should read: "The Responsible Entity failed on more than one occasion to issue a directive in a clear, concise and definitive manner while ensuring the recipient of the directive repeated the information back correctly with acknowledgment by the originator that the response was correct."

Standard – COM-001-2 Telecommunications Requirement 1: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail. Proposed Measure: Each Reliability

Coordinator, Transmission Operator, and Balancing Authority shall provide evidence that it operationally tested, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail. Attributes of the requirement Binary Quarterly operational tests of alternate telecommunications Timing X Omission Communication Quality X Other SDT Proposed Lower VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last quarter. CEDRP Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in one of the previous four quarters. SDT Proposed Moderate VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 2 quarters. CEDRP Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in two of the previous four quarters. SDT Proposed High VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 3 quarters. CEDRP Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in three of the previous four quarters. SDT Proposed Severe VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 4 quarters. CEDRP Proposed Severe VSL: The Responsible Entity failed to operationally test alternative telecommunications every quarter on more than three separate occasions (i.e. more than any three different quarters). FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? Yes 3. Is it truly a “binary” requirement? Yes 4. If yes, is the VSL assignment consistent with other binary requirement assignments? Yes 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – COM-001-2 Telecommunications Requirement 2: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities of the failure of its normal telecommunications facilities, and shall verify that alternate means of telecommunications are functional. Proposed Measure: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional. Attributes of the requirement Binary Timing Notify impacted entities and verify functionality of alternate telecommunications Omission Communication X Quality Other - Test X Discussion - This requirement needs to be re-written to be more clearly define who the entities are that are “impacted.” The key attributes appear to be notification of ALL (communication) impacted entities (possible omission if some, but not all are not notified). The requirement does not give any guidance on the “verification” side – this is a problem, one entity can interpret that to mean “we looked and it was working”, another may be to verify with all impacted entities that alternate communication is working. We suggest this requirement needs a little more clarification. The CEDRP does not feel it can write a valid VSL for this requirement as currently worded. SDT Proposed Lower VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority notified all impacted entities of the failure of their normal telecommunications facilities, but failed to

verify the alternate means of telecommunications are functional. CEDRP Proposed Lower VSL: See Discussion SDT Proposed Moderate VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority notified some, but not all, impacted entities of the failure of their normal telecommunications facilities, and failed to verify the alternate means of telecommunications are functional. CEDRP Proposed Moderate VSL: See Discussion SDT Proposed High VSL: N/A CEDRP Proposed High VSL: See Discussion SDT Proposed Severe VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority failed to notify any impacted entities of the failure of their normal telecommunications facilities, and failed verify the alternate means of telecommunications are functional. CEDRP Proposed Severe VSL: See Discussion FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a “binary” requirement? No 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – COM-001-2 Telecommunications Requirement 3: Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. Proposed Measure: The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Attributes of the requirement Binary Use English for real-time communications unless agreed to otherwise. NOTE: OK with this as is because the requirement and VSLs have been re-written, will be removed from this standard shortly, and included in the new COM-003-1 standard. Timing Omission Communication X Quality Other SDT Proposed Lower VSL: N/A CEDRP Proposed Lower VSL: No change SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: No change SDT Proposed High VSL: N/A CEDRP Proposed High VSL: No change SDT Proposed Severe VSL: The responsible entity failed to provide evidence of concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. CEDRP Proposed Severe VSL: The Responsible Entity failed to provide evidence of the concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? Yes 3. Is it truly a “binary” requirement? Yes 4. If yes, is the VSL assignment consistent with other binary requirement assignments? It’s a little inflated as being Severe 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? It’s OK for

the interim 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – COM-001-2 Telecommunications Requirement 4: Each Distribution Provider and Generation Operator shall have telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. Proposed Measure: Each Distribution Provider and Generation Operator has telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. Attributes of the requirement Binary “has” telecomm with TOP and BA Timing Omission Communication X Quality Other Discussion – Telecommunication Facilities is ambiguous and is not included in the NERC glossary of terms – the CEDRP recommend deleting the word “facilities” from the requirement and measure and leaving it just as “telecommunications” with its TOP and BA . SDT Proposed Lower VSL: N/A CEDRP Proposed Lower VSL: No change SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: No change SDT Proposed High VSL: N/A CEDRP Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority OR Transmission Operator for the exchange of Interconnection and operating information. SDT Proposed Severe VSL: The Distribution Provider or Generation Operator failed to have telecommunications facilities with its Transmission Operator and Balancing Authority CEDRP Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority AND Transmission Operator for the exchange of Interconnection and operating information. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? Mostly 3. Is it truly a “binary” requirement? Mostly 4. If yes, is the VSL assignment consistent with other binary requirement assignments? Yes 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes, considering the wording of the requirement as written. More specifically, the word “have” as used in the requirement is a bit vague. A better choice could have been, “established and maintains.” 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard: COM-002-3 Communications and Coordination Requirement 1: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall issue directives in a clear, concise, and definitive manner; shall ensure the recipient of the directive repeats the information back correctly; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. Proposed Measure: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have evidence such as voice recordings or transcripts of voice recordings to show that it issued directives in a clear, concise, and definitive manner; ensured the recipient of the directive repeated the information back correctly; and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings. Attributes of the requirement: Binary Timing Omission Communication X Quality X Other SDT Proposed Lower VSL: None CEDRP Proposed Lower VSL: No Comment SDT Proposed Moderate VSL: The responsible entity provided a clear directive in a clear, concise and definitive manner and required the recipient to repeat the directive, but did not acknowledge the recipient was correct in the repeated directive. CEDRP Proposed Moderate VSL: No comment SDT Proposed High VSL: The responsible entity provided a clear directive in a clear, concise and definitive manner, but did not require the recipient to repeat the directive. CEDRP

Proposed High VSL: No comment SDT Proposed Severe VSL: The responsible entity failed to provide a clear directive in a clear, concise and definitive manner when required. CEDRP Proposed Severe VSL: No comment FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? No 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes and No (Severe is for multiple occasions of not issuing directives per the requirement).

R1- The proposed requirement R1 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set. R2 - The proposed requirement R2 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set. R4 - The proposed requirement R4 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.

No

M1 - The proposed measure M1 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set. M2 - The proposed measure M2 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set. M4 - The proposed measure M4 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA

EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.

Purpose - The purpose does not include the GOP and DP entities. It may be better if the purpose was written more generally as "To ensure adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information necessary to maintain BES reliability". R1 - This requirement makes no distinction between data and voice communications facilities and assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communications. Lastly, the requirements need to be much more specific concerning the criticality of the facilities to be tested to improve the measurability of the standard. The drafting team dropped the phrase "for the exchange of Interconnection and operating data" from the standard requirement. This deletion appears to open the application of this standard to virtually every communication path

used by an RC, BA, TOP whether or not it is used for communicating real-time operating information or not. We do not believe this was the intention of the drafting team and suggest this phrase be reinserted or another one added that limits applicability to only those communication paths that support the real-time reliability of the bulk electric system. R2 - It is not clear who the "impacted entities" would be in this requirement. The SDT should consider specifying these entities. R3 - The last sentence of this requirement should be deleted. It is not a requirement, it does not add clarity, and the first sentence is very specific as to the communications covered by the requirement. R4 - This requirement makes no distinction between data and voice communications facilities and assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communication.

No

The measures should be modified per our suggested modifications in question 1.

No

The VSL should be modified per our suggested modifications in question 1. R1 VSL - The statement in the VSL that the responsible entity did not "operationally test" is too broad. It should be more specific with the language used in the requirement.

No

Purpose - The GOP is still shown in the purpose statement although it was removed from the applicability. Also, it may be better if the purpose was written more generally as "To ensure adequate communications capabilities for addressing real-time emergency conditions and ensure communications by operating personnel are effective to maintain BES reliability".  
Applicability - In the SDT's document "Scope of Work Assigned to the Reliability Coordination Standard Drafting Team", the team decided to not include the FERC directive to include the DP in the applicability with the following reasoning "The proposed revisions do not include the DP entity because they are not applicable." We would like clarification on this. R1 - It does not appear that the implementation plan addresses the FERC direction to consider comments from Santa Clara, FirstEnergy, and Six Cities per 693 par. 539 regarding staffing requirements. Santa Clara asks that these requirements apply "only to operating staff available on site at all times or includes repair personnel who are available only on an on-call basis". FirstEnergy asks that the "term [staffed] should not require a physical presence at all facilities at all times because some units, such as peaking units, are not staffed 24 hours a day". FirstEnergy also suggest "because nuclear units are already subject to communications requirements in their operating procedures, their compliance with NRC operating procedures should be deemed in compliance with the NERC Reliability Standards". Six Cities "states that, to avoid unnecessary staffing burdens, particularly for smaller entities, the Commission should direct NERC to clarify COM-002-2 by providing that identification of an emergency contact

person on call to respond to real-time emergency conditions will constitute adequate compliance". R1 - Just as an FYI, with regard to the proposed replacement requirement statement in the implementation plan: "TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC", per recently stakeholder approved ballots, R1 of TOP-005-1 has been retired and now covered in new standard IRO-010-1. R1.1 - The existing requirement includes "through predetermined communication paths of any condition that could threaten the reliability of its area or when firm load shedding is anticipated". The proposed replacement requirements do not address the need for "predetermined communication paths".

No

The measures should be modified if our comments in question 4 result in changes to the proposed requirements.

No

The VSL should be modified if our comments in question 4 result in changes to the proposed requirements.

No

R3 - should be a sub requirement of R2. These two requirements are sequential in nature and should be measured at the same time. The VRFs and Time Horizons are the same for both requirements lending to their combination into a requirement with a sub requirement. In the VSL for R2, an entity is being penalized with a high severity level for not completely following an RC directive even though it violated safety, equipment, statutory, or regulatory requirements. Measuring R2 and R3 at the same time allows for the process to complete prior to the measurement taking place. R3 - The "or" between "Distribution Provider" and "Purchasing-Selling Entity" should be replaced with an "and". R4 - Should be revised by adding the phrase "of the expected or actual threat" to the end of the requirement to add clarity. Existing R7 requirement - This requirement is proposed for retirement because it is redundant with IRO-014-1 R1. However, it is not clear how the existing requirement to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated" is covered in IRO-014-1 R1. IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. IRO-014-1 only vaguely covers the existing requirement R7 of IRO-001-1.

No

M2 - The word "intentional" should be added between "without" and "delay".

No

R2 VSL - The Severe VSL should include after the word directive: "that would not violate safety, equipment, statutory or regulatory requirements".

No

R2 - As written, this requirement does not clearly define the scope of the authority of the Reliability Coordinator over analysis tools. Is it the intent of the drafting team to give the RC authority over analysis tools owned and operated by the RC. Is it the intent of the drafting team to give the RC authority over the analysis tools owned and operated by the BA, TOP, GOP, etc.? Are the tools intended to be the real-time (EMS) or the off-line engineering planning

analysis tools or any analysis tool used in real-time. Does this include the analysis tools used by field personnel? This requirement should be revised to specify exactly the analysis tools under the authority of the Reliability Coordinator.

No

The measures should be modified per our suggested modifications in question 10.

No

The VSL should be modified per our suggested modifications in question 10.

Yes

No

R1 - Should be revised as follows to improve readability and clarity: R1.3 - Add "Exchanging" before "Planned" R1.4 - Add "Control of voltage" at the beginning of the requirement and delete "for voltage control" at the end of the requirement. Add a new R1.7 as follows: "A process for resolution of the disagreement covered by R6 of this standard."

No

The measures should be modified per our suggested modifications in question 14.

No

The VSL should be modified per our suggested modifications in question 14.

Purpose - The purpose statement does not read very well. It either needs another sentence or changes to the current sentence. The purpose of the standard is to assure proper communications, not to suggest entities need proper communications as currently written. Suggest changing to, "To assure each Reliability Coordinator, Transmission Operator and Balancing Authority develops and maintains.... Requirement R1 - What is the definition of "alternative telecommunications facilities"? Is there another requirement somewhere to have alternative telecommunications facilities – or is this a new requirement being introduced by this standard? What is the relationship, if any, between "alternative telecommunications facilities" and EOP-008-1? What is the requirement for maintaining and testing "alternative telecommunications facilities"; what does “operationally test” mean? Just because an alternative facility works when it is tested does not mean it will work during an actual failure of the primary system. Furthermore, what do we do if the “test” fails- are we still compliant? The word “ensure” needs to be changed to “assure”. Requirement R2 - What does "impacted entity"

mean? Requirement R3 - Why can't others use alternate language – this limits alternate language to just TOPs and BAs internal operations. TOs, GOPs, and others may want to use alternate language internally. Need to define language to be used with and between other relationships – BA to PSE, as an example. Is this a reliability issue or a certification issue? Simply state that: “Entities may use alternative language for internal operations”. This will allow any entity to use alternative language for internal operations. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-001-2 applicability and requirements concerning the use of English as the approved language. Requirement R4 - Remove R4 and add DP and GO, as well as all of the other entities listed in IRO-001-2, to R1 thru R3.

No

General comments - Not using consistent language regarding “provide evidence” and “shall have and provide upon request evidence”. Also need to add corresponding requirement number after each measure. Measure M1 - Just because an alternate facility works when it is tested does not mean it will work during an actual failure of the primary system. - what do we do if the “test” fails- are we complaint? Clarify that the requirement and measure is to “test” not "to test successfully". We may test and find that something does not work as expected.

No

VSL for Requirement R1 - The VSL for R1 seems to imply that an operational test needs to have been performed in the last 90 days – this is read in conjunction with the data retention requirements. Need to clarify in the requirement how “quarter basis” is defined - is it the calendar quarter, or a rolling 90 days? In addition, the VSLs for Requirement R1 appear to violate NERC guidelines, since the Moderate, High and Severe VSLs are based upon cumulative violations of the Lower VSL.

No

Requirement R1 - As defined by Merriam Webster, the use of the word “ensure” implies virtual guarantee <the government has ensured the safety of the refugees>; while the use of the alternative word “assure” implies the removal of doubt and suspense from a person's mind. We suggest that “assure” is more appropriate than “ensure” in this context in the standards. The use of words like “clear, concise, and definitive manner” is subject to interpretation. This same language is used in the VSLs. Depending on the interpretation of this phrase, an entity could be found to be in a “Severe” violation level. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-002-3 requirement concerning repeat-backs. What is a “directive”? The regional compliance processes are having difficulty in auditing this existing standard due to lack of clarity of what constitutes a directive. "Directive" should be defined as being associated with real-time operational emergency conditions, and not ordinary day-to-day communications. Otherwise a VRF of High is not warranted.

No

The use of words like “clear, concise, and definitive manner” is subject to interpretation. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back.

No

The use of words like “clear, concise, and definitive manner” is subject to interpretation. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back.

No

Requirement R1 - What happens if the RC failed to recognize that such an event was happening as opposed to failed to take action. Is this intended to cover both scenarios? The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision development of this definition needs to go thru Due Process. The inclusion of TSPs, LSEs, and PSEs here indicates the need to include these functions in the COM-001-2 requirements concerning the use of English as the approved language. In addition, this also indicates the need for all of these listed entities to be included in COM-002-3 requirements concerning repeat-backs. The RC, TOP, and BA should not be placed in a possible non-complaint state because the counter party refuses a repeat-back AND these requirements are not applicable to the counter party. Requirement R2 - The language in the Moderate VSL of R2 recognizes another potential reason for delay in execution of a directive. Requirement 2 of the Standards needs to be modified to also recognize this potential. Requirements R2 and R3 - Clarify that entities are obligated to take action and confirm directives only from their Reliability Coordinators, not from any Reliability Coordinator. Requirements R2, R3, R4, R5 - Inconsistent use of “timing” words in the standards – “without intentional delay” and “immediately”. Suggest deleting these words due to the difficulty of determining compliance. Requirement R4 - The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process. Requirement R5 - The VRF should be “Lower” instead of “High” since the notification is that the threat has been mitigated. Also, the term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.

No

Measures M2, M4 and M5 use the terms “without delay” and “without intentional delay”. Suggest deleting these words due to the difficulty of determining compliance. The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.

No

The language in R1 of the VSL is not consistent with the requirements and measures in the standard. The VSL needs to recognize that the RC may EITHER act or give direction to others to act. The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process. The language in R2 of the VSL places an entity in Moderate or High violation level even if failure is “allowed” in the standard; i.e. failure to act is due to violation of safety, regulatory, statutory requirements. The language in R2 of the VSL recognizes another potential reason for delay in execution of a directive. Requirement R2 of the Standard needs to be modified to also recognize this potential.

No

Requirement R1 - This requirement is in the wrong standard – this is a Facilities standard. This requirement belongs in another standard. Question: Is there a requirement in another standard that compels the TOPS, BAs, etc to provide the requested data? Requirement R2 - Need to clarify whose analysis tools (I assume it is the RCs analysis tools, not the analysis tools of another entity) and planned maintenance to what – is it tools, facilities, transmission, generation, etc. Depending on the answer above, this requirement is in the wrong standard – this is a Facilities standard. This requirement belongs in another standard. Question: Where is the Requirement for the RC to have analysis tools? It appears that the Requirement the RC has analysis tools have been removed in the revisions to the standard.

No

See response to Question #12 above. If the requirements are moved to another standard, the measures aren't needed here.

No

R1 VSL - As a general comment, this VSL is unclear and would be difficult to audit. This VSL uses subjective terms like “material impact” and “minimal impact”. These terms are not used in the associated requirement or measure and should be removed from the VSL. This VSL uses terms like “majority, but not all”; “some, but less than a majority” which provides an opportunity for a subjective review by Compliance as to what a complete listing of data requirements should be. This term is not used in the Requirements or Measures and should be removed from the VSL. This VSL introduces a concept, data the RC needs for “ ... administrative purposes, such as data reporting ...”. This concept is not included in the Requirements or Measures portions of the Standard and should be removed from the VSL. This VSL should be written to simply assess whether the RC has made determination of what its data needs are and whether those needs have been communicated to the entities in the footprint. R2 VSL - This VSL clarifies the questions posed above regarding what the RC needs approval rights over. R2 needs to be modified to include this clarity. This VSL needs to clarify that the RC approval rights are for the RC's tools, not tools of other entities. The Severe level of this VSL needs to be re-written along the lines of: The RC does not have approval rights for planned maintenance or outages to its analysis tools.

Yes

No

R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly. R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous". We suggest rewriting R5 to

read: In the event that an operating issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.
No
See comment #14 above. Also, Measure M5 is inconsistent with Requirement R5. It should mirror the requirement. Also, need to add the requirement number at the end of each Measure.
No
See comments #14 and #15 above - VSLs need to be revised to correspond to the revised Requirements and Measures.
Yes
No
See comment #14 above regarding re-write needed for Requirement R6 of IRO-014-2.
Individual
Thad Ness
AEP
No
A precise definition of telecommunications facilities needs to be established in this standard. R2 needs to be clarified regarding impacted utilities. FERC Order 693 suggests that this standard should apply Distribution Providers (DP) along with Generation Operators (GOP). AEP acknowledges that there needs to be some level of coordination and communication between DP's and other function model entities; however, the requirements, as applied to the DP, for telecommunications with the TOP and BA might not address the current communication paths adequately. Today, the DP usually does not communicate with the RTO (performing the BA and/or TOP function), but the DP could either communicate directly or through a joint action agency to the IOU that may serve as the TO (or maybe the TOP). As this draft is written the DP's would be required to have telecommunication facilities with the RTO in this scenario. There will likely be many exceptions to the rule that the requirements and measures create when applied to the DP. We ask that the drafting team consider the applicability, some of the current channels of communications, and options for addressing the FERC comments without creating telecommunication paths that do not make practical sense.
No
M2 needs to be clarified regarding impacted functions.

Wording in question: R.2/M.2 Each ... Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without intentional delay to comply with the Reliability Coordinator's directives. R.3/M.3 Each ... Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives. [1] Question: Is this wording absolutely necessary? And then, is it sufficient, if needed? Comment: First, we would question whether there is a specific need to include this

wording. Is the IRO-001 Reliability Standard sufficient without it? [2] Question: Is this wording unambiguous? Comment: The wording seems somewhat vague and ambiguous. Analysis: The wording appears to establish performance standards ("without intentional delay", "shall immediately confirm") and evidentiary requirements ("evidence that it acted" or "evidence that it confirmed"), but without using pre-existing defined terms, establishing new defined terms, or defining these terms as used in context. [3] Intentional vs. Unintentional, Valid Intentional vs. Inappropriate Intentional? How does one differentiate between intentional and unintentional delay? When is and how much delay is valid or inappropriate? Isn't some intentional delay necessary to ensure that the other parts of the requirement being are met, e.g., "... unless such actions would violate safety, equipment, or regulatory or statutory requirements"? Mightn't some acceptable amount of valid intentional delay be necessary to insure that any such RC directive and entity action would not in fact violate these safety, equipment, or regulatory or statutory requirements? [4] What is the timeliness standard? How are the terms "without delay" and "immediately conform" defined? What standard commercial measures would apply, e.g., "reasonable efforts" vs. "best efforts?" Are these terms measured in units of time (seconds or minutes) or in units of performance quality? Does a poorly considered "immediate" reply meet the standard, while a well considered reply, which is intentionally delayed, yet still appropriate, fail to meet this standard? Is that the best outcome? [5] What is this Evidentiary Standard? Is the sought-after "evidence" sufficiently well defined, e.g., phone logs, computer e-mail, control center computer logs, hand-written operator journals, etc.? What form of evidence is necessary and sufficient to demonstrate that the entity met this evidentiary standard? How is failure to meet this uncertain standard measured, judged and penalized?

Yes and No

[Comments repeated for Measures] Wording in question: R.2/M.2 Each ... Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without intentional delay to comply with the Reliability Coordinator's directives. R.3/M.3 Each ... Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives. [1] Question: Is this wording absolutely necessary? And then, is it sufficient, if needed? Comment: First, we would question whether there is a specific need to include this wording. Is the IRO-001 Reliability Standard sufficient without it? [2] Question: Is this wording unambiguous? Comment: The wording seems somewhat vague and ambiguous. Analysis: The wording appears to establish performance standards ("without intentional delay", "shall immediately confirm") and evidentiary requirements ("evidence that it acted" or "evidence that it confirmed"), but without using pre-existing defined terms, establishing new defined terms, or defining these terms as used in context. [3] Intentional vs. Unintentional, Valid Intentional vs. Inappropriate Intentional? How does one differentiate between intentional and unintentional delay? When is and how much delay is valid or inappropriate? Isn't some intentional delay necessary to ensure that the other parts of the requirement being are met, e.g., "... unless such actions would violate safety, equipment, or regulatory or statutory requirements"? Mightn't some acceptable amount of valid intentional delay be necessary to insure that any such RC directive and entity action would not in fact violate these safety, equipment, or regulatory or statutory requirements? [4] What is the timeliness standard? How are the terms "without delay" and "immediately conform" defined? What standard commercial measures would apply, e.g., "reasonable efforts" vs. "best efforts?" Are these terms measured in units of time (seconds or minutes) or in units of performance

quality? Does a poorly considered “immediate” reply meet the standard, while a well considered reply, which is intentionally delayed, yet still appropriate, fail to meet this standard? Is that the best outcome? [5] What is this Evidentiary Standard? Is the sought-after “evidence” sufficiently well defined, e.g., phone logs, computer e-mail, control center computer logs, hand-written operator journals, etc.? What form of evidence is necessary and sufficient to demonstrate that the entity met this evidentiary standard? How is failure to meet this uncertain standard measured, judged and penalized?

Yes and No

Agreement uncertain, subject to further clarification of Requirements and Measures performance standards and definitions (see our comments on Requirements and Measures). Without clearer definitions, e.g., for "immediate," or any allowance for appropriate intentional delay, it is not entirely clear that the VSL's comport with the ultimate meaning, intent and needed wording to be incorporated into the Requirements and Measures. Why would failure to fully comply, when precluded by conditions specifically allowed in the standard, necessarily be a problem, so long as the RC received timely notice, however defined?

If some language is clarified, we support the revisions. R2 states that "Each TO shall notify impacted entities of the failure of its normal telecommunications facilities...". If a phone line goes down and an alternate phone line is used, it is an excessive requirement to notify the impacted entities when there is no impact upon communication or the BES. The wording should be clear that notification is only required if an alternate means of communication is necessary. A defined timeframe for notification should be added to the requirement. It is possible that the loss of telecommunication facilities can occur without the loss of a control center. So, the redundancy with EOP-008 to R4 should be clarified.
No
M2 should be changed to reflect the comments noted in Question 1 for R2.
Yes
Based upon revisions to Question 1.

Yes
Yes and No
As long as the measurement of compliance does not include proving the negative, that no directives were issued.
No
R1-High VSL-If the directive was followed and there was no threat to the BES, then a lack of repetition of the directive does not constitute a "high" VSL. Suggest that this be a low or moderate VSL.
No
R2 refers to "intentional delay". The determination of intent should be left to the VSL portion of the standard, not the requirement portion.
Yes
If some language is changed, we support the revisions. R2 has language in it that should be added to M4 to be consistent. In M2, we propose adding language "unless such actions would violate safety, statutory or regulatory requirements."
No
VSL's for R2 and R3 are not appropriate. In order to assess a situation we may not be able to immediately inform the RC of our ability to comply with the directive. The high VSL for R2 currently states that if we do not follow the directive because of safety, statutory or regulatory requirements, it is a high VSL. An entity should not be penalized for not breaking the law.
Abstain.
Abstain.
Abstain.
No
The accountability and monitoring addressed in this Standard is still required. The drafting team's intent was that the ability to monitor is part of the certification process. However, certification is to Standards, and if there is not a Standard which addresses this issue, then an entity cannot certify to it.

We suggest that a definition of telecommunications be written by the drafting team because it is not clear what all telecommunications is intended to be included. Does this requirement apply to data, voice, rtus, networks, etc? For requirement R2, e suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional. The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF. In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "... is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."

Yes and No

M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.

No

The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter." The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2. (i) R1: Suggest to revise the conditions for all levels to read "...failed to operationally test the alternative communication facilities within the last..... (ii) R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affected entities, then the second condition should be an "OR". (iii) R3: Failure to having concurrence to use a language other than English for

communications between and among operating personnel responsible for real-time operations by itself does not constitute a violation of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.

Yes

Yes

Yes

Yes and No

New requirement R2 should omit act without intentional delay. Use of intentional implies willful disregard for compliance for the requirement. Intention should not be addressed as part of the compliance with the requirement but rather through the enforcement process once the compliance auditor has identified a violation. The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not functioning properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violate safety, equipment, statutory, or regulatory requirements. Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary. The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).

No

The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don't believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to

prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact. The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements. In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL. In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses "that, as a general rule, gradated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels". Given that it is possible to define gradated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.

No

New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.

No

Measure 1 should not focus on a letter as evidence. A more appropriate measure would be a data specification document and actual verification that data has been received. The letter or equivalent is only needed if data has not been supplied. Demonstration of the actual receipt the data would be easy.

No

For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by

making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in the their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document. We suggest that the VSLs should be: Severe: The RC did not determine it data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be deomstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be deomstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be deomstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be deomstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. R2 VSLs are not needed er paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.

No

Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A. Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary? Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be address per R1.1. R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm. As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.

No

Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. There should be the single measurement to verify the Operating Processes, Procedures, and Plans have been developed and address the sub-requirements. This really points out the problem with making the criteria that must be considered in the Operating Processes, Procedures, and Plans sub-requirements in the first place. They aren't requirements of any sort. They represent criteria. The drafting team should consider making them a bulleted list without the Rs, then the drafting team won't feel compelled to write sub-measures that don't measure anything.

No

For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed. We don't agree with the VSLs in R4 since we believe R4 should be struck. The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.

Yes

Yes

We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-2.

There is inconsistency between R3 and M3. In R3, there is a provision for agreement between entities (RC, TOP, BA, GOP, DP) to use a language other than English in their communications. In M3, that option is not presented. M3 should reflect what is written in R3.
No

While we agree that most of the requirements are redundancies that properly belong elsewhere, we are concerned that Requirement 4 and Requirement 8 are not properly represented elsewhere and should not be retired until they re-surface in another standard explicitly. We believe it is still very important for an RC to monitor their respective BAs reserves and CPS performance. Likewise in R8, while the frequency monitoring is a BA function, we think that it is important enough to also be included as an RC function explicitly.

M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.
No
(i) R1: Suggest to revise the conditions for all levels to read "...failed to operationally test the alternative communication facilities within the last..... (ii) R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affected entities, then the second condition should be an "OR". (iii) R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time

operations by itself does not constitute a violation of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.

Yes

Yes

Yes

No

(i) R2: the phrase "act without intentional delay" is not necessary since the urgency of taking any actions as directed by the RC's are generally understood to be conveyed in the RC's directives. (ii) R3: Given R2 requires the responsible entities to comply with the RC directives, the part that says "immediately confirm the ability to comply with the directive or" is not needed. R3 should simply require the responsible entities to notify the RC upon recognition of the inability to perform the directive. (iii) The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).

No

Wording in some of the Measures needs to be revised to reflect changes to R2 and/or R3, if our proposed changes are accepted. Also, we suggest the Requirement numbers be referenced in the Measures.

No

(i) R1: There should not be any distinction made between an RC acting and an RC directing others to act. Failure to mitigate adverse reliability impacts a severe violation of the requirement. We therefore suggest to revise the High and Severe levels as: High if the RC did not act or direct actions to prevent an Adverse Reliability Impact; Severe if the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact. (ii) R2: The High VSL seems contradictory to the requirement, which already has provision of not fully complying with the RC directives due to safety, equipment, or regulatory or statutory requirements. (iii) R3: We have proposed some wording change to R3, which if adopted, would precipitate a need to revise the VSLs for R3 accordingly. (iv) R4 and R5: The VSLs for these two requirements could be graded by assessing the number and/or timing of notifying the affected entities.

No

(i) R1: There is a duplicating requirement in TOP-005 R1.1. Suggest to eliminate one of the two. (ii) We do not agree with eliminating all of R5 to R8. There is a fundamental need for RCs to monitor its area, and even some portion of its adjacent areas to be aware of situations that require preventive and mitigating actions. While arguments can be made that requiring RCs to prevent and mitigate adverse reliability impacts would imply monitoring, the latter is a fundamental duty of any RCs to ensure system reliability. If monitoring is not explicitly stated as a requirement, then the same argument may be extended to training and operational facilities. We do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. Measuring can be illustrated, for example, by a compliance audit to review system logs and assess the extent to which an RC follows and assesses system conditions.

No

(i) M1: We suggest to change the word "letter" to "documented request" (ii) If our recommendations to retain some of R5 to R9, some measures will need to be provided.

No

(i) R1: The wording for Low VSL is contradictory (e.g. it determined and requested in the first part but did not request in the second part). Suggest to revise it. (ii) R1: We suggest to grade the VSLs according to the extent to which the percentage of data specification and/or the number of entities not requested. (iii) R2: The RC either has the right or it doesn't, and hence it's a binary requirement. The VSL should be developed accordingly. Further, the wording for the Severe VSL does not correspond to the requirement and measure. The condition should simply be that the Reliability Coordinator failed to demonstrate that it had the authority to veto planned outages to analysis tools, including final approvals for planned maintenance.

No

(i) R1: We do not agree with removing this requirement for the same reason given for the proposal to remove R5 to R8 from IRO-002 (see comments on 10 (ii), above). (ii) R8: We do not agree with completely removing this requirement, especially that part that requires an RC to monitor system frequency. While DCS and CPS are largely a BA's responsibility, the RC is the last line of defence for abnormal system performance and needs to monitor its BAs' performance including their ability to address large frequency deviations, and direct or take corrective actions as needed including requesting emergency assistance on the BAs' behalf and directing load shedding. (iii) R9: The second part of this requirement needs to be retained. IRO-004 covers operational planning, not current day operations. Coordinating pending generator and transmission facility outages is an essential and necessary task by the RC to ensure reliability. (iv) R11: The RC needs to monitor ACE, detect and identify the cause of any abnormal

ACE, and direct its BAs to take necessary actions to return ACE to within a normal range. (v) R13: We do not agree with removing the latter part of R13. The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set exists is a necessary requirement for reliable operation.
No
We suggest to replace the word "impacted" with "other" since there is a preconception that the concerned RC makes an assessment of which other RCs are impacted by the coordinated actions, which may not be the perspective of the other RCs who may in fact be impacted by any coordinated actions among other RCs.
No
Measure 1 actually contains a number of subrequirements that should be stipulated in R1, not M1. If indeed these are required, they should be stipulated in the Requirement section, not the Measures Section.
No
(i) R2: the High and Severe VSLs contradict with the requirement. We believe all of the "nots" should be removed. (ii) R6: The Low VSL should be a High since not agreeing to a plan but implementing one that has not been agreed to is a high violation of the requirement. (iii) The VSLs for R1 may need to be revised if our comments on M1 are adopted.

measures do not align with VSL's (see question 9)
No
R1 talks about "shall act or direct actions to be taken". High VSL - failure to act. Severe VSL - failure to act and direct. Does "act" mean any action taken short of issuing a directive? Change Severe VSL to failure to act or direct and eliminate the High VSL all together. R2 delay in issuing a directive due to equipment problems should be included in the moderate VSL and the body of the requirement and in the measure. The High VSL should be removed because not following the directive for equipment failure is allowed per R2. R5 - Severe VSL should be changed to moderate VSL since the problem has been mitigated and the system is stable and it does not adversely impact reliability. M3 talks about the ability of reliability entities to meet a directive. What constitutes evidence that confirms you are able to immediately comply with the directive? If the entity agrees to the directive and then is unable to comply due to events outside of their control, such as a CT not starting, do they meet the measure? If the entity, based on the circumstances at the time of the directive, agrees to comply in good faith are they compliant? The Lower VSL should be made N/A because it is not practical for an entity to immediately confirm they are able to meet the directive in all cases.
No

for R1, this should be 2 separate requirements and measures. R1 should have a methodology for determining what data is needed and then a R2 should be a requirement to request this data from the reliability entities.

We are a joint action agency registered on behalf of our member municipalities, who are all TDUs, neither own nor operate any Bulk Electric System facilities, and perform no real-time operations or operations planning for the BES. There are currently other standards that already apply to us that require us to have processes and means to communicate with our RC, BA, TOP, etc. The proposed modifications to this standard would now make our members subject to this standard as well, based on the DP registration designation. Given that, we believe there needs to be additional clarification of specifically what type of "telecommunications facilities" are required to be considered compliant with this standard. Maybe in the past when this standard applied to TOPs, BAs, and RCs, it was intuitive what type of telecommunications facilities they needed to communicate with each other. However, when you bring in small DPs, it doesn't seem so clear. Obviously we already communicate with our TOP and BA, and have done so for years. As written, the standard is ambiguous in terms of what more, if anything, we would have to put in place to satisfy this standard.

R3 needs to have the last sentence revised to allow the Generator Operator and Distribution Provider to use an alternate language for internal operations.
No
M3 needs to include the GO and DP in its requirement for interutility communications in English.

Standard – IRO-001 R1 Requirement (including sub-requirements) The Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area Attributes of the requirement Binary Timing X Omission X Communication X Quality Other Discussion – 1. As currently worded it can be interpreted that any time an event occurs the RC would be in violation of the standard simply because they had failed “to prevent” an event. 2. This requirement does not have a “timing” element included, although it implies timing based on the “duration of the event”. Including that “duration of the event” is problematic – it appears to imply that human intervention may provide a more timely response than relay operation, we would suggest more clarification about what the “duration” element of the requirement is intended to address (e.g. generation re-dispatch?). 3. There also appears to be a “quality” element included based on the mitigation of magnitude of the event. As a result we believe that timeliness, effectiveness and communication should be the basis of the VSLs. 4. The VSLs as differentiate between directing actions and acting. Practically, there is no difference. The RC is still giving the directive. It is just a matter of who is carrying it out. This is not a valid basis for differentiating between VSLs. We suggest the VSLs be defined based on actual system impact (i.e. Was the RC acting or directing actions to prevent or to mitigate?) and to either modify the requirement to remove timing aspects or to add the timing aspects to the VSLs. SDT Proposed Lower VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL N/A CEDRP Proposed VSL No Comment SDT Proposed High VSL The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. CEDRP Proposed VSL The Reliability Coordinator failed to act to prevent the magnitude or duration of Adverse Reliability Impacts. SDT Proposed Severe VSL The Reliability Coordinator failed to act and direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts CEDRP Proposed VSL The Reliability Coordinator failed to act and direct actions to mitigate the magnitude or duration of Adverse Reliability Impacts FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a “binary” requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Additional Compliance Elements Compliance Enforcement Authority NERC shall be responsible for compliance monitoring of the Regional Entity. Regional Entities shall be responsible for compliance monitoring of the Reliability Coordinators, Transmission Operators, Generator Operators, Distribution Providers, and Load Serving Entities. Compliance Monitoring Period and Reset Time Frame N/A Compliance Monitoring and Enforcement Processes: Compliance Audits Self-Certifications Spot Checking Compliance Violation Investigations Self-Reporting Complaints Data Retention Each applicable entity shall retain data and evidence for a rolling 12 months unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation. The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent compliance records. Additional Compliance Information None CAE Resource Pool Comments The Enforcement Authority Statement, “NERC shall be responsible for compliance monitoring of the Regional Entity.” Is not clear, if it is intended to encompass Regional Entities that perform RC functions is should be clearly stated, if not it should not be included in the Enforcement Authority section.

Standard – IRO-001 R2 Requirement (including sub-requirements) Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall act without intentional delay to comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without delay to comply with the Reliability Coordinator’s directives. Attributes of the requirement Binary Timing X Omission X Communication X Quality X Other The team would suggest “intentional delay” be eliminated from the requirement – e.g. “shall act to...”). To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful

disregard of the requirement. The measure and VSLs do not consider the exceptions for not following the RC objective. The drafting team should consider combining requirements R2 and R3. Thus, one VSL would become failure to notify the RC of the inability to comply. The drafting team could consider applying the numerical category of VSLs for some directives such as an order to redispach. Obviously, it would not work well if the directive was to reconfigure the system. SDT Proposed Lower VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL The responsible entity followed the Reliability Coordinators directive with a delay not caused by equipment problems. CEDRP Proposed VSL The team does not agree that this is a valid VSL. SDT Proposed High VSL The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements. CEDRP Proposed VSL The team does not agree that this is a valid VSL. The word majority implies some ability to numerically measure the response to the directive. Thus, the drafting team should consider applying the numerical category of the VSL guidelines. SDT Proposed Severe VSL The responsible entity did not follow the Reliability Coordinators directive. CEDRP Proposed VSL The responsible entity did not follow the Reliability Coordinators directive, the directive would not have violated safety, equipment, regulatory, or statutory requirements, and responsible entity did not communicate the inability to follow the directive to the Reliability Coordinator. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? No Standard - IRO-001 R3 Requirement (including sub-requirements) The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the Reliability Coordinator upon recognition of the inability to perform the directive. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, informed the Reliability Coordinator upon recognition of the inability to comply. Attributes of the requirement Binary Timing Omission Communication X Quality Other Discussion – The requirement appears to be based on communication and can be problematic by including the requirement to immediately confirm the ability to comply, a directive can be issued to one entity or several entities at one time (e.g. conference call, all call, electronic notification) that may create several issues when attempting to process all confirmations, the requirement language presents a risk of being found out of compliance for following a directive but not providing an "immediate" confirmation to the RC. The CEDRP believes it to be a reasonable expectation that all entities will comply with reliability directives and notification should be made only on exception. The SDT should consider combining this requirement with R2. SDT Proposed Lower VSL The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator. CEDRP Proposed VSL See above discussion note SDT Proposed Moderate VSL N/A CEDRP Proposed VSL No comment SDT Proposed High VSL N/A CEDRP Proposed VSL No comment SDT Proposed Severe VSL The responsible entity failed to inform the Reliability Coordinator upon recognition of the inability to perform the directive. CEDRP Proposed VSL No comment FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? As currently worded the CEDRP believe that the requirement should be changed to eliminate that "immediate confirmation" portion of the requirement 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? No Standard - IRO-001 R4 Requirement (including sub-requirements) Each Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area. Attributes of the requirement Binary Timing X Omission Communication X Quality Other Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. This requirement appears to fit the numerical category of the VSL guidelines best. SDT Proposed Lower VSL N/A CEDRP Proposed VSL The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. SDT Proposed Moderate VSL N/A CEDRP Proposed VSL The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. SDT Proposed High VSL

N/A CEDRP Proposed VSL The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. SDT Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard - IRO-001 R5 Requirement (including sub-requirements) Each Reliability Coordinator who identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when the real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area has been mitigated. Attributes of the requirement Binary Timing X Omission Communication X Quality Other Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. Measure 5 is written implying that there is an Adverse Reliability Impact. The drafting team should consider wording the measurement to consider that there may not be an Adverse Reliability Impact requiring a directive. The Commission in paragraph 27 of the VSL order has stated that multiple VSLs are preferable where possible. Suggest applying the numerical category of the VSL Guidelines based on the number of entities notified.. SDT Proposed Lower VSL: N/A CEDRP Proposed Lower VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. SDT Proposed High VSL: N/A CEDRP Proposed High VSL: The Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. SDT Proposed Severe VSL: The Reliability Coordinator failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated. CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – IRO-002-2 R1 Requirement (including sub-requirements) Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a letter to Transmission Operators, Balancing Authorities, Transmission Owners, Generator Owners, Generator Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has requested the data required to support its reliability coordination tasks. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion – The VSLs attempt to measure the quality of the data requirements. They require the compliance auditor to judge if another RC has material impact and what data is administrative and what data is substantial. Given the typical length of a compliance audit, it is doubtful that the compliance auditor can make these types of judgments about the quality of the data and the material impact of another RC. The drafting team should consider applying numerical category of VSLs based on the number of entities the data request is made from. It is

interesting that the measure also does not require any documentation of a data specification. SDT Proposed Lower VSL: The Reliability Coordinator demonstrated that it 1) determined its data requirements and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with a material impact on the Bulk Electric System in its Reliability Coordination Area but did not request the data from Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with minimal impact on the Bulk Electric System in its Reliability Coordination Area or 2) determined its data requirements necessary to perform its reliability functions with the exceptions of data that may be needed for administrative purposes such as data reporting. CEDRP Proposed Lower VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from 25% or less of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. SDT Proposed Moderate VSL: The Reliability Coordinator demonstrated that it determined the majority but not all of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators. CEDRP Proposed Moderate VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 25% but less than or equal to 50% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. SDT Proposed High VSL: The Reliability Coordinator demonstrated that it determined 1) some but less than the majority of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators Or 2) all of its data requirements necessary to support its reliability coordination functions but failed to demonstrate that it requested data from two of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators. CEDRP Proposed High VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 50% but less than or equal to 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. SDT Proposed Severe VSL: The Reliability Coordinator failed to demonstrate that it 1) determined its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators Or 2) requested the data from three or more of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators. CEDRP Proposed Severe VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, Or, The Reliability Coordinator failed to determine data requirements to support its reliability coordination tasks. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-002-2 R2 Requirement (including sub-requirements) Each Reliability Coordinator shall have the authority to veto planned outages to analysis tools, including final approvals for planned maintenance. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement 2. Attributes of the requirement Binary Timing Omission Communication Quality Other X Is this requirement needed? R1 IRO-001-2 requires the RC to mitigate Adverse Reliability Impacts. R2 IRO-001-2 requires responsible entities to comply with the RC directives. Wouldn't the RC thus have the right to cancel all types of outages (i.e. analysis tools, transmission equipment, etc). FERC has stated in paragraph 112 of Order 693-A that an RC does not derive their authority from agreements but rather from FERC's approval of the standards. Barring the team's decision to remove this requirement, the Severe VSL is confusing. We have suggested different wording. SDT Proposed Lower VSL Reliability Coordinator has approval rights for planned outages of analysis tools but does not have approval rights for maintenance on analysis tools. CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL N/A CEDRP Proposed VSL No Comment SDT Proposed High VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Severe VSL Reliability Coordinator approval is not required for planned maintenance or planned outages. CEDRP Proposed VSL Reliability Coordinator does not approve planned maintenance or planned outages. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated

requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R1 Requirement (including sub-requirements) R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning] R1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. R1.2. Energy and capacity shortages. R1.3. Planned or unplanned outage information. R1.4. Voltage control, including the coordination of reactive resources for voltage control. R1.5. Coordination of information exchange to support reliability assessments. R1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. Proposed Measure M1. The Reliability Coordinator's System Operators shall have available for Real-time use, the latest approved version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators. M1.1 These Operating Procedures, Processes, or Plans shall address: M1.2 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. M1.3 Energy and capacity shortages. M1.4 Planned or unplanned outage information. M1.5 Voltage control, including the coordination of reactive resources for voltage control. M1.6 Coordination of information exchange to support reliability assessments. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. Attributes of the requirement Binary Timing Omission x Communication x Quality Other Discussion – The CEDRP has no recommendations regarding this requirement. SDT Proposed Lower VSL: The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one or two of the subrequirements. CEDRP Proposed Lower VSL: No Comment SDT Proposed Moderate VSL: Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three or four of the subrequirements. CEDRP Proposed High VSL: No Comment SDT Proposed High VSL: The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address five of the subrequirements. CEDRP Proposed High VSL: No Comment SDT Proposed Severe VSL: The Reliability Coordinator failed to have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. CEDRP Proposed Severe VSL: No Comment FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R2 Requirement (including sub-requirements) R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: [Violation Risk Factor: Lower] [Time Horizon: Real-time Operations and Operations Planning] R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s). R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s). Proposed Measure M2. The Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were: M2.1 Agreed to by all the Reliability Coordinators required to take the indicated action(s). M2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s). Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion – The High and Severe VSLs appear to use "not" incorrectly. SDT Proposed Lower VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL: The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action. CEDRP Proposed Moderate VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action. SDT Proposed High VSL: The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action CEDRP Proposed High VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action SDT Proposed Severe VSL: The Reliability Coordinator failed to have evidence that

the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action and were not distributed to all Reliability Coordinators that are required to take action

**CEDRP Proposed Severe VSL:** The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action and were distributed to all Reliability Coordinators that are required to take action

**FERC Guidance for VSLs**

1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned?
2. Is the VSL assignment a binary requirement?
3. Is it truly a “binary” requirement?
4. If yes, is the VSL assignment consistent with other binary requirement assignments?
5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised?
6. Does the VSL redefine or undermine the stated requirement?
7. Is the VSL based on a single violation of the requirement (not multiple violations)?

**Standard – IRO-014-2 R3 XXX-XXX Requirement (including sub-requirements) R3.** The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]

**Proposed Measure M3.** The Reliability Coordinator shall have evidence it made notifications and exchanged reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion: The VSLs appear to be appropriate. Since the only difference is the use of the “and” and “or”, we suggest emphasizing those words in bold. We read this more than once before we noticed the difference.

**SDT Proposed Lower VSL N/A CEDRP Proposed VSL N/A SDT Proposed Moderate VSL N/A CEDRP Proposed VSL N/A SDT Proposed High VSL:** The Reliability Coordinator failed to make notifications or exchange reliability-related information with impacted Reliability Coordinators. **CEDRP Proposed High VSL:** The Reliability Coordinator failed to make notifications or exchange reliability-related information with impacted Reliability Coordinators. **SDT Proposed Severe VSL:** The Reliability Coordinator failed to make notifications and exchange reliability-related information with impacted Reliability Coordinators. **CEDRP Proposed Severe VSL:** The Reliability Coordinator failed to make notifications and exchange reliability-related information with impacted Reliability Coordinators. **FERC Guidance for VSLs**

1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned?
2. Is the VSL assignment a binary requirement?
3. Is it truly a “binary” requirement?
4. If yes, is the VSL assignment consistent with other binary requirement assignments?
5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised?
6. Does the VSL redefine or undermine the stated requirement?
7. Is the VSL based on a single violation of the requirement (not multiple violations)?

**Standard – IRO-014-2 R4 XXX-XXX Requirement (including sub-requirements) R4.** The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted Reliability Coordinators. [Violation Risk Factor: Lower][Time Horizon: Real-time Operations] The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.

**Proposed Measure M4.** The Reliability Coordinator shall have evidence it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators. Attributes of the requirement Binary Timing X Omission X Communication X Quality Other Discussion – This requirement is purely administrative and probably does not rise to a level of a reliability standard requirement. It is in essence redundant, with R1.1 IRO-014-2? It appears R1.1 addresses the same information that would be expected to be discussed in a weekly conference call. Should the drafting team disagree and retain this requirement, please consider applying multiple VSLs based on how often the RC participates in conference calls, how many they missed, or how many impacted RCs they participated in conference calls with.

**SDT Proposed Lower VSL:** The Reliability Coordinator failed to participate in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators. **CEDRP Proposed Lower VSL:** The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators bi-weekly, Or the Reliability Coordinator failed to participate in one weekly conference call, Or the Reliability Coordinator agreed to participate in conference calls with 25% or less of the impacted Reliability Coordinators. **SDT Proposed Moderate VSL:** N/A **CEDRP Proposed Moderate VSL:** The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators every third week, Or the Reliability Coordinator failed to participate in two weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 25% but less than or equal to 50% of the impacted Reliability Coordinators. **SDT Proposed High VSL:** N/A **CEDRP Proposed High VSL:** The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators fourth week, Or the Reliability Coordinator failed to participate in three weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 50% but less than or equal to 75% of the impacted Reliability Coordinators. **SDT Proposed Severe VSL:** N/A **CEDRP Proposed Severe VSL:** The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators at least every fifth week, Or the Reliability Coordinator failed to participate in four weekly conference calls, Or the Reliability Coordinator failed to agree to participate in any conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 75% but less than 100% of the

impacted Reliability Coordinators. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R5 XXX-XXX Requirement (including sub-requirements) R5. When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the impacted Reliability Coordinators. In the event that the issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] Proposed Measure The Reliability Coordinator shall have evidence that, in cases when an expected or actual reliability issue was detected, it has confirmed the existence of the issue with the impacted Reliability Coordinators. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion – This requirement is confusing in the way it is worded. We think it is trying to say that the RC should operate as though the reliability issue (should this be Adverse Reliability Impact) is detected until the issue is confirmed not to exist. The way it is worded might imply that if one doesn't confirm it to exist, operate as though it does. This leaves open the interpretation that a confirmation that it doesn't exist must still be operated to as though it does exist. The drafting team should consider splitting operating to prevent from operating to mitigate an existing event in the VSLs. SDT Proposed Lower VSL The Reliability Coordinator that detected an expected or actual reliability issue contacted the other Reliability Coordinator(s) to confirm that there was a problem but could not confirm that the problem existed and failed to operate as though the problem existed. CEDRP Proposed VSL N/A SDT Proposed Moderate VSL N/A CEDRP Proposed VSL N/A SDT Proposed High VSL N/A CEDRP Proposed VSL The Reliability Coordinator that detected an expected reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. SDT Proposed Severe VSL The Reliability Coordinator that detected an expected or actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. CEDRP Proposed VSL The Reliability Coordinator that detected an actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R6 XXX-XXX Requirement (including sub-requirements) When an expected or actual reliability issue exists and the impacted Reliability Coordinators cannot agree on a mitigation plan, all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] Proposed Measure The affected Reliability Coordinators shall have evidence that, in cases when an expected or actual reliability issue existed and the impacted Reliability Coordinators could not agree on a mitigation plan, they implemented the mitigation plan developed by the Reliability Coordinator who has the reliability issue. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion: We are concerned the validity of this requirement, it may force an RC to implement a solution that they don't agree with and ultimately result in an Adverse Reliability Impact. The RC may not agree with the solution because it may not be reliable for their footprint. They need to have the ability to veto mitigation plans that cause Adverse Reliability Impacts in their footprint without incurring a compliance violation. SDT Proposed Lower VSL The Reliability Coordinator did not agree on a mitigation plan and implemented a plan other than the one developed by the Reliability Coordinator who had the reliability issue. CEDRP Proposed VSL N/A SDT Proposed Moderate VSL N/A CEDRP Proposed VSL N/A SDT Proposed High VSL N/A CEDRP Proposed VSL N/A SDT Proposed Severe VSL The Reliability Coordinator did not agree on a mitigation plan and did not implement a mitigation plan. CEDRP Proposed VSL What if the RC is correct in disagreeing and the mitigation plan would have caused an Adverse Reliability Impact on their system? FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)?

Group
MRO NERC Standards Review Subcommittee
Terry Bilke
MidwestISO
No
The new R2 requirement is too verbose. We suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted

parties if the alternate communications means are not functional. This clause is similar to the old requirement one that the drafting team appropriately struck. We tend to agree that striking R1 makes sense due to the drafting team's reasoning. However, we are not clear why the new R4 is necessary then. If the drafting team does not believe R1 is necessary shouldn't they respond to the FERC directive with the same reason why R4 is not really necessary? The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF. In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "... is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."

No

M4 does not appear to be worded as a measurement. If R4 is kept, we suggest the following modification: "The Distribution Provider and Generation Operator shall demonstrate the existence of its telecommunication systems identified in R4."

No

The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter." The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2.

Yes

Yes

Yes

No

New requirement R2 should omit act without intentional delay. The desired outcome is for the responsible entity to comply with the RC directive. Adding act without intentional delay only confuses the situation and adds questions. What is an intentional delay? The word act implies that the requirement is met simply if the responsible entity attempted to meet the directive but was unable to do so. That is already considered in with the clause that begins "unless such actions would violate ...". Thus, the word act is not necessary. The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not functional properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violated safety, equipment, statutory, or regulatory requirements. Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverst Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary.

No

Some compliance auditors have been taking the need for evidence to the extreme. We have encountered actual situations where if a measure states evidence shall be provided for requirements that are event based. the

compliance auditor expected evidence even if no event occurred. For example, some RCs rarely issue directives. As M1 is written, some compliance auditors would require the RC to provide evidence that no reliability directives were issued. This is not possible. We suggest modifying the measurement to: Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area if needed. If there were no directives issues (assuming there are no complaints or evidence to the contrary of the need to issue a directive), no evidence is necessary."

No

The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don't believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact. The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements. In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL. In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses "that, as a general rule, graduated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels". Given that it is possible to define graduated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.

No

New Requirement R1 is duplicate to the requirement TOP-005-1 R1.1. If the drafting team can't delete TOP-005-1 R1.1, they should notify other appropriate drafting teams of the need to remove the requirement. We do not agree with eliminating requirements R5, R6, R7, and R8 in their entirety. The requirements as they are written are problematic. However, we do believe that there is a need for a basic requirement to monitor the system. The requirements should be that the RC should compare actual system flows to SOLs and IROLs. While some will argue SOLs are not the responsibility of the RC, failure to monitor SOLs could cause the RC to miss unknown IROLs since an SOL can become an IROL. Several SOL violations in a given area also can be indicative of a broader system problem the RC should be addressing. We also do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. It is very easy to measure. As an example, a compliance auditor could select a day and an SOL or IROL and ask for the system flows from that day or hour etc. This is generally easy for any RC to produce with today's data archiving software. We believe that there should be a requirement that the RC have a state estimator and real-time contingency analysis as well (RTCA). The drafting team needs to be careful in the construction of these requirements to make them practical and measurable. For instance, making the requirement to have a state estimator and RTCA is measurable in that the compliance auditor can verify their existence but this is not stringent enough because they may only run once a week. At the same time, if we create a requirement that SE and RTCA must run every 5 minutes, we could inadvertently create a requirement that any missing 5 minute run of RTCA and SE could be construed as a violation. There also needs to be a requirement that there is a real-time assessment of voltage as well. New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.

No

Measure 1 should not focus on a letter as evidence. A more appropriate measure would be a data specification document and actual verification that data has been received. The letter or equivalent is only needed if data has not been supplied. Demonstration of the actual receipt the data would be easy. Requirement 2 is not needed and thus Measure 2 is not needed per paragraph 112 of Order 693-A. Additional measures are needed to address the proposed requirements in question 10.

No

For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the

administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document. We suggest that the VSLs should be: Severe: The RC did not determine its data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. R2 VSLs are not needed per paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.

No

R1 includes many requirements for monitoring the system that are important, measurable and should be retained. Monitoring is too critical to operating the system to completely eliminate these requirements. R4, R8 and R11 are problematic as currently written. However, there have been actual instances of a large BA intentionally operating short hundreds of MWs of energy. I believe this occurred during the summer of 1999. Thus, the RC should be monitoring the BAs ACE and directing the BA to correct it if it becomes too large. It is not necessary or even useful for the RC to monitor the BA CPS performance.

No

Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A. Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary? Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be addressed per R1.1. R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm. R6 appears to be a rewrite of requirements R1, R2 and their sub-requirements in IRO-016. We agree that those requirements do need to be written more succinctly or removed altogether. However, R6 does not accomplish the goal and only confuses that matter further. The reason the RCs may not be able to agree on a mitigation plan is that RC with the reliability issue may be requesting mitigations that the other RCs believe may cause them reliability issues. This requirement appears to suggest that the solution to a disagreement on the mitigation plan is cut and dried. Generally, the reason the disagreement arises is due to one RC not fully understanding the impact of their actions on another RC. The bottom line is that the RCs may have disagreements and there is no way to require a solution in these types of situations. Please revise R6 to require using the mitigation plan developed by the Reliability Coordinator who has the reliability issue provided that the mitigation plan does not cause a reliability issue in the other region. As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance.

No

Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. There should be the single measurement to verify the Operating Processes, Procedures, and Plans have been developed and address the sub-requirements. This really points out the problem with making the criteria that must be considered in the Operating Processes, Procedures, and Plans sub-requirements in the first place. They aren't requirements of any sort. They represent criteria. The drafting team should consider making them a bulleted list without the Rs, then the drafting team won't feel compelled to write sub-measures that don't measure anything. We do not agree with M6 because we don't agree with R6.

No

For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed. We don't agree with the VSLs in R4 since we believe R4 should be struck. The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.

Yes
Yes
We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-2.
Group
Southern Company Transmission
Jim Busbin
Southern Company Services, Inc.
No
1.1 - In R1, we suggest that "operationally test by way of operator action" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities". 1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. The VSL should be consistent with the language of the requirement. A very short, insignificant telecom outage with no notification could result in a severe violation as the requirement is presently written and VSL's applied. 1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated. 1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.
No
2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards. 2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. 2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements.
Yes
3.1 - The expanded list of entities recommended in comment 1.3 and 1.4 need to be included the VSLs 3.2 - The Severe VSL for R2 should be corrected. Add the word 'to' as follows: "...and failed to verify the ..."
No
4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3: 4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard. 4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2. 4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to measure. We suggest they be replaced with "the RC shall direct". 4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1). 4.6 - Grammatical changes are suggested. The revised requirement reads as follows: "To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications; to ensure that these communication capabilities are staffed and available for addressing a real-time emergency condition; and to ensure effective communications by operating personnel." 4.7 - At the Data Retention section, the reference to 'Requirement 3, Measure 3' should be consistent with the modified standard. The revised standard only has one requirement. 4.8 - The use of calendar days in the Data Retention section is inconsistent with related standards where 'months' are used.
No
5.1 - The measures need to be revised to match the new requirements.
No
6.1 - The severity levels need to be revised to match the new requirements.
No
7.1 - Applicability 4.2 - Transmission Operator should be plural. 7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process. 7.3 - In R2 insert the word "its" before Reliability Coordinator. 7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.

No
8.1 - In M2 and M3, Add Distribution Provider. 8.2 - In M2 add "intentional" between "without" and "delay". 8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator. 8.4 - In M5, change "has" to "had".
No
9.1 - R1 is a binary requirement and should have only a severe VSL. The RC either acts or he doesn't - If he fails to act, he fails to direct and mitigate the problem by default. 9.2 - R2 VSLs need to be rewritten to recognize that some directives may not be followed because of safety, regulatory or statutory requirements. 9.3 - Remove the Lower severity level in R3 to conform to changes in R3 and M3.
No
10.1 - We propose that R1 and R2 should be moved to the RC Certification Procedure and this standard retired. If this standard is not retired then we recommend Comments 10.2 and 10.3. 10.2 - At Requirement R2, the RC is given 'veto' authority. Is a standard an appropriate place to give this type of authority? 10.3 - The revised Purpose basically provides that the RC will have access to information and control of analysis tools. What is the correlation of information/control to veto authority/approval of planned maintenance?
No
11.1 - Moving R1 and R2 to the RC Certification Procedure, will eliminate measurement requirements.
No
12.1 - Moving R1 and R2 to the RC Certification Procedure, will eliminate VSL requirements.
Yes
13.1 - We agree with retiring this standard.
No
14.1 - R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? 14.2 - We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. 14.3 - We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly. 14.4 - R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous" or a similar term. 14.5 - We suggest rewriting R5 to read: In the event that a reliability issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists. 14.6 - At Requirement R1, the use of the phrase "as a minimum" seems to add some flexibility for development of procedures, processes and plans. A negative consequence is that it introduces more ambiguity. The recommendation is to strike the phrase. 14.7 - At Requirement R1.6, consider the following: "Authority to act to prevent and mitigate instances 'that have the potential to cause' Adverse Reliability Impacts to other Reliability Coordinator Areas."
No
15.1 - In M1, delete "for Real-time use". 15.2 - Modify the measures to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
No
16.1 - In R2, severe should be "... and no action was taken by the RC". 16.2 - In R5, severe should also include "... or that the RC failed to operate as though the problem existed." 16.3 - Modify the VSLs to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
Yes
17.1 - We agree with the recommendation to retire IRO-015-2.
Yes
18.1 - We agree with the recommendation to retire IRO-016-2.
19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability.

We beleive the word "threat" shoudl be replaced with "events" in Requirements 4 and 5.
Yes and No
Suggest changing with word "request" to "document" in Requirement 1.
Yes
Yes and No
As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.

PER-003 R1 does not specifically addresss delegated functions; therefore, this requirement is not redundant with IRO-001 R6 without changes to PER-003 to specifically deal with employees performing delegated functions.
Yes
No

The VSL for R2 does not seem consistent with the language in the requirement. It is not clear why the entity should be subject to a high VSL if the entity did not comply with an RC directive due to safety or regulatory prohibition, and made the RC aware of same.

No

IRO-002-1 R9, the deleted language of the second sentence is not adequately covered by the language in EOP-008-0 R1, unless those outages are tied to the loss of a control center. EOP-008-0 is in the process of being revised and this language could be included in the revision, but it isn't adequately addressed by the version 0 standard.

Directives that are mandatory under R2 of IRO-001-2 should have boundaries consistent with the proper role of an RC. For example, if an RC directs an LSE with a 15% planning reserve margin to execute purchase power agreements until its reserve margin is at least 20% and the LSE refuses, then the LSE may have violated this standard. Other examples of improper RC directives are directives to increase coal inventories, buy firm fuel transportation rights, reconductor transmission lines, purchase spare equipment, etc. Granted entities may be able to conjure up a regulatory or statutory basis for refusing many improper RC directives but in some instances there may be no permissible grounds to refuse. The appropriate solution is to modify the standard to ensure that improper directives are never mandatory in the first place. Specifically, NERC is urged to state that RC directives are mandatory only if they pertain to specific categories such as: switching orders to reconfigure the BES, orders to postpone scheduled outages of BES equipment, orders to change generator output, orders to curtail transactions or orders to curtail load.

No

The M2 measure should not mandate compliance with RC directives that are improper as defined in my response to question 7.

My other concerns are addressed in the comments of the SERC OC Standards Review Group.

R1 states the RC must act OR direct. The R1 VSL's attempt to distinguish between act and direct. The requirement allows for either action. I suggest that the High VSL be removed and replaced by an N/A. The Severe VSL should be amended so that the words "act and direct" are replaced by the words "act OR direct" as is consistent with the requirement and the measure. R2:The moderate VSL introduces the phrase "equipment problems" for the first time in the Standard. "Equipment Problems" needs to be included in the Requirement, R2, and defined in the Measure for R2. R5: The Severe VSL needs to be moved to the Moderate category. This condition does not constitute an Adverse Reliability Impact that severely threatens the BES.
Yes
No
R1: The Requirement and VSL's mention that the RC will determine it's data needs. Yet the Measure for R1 does not mention this, it only mentions the RC requesting the data from it's member emities. This Measure needs to include a measure for how the RC determines it's data needs.

6.1 - The severity levels need to be revised to match the new requirements
Yes and No
7.1 - Applicability 4.2 - Transmission Operator should be plural. 7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process. 7.3 - In R2 insert the word "its" before Reliability Coordinator 7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.
Yes and No
8.1 - In M2 and M3, Add Distribution Provider. 8.2 - In M2 add "intentional" between "without" and "delay". 8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator. 8.4 - In M5, change "has" to "had".
Yes and No
9.1 - R1 is a binary requirement and should have only a severe VSL. The RC either acts or he doesn't - If he fails to act, he fails to direct and mitigate the problem by default. 9.2 - R2 VSLs need to be rewritten to recognize that some directives may not be followed because of safety, regulatory or statutory requirements. 9.3 - Remove the Lower severity level in R3 to conform to changes in R3 and M3.
Yes and No
10.1 - We propose that R1 and R2 should be moved to the RC Certification Procedure and this standard retired.
Yes and No
11.1 - Moving R1 and R2 to the RC Certification Procedure, will eliminate measurement requirements.
Yes and No
12.1 - Moving R1 and R2 to the RC Certification Procedure, will eliminate VSL requirements.
Yes

13.1 - We agree with retiring this standard
Yes and No
14.1 - R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? 14.2 - We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. 14.3 - We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly. 14.4 - R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous". 14.5 - We suggest rewriting R5 to read: In the event that an operating issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.
Yes and No
15.1 - In M1, delete "System Operator" and "for real-time use". 15.2 - Modify the measures to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
Yes and No
16.1 - In R2, severe should be "no action was taken by the RC". 16.2 - In R5, severe should also include that the RC failed to operate as though the problem existed. 16.3 - Modify the VSLs to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
Yes
17.1 - We agree with the recommendation to retire IRO-015-2
Yes
18.1 - We agree with the recommendation to retire IRO-016-2
19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability

No
Purpose Distribution Providers and Generator Operators were added to the applicability; the Purpose should be revised to reflect that.
Yes
Yes
No
Purpose Since Generator Operators were deleted from the applicability; the Purpose should be revised to reflect that and include Reliability Coordinators. The language is somewhat redundant, recommend it be simplified to "To ensure Balancing Authorities, Reliability Coordinators, and Transmission Operators communicate in an effective manner."
Yes
Yes
No
R4. and R5. Both of these Requirements use the phrase "without intentional delay" to describe the urgency of the notification to impacted entities. In both requirements we recommend the language be changed from "notify, without intentional delay" to "immediately notify".
No
M4. and M5. In both Measures, recommend "without intentional delay" be changed as described above for R4. and R5.
Yes
No

R2. This requirement provides authority to the Reliability Coordinator to veto planned outages and approve planned maintenance to "analysis tools". It is not clear in this standard what these "analysis tools" are. Per FERC Order 693, NERC was to identify a minimum set of analysis tools and the task was assigned to the Real-Time Tools Best Practices Task Force. Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.

No

M2 again "analysis tools" have not been identified.

No

Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.

PJM Interconnection

Patrick Brown

PJM Interconnection

Yes

We agree with the revisions, but recommend adding applicability to Distribution Providers and Generator Operators for data retention requirements.

Yes

M4 should be revised to reflect that each Distribution Provider and Generation Operator has evidence demonstrating the functionality of telecommunications facilities with the TOP and BA for the exchange of interconnection and operating information.

No

Recommend the following VSLs for R1: Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion. Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions. Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions. Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions. Recommend the following VSLs for R2: Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion. Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions. Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions. Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions. Recommend the following VSLs for R4: Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority or Transmission Operator for the exchange of Interconnection and operating information. Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority and Transmission Operator for the exchange of Interconnection and operating information.

Yes

We note that this requirement really is "3-part communication" and will be moved to the new communications standard, COM-003-1.

Standard – COM-001-2 Telecommunications Requirement 1: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail. Proposed Measure: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide evidence that it operationally tested, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail. Attributes of the requirement Binary Quarterly operational tests of alternate telecommunications Timing X Omission Communication Quality X Other SDT Proposed Lower VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last quarter. CEDRP Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in one of the previous four quarters. SDT Proposed Moderate VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 2 quarters. CEDRP Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in two of the previous four quarters. SDT Proposed High VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 3 quarters. CEDRP Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in three of the previous four quarters. SDT Proposed Severe VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 4 quarters. CEDRP Proposed Severe VSL: The Responsible Entity failed to operationally test alternative telecommunications every quarter on more than three separate occasions (i.e. more than any three different quarters). FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? Yes 3. Is it truly a “binary” requirement? Yes 4. If yes, is the VSL assignment consistent with other binary requirement assignments? Yes 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – COM-001-2 Telecommunications Requirement 2: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities of the failure of its normal telecommunications facilities, and shall verify that alternate means of telecommunications are functional. Proposed Measure: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional. Attributes of the requirement Binary Timing Notify impacted entities and verify functionality of alternate telecommunications Omission Communication X Quality Other - Test X Discussion - This requirement needs to be re-written to be more clearly define who the entities are that are “impacted.” The key attributes appear to be notification of ALL (communication) impacted entities (possible omission if some, but not all are not notified). The requirement does not give any guidance on the “verification” side – this is a problem, one entity can interpret that to mean “we looked and it was working”, another may be to verify with all impacted entities that alternate communication is working. We suggest this requirement needs a little more clarification. The CEDRP does not feel it can write a valid VSL for this requirement as currently worded. SDT Proposed Lower VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority notified all impacted entities of the failure of their normal telecommunications facilities, but failed to verify the alternate means of telecommunications are functional. CEDRP Proposed Lower VSL: See Discussion SDT Proposed Moderate VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority notified some, but not all, impacted entities of the failure of their normal telecommunications facilities, and failed to verify the alternate means of telecommunications are functional. CEDRP Proposed Moderate VSL: See Discussion SDT Proposed High VSL: N/A CEDRP Proposed High VSL: See Discussion SDT Proposed Severe VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority failed to notify any impacted entities of the failure of their normal telecommunications facilities, and failed verify the alternate means of telecommunications are functional. CEDRP Proposed Severe VSL: See Discussion FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a “binary” requirement? No 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – COM-001-2 Telecommunications Requirement 3: Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. Proposed Measure: The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and

provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Attributes of the requirement Binary Use English for real-time communications unless agreed to otherwise. NOTE: OK with this as is because the requirement and VSLs have been re-written, will be removed from this standard shortly, and included in the new COM-003-1 standard. Timing Omission Communication X Quality Other SDT Proposed Lower VSL: N/A CEDRP Proposed Lower VSL: No change SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: No change SDT Proposed High VSL: N/A CEDRP Proposed High VSL: No change SDT Proposed Severe VSL: The responsible entity failed to provide evidence of concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. CEDRP Proposed Severe VSL: The Responsible Entity failed to provide evidence of the concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? Yes 3. Is it truly a "binary" requirement? Yes 4. If yes, is the VSL assignment consistent with other binary requirement assignments? It's a little inflated as being Severe 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? It's OK for the interim 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – COM-001-2 Telecommunications Requirement 4: Each Distribution Provider and Generation Operator shall have telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. Proposed Measure: Each Distribution Provider and Generation Operator has telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. Attributes of the requirement Binary "has" telecomm with TOP and BA Timing Omission Communication X Quality Other Discussion – Telecommunication Facilities is ambiguous and is not included in the NERC glossary of terms – the CEDRP recommend deleting the word "facilities" from the requirement and measure and leaving it just as "telecommunications" with its TOP and BA . SDT Proposed Lower VSL: N/A CEDRP Proposed Lower VSL: No change SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: No change SDT Proposed High VSL: N/A CEDRP Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority OR Transmission Operator for the exchange of Interconnection and operating information. SDT Proposed Severe VSL: The Distribution Provider or Generation Operator failed to have telecommunications facilities with its Transmission Operator and Balancing Authority CEDRP Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority AND Transmission Operator for the exchange of Interconnection and operating information. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? Mostly 3. Is it truly a "binary" requirement? Mostly 4. If yes, is the VSL assignment consistent with other binary requirement assignments? Yes 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes, considering the wording of the requirement as written. More specifically, the word "have" as used in the requirement is a bit vague. A better choice could have been, "established and maintains." 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard: COM-002-3 Communications and Coordination Requirement 1: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall issue directives in a clear, concise, and definitive manner; shall ensure the recipient of the directive repeats the information back correctly; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. Proposed Measure: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have evidence such as voice recordings or transcripts of voice recordings to show that it issued directives in a clear, concise, and definitive manner; ensured the recipient of the directive repeated the information back correctly; and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings. Attributes of the requirement: Binary Timing Omission Communication X Quality X Other SDT Proposed Lower VSL: None CEDRP Proposed Lower VSL: No Comment SDT Proposed Moderate VSL: The responsible entity provided a clear directive in a clear, concise and definitive manner and required the recipient to repeat the directive, but did not acknowledge the recipient was correct in the repeated directive. CEDRP Proposed Moderate VSL: No comment SDT Proposed High VSL: The responsible entity provided a clear directive in a clear, concise and definitive manner, but did not require the recipient to repeat the directive. CEDRP Proposed High VSL: No comment SDT Proposed Severe VSL: The responsible entity failed to provide a clear directive in a clear, concise and definitive manner when required. CEDRP Proposed Severe VSL: No comment FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? No 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes and No (Severe is for multiple occasions of not issuing directives per the requirement).

placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communications. Lastly, the requirements need to be much more specific concerning the criticality of the facilities to be tested to improve the measurability of the standard. The drafting team dropped the phrase "for the exchange of Interconnection and operating data" from the standard requirement. This deletion appears to open the application of this standard to virtually every communication path used by an RC, BA, TOP whether or not it is used for communicating real-time operating information or not. We do not believe this was the intention of the drafting team and suggest this phrase be reinserted or another one added that limits applicability to only those communication paths that support the real-time reliability of the bulk electric system. R2 - It is not clear who the "impacted entities" would be in this requirement. The SDT should consider specifying these entities. R3 - The last sentence of this requirement should be deleted. It is not a requirement, it does not add clarity, and the first sentence is very specific as to the communications covered by the requirement. R4 - This requirement makes no distinction between data and voice communications facilities and assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communication.

No

The measures should be modified per our suggested modifications in question 1.

No

The VSL should be modified per our suggested modifications in question 1. R1 VSL - The statement in the VSL that the responsible entity did not "operationally test" is too broad. It should be more specific with the language used in the requirement.

No

Purpose - The GOP is still shown in the purpose statement although it was removed from the applicability. Also, it may be better if the purpose was written more generally as "To ensure adequate communications capabilities for addressing real-time emergency conditions and ensure communications by operating personnel are effective to maintain BES reliability". Applicability - In the SDT's document "Scope of Work Assigned to the Reliability Coordination Standard Drafting Team", the team decided to not include the FERC directive to include the DP in the applicability with the following reasoning "The proposed revisions do not include the DP entity because they are not applicable." We would like clarification on this. R1 - It does not appear that the implementation plan addresses the FERC direction to consider comments from Santa Clara, FirstEnergy, and Six Cities per 693 par. 539 regarding staffing requirements. Santa Clara asks that these requirements apply "only to operating staff available on site at all times or includes repair personnel who are available only on an on-call basis". FirstEnergy asks that the "term [staffed] should not require a physical presence at all facilities at all times because some units, such as peaking units, are not staffed 24 hours a day". FirstEnergy also suggest "because nuclear units are already subject to communications requirements in their operating procedures, their compliance with NRC operating procedures should be deemed in compliance with the NERC Reliability Standards". Six Cities "states that, to avoid unnecessary staffing burdens, particularly for smaller entities, the Commission should direct NERC to clarify COM-002-2 by providing that identification of an emergency contact person on call to respond to real-time emergency conditions will constitute adequate compliance". R1 - Just as an FYI, with regard to the proposed replacement requirement statement in the implementation plan: "TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC", per recently stakeholder approved ballots, R1 of TOP-005-1 has been retired and now covered in new standard IRO-010-1. R1.1 - The existing requirement includes "through predetermined communication paths of any condition that could threaten the reliability of its area or when firm load shedding is anticipated". The proposed replacement requirements do not address the need for "predetermined communication paths".

No

The measures should be modified if our comments in question 4 result in changes to the proposed requirements.

No

The VSL should be modified if our comments in question 4 result in changes to the proposed requirements.

No

R3 - should be a sub requirement of R2. These two requirements are sequential in nature and should be measured at the same time. The VRFs and Time Horizons are the same for both requirements lending to their combination into a requirement with a sub requirement. In the VSL for R2, an entity is being penalized with a high severity level for not completely following an RC directive even though it violated safety, equipment, statutory, or regulatory

requirements. Measuring R2 and R3 at the same time allows for the process to complete prior to the measurement taking place. R3 - The "or" between "Distribution Provider" and "Purchasing-Selling Entity" should be replaced with an "and". R4 - Should be revised by adding the phrase "of the expected or actual threat" to the end of the requirement to add clarity. Existing R7 requirement - This requirement is proposed for retirement because it is redundant with IRO-014-1 R1. However, it is not clear how the existing requirement to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated" is covered in IRO-014-1 R1. IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. IRO-014-1 only vaguely covers the existing requirement R7 of IRO-001-1.

No

M2 - The word "intentional" should be added between "without" and "delay".

No

R2 VSL - The Severe VSL should include after the word directive: "that would not violate safety, equipment, statutory or regulatory requirements".

No

R2 - As written, this requirement does not clearly define the scope of the authority of the Reliability Coordinator over analysis tools. Is it the intent of the drafting team to give the RC authority over analysis tools owned and operated by the RC. Is it the intent of the drafting team to give the RC authority over the analysis tools owned and operated by the BA, TOP, GOP, etc.? Are the tools intended to be the real-time (EMS) or the off-line engineering planning analysis tools or any analysis tool used in real-time. Does this include the analysis tools used by field personnel? This requirement should be revised to specify exactly the analysis tools under the authority of the Reliability Coordinator.

No

The measures should be modified per our suggested modifications in question 10.

No

The VSL should be modified per our suggested modifications in question 10.

Yes

No

R1 - Should be revised as follows to improve readability and clarity: R1.3 - Add "Exchanging" before "Planned" R1.4 - Add "Control of voltage" at the beginning of the requirement and delete "for voltage control" at the end of the requirement. Add a new R1.7 as follows: "A process for resolution of the disagreement covered by R6 of this standard."

No

The measures should be modified per our suggested modifications in question 14.

No

The VSL should be modified per our suggested modifications in question 14.

<p>Purpose - The purpose statement does not read very well. It either needs another sentence or changes to the current sentence. The purpose of the standard is to assure proper communications, not to suggest entities need proper communications as currently written. Suggest changing to, "To assure each Reliability Coordinator, Transmission Operator and Balancing Authority develops and maintains.... Requirement R1 - What is the definition of "alternative telecommunications facilities"? Is there another requirement somewhere to have alternative telecommunications facilities – or is this a new requirement being introduced by this standard? What is the relationship, if any, between "alternative telecommunications facilities" and EOP-008-1? What is the requirement for maintaining and testing "alternative telecommunications facilities"; what does "operationally test" mean? Just because an alternative facility works when it is tested does not mean it will work during an actual failure of the primary system. Furthermore, what do we do if the "test" fails- are we still compliant? The word "ensure" needs to be changed to "assure". Requirement R2 - What does "impacted entity" mean? Requirement R3 - Why can't others use alternate language – this limits alternate language to just TOPs and BAs internal operations. TOs, GOPs, and others may want to use alternate language internally. Need to define language to be used with and between other relationships – BA to PSE, as an example. Is this a reliability issue or a certification issue? Simply state that: "Entities may use alternative language for internal operations". This will allow any entity to use alternative language for internal operations. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-001-2 applicability and requirements concerning the use of English as the approved language. Requirement R4 - Remove R4 and add DP and GO, as well as all of the other entities listed in IRO-001-2, to R1 thru R3.</p>
No
<p>General comments - Not using consistent language regarding "provide evidence" and "shall have and provide upon request evidence". Also need to add corresponding requirement number after each measure. Measure M1 - Just because an alternate facility works when it is tested does not mean it will work during an actual failure of the primary system. - what do we do if the "test" fails- are we complaint? Clarify that the requirement and measure is to "test" not "to test successfully". We may test and find that something does not work as expected.</p>

No
VSL for Requirement R1 - The VSL for R1 seems to imply that an operational test needs to have been performed in the last 90 days – this is read in conjunction with the data retention requirements. Need to clarify in the requirement how “quarter basis” is defined - is it the calendar quarter, or a rolling 90 days? In addition, the VSLs for Requirement R1 appear to violate NERC guidelines, since the Moderate, High and Severe VSLs are based upon cumulative violations of the Lower VSL.
No
Requirement R1 - As defined by Merriam Webster, the use of the word “ensure” implies virtual guarantee <the government has ensured the safety of the refugees>; while the use of the alternative word “assure” implies the removal of doubt and suspense from a person's mind. We suggest that “assure” is more appropriate than “ensure” in this context in the standards. The use of words like “clear, concise, and definitive manner” is subject to interpretation. This same language is used in the VSLs. Depending on the interpretation of this phrase, an entity could be found to be in a “Severe” violation level. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-002-3 requirement concerning repeat-backs. What is a “directive”? The regional compliance processes are having difficulty in auditing this existing standard due to lack of clarity of what constitutes a directive. "Directive" should be defined as being associated with real-time operational emergency conditions, and not ordinary day-to-day communications. Otherwise a VRF of High is not warranted.
No
The use of words like “clear, concise, and definitive manner” is subject to interpretation. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back.
No
The use of words like “clear, concise, and definitive manner” is subject to interpretation. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back.
No
Requirement R1 - What happens if the RC failed to recognize that such an event was happening as opposed to failed to take action. Is this intended to cover both scenarios? The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision development of this definition needs to go thru Due Process. The inclusion of TSPs, LSEs, and PSEs here indicates the need to include these functions in the COM-001-2 requirements concerning the use of English as the approved language. In addition, this also indicates the need for all of these listed entities to be included in COM-002-3 requirements concerning repeat-backs. The RC, TOP, and BA should not be placed in a possible non-complaint state because the counter party refuses a repeat-back AND these requirements are not applicable to the counter party. Requirement R2 - The language in the Moderate VSL of R2 recognizes another potential reason for delay in execution of a directive. Requirement 2 of the Standards needs to be modified to also recognize this potential. Requirements R2 and R3 - Clarify that entities are obligated to take action and confirm directives only from their Reliability Coordinators, not from any Reliability Coordinator. Requirements R2, R3, R4, R5 - Inconsistent use of “timing” words in the standards – “without intentional delay” and “immediately”. Suggest deleting these words due to the difficulty of determining compliance. Requirement R4 - The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process. Requirement R5 - The VRF should be “Lower” instead of “High” since the notification is that the threat has been mitigated. Also, the term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.
No
Measures M2, M4 and M5 use the terms "without delay" and "without intentional delay". Suggest deleting these words due to the difficulty of determining compliance. The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.
No
The language in R1 of the VSL is not consistent with the requirements and measures in the standard. The VSL needs to recognize that the RC may EITHER act or give direction to others to act. The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process. The language in R2 of the VSL places an entity in Moderate or High violation level even if failure is “allowed” in the standard; i.e. failure to act is due to violation of safety, regulatory, statutory requirements. The language in R2 of the VSL recognizes another potential reason for delay in execution of a directive. Requirement R2 of the Standard needs to be modified to also recognize this potential.
No

Requirement R1 - This requirement is in the wrong standard – this is a Facilities standard. This requirement belongs in another standard. Question: Is there a requirement in another standard that compels the TOPS, BAs, etc to provide the requested data? Requirement R2 - Need to clarify whose analysis tools (I assume it is the RCs analysis tools, not the analysis tools of another entity) and planned maintenance to what – is it tools, facilities, transmission, generation, etc. Depending on the answer above, this requirement is in the wrong standard – this is a Facilities standard. This requirement belongs in another standard. Question: Where is the Requirement for the RC to have analysis tools? It appears that the Requirement the RC has analysis tools have been removed in the revisions to the standard.

No

See response to Question #12 above. If the requirements are moved to another standard, the measures aren't needed here.

No

R1 VSL - As a general comment, this VSL is unclear and would be difficult to audit. This VSL uses subjective terms like "material impact" and "minimal impact". These terms are not used in the associated requirement or measure and should be removed from the VSL. This VSL uses terms like "majority, but not all"; "some, but less than a majority" which provides an opportunity for a subjective review by Compliance as to what a complete listing of data requirements should be. This term is not used in the Requirements or Measures and should be removed from the VSL. This VSL introduces a concept, data the RC needs for " ... administrative purposes, such as data reporting ...". This concept is not included in the Requirements or Measures portions of the Standard and should be removed from the VSL. This VSL should be written to simply assess whether the RC has made determination of what its data needs are and whether those needs have been communicated to the entities in the footprint. R2 VSL - This VSL clarifies the questions posed above regarding what the RC needs approval rights over. R2 needs to be modified to include this clarity. This VSL needs to clarify that the RC approval rights are for the RC's tools, not tools of other entities. The Severe level of this VSL needs to be re-written along the lines of: The RC does not have approval rights for planned maintenance or outages to its analysis tools.

Yes

No

R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly. R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous". We suggest rewriting R5 to read: In the event that an operating issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.

No

See comment #14 above. Also, Measure M5 is inconsistent with Requirement R5. It should mirror the requirement. Also, need to add the requirement number at the end of each Measure.

No

See comments #14 and #15 above - VSLs need to be revised to correspond to the revised Requirements and Measures.

Yes

No

See comment #14 above regarding re-write needed for Requirement R6 of IRO-014-2.

A precise definition of telecommunications facilities needs to be established in this standard. R2 needs to be clarified regarding impacted utilities. FERC Order 693 suggests that this standard should apply Distribution Providers (DP) along with Generation Operators (GOP). AEP acknowledges that there needs to be some level of coordination and communication between DP's and other function model entities; however, the requirements, as applied to the DP, for telecommunications with the TOP and BA might not address the current communication

paths adequately. Today, the DP usually does not communicate with the RTO (performing the BA and/or TOP function), but the DP could either communicate directly or through a joint action agency to the IOU that may serve as the TO (or maybe the TOP). As this draft is written the DP's would be required to have telecommunication facilities with the RTO in this scenario. There will likely be many exceptions to the rule that the requirements and measures create when applied to the DP. We ask that the drafting team consider the applicability, some of the current channels of communications, and options for addressing the FERC comments without creating telecommunication paths that do not make practical sense.

No

M2 needs to be clarified regarding impacted functions.

If some language is clarified, we support the revisions. R2 states that "Each TO shall notify impacted entities of the failure of its normal telecommunications facilities...". If a phone line goes down and an alternate phone line is used, it is an excessive requirement to notify the impacted entities when there is no impact upon communication or the BES. The wording should be clear that notification is only required if an alternate means of communication is necessary. A defined timeframe for notification should be added to the requirement. It is possible that the loss of telecommunication facilities can occur without the loss of a control center. So, the redundancy with EOP-008 to R4 should be clarified.
No

M2 should be changed to reflect the comments noted in Question 1 for R2.
Yes
Based upon revisions to Question 1.
Yes
Yes and No
As long as the measurement of compliance does not include proving the negative, that no directives were issued.
No
R1-High VSL-If the directive was followed and there was no threat to the BES, then a lack of repetition of the directive does not constitute a "high" VSL. Suggest that this be a low or moderate VSL.
No
R2 refers to "intentional delay". The determination of intent should be left to the VSL portion of the standard, not the requirement portion.
Yes
If some language is changed, we support the revisions. R2 has language in it that should be added to M4 to be consistent. In M2, we propose adding language "unless such actions would violate safety, statutory or regulatory requirements."
No
VSL's for R2 and R3 are not appropriate. In order to assess a situation we may not be able to immediately inform the RC of our ability to comply with the directive. The high VSL for R2 currently states that if we do not follow the directive because of safety, statutory or regulatory requirements, it is a high VSL. An entity should not be penalized for not breaking the law.
Abstain.
Abstain.
Abstain.
No
The accountability and monitoring addressed in this Standard is still required. The drafting team's intent was that the ability to monitor is part of the certification process. However, certification is to Standards, and if there is not a Standard which addresses this issue, then an entity cannot certify to it.

We suggest that a definition of telecommunications be written by the drafting team because it is not clear what all telecommunications is intended to be included. Does this requirement apply to data, voice, rtus, networks, etc? For requirement R2, e suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional. The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF. In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "... is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."
Yes and No

M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.

No

The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter." The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2. (i) R1: Suggest to revise the conditions for all levels to read "...failed to operationally test the alternative communication facilities within the last..... (ii) R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affected entities, then the second condition should be an "OR". (iii) R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time operations by itself does not constitute a violation of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.

Yes

Yes

Yes

Yes and No

New requirement R2 should omit act without intentional delay. Use of intentional implies willful disregard for compliance for the requirement. Intention should not be addressed as part of the compliance with the requirement but rather through the enforcement process once the compliance auditor has identified a violation. The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not functioning properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violate safety, equipment, statutory, or regulatory requirements. Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary. The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).

No

The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don't believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact. The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a

delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements. In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL. In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses "that, as a general rule, gradated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels". Given that it is possible to define gradated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.

No

New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.

No

Measure 1 should not focus on a letter as evidence. A more appropriate measure would be a data specification document and actual verification that data has been received. The letter or equivalent is only needed if data has not been supplied. Demonstration of the actual receipt the data would be easy.

No

For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document. We suggest that the VSLs should be: Severe: The RC did not determine its data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. R2 VSLs are not needed per paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.

No

No

Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A. Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary? Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be addressed per R1.1. R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm. As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.

No

Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. There should be the single measurement to verify the Operating Processes, Procedures, and Plans have been developed and address the sub-requirements. This really points out the problem with making the criteria that must be considered in the Operating Processes, Procedures, and Plans sub-requirements in the first place. They aren't requirements of any sort. They represent criteria. The drafting team should consider making them a bulleted list without the Rs, then the drafting team won't feel compelled to write sub-measures that don't measure anything.

No

For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed. We don't agree with the VSLs in R4 since we believe R4 should be struck. The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.

Yes

Yes

We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-2.

## Consideration of Comments on Set of Reliability Coordination Standards (Project 2006-06)

The Reliability Coordination Standards Drafting Team (RC SDT) thanks all commenters who submitted comments on the set of Reliability Coordination Standards. These standards were posted for a 45-day public comment period from August 5, 2008 through September 16, 2008. Stakeholders were asked to provide feedback on the standards through a special electronic standard comment form. There were 29 sets of comments, including comments from more than 70 different people from approximately 50 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

The following standards remain within the scope of this project:

- COM-001-2 — Communications
- COM-002-3 — Communication and Coordination
- IRO-001-2 — Reliability Coordination — Responsibilities and Authorities
- IRO-002-2 — Reliability Coordination — Facilities
- IRO-005-1 — Reliability Coordination — Current Day Operations
- IRO-014-2 — Coordination among Reliability Coordinators
- IRO-015-1 — Notifications and Information Exchange between Reliability Coordinators
- IRO-016-1 — Coordination of Real-time Activities between Reliability Coordinators

The RC SDT has revised some of the requirements, measures, violation risk factors and violation severity levels for COM-001, COM-002, and IRO-001, and IRO-014 based on the comments received. A summary of the drafting team's consideration of comments follows:

### Requirements, Measures and VSLs in COM-001-2

**Requirements:** The RC SDT received several comments regarding the intent of the term "telecommunications facilities". For COM-001-2, the RC SDT envisions telecommunications to be voice or message communication between operating personnel. The standard has been renamed "Communications" and the term "telecommunications facilities" was replaced with "interpersonal communications capabilities" throughout the standard to better reflect the intent of the RC SDT.

We also received comments regarding the applicability of the standard that suggested adding the other entities listed in IRO-001 (Transmission Service Provider, Load-serving Entity and Purchasing-Selling Entity). The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the Reliability Coordinator ...either directly or through other entities (e.g. – a Distribution Provider may receive a directive from the Transmission Operator who received it from the Reliability Coordinator). We have not expanded the applicability as suggested as we feel that this expands the standard beyond the reliability intent. The RC SDT contends that the addition of the Transmission Service Provider, Load-Serving Entity and Purchasing Selling Entity to COM-001 adds no reliability benefit as the interactions with these entities are commercial in nature. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity. The SDT did, however add the Transmission Service Provider, Load-serving Entity and Purchasing-Selling Entity to the list of entities in R3 that must use English Language for inter-entity communications.

| Other commenters had concerns with regard to R2 and the intent with regard to length of outages. The requirement was revised as:

**R2.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its their normal interpersonal communications capabilities-telecommunications facilities, and verify the alternate means of telecommunications are functional.

The informational (last) sentence of R3 was removed per stakeholder suggestions:

**R3.** Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. ~~Transmission Operators and Balancing Authorities may use an alternate language for internal operations.~~

**Measures:** Commenters suggested general as well as specific revisions to the measures. One general comment suggested making the language consistent among the measures regarding evidence. M1-M3 were revised to include the phrase “shall have and provide upon request evidence that ...”.

Several commenters suggested revisions to M3. The RC SDT revised M3 based on the comments received suggesting that the applicability be expanded and added the Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-selling Entity, and Load-serving Entity to the measure. Several entities commented that M3 did not match R3 which included an explanatory sentence that allowed an entity to use a language other than English for its internal communications. The informational second sentence was removed from Requirement R3, thus eliminating the “disconnect” between the requirement and the measure. All measures were revised as necessary to reflect revisions to requirements.

**VSLs:** The RC SDT made revisions to the VSL’s based on the comments received and also to reflect revisions to the associated requirements. The SDT received comments that the VSLs for R1 and R2 were based on multiple violations rather than a single violation and revised the VSLs to reflect a single violation, which is one of FERC’s guidelines for VSLs.

### **Requirements, Measures and VSLs in COM-002-3**

The work of the IROL SDT resulted in the retirement of R1 from the standard. The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements were revised to:

**R1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall require the recipient of the directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. *[Violation Risk Factor: High][Time Horizon: Real-Time]*

**R2.** Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall repeat the intent of the directive back to the issuer of the directive. *[Violation Risk Factor: High][Time Horizon: Real-Time]*

The purpose statement was also revised to reflect the revisions to the standard: “To ensure communications by operating personnel are effective.”

The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission

Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The measures were revised to:

- M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall have evidence such as voice recordings or transcripts of voice recordings to show that it required the recipient of the directive to repeat the intent of the directive back; and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings.
- M2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall have evidence such as voice recordings or transcripts of voice recordings to show that it repeated the intent of the directive back to the issuer of the directive.

VSLs: The RC SDT received comments recommending revisions to the VSLs based on revisions to the requirements and measures. The RC SDT did this and created new VSLs for new Requirement R2.

#### **Requirements, Measures and VSLs in IRO-001-2**

The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring delay time.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This would obviate the need for providing a measure for “intent”, but still maintain the reliability intent of the original requirement.

The VSLs were revised to reflect revisions to the requirements as well as the comments of stakeholders. Several comments suggested that there was no fundamental difference between the RC “acting” or “directing actions”. The RC SDT agreed and removed the High VSL for R1 and revised the Severe VSL accordingly. Other commenters suggested removing the High VSL from R2 as the VSL contradicted the requirement. The RC SDT agreed and removed the VSL.

#### **Requirements, Measures and VSLs in IRO-002-2**

Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired IRO-002-2 Requirement R1. The team also received concern about eliminating the requirement to monitor frequency. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability. The team declined to delete R2 (Reliability Coordinator veto over analysis tool outages) as it was a specific recommendation from the 2003 Blackout report. This requirement was revised and moved into IRO-001-2 as R6.

#### **Retirement of IRO-005-1**

Several commenters had concerns around removing the requirement to monitor frequency (IRO-005-1 R8). The intent of this monitoring activity was incorporated into IRO-002-2, R1. Other commenters had concerns with the removal of other monitoring requirements in the standard. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity

associated with any attempt to measure “Monitoring.” It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification process requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.

**Requirements, Measures and VSLs in IRO-014-2**

Several commenters expressed concerns with the term “impacted” and suggested replacing this with “other”. The RC SDT believes “impacted” directly relates to the purpose statement. The original wording of “one or more other” is vague and difficult to measure. Using the word “other” presents a similar situation. The RC SDT chose to use the word “impacted” to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous Reliability Coordinators to have “Reliability Coordinator Agreements”, but to have Procedures, Processes, or Plans with impacted Reliability Coordinators. Other commenters suggested striking the term “as a minimum” in R1 and the RC SDT agrees and has modified R1 accordingly.

Some commenters did not agree with the wording of the two new requirements in IRO-014 that were formerly in IRO-016. The SDT modified and subdivided the requirements into four requirements (R5 – R8) shown below:

- R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
- R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
- R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
- R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

Several commenters suggested that the High and Severe VSLs for R2 contradicted the requirement. The RC SDT agreed and removed the “nots” from the VSLs. Several commenters had suggested revisions for the VSLs for R6, which was imported from IRO-016. VSLs were changed to support the revised requirements.

**IRO-015-2**

Stakeholders agree with the proposal to move the requirements into IRO-014-2 and retire IRO-015 as a separate standard.

**IRO-016-1**

Stakeholders agree with the concept of moving the requirements of IRO-016-1 into IRO-014-2. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements are listed above in IRO-014-2 summary.

**Implementation Plan - Proposed Effective Dates**

The RC SDT received comments that COM-001-2, R5 should have an effective date immediately upon regulatory approval. The RC SDT agrees and will request an effective date that is the first possible effective date – the first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at [gerry.adamski@nerc.net](mailto:gerry.adamski@nerc.net). In addition, there is a NERC Reliability Standards Appeals Process.<sup>1</sup>

1. Do you agree with the revisions to the Requirements in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

**Summary Consideration:** The RC SDT received several comments regarding the intent of the term “telecommunications facilities”. For COM-001-2, the RC SDT envisions telecommunications to be voice or message communication between operating personnel. The standard has been renamed “Communications” and the term “telecommunications facilities” was replaced with “interpersonal communications capabilities” throughout the standard to better reflect the intent of the RC SDT. Based on stakeholder comments, R1 was changed as follows:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis ~~at a minimum,~~ alternative [interpersonal telecommunications facilities capabilities used for communicating real-time operating information.](#) ~~to ensure the availability of their use when normal telecommunications facilities fail. If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities.~~

We also received comments regarding the applicability of the standard that suggested adding other entities listed in IRO-001. The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the RC...either directly or through other entities (e.g. – a Distribution Provider may receive the directive from the Transmission Operator who received it from the Reliability Coordinator). We have not expanded the applicability of R1 to include the TSP, LSE and PSE as suggested as we feel that this expands the standard beyond the reliability intent. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity. The TSP, LSE and PSE were, however, added to R3 to add these entities to the list of entities that must use the English language when exchanging inter-entity information.

Other commenters had concerns with regard to R2 and the intent with regard to length of outages. The requirement was revised as follows:

R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities [within 60 minutes of the detection](#) of ~~the a~~ failure [\(30 minutes or longer\)](#) of its normal [interpersonal tele](#)communications [facilities capabilities.](#) ~~, and shall verify that alternate means of telecommunications are functional.~~

The TSP, LSE and PSE were added to the list of responsible entities and the informational (last) sentence of R3 was removed per stakeholder suggestions:

R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, ~~Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity,~~ and Distribution Provider shall use English as the

language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. ~~Transmission Operators and Balancing Authorities may use an alternate language for internal operations.~~

Organization	Question 1:	Question 1 Comments:
AEP	No	<p>A precise definition of telecommunications facilities needs to be established in this standard.</p> <p>R2 needs to be clarified regarding impacted utilities. FERC Order 693 suggests that this standard should apply Distribution Providers (DP) along with Generation Operators (GOP). AEP acknowledges that there needs to be some level of coordination and communication between DPs and other function model entities; however, the requirements, as applied to the DP, for telecommunications with the TOP and BA might not address the current communication paths adequately. Today, the DP usually does not communicate with the RTO (performing the BA and/or TOP function), but the DP could either communicate directly or through a joint action agency to the IOU that may serve as the TO (or maybe the TOP). As this draft is written the DPs would be required to have telecommunication facilities with the RTO in this scenario. There will likely be many exceptions to the rule that the requirements and measures create when applied to the DP. We ask that the drafting team consider the applicability, some of the current channels of communications, and options for addressing the FERC comments without creating telecommunication paths that do not make practical sense.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>COM-001-2 has been renamed “Communications”. The RC SDT envisions COM-001-2 as referring to voice or text communications only. We have revised the term “telecommunications facilities” to “interpersonal communications capabilities” to better reflect the intent.</p> <p>In R2, the phrase, “impacted entities” refers to any entity with whom the TC, TOP or BA has lost interpersonal communications capabilities. The requirements were written to address the differences in any entity’s facility needs allowing for adequate flexibility to incorporate cost effective solutions as well as accommodate future technologies (FERC Order 693 directives).</p>		
ElectriCities of North Carolina, Inc.	No	<p>We are a joint action agency registered on behalf of our member municipalities, who are all TDUs, neither own nor operate any Bulk Electric System facilities, and perform no real-time operations or operations planning for the BES. There are currently other standards that already apply to us that require us to have processes and means to communicate with our RC, BA, TOP, etc. The proposed modifications to this standard would now make our members subject to this standard as well, based</p>

Organization	Question 1:	Question 1 Comments:
		<p>on the DP registration designation. Given that, we believe there needs to be additional clarification of specifically what type of "telecommunications facilities" are required to be considered compliant with this standard. Maybe in the past when this standard applied to TOPs, BAs, and RCs, it was intuitive what type of telecommunications facilities they needed to communicate with each other. However, when you bring in small DPs, it doesn't seem so clear. Obviously we already communicate with our TOP and BA, and have done so for years. As written, the standard is ambiguous in terms of what more, if anything, we would have to put in place to satisfy this standard.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or text communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" to better reflect the intent. The purpose statement is revised as:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>The requirement R4 was written to meet a FERC directive with respect to COM-001. The requirement states:</p> <p>Each Distribution Provider and Generation Operator shall demonstrate the existence of its interpersonal communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p> <p>Compliance with NERC requirements can be achieved through agreements with other entities to meet the intent of the requirement. The RC SDT can not address compliance issues, as this is the scope of NERC Compliance.</p>		
US Army Corps of Engineers, Northwestern Division	No	R3 needs to have the last sentence revised to allow the Generator Operator and Distribution Provider to use an alternate language for internal operations.
<p><b>Response:</b> The RC SDT thanks you for your comment. The requirement and measure were revised to delete the last sentence as it was not a requirement, but only information.</p>		
US Bureau of Reclamation	No	Purpose Distribution Providers and Generator Operators were added to the applicability; the Purpose should be revised to reflect that.
<p><b>Response:</b> The RC SDT thanks you for your comment. The Purpose Statement was revised to:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p>		

Organization	Question 1:	Question 1 Comments:
CU of Springfield	No	<p>City Utilities of Springfield, Missouri (CU) supports the effort of the drafting team to add Distribution Providers and Generator Operators to the "Applicability" section, the change in language regarding testing of alternate telecommunication facilities and the future effort to move COM-001-2 R3 to the new COM-003-1 standard.</p> <p>However, it is still necessary to define all parties that are responsible for having "adequate and reliable telecommunication facilities" and to require them to have both primary and backup telecommunication facilities. Since this standard is designed to address telecommunication facilities, any redundancy that exists should be removed from other standards instead. The proposal from the drafting team to remove all of the language from COM-001-1 R1 will create a gap in responsibility, since none of the standards mentioned in the Implementation Plan specifically require a RC, BA or TOP to have these facilities. It is the opinion of CU that you have defined the parties that need to communicate "Interconnection and operating information" in IRO-001-2, where a BA, TOP, GOP, TSP, LSE, DP and PSE receive and comply with directives from the RC. Therefore to maintain consistency are not all of these entities expected to have "adequate and reliable" telecommunication facilities?</p> <p>CU suggests that COM-001-2 R4 be moved to R1 and standard language changed to say:</p> <p>Purpose: Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity needs adequate and reliable telecommunications facilities internally and with others in the Reliability Coordinator's area, for the exchange of Interconnection and operating information necessary to maintain reliability.</p> <p>R1. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall have primary and backup telecommunications facilities for the exchange of Interconnection and operating information.</p> <p>R2. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>R3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling</p>

Organization	Question 1:	Question 1 Comments:
		<p>Entity shall notify impacted entities of the failure of its normal telecommunications facilities, and shall verify that alternate means of telecommunications are functional.</p> <p>R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.</p> <p>The end result will be a standard that requires all applicable entities to:</p> <ul style="list-style-type: none"> <li>A. Have primary and backup telecommunication facilities.</li> <li>B. Test the telecommunication facilities.</li> <li>C. Utilize the telecommunication facilities.</li> </ul>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>Applicability: You are correct with regards to IRO-001 and the entities involved in carrying out directives. The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the RC...either directly or through other entities (e.g. – a Distribution Provider may receive the directive from the Transmission Operator who received it from the Reliability Coordinator). The RC SDT has changed the name of this standard to “Communications and revised the Purpose Statement to:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>We have replaced the term “Telecommunications Facilities” with “interpersonal communications capabilities” to better reflect the intent of the standard. We have not expanded the applicability of R1 or R2 as you suggest as we feel that this expands the standard beyond the reliability intent. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity. The SDT did, however, expand the applicability for the requirement to use English language to include the TSP, LSE and PSE in support of your suggestion.</p>		
Northern California Power Agency	No	R3 should include in the last sentence that the Generator Operator and Distribution Provider may use alternate language for internal operations.
<p><b>Response:</b> The RC SDT thanks you for your comment. The requirement and measure were revised to delete the last sentence since it was informational only and not a requirement.</p>		

Organization	Question 1:	Question 1 Comments:
<p>MRO NERC SDT Standards Review Subcommittee</p>	<p>No</p>	<p>The new R2 requirement is too verbose. We suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional. This clause is similar to the old requirement one that the drafting team appropriately struck.</p> <p>We tend to agree that striking R1 makes sense due to the drafting team's reasoning. However, we are not clear why the new R4 is necessary then. If the drafting team does not believe R1 is necessary shouldn't they respond to the FERC directive with the same reason why R4 is not really necessary?</p> <p>The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF.</p> <p>In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "... is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."</p>
<p><b>Response:</b> The RC SDT thanks you for your comments.</p> <p>R2: The RC SDT deleted the final clause as you suggest.</p> <p>R4: This was added because of the FERC directive:</p> <p>Include generator operators and distribution provider as applicable entities and include requirements for their telecommunications.</p> <p>VRF: We concur and have modified the VRF.</p>		

Organization	Question 1:	Question 1 Comments:
<p>Data Retention: We have revised the Data Retention to section to comport with your comment.</p>		
<p>Southern Company Transmission</p>	<p>No</p>	<p>1.1 - In R1, we suggest that "operationally test by way of operator action" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities".</p> <p>1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. The VSL should be consistent with the language of the requirement. A very short, insignificant telecom outage with no notification could result in a severe violation as the requirement is presently written and VSL's applied.</p> <p>1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated.</p> <p>1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>1.1: The RC SDT removed the word "operationally" from the requirement. The requirement was revised to remove the "assurance" part as it does not add to the requirement. We have changed to term "telecommunications facilities" to "interpersonal communication capabilities" to better reflect the intent of the standard.</p> <p>1.2: We have revised the requirement to place time bounds on outages that require notification. The new R2 is:                      Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>1.3: The RC SDT contends that the addition of the TSP, LSE and PSE to R1 and R2 of COM-001 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3.</p> <p>1.4: We have removed the informational (last) sentence as it is not a requirement. Others can use an alternate language, but the entities must agree to do so. This is in the first sentence of the requirement which states "Unless agreed to otherwise..." R3 was revised so that the last</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 1:	Question 1 Comments:
sentence, which was explanatory and did not include any required performance, was deleted.		
Progress Energy Carolinas	No	<p>R1 - The proposed requirement R1 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>R2 - The proposed requirement R2 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>R4 - The proposed requirement R4 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or message communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" throughout the standard to better reflect the intent.</p>		
NPCC	No	<p>There is inconsistency between R3 and M3. In R3, there is a provision for agreement between entities (RC, TOP, BA, GOP, DP) to use a language other than English in their communications. In M3, that option is not presented. M3 should reflect what is written in R3.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The provision that you mention was removed from the requirement since it is not a requirement, but an informational statement. The English language Requirement begins with the phrase "Unless agreed to otherwise...". This allows for the use of other languages where agreed to.</p>		
ISO New England Inc.	No	<p>ISO New England does not support the removal of Requirement 1.</p> <p>Also, we believe Requirement 3 is written such that it may pose an unnecessary requirement on the</p>

Organization	Question 1:	Question 1 Comments:
		Hydro Quebec area given the terminology "inter-entity" and support further clarification.
<p><b>Response:</b> The RC SDT thanks you for your comment. The majority of commenters agreed with the removal of R1. The last sentence of the requirement 3 was deleted as it was an informational statement only. The English language Requirement begins with the phrase "Unless agreed to otherwise..." This allows for the use of other languages where agreed to.</p>		
FirstEnergy	No	<p>Purpose - The purpose does not include the GOP and DP entities. It may be better if the purpose was written more generally as "To ensure adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information necessary to maintain BES reliability".</p> <p>R1 - This requirement makes no distinction between data and voice communications facilities and assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communications. Lastly, the requirements need to be much more specific concerning the criticality of the facilities to be tested to improve the measurability of the standard. The drafting team dropped the phrase "for the exchange of Interconnection and operating data" from the standard requirement. This deletion appears to open the application of this standard to virtually every communication path used by an RC, BA, TOP whether or not it is used for communicating real-time operating information or not. We do not believe this was the intention of the drafting team and suggest this phrase be reinserted or another one added that limits applicability to only those communication paths that support the real-time reliability of the bulk electric system.</p> <p>R2 - It is not clear who the "impacted entities" would be in this requirement. The SDT should consider specifying these entities.</p> <p>R3 - The last sentence of this requirement should be deleted. It is not a requirement, it does not add clarity, and the first sentence is very specific as to the communications covered by the requirement.</p> <p>R4 - This requirement makes no distinction between data and voice communications facilities and</p>

Organization	Question 1:	Question 1 Comments:
		<p>assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communication.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p><b>Purpose:</b> To better reflect the intent of the standard, we have modified the Purpose Statement to: To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p><b>R1:</b> The standard has been revised to remove the term “telecommunications facilities” and replace it with “interpersonal communications capabilities”. This reflects the intent of the standard, which is to have voice and message communication capabilities. R1 has been revised as: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test, on a quarterly basis, alternative interpersonal communications capabilities used for communicating real-time operating information. If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p> <p><b>R2:</b> The term “impacted entities” indicates those entities with which you have lost interpersonal communications capabilities. R2 has been revised to: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p><b>R3:</b> We concur and have deleted the sentence.</p> <p><b>R4:</b> COM-001-2 only covers voice and message communications and R4 has no provision for primary / alternate capabilities.</p>		
Duke Energy	No	<p>Purpose - The purpose statement does not read very well. It either needs another sentence or changes to the current sentence. The purpose of the standard is to assure proper communications, not to suggest entities need proper communications as currently written. Suggest changing to, “To</p>

Organization	Question 1:	Question 1 Comments:
		<p>assure each Reliability Coordinator, Transmission Operator and Balancing Authority develops and maintains”.</p> <p>Requirement R1 - What is the definition of "alternative telecommunications facilities"? Is there another requirement somewhere to have alternative telecommunications facilities — or is this a new requirement being introduced by this standard? What is the relationship, if any, between "alternative telecommunications facilities" and EOP-008-1? What is the requirement for maintaining and testing "alternative telecommunications facilities"; what does “operationally test” mean Just because an alternative facility works when it is tested does not mean it will work during an actual failure of the primary system. Furthermore, what do we do if the “test” fails — are we still compliant? The word “ensure” needs to be changed to “assure”.</p> <p>Requirement R2 - What does "impacted entity" mean?</p> <p>Requirement R3 - Why can't others use alternate language — this limits alternate language to just TOPs and BAs internal operations. TOs, GOPs, and others may want to use alternate language internally. Need to define language to be used with and between other relationships — BA to PSE, as an example. Is this a reliability issue or a certification issue? Simply state that: “Entities may use alternative language for internal operations”. This will allow any entity to use alternative language for internal operations. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-001-2 applicability and requirements concerning the use of English as the approved language.</p> <p>Requirement R4 - Remove R4 and add DP and GO, as well as all of the other entities listed in IRO-001-2, to R1 thru R3.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p><b>Purpose:</b> To better reflect the intent of the standard, we have modified the Purpose Statement to:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p><b>R1:</b> “Alternative telecommunications facilities” was used in place of “redundant”. Many entities have multiple “primary facilities” which could be construed as redundant. The use of “alternative” is intended to indicate at least one primary and one other facility.</p> <p><b>R2:</b> The term “impacted entities” indicates those entities with which you have lost communications capabilities. Based on other’s comments, R2 has been revised to:</p> <p>Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of</p>		

Organization	Question 1:	Question 1 Comments:
		<p>a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>R3: The second sentence was removed as it was a statement and not a requirement. Others can use an alternate language, but the entities must agree to do so. This is in the first sentence of the requirement which states "Unless agreed to otherwise..."</p> <p>R4: The DP and GOP were added to this standard per a FERC directive (paragraph 509 of Order 693). Putting these entities in R1-R3 would add requirements not envisioned by the directive and provide no additional reliability benefit. The RC SDT contends that the addition of the TSP, LSE and PSE (from IRO-001) to COM-001 R1 and R2 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3.</p>
<p>ISO/RTO Council Standards Review Subcommittee</p>	<p>Yes and No</p>	<p>We suggest that a definition of telecommunications be written by the drafting team because it is not clear what all telecommunications is intended to be included. Does this requirement apply to data, voice, rtus, networks, etc?</p> <p>For requirement R2, we suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional.</p> <p>The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF.</p> <p>In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "...is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."</p>

Organization	Question 1:	Question 1 Comments:
<p><b>Response:</b> The RC SDT thanks you for your comment. The intent of this standard is reflected in the revised purpose statement:                      To ensure that operating entities have adequate interpersonal communication capabilities.                      COM-001-2 only deals with voice or message communications. We have renamed the standard to “Communications” and replaced the term “telecommunications facilities’ with “interpersonal communications capabilities” throughout the standard.                      R2: We have revised R2 as you suggest. R2 has been revised to:                      Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i>                      VRF: We concur and have modified the VRF.                      Data Retention: We have revised the Data Retention as you suggested.</p>		
<p>SERC OC Standards Review Group</p>	<p>Yes and No</p>	<p>1.1 - In R1, we suggest that "operationally test" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities".                      1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation.                      1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated.                      1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.                      1.1: The RC SDT removed the word “operationally” from the requirement. The requirement was revised remove the “assurance” part as it does not add to the requirement. We have changed to term “facilities” to “capabilities” as you suggest.</p>		

Organization	Question 1:	Question 1 Comments:
		<p>1.2: We have revised the requirement to place time bounds on outages that require notification. The new R2 is:                      Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>1.3: The RC SDT contends that the addition of the TSP, LSE and PSE to COM-001 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3.</p> <p>1.4: We have removed the informational (last) sentence as it is not a requirement. Others can use an alternate language, but the entities must agree to do so. This is in the first sentence of the requirement which states "Unless agreed to otherwise..."</p>
Buckeye Power, Inc.	Yes and No	What constitutes "telecommunications facilities"?
		<p><b>Response:</b> The RC SDT thanks you for your comment. COM-001-2 deals with voice or message communications only and has been renamed "Communications. We have replaced the phrase "telecommunications facilities" with "interpersonal communications capabilities" throughout the standard to better reflect the intent. The purpose statement has been revised to                      To ensure that operating entities have adequate interpersonal communication capabilities.</p>
American Transmission Company	Yes and No	<p>If some language is clarified, we support the revisions. R2 states that "Each TO shall notify impacted entities of the failure of its normal telecommunications facilities". If a phone line goes down and an alternate phone line is used, it is an excessive requirement to notify the impacted entities when there is no impact upon communication or the BES. The wording should be clear that notification is only required if an alternate means of communication is necessary. A defined timeframe for notification should be added to the requirement. It is possible that the loss of telecommunication faculties can occur without the loss of a control center. So, the redundancy with EOP-008 to R4 should be clarified.</p>
		<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>The RC SDT believes that entities should contact others when their normal communication capability is lost. For example, the normal phone line could be cut and someone trying to contact that entity may only get a busy signal and have no idea that alternate communications is necessary.</p> <p>We have revised the requirement to place time bounds on outages that require notification as you suggest. The new R2 is:                      Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of</p>

Organization	Question 1:	Question 1 Comments:
<p>a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>Based on these revisions, we do not believe further clarification with regards to EOP-008 is necessary.</p>		
PJM Interconnection	Yes	We agree with the revisions, but recommend adding applicability to Distribution Providers and Generator Operators for data retention requirements.
<p><b>Response:</b> The RC SDT thanks you for your comment. The data retention requirements have been revised as you suggested.</p>		
Entergy Services, Inc	Yes	The drafting team should consider expanding the second sentence of R3 to apply to internal communications of any affected entity not just BAs and TOPs.
<p><b>Response:</b> The RC SDT thanks you for your comment. We concur with your sentiment and the second sentence has been removed as it was not a requirement, but an informational statement. Use of an alternate language by any entity is allowed under the requirement which begins with the phrase: "Unless agreed to otherwise..." The requirement has been revised to:</p> <p>R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>		
Salt River Project	Yes	
Manitoba Hydro	Yes	
Ameren	Yes	
Independent Electricity System Operator - Ontario	Yes	
Reliability Coordinator	Yes	

**Comments for Set of Reliability Coordination Standards (Project 2006-06)**

---

<b>Organization</b>	<b>Question 1:</b>	<b>Question 1 Comments:</b>
Comment Working Group		
PPL Supply Group	Yes	
Bonneville Power Administration	Yes	

2. Do you agree with the revisions to the Measures in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

**Summary Consideration:** Commenters suggested general as well as specific revisions to the measures. One general comment suggested making the language consistent among the measures regarding evidence. M1-M3 were revised to include the phrase “shall have and provide upon request evidence that ...”.

The revisions to M1 are shown below:

M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request, evidence that could include, but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, it operationally tested, on a quarterly basis-at a minimum, alternative interpersonal telecommunications facilities-capabilities used for communicating real-time operating information. to ensure the availability of their use when normal telecommunications facilities fail. If the test was unsuccessful, the entity shall have and provide upon request evidence that it developed a mitigation plan to restore the interpersonal communications capabilities.

Several commenters suggested revisions to M3. The RC SDT revised M3 based on the comments received suggesting that the applicability be expanded to include Generator Operators, Transmission Service Providers, Load-Serving Entities, Purchasing-Selling Entities, and Distribution Providers. Several entities commented that M3 did not match R3 which included an explanatory sentence that allowed an entity to use a language other than English for its internal communications. The informational second sentence was removed from Requirement R3, thus eliminating the “disconnect” between the requirement and the measure.

The revisions to M3 are shown below:

M3. ~~The Each~~ Reliability Coordinator, Transmission Operator or Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language.

M4 was revised based on stakeholder comments as follows:

M4. Each Distribution Provider and Generation Operator shall demonstrate the existence of ~~has-its tele~~interpersonal communications ~~facilities~~capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.

All measures were revised as necessary to reflect revisions to requirements.

Organization	Question 2:	Question 2 Comments:
NPCC	No	There is inconsistency between R3 and M3. In R3, there is a provision for agreement between entities (RC, TOP, BA, GOP, DP) to use a language other than English in their communications. In M3, that option is not presented. M3 should reflect what is written in R3.
<p>Response: The RC SDT thanks you for your comment. The informational second sentence was removed from the requirement so there is no longer a disconnect between the requirement and the measure.</p>		
CU of Springfield	No	<p>CU suggests that COM-001-2 M4 be moved to M1 and language in the measures changed to:</p> <p>M1. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall have evidence of primary and backup telecommunication facilities.</p> <p>M2.Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall provide evidence that it operationally tested, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional.</p> <p>M4. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall have and provide upon request evidence that could include, but is not limited to operator</p>

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 2:	Question 2 Comments:
		logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES.
<p>Response: The RC SDT thanks you for your comment. We have revised the requirements for COM-001 based on the comments received from all stakeholders. We also revised the measures to reflect the new verbiage of the requirements.</p> <p>We have replaced the term “Telecommunications Facilities” with “interpersonal communications capabilities” to better reflect the intent of the standard.</p> <p>The RC SDT contends that the addition of the TSP, LSE and PSE to COM-001 to R1 and R2 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity.</p>		
Independent Electricity System Operator - Ontario	No	M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.
<p>Response: The RC SDT thanks you for your comment. The informational second sentence was removed from the requirement so there is no longer a requirement for evidence regarding this.</p>		
Reliability Coordinator Comment Working Group	No	On Measure 3 need to remove the word "all" in reference to voice logs. Measure needs to include evidence of concurrence for using a language other than English
<p>Response: The RC SDT thanks you for your comment. The informational second sentence was removed from the requirement so there is no longer a requirement for evidence regarding this.</p>		
Northern California Power Agency	No	M3 should include Generator Operator and Distribution Provider in the applicability.
<p>Response: The RC SDT thanks you for your comment. The measure has been revised to include the Generator Operator and Distribution Provider.</p>		

**Comments for Set of Reliability Coordination Standards (Project 2006-06)**

Organization	Question 2:	Question 2 Comments:
ElectriCities of North Carolina, Inc.	No	See comments on Question 1
<p><b>Response:</b> Please see response to question 1.</p>		
US Army Corps of Engineers, Northwestern Division	No	M3 needs to include the GO and DP in its requirement for inter-utility communications in English.
<p><b>Response:</b> The RC SDT thanks you for your comment. The measure has been revised to include the Generator Operator and Distribution Provider.</p>		
MRO NERC SDTandards Review Subcommittee	No	M4 does not appear to be worded as a measurement. If R4 is kept, we suggest the following modification: "The Distribution Provider and Generation Operator shall demonstrate the existence of its telecommunication systems identified in R4."
<p><b>Response:</b> The RC SDT thanks you for your comment. We have revised M4 per your suggestion.</p>		
Southern Company Transmission	No	<p>2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards.</p> <p>2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation.</p> <p>2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>2.1 - The measures for this standard have all been revised per your comment.</p> <p>2.2 – The requirement for this measure has been modified to reflect time frames for notification as well as a length of time applicable to the outage. The measure has been revised accordingly.</p>		

Organization	Question 2:	Question 2 Comments:
<p>2.3 - The Data Retention section for this standard has been revised to comport with NERC Compliance guidelines. DP and GOP have been added to the measure.</p>		
ISO New England Inc.	No	See answer to #1.
<p><b>Response:</b> Please see response to question 1.</p>		
Salt River Project	No	M3 should include providing evidence of concurrence to use a language other than English. This will better align the measure with the VSL language.
<p><b>Response:</b> The RC SDT thanks you for your comment. We have revised the measure by adding the following sentence:                      If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language.</p>		
SERC OC Standards Review Group	Yes and No	<p>2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards.</p> <p>2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation.</p> <p>2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>2.1 - The measures for this standard have all been revised per your comment.</p> <p>2.2 – The requirement for this measure has been modified to reflect time frames for notification as well as a length of time applicable to the outage. The measure has been revised accordingly.</p> <p>2.3 - The Data Retention section for this standard has been revised to comport with NERC Compliance guidelines. DP and GOP have been added to the measure.</p>		

Organization	Question 2:	Question 2 Comments:
Progress Energy Carolinas	No	<p>M1 - The proposed measure M1 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>M2 - The proposed measure M2 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>M4 - The proposed measure M4 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or text communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" to better reflect the intent.</p>		
FirstEnergy	No	The measures should be modified per our suggested modifications in question 1.
<p><b>Response:</b> The RC SDT thanks you for your comment. The measures were revised based on the revisions to requirements that resulted from stakeholder comments.</p>		
Duke Energy	No	<p>General comments - Not using consistent language regarding "provide evidence" and "shall have and provide upon request evidence". Also need to add corresponding requirement number after each measure.</p> <p>Measure M1 - Just because an alternate facility works when it is tested does not mean it will work during an actual failure of the primary system. - what do we do if the "test" fails — are we complaint? Clarify that the requirement and measure is to "test" not "to test successfully". We may test and find that something does not work as expected.</p>

Organization	Question 2:	Question 2 Comments:
<p><b>Response:</b> The RC SDT thanks you for your comment. We have modified the “evidence” language for consistency. Each measure corresponds to the measure with the same number. There is a one-to-one relationship between requirements and measures – however the SDT did add the requirement numbers to ensure this is clear to all stakeholders.</p> <p>M1: We have added the following sentence to R1 and M1.</p> <p>R1: If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities.</p> <p>M1: If the test was unsuccessful, the entity shall have and provide upon request evidence that it developed a mitigation plan to restore the interpersonal communications capabilities.</p>		
AEP	No	M2 needs to be clarified regarding impacted functions.
<p><b>Response:</b> The RC SDT thanks you for your comment. The requirement, as written, has sufficient clarity regarding the impacted entities.</p>		
American Transmission Company	No	M2 should be changed to reflect the comments noted in Question 1 for R2.
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT believes that entities should contact others when their normal communication capability is lost. For example, the normal phone line could be cut and someone trying to contact that entity may only get a busy signal and have no idea that alternate communications is necessary. We have revised the requirement to place time bounds on outages that require notification. The new R2 is:</p> <p>Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>The measure reflects the new requirement.</p>		
ISO/RTO Council Standards Review Subcommittee	Yes and No	M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.
<p><b>Response:</b> The RC SDT thanks you for your comment. The measure has been revised as:</p> <p>M1: The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include,</p>		

Organization	Question 2:	Question 2 Comments:
<p>but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language.</p>		
PJM Interconnection	Yes	M4 should be revised to reflect that each Distribution Provider and Generation Operator has evidence demonstrating the functionality of telecommunications facilities with the TOP and BA for the exchange of interconnection and operating information.
<p><b>Response:</b> The RC SDT thanks you for your comment. The measure was modified as:                      Each Distribution Provider and Generation Operator shall demonstrate the existence of its interpersonal communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p>		
Buckeye Power, Inc.	Yes and No	Abstain
US Bureau of Reclamation	Yes	
Bonneville Power Administration	Yes	
Manitoba Hydro	Yes	
Ameren	Yes	
PPL Supply Group	Yes	
Entergy Services, Inc	Yes	

**3. Do you agree with the Violation Severity Levels proposed in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.**

**Summary Consideration:** The RC SDT made revisions to the VSLs based on the comments received and also to reflect revisions to the associated requirements. We received comments that the VSLs for R1 and R2 were based on multiple violations, which do not support FERC's Guideline 4 for VSLs - Guideline 4 requires that a VSL should be based on a single violation. We agreed and revised the VSLs to reflect a single violation.

Organization	Question 3:	Question 3 Comments:
Independent Electricity System Operator - Ontario	No	<p>R1: Suggest to revise the conditions for all levels to read "failed to operationally test the alternative communication facilities within the last???"</p> <p>R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affect entities, then the second condition should be an "OR".</p> <p>R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time operations by itself does not constitute a violate of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>We have revised the VSLs per your suggestions and comments from other stakeholders, and revisions made to the wording of the associated requirement.</p> <p>We have revised the VSLs per your suggestions and the revisions made to the associated requirement</p> <p>We have revised the VSLs per your suggestions.</p>		
CU of Springfield	No	Revise to reflect proposed changes above
<p><b>Response:</b> The RC SDT thanks you for your comment. The Requirement, Measures and VSLs have been revised per your and other</p>		

Organization	Question 3:	Question 3 Comments:
<a href="#">stakeholders' comments.</a>		
ElectriCities of North Carolina, Inc.	No	Depends of what is meant by "telecommunications facilities"
<p><b>Response:</b> The RC SDT thanks you for your comment. We have clarified the requirements and measures to use the term "interpersonal communications capabilities" rather than "telecommunications facilities".</p>		
MRO NERC SDTandards Review Subcommittee	No	<p>The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter."</p> <p>The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1: We have revised the VSLs per the guideline and the revised requirement.</p> <p>R2: We have revised the requirement to have time constraints for the length of an outage as well as a timeframe for notification. The VSL has been revised to reflect the revised requirement.</p>		
PJM Interconnection	No	<p>Recommend the following VSLs for R1:</p> <p>Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion.</p>

Organization	Question 3:	Question 3 Comments:
		<p>Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions.</p> <p>Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions.</p> <p>Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions.</p> <p>Recommend the following VSLs for R2:</p> <p>Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion.</p> <p>Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions.</p> <p>Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions.</p> <p>Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions.</p> <p>Recommend the following VSLs for R4:</p> <p>Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority or Transmission Operator for the exchange of Interconnection and operating information.</p> <p>Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority and Transmission Operator for the exchange of Interconnection and operating information.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p>		

Organization	Question 3:	Question 3 Comments:
<p>R1: The proposed VSLs reflect multiple violations of the requirement. Each VSL must be written for a single violation (failure to test quarterly).                      R2: The proposed VSLs reflect multiple violations of the requirement and are a duplication of the VSLs proposed for R1, not for R2.                      R4: We have revised the VSLs per your suggestion.</p>		
FirstEnergy	No	<p>The VSL should be modified per our suggested modifications in question 1.R1 VSL - The statement in the VSL that the responsible entity did not "operationally test" is too broad. It should be more specific with the language used in the requirement.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The requirement, measure and VSLs have been revised per stakeholder comments and the phrase, "operationally test" is no longer used in the standard.</p>		
Duke Energy	No	<p>VSL for Requirement R1 - The VSL for R1 seems to imply that an operational test needs to have been performed in the last 90 days — this is read in conjunction with the data retention requirements. Need to clarify in the requirement how ?quarter basis? is defined - is it the calendar quarter, or a rolling 90 days? In addition, the VSLs for Requirement R1 appear to violate NERC guidelines, since the Moderate, High and Severe VSLs are based upon cumulative violations of the Lower VSL.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The data retention was changed from three months to three years. The VSLs were revised to reflect the guidelines as you suggested. There are now 2 VSLs.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter."</p> <p>The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The</p>

Organization	Question 3:	Question 3 Comments:
		<p>drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2.</p> <p>(i) R1: Suggest to revise the conditions for all levels to read "...failed to operationally test the alternative communication facilities within the last....."</p> <p>(ii) R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. Northern California Power Agency	Yes	
Entergy Services, Inc	Yes	
Salt River Project	Yes	
US Bureau of Reclamation	Yes	

4. Do you agree with the revisions to the Requirements in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

**Summary Consideration:** The work of the IROL SDT resulted in the retirement of R1 from the standard. The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R2 (now R1) into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall ~~issue directives in a clear, concise, and definitive manner; shall ensure~~require the recipient of the verbal directive to repeats the intent of the directive back ~~information back correctly~~; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings.

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall repeat the intent of the directive back to the issuer of the directive

The purpose statement was also revised to reflect the revisions to the standard:

~~To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications and that these communications capabilities are staffed and available for addressing a real time emergency condition.~~ To ensure emergency communications by between operating personnel are effective.

Organization	Question 4:	Question 4 Comments:
Southern Company Transmission	No	4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3: 4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard. 4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2. 4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to

Organization	Question 4:	Question 4 Comments:
		<p>measure. We suggest they be replaced with "the RC shall direct".</p> <p>4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1).</p> <p>4.6 - Grammatical changes are suggested. The revised requirement reads as follows: " To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications; to ensure that these communication capabilities are staffed and available for addressing a real-time emergency condition; and to ensure effective communications by operating personnel."</p> <p>4.7 - At the Data Retention section, the reference to 'Requirement 3, Measure 3' should be consistent with the modified standard. The revised standard only has one requirement.</p> <p>4.8 - The use of calendar days in the Data Retention section is inconsistent with related standards where 'months' are used.</p>
<p><b>Response:</b> The RC SDT thanks you for your comments.</p> <p>4.2 - We have revised the purpose statement to: To ensure emergency communications between operating personnel are effective.</p> <p>4.3 – We have changed the applicability of COM-002 to match that of IRO-001.</p> <p>4.4 and 4.5 - We have separated the requirement into two requirements to ensure that the requirements are measurable and distinct. We concur with your comments and have revised the requirements to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall require the recipient of the verbal directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>4.6 - We have revised the purpose statement to: To ensure emergency communications between operating personnel are effective.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 4:	Question 4 Comments:
4.7 and 4.8 – We have updated the data retention section with the latest compliance template information.		
ISO New England Inc.	No	ISO New England believes it is inefficient to have a (temporary) Standard with only one Requirement and recommend including this Requirement in COM-001, with COM-001 renamed to "Communications."
<p><b>Response:</b> The RC SDT thanks you for your comments. Based on other stakeholder feedback, we have added applicable entities and another requirement for those entities. This standard will be retired upon adoption of COM-003-1.</p>		
US Bureau of Reclamation	No	Purpose: Since Generator Operators were deleted from the applicability; the Purpose should be revised to reflect that and include Reliability Coordinators. The language is somewhat redundant, recommend it be simplified to "To ensure Balancing Authorities, Reliability Coordinators, and Transmission Operators communicate in an effective manner."
<p><b>Response</b> The RC SDT thanks you for your comments. Several entities were added to the applicability and the purpose statement was revised to:</p> <p>To ensure emergency communications between operating personnel are effective.</p>		
FirstEnergy	No	<p>Purpose - The GOP is still shown in the purpose statement although it was removed from the applicability. Also, it may be better if the purpose was written more generally as "To ensure adequate communications capabilities for addressing real-time emergency conditions and ensure communications by operating personnel are effective to maintain BES reliability".</p> <p>Applicability - In the SDT's document "Scope of Work Assigned to the Reliability Coordination Standard Drafting Team", the team decided to not include the FERC directive to include the DP in the applicability with the following reasoning "The proposed revisions do not include the DP entity because they are not applicable." We would like clarification on this.</p> <p>R1 - It does not appear that the implementation plan addresses the FERC direction to consider comments from Santa Clara, FirstEnergy, and Six Cities per 693 par. 539 regarding staffing requirements. Santa Clara asks that these requirements apply "only to operating staff available on site at all times or includes repair personnel who are available only on an on-call basis". FirstEnergy asks that the "term [staffed] should not require a physical presence at all facilities at all times because some units, such as peaking units, are not staffed 24 hours a day". FirstEnergy also suggest "because nuclear units are already subject to communications requirements in their operating</p>

Organization	Question 4:	Question 4 Comments:
		<p>procedures, their compliance with NRC operating procedures should be deemed in compliance with the NERC Reliability Standards". Six Cities "states that, to avoid unnecessary staffing burdens, particularly for smaller entities, the Commission should direct NERC to clarify COM-002-2 by providing that identification of an emergency contact person on call to respond to real-time emergency conditions will constitute adequate compliance".</p> <p>R1 - Just as an FYI, with regard to the proposed replacement requirement statement in the implementation plan: "TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC", per recently stakeholder approved ballots, R1 of TOP-005-1 has been retired and now covered in new standard IRO-010-1.R1.1 - The existing requirement includes "through predetermined communication paths of any condition that could threaten the reliability of its area or when firm load shedding is anticipated". The proposed replacement requirements do not address the need for "predetermined communication paths".</p>
<p><b>Response:</b> The RC SDT thanks you for your comments.</p> <p><b>Purpose:</b> Several entities were added to the applicability and the purpose statement was revised to: To ensure emergency communications between operating personnel are effective.</p> <p><b>Applicability:</b> The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity.</p> <p><b>R1:</b> The RC SDT considered these comments when developing the proposed COM-001-2 specification requirements. We have revised the requirement to indicate that directives being issued relate to real-time operating emergencies. We do not feel that this would place an undue burden on any entity with respect to staffing as the requirement makes no mention of staffing.</p> <p><b>R1 FYI:</b> Thank you for the FYI.</p>		
Duke Energy	No	<p>Requirement R1 - As defined by Merriam Webster, the use of the word "ensure" implies virtual guarantee &lt;the government has ensured the safety of the refugees&gt;; while the use of the alternative word "assure" implies the removal of doubt and suspense from a person's mind. We suggest that "assure" is more appropriate than "ensure" in this context in the standards. The use of words like "clear, concise, and definitive manner" is subject to interpretation. This same language is used in the VSLs. Depending on the interpretation of this phrase, an entity could be found to be in a "Severe" violation level. The issuer of the directive should not be subject to non-compliance if the recipient of</p>

Organization	Question 4:	Question 4 Comments:
		<p>the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-002-3 requirement concerning repeat-backs. What is a “directive”? The regional compliance processes are having difficulty in auditing this existing standard due to lack of clarity of what constitutes a directive. "Directive" should be defined as being associated with real-time operational emergency conditions, and not ordinary day-to-day communications. Otherwise a VRF of High is not warranted.</p>
<p><b>Response:</b> The RC SDT thanks you for your comments. We concur with your comments and have revised the requirements to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall require the recipient of the verbal directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
Northern California Power Agency	Yes and No	Remove Generator Operator from the Purpose Statement. The re-written standard no longer applies to GOP
<p><b>Response:</b> The RC SDT thanks you for your comments. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity.</p> <p>We have revised the purpose statement to: “To ensure emergency communications between operating personnel are <b>effective</b>[ML1].”</p>		
SERC OC Standards Review Group	Yes and No	<p>4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3:</p> <p>4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard.</p> <p>4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2.</p> <p>4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to</p>

Organization	Question 4:	Question 4 Comments:
		measure. We suggest they be replaced with "the RC shall direct". 4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1).
<p><b>Response:</b> The RC SDT thanks you for your comments.</p> <p>4.2 - We have revised the purpose statement to:                      To ensure emergency communications between operating personnel are effective.</p> <p>4.3 – We have changed the applicability of COM-002 to match that of IRO-001.</p> <p>4.4 and 4.5 - We have separated the requirement into two requirements to ensure that the requirements are measurable and distinct. We concur with your comments and have revised the requirements to:</p> <p>R1. Reliability Coordinator Comment Working Group	Yes	
MRO NERC SDStandards Review Subcommittee	Yes	
Entergy Services, Inc	Yes	
Salt River Project	Yes	

5. Do you agree with the revisions to the Measures in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

**Summary Consideration:** The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements and measures were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority [that issues a verbal directive associated with real-time operational emergency conditions](#) shall ~~issue directives in a clear, concise, and definitive manner; shall ensure~~ [require](#) the recipient of the [verbal](#) directive [to repeat](#) ~~s the information intent of the directive~~ back ~~correctly;~~ and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. *[Violation Risk Factor: High][Time Horizon: Real-Time]*

[R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. \[Violation Risk Factor: High\]\[Time Horizon: Real-Time\]](#)

M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority [that issues a verbal directive associated with real-time operational emergency conditions](#) shall have evidence such as voice recordings or transcripts of voice recordings to show that it ~~required issued directives in a clear, concise, and definitive manner; ensured~~ the recipient of the [verbal](#) directive [to repeat](#) ~~ed the information intent of the directive~~ back ~~correctly;~~ and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings.

[M2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1 shall have evidence such as voice recordings or transcripts of voice recordings to show that it repeated the intent of the directive back to the issuer of the directive.](#)

Organization	Question 5:	Question 5 Comments:
Southern Company	No	5.1 - The measures need to be revised to match the new requirements.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 5:	Question 5 Comments:
Transmission		
<p><b>Response:</b> The RC SDT thanks you for your comment. The measures have been revised to reflect revisions to the requirements.</p>		
SERC OC Standards Review Group	No	5.1 - The measures need to be revised to match the new requirements.
<p><b>Response:</b> The RC SDT thanks you for your comment. The measures have been revised to reflect revisions to the requirements.</p>		
ISO New England Inc.	No	See response to Q#4
<p><b>Response:</b> The RC SDT thanks you for your comment. Please see response to Q4.</p>		
FirstEnergy	No	The measures should be modified if our comments in question 4 result in changes to the proposed requirements.
<p><b>Response:</b> The RC SDT thanks you for your comment. The measures have been revised to reflect revisions to the requirements.</p>		
Duke Energy	No	The use of words like “clear, concise, and definitive manner” is subject to interpretation. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back.
<p><b>Response:</b> The RC SDT thanks you for your comments. We concur with you comments – the phrase, “clear, concise, and definitive” was removed from the standard and the requirement was subdivided so that there is a separate requirement that obligates the recipients to repeat the intent of the directive. Measures and VSLs were revised to reflect the modifications to the requirements. The new measures are:</p> <p>Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall have evidence such as voice recordings or transcripts of voice recordings to show that it required the recipient of the verbal directive to repeat the intent of the directive back; and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings.</p> <p>Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving</p>

6. Do you agree with the Violation Severity Levels proposed in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

**Summary Consideration:** The RC SDT received comments recommending revisions to the VSLs based on revisions to the requirements and measures. The RC SDT did this and created new VSLs for new Requirement R2. The revised VSLs are:

Requirement	Lower	Moderate	High	Severe
R1	N/A	The responsible entity <del>provided a clear</del> issued a verbal directive <del>in a clear, concise and definitive manner</del> associated with real-time operating emergency conditions and required the recipient to repeat the <del>directive</del> intent of the directive, but did not acknowledge the recipient was correct in the repeated directive <u>OR failed to repeat the intent of the original statement to resolve any misunderstandings.</u>	The responsible entity <del>provided a clear</del> issued a verbal directive associated with real-time operating emergency conditions <del>in a clear, concise and definitive manner</del> , but did not require the recipient to repeat the intent of the directive.	<u>The responsible entity issued a verbal directive associated with real-time operating emergency conditions and required the recipient to repeat the intent of the directive, but did not acknowledge the recipient was correct in the repeated directive AND failed to repeat the intent of the original statement to resolve any misunderstandings..</u> <del>The responsible entity failed to provide a clear directive in a clear, concise and definitive manner when required.</del>
<u>R2</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>	<u>The responsible entity that is the recipient of a verbal directive issued per Requirement R1 failed to repeat the intent of the directive back to the issuer of the directive.</u>

Organization	Question 6:	Question 6 Comments:
Southern Company Transmission	No	6.1 - The severity levels need to be revised to match the new requirements.
<p><b>Response:</b> The RC SDT thanks you for your comment. The VSLs were revised based on revisions to the requirements.</p>		
SERC OC Standards Review Group	No	6.1 - The severity levels need to be revised to match the new requirements
<p><b>Response:</b> The RC SDT thanks you for your comment. The VSLs were revised based on revisions to the requirements.</p>		
PJM Interconnection	No	<p>The word "clear" is redundantly used in the High and Severe columns.</p> <p>Recommend that "Moderate" should read: "The Responsible Entity provided a directive in a clear, concise and definitive manner, but did not require the recipient to repeat the directive back to the originator."</p> <p>Recommend that "High" should read: "The Responsible Entity failed to issue a directive in a clear, concise and definitive manner while ensuring the recipient of the directive repeated the information back correctly with acknowledgment by the originator that the response was correct."</p> <p>Recommend that "Severe" should read: "The Responsible Entity failed on more than one occasion to issue a directive in a clear, concise and definitive manner while ensuring the recipient of the directive repeated the information back correctly with acknowledgment by the originator that the response was correct."</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. We have removed the language "clear, concise and definitive manner" from the requirements, measures and VSLs. Based on the requirements, the VSLs were revised as shown above in the Summary Consideration section. We do not agree with your suggestion on the Severe VSL regarding the number of occasions. The requirement is a stand alone which requires the entity to perform it each time.</p>		
FirstEnergy	No	The VSL should be modified if our comments in question 4 result in changes to the proposed requirements.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 6:	Question 6 Comments:
<p><b>Response:</b> The RC SDT thanks you for your comment. The VSLs were revised based on revisions to the requirements.</p>		
Duke Energy	No	<p>The use of words like “clear, concise, and definitive manner” is subject to interpretation. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. We concur with your comments. The words “clear, concise, and definitive manner” have been removed from the requirement, measure and VSLs. A separate requirement has been added per your suggestion.</p>		
American Transmission Company	No	<p>R1-High VSL-If the directive was followed and there was no threat to the BES, then a lack of repetition of the directive does not constitute a "high" VSL. Suggest that this be a low or moderate VSL.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. We have revised the requirements, measures and VSLs to reflect that these directives are those that are issued for real-time operating emergency conditions.</p>

**7. Do you agree with the revisions to the Requirements in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.**

**Summary Consideration:** The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring time delay.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

R2 was modified as shown below – note that the phrase, “without intentional delay” was removed from all requirements, measures and VSLs:

R2. Each Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall ~~act without intentional delay to~~ comply with its Reliability Coordinator’s directives unless such actions would violate safety, equipment, or regulatory or statutory requirements.

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This revision would obviate the need for providing a measure for “intent”, while still maintaining the reliability intent of the original requirement.

The SDT proposes to re-post the standard to obtain stakeholder feedback on the suggested revisions

Organization	Question 7:	Question 7 Comments:
Manitoba Hydro	No	<p>I do not agree with the way IRO-001-2 R1 is written. In the present form the requirement may infer that directing action is not an action. It may also infer that the RC is only required to do "act "or "direct actions" but not both. The way it is written also leads to problems with the VSLs. Perhaps R1 can be edited along the lines of:</p> <p>R1. The Reliability Coordinator shall act to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. When required, the actions initiated by the Reliability Coordinator will include, but is not limited to, directing the actions to be taken by Transmission</p>

Organization	Question 7:	Question 7 Comments:
		<p>Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area.</p> <p>I agree with the other Requirements in IRO-001-2 with the exception of the "High" Violation Risk Factor assigned to IRO-001-2 requirement R5. This should be a "Medium" VRF at the most. If the emergency has been mitigated, and the entities are not aware, they will still be operating to restrictions, which means the grid is operating well within limits. Not notifying the entities that the problem has been mitigated may have some financial implications but it should not place the grid at risk.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The recommended language change is what the requirement means. The SDT did not modify the original language as they say the same thing.</p> <p>The RC SDT agrees and modified the VRF for R5 to medium.</p>		
Independent Electricity System Operator - Ontario	No	<p>R2: the phrase "act without intentional delay" is not necessary since the urgency of taking any actions as directed by the RC's are generally understood to be conveyed in the RC's directives.</p> <p>R3: Given R2 requires the responsible entities to comply with the RC directives, the part that says "immediately confirm the ability to comply with the directive or" is not needed. R3 should simply require the responsible entities to notify the RC upon recognition of the inability to perform the directive.</p> <p>The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>The RC SDT agrees to remove this phrase. The majority of commenters found this to be unnecessary.</p> <p>Agreed, the RC SDT modified R3 to remove "immediately confirm the ability to comply with the directive or"</p> <p>The RC SDT agrees and modified the VRF for R5 to medium.</p>		
MRO NERC SDTandards Review	No	New requirement R2 should omit act without intentional delay. The desired outcome is for the responsible entity to comply with the RC directive. Adding act without intentional delay only confuses

Organization	Question 7:	Question 7 Comments:
Subcommittee		<p>the situation and adds questions. What is an intentional delay? The word act implies that the requirement is met simply if the responsible entity attempted to meet the directive but was unable to do so. That is already considered in with the clause that begins "unless such actions would violate ...". Thus, the word act is not necessary.</p> <p>The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not function properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violated safety, equipment, statutory, or regulatory requirements.</p> <p>Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT agrees to remove this phrase. The majority of commenters found this to be unnecessary.</p> <p>The RC SDT agrees. We have modified R3 to remove "immediately" and "confirm the ability to comply with the directive or".</p> <p>The RC SDT does not agree with regard to R4 and R5, as some impacted entities may not need to take action or be issued directives but would benefit from the situational awareness associated with knowing the status of operating issues.</p>		
Southern Company	No	7.1 - Applicability 4.2 - Transmission Operator should be plural.

Organization	Question 7:	Question 7 Comments:
Transmission		<p>7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process.</p> <p>7.3 - In R2 insert the word "its" before Reliability Coordinator.</p> <p>7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>7.1 agreed, The RC SDT modified the applicability section.</p> <p>7.2 The revision to the definition will be placed in the correct location on the next posting and will be balloted along with the standard revisions.</p> <p>7.3 The RC SDT agrees and modified R2, the expectation is the entity's RC will issue the directives, not a different RC.</p> <p>7.4 R3 has been modified and changed "the" with "its" before RC. Note that based on comments from other stakeholders, the phrase, "immediately confirm the ability to comply" has been omitted from the revised requirement.</p>		
ISO New England Inc.	Yes and No	We believe the word "threat" should be replaced with "events" in Requirements 4 and 5.
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT chose the term "threat with Adverse Reliability Impacts" to convey the concept that action may be taken to prevent an event when an RC identified a potential threat. This will help better ensure reliability by mitigating threats rather than waiting for an event to occur.</p>		
Entergy Services, Inc	No	PER-003 R1 does not specifically address delegated functions; therefore, this requirement is not redundant with IRO-001 R6 without changes to PER-003 to specifically deal with employees performing delegated functions.
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>The RC SDT references the NERC ROP in the Implementation plan which address your delegation concern. -</p> <p>Per NERC ROP appendix 5, Organization Registration and Certification Manual v3.3 Sec IV and V:</p> <p>The applicant retains the responsibility for all delegated tasks. The applicant shall identify to the review team all tasks that have been delegated</p>		

Organization	Question 7:	Question 7 Comments:
<p>to another entity prior to the on-site visit. The review team shall conduct at least one on-site visit to the applicant's facilities. This may also apply to the facilities of entities responsible for delegated tasks. During the visit, the review team will:</p> <ul style="list-style-type: none"> <li>a. Review with the applicant the data collected through the questionnaires;</li> <li>b. Interview the operations and management personnel;</li> <li>c. Inspect the facilities and equipment;</li> <li>d. Request a demonstration of all tools identified in the certification standard;</li> <li>e. Review all necessary documents and data including all agreements, processes, and procedures identified in the certification standard;</li> <li>f. Review certification documents and projected system operator work schedules; and</li> <li>g. Review any additional documentation that is needed to support the completed questionnaire or inquiries arising during the site-visit.</li> </ul>		
MEAG Power	No	<p>Directives that are mandatory under R2 of IRO-001-2 should have boundaries consistent with the proper role of an RC. For example, if an RC directs an LSE with a 15% planning reserve margin to execute purchase power agreements until its reserve margin is at least 20% and the LSE refuses, then the LSE may have violated this standard. Other examples of improper RC directives are directives to increase coal inventories, buy firm fuel transportation rights, reconductor transmission lines, purchase spare equipment, etc. Granted entities may be able to conjure up a regulatory or statutory basis for refusing many improper RC directives but in some instances there may be no permissible grounds to refuse. The appropriate solution is to modify the standard to ensure that improper directives are never mandatory in the first place. Specifically, NERC is urged to state that RC directives are mandatory only if they pertain to specific categories such as: switching orders to reconfigure the BES, orders to postpone scheduled outages of BES equipment, orders to change generator output, orders to curtail transactions or orders to curtail load.</p>
<p>Response: The RC SDT thanks you for your comment. It is envisioned by the RC SDT that such RC directives consist of real-time and same-day operating actions that prevent or mitigate events that may or will cause Adverse Reliability impacts.</p>		
FirstEnergy	No	<p>R3 - should be a sub requirement of R2. These two requirements are sequential in nature and should be measured at the same time. The VRFs and Time Horizons are the same for both requirements lending to their combination into a requirement with a sub requirement. In the VSL for R2, an entity is being penalized with a high severity level for not completely following an RC directive even though it violated safety, equipment, statutory, or regulatory requirements. Measuring R2 and R3 at the same</p>

Organization	Question 7:	Question 7 Comments:
		<p>time allows for the process to complete prior to the measurement taking place.</p> <p>R3 - The "or" between "Distribution Provider" and "Purchasing-Selling Entity" should be replaced with an "and".</p> <p>R4 - Should be revised by adding the phrase "of the expected or actual threat" to the end of the requirement to add clarity.</p> <p>Existing R7 requirement - This requirement is proposed for retirement because it is redundant with IRO-014-1 R1. However, it is not clear how the existing requirement to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated" is covered in IRO-014-1 R1. IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. IRO-014-1 only vaguely covers the existing requirement R7 of IRO-001-1.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The intent of the drafting team is to have distinct requirements that are measured independently. Having one as a subrequirement will not allow that to occur.</p> <p>The RC SDT revised the "or" to an "and".</p> <p>R4, The recommended language change is what the requirement means. The RC SDT did not modify the original language as they say the same thing.</p> <p>R7, The industry comments do not support being more specific in IRO-014-1 R1 in order to retire IRO-001-1 R7.</p>		
SERC OC Standards Review Group	Yes and No	<p>7.1 - Applicability 4.2 - Transmission Operator should be plural.</p> <p>7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process.</p> <p>7.3 - In R2 insert the word "its" before Reliability Coordinator</p> <p>7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.</p>

Organization	Question 7:	Question 7 Comments:
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>7.1 The RC SDT agrees and will modify the applicability section.</p> <p>7.2 The revision to the definition will be placed in the correct location on the next posting and will be balloted along with the standard revisions.</p> <p>7.3 Agreed, The RC SDT modified R2, the expectation is the entities RC will issue the directives, not a different RC.</p> <p>7.4 R3 has been modified and changed “the” with “its” before RC. Note that based on comments from other stakeholders, the phrase, “immediately confirm the ability to comply” has been omitted from the revised requirement.</p>		
US Bureau of Reclamation	No	R4. and R5. Both of these Requirements use the phrase “without intentional delay” to describe the urgency of the notification to impacted entities. In both requirements we recommend the language be changed from “notify, without intentional delay” to “immediately notify”.
<p><b>Response:</b> The RC SDT thanks you for your comment. We have removed the phrase from the requirements.</p>		
American Transmission Company	No	R2 refers to "intentional delay". The determination of intent should be left to the VSL portion of the standard, not the requirement portion.
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT has removed “without intentional delay” from the proposed requirement.</p>		
Consolidated Edison Co. of NY, Inc.	Yes and No	<p>Wording in question: R.2/M.2 Each Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without intentional delay to comply with the Reliability Coordinator's directives.R.3/M.3 Each — Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives.</p> <p>[1] Question: Is this wording absolutely necessary? And then, is it sufficient, if needed? Comment: First, we would question whether there is a specific need to include this wording. Is the IRO-001 Reliability Standard sufficient without it?</p> <p>[2] Question: Is this wording unambiguous? Comment: The wording seems somewhat vague and ambiguous. Analysis: The wording appears to establish performance standards ("without intentional delay", "shall immediately confirm") and evidentiary requirements ("evidence that it acted" or "evidence that it confirmed"), but without using pre-existing defined terms, establishing new defined</p>

Organization	Question 7:	Question 7 Comments:
		<p>terms, or defining these terms as used in context.</p> <p>[3] Intentional vs. Unintentional, Valid Intentional vs. Inappropriate Intentional? How does one differentiate between intentional and unintentional delay? When is and how much delay is valid or inappropriate? Isn't some intentional delay necessary to ensure that the other parts of the requirement being are met, e.g., — unless such actions would violate safety, equipment, or regulatory or statutory requirements?? Mightn't some acceptable amount of valid intentional delay be necessary to insure that any such RC directive and entity action would not in fact violate these safety, equipment, or regulatory or statutory requirements?</p> <p>[4] What is the timeliness standard?</p> <p>How are the terms “without delay” and “immediately conform” defined? What standard commercial measures would apply, e.g., “reasonably efforts” vs. “best efforts”? Are these terms measured in units of time (seconds or minutes) or in units of performance quality? Does a poorly considered “immediate” reply meet the standard, while a well considered reply, which is intentionally delayed, yet still appropriate, fail to meet this standard? Is that the best outcome?</p> <p>[5] What is this Evidentiary Standard? Is the sought-after “evidence” sufficiently well defined, e.g., phone logs, computer e-mail, control center computer logs, hand-written operator journals, etc.? What form of evidence is necessary and sufficient to demonstrate that the entity met this evidentiary standard? How is failure to meet this uncertain standard measured, judged and penalized?</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>The RC SDT has removed the phrases “immediately” and “without intentional delay” from the proposed requirements.</p>		
Duke Energy	No	<p>Requirement R1 - What happens if the RC failed to recognize that such an event was happening as opposed to failed to take action? Is this intended to cover both scenarios? The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision development of this definition needs to go thru Due Process. The inclusion of TSPs, LSEs, and PSEs here indicates the need to include these functions in the COM-001-2 requirements concerning the use of English as the approved language. In addition, this also indicates the need for all of these listed entities to be included in COM-002-3 requirements concerning repeat-backs. The RC, TOP, and BA should not be placed in a possible non-complaint state because the counter party refuses a repeat-back AND these requirements are not applicable to the counter party.</p>

Organization	Question 7:	Question 7 Comments:
		<p>Requirement R2 - The language in the Moderate VSL of R2 recognizes another potential reason for delay in execution of a directive. Requirement 2 of the Standards needs to be modified to also recognize this potential.</p> <p>Requirements R2 and R3 - Clarify that entities are obligated to take action and confirm directives only from their Reliability Coordinators, not from any Reliability Coordinator. Requirements R2, R3, R4, R5 - Inconsistent use of "timing" words in the standards — "without intentional delay" and "immediately". Suggest deleting these words due to the difficulty of determining compliance.</p> <p>Requirement R4 - The term "Adverse Reliability Impacts?" is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.</p> <p>Requirement R5 - The VRF should be "Lower" instead of "High" since the notification is that the threat has been mitigated. Also, the term "Adverse Reliability Impacts" is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1 Both scenarios are envisioned by the requirement. The proposed revision to the definition will be balloted along with the standard revision. &amp; R4, &amp;R5. The TSPs, LSEs, and PSEs have been added to COM-001 and COM-002 as you suggest.</p> <p>R2, already included in R2 "unless such actions would violate safety, equipment, or regulatory or statutory requirements."</p> <p>R2, R3, The RC SDT modified R2, R3 to identify "its" RC. The phrases "immediately" and "without intentional delay" have been removed from the standard.</p> <p>R4 The revision to the definition will be placed in the correct location on the next posting and will be balloted along with the standard revisions.</p> <p>R5, The RC SDT modified the VRF for R5 to medium based on other industry comments.</p>		
Buckeye Power, Inc.	Yes and No	abstain
ISO/RTO Council Standards Review Subcommittee	Yes and No	New requirement R2 should omit act without intentional delay. Use of intentional implies willful disregard for compliance for the requirement. Intention should not be addressed as part of the compliance with the requirement but rather through the enforcement process once the compliance auditor has identified a violation.

Organization	Question 7:	Question 7 Comments:
		<p>The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not functioning properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violate safety, equipment, statutory, or regulatory requirements.</p> <p>Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary.</p> <p>The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT has removed the phrases "immediately" and "without intentional delay" from the proposed requirements. The RC SDT modified R3 based on industry comments and the phrase, "shall immediately confirm the ability to comply with the directive or" was removed from the requirement.</p> <p>The RC SDT does not agree with regard to R4 and R5, as some impacted entities may not need to take action or be issued directives but would benefit from the situational awareness associated with knowing the status of operating issues.</p> <p>The RC SDT modified the VRF for R5 to medium based on industry comments.</p>		
CU Springfield	Yes	CU supports the effort to consolidate redundant requirements in the standards.

**8. Do you agree with the revisions to the Measures in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.**

**Summary Consideration:**

The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring time delay.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This revision would obviate the need for providing a measure for “intent”, while still maintaining the reliability intent of the original requirement.

The SDT proposes to re-post the standard to obtain stakeholder feedback on the suggested revisions.

Organization	Question 8:	Question 8 Comments:
CU of Springfield	No	M2 and M3 should include Distribution Provider as one of the entities to comply with directives from the Reliability Coordinator.
<p><b>Response:</b> The RC SDT thanks you for your comment. The SDT will correct the oversight.</p>		
Independent Electricity System Operator - Ontario	No	Wording in some of the Measures needs to be revised to reflect changes to R2 and/or R3, if our proposed changes are accepted. Also, we suggest the Requirement numbers be referenced in the Measures.
<p><b>Response:</b> The RC SDT thanks you for your comment. The SDT has revised the R2 and R3 and the associated measures per stakeholder comments. We have also added the associated requirement number to each measure.</p>		

Organization	Question 8:	Question 8 Comments:
Reliability Coordinator Comment Working Group	No	Measures do not align with VSLs (see question 9)
<p><b>Response:</b> The RC SDT thanks you for your comment. We will ensure that the VSLs and measures align.</p>		
MRO NERC SDT Standards Review Subcommittee	No	<p>Some compliance auditors have been taking the need for evidence to the extreme. We have encountered actual situations where if a measure states evidence shall be provided for requirements that are event based, the compliance auditor expected evidence even if no event occurred. For example, some RCs rarely issue directives. As M1 is written, some compliance auditors would require the RC to provide evidence that no reliability directives were issued. This is not possible. We suggest modifying the measurement to: Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area if needed. If there were no directives issues (assuming there are no complaints or evidence to the contrary of the need to issue a directive), no evidence is necessary."</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT agrees with the principle (i.e. should not have to prove a negative to an auditor). This issue should be addressed with NERC or Regional Compliance personnel. The RC SDT has the obligation to draft measures based on the requirements. The measure (M1) for R1 accomplishes that as written.</p>		
Southern Company Transmission	No	<p>8.1 - In M2 and M3, Add Distribution Provider.                      8.2 - In M2 add "intentional" between "without" and "delay".                      8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator.                      8.4 - In M5, change "has" to "had".</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. We have added DP to the measures M2 and M3. We have removed the phrases "immediately" and "without intentional delay" from the measures. The RC SDT has left the word "inability" in the measure to mirror the requirement. We have made the other revisions that you suggested.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 8:	Question 8 Comments:
MEAG Power	No	The M2 measure should not mandate compliance with RC directives that are improper as defined in my response to question 7.
<p><b>Response:</b> The RC SDT thanks you for your comment. It is envisioned by the RC SDT that RC directives consist of real-time and same-day operating actions that prevent or mitigate events that may or will cause Adverse Reliability impacts.</p>		
SERC OC Standards Review Group	Yes and No	<p>8.1 - In M2 and M3, Add Distribution Provider.</p> <p>8.2 - In M2 add "intentional" between "without" and "delay".</p> <p>8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator.</p> <p>8.4 - In M5, change "has" to "had".</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. We have added DP to the measures M2 and M3. We have removed the phrases "immediately" and "without intentional delay" from the measures. The RC SDT has left the word "inability" in the measure to mirror the requirement. We have made the other revisions that you suggested.</p>		
US Bureau of Reclamation	No	M4. and M5. In both Measures, recommend "without intentional delay" be changed as described above for R4. and R5.
<p><b>Response:</b> The RC SDT thanks you for your comment. Based on stakeholder comments, we have removed "without intentional delay" from the requirement and measure.</p>		
Progress Energy Carolinas		
FirstEnergy	No	M2 - The word "intentional" should be added between "without" and "delay".
<p><b>Response:</b> The RC SDT thanks you for your comment. Based on stakeholder comments, we have removed the phrase "without intentional delay" from the requirement and measure.</p>		
Duke Energy	No	Measures M2, M4 and M5 use the terms "without delay" and "without intentional delay". Suggest deleting these words due to the difficulty of determining compliance. The term "Adverse Reliability

Organization	Question 8:	Question 8 Comments:
		Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>We have removed the phrases “immediately” and “without intentional delay” from the measures.</p> <p>The proposed definition has been added to the standard and will be posted with the proposed revisions to the standard.</p>		
Consolidated Edison Co. of NY, Inc.	Yes and No	<p>[Comments repeated for Measures] Wording in question:R.2/M.2 Each Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without intentional delay to comply with the Reliability Coordinator's directives.R.3/M.3 Each Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives.</p> <p>[1] Question: Is this wording absolutely necessary? And then, is it sufficient, if needed? Comment: First, we would question whether there is a specific need to include this wording. Is the IRO-001 Reliability Standard sufficient without it?</p> <p>[2] Question: Is this wording unambiguous? Comment: The wording seems somewhat vague and ambiguous. Analysis: The wording appears to establish performance standards (“without intentional delay”, “shall immediately confirm”) and evidentiary requirements (“evidence that it acted” or “evidence that it confirmed”), but without using pre-existing defined terms, establishing new defined terms, or defining these terms as used in context.</p> <p>[3] Intentional vs. Unintentional, Valid Intentional vs. Inappropriate Intentional? How does one differentiate between intentional and unintentional delay? When is and how much delay is valid or inappropriate? Isn't some intentional delay necessary to ensure that the other parts of the requirement being are met, e.g., unless such actions would violate safety, equipment, or regulatory or statutory requirements?? Mightn't some acceptable amount of valid intentional delay be necessary to insure that any such RC directive and entity action would not in fact violate these safety, equipment, or regulatory or statutory requirements?</p> <p>[4] What is the timeliness standard? How are the terms “without delay” and “immediately conform” defined? What standard commercial measures would apply, e.g., “reasonable efforts” vs. “best efforts”? Are these terms measured in units of time (seconds or minutes) or in units of performance quality? Does a poorly considered “immediate” reply meet the standard, while a well considered reply, which is intentionally delayed, yet still appropriate, fail to meet this standard? Is that the best</p>

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 8:	Question 8 Comments:
		outcome? [5] What is this Evidentiary Standard? Is the sought-after “evidence” sufficiently well defined, e.g., phone logs, computer e-mail, control center computer logs, hand-written operator journals, etc.? What form of evidence is necessary and sufficient to demonstrate that the entity met this evidentiary standard? How is failure to meet this uncertain standard measured, judged and penalized?
<p><b>Response:</b> The RC SDT thanks you for your comment. We have removed the phrases “immediately” and “without intentional delay” from the measures.</p>		
Buckeye Power, Inc.	Yes and No	abstain
American Transmission Company	Yes	If some language is changed, we support the revisions. R2 has language in it that should be added to M4 to be consistent. In M2, we propose adding language "unless such actions would violate safety, statutory or regulatory requirements."

9. Do you agree with the Violation Severity Levels proposed in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

**Summary Consideration:** The VSLs were revised to reflect revisions to the requirements as well as the comments of stakeholders. Several comments suggested that there was no fundamental difference between the RC “acting” or “directing actions”. The RC SDT agreed and removed the High VSL for R1 and revised the Severe VSL accordingly. Other commenters suggested removing the High VSL from R2 as the VSL contradicted the requirement. The RC SDT agreed and removed the VSL. All of the revised VSLs are in the table below.

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	The Reliability Coordinator failed to act or direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts
R2	N/A	N/A	N/A	<a href="#">The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.</a> <del>The responsible entity did not follow the Reliability Coordinators directive per requirement 2.</del>
R3	N/A	N/A	N/A	The responsible entity failed to inform <del>the-its</del> Reliability Coordinator upon recognition of <del>the-its</del> inability to perform the directive.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

R4	The Reliability Coordinator <del>who</del> identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to one, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator <del>who</del> identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to two, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator <del>who</del> identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to three or more, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator <del>who</del> identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
R5	The Reliability Coordinator <u>issued an alert failed to notify entities of a transmission problem but failed</u> to notify one, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator <u>issued an alert to notify entities of a transmission problem but</u> failed to notify two, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator <u>issued an alert to notify entities of a transmission problem but</u> failed to notify three or more, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator <u>issued an alert to notify entities of a transmission problem but</u> failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.
R6	N/A	N/A	N/A	The Reliability Coordinator failed to provide its <del>Operating operating Personnel</del> <u>personnel</u> with the authority to veto planned outages of its own analysis tools.

Organization	Question 9:	Question 9 Comments:
Manitoba Hydro	No	<p>IRO-001-2 R1 VSLs: You can not split "shall act" and "or direct actions" into separate VSLs. They are one and same. If the RC directs action then they have acted. If the RC failed to direct action or have failed to other wise act then they have failed to act appropriately. Perhaps the VSLs can be drafted along the lines of the following:</p> <p>IRO-001-2 R1 High VSL... The Reliability Coordinator's action was incomplete in that it failed to demonstrate a specific action to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts.</p> <p>IRO-001-2 R1 Severe VSL... The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of</p>

Organization	Question 9:	Question 9 Comments:
		<p>Adverse Reliability Impacts.</p> <p>IRO-001-2 R2 VSLs:                      (1) Entities may be justified in an intentional delay in responding to an RC directive. A justified intentional delay may due be equipment problems, a generators ramp rate or system voltage adjustments prior to large system reconfiguration or large transmission loading changes.                      (2) An entity cannot be faulted for not following an RC directive because to it would violate safety, equipment, regulatory or statutory requirements.                      Perhaps the VSLs can be drafted along the lines of the following:                      Moderate VSL... should be deleted.                      High VSL... The responsible entity followed the Reliability Coordinators directive but with an unjustified delay.                      Severe VSL... no edits required.</p> <p>IRO-001-2 R5 VSLs:                      Perhaps the VSLs can be drafted along the lines of the following to reflect to what degree the RC missed the mark:                      Lower VSL...The Reliability Coordinator failed to notify &lt;25% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated.                      Moderate VSL... The Reliability Coordinator failed to notify &gt;24% but &lt;50% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated.                      High VSL...The Reliability Coordinator failed to notify &gt;49% but &lt;75% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated.                      Severe VSL... The Reliability Coordinator failed to notify &gt;74% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and direct actions. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL.</p> <p>R2: 1. The SDT removed the “intentional delay” wording. 2. We concur with your statement. The RC SDT believes that the revised requirement is a binary and thus only requires one VSL. We have removed the High VSL and revised the severe VSL to:</p> <p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.</p> <p>R5: The RC SDT developed a revised set of VSLs that are graded in a way that gives consideration to the number of impacted entities since some entities will have a very small number of entities to contact, and using percentages may not be effective.</p>		
Independent Electricity System	No	<p>R1: There should not be any distinction made between an RC acting and an RC directing others to act. Failure to mitigate adverse reliability impacts a severe violation of the requirement. We therefore suggest to revise the High and Severe levels as: High if the RC did not act or direct actions to prevent an Adverse Reliability Impact; Severe if the RC did not act or</p>

Organization	Question 9:	Question 9 Comments:
Operator - Ontario		<p>direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact.</p> <p>R2: The High VSL seems contradictory to the requirement, which already has provision of not fully complying with the RC directives due to safety, equipment, or regulatory or statutory requirements.</p> <p>R3: We have proposed some wording change to R3, which if adopted, would precipitate a need to revise the VSLs for R3 accordingly.</p> <p>(iv) R4 and R5: The VSLs for these two requirements could be graded by assessing the number and/or timing of notifying the affected entities.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>The RC SDT agrees with you regarding “act” and “direct actions”. Based on yours and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL.</p> <p>We agree and have removed the High VSL.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p> <p>R4 and R5: We concur and have expanded the VSLs to include notification of a varying number of entities.</p>		
Reliability Coordinator Comment Working Group	No	<p>R1 talks about "shall act or direct actions to be taken".</p> <p>High VSL - failure to act.</p> <p>Severe VSL - failure to act and direct. Does "act" mean any action taken short of issuing a directive? Change Severe VSL to failure to act or direct and eliminate the High VSL all together.</p> <p>R2 delay in issuing a directive due to equipment problems should be included in the moderate VSL and the body of the requirement and in the measure. The High VSL should be removed because not following the directive for equipment failure is allowed per R2.</p> <p>R5 - Severe VSL should be changed to moderate VSL since the problem has been mitigated and the system is stable and it does not adversely impact reliability.</p> <p>M3 talks about the ability of reliability entities to meet a directive. What constitutes evidence that confirms you are able to immediately comply with the directive? If the entity agrees to the directive and then is unable to comply due to events outside of their control, such as a CT not starting, do they meet the measure? If the entity, based on the circumstances at the time of the directive, agrees to comply in good faith are they compliant? The Lower VSL should be made N/A because it is not practical for an entity to immediately confirm they are able to meet the directive in all cases.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p>		

**Comments for Set of Reliability Coordination Standards (Project 2006-06)**

Organization	Question 9:	Question 9 Comments:
<p>R1 - The RC SDT agrees with you regarding “act” and “direct actions” and has removed the High VSL and revised the Severe VSL.</p> <p>R2 - Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL.</p> <p>R5: The VSL relates to how badly an entity missed the requirement, not the threat to reliability (this is the VRF). The requirement is to notify “all”. The RC SDT has developed a revised set of graded VSLs for this requirement.</p> <p>M3. The requirement was revised to remove words such as “immediately” and intentional delay:</p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform a directive.</p> <p>The measure was revised to reflect the new requirement which addresses your concerns. The Lower VSL was revised to N/A.</p>		
<p>MRO NERC SDT Standards Review Subcommittee</p>	<p>No</p>	<p>The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don’t believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact.</p> <p>The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements.</p> <p>In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL.</p> <p>In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses “that, as a general rule, gradated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels”. Given that it is possible to define gradated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p>		

**Comments for Set of Reliability Coordination Standards (Project 2006-06)**

Organization	Question 9:	Question 9 Comments:
<p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to include failure to “act or direct actions”.</p> <p>R2. We have removed the “intentional delay” verbiage and subsequently removed the Moderate VSL. We agree with you regarding the High VSL and have removed it from the table. The Severe VSL was revised per your suggestion.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p> <p>R4 and R5: We concur and have expanded the VSLs to include notification of a varying number of entities.</p>		
Southern Company Transmission	No	<p>9.1 - R1 is a binary requirement and should have only a severe VSL. The RC either acts or he doesn't - If he fails to act, he fails to direct and mitigate the problem by default.</p> <p>9.2 - R2 VSLs need to be rewritten to recognize that some directives may not be followed because of safety, regulatory or statutory requirements.</p> <p>9.3 - Remove the Lower severity level in R3 to conform to changes in R3 and M3.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL. This is now treated as a binary requirement with just one VSL.</p> <p>R2. We agree and have removed the High VSL and revised the severe VSL to:</p> <p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p>		
Entergy Services, Inc	No	The VSL for R2 does not seem consistent with the language in the requirement. It is not clear why the entity should be subject to a high VSL if the entity did not comply with an RC directive due to safety or regulatory prohibition, and made the RC aware of same.
<p><b>Response:</b> The RC SDT thanks you for your comment. Please see Summary Consideration above. The High VSL for R2 was removed.</p>		
Salt River Project	No	<p>R1 states the RC must act OR direct. The R1 VSLs attempt to distinguish between act and direct. The requirement allows for either action. I suggest that the High VSL be removed and replaced by an N/A. The Severe VSL should be amended so that the words "act and direct" are replaced by the words "act OR direct" as is consistent with the requirement and the measure.</p> <p>R2: The moderate VSL introduces the phrase "equipment problems" for the first time in the Standard. "Equipment Problems" needs to be included in the Requirement, R2, and defined in the Measure for</p>

**Comments for Set of Reliability Coordination Standards (Project 2006-06)**

Organization	Question 9:	Question 9 Comments:
		R2.R5: The Severe VSL needs to be moved to the Moderate category. This condition does not constitute an Adverse Reliability Impact that severely threatens the BES.
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to use the phrase, “act or direct.”</p> <p>R2. The moderate VSL was removed.</p> <p>R5: The VSL relates to how badly an entity missed the requirement, not the threat to reliability (this is the VRF). The requirement is to notify “all”. The RC SDT believes it has developed appropriate VSLs for this requirement.</p>		
FirstEnergy	No	R2 VSL - The Severe VSL should include after the word directive: "that would not violate safety, equipment, statutory or regulatory requirements".
<p><b>Response:</b> The RC SDT thanks you for your comment. We agree with your premise, but the suggested wording of the VSL appears cumbersome. The VSL has been revised to:</p> <p>The responsible entity did not follow the Reliability Coordinator’s directive per Requirement R2.</p>		
Duke Energy	No	<p>The language in R1 of the VSL is not consistent with the requirements and measures in the standard. The VSL needs to recognize that the RC may EITHER act or give direction to others to act.</p> <p>The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.</p> <p>The language in R2 of the VSL places an entity in Moderate or High violation level even if failure is “allowed” in the standard; i.e. failure to act is due to violation of safety, regulatory, statutory requirements.</p> <p>The language in R2 of the VSL recognizes another potential reason for delay in execution of a directive. Requirement R2 of the Standard needs to be modified to also recognize this potential.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to use the phrase, “act or direct.”</p> <p>The proposed revision to the term, “Adverse Reliability Impact” will be posted for stakeholder comment with the next version of the standard.</p> <p>R2. We agree and have removed the Moderate and High VSLs and revised the Severe VSL to :</p>		

**Comments for Set of Reliability Coordination Standards (Project 2006-06)**

Organization	Question 9:	Question 9 Comments:
<p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.  <a href="#">The requirement already addresses equipment.</a></p>		
<p>American Transmission Company</p>	<p>No</p>	<p>VSLs for R2 and R3 are not appropriate. In order to assess a situation we may not be able to immediately inform the RC of our ability to comply with the directive. The high VSL for R2 currently states that if we do not follow the directive because of safety, statutory or regulatory requirements, it is a high VSL. An entity should not be penalized for not breaking the law.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.  R2: We agree and have removed the Moderate and high VSLs.  R3. The requirement was revised to remove the “immediately” verbiage and the VSLs were revised accordingly – the Lower VSL was removed.</p>		
<p>ISO/RTO Council Standards Review Subcommittee</p>	<p>No</p>	<p>The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don't believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact.</p> <p>The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements.</p> <p>In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL.</p> <p>In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses "that, as a general rule, gradated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels". Given that it is possible to define gradated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.</p>

**Comments for Set of Reliability Coordination Standards (Project 2006-06)**

Organization	Question 9:	Question 9 Comments:
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to use the phrase, “act or direct.”</p> <p>R2. We agree and have removed the Moderate and High VSLs and revised the Severe VSL to :</p> <p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p> <p>R4 and R5: We concur and have expanded the VSLs to include notification of a varying number of entities.</p>		
SERC OC Standards Review Group	Yes and No	<p>9.1 - R1 is a binary requirement and should have only a severe VSL. The RC either acts or he doesn't - If he fails to act, he fails to direct and mitigate the problem by default.</p> <p>9.2 - R2 VSLs need to be rewritten to recognize that some directives may not be followed because of safety, regulatory or statutory requirements.</p> <p>9.3 - Remove the Lower severity level in R3 to conform to changes in R3 and M3.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to use the phrase, “act or direct.”</p> <p>R2. We agree and have removed the High VSL and revised the Severe VSL to:</p> <p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements..</p> <p>R3. The requirement was revised and the Lower VSL removed.</p>		
Consolidated Edison Co. of NY, Inc.	Yes and No	<p>Agreement uncertain, subject to further clarification of Requirements and Measures performance standards and definitions (see our comments on Requirements and Measures). Without clearer definitions, e.g., for "immediate," or any allowance for appropriate intentional delay, it is not entirely clear that the VSLs comport with the ultimate meaning, intent and needed wording to be incorporated into the Requirements and Measures. Why would failure to fully comply, when precluded by conditions specifically allowed in the standard, necessarily be a problem, so long as the RC received timely notice, however defined?</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The SDT removed the word, “immediate” and the phrase, “without intentional delay” from the standard.</p>

**10. Do you agree with the revisions to the Requirements in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.**

**Summary Consideration:** The last proposed version of IRO-002-2 had two requirements – R1 required the Reliability Coordinator to request data from other entities; R2 required the Reliability Coordinator to provide its operating personnel with authority to veto planned outages of analysis tools.

Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees’ approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired IRO-002 Requirement R1 and eliminated the need for the proposed R2.

The team received comments expressing concern about eliminating the requirement to monitor frequency which had been in an earlier approved version of IRO-002. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in Certification Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability. The team retained the remaining requirement (Reliability Coordinator’s authority to veto analysis tool outages) as it was a specific recommendation from the 2003 Blackout report. This requirement was revised and moved into IRO-001-2, R6.

R6. Each Reliability Coordinator shall ~~have~~provide its operating personnel with the authority to veto planned outages to its own analysis tools, ~~including final approvals for planned maintenance.~~ *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

Organization	Question 10:	Question 10 Comments:

Organization	Question 10:	Question 10 Comments:
		<p>monitor its area, and even some portion of its adjacent areas to be aware of situations that require preventive and mitigating actions. While arguments can be made that requiring RCs to prevent and mitigate adverse reliability impacts would imply monitoring, the latter is a fundamental duty of any RCs to ensure system reliability. If monitoring is not explicitly stated as a requirement, then the same argument may be extended to training and operational facilities. We do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. Measuring can be illustrated, for example, by a compliance audit to review system logs and assess the extent to which an RC follows and assesses system conditions.</p>
<p><b>Response:</b> R1: The RC SDT thanks you for your comment. Several NERC drafting teams are working on related standards. The RTO SDT just posted changes to TOP-005 that will retire that standard upon approval. Therefore, there will be no redundancy because TOP-005 R1.1 will be removed.</p> <p>Monitoring: While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure "Monitoring" can provide. It is the SDT's contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in Certification Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p>		
Reliability Coordinator Comment Working Group	No	<p>For R1, this should be 2 separate requirements and measures. R1 should have a methodology for determining what data is needed and then a R2 should be a requirement to request this data from the reliability entities.</p>
<p><b>Response:</b> The RC SDT appreciates your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1.</p>		
MRO NERC SDT Standards Review Subcommittee	No	<p>New Requirement R1 is duplicate to the requirement TOP-005-1 R1.1. If the drafting team can't delete TOP-005-1 R1.1, they should notify other appropriate drafting teams of the need to remove the requirement.</p> <p>We do not agree with eliminating requirements R5, R6, R7, and R8 in their entirety. The requirements as they are written are problematic. However, we do believe that there is a need for a basic</p>

Organization	Question 10:	Question 10 Comments:
		<p>requirement to monitor the system. The requirements should be that the RC should compare actual system flows to SOLs and IROLs. While some will argue SOLs are not the responsibility of the RC, failure to monitor SOLs could cause the RC to miss unknown IROLs since an SOL can become an IROL. Several SOL violations in a given area also can be indicative of a broader system problem the RC should be addressing. We also do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. It is very easy to measure. As an example, a compliance auditor could select a day and an SOL or IROL and ask for the system flows from that day or hour etc. This is generally easy for any RC to produce with today's data archiving software. We believe that there should be a requirement that the RC have a state estimator and real-time contingency analysis as well (RTCA). The drafting team needs to be careful in the construction of these requirements to make them practical and measurable. For instance, making the requirement to have a state estimator and RTCA is measurable in that the compliance auditor can verify their existence but this is not stringent enough because they may only run once a week. At the same time, if we create a requirement that SE and RTCA must run every 5 minutes, we could inadvertently create a requirement that any missing 5 minute run of RTCA and SE could be construed as a violation. There also needs to be a requirement that there is a real-time assessment of voltage as well.</p> <p>New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.</p>
<p><b>Response:</b> The RC SDT appreciates your comments. The RTO SDT has recently posted the proposed retirement of TOP-005. This eliminates the redundancy with R1.</p> <p>The RC SDT appreciates your comments and recognizes that NERC standards historically have included requirements to ensure that each entity is acting responsibly in the portion of the Interconnect over which it has authority. The IRO-014, as proposed by this team, requires RCs to act in coordinated fashion to protect the Interconnection. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p> <p>The RC must respond to these situations proactively in order to prevent separation or cascading events.</p> <p>The RC SDT agrees philosophically with your comment regarding the redundancy of Requirement R2, however, this issue was enumerated in</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 10:	Question 10 Comments:
<p>the report on the 2003 Blackout as a key improvement. The team believes that, while this is redundant as you stated, it is too soon to remove it from standards. At some point in the future after the industry assimilates the set of changes currently proposed, this requirement could be proposed for deletion.</p>		
<p>Southern Company Transmission</p>	<p>No</p>	<p>10.1 - We propose that R1 and R2 should be moved to the RC Certification Procedure and this standard retired. If this standard is not retired then we recommend Comments</p> <p>10.2 and 10.3.10.2 - At Requirement R2, the RC is given 'veto' authority. Is a standard an appropriate place to give this type of authority?</p> <p>10.3 - The revised Purpose basically provides that the RC will have access to information and control of analysis tools. What is the correlation of information/control to veto authority/approval of planned maintenance?</p>
<p><b>Response:</b> The RC SDT appreciates your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1.</p> <p>R2. This is a Blackout recommendation and therefore is appropriate within a standard. We revised the wording to indicate that the RC will provide its Operating Personnel the authority. This clarified the intent of the requirement. This requirement will also be moved into IRO-001-2, R6.</p> <p>10.3 This standard will be retired making the purpose statement moot.</p>		
<p>ISO New England Inc.</p>	<p>Yes and No</p>	<p>Suggest changing with word "request" to "document" in Requirement 1.</p>
<p><b>Response:</b> The RC SDT appreciates your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1.</p>		
<p>Entergy Services, Inc</p>	<p>No</p>	<p>IRO-002-1 R9, the deleted language of the second sentence is not adequately covered by the language in EOP-008-0 R1, unless those outages are tied to the loss of a control center. EOP-008-0 is in the process of being revised and this language could be included in the revision, but it isn't adequately addressed by the version 0 standard.</p>

Organization	Question 10:	Question 10 Comments:
<p><b>Response:</b> The RC SDT appreciates your comments. The RC SDT took this comment into consideration when making revisions to this requirement as well as to COM-001-2 regarding specifications. The data specification required in IRO-010 should address mitigation plans for analysis tool outages and proposed COM-001 specifications should include mitigation plans for communications outages.</p>		
<p>US Bureau of Reclamation</p>	<p>No</p>	<p>R2. This requirement provides authority to the Reliability Coordinator to veto planned outages and approve planned maintenance to “analysis tools”. It is not clear in this standard what these “analysis tools” are. Per FERC Order 693, NERC was to identify a minimum set of analysis tools and the task was assigned to the Real-Time Tools Best Practices Task Force. Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.</p>
<p><b>Response:</b> The RC SDT appreciates your comments. The Reliability Coordinator has a set of tools in use to monitor and analyze its area as well as to provide a wide area view. These tools may include a SCADA system, state estimator and contingency analysis programs. It is the responsibility of the Reliability Coordinator to ensure that these tools are operational or that a plan or procedure is in place to mitigate their outages. The Real-time Tools Best Practices Task Force work has resulted in the inception of a new standard development project. It is scheduled to begin in 2009.</p>		
<p>FirstEnergy</p>	<p>No</p>	<p>R2 - As written, this requirement does not clearly define the scope of the authority of the Reliability Coordinator over analysis tools. Is it the intent of the drafting team to give the RC authority over analysis tools owned and operated by the RC. Is it the intent of the drafting team to give the RC authority over the analysis tools owned and operated by the BA, TOP, GOP, etc.? Are the tools intended to be the real-time (EMS) or the off-line engineering planning analysis tools or any analysis tool used in real-time. Does this include the analysis tools used by field personnel? This requirement should be revised to specify exactly the analysis tools under the authority of the Reliability Coordinator.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The intent of the requirement is to have veto authority over its own tools. The requirement is revised to:</p> <p>R2. Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>The intended tools are any tools that the Reliability Coordinator needs to perform its reliability functions.</p>		

Organization	Question 10:	Question 10 Comments:
Duke Energy	No	<p>Requirement R1 - This requirement is in the wrong standard — this is a Facilities standard. This requirement belongs in another standard. Question: Is there a requirement in another standard that compels the TOPS, BAs, etc to provide the requested data? Requirement R2 - Need to clarify whose analysis tools (I assume it is the RCs analysis tools, not the analysis tools of another entity) and planned maintenance to what — is it tools, facilities, transmission, generation, etc. Depending on the answer above, this requirement is in the wrong standard — this is a Facilities standard. This requirement belongs in another standard. Question: Where is the Requirement for the RC to have analysis tools? It appears that the Requirement the RC has analysis tools have been removed in the revisions to the standard.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1 and does compel entities to provide data to the Reliability Coordinator</p> <p>For R2, the intent of the requirement is to have veto authority over its own tools. The requirement is revised to:</p> <p>R2. Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>The intended tools are any tools that the Reliability Coordinator needs to perform its reliability functions.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.</p>

Organization	Question 12:	Question 12 Comments:
Independent Electricity System Operator - Ontario	No	<p>R1: The wording for Low VSL is contradictory (e.g. it determined and requested in the first part but did not request in the second part). Suggest to revise it.</p> <p>R1: We suggest to grade the VSLs according to the extent to which the percentage of data specification and/or the number of entities not requested.</p> <p>R2: The RC either has the right or it doesn't, and hence it's a binary requirement. The VSL should be developed accordingly. Further, the wording for the Severe VSL does not correspond to the requirement and measure. The condition should simply be that the Reliability Coordinator failed to demonstrate that it had the authority to veto planned outages to analysis tools, including final approvals for planned maintenance.</p>
<p><a href="#">Response:</a> The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part</p>		

Organization	Question 12:	Question 12 Comments:
of the IROL project. The lower VSL was removed as proposed for the second requirement.		
Southern Company Transmission	No	12.1 - Moving R1 and R2 to the RC Certification Procedure will eliminate VSL requirements.
<b>Response:</b> The RC SDT thanks you for your comment. Please see Summary Consideration above. R1 was retired – and R2 was moved into IRO-001 as Requirement R6. The VSLs for R6 are still needed.		
US Bureau of Reclamation	No	Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.
<b>Response:</b> The RC SDT thanks you for your comment. Please see Summary Consideration above. As envisioned, the intent is to protect the analysis tools used by real time operating personnel – and not all companies have the same set of tools, so the SDT will not name specific tools in this standard. The intent is to give the real time operating personnel control over the availability of their tools so that the real time operating personnel will always know if their tools are “unavailable” due to maintenance. Names of specific tools are not needed to enforce the intent of this requirement.		
MRO NERC SDT Standards Review Subcommittee	No	For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document.

Organization	Question 12:	Question 12 Comments:
		<p>We suggest that the VSLs should be:</p> <p>Severe: The RC did not determine it data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>R2 VSLs are not needed or paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part of the IROL project. For R2, based on your comments and the comments of others, the VSLs were modified – the lower was removed and the requirement was treated as binary with just a Severe VSL rephrased to more closely match the language in the revised requirement.</p>		
FirstEnergy	No	The VSL should be modified per our suggested modifications in question 10.
<p><b>Response:</b> The RC SDT thanks you for your comment. Please see Summary Consideration above.</p>		
Duke Energy	No	<p>R1 VSL - As a general comment, this VSL is unclear and would be difficult to audit. This VSL uses subjective terms like “material impact” and “minimal impact”. These terms are not used in the associated requirement or measure and should be removed from the VSL. This VSL uses terms like “majority, but not all”; “some, but less than a majority” which provides an opportunity for</p>

Organization	Question 12:	Question 12 Comments:
		<p>a subjective review by Compliance as to what a complete listing of data requirements should be. This term is not used in the Requirements or Measures and should be removed from the VSL. This VSL introduces a concept, data the RC needs for ?? administrative purposes, such as data reporting ??. This concept is not included in the Requirements or Measures portions of the Standard and should be removed from the VSL. This VSL should be written to simply assess whether the RC has made determination of what its data needs are and whether those needs have been communicated to the entities in the footprint.</p> <p>R2 VSL - This VSL clarifies the questions posed above regarding what the RC needs approval rights over. R2 needs to be modified to include this clarity. This VSL needs to clarify that the RC approval rights are for the RC's tools, not tools of other entities. The Severe level of this VSL needs to be re-written along the lines of: The RC does not have approval rights for planned maintenance or outages to its analysis tools.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part of the IROL project. For R2, based on your comments and the comments of others, the requirement, measure and VSLs were all modified – the lower was removed and the requirement was treated as binary with just a Severe VSL rephrased to more closely match the language in the revised requirement.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document.</p>

Organization	Question 12:	Question 12 Comments:
		<p>We suggest that the VSLs should be:</p> <p>Severe: The RC did not determine it data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>R2 VSLs are not needed er paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part of the IROL project. For R2, based on your comments and the comments of others, the requirement, measure and VSLs were all modified – the lower was removed and the requirement was treated as binary with just a Severe VSL rephrased to more closely match the language in the revised requirement.</p>		
SERC OC Standards Review Group	Yes and No	12.1 - Moving R1 and R2 to the RC Certification Procedure will eliminate VSL requirements.
<p><b>Response:</b> The RC SDT thanks you for your comment. Please see Summary Consideration above. R1 was retired – and R2 was moved into IRO-001 as Requirement R6. The VSLs for R6 are still needed.</p>

**13. Do you agree with the revisions to IRO-005-1 as shown in the posted Standard and Implementation Plan? The RC SDT is recommending retiring or moving all of the requirements and retiring this standard. If not, please explain in the comment area.**

**Summary Consideration:** Several commenters had concerns around removing the requirement to monitor frequency. Other commenters had concerns with the removal of other monitoring requirements in the standard. While the Standard Drafting Team (SDT) recognizes the concerns raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in assessing and responding to situations or events that could have an adverse impact on reliability.

Organization	Question 13:	Question 13 Comments:
Independent Electricity System Operator - Ontario	No	<p>R1: We not agree with removing this requirement for the same reason given for the proposal to remove R5 to R8 from IRO-002 (see comments on 10 (ii), above).</p> <p>R8: We do not agree with completely removing this requirement, especially that part that requires an RC to monitor system frequency. While DCS and CPS are largely a BA's responsibility, the RC is the last line of defense for abnormal system performance and needs to monitor its BAs' performance including their ability to address large frequency deviations, and direct or take corrective actions as needed including requesting emergency assistance on the BAs' behalf and directing load shedding.</p> <p>R9: The second part of this requirement needs to be retained. IRO-004 covers operational planning, not current day operations. Coordinating pending generator and transmission facility outages is an essential and necessary task by the RC to ensure reliability.</p> <p>R11: The RC needs to monitor ACE, detect and identify the cause of any abnormal ACE, and direct its BAs to take necessary actions to return ACE to within a normal range.</p> <p>R13: We do not agree with removing the latter part of R13. The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set</p>

Organization	Question 13:	Question 13 Comments:
		exists is a necessary requirement for reliable operation.
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>I While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p> <p>li With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in assessing and responding to situations or events that could have an adverse impact on reliability.</p> <p>lii The RC SDT proposes retiring this requirement as it is redundant with TOP-003 and IRO-004 (all requirements) for next day requirements. The RC has the authority to coordinate pending outages in real-time through IRO-001-2, R1 (proposed).</p> <p>Iv The SDT feels that there are better avenues to ensure BAs operate within established and acceptable thresholds as described in the BAL-001 and BAL-002 standards. Current standards projects are addressing revisions to the BAL set of standards.</p> <p>V The SDT believes this requirement is redundant with FAC-014. FAC-014 states the requirement for developing and sharing SOL and IROL between the RC, PA, TP and TOP in both the planning and operating time frames.</p>		
American Transmission Company	No	The accountability and monitoring addressed in this Standard is still required. The drafting team's intent was that the ability to monitor is part of the certification process. However, certification is to Standards, and if there is not a Standard which addresses this issue, then an entity cannot certify to it.
<p><b>Response:</b> The RC SDT thanks you for your comment. While the Standard Drafting Team (SDT) recognizes the concerns raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT's contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p>		
MRO NERC SDT standards	No	R1 includes many requirements for monitoring the system that are important, measurable and should be retained. Monitoring is too critical to operating the system to completely eliminate these

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 13:	Question 13 Comments:
Review Subcommittee		<p>requirements.</p> <p>R4, R8 and R11 are problematic as currently written. However, there have been actual instances of a large BA intentionally operating short hundreds of MWs of energy. I believe this occurred during the summer of 1999. Thus, the RC should be monitoring the BAs ACE and directing the BA to correct it if it becomes too large. It is not necessary or even useful for the RC to monitor the BA CPS performance.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The SDT feels that there are better avenues to ensure BAs operate within established and acceptable thresholds as described in the BAL-001 and BAL-002 standards. If a BA chooses to operate off schedule then the BAL standards need to be revisited and tightened up. This is being done in the current projects addressing the BAL standards. Monitoring capability can be objectively measured and is essential to real-time operations – however real-time monitoring is a supporting activity and is only one of several processes used to support operation within defined parameters. Monitoring capability should be assessed during the entity registration certification process and should not be a requirement. Note that certification is aimed at verifying that an entity has the “capability” of operating reliably. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in assessing and responding to situations or events that could have an adverse impact on reliability.</p>		
Ameren	Yes and No	<p>While we agree that most of the requirements are redundancies that properly belong elsewhere, we are concerned that Requirement 4 and Requirement 8 are not properly represented elsewhere and should not be retired until they re-surface in another standard explicitly. We believe it is still very important for an RC to monitor their respective BAs reserves and CPS performance. Likewise in R8, while the frequency monitoring is a BA function, we think that it is important enough to also be included as an RC function explicitly.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The SAR for this project included eliminating redundancies within the standards. In the Implementation Plan for this standard, we show the redundancy between this requirement, R4, and EOP-002-2. (please see pages 6-8 of the Implementation Plan). While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p>

**14. Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.**

**Summary Consideration:** Several commenters expressed concerns with the term “impacted” and suggested replacing this with “other”. The RC SDT believes “impacted” directly relates to the purpose statement. The original wording of “one or more other” is vague and difficult to measure. Using the word “other” presents a similar situation. The RC SDT chose to use the word “impacted” to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous reliability coordinators to have “RC agreements”, but to have Procedures, Processes, or Plans with impacted reliability coordinators. Other commenters suggested striking the term “as a minimum” in R1 and the RC SDT agrees and has modified R1 accordingly. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. The requirement that was transferred from IRO-016 has been translated into 4 requirements in IRO-014:

R5. ~~When an expected or actual reliability issue is detected, the~~ Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. ~~confirm the existence of the issue with the impacted Reliability Coordinators.~~

R6. ~~In the event that the issue cannot be confirmed, e~~ Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators.

R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists.

~~R6~~R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when ~~When an expected or actual reliability issue exists and~~ the impacted Reliability Coordinators cannot agree on a mitigation plan, ~~all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue.~~

Organization	Question 14:	Question 14 Comments:
Independent Electricity System	No	We suggest to replace the word "impacted" with "other" since there is a preconception that the concerned RC makes an assessment of which other RCs are impacted by the coordinated actions,

Organization	Question 14:	Question 14 Comments:
Operator - Ontario		which may not be the perspective of the other RCs who may in fact be impacted by any coordinated actions among other RCs.
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT believes “impacted” directly relates to the purpose statement. The original wording of “one or more other” is vague and difficult to measure. Using the word “other” presents a similar situation. The RCSDT chose to use the word “impacted” to tighten the requirement and remove ambiguity. Additionally, R1.1 reconciles the preconception of the Reliability Coordinator making an assessment:</p> <p>R1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p>		
MRO NERC SDT Standards Review Subcommittee	No	<p>Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A.</p> <p>Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary?</p> <p>Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be address per R1.1.</p> <p>R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm.</p> <p>R6 appears to be a rewrite of requirements R1, R2 and their sub-requirements in IRO-016. We agree that those requirements do need to be written more succinctly or removed altogether. However, R6 does not accomplish the goal and only confuses that matter further. The reason the RCs may not be able to agree on a mitigation plan is that RC with the reliability issue may be requesting mitigations that the other RCs believe may cause them reliability issues. This requirement appears to suggest that the solution to a disagreement on the mitigation plan is cut and dried. Generally, the reason the disagreement arises is due to one RC not fully understanding the impact of their actions on another RC. The bottom line is that the RCs may have disagreements and there is no way to require a solution in these types of situations. Please revise R6 to require using the mitigation plan developed by the Reliability Coordinator who has the reliability issue provided that the mitigation plan does not cause a reliability issue in the other region.</p> <p>As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The</p>

Organization	Question 14:	Question 14 Comments:
		<p>drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with striking “as a minimum” and the requirement is modified accordingly. The RC SDT believes that the term “collectively” addresses the interpretation of R1 (your last comment).</p> <p>R1.6: The RC SDT disagrees with the MRO interpretation of 693-A and believes R1.6 reinforces the Commission’s determination in paragraph 112 of 693-A which clarifies the reliability coordinator’s authority stating “...authority to issue directives arises out of the Commission’s approval of Reliability Standards that mandate compliance with such directives.”</p> <p>R1.1: R1.1 provides the conditions under which the RC’s will communicate or notify each other. R2 deals with actions that are to be taken beyond notifications.</p> <p>R4 and R4.1: The RC SDT disagrees with the duplicity. R1.1 is a sub-requirement of R1 which requires the reliability coordinator “to have” procedures, processes, or plans, and R4 requires “participation.”</p> <p>R5 &amp; R6: Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>		

Organization	Question 14:	Question 14 Comments:
Southern Company Transmission	No	<p>14.1 - R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC?</p> <p>14.2 - We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken.</p> <p>14.3 - We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly.</p> <p>14.4 - R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous" or a similar term.</p> <p>14.5 - We suggest rewriting R5 to read: In the event that a reliability issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.</p> <p>14.6 - At Requirement R1, the use of the phrase "as a minimum" seems to add some flexibility for development of procedures, processes and plans. A negative consequence is that it introduces more ambiguity. The recommendation is to strike the phrase.</p> <p>14.7 - At Requirement R1.6, consider the following: "Authority to act to prevent and mitigate instances 'that have the potential to cause' Adverse Reliability Impacts to other Reliability Coordinator Areas."</p>
<p><b>Response:</b> The RC SDT thanks you for your comments.</p> <p>14.1: The RC SDT believes "impacted" directly relates to the purpose statement. The original wording of "one or more other" is vague and difficult to measure. Using the word "other" presents a similar situation. The RCSDT chose to use the word "impacted" to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous reliability coordinators to have "RC agreements", but to have Procedures, Processes, or Plans with impacted reliability coordinators.</p> <p>14.2: The RC SDT respectfully disagrees with your comment. R6 requires implementation ("shall implement") and R1 is a "shall have" requirement; keeping these separate provides clarity of related measures. The Dispute Resolution process is more administrative in nature regarding compliance, certification, audit processes, or contracts.</p>		

Organization	Question 14:	Question 14 Comments:
		<p>14.3: The RC SDT deleted 4.1 modified R4 to: “The RC shall participate in agreed upon conference calls at least weekly and other communication forums with impacted Reliability Coordinators.”</p> <p>14.4: The RC SDT chose the word “impacted” after much discussion. Impacted has the implication that the RC is immediately impacted or the RC may be impacted by a future situation. We feel that the requirement for weekly calls addresses your concern.</p> <p>14.5: R5 &amp; R6: Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>14.6: The RC SDT agrees with striking “as a minimum” and the requirement is modified accordingly.</p> <p>14.7: The RC SDT believes that if a reliability coordinator acts to prevent or mitigate instances the “potential to cause” already exists.</p>
ISO New England Inc.	Yes and No	As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT agrees that the term “collectively” addresses your interpretation and it is already included in R1.</p>		

Organization	Question 14:	Question 14 Comments:
FirstEnergy	No	<p>R1 - Should be revised as follows to improve readability and clarity:</p> <p>R1.3 - Add "Exchanging" before "Planned"</p> <p>R1.4 - Add "Control of voltage" at the beginning of the requirement and delete "for voltage control" at the end of the requirement.</p> <p>Add a new R1.7 as follows: "A process for resolution of the disagreement covered by R6 of this standard."</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1.3: The RC SDT believes adding the term "Exchanging" before "Planned" is redundant with "... exchange of information" stated in R1.</p> <p>R1.4: The RC SDT modified R1.4 to read as "Control of voltage including the coordination of reactive resources."</p> <p>R1.7: R6: To address the process for resolution of disagreements, the RC SDT proposes the 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>		
Duke Energy	No	<p>R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows:</p>

Organization	Question 14:	Question 14 Comments:
		<p>R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly.</p> <p>R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous". We suggest rewriting R5 to read: In the event that an operating issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1 and R2: The RC SDT believes "impacted" directly relates to the purpose statement. The original wording of "one or more other" is vague and difficult to measure. Using the word "other" presents a similar situation. The RC SDT chose to use the word "impacted" to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous reliability coordinators to have "RC agreements", but to have Procedures, Processes, or Plans with impacted reliability coordinators.</p> <p>To address your comments on the process for resolution of disagreements and R5, the RC SDT proposes the 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R4: The RC SDT deleted 4.1 modified R4 to: "The RC shall participate in agreed upon conference calls, at least weekly, and other communication forums with impacted Reliability Coordinators." The RC SDT chose the word "impacted" after much discussion. Impacted has the implication that the RC is immediately impacted or the RC may be impacted by a future situation. We feel that the requirement for weekly</p>		

Organization	Question 14:	Question 14 Comments:
calls addresses your concern		
ISO/RTO Council Standards Review Subcommittee	No	<p>Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A. Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary? Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be address per R1.1.</p> <p>R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm. As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with striking "as a minimum" and the requirement is modified accordingly. The RC SDT believes that the term "collectively" addresses your interpretation of R1.</p> <p>R1.6: The RC SDT disagrees with your interpretation of 693-A, and believes R1.6 reinforces the Commission's determination in paragraph 112 of 693-A which clarifies the reliability coordinator's authority stating "...authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives."</p> <p>R1.1: The RC SDT believes "mutually agreed to" reinforces R2.</p> <p>R4 and R4.1: The RC SDT disagrees with the duplicity. R1.1 is a sub-requirement of R1 which requires the reliability coordinator "to have" procedures, processes, or plans, and R4 requires "participation."</p> <p>R5: The RC SDT proposes the 4 requirements for clarity:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day</p>		

Organization	Question 14:	Question 14 Comments:
		<p>Operations and Real-time Operations]</p> <p>R7. 15. Do you agree with the revisions to the Measures in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

**Summary Consideration:** The RC SDT received comments to revise M1 to remove “System operators” as it added to the requirement and to remove “for real-time use”. The RC SDT agrees and has modified the measure as shown below:

M1. The Reliability Coordinator ~~’s System Operators~~ shall have available ~~for Real-time use,~~ the latest approved [documented](#) version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators. [This documentation may include, but is not limited to, dated, current in force documentation with the specified elements.](#)

~~M1.1 These Operating Procedures, Processes, or Plans shall address:~~

- ~~–M1.1.1— Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.~~
- ~~–M1.1.2— Energy and capacity shortages.~~
- ~~–M1.1.3— Planned or unplanned outage information.~~
- ~~–M1.1.4— Voltage control, including the coordination of reactive resources for voltage control.~~
- ~~–M1.1.5— Coordination of information exchange to support reliability assessments.~~
- ~~–M1.1.6— Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.~~

~~Most o~~ [Other The](#) measures were ~~also~~ revised to conform to changes in the requirements [and to provide samples of acceptable evidence.](#)

Organization	Question 15:	Question 15 Comments:
Independent Electricity System Operator -	No	Measure 1 actually contains a number of subrequirements that should be stipulated in R1, not M1. If indeed these are required, they should be stipulated in the Requirement section, not the Measures Section.

Organization	Question 15:	Question 15 Comments:
Ontario		
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT modified M1 deleting “System Operators” and the submeasures were removed and included only in the requirement.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. There should be the single measurement to verify the Operating Processes, Procedures, and Plans have been developed and address the sub-requirements. This really points out the problem with making the criteria that must be considered in the Operating Processes, Procedures, and Plans sub-requirements in the first place. They aren't requirements of any sort. They represent criteria. The drafting team should consider making them a bulleted list without the Rs, then the drafting team won't feel compelled to write sub-measures that don't measure anything.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. . The RC SDT modified M1 deleting “System Operators” and the submeasures were removed and included only in the requirement. As the list includes topics for every RC is required to address, these are mandatory and should be numbered rather than bulleted.</p>		
MRO NERC SDTandards Review Subcommittee	No	<p>Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. **16. Do you agree with the Violation Severity Levels proposed in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.**

**Summary Consideration:** Several commenters suggested that the High and Severe VSLs for R2 contradicted the requirement. The RC SDT agreed and removed the "nots" from the VSLs to correct this error.

The VSL for R4 was originally proposed as a binary requirement with only a Lower VSL – since that time, a determination was made that noncompliance with any binary requirement must be classified a Severe VSL – thus the VSL for R4 was changed from Lower to Severe.

Several commenters had suggested revisions for the VSLs for R6. This requirement was imported from IRO-016 and several commenters suggested expanding the set of requirements regarding the Implementation Plan. The RC SDT expanded the requirements to 4 separate requirements and developed VSLs for these requirements (R5-R8). This made some of the comments on the VSLs moot.

Organization	Question 16:	Question 16 Comments:
Independent Electricity System Operator - Ontario	No	<p>R2: the High and Severe VSLs contradict with the requirement. We believe all of the "nots" should be removed.</p> <p>R6: The Low VSL should be a High since not agreeing to a plan but implementing one that has not been agreed to is a high violation of the requirement.</p> <p>The VSLs for R1 may need to be revised if our comments on M1 are adopted.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>We have revised the VSL based on your comment.</p> <p>R6 – The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p> <p>The VSL for R1 was unchanged as R1 remained unchanged.</p>		
MRO NERC SDTandards Review	No	For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed. We don't agree with the VSLs in R4 since we believe R4 should be struck.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 16:	Question 16 Comments:
Subcommittee		The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>We have revised the VSL for R2 per your suggestion.</p> <p>R4 – R4 remains in the standard</p> <p>R6 - The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p>		
Southern Company Transmission	No	<p>16.1 - In R2, severe should be "... and no action was taken by the RC".</p> <p>16.2 - In R5, severe should also include "... or that the RC failed to operate as though the problem existed."</p> <p>16.3 - Modify the VSLs to be consistent with changes requested in R1, R2, R4, R4.1 and R5.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>16.1 The requirement is to have agreed to plans and to distribute the plans. Other requirements address the actions to be taken.</p> <p>16.2 The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p> <p>16.3 The VSLs were revised based on stakeholder comments and revised requirements.</p>		
FirstEnergy	No	The VSL should be modified per our suggested modifications in question 14.
<p><b>Response:</b> The RC SDT thanks you for your comment. The VSLs were revised to reflect revisions to the requirements.</p>		
Duke Energy	No	See comments #14 and #15 above - VSLs need to be revised to correspond to the revised Requirements and Measures.
<p><b>Response:</b> The RC SDT thanks you for your comment. Please see responses to comment 14 and 15 above. VSLs were revised to reflect</p>		

Organization	Question 16:	Question 16 Comments:
revised requirements.		
ISO/RTO Council Standards Review Subcommittee	No	<p>For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed.</p> <p>We don't agree with the VSLs in R4 since we believe R4 should be struck.</p> <p>The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>The VSL for R2 was revised per your suggestion.</p> <p>R4 – R4 remains in the standard. The VSLs were revised to reflect that noncompliance with a binary requirement is Severe.</p> <p>R6 – The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p>		
SERC OC Standards Review Group	Yes and No	<p>16.1 - In R2, severe should be "no action was taken by the RC".</p> <p>16.2 - In R5, severe should also include that the RC failed to operate as though the problem existed.</p> <p>16.3 - Modify the VSLs to be consistent with changes requested in R1, R2, R4, R4.1 and R5.</p>

**18. Do you agree with the revisions to IRO-016-1 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.**

**Summary Consideration:** Stakeholders agree with the concept of moving the requirements of IRO-016-1 into IRO-014-2. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements formed to cover the intent of the requirement transferred from IRO-016:

R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

Organization	Question 18:	Question 18 Comments:
Duke Energy	No	See comment #14 above regarding re-write needed for Requirement R6 of IRO-014-2.
<b>Response:</b> The RC SDT thanks you for your comment. Please see response in #14 above.		
MRO NERC SDTandards Review Subcommittee	Yes	We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-2.

Organization	Question 18:	Question 18 Comments:
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. Southern Company Transmission	Yes	18.1 - We agree with the recommendation to retire IRO-016-2.
<p><b>Response:</b> The RC SDT thanks you for your comment.</p>		
Buckeye Power, Inc.	Yes and No	Abstain
SERC OC Standards Review Group	Yes	18.1 - We agree with the recommendation to retire IRO-016-2
<p><b>Response:</b> The RC SDT thanks you for your comment.</p>		
ISO/RTO Council Standards Review	Yes	We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-

Organization	Question 18:	Question 18 Comments:
Subcommittee		2.
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan,. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>

**19. If you have any other comments, not expressed in questions above, on this set of revisions, please provide your comments here.**

**Summary Consideration:** The RC SDT received comments that COM-001-2, R5 should be retired upon regulatory approval. The RC SDT will propose the earliest possible retirement date – the first day of the first calendar quarter following applicable regulatory approval, or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following BOT adoption.

Organization	Question 19:
Southern Company Transmission	19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability.
<b>Response:</b> The RC SDT thanks you for your comment. We concur and will request an effective date as you suggest.	
SERC OC Standards Review Group	19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability
<b>Response:</b> The RC SDT thanks you for your comment. We concur and will request an effective date as you suggest.	
Entergy Services, Inc	Overall, we think the coordinated set of standards being developed by the RTOSDT and IROLSDT are good for reliability, crisp, and tightens up the reliability concepts.
<b>Response:</b> The RC SDT thanks you for your comment.	
MEAG Power	My other concerns are addressed in the comments of the SERC OC Standards Review Group.
<b>Response:</b> The RC SDT thanks you for your comment.	
Salt River Project	I appreciate the new comment form in Word version. his allows me to comment on each requirement specifically addressing the requirement, measure or the VSL's

Organization	Question 19:
<p><b>Response:</b> The RC SDT thanks you for your comment.</p>	
<p>#2 Standards Interface Subcommittee/Compliance Elements Development Resource Pool</p>	<p>Standard – COM-001-2 Telecommunications:</p> <p>Requirement 1: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>Proposed Measure: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide evidence that it operationally tested, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>SDT Proposed Lower VSL The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last quarter.</p> <p>CEDRP Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in one of the previous four quarters.</p> <p>SDT Proposed Moderate VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 2 quarters.</p> <p>CEDRP Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in two of the previous four quarters.</p> <p>SDT Proposed High VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 3 quarters.</p> <p>CEDRP Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in three of the previous four quarters.</p>

Organization	Question 19:
	<p>SDT Proposed Severe VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 4 quarters.</p> <p>CEDRP Proposed Severe VSL: The Responsible Entity failed to operationally test alternative telecommunications every quarter on more than three separate occasions (i.e. more than any three different quarters).</p> <p>=====</p> <p>Standard – COM-001-2 R2 Telecommunications Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities of the failure of its normal telecommunications facilities, and shall verify that alternate means of telecommunications are functional.</p> <p>Proposed Measure: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional.</p> <p>Discussion - This requirement needs to be re-written to be more clearly define who the entities are that are “impacted.” The key attributes appear to be notification of ALL (communication) impacted entities (possible omission if some, but not all are not notified). The requirement does not give any guidance on the “verification” side – this is a problem, one entity can interpret that to mean “we looked and it was working”, another may be to verify with all impacted entities that alternate communication is working. We suggest this requirement needs a little more clarification.</p> <p><b>Response:</b> The RC SDT believes that entities should contact others when their normal communication capability is lost. For example, the normal phone line could be cut and someone trying to contact that entity may only get a busy signal and have no idea that alternate communications is necessary.</p> <p>We have revised the requirement to place time bounds on outages that require notification. The requirement was rewritten to:</p> <p>R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>The CEDRP does not feel it can write a valid VSL for this requirement as currently worded.</p> <p>SDT Proposed Lower VSL:</p>

Organization	Question 19:
	<p>The Reliability Coordinator, Transmission Operator or Balancing Authority notified all impacted entities of the failure of their normal telecommunications facilities, but failed to verify the alternate means of telecommunications are functional.                      CEDRP Proposed Lower VSL:                      See Discussion</p> <p>SDT Proposed Moderate VSL:                      The Reliability Coordinator, Transmission Operator or Balancing Authority notified some, but not all, impacted entities of the failure of their normal telecommunications facilities, and failed to verify the alternate means of telecommunications are functional.                      CEDRP Proposed Moderate VSL:                      See Discussion:</p> <p>SDT Proposed High VSL:                      N/A                      CEDRP Proposed High VSL:                      See Discussion                      SDT Proposed Severe VSL:                      The Reliability Coordinator, Transmission Operator or Balancing Authority failed to notify any impacted entities of the failure of their normal telecommunications facilities, and failed verify the alternate means of telecommunications are functional.                      CEDRP Proposed Severe VSL:                      See Discussion</p> <hr/> <p>Standard – COM-001-2 R3 Telecommunications                      Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.                      Proposed Measure: The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used</p>

Organization	Question 19:
	<p>to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES.</p> <p>NOTE: OK with this as is because the requirement and VSLs have been re-written, will be removed from this standard shortly, and included in the new COM-003-1 standard.</p> <p><b>Response:</b> Thank you for your comment.</p> <p>SDT Proposed Severe VSL: The Responsible Entity failed to provide evidence of concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System.</p> <p>CEDRP Proposed Severe VSL: The Responsible Entity failed to provide evidence of the concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System.</p> <p>=====</p> <p>Standard – COM-001-2 R4 Telecommunications Each Distribution Provider and Generation Operator shall have telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p> <p>Proposed Measure: Each Distribution Provider and Generation Operator has telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p> <p>“has” telecomm with TOP and BA Discussion – Telecommunication Facilities is ambiguous and is not included in the NERC glossary of terms – the CEDRP recommend deleting the word “facilities” from the requirement and measure and leaving it just as “telecommunications” with its TOP and BA .</p> <p><b>Response:</b> The term “telecommunications facilities” was replaced with “interpersonal communications</p>

Organization	Question 19:
	<p>capabilities” to clarify the intent of the requirement.</p> <p>SDT Proposed High VSL: N/A</p> <p>CEDRP Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority OR Transmission Operator for the exchange of Interconnection and operating information.</p> <p>SDT Proposed Severe VSL: The Distribution Provider or Generation Operator failed to have telecommunications facilities with its Transmission Operator and Balancing Authority</p> <p>CEDRP Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority AND Transmission Operator for the exchange of Interconnection and operating information.</p> <p>5. Is the VSL language clear &amp; measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes, considering the wording of the requirement as written. More specifically, the word “have” as used in the requirement is a bit vague. A better choice could have been, “established and maintains.”</p> <p><b>Response:</b> Thank you for your comment.</p> <p>=====</p> <p>Standard: COM-002-3 Communications and Coordination</p>
	<p><b>Response:</b> The RC SDT thanks you for your comments. Please see responses embedded above.</p> <p>In the future, please do not submit comments in this format. It is extremely burdensome on the drafting team in trying to respond to the comments. Please answer each question individually. If you encounter difficulty, please contact NERC for assistance.</p>
Standards Interface Subcommittee/Compliance Elements Drafting	<p>Standard – IRO-001 R1</p> <p>The Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. [Violation Risk</p>

Organization	Question 19:
	<p>Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]  Proposed Measure  Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area Discussion –</p> <ol style="list-style-type: none"> <li>1. As currently worded it can be interpreted that any time an event occurs the RC would be in violation of the standard simply because they had failed “to prevent” an event.</li> <li>2. This requirement does not have a “timing” element included, although it implies timing based on the “duration of the event”. Including that “duration of the event” is problematic – it appears to imply that human intervention may provide a more timely response than relay operation, we would suggest more clarification about what the “duration” element of the requirement is intended to address (e.g. generation re-dispatch?).</li> <li>3. There also appears to be a “quality” element included based on the mitigation of magnitude of the event. As a result we believe that timeliness, effectiveness and communication should be the basis of the VSLs.</li> <li>4. The VSLs as differentiate between directing actions and acting. Practically, there is no difference. The RC is still giving the directive. It is just a matter of who is carrying it out. This is not a valid basis for differentiating between VSLs. We suggest the VSLs be defined based on actual system impact (i.e. Was the RC acting or directing actions to prevent or to mitigate?) and to either modify the requirement to remove timing aspects or to add the timing aspects to the VSLs.</li> </ol> <p><b>Response:</b></p> <ol style="list-style-type: none"> <li>1. The RC SDT does not agree that there would be a violation any time an event occurred. The RC should always be looking ahead. Even though events can occur that were not foreseeable or due to catastrophic failures of system equipment.</li> <li>2. The intent of the phrase of “duration of the event” is to emphasize that there are actions that can be taken to shorten the duration of an event. These include ordering redispatch and system reconfiguration (including load shedding) to mitigate an Adverse Reliability Impact, thus shortening the event and its impact on the interconnection.</li> <li>3. The VSL has been re-written to include only a Severe VSL.</li> <li>4. We agree and have revised the VSL to only have a Severe VSL.</li> </ol> <p>SDT Proposed High VSL IRO-001 R1</p>

Organization	Question 19:
	<p>The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts.                      CEDRP Proposed VSL                      The Reliability Coordinator failed to act to prevent the magnitude or duration of Adverse Reliability Impacts.</p> <p>SDT Proposed Severe VSL IRO-001 R1                      The Reliability Coordinator failed to act and direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts                      CEDRP Proposed VSL                      The Reliability Coordinator failed to act and direct actions to mitigate the magnitude or duration of Adverse Reliability Impacts</p> <p>CAE Resource Pool Comments                      The Enforcement Authority Statement, “NERC shall be responsible for compliance monitoring of the Regional Entity.” Is not clear, if it is intended to encompass Regional Entities that perform RC functions is should be clearly stated, if not it should not be included in the Enforcement Authority section.</p> <p>=====</p> <p>Standard – IRO-001 R2                      Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall act without intentional delay to comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]                      Proposed Measure                      Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without delay to comply with the Reliability Coordinator’s directives <b>unless such actions would violate safety, equipment, or regulatory or statutory requirements.</b>                      Discussion - The team would suggest “intentional delay” be eliminated from the requirement – e.g. “shall act to...”). To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement.</p>

Organization	Question 19:
	<p>The measure and VSLs do not consider the exceptions for not following the RC objective. The drafting team should consider combining requirements R2 and R3. Thus, one VSL would become failure to notify the RC of the inability to comply. The drafting team could consider applying the numerical category of VSLs for some directives such as an order to redispach. Obviously, it would not work well if the directive was to reconfigure the system.</p> <p><b>Response:</b></p> <p>The term “intentional delay” was eliminated from the standard as you suggested. The VSLs were revised to reflect the requirement.</p> <p>SDT Proposed Moderate <del>Moderate</del> High VSL  The responsible entity followed the Reliability Coordinators directive <b>unless such actions would violate safety, equipment, or regulatory or statutory requirements</b> with a delay. <del>not caused by equipment problems.</del></p> <p>CEDRP Proposed VSL IRO-001 R2  The team does not agree that this is a valid VSL.</p> <p>SDT Proposed High VSL  <del>The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements.</del></p> <p>CEDRP Proposed VSL IRO-001 R2  The team does not agree that this is a valid VSL. The word majority implies some ability to numerically measure the response to the directive. Thus, the drafting team should consider applying the numerical category of the VSL guidelines.</p> <p>SDT Proposed Severe VSL  <del>The responsible entity did not follow the Reliability Coordinators directive. The responsible entity did not follow the Reliability Coordinators directive, the directive would not have violated safety, equipment, regulatory, or statutory requirements, and responsible entity did not communicate the inability to follow the directive to the Reliability Coordinator.</del></p> <p>CEDRP Proposed VSL IRO-001 R2  The responsible entity did not follow the Reliability Coordinators directive, the directive would not have violated safety, equipment, regulatory, or statutory requirements, and responsible entity did not communicate the inability to follow the directive to the Reliability Coordinator.</p>

Organization	Question 19:
	<p>=====</p> <p>Standard - IRO-001 R3 The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the Reliability Coordinator upon recognition of the inability to perform the directive. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</p> <p>Proposed Measure</p> <p>Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, informed the Reliability Coordinator upon recognition of the inability to comply.</p> <p>Discussion – The requirement appears to be based on communication and can be problematic by including the requirement to immediately confirm the ability to comply, a directive can be issued to one entity or several entities at one time (e.g. conference call, all call, electronic notification) that may create several issues when attempting to process all confirmations, the requirement language presents a risk of being found out of compliance for following a directive but not providing an “immediate” confirmation to the RC. The CEDRP believes it to be a reasonable expectation that all entities will comply with reliability directives and notification should be made only on exception. The SDT should consider combining this requirement with R2.</p> <p><b>Response:</b></p> <p>The phrase “immediately confirm the ability to comply” was removed from the requirement. The new wording is:</p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, or Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform the directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p>SDT Proposed Lower VSL IRO-001 R3</p> <p>The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator.</p>

Organization	Question 19:
	<p>CEDRP Proposed VSL See above discussion note</p> <p>=====</p> <p>Standard - IRO-001 R4</p> <p>Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure</p> <p>Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area.</p> <p>Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. This requirement appears to fit the numerical category of the VSL guidelines best.</p> <p><b>Response:</b></p> <p>The term “intentional delay” was eliminated from the standard as you suggested. The VSLs were revised as you suggested.</p> <p>SDT Proposed Lower VSL IRO-001 R4 N/A CEDRP Proposed VSL</p> <p>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>SDT Proposed Moderate VSL IRO-001 R4 N/A CEDRP Proposed VSL</p>

Organization	Question 19:
	<p>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>SDT Proposed High VSL IRO-001 R4 N/A CEDRP Proposed VSL</p> <p>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>SDT Proposed Severe VSL: IRO-001 R4 The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.</p> <p>CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>=====</p> <p>Standard - IRO-001 R5</p> <p>Each Reliability Coordinator who identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when the real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area has been mitigated.</p>

Organization	Question 19:
	<p>Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. Measure 5 is written implying that there is an Adverse Reliability Impact. The drafting team should consider wording the measurement to consider that there may not be an Adverse Reliability Impact requiring a directive. The Commission in paragraph 27 of the VSL order has stated that multiple VSLs are preferable where possible. Suggest applying the numerical category of the VSL Guidelines based on the number of entities notified.</p> <p><b>Response:</b></p> <p>The term “intentional delay” was eliminated from the standard as you suggested. The VSLs were revised per your suggestion.</p> <p>SDT Proposed Lower VSL: IRO-001 R5 N/A CEDRP Proposed Lower VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>SDT Proposed Moderate VSL: IRO-001 R5 N/A CEDRP Proposed Moderate VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>SDT Proposed High VSL: IRO-001 R5 N/A CEDRP Proposed High VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the</p>

Organization	Question 19:
	<p>impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>SDT Proposed Severe VSL: IRO-001 R5                      The Reliability Coordinator failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.</p> <p>CEDRP Proposed Severe VSL:                      The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>=====</p> <p>Standard – IRO-002-2 R1                      Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure                      Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a letter to Transmission Operators, Balancing Authorities, Transmission Owners, Generator Owners, Generator Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has requested the data required to support its reliability coordination tasks.</p> <p>Discussion – The VSLs attempt to measure the quality of the data requirements. They require the compliance auditor to judge if another RC has material impact and what data is administrative and what data is substantial. Given the typical length of a compliance audit, it is doubtful that the compliance auditor can make these types of judgments about the quality of the data and the material impact of another RC. The drafting team should consider applying numerical category of VSLs based on the number of entities the data request is made from. It is interesting that the measure also does not require</p>

Organization	Question 19:
	<p>any documentation of a data specification.</p> <p><b>Response:</b></p> <p>The requirement was retired by the work of the IROLSDT. It is no longer in the standard.</p> <p>SDT Proposed Lower VSL:                      The Reliability Coordinator demonstrated that it</p> <ol style="list-style-type: none"> <li>1) determined its data requirements and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with a material impact on the Bulk Electric System in its Reliability Coordination Area but did not request the data from Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with minimal impact on the Bulk Electric System in its Reliability Coordination Area or</li> <li>2) determined its data requirements necessary to perform its reliability functions with the exceptions of data that may be needed for administrative purposes such as data reporting.</li> </ol> <p>CEDRP Proposed Lower VSL: IRO-002-2 R1</p> <p>The Reliability Coordinator failed to request data to support its reliability coordination tasks from 25% or less of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.</p> <p>SDT Proposed Moderate VSL:                      The Reliability Coordinator demonstrated that it determined the majority but not all of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p> <p>CEDRP Proposed Moderate VSL: IRO-002-2 R1</p> <p>The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 25% but less than or equal to 50% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.</p> <p>SDT Proposed High VSL:                      The Reliability Coordinator demonstrated that it determined</p> <ol style="list-style-type: none"> <li>1) some but less than the majority of its data requirements necessary to support its reliability</li> </ol>

Organization	Question 19:
	<p>coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators</p> <p>Or</p> <p>2) all of its data requirements necessary to support its reliability coordination functions but failed to demonstrate that it requested data from two of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p> <p>CEDRP Proposed High VSL: IRO-002-2 R1                      The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 50% but less than or equal to 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.</p> <p>SDT Proposed Severe VSL:                      The Reliability Coordinator failed to demonstrate that it</p> <p>1) determined its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators</p> <p>Or</p> <p>2) requested the data from three or more of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p> <p>CEDRP Proposed Severe VSL: IRO-002-2 R1                      The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators,</p>

Organization	Question 19:
	<p>Or,</p> <p>The Reliability Coordinator failed to determine data requirements to support its reliability coordination tasks.</p> <p>Standard – IRO-002-2 R2</p> <p>Each Reliability Coordinator shall have the authority to veto planned outages to analysis tools, including final approvals for planned maintenance. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure</p> <p>Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement 2.</p> <p>Is this requirement needed? R1 IRO-001-2 requires the RC to mitigate Adverse Reliability Impacts. R2 IRO-001-2 requires responsible entities to comply with the RC directives. Wouldn't the RC thus have the right to cancel all types of outages (i.e. analysis tools, transmission equipment, etc). FERC has stated in paragraph 112 of Order 693-A that an RC does not derive their authority from agreements but rather from FERC's approval of the standards.</p> <p>Barring the team's decision to remove this requirement, the Severe VSL is confusing. We have suggested different wording.</p> <p><b>Response:</b></p> <p>While the RC SDT agrees that the other requirements should cover this subject, this is a direct response to the 2003 blackout and is included here. We have revised the Severe VSL to reflect the revised requirement.</p> <p>SDT Proposed Severe VSL IRO-002-2 R2  Reliability Coordinator approval is not required for planned maintenance or planned outages.  CEDRP Proposed VSL  Reliability Coordinator does not approve planned maintenance or planned outages.</p>

Organization	Question 19:
	<p>=====                      Standard – IRO-014-2 R1 No comments                      =====</p> <p>Standard – IRO-014-2 R2                      R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: [Violation Risk Factor: Lower] [Time Horizon: Real-time Operations and Operations Planning]                      R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).                      R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p> <p>Proposed Measure                      M2. The Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:                      M2.1 Agreed to by all the Reliability Coordinators required to take the indicated action(s).                      M2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p> <p>Discussion – The High and Severe VSLs appear to use “not” incorrectly.</p> <p><b>Response:</b>                      We agree and have revised the VSLs.</p> <p>SDT Proposed Moderate VSL: IRO-014-2 R2                      The Reliability Coordinator <del>failed to</del> <b>did not</b> have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action.</p> <p>CEDRP Proposed Moderate VSL: IRO-014-2 R2                      The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take</p>

Organization	Question 19:
	<p>action.</p> <p>SDT Proposed High VSL:                      The Reliability Coordinator <del>failed to</del> <b>did not</b> have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were <del>not</del> agreed to by all Reliability Coordinators that are required to take action</p> <p>CEDRP Proposed High VSL:                      The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action</p> <p>SDT Proposed Severe VSL:                      The Reliability Coordinator <del>failed to</del> <b>did not</b> have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were <del>not</del> agreed to by all Reliability Coordinators that are required to take action and were <del>not</del> distributed to all Reliability Coordinators that are required to take action</p> <p>CEDRP Proposed Severe VSL:                      The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action and were distributed to all Reliability Coordinators that are required to take action</p> <p>=====</p> <p>Standard – IRO-014-2 R3 [Response: The SDT appreciates the comments. To better emphasize the distinction, the SDT decided to underline the “and” and the “or”.]                      Requirement (including sub-requirements)                      R3. The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. [Violation Risk Factor: Medium][Time</p>

Organization	Question 19:
	<p>Horizon: Real-time Operations and Operations Planning]</p> <p>Proposed Measure  M3. The Reliability Coordinator shall have evidence it made notifications and exchanged reliability–related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information.</p> <p>Discussion: The VSLs appear to be appropriate. Since the only difference is the use of the “and” and “or”, we suggest emphasizing those words in bold. We read this more than once before we noticed the difference.</p> <p><b>Response:</b>  We revised the VSL to emphasize the “OR” and “AND” parts.</p> <p>SDT Proposed High VSL:  The Reliability Coordinator failed to make notifications <b>or</b> exchange reliability–related information with impacted Reliability Coordinators.  CEDRP Proposed High VSL: IRO-014-2 R3  The Reliability Coordinator failed to make notifications or exchange reliability–related information with impacted Reliability Coordinators.</p> <p>SDT Proposed Severe VSL:  The Reliability Coordinator failed to make notifications <b>and</b> exchange reliability–related information with impacted Reliability Coordinators.  CEDRP Proposed Severe VSL: IRO-014-2 R3  The Reliability Coordinator failed to make notifications and exchange reliability–related information with impacted Reliability Coordinators.</p> <p>=====</p> <p>Standard – IRO-014-2 R4  R4. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted Reliability Coordinators. [Violation Risk Factor: Lower][Time</p>

Organization	Question 19:
	<p>Horizon: Real-time Operations]</p> <p>The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.</p> <p>Proposed Measure</p> <p>M4. The Reliability Coordinator shall have evidence it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.</p> <p>Discussion – This requirement is purely administrative and probably does not rise to a level of a reliability standard requirement.</p> <p>It is in essence redundant, with R1.1 IRO-014-2? It appears R1.1 addresses the same information that would be expected to be discussed in a weekly conference call. Should the drafting team disagree and retain this requirement, please consider applying multiple VSLs based on how often the RC participates in conference calls, how many they missed, or how many impacted RCs they participated in conference calls with.</p> <p><b>Response:</b></p> <p>R1.1 is a sub-requirement of R1 which requires the reliability coordinator “to have” procedures, processes, or plans, and R4 requires “participation.” R4 requires participation on calls. If the RC fails to participate, that is a violation of the requirement, making it a binary requirement with only one VSL.</p> <p>SDT Proposed Lower VSL:                      The Reliability Coordinator failed to participate in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.</p> <p>CEDRP Proposed Lower VSL: IRO-014-2 R4                      The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators bi-weekly,                      Or                      the Reliability Coordinator failed to participate in one weekly conference call,                      Or                      the Reliability Coordinator agreed to participate in conference calls with 25% or less of the impacted Reliability Coordinators.</p> <p>SDT Proposed Moderate VSL:                      N/A</p>

Organization	Question 19:
	<p>CEDRP Proposed Moderate VSL: IRO-014-2 R4                      The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators every third week,                      Or                      the Reliability Coordinator failed to participate in two weekly conference calls,                      Or                      the Reliability Coordinator agreed to participate in conference calls with more than 25% but less than or equal to 50% of the impacted Reliability Coordinators.</p> <p>SDT Proposed High VSL:                      N/A                      CEDRP Proposed High VSL: IRO-014-2 R4                      The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators fourth week,                      Or                      the Reliability Coordinator failed to participate in three weekly conference calls,                      Or                      the Reliability Coordinator agreed to participate in conference calls with more than 50% but less than or equal to 75% of the impacted Reliability Coordinators.</p> <p>SDT Proposed Severe VSL:                      N/A                      CEDRP Proposed Severe VSL: IRO-014-2 R4                      The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators at least every fifth week,                      Or                      the Reliability Coordinator failed to participate in four weekly conference calls,                      Or                      the Reliability Coordinator failed to agree to participate in any conference calls,                      Or                      the Reliability Coordinator agreed to participate in conference calls with more than 75% but less than 100% of the impacted Reliability Coordinators.</p> <p>=====</p>

Organization	Question 19:
	<p>Standard – IRO-014-2 R5</p> <p>R5. When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the impacted Reliability Coordinators. <del>Until in the event that the issue cannot be</del> has been <b>proven to not exist</b>, <del>confirmed</del>, each Reliability Coordinator shall operate as though the problem exists. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>Proposed Measure</p> <p>The Reliability Coordinator shall have evidence that, in cases when an expected or actual reliability issue was detected, it has confirmed the existence of the issue with the impacted Reliability Coordinators.</p> <p>Discussion – This requirement is confusing in the way it is worded. We think it is trying to say that the RC should operate as though the reliability issue (should this be Adverse Reliability Impact) is detected until the issue is confirmed not to exist. The way it is worded might imply that if one doesn't confirm it to exist, operate as though it does. This leaves open the interpretation that a confirmation that it doesn't exist must still be operated to as though it does exist.</p> <p>The drafting team should consider splitting operating to prevent from operating to mitigate an existing event in the VSLs.</p> <p><b>Response:</b></p> <p>The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk</p>

Organization	Question 19:
	<p>Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan,. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>The RC SDT has revised / created VSLs based on the new requirements.</p> <p>SDT Proposed Lower VSL                      The Reliability Coordinator that detected an expected or actual reliability issue contacted the other Reliability Coordinator(s) to confirm that there was a problem but could not confirm that the problem existed and failed to operate as though the problem existed.                      CEDRP Proposed VSL IRO-014-2 R5                      N/A</p> <p>SDT Proposed High VSL                      N/A                      CEDRP Proposed VSL IRO-014-2 R5                      The Reliability Coordinator that detected an expected reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem.</p> <p>SDT Proposed Severe VSL                      The Reliability Coordinator that detected an expected or actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem.                      CEDRP Proposed VSL IRO-014-2 R5                      The Reliability Coordinator that detected an actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem.</p> <p>=====</p> <p>Standard – IRO-014-2 R6                      When an expected or actual reliability issue exists and the impacted Reliability Coordinators cannot agree on a mitigation plan, all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>Proposed Measure</p>

Organization	Question 19:
	<p>The affected Reliability Coordinators shall have evidence that, in cases when an expected or actual reliability issue existed and the impacted Reliability Coordinators could not agree on a mitigation plan, they implemented the mitigation plan developed by the Reliability Coordinator who has the reliability issue.</p> <p>Discussion: We are concerned the validity of this requirement, it may force an RC to implement a solution that they don't agree with and ultimately result in an Adverse Reliability Impact. The RC may not agree with the solution because it may not be reliable for their footprint. They need to have the ability to veto mitigation plans that cause Adverse Reliability Impacts in their footprint without incurring a compliance violation.</p> <p><b>Response:</b></p> <p>R6 was brought into this standard from IRO-016, R1 and R2. The RC SDT removed the wording relating to the "most conservative solution" because it can not be measured. We are proposing to use the mitigation plan of the RC who is experiencing the issue in cases where an agreed to mitigation plan can not be developed.</p> <p>SDT Proposed Lower VSL                      The Reliability Coordinator did not agree on a mitigation plan and implemented a plan other than the one developed by the Reliability Coordinator who had the reliability issue.                      CEDRP Proposed VSL IRO-014-2 R6                      N/A</p> <p>SDT Proposed Severe VSL                      The Reliability Coordinator did not agree on a mitigation plan and did not implement a mitigation plan.                      CEDRP Proposed VSL IRO-014-2 R6                      What if the RC is correct in disagreeing and the mitigation plan would have caused an Adverse Reliability Impact on their system?</p>
<p><b>Response:</b> The RC SDT thanks you for your comments. Please see responses embedded above.</p> <p>In the future, please do not submit comments in this format. It is extremely burdensome on the drafting team in trying to respond to the comments. Please answer each question individually. If you encounter difficulty, please contact NERC for assistance.</p>	

### Standard Development Roadmap

*This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.*

#### Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008 – May 26, 2009.

#### Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the first draft. The team is seeking comments on the revised standards.

#### Future Development Plan:

Anticipated Actions	Anticipated Date
1. Second Posting of draft standards,	July-August 2009
2. Respond to comments on second posting	August 2009
3. Post Standards for pre-ballot period.	September 2009
4. Standards posted for initial and recirculation ballots.	October 2009
5. Standards sent to BOT for approval.	December 2009
6. Standards filed with regulatory authorities.	January 2010

**Definitions of Terms Used in Standard**

*This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.*

**None**

## A. Introduction

1. **Title:** Communications
2. **Number:** COM-001-2
3. **Purpose:** To ensure that operating entities have adequate interpersonal communication capabilities.
4. **Applicability:**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.
  - 4.3. Reliability Coordinators.
  - 4.4. Distribution Providers.
  - 4.5. Generator Operators.
  - 4.6. Transmission Service Providers.
  - 4.7. Load-Serving Entities.
  - 4.8. Purchasing-Selling Entities.
5. **Effective Date:** The first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

## B. Requirements

- R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test, on a quarterly basis, alternative interpersonal communications capabilities used for communicating real-time operating information. If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities. *[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]*
- R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*
- R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*
- R4. Each Distribution Provider and Generation Operator shall have interpersonal communications capabilities with its Transmission Operator and Balancing Authority

for the exchange of Interconnection and operating information. *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*

**C. Measures**

- M1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, it tested, on a quarterly basis, alternative interpersonal communications capabilities used for communicating real-time operating information. If the test was unsuccessful, the entity shall have and provide upon request evidence that it developed a mitigation plan to restore the interpersonal communications capabilities. (R1.)
- M2.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, it notified impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of their normal communications capabilities. (R2.)
- M3.** Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language. (R3.)
- M4.** Each Distribution Provider and Generation Operator shall demonstrate the existence of its interpersonal communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)

**D. Compliance**

- 1. Compliance Monitoring Process**
  - 1.1. Compliance Enforcement Authority**
    - Regional Entity
  - 1.2. Compliance Monitoring and Enforcement Processes**
    - Compliance Audits
    - Self-Certifications
    - Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

### **1.3. Data Retention**

The Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall keep the most recent three years of historical data (evidence) for Requirement R1, Measure M1.

Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall keep the most recent twelve months of historical data (evidence) for Requirement R2, Measure M2.

Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall keep evidence for Requirement R3, Measure M3 for the most recent 3 months. If a Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator is found non-compliant with a requirement, it shall keep information related to the noncompliance until the Compliance Enforcement Authority finds it compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

### **1.4. Additional Compliance Information**

None

2. Violation Severity Levels

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The responsible entity tested alternative interpersonal communications capabilities but failed to develop a mitigation plan when the test failed.	N/A	N/A	The responsible entity failed to test the alternative interpersonal communications capabilities on a quarterly basis.
R2	N/A	The responsible entity notified at least one, but not all, impacted entities of the failure of its normal interpersonal communications capabilities within 60 minutes.	N/A	The responsible entity failed to notify any impacted entities of the failure of their normal interpersonal communications capabilities within 60 minutes.
R3	N/A	N/A	N/A	The responsible entity failed to provide evidence of concurrence to use a language other than English for communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES when a language other than English was used.
R4	N/A	N/A	The responsible entity failed to have interpersonal communications capabilities with its Transmission Operator <b>or</b> Balancing Authority.	The responsible entity failed to have interpersonal communications capabilities with its Transmission Operator <b>and</b> Balancing Authority.

## Standard Development Roadmap

*This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.*

### Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008 – May 26, 2009.

### Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the first draft. The team is seeking comments on the revised standards.

### Future Development Plan:

Anticipated Actions	Anticipated Date
1. Second Posting of draft standards,	July-August 2009
2. Respond to comments on second posting	August 2009
3. Post Standards for pre-ballot period.	September 2009
4. Standards posted for initial and recirculation ballots.	October 2009
5. Standards sent to BOT for approval.	December 2009
6. Standards filed with regulatory authorities.	January 2010

### **Definitions of Terms Used in Standard**

*This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.*

**None**

## A. Introduction

1. **Title:** **C**Telecommunications
2. **Number:** COM-001-2
3. **Purpose:** To ensure that operating entities have adequate interpersonal communication capabilities.~~Each Reliability Coordinator, Transmission Operator and Balancing Authority needs adequate and reliable telecommunications facilities internally and with others for the exchange of Interconnection and operating information necessary to maintain reliability.~~
4. **Applicability:**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.
  - 4.3. Reliability Coordinators.
  - 4.4. Distribution Providers.
  - 4.5. Generator Operators.
  - 4.6. Transmission Service Providers.
  - 4.7. Load-Serving Entities.
  - 4.8. Purchasing-Selling Entities.
5. **Effective Date:** **TBD**The first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

## B. Requirements

- R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall ~~operationally~~ test, on a quarterly basis ~~at a minimum~~, alternative interpersonal telecommunications capabilities~~facilities used for communicating real-time operating information to ensure the availability of their use when normal telecommunications facilities fail.~~ If the test is unsuccessful, the entity willshall develop a mitigation plan to restore ~~the~~its interpersonal communications capabilities. *[Violation Risk Factor: Lower~~Medium~~][Time Horizon: Real-time Operations]*
- R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a~~of~~ failure (30 minutes or longer) of ~~the~~its normal interpersonal communications capabilities. ~~of their normal telecommunications facilities, and verify the alternate means of telecommunications are functional.~~*[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*
- R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity and Distribution Provider shall use English

as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected ~~Bulk Electric System~~ BES. ~~Transmission Operators and Balancing Authorities may use an alternate language for internal operations.~~ [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]

- R4. Each Distribution Provider and Generation Operator shall have interpersonal telecommunications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. [Violation Risk Factor: High][Time Horizon: Real-time Operations ~~and Operations Planning~~]

### C. Measures

- M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, ~~it operationally~~ tested, on a quarterly basis ~~at a minimum~~, alternative interpersonal telecommunications capabilities used for communicating real-time operating information to ensure the availability of their use when normal telecommunications facilities fail. If the test was unsuccessful, the entity shall have and provide upon request evidence that it developed a mitigation plan to restore the interpersonal communications capabilities. (R1.)
- M2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, ~~that~~ it notified impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of their normal ~~telecommunications capabilities~~ ~~facilities, and verified the alternate means of telecommunications were functional.~~ (R2.)
- M3. ~~The Each~~ Reliability Coordinator, Transmission Operator, ~~or~~ Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language. (R3.)
- M4. Each Distribution Provider and Generation Operator shall demonstrate the existence of its interpersonal telecommunications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)

## D. Compliance

### 1. Compliance Monitoring Process

#### 1.1. Compliance Enforcement Authority

Regional Entity

#### 1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

#### 1.3. Data Retention

The Reliability Coordinator, Transmission Operator, ~~and~~ Balancing Authority, Distribution Provider and Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

~~For the Measures, e~~ Each Reliability Coordinator, Transmission Operator, ~~and~~ Balancing Authority, Distribution Provider, and Generator Operator shall ~~each~~ keep the most recent three ~~years~~ months of historical data (evidence) for Requirement R1, Measure M1.

Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall keep the most recent twelve months of historical data (evidence) for Requirement R2, Measure M2.

Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall keep evidence for Requirement R3, Measure M3 for the most recent 3 months.

If a Reliability Coordinator, Transmission Operator, ~~and~~ Balancing Authority, Distribution pProvider ~~and~~ Generator Operator is found non-compliant with a requirement, it shall keep information related to the noncompliance until the Compliance Enforcement Authority finds it ~~ound~~ compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

#### 1.4. Additional Compliance Information

None

2. Violation Severity Levels

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The responsible entity tested alternative interpersonal communications capabilities but failed to develop a mitigation plan when the test failed.	N/A	N/A	The responsible entity failed to test the alternative interpersonal communications capabilities on a quarterly basis.
R2	N/A	The responsible entity notified at least one, but not all, impacted entities of the failure of its normal interpersonal communications capabilities within 60 minutes.	N/A	The responsible entity failed to notify any impacted entities of the failure of their normal interpersonal communications capabilities within 60 minutes.

R3	N/A	N/A	N/A	<p>The responsible entity failed to provide evidence of concurrence to use a language other than English for <b>all</b> communications between and among operating personnel responsible for the real-time generation control <b>and-or</b> operation of the interconnected <b>Bulk Electric System</b> <u>BES when a language other than English was used.</u></p>
R4	N/A	N/A	<p><u>The responsible entity failed to have interpersonal communications capabilities with its Transmission Operator</u> <b>OR</b> <u>Balancing Authority.</u> <b>N/A</b></p>	<p>The <u>responsible entity</u> <b>Distribution Provider or Generation Operator</b> failed to have <u>interpersonal communications capabilities</u> <b>telecommunications facilities</b> with its Transmission Operator <b>and</b> Balancing Authority.</p>

## **UNOFFICIAL Comment Form for Reliability Coordination — Project 2006-06**

**Please DO NOT use this form.** Please use the electronic comment form located at the link below to submit comments on the proposed revisions to the standards for Project 2006-06: Reliability Coordination. Comments must be submitted by **August 9, 2009**. If you have questions please contact Stephen Crutchfield at [stephen.crutchfield@nerc.net](mailto:stephen.crutchfield@nerc.net) or by telephone at 609-651-9455.

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

### **Background Information:**

The Reliability Coordination Standards Drafting Team (RC SDT) was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable, 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System, and 3) revising the group of standards based on FERC Order 693.

During the course of the project, the NERC standards staff revised the Reliability Standards Development Plan and noted several areas of overlapping scope between certain projects. The original SAR for Project 2006-06 called for revisions to PER-004 — Reliability Coordination — Staffing and PRC-001 — System Protection Coordination. Based on scope overlap, it was determined that PER-004 and PRC-001 would best be served by moving the proposed work to Project 2006-01: System Personnel Training and Project 2007-06: System Protection, respectively.

The RC SDT proposed revisions to the set of standards under the project in August and September 2008. The RC SDT made revisions to the set of standards based on stakeholder feedback and the results of the IROL Standards Drafting Team work. Since the inception of this project, the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for three new Standards which included revisions to other IRO standards. With the approval of the IROL set of standards, certain requirements were retired from other IRO standards (see below summaries for specific examples under the RC SDT project).

### **Requirements, Measures and Violation Severity Levels in COM-001-2**

Requirements: The RC SDT received several comments regarding the intent of the term “telecommunications facilities”. For COM-001-2, the RC SDT envisions telecommunications to be voice or message communication between operating personnel. The standard has been renamed “Communications” and the term “telecommunications facilities” was replaced with “interpersonal communications capabilities” throughout the standards to better reflect the intent of the RC SDT.

We also received comments regarding the applicability of the standard that suggested adding other entities listed in IRO-001 (LSE, PSE, and TSP). The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the RC...either directly or through other entities (e.g. – a DP may receive the directive from the TOP who received it from the RC). We have not expanded the applicability of Requirements R1 and R2 as suggested as we feel that this expands the standard beyond the reliability - it is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity.

Other commenters had concerns with regard to R2 and the intent with regard to length of outages. The requirement was revised as:

R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations*]

R3 was expanded to include the Transmission Service Provider, Load-Serving Entity, and Purchasing-Selling Entity – to ensure that they use the English language for inter-entity communications. The informational (last) sentence of R3 was removed per stakeholder suggestions.

**Measures:** Commenters suggested general as well as specific revisions to the measures. One general comment suggested making the language consistent among the measures regarding evidence. M1-M3 were revised to include the phrase “shall have and provide upon request evidence that ...”.

Several commenters suggested revisions to M3. The RC SDT revised M3 based on the comments received suggesting that the applicability be expanded to include Generator Operators, Distribution Providers, Transmission Service Providers, Purchasing-selling Entities and Load-Serving Entities. Several entities commented that M3 did not match R3 which included an explanatory sentence that allowed an entity to use a language other than English for its internal communications. The informational second sentence was removed from Requirement R3, thus eliminating the “disconnect” between the requirement and the measure. All measures were revised as necessary to reflect revisions to requirements.

VSLs: The RC SDT made revisions to the VSLs based on the comments received and also to reflect revisions to the associated requirements. We received comments that the VSLs for R1 and R2 were based on multiple violations. We agreed and revised the VSLs to reflect a single violation.

### **Requirements, Measures and Violation Severity Levels in COM-002-3**

The work of the IROL SDT resulted in the retirement of R1 from the standard. The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall require the recipient of the directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. [*Violation Risk Factor: High*][*Time Horizon: Real-Time*]

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall repeat the intent of the directive back to the issuer of the directive. [*Violation Risk Factor: High*][*Time Horizon: Real-Time*]

The purpose statement was also revised to reflect the revisions to the standard:

To ensure communications by operating personnel are effective.

The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The measures were revised to:

M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall have evidence such as voice recordings or transcripts of voice recordings to show that it required the recipient of the directive to repeat the intent of the directive back; and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings.

M2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall have evidence such as voice recordings or transcripts of voice recordings to show that it repeated the intent of the directive back to the issuer of the directive.

The RC SDT received comments recommending revisions to the VSLs based on revisions to the requirements and measures. The RC SDT did this and created new VSLs for new Requirement R2.

#### **Requirements, Measures and Violation Severity Levels in IRO-001-2**

The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring delay time.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This would obviate the need for providing a measure for “intent”, but still maintain the reliability intent of the original requirement.

The VSLs were revised to reflect revisions to the requirements as well as the comments of stakeholders. Several comments suggested that there was no fundamental difference between the RC “acting” or “directing actions”. The RC SDT agreed and removed the High VSL for R1 and revised the Severe VSL accordingly. Other commenters suggested removing the High VSL from R2 as the VSL contradicted the requirement. The RC SDT agreed and removed the VSL.

#### **Requirements, Measures and Violation Severity Levels in IRO-002-2**

Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired IRO-002-2 Requirement R1. The team received comments expressing concern about eliminating the requirement in IRO-002 to monitor frequency. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s

contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability. The team declined to delete R2 (Reliability Coordinator veto over analysis tool outages) as it was a specific recommendation from the 2003 Blackout report. This requirement was revised and moved into IRO-001-2 as R6.

Stakeholders indicated that R6 (previously IRO-002 R2) is a “binary” requirement and the Lower VSL was deleted and the Severe VSL was revised based on those comments.

#### **Retirement of IRO-005-1**

Several commenters had concerns around removing the requirement to monitor frequency (IRO-005-1 R8). The intent of this monitoring activity was incorporated into IRO-002-2, R1. Other commenters had concerns with the removal of other monitoring requirements in the standard. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity associated with any attempt to measure “Monitoring.” It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification process requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.

#### **Requirements, Measures and Violation Severity Levels in IRO-014-2**

Several commenters expressed concerns with the term “impacted” and suggested replacing this with “other”. The RC SDT believes “impacted” directly relates to the purpose statement. Additionally, replacing “one or more other” with “impacted” does tighten the requirement and removes ambiguity. The RC SDT does not intend for non-contiguous Reliability Coordinators to have “Reliability Coordinator Agreements”, but to have Procedures, Processes, or Plans with impacted reliability coordinators. Other commenters suggested striking the term “as a minimum” in R1 and the RC SDT agrees and has modified R1 accordingly. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:

R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator that has the identified Adverse Reliability Impact when the

impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

Several commenters suggested that the High and Severe VSLs for R2 contradicted the requirement. The RC SDT agreed and removed the “nots” from the VSLs. Several commenters had suggested revisions for the VSLs for R6. This requirement was imported from IRO-016 and several commenters suggested expanding the set of requirements regarding the mitigation plan. New VSLs were developed for these requirements.

**Retirement of IRO-015-2**

Stakeholders agreed with the proposed revisions and this is not being re-posted for comment.

**Requirements of IRO-016-1**

Stakeholders agreed with the concept of moving the requirements of IRO-016-1 into IRO-014-2. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016 and the RC SDT revised these requirements in support of stakeholder comments. There are now 4 requirements, rather than 2, that address Reliability Coordinator actions when a Reliability Coordinator identifies an Adverse Reliability Impact. New measures and VSLs were developed to support these revised requirements.

**Proposed Effective Dates**

The RC SDT received comments that COM-001-2, R5 should have an effective date immediately upon regulatory approval. The RC SDT agrees and will request an effective date that is the first possible effective date – the first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

The Reliability Coordination Drafting Team would like to receive industry comments on these changes. The RC SDT asks that you review the revised standards and answer the following questions by August 9, 2009.

1. **Do you agree with the revisions made to the Requirements in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

No

Comments:

2. **Do you agree with the revisions made to the Measures in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

No

Comments:

3. **Do you agree with the revisions made to the Violation Severity Levels in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

No

Comments:

4. **Do you agree with the revisions made to the Requirements in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

No

Comments:

5. **Do you agree with the revisions made to the Measures in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

No

Comments:

6. **Do you agree with the revisions made to the Violation Severity Levels in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

No

Comments:

7. **Do you agree with the revisions to the definition of Adverse Reliability Impacts (IRO-001-2)? If not, please explain in the comment area.**

Yes

No

Comments:

**8. Do you agree with the revisions to the Requirements in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

No

Comments:

**9. Do you agree with the revisions to the Measures in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

No

Comments:

**10. Do you agree with the revisions to the Violation Severity Levels in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

Yes

No

Comments:

**13. Do you agree with the revisions to the Violation Severity Levels in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.**

Yes

No

Comments:

**14. If you have any other comments, not expressed in questions above, for the RC SDT on any of the other changes made to this set of standards and their associated implementation plans, please provide them here.**

Comments:

### **Prerequisite Approvals**

- IRO-002-2
- IRO-005-3

### **Conforming Changes to Requirements in Already Approved Standards**

- None

### **Revision Summary**

- The RC SDT revised the standard and is proposing retiring three requirements (R1, R5 and R6). Changes were made to eliminate redundancies between standards (existing and proposed), to align with the ERO Rules of Procedure and to address issues in FERC Order 693.

### **Effective Dates**

To be determined.

**Implementation Plan for COM-001-2  
Communications**

**Revisions or Retirements to Already Approved Standards**

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p>The RC SDT contends that COM-001-1, R1 and its subrequirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. Examples include:</p> <p>IRO-001-1, R3 requires adequate telecommunication for the Reliability Coordinator to direct actions of multiple entities, including TOPs and BAs.</p> <p>TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC.</p> <p>TOP-001-1, R3 requires adequate telecommunications facilities for the TOP, BA, and GOP to be able to receive directives from the RC.</p> <p>TOP-006-1, R1 requires adequate telecommunications for the GOP to inform the BA and TOP of resources. The BA and TOP will then inform the RC, other TOP and BAs of all transmission and generation available for use.</p> <p>The retirement of this requirement also facilitates one of the FERC Order 693 directives for COM-001-1 to “includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions”.</p>
<p><b>Notes:</b> Based on the above information, the RC SDT recommends retiring R1 and its subrequirements.</p>	

**Implementation Plan for COM-001-2  
Communications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R2.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall <i>manage, alarm, test and/or actively monitor vital telecommunications facilities. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications.</i> <i>[Violation Risk Factor: Medium]</i></p>	<p><b>COM-001-2:</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test, on a quarterly basis alternative interpersonal communications capabilities used for communicating real-time operating information. If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p>
<p><b>Notes:</b> The RC SDT contends that the first sentence of COM-001-1, R2 is a low level facilitating requirements that is more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards as described in R1 above. We propose revising R2 as shown above to focus on the testing of capabilities that are not used on a routine basis.</p>	

**Implementation Plan for COM-001-2  
Communications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R3.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide a means to coordinate telecommunications among their respective areas. This coordination shall include the ability to investigate and recommend solutions to telecommunications problems within the area and with other areas. <i>[Violation Risk Factor: Lower]</i></p>	<p><b>COM-001-2</b></p> <p><b>R2.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>

**Implementation Plan for COM-001-2  
Communications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R4.</b> Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. <i>[Violation Risk Factor: Medium]</i></p>	<p><b>COM-001-2</b></p> <p><b>R3.</b> Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]</i></p>
<p><b>Notes:</b> COM-001 Requirement R3 is being incorporated into COM-003-1 by the Operations Personnel Communications Protocols SDT (Project 2007-02). It will be retired from this standard upon approval of COM-003-1. The RC SDT expanded the list of applicable entities to include the TSP, LSE and PSE and to delete the explanatory sentence at the end of the requirement.</p>	

**Implementation Plan for COM-001-2  
Communications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R5.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities. <i>[Violation Risk Factor: Lower]</i></p>	<p><b>EOP-008-0</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have a plan to continue reliability operations in the event its control center becomes inoperable. The contingency plan must meet the following requirements:</p> <p><b>R1.1.</b> The contingency plan shall not rely on data or voice communication from the primary control facility to be viable.</p> <p><b>R1.2.</b> The plan shall include procedures and responsibilities for providing basic tie line control and procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.</p> <p><b>R1.3.</b> The contingency plan must address monitoring and control of critical transmission facilities, generation control, voltage control, time and frequency control, control of critical substation devices, and logging of significant power system events. The plan shall list the critical facilities.</p> <p><b>R1.4.</b> The plan shall include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.</p> <p><b>R1.5.</b> The plan shall include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.</p> <p><b>R1.6.</b> The plan shall include procedures and responsibilities for providing annual training to ensure that operating personnel are able to implement the contingency plans.</p> <p><b>R1.7.</b> The plan shall be reviewed and updated annually.</p> <p><b>R1.8.</b> Interim provisions must be included if it is expected to take more than one hour to implement the contingency plan for loss of primary control facility.</p>
<p><b>Notes:</b> The RC SDT proposes retiring COM-001-1 R5 as it is redundant with EOP-008-0 Requirement R1.</p>	

**Implementation Plan for COM-001-2  
Communications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R6.</b> Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001, "NERCNet Security Policy." <i>[Violation Risk Factor: Lower]</i></p>	<p><b>None - retire</b></p>
<p><b>Notes:</b> The RC SDT is recommending that R6 be retired. This is an ERO procedural issue and should not be in a reliability standard. It should be included in the ERO Rules of Procedure.</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
	<p><b>COM-001-2</b></p> <p><b>R4.</b> Each Distribution Provider and Generation Operator shall have interpersonal communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Operations Planning]</i></p>
<p><b>Notes:</b> This is a new requirement based on the following FERC Order 693 directive:</p> <p>"expands the applicability to include generator operators and distribution providers and includes Requirements for their telecommunications facilities"</p>

## Prerequisite Approvals

- IRO-002-2
- IRO-005-3

## Conforming Changes to Requirements in Already Approved Standards

- None

## Revision Summary

- The RC SDT revised the standard and is proposing retiring three requirements (R1, R5 and R6). Changes were made to eliminate redundancies between standards (existing and proposed), to align with the ERO Rules of Procedure and to address issues in FERC Order 693.

## Effective Dates

To be determined.

**Revisions or Retirements to Already Approved Standards**

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p>The RC SDT contends that COM-001-1, R1 and its subrequirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. Examples include:</p> <p>IRO-001-1, R3 requires adequate telecommunication for the Reliability Coordinator to direct actions of multiple entities, including TOPs and BAs.</p> <p>TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC.</p> <p>TOP-001-1, R3 requires adequate telecommunications facilities for the TOP, BA, and GOP to be able to receive directives from the RC.</p> <p>TOP-006-1, R1 requires adequate telecommunications for the GOP to inform the BA and TOP of resources. The BA and TOP will then inform the RC, other TOP and BAs of all transmission and generation available for use.</p> <p>The retirement of this requirement also facilitates one of the FERC Order 693 directives for COM-001-1 to “includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions”.</p>
<p><b>Notes:</b> Based on the above information, the RC SDT recommends retiring R1 and its subrequirements.</p>	

Implementation Plan for COM-001-2  
**Telecommunications**Communications

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R2.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall <u>manage, alarm, test and/or actively monitor vital telecommunications facilities. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications.</u> [<i>Violation Risk Factor: Medium</i>]</p>	<p><b>COM-001-2:</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall <del>operationally</del> test, on a quarterly basis <del>at a minimum,</del> alternative <u>interpersonal telecommunications facilities capabilities used for communicating real-time operating information.</u> <u>If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities.</u> <del>to ensure the availability of their use when normal telecommunications facilities fail.</del> <del>manage, alarm, test and/or actively monitor vital telecommunications facilities.</del> <del>Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications.</del> [<i>Violation Risk Factor: <u>Medium</u> Lower</i>][<i>Time Horizon: Real-time Operations</i>]</p>
<p><b>Notes:</b> The RC SDT contends that the first sentence of COM-001-1, R2 is a low level facilitating requirements that is more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards as described in R1 above. We propose revising R2 as shown above-- <u>to focus on the testing of capabilities that are not used on a routine basis.</u></p>

## Standards Announcement

Comment Period Open

July 10–August 9, 2009

Now available at:

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

### Project Name

Project 2006-06 — Reliability Coordination

### Due Date and Submittal Information

The comment period is open **until 8 p.m. EDT on August 9, 2009**. Please use this [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, please contact Lauren Koller at [Lauren.Koller@nerc.net](mailto:Lauren.Koller@nerc.net). An off-line, unofficial copy of the comment form is posted on the project page: [http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

### Content for Comment Period

The Reliability Coordination Standards Drafting Team is seeking comments on its second drafts of the following proposed standards:

- COM-001-2 — Communications
- COM-002-3 — Communications and Coordination
- IRO-001-2 — Reliability Coordination – Responsibilities and Authorities
- IRO-014-2 — Coordination Among Reliability Coordinators

The drafting team revised the proposed standards based on stakeholder feedback and the results of the IROL Standards Drafting Team work.

### Other Materials Posted

- Revised implementation plans
- The drafting team's consideration of industry comments received during the first comment period

### Project Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable, 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System, and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team, and two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. Detailed information on these changes can be found in the comment form for this posting.

### **Applicability of Standards in Project**

Reliability Coordinator  
Balancing Authority  
Transmission Service Provider  
Transmission Operator  
Distribution Provider  
Generator Operator  
Purchasing Selling Entity  
Load Serving Entity

### **Standards Development Process**

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate

Comments: The inclusion of load serving entities and distribution providers does not address any present reliability gap. R4 is extremely vague, and is not likely to be interpreted consistently. What form of evidence will be acceptable? Photos of telephones?
No
Comments: M4 is of little help regarding R4. How does an entity perform this demonstration, especially in the case of an off-site audit? If left to the regions, there will be no consistency.
No
The severity levels have little or no relationship to reliability. Failure to provide a evidence of an agreement per R3, for example, has no impact on reliability by itself; yet it carries the maximum VSL. In reality, the impact would only be severe if the use of an alternate language resulted in a miscommunication.
No
The inclusion of load serving entities and distribution providers does not address any present BES reliability gap.
No
M2 goes beyond R2 in requiring recordings. This will be cost prohibitive for small entities that have little impact on the BES. Telephone recording equipment will be needed on company phones. and some way to handle the recording of

directives and responses that occur after hours on home or cell phones must be handled. Drafters seem to have missed the fact that not all the applicable entities have 24/7 dispatch centers.

R2 I would suggest that R2 be clarified so that it is understood that the 60 minutes starts at the beginning of the outage (or the end of the 30 minute period, if that was instead the intent) so that there can be no confusion about when the clock starts for notification periods. Otherwise, the wording of these standards is clearer than the current version. R4 I am concerned that with the word "capabilities" that the DP/GO's will be expected by the auditors to demonstrate that its "capability" was working every single second of every day since their last audit, especially since you have not included a data retention period(especially since this is rated a "high" VRF).

Yes

M1 - very nice, probably we will also be held responsible for completing the mitigation plans, so perhaps you should go ahead and add that so no one gets caught without sufficient evidence in that regard M2 - fine M3 - this measure would indicate that operators have the authority to agree among themselves to speak other languages, rather than a more formal agreement between entities, which is how I read the language of the requirement. If that is not what is meant, then I would suggest the examples include Memorandums of Agreement or Understanding, Contracts or other more formal mechanisms. M4 - fine

Yes

Empty table row

No

R1: just to avoid possible auditor misunderstandings the SDT might consider replacing the words "or repeat the original statement" to "reissue the directive" so that the RC does not get into trouble if the second statement is not verbatim of the first. This also helps clarify that another statement is required from the recipient along with a final acknowledgement from the RC that the intent is correct.

No

Not all entities have recorded lines. The standard does not directly require the to record their lines, but the measure implies it. It seems that a written log should be sufficient. Since both sides of the conversation gets audited, the auditors will have ample opportunity to check up on both sides.

The proposed standard does not require the RC, TO, or BA to declare an emergency to the GO when issuing a directive. There has been confusion at times in the past as to whether the entity is issuing a directive based on economics or due to an emergency. The standard should be amended to require the RC/TO/BA to state the directive is due to a declared emergency. The GO is required to repeat back the intent of an emergency directive, but is not required to repeat back the intent of economic directive. This can lead to a finding of a severe VSL non-compliance on the part of the GO due to a failure of the RC/TO/BA to clearly state the nature of the directive.
Yes
Yes
Yes
No
Similar objection to COM-002-3: There should be a requirement to the RC to declare the nature of the directive, emergency or economic.
Yes
No
The VSL's have a "Severe" VSL attached to a GO who fails to inform the RC when the Go becomes aware it is are unable to fully comply with a directive. However, the RC failing to inform two TO's - who potentially could have many GOs supplying power to their systems - of an emergency is only a "Moderate" VSL.

No
The RC STD has done a commendable effort. However, it is questionable how expanding the applicability to include LSEs, DPs, & PSEs that are non-scheduling/tagging entities will increase reliability of the BES. In fact, we believe that increasing the applicability could do just the opposite. Many of these entities that are only registered as a LSE, DP, and/or PSE do not have a 24/7 desk/dispatch facility to receive RC/BA/TOP reliability directives, and are too small (10s of MW) to effectively assist during a reliability crisis. In addition, the Regional Entities (WECC in this case) are overwhelmed as it is, asking them to take on even more audit responsibilities is unrealistic, and not worth the effort. In addition, for the small Registered Entity, what would constitute compliance with R3 & R4 if no TOP/BA real-time directives were received? Everyone employed speaks English and there is at least one phone on the premises? Will the small DP and/or LSE be required to monitor its communication system 24/7 with competent personnel for an unlikely TOP/BA directive?
No
To demonstrate compliance the small Registered Entities will be in the position of proving a negative: i.e., there is no real-time BES operational communication from or to any other entity. Currently, for the smaller entities, communication with the Transmission Operator or Balancing Authority is strictly for operational safety and local reliability of service, not operational reliability for the BES as defined by NERC. It is not clear how the small entity will show compliance. If R4 requires the small load-only DP and/or LSE to have 24/7 monitoring of its phone, and contracted answering service is unable to contact anyone, will this be a violation?
No
With the vague verbiage of R4 coupled with the High and Severe VSL, it is important to clarify R4 with the small DP in mind, and possibly include Lower and Moderate VSLs for smaller load-only DP violations.
No
It would be advantageous to exempt certain smaller Registered Entities (LSE, DP, & PSE) that are non-scheduling/tagging entities. In addition to not having a scheduling/tagging desk, many of these entities do not have a 24/7 desk to receive RC/BA/TOP reliability directives/calls. and are too small (10s of MW) to even be substantially

significant in a reliability crisis. Instead of making this Standard applicable to all DPs, LSEs, and PSEs, we suggest that the RC, BAs, and TOPs to yearly publish those LSEs, DPs, and PSEs responsible for responding to emergency reliability directives. Also, it would be advisable for the RC, BA, and TOP giving a reliability directive to clearly preface the instruction with "The following is an emergency reliability directive" to differentiate from normal operations communications. Many smaller entities do not have the resources to install reliable voice recording equipment, but having access to such recordings would be beneficial towards compliance documentation; thus, it would be helpful to require the directive issuing RC, BA, or TOP to provide a digital copy of the voice recording, or transcript if available on request to the recipient of the directive. Short of a recording or transcript of the recording, it will be difficult to determine how a small entity without recorded line would show compliance other than writing down the directive as it is given and reading it back to the issuer. If the directive is lengthy, this will slow down the process and probably defeat the purpose and value of quick action. Further, there is no guarantee that the receiver will accurately retain a complicated directive if not immediately documented in some way to allow review. Last of all, what is meant by the word "intent?" Must the recipient understand and demonstrate the "why" the directive is given and the intended "outcome," or merely paraphrase the directive to demonstrate understanding? If the recipient repeats word for word the directive back to the issuer without any other indication that the directive is understood, is this a violation??

No

Only in making the Measures agree with the suggested changes to the requirements above.

No

Only in making the Measures agree with the suggested changes to the requirements above.

Yes

No

To reduce the compliance burden on smaller entities that would never receive a Reliability Coordinator directive and reduce needless Regional Entity auditing, it would be most helpful to require the RC to publish its list of entities responsible for receiving reliability directives. Also, any Registered Entity should be able to request copies of digital audio recordings or transcripts of the audio recordings if available from the RC.

No

Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication. Having alternative interpersonal communications should be specified as a requirement. Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and in fact is already, in English. Accordingly, R3 should be modify as the proposition below: R3. Unless dictated by law or otherwise agreed to, ...
No
See our comment for R3 in Q1. Accordingly, M3 should be modified as the proposition below: M3. ... that will be used to determine that personnel used English «or another language» as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, both parties shall have and provide upon request, evidence that could include, but is not limited to operator logs.

voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement shall be provided to explain the use of the alternate language. (R3.) M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?
No
see M3 comment for question 2
No
Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer R2 – leave as is A new R3 – If not repeated, then issuer shall request the receiving Entity to repeat the communication directive A new R4 – The issuer will acknowledge the correctness of the repetition of the communications directive
No
Addressed the new proposed Requirements above in Question 4.
No
Address the new proposed Requirements.
No
Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
No
Add “an issued” to the wording as shown following: The Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and/or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the its Reliability Coordinator upon recognition of itshe inability to perform thean issued directive.
Yes
No
(i) R4: Since failing to issue an alert to 3 entities already attracts a “High” VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a “Severe” VSL. We suggest to change the High VSL to: “...failed to issue an alert to three, but not all, impacted...” and the Severe VSL to: “...failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a “Severe” violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a “High” violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a “Severe” violation. (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.
No
The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.
No
The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
No
(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT’s response to our comments under Q11.
NPCC appreciates the work of the Drafting Team. No additional comments.

IRO-001-1 Requirement 3 states that, "The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing- Selling Entities within its Reliability Coordinator Area to preserve the integrity and and reliability of the Bulk Electric System." This does not give one RC the authority to direct another RC. Requirement 7 and 8 would allow one RC to give a directive to another RC if they disagree. This would allow an RC with bad information to require another RC to carry out a mitigation plan that could degrade system reliability. For example, RC1 identifies a possible SOL violation in RC2's reliability area due to RC1's generation pattern. RC1 and RC2 can't agree that there is a problem. In order to mitigate the SOL a mitigation plan is developed by RC1 that requires RC2 to redispatch generation and reconfigure transmission in RC2's area so that the generation and transmission in RC1's area won't have to be redispatched or reconfigured. Suggested rewording of R7 and R8 R7. When Reliability Coordinators can not agree that a problem exists a mitigation plan will be developed by each Reliability Coordinator that will restore system reliability in their respective reliability areas. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed to relieve the identified Adverse Reliability Impact in their reliability area when the impacted Reliability Coordinators can not agree that a problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
Yes
No
Reliability problems identified in other reliability areas are based on modeling information obtained from another reliability region. The fact that one RC will not agree that the model of an adjacent RC's reliability area may be more accurate than their model of the adjacent reliability area is no reason to impose a severe violation on the RC with the more accurate model of their own reliability region. Example: RC1 identifies a contingency overload of a transformer bank in an adjacent reliability area. The transformer bank was replaced the week before with a larger bank. When RC1 contacts RC2, RC2 explains that the bank overload is not valid because of the replacement. RC2 does not identify a problem due to the fact that the model RC2 is using has been updated with the new transformer bank. RC1 will not agree and requires RC2 to open a tie line with another reliability area to relieve the contingency overload. If RC2 does not follow the instructions of RC1, making the interconnection weaker to relieve a problem that does not exists, RC2 is out of compliance and a severe violation will be imposed.

Issue #1: Measure M3 The measure states that entities “shall have and provide” evidence that “personnel used English as the language for all” communications. This infers that all communications must be documented in some form or fashion and that any outage of the normal communication system must be met with alternative processes which will meet this measure, even if the alternative is the preparation of handwritten notes of each person’s conversations, noting that the communications occurred in English. Unfortunately, there have been times where our Dictaphone stopped recording phone calls, and nobody knew it for days! This measure sets us up for a violation! It’s just a matter of time.
Yes
Yes
Yes
No
Comments: Issue #1: Violation Severity Level The Moderate and Severe VSLs for Requirement R1 can lead to confusion. For instance, the Moderate VSL states that the responsible entity ‘did not acknowledge the recipient was correct in the repeated directive OR (emphasis theirs) failed to repeat the intent of the original statement to resolve any misunderstandings.’ What is it saying here? Is it dinging the responsible entity for making no response at all to the recipient after they repeated the intent of the message? Or is that what the Severe VSL is dinging for when it includes an AND rather than an OR in the statement? I can’t tell what the drafting team was intending with their statements, but one of the statements seem to infer that the responsible entity can actually be dinged for not doing both, acknowledging the recipient as being correct in their response and at the very same time repeating the intent of the original statement to resolve any misunderstandings because the recipient was incorrect in their response. This then argues that the recipient can be both correct and incorrect at the same time. I didn’t think that was possible...similar to binary code...either you get a one or a zero, but not both and never neither! I would argue that the drafting team should rewrite their VSLs to succinctly state that the responsible entity failed to respond after the recipient repeated the intent of the message. With that in mind, either the Moderate or the Severe VSL will be rewritten in an understandable way and the other VSL will disappear in the realms of impossible things.
Yes
Yes

Yes
Yes
Yes
Yes
Issue #2: Data Retention Why would the Distribution Provider and Generator Operator be required to store historical data (three years in the case of Requirement R1 and Measure M1; twelve months in the case of Requirement R2 and Measure M2) to show that these requirements and measures have been successfully implemented when these two entities (Distribution Provider and Generator Operator) aren’t even included either in Requirements R1 and R2 or in Measure M1 and M2? It would appear that they should only have to provide historical data for three months as required by the data retention time for Requirement 3 and Measure 3. Issue #1: Data Retention The first bullet in this section states that all entities are responsible for retaining documents associated with all Requirements and Measures associated with this standard. In reality, Requirements R1, R4, R5 and R6 and the corresponding Measures are the responsibility of the Reliability Coordinator. Requirements R2 and R3 and their corresponding Measures are implemented by the Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity and the Load Serving Entity. The Data Retention section should be rewritten to reflect this so that entities are not required to maintain documents that they aren’t suppose to even possess in some cases.

Brent ingebrightson
E.ON U.S.

No
E.ON U.S. suggests deleting "interpersonal" from the term "interpersonal communications capabilities". The need for and meaning of the term "interpersonal" isn't clear. Does it infer communications must be to/from a specific individual rather than to/from another reliability entity? Verbal vs electronic communications? All non-data communications? E.ON U.S. believes that the term "interpersonal" must be clarified if it is to remain in the standard. In the proposed R1 – how extensive must the quarterly testing be – establish contact or verify all functions? Does the term "alternative" include the "normal" communication medium or only the "backup" mediums? Does the alternative imply ALL possible communication alternatives? E.ON U.S. suggests replacing the term "alternative" with "planned backup" or similar. Quarterly testing needs to be limited to only established/planned backup communication methods not any potential "alternative" communication method.
No
E.ON U.S. believes that the M1 must be clarified to address whether the testing entity is responsible to develop and implement a mitigation plan when a test is unsuccessful due to an issue at the other end (i.e. non-testing entity).
No
E.ON U.S. suggests that R1 be modified to include the language that when an RC, BA and/or TOP issue a directive it must state: "This is a directive" and the entity receiving the directive must state: "I understand this is a directive". E.ON U.S. also requests that language be added to the requirement that states that this communication protocol is only for reliability related directives and not for other operational directives.
No
E.ON U.S. suggests that the VSL for R4 should be binary with the Severe VSL for failing to notify all entities as per R4. Partially meeting R4 is not consistent with the language in R4. E.ON U.S. also suggests that the VSL for R5 should be binary with the Severe VSL for failing to notify all entities as per R5. Partially meeting R5 is not consistent with the language in R5 but the reliability impact of partially meeting R5 is low.
COM-001-2 R1 and R2 and the associated M1 and M2 are only applicable to the RC, TOP and BA but the "Data Retention" for R1/R2 and M1/M2 require the DP and GOP to retain data for the Requirements and Measures. E.ON U.S. suggests that the requirement for data retention of the DP and GOP be eliminated from the standard.

No
do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary as it would delay repairing the interpersonal communication capability. R2 assumed that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes." R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.
No
Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
No
Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. In addition, since R2 has a time component in the requirement four VSLs could be written based on the timeliness of the notification.
Yes
For the most part agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. The SDT could further support

resolution to this directive issue by developing a definition for directive. In requirement 1, I would use another word than "require". Consider using "request". An RC, BA, and TOP can't force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.

Yes

For the most part agree with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.

No

If the suggestion regarding "require" in Q4 is accepted, conforming changes to the VSL need to made. Additionally, believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.

Yes

No

R5 does not make sense as it doesn't create an adverse reliability impact should the RC fail to notify impacted entities.

No

Measure for R5 would need to be struck should R5 be struck as per question 8.

No

Believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause "but not all". It is not necessary.

No

Requirements R2 and R8 need additional work. R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable. Further, the drafting team needs to clarify that R2 also applies to the mitigation plan in R7. Because R7 requires the RC experiencing the Adverse Reliability Impact to develop the mitigation plan, the mitigation plan may not be agreed to by the impacted RC. The impacted RC may have a perfectly valid reliability, statutory, legal, or regulatory reason for not agreeing to the mitigation plan. R8 still obligates the RC to implement the mitigation plan developed in R7 though it may be contrary to reliability. R8 needs to allow the RC to refuse to implement the mitigation plan if the impacted RC has a reliability, statutory, legal or regulatory reason. Further the drafting team should consider if the impacted RC could refuse because the RC experiencing the Adverse Reliability Impact has not implemented comparable measures in their own area. R8 as written could allow an RC to simply pass cost on to the neighboring RC in the name of reliability. For example, the RC may not want to order a unit to be committed to avoid certain startup costs but they ask the neighboring RC to start up a unit in their footprint.

No

Conforming changes to the Measurements will be required for accepted changes from question 11.

No

Believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any.

Georgia Transmission Corporation

No

Per the NERC Reliability Standards Development Procedure, under the definition of a Reliability Standard; "The obligations or requirements must be material to reliability and measurable." With regards to R3. - It goes without saying that inter-entity BES reliability communications must be in a common language between the entities for understanding operation instructions. From an audit/measurability standpoint, the evidence to the requirement would not converge to a finite amount of material. The amount of evidence required to demonstrate compliance of this requirement would be a huge administrative burden. It seems this concept (for use of the English language) could be captured under the "Entity Tasks and Interrelationships" section of the NERC Reliability Functional Model which defines the set of functions that must be performed to ensure the reliability of the bulk electric system. It also explains the relationship between and among the entities responsible for performing the tasks within each function. Additionally, this concept (for use of the English language) could further be explained under each applicable registration type (BA, GOP, TSP, LSE, PSE, and DP) in the NERC Reliability Functional Model. The Second option for R3 is to remove the Requirement from the continent wide Standards and have the effected entities/regions create a "Regional Standard" where entities involved in inter-entity BES reliability communications have a history of language barrier concerns. As a separate issue to R3, it also seems conflicting that a written requirement would provide the option of "Unless agreed to otherwise". This option described in the language of the requirement implies that it is not a requirement but an option which further supports the suggestions above.

No

See comments to Question 1 in regards to measurability.

Illinois Municipal Electric Agency

No

The IMEA supports comments submitted by the MISO Standards Collaboration Group indicating R3 is not necessary. Similarly, IMEA questions the necessity of R4. Therefore, we question the need to expand the applicability of COM-001 to DP, LSE, and PSE since R3 and R4 are the only two Requirements applicable to those functions.

No

Conforming changes are required to the Measures based on the suggested modifications to the requirements in Question 1.

No

Conforming changes are required to the VSLs based on the suggested modifications to the requirements in Question 1.

No

IMEA questions the necessity of expanding the applicability of COM-002 as proposed in R2, particularly to the DP, LSE, and PSE functions. IMEA recommends accomplishing the intent of COM-002-3 R2 by simply referring to COM-002-3 R1 in IRO-001-2 R2 which requires those entities to comply with the RC directive. Thus it would be understood that the functional entity had repeated the directive in order to comply with it; thereby avoiding the necessity of expanding applicability to another reliability standard.

Conforming changes are required to the Measures based on the suggested modifications to the requirements in

Question 4.
No
Conforming changes are required to the VSLs based on the suggested modifications to the requirements in Question 4.
Yes
No
IMEA supports the comments submitted by the MISO Standards Collaboration Group. In addition, while we agree with the proposed revisions to IRO-001-2 R2, IMEA recommends (as indicated in our comments to Question 4) that a reference be made to COM-002-3 R1 in IRO-001-2 R2. By including this reference, it is understood the applicable entities successfully repeated the directive in order to comply with the directive.
No
IMEA supports the comments submitted by the MISO Standards Collaboration Group.
No
IMEA supports the comments submitted by the MISO Standards Collaboration Group.
In order to minimize the number of reliability standards and the details covered in requirements - particularly those dealing with communications - it is recommended that an up-front provision/requirement be included as part of the compliance registration process that certain functional entities (e.g., DP, LSE, PSE, etc.) shall be responsible for providing the necessary information to transact services and for complying with the directives/requests of certain functional authorities (e.g., BA, PC, RC, etc.) in order to maintain/enhance reliability of the BES.

Yes
We agree with many of the changes made to the standard including the change of title to reflect communications (voice and text messages). The parenthesis around 30 minutes or longer should be removed as parenthesis by definition mean a word, phrase, or sentence inserted in a passage to explain or modify the thought. This phrase is more than an explanation of the term failure. It sets forth a time requirement that is an integral part of R1. We suggest rewording the requirement as "Each RC, TOP, and BA shall notify impacted entities within 60 minutes of a failure of its normal

interpersonal communications capabilities that lasts 30 minutes or longer."
Yes
However, it is not clear whether to show compliance the voice recordings and associated transcripts are of the test done or of the conversations across those facilities.
Yes
Yes
1. We agree with the clarification in R1 that a directive per COM-002-3 is a "verbal directive associated with real-time operational emergency conditions". We understand this to be a "Reliability" directive used during times of emergency or in situations where reliability may be an issue. Also, with this clarification, it confirms that the term "directive", as used in this standard, does not include "Operational" directives issued by System Operators during normal system conditions to change the status of an element such as a circuit breaker. 2. The industry does not appear to have a clear, consistent definition of what constitutes a directive. We suggest the standard require the person issuing a directive to use the phrase "I am directing you to ...", "I am ordering you to ..." or something similar to invoke the three part communication requirement. 3. Since this standard deals with communications and coordination during emergency conditions, it may be helpful to change the title of the standard to "Communications and Coordination – Emergency Conditions". 4. The phrase "the intent of the directive" could be difficult to comply with and measure. The words "the intent of" should be removed from Requirements R1 and R2.
Yes
Yes
Yes
If the term "cascading" used in the definition is referring to the NERC-defined term, it should be capitalized.
No
Regarding the retirement of IRO-001-1 R7 – We are not convinced that this requirement is redundant with IRO-014-1 R1. The existing requirement requires the RC to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated". IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. For IRO-001-1 R7 to be properly retired, the "mitigation of SOL and IROL violations" should be explicitly stated in IRO-014-2 R1 as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.
Yes
Yes
No
See our comments from Questions 8. If IRO-001 R7 is retired and deemed covered by IRO-014 R1, then IRO-014 R1 should include the "mitigation of SOL and IROL violations" as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.

Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication. Having alternative interpersonal communications should be specified as a requirement since there is actually no requirement to have that alternative way of communication in the first place. Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and is in fact already, in English. Accordingly, R3 should be modify as the proposition below: R3. Unless determined by law or otherwise agreed to, ...
No
Comments: See our comment for R3 in Q1. Accordingly, M3 should be modify to read as the proposition below: M3. ... that will be used to determine that personnel used English «or another language determine otherwise» as the language

for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, upon request, evidence shall be provided to explain the use of the alternate language. (R3.) M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?

No

see M3 comment for question 2

No

Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer R2 – leave as is A new R3 – If not repeated, then issuer shall request the receiving Entity to repeat the communication directive A new R4 – The issuer will acknowledge the correctness of the repetition of the communications directive

No

Address the new proposed Requirements above in Question 4.

No

address the new proposed Requirements.

No

Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.

No

Add “an issued” to the wording as shown following: Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform «an issued» directive.

Yes

No

(i) R4: Since failing to issue an alert to 3 entities already attracts a “High” VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a “Severe” VSL. We suggest to change the High VSL to: “...failed to issue an alert to three, but not all, impacted...” and the Severe VSL to: “...failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a “Severe” violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a “High” violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a “Severe” violation. (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.

No

The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.

No

The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.

No

(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT’s response to our comments under Q11.

Individual

Scott Berry

Indiana Municipal Power Agency

No

The requirements do not consider a pre-recorded communication that might be sent out from the Transmission Operator to Generator Operators or any other entity. If this communication is a directive associated with a real-time operational emergency condition (depending on the judgement used by an entity or auditor), it does not make sense to repeat back a pre-recorded message on the phone. It might be good to clearly state in the standard that pre-recorded messages do not need to be repeated back.

R1 requires an entity to “develop a mitigation plan” if a test of alternative communications capabilities is unsuccessful. We believe that this phrase should be changed to “take action”, reflecting that an entity’s response to an unsuccessful test may be to simply call or email a repair order. The phrase “develop a mitigation plan” implies that an entity must establish a backup to the alternative communications capabilities rather than just restore the alternative communications capabilities.
No
Replace the phrase “develop a mitigation plan” with the phrase “take action” per our comment on Requirement R1 above. Also, the DP and GOP should be deleted from the Data Retention section requirements for R1/M1 and R2/M2. Need to add a Data Retention requirement for R4/M4 for the DP and GOP.
No
Replace the phrase “develop a mitigation plan” with the phrase “take action to restore the capabilities” per our comment on Requirement R1 above.
No
We agree with adding the clarification that these requirements refer to “emergency” communications, but we think the word “Emergency” should be capitalized to further clarify that it is a defined term in the NERC Glossary. Also, the phrase “require the recipient of the verbal directive to repeat the intent of the directive back” should be changed to “have the recipient of the verbal directive repeat the intent of the directive back”. This avoids making the issuer of the directive make a statement requiring a repeat back unless the recipient actually fails to repeat back as normally expected.
No
Change “emergency” to “Emergency” per comment on R1 above. Also change the phrase “required the recipient of the verbal directive to repeat” to “had the recipient of the verbal directive repeat” per our comment on R1 above.
No
Change “emergency” to “Emergency” in the VSLs per our comment on R1 above. Also, we don’t see a tangible difference between the Moderate and Severe VSLs, and the High VSL should really be the Severe VSL. We suggest having just a High and a Severe VSL as follows: • High VSL: “The responsible entity issued a verbal directive associated with real-time operating Emergency conditions and had the recipient repeat back the intent of the directive, but did not either acknowledge the recipient was correct in the repeated directive or failed to repeat the intent of the original statement to resolve any misunderstandings.” • Severe VSL: “The responsible entity issued a verbal directive associated with real-time operating Emergency conditions, but did not have the recipient repeat back the intent of the directive.”

• R1 introduces the concept of “impacted Reliability Coordinators” which is unclear. Revise R1 as follows: R1. For conditions or activities that may impact other Reliability Coordinator Areas, each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for notification, exchange of information or coordination of actions with

those impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: • R2 Time Horizon should not include Long-term Planning. • R3 is unclear. Revise R3 as follows: R3. For conditions or activities that may impact other Reliability Coordinator Areas, each Reliability Coordinator shall make notifications and exchange reliability-related information with those impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans, or other available means to accomplish the notifications and exchange of reliability-related information. • R4 could be interpreted to require a weekly conference call even if there is no need for a call. Revise R4 as follows: R4. When there are conditions or activities that may impact other Reliability Coordinator areas, each Reliability coordinator shall participate in agreed upon conference calls, at least weekly, and other communication forums with those impacted Reliability Coordinators. • R5 – Insert the word “all” before impacted Reliability Coordinators for clarity. • R6, R7 and R8 are interrelated and unclear. Combine these three requirements into one clear requirement as follows: R6. When the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, the Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan and each impacted Reliability Coordinator shall implement the plan.

No

Need to revise the Measures to coincide with the recommended changes to the requirements in #11 above. Also under Data Retention, 12 months of evidence is needed for R3, R4 and M3, M4. However 3 years plus the current year is required for R5 through R8 and M5 through M8. We see no reason the data requirements to be different and believe 12 months is the proper amount of data retention.

No

Need to revise the VSLs to coincide with recommended changes to the requirements in #11 above.

COM-002 R2 specifies the Generator Operator that receives a directive from the Transmission Operator, Reliability Coordinator or Balancing Authority must repeat the intent of the directive back to the Transmission Operator. COM-002 M2 specifies that evidence must be retained in the form of either voice recordings or transcripts by the generator operator. Since the Transmission Operator, Reliability Coordinator and Balancing Authority already have voice recording capability (centrally located), it is not necessary for the Generator to also install voice recording capability at each generating station. We suggest the wording of COM-002 be changed such that only the Transmission Operator, Reliability Coordinator and Balancing Authority be required to keep voice recordings or transcripts.

(1) We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. If repairing the system would be a lengthy process, then a mitigation plan may be developed to document that the entity is in process to fix the system. There is no associated requirement to have an alternate interpersonal communication capability along with R1 to test it. Thus, if a responsible entity did not have an alternate interpersonal communication capability. R1. in essence. does not apply. We suggest adding a requirement to have an alternate

interpersonal communication capability to address this gap. Alternatively, the requirement to have an alternate interpersonal communication capability along with requirements to test and fix it could be stipulated in the Organization Certification Requirements. (2) In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes." (3) R3 is not necessary. This requirement results in the waste of compliance resources managing and auditing documentation associated with it with no measurable improvement to reliability.

No

Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.

No

(1) Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. (2) FERC expressed its desire in the June 2008 order on VSLs to have as many VSLs as possible. We suggest since R2 also has a time component in the requirement four VSLs could be written based on the timeliness of the notification as well as the number of impacted entities that were not notified. The VSLs should reflect both components.

Yes

(1) We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as Reliability Directives. This makes it clear that only Reliability Directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this Reliability Directive issue by developing a definition for Reliability Directive. We propose the following definition: Reliability Directive – A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact. Please note that AESO already has this term defined. The above suggested definition may be different from the AESO's definition. (2) In requirement 1, we do believe that another word than "require" should be used. Consider using "request". An RC, BA, and TOP can't force the recipient of the Reliability Directive to repeat it back. They can ask or request it be repeated back though.

Yes

We largely agree with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.

No

If the suggestion regarding "require" in Q4 is accepted, conforming changes to the VSL need to be made. Additionally, we believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the Reliability Directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the Reliability Directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal Reliability Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Reliability Directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal Reliability Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Reliability Directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.

Yes

The drafting team should consider that NERC is moving away from using the term "cascading outages". FERC has directed NERC to rescind this definition, and use the defined term "cascading" instead.

Yes

Yes

Yes

Yes

No

(1) R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, placing the burden on the same RC to obtain the agreement of impacted RCs may not be appropriate since the RC experiencing the Adverse Reliability Impact may not be able to force impacted RC to concur. We suggest the SDT to consider: a. Remove the bullet to require agreement from the impacted RC; b. Add a new requirement that the impacted RC shall acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given. (2) We realize that R7 implies that the RC experiencing the Adverse Reliability Impact has come up with an alternative plan when its initial plan was not agreed to, but the alternative may still be disagreed by the impacted RC. Simply implementing the alternative plan, as stipulated in R8, could expose the

impacted RC to operate in an unreliable or unsafe domain. We therefore request the SDT to assess if any requirements need to be introduced to resolve this difference with due regard to reliability concerns in both RC areas when agreement cannot be reached even on the alternative plan.

No

Conforming changes to the Measurements will be required if changes as suggested in Question 11 are introduced.

No

(1) In the Commission's June 2008 order on VSLs, they expressed their preference for having as many VSLs as possible. We believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. We also believe this would be consistent with the Commission's guideline 4 because the requirement is written in the plural, that is conference calls, so all conference calls must be considered in aggregate. Thus, failure to participate in more than one conference call does not represent distinct violations but a single violation. (2) Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any. Note: CAISO abstains from these comments.

AESO abstains from commenting on VSLs. VSLs for Alberta will be developed by provincial authorities.

It is understood that the use of the term "interpersonal communications" and "interpersonal communications capabilities" were selected by the RC SDT to better reflect the intent of the Standard. However, NU reviewers are concerned over the new terminology and believe that it is unclear and not universally accepted to mean the same thing to all parties. NU's belief is that the original use of the terms "telecommunications" and "telecommunications facilities" are clearer and universally understood. NU recommends that the original terms be re-instated or the term "interpersonal communications" be replaced to reflect the intent of the Standard is to ensure "voice and text equipment" is adequate for communicating real-time operating information. R1 – the requirement has evolved to test alternative equipment, versus a requirement to have primary and alternative equipment. Standard should require entities to have the equipment such as in the -1 version. R2 is to notify impacted entities in the event of a loss of normal communications. With backup communications operating correctly do we assume there is no impact and therefore notification is not required? This is unclear from a compliance perspective and unnecessary if backup communications are available. Alternative communications often go several layers deep including cell phones, satellite phones, radio, etc.

Yes

Yes

Yes

No

NU agrees with expanding the applicability of the Standard beyond the Reliability Coordinators, Balancing Authorities and Transmission Operators to ensure that the recipient of a verbal directive repeats back the directive to the issuer (R2). Despite NU's agreement with R2, NU believes that M2 is duplicative to the intent of M1 and unnecessarily requires the installation of voice recording capabilities at the entities other than a RC, BA or TOP. It is our belief that the voice recordings of the RC, BA and TOP (M1) provide the evidentiary support required by all applicable entities.

Yes

No

Remove the word "outages" that appears after "cascading" as per NERC Glossary and FERC Directive issued Dec. 27, 2007.

No

The intent of R3 is not clear - i.e., "... shall inform its Reliability Coordinator upon recognition of its inability to perform a directive". Does this requirement pre-suppose a directive has been given? Suggest adding clarifying language that indicates that the requirement is applicable subsequent to a directive being received. It is our belief that the wording of Measure M3 supports the suggested changes to R3.

Yes

No

(i) R4: Since failing to issue an alert to 3 entities already attracts a "High" VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a "Severe" VSL. We suggest to change the High VSL to:

<p>"...failed to issue an alert to three, but not all, impacted..." and the Severe VSL to: "...failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a "Severe" violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a "High" violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a "Severe" violation. (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.</p>
No
The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.
No
The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
No
(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT's response to our comments under Q11.
Northeast Utilities appreciates the work of the Drafting Team. No additional comments.
Individual
Dan Rochester
Independent Electricity System Operator
No
We suggest the SDT review the applicability to Transmission Service Providers, Load-Serving Entities and Purchasing Entities from a real time operating perspective. We do not believe they are active participants in real time operation for which they require to have the same communication capability as the RCs, TOPs, BAs and DPs. Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication. Having alternative interpersonal communications should also be specified as a requirement. Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and already is, in English. Accordingly, R3 should be modified as proposed below: R3. Unless dictated by law or otherwise agreed to, ... R4: We believe "Interconnection" should be replaced by "interconnection" since the former is not a defined term.
No
M3 and M4 may need to be revised depending on the response to our comments under Q1, above.
No
The VSLs for R3 may have to be changed based on the outcome of our comments in Q2 regarding the language of communication.
No
(i) We suggest the word "emergency" be capitalized since it is a defined term which generally covers the conditions under which directives are issued. (ii) We further suggest that to avoid confusion between operating instructions and directives, the term directive should be defined as suggested below: Directive or Reliability Directive – A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires complying action by the recipient to prevent or mitigate an Adverse Reliability Impact. (iii) Since R1 contains two requirements, there may be some benefit in separating these since that would make the VSLs clearer, i.e. separate the requirements placed on the issuer of the directive to (a) request the recipient to repeat the intent of the directive and (b) to acknowledge the response of the recipient as correct.
No
Comments: Some changes may be necessary based on the SDT's response to our suggestion in Q4.
No
The sequence of communication required under R1 is intended to ensure that directives from the issuing entities are clearly understood. The earlier this sequence is broken, the greater the uncertainty that this goal is achieved and the greater should be the severity level. Thus, failure to request that the recipient entity repeat the intent of the directive – the earliest step in the sequence - should attract the "Severe" VSL. Also, failing to repeat the original directive when there is any misunderstanding, again, in our view, leaves the intent of the directive equally unclear and should also attract a "Severe" VSL. Failing to acknowledge the recipient was correct in the repeating the intent of the directive – the last step in the sequence – is already assigned a "Moderate" VSL and this should not be repeated in the "Severe" VSL. We therefore suggest that the two conditions under "High" and "Severe" in R1 be combined as one under "Severe" as follows: The responsible entity issued a verbal directive associated with real-time operating emergency conditions but did not require the recipient to repeat the intent of the directive; OR The responsible entity issued a verbal directive associated with real-time operating emergency conditions and required the recipient to repeat the intent of the directive, but failed to repeat the intent of the original statement to resolve any misunderstandings.
No

Comments: Remove the word "outages" that appears after "cascading" as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
No
Comments: Change "...inability to perform a directive." to "...inability to perform an issued directive."
Yes
No
(i) R1: For clarity, we suggest changing "it" to "that". R4: Since failing to issue an alert to 3 entities already attracts a "High" VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a "Severe" VSL. We suggest to change the High VSL to: "...failed to issue an alert to three, but not all, impacted...." and the Severe VSL to: "...failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a "Severe" violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a "High" violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a "Severe" violation. (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.
No
(i) Definition of Adverse Reliability Impact is duplicated as it is already defined in IRO-001-2. (ii) We do not see the need for R7 and R8 since R6 already stipulates the necessary actions to be taken, it is not necessary for the Reliability Coordinator with the identified Adverse Reliability Impact to develop (re-develop?) a mitigation plan when the impacted Reliability Coordinators did not agree that the problem exists. What may be needed is the insertion of "shall develop a mitigation plan" before "notify impacted Reliability Coordinators" in R5. We suggest removing these requirements (R7 and R8).
No
Depending on the response of the SDT, changes to M5 to M8 may be required.
No
(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe if the VSLs are graded according to then number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT's response to our comments under Q11.
In our comments on the previous posting, we expressed a disagreement with a proposed to remove IRO-005, in particular the latter part of R13, which stipulated that: In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter. Our rationale was that The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities may come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set exists is a necessary requirement for reliable operation. The SDT responded by suggesting that this requirement is redundant with FAC-014 which -014 states the requirement for developing and sharing SOL and IROL between the RC, PA, TP and TOP in both the planning and operating time frames. However, this response fails to address the situation where during operation, the situation of disagreeing SOLs or IROLs does arise. FAC-014 or any other standards do not currently have a requirement to ensure that all entities operate to the lower limit before the difference is resolved. This leaves room for unreliable operation. We suggest the SDT to consider restating this requirement somewhere. Note that this requirement is similar to R6 of IRO-014 that when in doubt, the more conservative approach should be taken. If it is necessary to have an R6 to deal with an uncertain identification/notification of an Adverse Reliability Impact, we don't see why it is not necessary to operate to a lower SOL or IROL when there is an unresolved difference.

No
We believe that the team needs to define the term "interpersonal communications capabilities". It's our understanding that the term refers to how entities will communicate (i.e. phone, cell phone, video conferencing, email or satellite phone) with each other, but that is not being clearly communicated by the requirement. A clear definition of the term "interpersonal communication capabilities" will likely provide needed clarity to the requirement. Requirement 1 seems to imply that an entity will be judge based on a single test of its alternative communication system within any given quarter, and if that test fails they must develop a mitigation plan. Our concern is that the requirement should allow for multiple testing and only if all or a reoccurring issue is found should you document and fix the issue. (Example: An entity performs weekly tests of its alternative communication system. One of the test's fails. All other tests, following the failed test, are successful. Would the entity have to develop a mitigation plan based on the one failure, or are the other successful tests sufficient to show compliance?) In R2, we assume that the 30 minutes or longer in parenthesis is

intended to describe the length of the outage. To clarify, we suggest that the language be changed to: "Each RC, TOP and BA shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communication systems lasting longer than 30 minutes."
No
See our comment to question 1
No
are supportive of the language regarding "directives" which clarifies that directives are those which involve operating emergencies. However, in R1, we believe that the word "requires" should be changed to "request". An entity can request that another entity repeat back a directive but we cannot "require" it.

No
We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes." R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.
No
Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
No
Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. In addition, we suggest since R2 has a time component in the requirement, four VSLs could be written based on the timeliness of the notification. This would be consistent with the FERC's expressed desire in the June 2008 order on VSLs in which they stated that as many VSLs should be developed as possible.
Yes
We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this directive issue by developing a definition for directive. We propose the following definition: Directive or Reliability Directive – A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact. In requirement 1, we do believe that another word than "require" should be used. Consider using "request". An RC, BA, and TOP can't force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.
Yes
We largely agree with the measures with the exception that a conforming change needs to be made to M1 if the

suggestion regarding "require" in Q4 is accepted.
No
If the suggestion regarding "require" in Q4 is accepted, conforming changes to the VSL need to be made. Additionally, we believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.
Yes
No
We agree with many of the changes. However, we believe R5 is not necessary for reliability. We agree the RC should notify impacted entities when the transmission problem has been mitigated; however, if the RC fails to notify the impacted entities, it will not result in an Adverse Reliability Impact. Thus, it is not necessary as a sanctionable requirement.
No
Measurement 5 needs to be struck if R5 is struck per question 8.
No
The Commission stated in their order on VSLs in June of 2008 their preference for as many VSLs as possible. We believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause "but not all". It is not necessary.
No
Requirements R2 and R8 need additional work. R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable. Further, the drafting team needs to clarify that R2 also applies to the mitigation plan in R7. Because R7 requires the RC experiencing the Adverse Reliability Impact to develop the mitigation plan, the mitigation plan may not be agreed to by the impacted RC. The impacted RC may have a perfectly valid reliability, statutory, legal, or regulatory reason for not agreeing to the mitigation plan. R8 still obligates the RC to implement the mitigation plan developed in R7 though it may be contrary to reliability. R8 needs to allow the RC to refuse to implement the mitigation plan if the impacted RC has a reliability, statutory, legal or regulatory reason. Further the drafting team should consider if the impacted RC could refuse because the RC experiencing the Adverse Reliability Impact has not implemented comparable measures in their own area. R8 as written could allow an RC to simply pass cost on to the neighboring RC in the name of reliability. For example, the RC may not want to order a unit to be committed to avoid certain startup costs but they ask the neighboring RC to start up a unit in their footprint.
No
Conforming changes to the Measurements will be required for accepted changes from question 11.
No
In the Commission's June 2008 order on VSLs, they expressed their preference for having as many VSLs as possible. We believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. We also believe this would be consistent with the Commission's guideline 4 because the requirement is written in the plural, that is conference calls, so all conference calls must be considered in aggregate. Thus, failure to participate in more than one conference call does not represent distinct violations but a single violation. Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any.

## Consideration of Comments on Reliability Coordination — Project 2006-06

The Reliability Coordination Standard Drafting Team (RC SDT) thanks all commenters who submitted comments proposed revisions to the standards for Project 2006-06: Reliability Coordination. These standards were posted for a 30-day public comment period from July 10, 2009 through August 9, 2009. The stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 31 sets of comments, including comments from more than 87 different people from over 62 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

All comments received have been reformatted so that all comments received in response to the first question appear following the first question, etc. All comments have been posted at the following site:

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

**Changes to Requirements, Measures and Violation Severity Levels in COM-001-2:** Stakeholders suggested that there is a need to define Interpersonal Communications for this standard. The RC SDT is proposing the following definitions:

**Interpersonal Communication:** Any method that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

Other stakeholders suggested edits to the requirements. The RC SDT revised the wording of R2 to add clarity and revised R3 to include the phrase “unless dictated by law...” to address legal requirements in some areas.

Several stakeholders suggested removing the mitigation plan from R1 and M1. The RC SDT agreed and made revisions to other measures to reflect changes to the requirements.

Stakeholders suggested adding more VSLs for R2. The RC SDT agreed and drafted additional VSLs reflecting timing and the number of entities notified. Other changes to the VSLs were made based on revisions to the requirements.

Stakeholders suggested removing the Distribution Provider and Generator Operator from the Data Retention section for R1 of COM-001. Since these are not applicable entities in R1, they were removed from Data Retention for the requirement.

The standard and the proposed definitions will be posted for an additional comment period.

**Changes to Requirements, Measures and Violation Severity Levels in COM-002-3** Stakeholder consensus has been achieved with respect to the retirement of R1 and M1 from the last approved version of the standard. In response to the majority of the comments, the drafting team has modified and rearranged the order of the remaining requirements, and coined a definition for “Reliability Directive”. The drafting team is also coordinating with the RTO SDT (Project 2007-03) and the OPCP SDT (Project 2007-02) on the definition and usage of the term “Reliability Directive”.

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

As a reference, we have included the existing definition of Emergency:

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

In accord with the majority of commenters, the drafting team made changes to the Measures to bring them into conformance with the adopted suggestions from question 4 for improving the Requirements.

### **Changes to Requirements, Measures and Violation Severity Levels in IRO-001-2**

Stakeholders generally agreed with the revisions to the requirements. Several stakeholders suggested adding the words “an issued” before “directive” in R3. The RC SDT agreed and made the change. No further revisions were made to the requirements. The proposed revisions to the definition of Adverse Reliability Impacts is being posted for comment.

Stakeholders agreed with the measures for IRO-001-2. The measure M3 was revised to reflect the revision to R3. No other revisions were suggested for the measures.

The VLS for R3 was revised to add the word “issued” before directive to match the revised requirement. Stakeholders suggested minor revisions to the VSLs for R4 and R5. The RC SDT agreed and made the revisions.

The RC SDT believes that stakeholder consensus has been achieved on IRO-001-2. The definition of Adverse Reliability Impacts is included in this posting for comment.

### **Changes to Requirements, Measures and Violation Severity Levels in IRO-014-2**

Stakeholders suggested revising R8 to include provisions for avoiding implementing actions that would violate safety, equipment or regulatory or statutory requirements. The RC SDT agreed and added this to the requirement. Other stakeholders suggested adding “For conditions or activities that impact other Reliability Coordinator Areas,...” at the beginning of R1 and R3. The RC SDT agreed and added this to the requirements. The Time Horizons for R2 were revised as suggested to “Same Day Operations and Operations Planning”. Several stakeholders expressed concerns regarding having R6-R8 as separate requirements. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT contends the requirements should be separate requirements as they identify distinctly different actions and are adequate as written.

Stakeholders agreed with the Measures, except to make conforming changes for revisions to the requirements. The RC SDT has revised the measures based on the new requirements. One stakeholder suggested revision to the Data Retention for R5-R8. Data Retention was revised for R5 to 12 months, however the RC SDT believes that three years is the correct period for R6-R8.

Several stakeholders suggested developing four VSLs for R5. Typically, in the course of BES operations, the number of impacted Reliability Coordinators will be a small number. The SDT effort in this regard was to write the VSLs to represent both the large and small

scenarios containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios. Other stakeholders suggested four VSLs for R4. The essence of R4 is written to require impacted RC's to talk at least weekly and is singular in nature. VSL's can not be written for conference calls that exceed the singular requirement.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at [gerry.adamski@nerc.net](mailto:gerry.adamski@nerc.net). In addition, there is a NERC Reliability Standards Appeals Process.<sup>1</sup>

---

<sup>1</sup> The appeals process is in the Reliability Standards Development Procedures:  
<http://www.nerc.com/standards/newstandardsprocess.html>.

**Index to Questions, Comments, and Responses**

**1. Do you agree with the revisions made to the Requirements in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration: Most stakeholders agreed with the requirements in COM-001.** Stakeholders suggested that there is a need to define Interpersonal Communications for this standard. The RC SDT is proposing the following definitions:

**Interpersonal Communication:** Any method that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

Other stakeholders suggested edits to the requirements. The RC SDT revised the wording of R2 to add clarity, revised R3 to include the phrase “unless dictated by law...” to address legal requirements in some areas, and removed references to the mitigation plan in R1.

Organization	Yes or No	Question 1 Comment
Central Lincoln		<p>Comments: The inclusion of load serving entities and distribution providers does not address any present reliability gap. R4 is extremely vague, and is not likely to be interpreted consistently. What form of evidence will be acceptable? Photos of telephones?</p>
<p><b>Response: The RC SDT thanks you for your comment. The LSE and DP were added as applicable entities to R3 as a result of stakeholder comments during the previous posting. The DP and GOP were added as applicable entities in R4 per FERC Order 693 directives. The Measure M4 for Requirement R4 was revised to:</b></p> <p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)</p>		
JEA		<p>R2 I would suggest that R2 be clarified so that it is understood that the 60 minutes starts at the beginning of the outage (or the end of the 30 minute period, if that was instead the intent) so that there can be no confusion about when the clock starts for notification periods. Otherwise, the wording of these standards is clearer than the current version.</p> <p>R4 I am concerned that with the word "capabilities" that the DP/GO's will be expected by the auditors to demonstrate that its "capability" was working every single second of every day since their last audit, especially since you have not included a data retention period(especially since this is rated a "high" VRF).</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
<p><b>Response: The RC SDT thanks you for your comment.</b></p> <p><b>R2: We have revised the wording to clarify the intent:</b></p> <p>Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal Interpersonal Communications capabilities that lasts 30 minutes or longer. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p><b>R4: The Measure 4 for Requirement R4 was revised to:</b></p> <p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)</p> <p>Data retention for R4, M4 was added to the revised standard.</p>		
Northwest LSE Group	No	<p>The RC STD has done a commendable effort. However, it is questionable how expanding the applicability to include LSEs, DPs, &amp; PSEs that are non-scheduling/tagging entities will increase reliability of the BES. In fact, we believe that increasing the applicability could do just the opposite. Many of these entities that are only registered as a LSE, DP, and/or PSE do not have a 24/7 desk/dispatch facility to receive RC/BA/TOP reliability directives, and are too small (10s of MW) to effectively assist during a reliability crisis. In addition, the Regional Entities (WECC in this case) are overwhelmed as it is, asking them to take on even more audit responsibilities is unrealistic, and not worth the effort.</p> <p>In addition, for the small Registered Entity, what would constitute compliance with R3 &amp; R4 if no TOP/BA real-time directives were received? Everyone employed speaks English and there is at least one phone on the premises? Will the small DP and/or LSE be required to monitor its communication system 24/7 with competent personnel for an unlikely TOP/BA directive?</p>
<p><b>Response: The RC SDT thanks you for your comment. The LSE, DP and PSE were added as applicable entities to R3 as suggested by other stakeholders in the last posting. The Distribution Provider and Generator Operator are in R4 per FERC Order 693 directives.</b></p> <p><b>The measures for the requirements specify what would constitute evidence needed to demonstrate compliance. Note that R3 and R4 are not focused solely on communication related to “directives.” Requirement R3 is focused on all “. . . inter-entity Bulk Electric System (BES) reliability communications . . . “ The drafting team feels that R4 as written allows flexibility to the entities in meeting the performance requirement. Note that R4 only applies to Distribution Providers and Generator Operators, not to LSEs.</b></p>		
American Transmission Company	No	<p>We believe that the team needs to define the term “interpersonal communications capabilities”. It’s our understanding that the term refers to how entities will communicate (i.e. phone, cell phone, video conferencing, email or satellite phone) with each other, but that is not being clearly communicated by the requirement. A clear definition of the term “interpersonal communication capabilities” will likely provide needed clarity to the requirement.</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 1 Comment
		<p>Requirement 1 seems to imply that an entity will be judge based on a single test of its alternative communication system within any given quarter, and if that test fails they must develop a mitigation plan. Our concern is that the requirement should allow for multiple testing and only if all or a reoccurring issue is found should you document and fix the issue. (Example: An entity performs weekly tests of its alternative communication system. One of the test’s fails. All other tests, following the failed test, are successful. Would the entity have to develop a mitigation plan based on the one failure, or are the other successful tests sufficient to show compliance?)</p> <p>In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. To clarify, we suggest that the language be changed to: Each RC, TOP and BA shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communication systems lasting longer than 30 minutes.</p>
<p><b>Response: The RC SDT thanks you for your comment. Several stakeholders have expressed a concern with the definition of interpersonal communications capabilities. The RC SDT concurs and has drafted a definition that will be posted for comment.</b></p> <p><b>R1: Other stakeholders also expressed concern with developing a mitigation plan in this requirement. The RC SDT has revised the requirement to:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>The RC SDT feels that this will address your comment.</b></p> <p><b>R2: We concur and have revised the requirement as you suggest.</b></p>		
Northeast Power Coordinating Council	No	<p>Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication.</p> <p>Having alternative interpersonal communications should be specified as a requirement.</p> <p>Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and in fact is already, in English. Accordingly, R3 should be modified as the proposition below: R3. Unless dictated by law or otherwise agreed to,</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</b></p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p><b>The RC SDT agrees with your comment regarding the alternate interpersonal communications capability and has revised the requirement to read:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal</p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 1 Comment
<p>Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>We concur with your suggestion regarding R3 and have made the suggested revision.</b></p>		
SERC OC Standards Review Group	No	The STD should clarify what types of communications are considered in the standard is it voice or data communications or both?
<p><b>Response: The RC SDT thanks you for your comment. Interpersonal communication does not include data (see IRO-010-1) and includes more than voice, such as instant messaging, text messaging and email. The RC SDT has developed a draft definition of interpersonal communications capabilities that will be posted for comment which meets the FERC Order 693 directive to:</b></p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p>		
IRC Standards Review Committee	No	<p>(1) We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. If repairing the system would be a lengthy process, then a mitigation plan may be developed to document that the entity is in process to fix the system. There is no associated requirement to have an alternate interpersonal communication capability along with R1 to test it. Thus, if a responsible entity did not have an alternate interpersonal communication capability, R1, in essence, does not apply. We suggest adding a requirement to have an alternate interpersonal communication capability to address this gap. Alternatively, the requirement to have an alternate interpersonal communication capability along with requirements to test and fix it could be stipulated in the Organization Certification Requirements.</p> <p>(2) In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes."</p> <p>(3) R3 is not necessary. This requirement results in the waste of compliance resources managing and auditing documentation associated with it with no measurable improvement to reliability.</p>
<p><b>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement for alternate interpersonal communications capability and has revised the requirement to read:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to</p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 1 Comment
		<p>restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>2) <b>We concur with your comment and have revised the requirement accordingly.</b></p> <p>3) <b>The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</b></p>
Midwest ISO Standards Collaborators	No	<p>We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system.</p> <p>In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes."</p> <p>R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.</p>
		<p><b>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement for alternate interpersonal communications capability and has revised the requirement to read:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>2) <b>We concur with your comment and have revised the requirement accordingly.</b></p> <p>3) <b>The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</b></p>
ReliabilityFirst Corporation	No	FERC 693 excludes distribution providers if they are not a user, owner or operator of BES. This should be reflected in R4 of the standard
		<p><b>Response: The RC SDT thanks you for your comment. FERC Order 693 endorses the NERC Statement of Compliance Registry criteria (paragraph 512) and also adopted the proposal to require the ERO to modify COM-001 to apply to distribution providers and generator operators (paragraph 493).</b></p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 1 Comment
E.ON U.S.	No	<p>E.ON U.S. suggests deleting “interpersonal” from the term “interpersonal communications capabilities”. The need for and meaning of the term “interpersonal” isn’t clear. Does it infer communications must be to/from a specific individual rather than to/from another reliability entity? Verbal vs electronic communications? All non-data communications? E.ON U.S. believes that the term “interpersonal” must be clarified if it is to remain in the standard.</p> <p>In the proposed R1 “how extensive must the quarterly testing be “ establish contact or verify all functions? Does the term “alternative” include the "normal" communication medium or only the “backup” mediums? Does the alternative imply ALL possible communication alternatives? E.ON U.S. suggests replacing the term “alternative” with “planned backup” or similar. Quarterly testing needs to be limited to only established/planned backup communication methods not any potential "alternative" communication method.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT agrees with several stakeholders that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</b></p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p><b>The testing requirement is to ensure that the alternative (not “normal”) interpersonal communications capability works as a minimum. Entities may go above and beyond the requirement if they desire. The requirement was edited to identify the alternative and test it.</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its alternative Interpersonal Communication capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p>		
Manitoba Hydro	No	<p>do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary as it would delay repairing the interpersonal communication capability.</p> <p>R2 assumed that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes?</p> <p>R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.</p>
<p><b>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 1 Comment
<p><b>for alternate interpersonal communications capability and has revised the requirement to read:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>2) We concur with your comment and have revised the requirement accordingly.</b></p> <p><b>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</b></p>		
Georgia Transmission Corporation	No	<p>Per the NERC Reliability Standards Development Procedure, under the definition of a Reliability Standard? The obligations or requirements must be material to reliability and measurable? With regards to R3. - It goes without saying that inter-entity BES reliability communications must be in a common language between the entities for understanding operation instructions. From an audit/measurability standpoint, the evidence to the requirement would not converge to a finite amount of material. The amount of evidence required to demonstrate compliance of this requirement would be a huge administrative burden. It seems this concept (for use of the English language) could be captured under the "Entity Tasks and Interrelationships" section of the NERC Reliability Functional Model which defines the set of functions that must be performed to ensure the reliability of the bulk electric system. It also explains the relationship between and among the entities responsible for performing the tasks within each function. Additionally, this concept (for use of the English language) could further be explained under each applicable registration type (BA, GOP, TSP, LSE, PSE, and DP) in the NERC Reliability Functional Model. The Second option for R3 is to remove the Requirement from the continent wide Standards and have the effected entities/regions create a "Regional Standard" where entities involved in inter-entity BES reliability communications have a history of language barrier concerns.</p> <p>As a separate issue to R3, it also seems conflicting that a written requirement would provide the option of "Unless agreed to otherwise". This option described in the language of the requirement implies that it is not a requirement but an option which further supports the suggestions above.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement. The Reliability Functional Model is not an enforceable standard.</b></p>		
Illinois Municipal Electric Agency	No	<p>The IMEA supports comments submitted by the MISO Standards Collaboration Group indicating R3 is not necessary. Similarly, IMEA questions the necessity of R4. Therefore, we question the need to expand the applicability of COM-001 to DP, LSE, and PSE since R3 and R4 are the only two Requirements applicable to those functions.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement. R4 is included per FERC Order 693 directive.</b></p>		
Exelon	No	<p>Agree with the revisions with the following exception/recommendation: COM-001: purpose is to address communication facilities / capabilities (technical/hardware). COM-002: purpose is to address effectiveness (protocols).COM-001: R.1-3 address telecommunication facility requirements. R4 requires English use. Recommend the drafting team move COM-001 R4 (use English) to COM-002 where effectiveness of communications (protocols) between entities is addressed.</p>
<p><b>Response: The RC SDT thanks you for your comment. COM-001 Requirement R3 (English use) is being incorporated into COM-003-1 by the Operations Personnel Communications Protocols SDT (Project 2007-02). It will be retired from this standard upon approval of COM-003-1. We see no benefit to moving it to COM-002 at this time.</b></p>		
Hydro-Québec TransEnergie (HQT)	No	<p>Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication.</p> <p>Having alternative interpersonal communications should be specified as a requirement since there is actually no requirement to have that alternative way of communication in the first place.</p> <p>Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and is in fact already, in English. Accordingly, R3 should be modified as the proposition below: R3. Unless determined by law or otherwise agreed to,</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</b></p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p><b>The RC SDT agrees with your comment regarding the alternate interpersonal communications capability and has revised the requirement to read:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>We concur with your suggestion regarding R3 and have made the suggested revision.</b></p>		
Duke Energy	No	<p>R1 requires an entity to “develop a mitigation plan” if a test of alternative communications capabilities is unsuccessful. We believe that this phrase should be changed to “take action”, reflecting that an entity’s response to an unsuccessful test may</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 1 Comment
		<p>be to simply call or email a repair order. The phrase “develop a mitigation plan” implies that an entity must establish a backup to the alternative communications capabilities rather than just restore the alternative communications capabilities.</p>
<p><b>Response: The RC SDT thanks you for your comment. We concur with your comment regarding the mitigation plan and have revised the requirement to:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its alternative Interpersonal Communication capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p>		
Northeast Utilities	No	<p>It is understood that the use of the term "interpersonal communications" and "interpersonal communications capabilities" were selected by the RC SDT to better reflect the intent of the Standard. However, NU reviewers are concerned over the new terminology and believe that it is unclear and not universally accepted to mean the same thing to all parties. NU's belief is that the original use of the terms "telecommunications" and "telecommunications facilities" are clearer and universally understood. NU recommends that the original terms be re-instated or the term "interpersonal communications" be replaced to reflect the intent of the Standard is to ensure "voice and text equipment" is adequate for communicating real-time operating information.</p> <p>R1 ? the requirement has evolved to test alternative equipment, versus a requirement to have primary and alternative equipment. Standard should require entities to have the equipment such as in the -1 version.R2 is to notify impacted entities in the event of a loss of normal communications. With backup communications operating correctly do we assume there is no impact and therefore notification is not required? This is unclear from a compliance perspective and unnecessary if backup communications are available. Alternative communications often go several layers deep including cell phones, satellite phones, radio, etc.</p>
<p><b>Response: The RC SDT thanks you for your comment. Several stakeholders have expressed a concern about the definition of interpersonal communications. The RC SDT is proposing a definition that will be posted for comment to address those concerns as well as your comment.</b></p> <p><b>R1: The intent of the requirement is as you suggest. This requirement has been revised to:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>Notification of a failure of the normal interpersonal communications is still required by R2. The testing requirement is for one designated alternative. No notification is required for the failure of a non-designated alternative.</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 1 Comment
Independent Electricity System Operator	No	<p>We suggest the SDT review the applicability to Transmission Service Providers, Load-Serving Entities and Purchasing Entities from a real time operating perspective. We do not believe they are active participants in real time operation for which they require to have the same communication capability as the RCs, TOPs, BAs and DPs.</p> <p>Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication.</p> <p>Having alternative interpersonal communications should also be specified as a requirement.</p> <p>Work communication within Quebec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and already is, in English. Accordingly, R3 should be modified as proposed below: R3. Unless dictated by law or otherwise agreed to,</p> <p>R4: We believe “Interconnection” should be replaced by “interconnection” since the former is not a defined term.</p>
<p><b>Response: The RC SDT thanks you for your comment. TSP, LSE and PSE are not required to have the same Interpersonal communication as RC, TOP or BA. The only requirement applicable to TSP, LSE and PSE is R3 (English language).</b></p> <p><b>The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</b></p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p><b>The RC SDT agrees with your comment regarding the alternate interpersonal communications capability and has revised the requirement to read:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>We concur with your suggestion regarding R3 and have made the suggested revision.</b></p> <p><b>R4: Interconnection is a defined term in the NERC Glossary of Terms (Updated on April 20, 2009).</b></p>		
MRO NSRS	No	<p>(1) The MRO NSRS does not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. Please create a definition for the interpersonal communication capability (or systems) term used in the response to comments to draft 1 in the summary of consideration for question 1.</p> <p>(2) In R2, MRO NSRS assumes that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. MRO NSRS thinks this would be clearer if the requirement were revised to: “Each Reliability Coordinator,</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 1 Comment
		<p>Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes.”</p> <p>(3) R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.</p>
<p><b>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement for alternate interpersonal communications capability and has revised the requirement to read:</b></p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>The team has drafted a definition for both the term “Interpersonal Communication” and the term, “Alternative Interpersonal Communication.”</p> <p><b>2) We concur with your comment and have revised the requirement accordingly.</b></p> <p><b>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</b></p>		
Xcel Energy	No	<p>(1) While an improvement from the terminology used in version 1, the term "interpersonal communications" is still vague. We feel the intent of the drafting team was to include non-verbal communication as well, like email. However, as drafted, this point is not clear. We feel a definition is needed in order avoid disparity in its interpretation.</p> <p>(2) It appears that the requirement for RCs, TOPs and BAs to have communication capabilities (whether primary or backup/alternative) was removed from the standard. Yet, R1 requires the RC, TOP and BA to test alternative communications capabilities. Requirements to have primary and backup/alternative communication capabilities should be explicitly stated.</p> <p>(3) Additionally, we feel that the DP and GOP should have testing requirements for their communication capabilities with their TOP and BA.</p>
<p><b>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</b></p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p><b>2) The RC SDT does not agree with your assertion regarding R1. The requirement for alternate interpersonal communications capability implies that primary interpersonal communications are in place.</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 1 Comment
<p><b>3) The DP and GOP were added as applicable entities in R4 per FERC Order 693 directives. The RC SDT does not agree with your assertion regarding the need for testing requirements. However, your concerns may be addressed in the Measure 4 revision:</b></p>		
<p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)</p>		
Western Area Power Administration	Yes	R4 should say "Generator Operator" rather than "Generation Operator"
<p><b>Response: The RC SDT thanks you for your comment. We have made this revision.</b></p>		
American Electric Power	Yes	AEP does generally agree with the revisions, but the use of the term "interpersonal communication capabilities" needs a NERC-approved definition. Otherwise, what is in scope? Are e-mail or text messages acceptable, and, if so, what type of guaranteed delivery is necessary?
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</b></p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p>		
FirstEnergy	Yes	We agree with many of the changes made to the standard including the change of title to reflect communications (voice and text messages). The parenthesis around 30 minutes or longer should be removed as parenthesis by definition mean a word, phrase, or sentence inserted in a passage to explain or modify the thought. This phrase is more than an explanation of the term failure. It sets forth a time requirement that is an integral part of R1. We suggest rewording the requirement as "Each RC, TOP, and BA shall notify impacted entities within 60 minutes of a failure of its normal interpersonal communications capabilities that lasts 30 minutes or longer."
<p><b>Response: The RC SDT thanks you for your comment. We concur with your comment and have revised the requirement accordingly.</b></p>		
Bonneville Power Administration	Yes	
PacifiCorp	Yes	
Southern Company	Yes	

**Consideration of Comments on Project 2006-06 Reliability Coordination**

---

Organization	Yes or No	Question 1 Comment
Calpine Corporation	Yes	

**2. Do you agree with the revisions made to the Measures in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration:** Most commenters agreed with the measures for COM-001. The measures were revised based on revisions to the requirements as well as comments received below. Several stakeholders suggested removing the mitigation plan from R1 and M1. The RC SDT agreed and made the revision. M3 and M4 were revised as:

M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that its personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language. (R3.)

M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information (R4).

Organization	Yes or No	Question 2 Comment
Northwest LSE Group	No	To demonstrate compliance the small Registered Entities will be in the position of proving a negative: i.e., there is no real-time BES operational communication from or to any other entity. Currently, for the smaller entities, communication with the Transmission Operator or Balancing Authority is strictly for operational safety and local reliability of service, not operational reliability for the BES as defined by NERC. It is not clear how the small entity will show compliance. If R4 requires the small load-only DP and/or LSE to have 24/7 monitoring of its phone, and contracted answering service is unable to contact anyone, will this be a violation?
<p><b>Response:</b> The RC SDT thanks you for your comment. R4 is applicable only to registered Distribution Providers and Generator Operators. The RC SDT has revised the measure to prevent having to prove a negative:</p> <p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information</p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 2 Comment
<p><b>There is no 24/7 monitoring requirement in R4.</b></p>		
<p>Northeast Power Coordinating Council</p>	<p>No</p>	<p>See our comment for R3 in Q1. Accordingly, M3 should be modified as the proposition below: M3. “ that will be used to determine that personnel used English “or another language” as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, both parties shall have and provide upon request, evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement shall be provided to explain the use of the alternate language. (R3.) M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT has revised the measure to conform to revisions in the requirement:</b></p> <p>M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language.</p> <p><b>The RC SDT feels that agreement is not required prior to the call, but only prior to the conversation using the alternate language.</b></p>		
<p>Bonneville Power Administration</p>	<p>No</p>	<p>Issue #1: Measure M3 The measure states that entities “shall have and provide” evidence that “personnel used English as the language for all” communications. This infers that all communications must be documented in some form or fashion and that any outage of the normal communication system must be met with alternative processes which will meet this measure, even if the alternative is the preparation of handwritten notes of each person’s conversations, noting that the communications occurred in English. Unfortunately, there have been times where our Dictaphone stopped recording phone calls, and nobody knew it for days! This measure sets us up for a violation! It’s just a matter of time.</p>
<p><b>Response: The RC SDT thanks you for your comment. The measure as written is consistent with the requirement. The RC SDT did not receive any other comments to modify this measure.</b></p>		
<p>IRC Standards Review Committee</p>	<p>No</p>	<p>Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.</p>
<p><b>Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 2 Comment
Midwest ISO Standards Collaborators	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
<b>Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.</b>		
Central Lincoln	No	Comments: M4 is of little help regarding R4. How does an entity perform this demonstration, especially in the case of an off-site audit? If left to the regions, there will be no consistency.
<b>Response: The RC SDT thanks you for your comment. Based on comments received on R4 and M4, the RC SDT has revised M4 to:</b> M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)		
ReliabilityFirst Corporation	No	No measures are posted for R4 of the revised standard
<b>Response: The RC SDT thanks you for your comment. A measure M4 is in both the redline and clean version of the posted standard.</b>		
E.ON U.S.	No	E.ON U.S. believes that he M1 must be clarified to address whether the testing entity is responsible to develop and implement a mitigation plan when a test is unsuccessful due to an issue at the other end (i.e. non-testing entity).
<b>Response: The RC SDT thanks you for your comment. We have removed the mitigation plan from the requirement and measure.</b>		
Manitoba Hydro	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
<b>Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.</b>		
Georgia Transmission Corporation	No	See comments to Question 1 in regards to measurability.
<b>Response: The RC SDT thanks you for your comment. Please see response to question 1.</b>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 2 Comment
Illinois Municipal Electric Agency	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in Question 1.
<b>Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.</b>		
Exelon	No	See answer to #1
<b>Response: The RC SDT thanks you for your comment. See response to question 1.</b>		
Hydro-Québec TransÉnergie (HQT)	No	Comments: See our comment for R3 in Q1. Accordingly, M3 should be modify to read as the proposition below: M3. “ that will be used to determine that personnel used English “or another language determine otherwise” as the language for all inter- entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, upon request, evidence shall be provided to explain the use of the alternate language. (R3.)M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT has revised the measure to conform to revisions in the requirement:</b></p> <p>M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that its personnel used English as the language for all inter- entity BES reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language.</p> <p><b>The RC SDT feels that agreement is not required prior to the call, but only prior to the conversation using the alternate language.</b></p>		
Duke Energy	No	Replace the phrase “develop a mitigation plan” with the phrase “take action” per our comment on Requirement R1 above. Also, the DP and GOP should be deleted from the Data Retention section requirements for R1/M1 and R2/M2. Need to add a Data Retention requirement for R4/M4 for the DP and GOP.
<b>Response: The RC SDT thanks you for your comment. The measure M1 was revised to conform to suggested revisions to R1. We have also revised the Data Retention section.</b>		
Independent Electricity System	No	M3 and M4 may need to be revised depending on the response to our comments under Q1, above.

**3. Do you agree with the revisions made to the Violation Severity Levels in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration:** Stakeholders suggested adding more VSLs for R2. The RC SDT agreed and drafted additional VSLs reflecting time and the number of entities notified. Other changes to the VSLs were made based on revisions to the requirements.

Organization	Yes or No	Question 3 Comment
Northwest LSE Group	No	With the vague verbiage of R4 coupled with the High and Severe VSL, it is important to clarify R4 with the small DP in mind, and possibly include Lower and Moderate VSLs for smaller load-only DP violations.
<p><b>Response: The RC SDT thanks you for your comment. Based on the requirement, the RC SDT does not feel that additional VSLs can be written for R4. The intent of the requirement is missed if the responsible entity does not have Interpersonal Communication Capabilities with both its TOP or its BA.</b></p>		
Northeast Power Coordinating Council	No	see M3 comment for question 2
<p><b>Response: The RC SDT thanks you for your comment. See response to question 2.</b></p>		
IRC Standards Review Committee	No	<p>(1) Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1.</p> <p>(2) FERC expressed its desire in the June 2008 order on VSLs to have as many VSLs as possible. We suggest since R2 also has a time component in the requirement four VSLs could be written based on the timeliness of the notification as well as the number of impacted entities that were not notified. The VSLs should reflect both components.</p>
<p><b>Response: The RC SDT thanks you for your comment. 1) Conforming changes were made to the VSLs based on the modifications to the requirements. 2) We have added VSLs based on the time requirements.</b></p>		
Midwest ISO Standards Collaborators	No	<p>Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1.</p> <p>In addition, we suggest since R2 has a time component in the requirement, four VSLs could be written based on the timeliness of the notification. This would be consistent with the FERC's expressed desire in the June 2008 order on VSLs in which they stated that as many VSLs should be developed as possible.</p>
<p><b>Response: The RC SDT thanks you for your comment. Conforming changes were made to the VSLs based on the modifications to the requirements.</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 3 Comment
<b>We have added VSLs based on the time requirements.</b>		
Central Lincoln	No	The severity levels have little or no relationship to reliability. Failure to provide a evidence of an agreement per R3, for example, has no impact on reliability by itself; yet it carries the maximum VSL. In reality, the impact would only be severe if the use of an alternate language resulted in a miscommunication.
<b>Response: The RC SDT thanks you for your comment. The VSLs are a metric applied after a requirement has been violated. The intent is to provide a relative measure of how far the action or inaction was from the threshold set in the requirement. Some requirements lend themselves to a relative measure of meeting the threshold (i.e. “almost met”, 12 minutes when the requirement was 10 minutes, etc), and some do not. Those that do not are often termed “binary” requirements (either you meet the threshold or you do not). The relative risk to the bulk electric system of not meeting a requirement is specifically reflected in the requirement’s VRF. The relative size of a registered entity is beyond the scope of the standard drafting team and is addressed through the NERC Statement of Compliance Registry Criteria or taken into account as a mitigating factor through the Regional compliance enforcement programs.</b>		
E.ON U.S.	No	E.ON U.S. suggests that R1 be modified to include the language that when an RC, BA and/or TOP issue a directive it must state: “This is a directive” and the entity receiving the directive must state: "I understand this is a directive". E.ON U.S. also requests that language be added to the requirement that states that this communication protocol is only for reliability related directives and not for other operational directives.
<b>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R1. The purpose of R1 is to ensure that operating entities have adequate Interpersonal Communications capabilities.</b>		
Manitoba Hydro	No	Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. In addition, since R2 has a time component in the requirement four VSLs could be written based on the timeliness of the notification.
<b>Response: The RC SDT thanks you for your comment. Conforming changes were made to the VSLs based on the modifications to the requirements. We have also added VSLs based on the time requirements.</b>		
Georgia Transmission Corporation	No	Again, Requirement 3 seems to be an option.
<b>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives.</b>

**4. Do you agree with the revisions made to the Requirements in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration:** Stakeholder consensus has been achieved with respect to the retirement of R1 (the requirement for the TOP and BA to each have data and voice communication with RCs, BAs and TOPs). In response to the majority of the comments, the drafting team has added a new R1 to require that “Reliability Directives” be identified as such, revised and rearranged the two requirements from the last posting so that the new R2 focuses on repeating the intent of a reliability directive and the new R3 focuses on responding to that repeated directive. The drafting team is also coordinating with the RTO SDT and the OPCP SDT (Project 2007-02) on the definition and usage of the term “Reliability Directive”.

The new R1 through R3 are:

R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat the intent of the Reliability Directive back to the issuer of the Reliability Directive. [Violation Risk Factor: High][Time Horizon: Real-Time]

R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that identifies an action as a Reliability Directive shall acknowledge the response from the recipient of the Reliability Directive in R2 as correct or reissue the Reliability Directive to resolve any misunderstandings. [Violation Risk Factor: High][Time Horizon: Real-Time]

The proposed definition for Reliability Directive is:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

Organization	Yes or No	Question 4 Comment
Northwest LSE Group	No	<p>It would be advantageous to exempt certain smaller Registered Entities (LSE, DP, &amp; PSE) that are non-scheduling/tagging entities. In addition to not having a scheduling/tagging desk, many of these entities do not have a 24/7 desk to receive RC/BA/TOP reliability directives/calls, and are too small (10s of MW) to even be substantially significant in a reliability crisis. Instead of making this Standard applicable to all DPs, LSEs, and PSEs, we suggest that the RC, BAs, and TOPs to yearly publish those LSEs, DPs, and PSEs responsible for responding to emergency reliability directives.</p> <p>Also, it would be advisable for the RC, BA, and TOP giving a reliability directive to clearly preface the instruction with “The following is an emergency reliability directive” to differentiate from normal operations communications. Many smaller entities</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 4 Comment
		<p>do not have the resources to install reliable voice recording equipment, but having access to such recordings would be beneficial towards compliance documentation; thus, it would be helpful to require the directive issuing RC, BA, or TOP to provide a digital copy of the voice recording, or transcript if available on request to the recipient of the directive. Short of a recording or transcript of the recording, it will be difficult to determine how a small entity without recorded line would show compliance other than writing down the directive as it is given and reading it back to the issuer. If the directive is lengthy, this will slow down the process and probably defeat the purpose and value of quick action. Further, there is no guarantee that the receiver will accurately retain a complicated directive if not immediately documented in some way to allow review.</p> <p>Last of all, what is meant by the word “intent”? Must the recipient understand and demonstrate the “why” the directive is given and the intended “outcome,” or merely paraphrase the directive to demonstrate understanding? If the recipient repeats word for word the directive back to the issuer without any other indication that the directive is understood, is this a violation??</p>
<p><b>Response: The RC SDT thanks you for your comment. The requirements of COM-002 for LSE, DP and PSE simply state that the entity has to repeat the intent of the directive back. The issue you raise concerning smaller entities is valid, but this standard is not the venue at which to make this argument. Registration criteria are outside the scope of this project.</b></p> <p><b>We have included a new requirement R1:</b></p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p><b>The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</b></p> <p><b>The word “intent” was chosen so that the recipient did not have to repeat the directive verbatim and to also indicate an understanding of the directive. If a recipient repeats the directive verbatim, it is not a violation of the requirement, as it would also capture the intent.</b></p>		
Northeast Power Coordinating Council	No	<p>Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements: A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer. R2 leave as is. A new R3 If not repeated, then issuer shall request the receiving Entity to repeat the communication directive. A new R4 The issuer will acknowledge the correctness of the repetition of the communications directive.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT does not see a reliability benefit to having an Operational Procedure requirement, as</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 4 Comment
<p><b>it would be redundant since the standard COM-002 would be mandatory and enforceable and requires the actions in the Operational Procedure that you suggest. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement.</b></p>		
<p>SERC OC Standards Review Group</p>	<p>No</p>	<p>The term “emergency” has a broad definition and other standards use “adverse conditions” or “adverse reliability impact”. There should be a consistency of terms when describing a system condition. The STD should include a definition of “directive” that includes more than “Emergency” operational conditions. Should this requirement be modified to include the term “Directive” and the definition of this term added to the NERC Glossary?</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. The RC SDT appreciates the baggage that comes with the defined term “Emergency”. However, it is the best fit with the normal messaging that has historically occurred in the bulk electric reliability community. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</b></p>		
<p>Midwest ISO Standards Collaborators</p>	<p>Yes</p>	<p>We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this directive issue by developing a definition for directive. We propose the following definition: Directive or Directive A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact.</p> <p>In requirement 1, we do believe that another word than “require” should be used. Consider using “request”. An RC, BA, and TOP can’t force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.</p>
<p><b>Response: The RC SDT thanks you for your comment. 1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</b></p> <p><b>2) The RC SDT has revised the requirement to remove that part since original R2 required the recipient to repeat the intent of the directive.</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 4 Comment
Central Lincoln	No	The inclusion of load serving entities and distribution providers does not address any present BES reliability gap.
<p><b>Response: The RC SDT thanks you for your comment. Loads are under the direct control of Load Serving Entities while underfrequency relays are often under the direct control of distribution providers. Current NERC standards do not address the possibility that a Reliability Directive may be issued to either of these entities. The requirements of COM-002 for LSE and DP simply state that the entity has to repeat the intent of the directive back since these entities may receive reliability directives.</b></p>		
JEA	No	R1: just to avoid possible auditor misunderstandings the SDT might consider replacing the words "or repeat the original statement" to "reissue the directive" so that the RC does not get into trouble if the second statement is not verbatim of the first. This also helps clarify that another statement is required from the recipient along with a final acknowledgement from the RC that the intent is correct.
<p><b>Response: The RC SDT appreciates your comment. You have identified a potential problem; the RC SDT agrees with your comment and has replaced the words "repeat the original statement" with "reissue the Reliability Directive".</b></p>		
Liberty Electric Power LLC	No	The proposed standard does not require the RC, TO, or BA to declare an emergency to the GO when issuing a directive. There has been confusion at times in the past as to whether the entity is issuing a directive based on economics or due to an emergency. The standard should be amended to require the RC/TO/BA to state the directive is due to a declared emergency. The GO is required to repeat back the intent of an emergency directive, but is not required to repeat back the intent of economic directive. This can lead to a finding of a severe VSL non-compliance on the part of the GO due to a failure of the RC/TO/BA to clearly state the nature of the directive.
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>This term has been included in the requirements of COM-002. The RTOSDT (Project 2007-03) is also working on a similar path and the RC SDT are coordinating with that team. A new R1 has been developed that states:</b></p> <p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
ReliabilityFirst	No	FERC 693 excludes distribution providers if they are not a user, owner or operator of BES. This should be reflected in R2 of

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
Corporation		the standard
<p><b>Response:</b> The RC SDT thanks you for your comment. Any distribution provider excluded by FERC Order 693 would not be held to the standard since standards only apply to registered entities. FERC Order 693 endorses the NERC Statement of Compliance Registry criteria (paragraph 512) and also adopted their proposal to require the ERO to modify COM-002 to apply to distribution providers and generator operators (paragraph 512). The Functional Model describes the real-time relationships between entities. Among those relationships, the DP:</p> <ul style="list-style-type: none"> <li>Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority</li> </ul> <p>Such directives fall under COM-002 requirements.</p>		
Illinois Municipal Electric Agency	No	<p>IMEA questions the necessity of expanding the applicability of COM-002 as proposed in R2, particularly to the DP, LSE, and PSE functions. IMEA recommends accomplishing the intent of COM-002-3 R2 by simply referring to COM-002-3 R1 in IRO-001-2 R2 which requires those entities to comply with the RC directive. Thus it would be understood that the functional entity had repeated the directive in order to comply with it; thereby avoiding the necessity of expanding applicability to another reliability standard.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT feels that there is a difference between complying with a directive and communicating the directive effectively. The requirements of COM-002 for LSE, PSE and DP simply state that the entity has to repeat the intent of the directive back since these entities may receive reliability directives. The drafting team feels that the current draft adds clarity to the requirements.</p>		
Exelon	No	See answer # 1
<p><b>Response:</b> The RC SDT thanks you for your comment. See response to answer #1.</p>		
Hydro-Québec TransEnergie (HQT)	No	<p>Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer R2 leave as is. A new R3 If not repeated, then issuer shall request the receiving Entity to repeat the communication directive. A new R4 The issuer will acknowledge the correctness of the repetition of the communications directive</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. There are no examples in any of the requirements of COM-002-3 as posted. There are no compound requirements remaining in COM-002-3 as posted. The RC SDT does not see a reliability benefit to having an Operational Procedure requirement, as it would be redundant since the standard COM-002 would be mandatory and enforceable and requires the actions in the Operational Procedure that you suggest. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement that is internally consistent.</p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 4 Comment
Indiana Municipal Power Agency	No	<p>The requirements do not consider a pre-recorded communication that might be sent out from the Transmission Operator to Generator Operators or any other entity. If this communication is a directive associated with a real-time operational emergency condition (depending on the judgment used by an entity or auditor), it does not make sense to repeat back a pre-recorded message on the phone. It might be good to clearly state in the standard that pre-recorded messages do not need to be repeated back.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>This term has been included in the requirements of COM-002. The RC SDT can not envision a situation, regardless of the technology, where a Reliability Directive would be issued without confirmation from the recipient and acknowledgement of accuracy. However, even if there were an occasion as suggested by your comment, the bulk electric system can only remain reliable by coordinating actions between reliability entities. A pre-recorded communication is a broadcast, not a coordinating activity. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT are coordinating with that team.</b></p>		
Duke Energy	No	<p>We agree with adding the clarification that these requirements refer to “emergency” communications, but we think the word “Emergency” should be capitalized to further clarify that it is a defined term in the NERC Glossary.</p> <p>Also, the phrase “require the recipient of the verbal directive to repeat the intent of the directive back” should be changed to “have the recipient of the verbal directive repeat the intent of the directive back”. This avoids making the issuer of the directive make a statement requiring a repeat back unless the recipient actually fails to repeat back as normally expected.</p>
<p><b>Response: The RC SDT thanks you for your comment. We have removed the word “emergency” and are proposing a definition of Reliability Directive which includes the defined term “Emergency” and which is being posted for comment.</b></p> <p><b>The RC SDT agrees with the intent of your comment. The phrase you mention has been removed from R1 as it is required by R2. We have made other edits to tighten the requirements as well.</b></p>		
Consumers Energy Company	No	<p>COM-002 R2 specifies the Generator Operator that receives a directive from the Transmission Operator, Reliability Coordinator or Balancing Authority must repeat the intent of the directive back to the Transmission Operator. COM-002 M2 specifies that evidence must be retained in the form of either voice recordings or transcripts by the generator operator. Since the Transmission Operator, Reliability Coordinator and Balancing Authority already have voice recording capability (centrally located), it is not necessary for the Generator to also install voice recording capability at each generating station. We suggest the wording of COM-002 be changed such that only the Transmission Operator, Reliability Coordinator and Balancing</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 4 Comment
		Authority be required to keep voice recordings or transcripts.
<p><b>Response: The RC SDT thanks you for your comment. While recordings may be available from other entities, a Generator Operator has mandatory requirements with which it must comply. Generator Operators must have evidence that they complied with the requirement. The evidence mentioned in the measures is a suggestion of possible methods of evidence. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</b></p>		
Independent Electricity System Operator	No	<p>(i) We suggest the word "emergency" be capitalized since it is a defined term which generally covers the conditions under which directives are issued.</p> <p>(ii) We further suggest that to avoid confusion between operating instructions and directives, the term directive should be defined as suggested below: Directive or Directive A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires complying action by the recipient to prevent or mitigate an Adverse Reliability Impact.</p> <p>(iii) Since R1 contains two requirements, there may be some benefit in separating these since that would make the VSLs clearer, i.e. separate the requirements placed on the issuer of the directive to (a) request the recipient to repeat the intent of the directive and (b) to acknowledge the response of the recipient as correct.</p>
<p><b>Response: The RC SDT thanks you for your comment.</b></p> <p><b>i) We have removed the word "emergency" and are proposing a definition of Reliability Directive which includes the defined term "Emergency" and which is being posted for comment.</b></p> <p><b>ii) The RC SDT is proposing a definition of Reliability Directive that will be posted for comment. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>iii) The RC SDT agrees and has modified R1. Since R2 requires the recipient to repeat the intent of the directive, we have removed the part of R1 that states the issues shall require the recipient to repeat the directive. This removed the compound requirement.</b></p>		
MRO NSRS	No	<p>The MRO NSRS largely agrees with the changes to the requirements and believes it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. MRO NSRS believes that the SDT could further support resolution to this directive issue by developing a definition for directive. MRO NSRS proposes the following definition:</p> <p>Directive or Directive – A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 4 Comment
		<p>that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact.</p> <p>In requirement 1, MRO NSRS does believe that another word than “require” should be used. Consider using “request”. An RC, BA, and TOP can’t force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.</p>
<p><b>Response: The RC SDT thanks you for your comment. 1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>This term has been included in the requirements of COM-002. The RTOSDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</b></p> <p><b>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive.</b></p>		
American Transmission Company	No	<p>are supportive of the language regarding “directives” which clarifies that directives are those which involve operating emergencies. However, in R1, we believe that the word “requires” should be changed to “request”. An entity can request that another entity repeat back a directive but we cannot “require” it.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a definition of Reliability Directive that will be posted for comment. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive.</b></p>		
IRC Standards Review Committee	Yes	<p>(1) We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as Directives. This makes it clear that only Directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this Directive issue by developing a definition for Directive. We propose the following definition: Directive A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact. Please note that AESO already has this term defined. The above suggested definition may be different from the AESO’s definition.</p> <p>(2) In requirement 1, we do believe that another word than “require” should be used. Consider using “request”. An RC, BA,</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 4 Comment
		and TOP can't force the recipient of the Directive to repeat it back. They can ask or request it be repeated back though.
<p><b>Response: The RC SDT thanks you for your comment.</b></p> <p><b>1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</b></p> <p><b>2) The RC SDT has revised the requirement to remove that part since original R2 required the recipient to repeat the intent of the directive.</b></p>		
Calpine Corporation	Yes	Calpine supports three part communications when verbal directives are issued during real-time operational emergency conditions. Calpine believes all issued directives should be explicitly identified as such.
<p><b>Response: The RC SDT thanks you for your comment. A new R1 has been developed that states:</b></p> <p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
Western Area Power Administration	Yes	This is a very good improvement. Some Regional Entities were interpreting every communication from a control room as a "directive" and stating that "directives" were equal to any "normal instruction" that related to operations of the power system. Making it clear that the directives are associated with emergency conditions is a big improvement. The drafting team may wish to consider additional clarification, such as, "The entity that issues a verbal directive shall make it known during the communication that, "This is a directive"? . All parties to the communication would be clear that the real-time situation was an emergency condition, and that the requirements for repeating the intent were in effect.
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team. A new R1 has been developed that states:</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 4 Comment
<p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
American Electric Power	Yes	<p>AEP does generally agree with the revisions, but we have concerns with the much wider scope of three part communications that expand the required voice or transcript evidence. There is no rationale provided for changing the text in R1 and M1, and adding a new R2 and M2. We would recommend that these items remain as stated in Version 2.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT's intent was to create a consistent set of noncompound requirements and to provide clarity according to the scope of the drafting team.</b></p>		
Manitoba Hydro	Yes	<p>For the most part agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. The SDT could further support resolution to this directive issue by developing a definition for directive.</p> <p>In requirement 1, I would use another word than "require". Consider using "request". An RC, BA, and TOP can't force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.</p>
<p><b>Response: The RC SDT thanks you for your comment.</b></p> <p><b>1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>This term has been included in the requirements of COM-002. The RTOSDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team. 2) The RC SDT has revised the requirement to remove that part since original R2 required the recipient to repeat the intent of the directive.</b></p>		
FirstEnergy	Yes	<p>1. We agree with the clarification in R1 that a directive per COM-002-3 is a "verbal directive associated with real-time operational emergency conditions". We understand this to be a "Reliability" directive used during times of emergency or in situations where reliability may be an issue. Also, with this clarification, it confirms that the term "directive", as used in this standard, does not include "Operational" directives issued by System Operators during normal system conditions to change the status of an element such as a circuit breaker.</p> <p>2. The industry does not appear to have a clear, consistent definition of what constitutes a directive. We suggest the standard require the person issuing a directive to use the phrase "I am directing you to ?", "I am ordering you to ?" or something similar</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 4 Comment
		<p>to invoke the three part communication requirement.</p> <p>3. Since this standard deals with communications and coordination during emergency conditions, it may be helpful to change the title of the standard to "Communications and Coordination Emergency Conditions".</p> <p>4. The phrase "the intent of the directive" could be difficult to comply with and measure. The words "the intent of" should be removed from Requirements R1 and R2.</p>
<p><b>Response: The RC SDT thanks you for your comment. 1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</b></p> <p><b>2) We agree and have included a new R1 that states:</b></p> <p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p><b>3) The RC SDT disagrees. This standard covers all interpersonal communications, not just emergency communications. The title stays as is.</b></p> <p><b>4) The phrase was included so that the recipient did not have to repeat the directive verbatim and to also indicate an understanding of the directive. If a recipient repeats the directive verbatim, it is not a violation of the requirement, as it would also capture the intent. The goal of the RC SDT is to assure continued reliability without creating a trap by requiring word-for-word repetition.</b></p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

**5. Do you agree with the revisions made to the Measures in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration:** Stakeholder consensus has been achieved with respect to the retirement of R1 and M1 from the last approved version of this standard. In accord with the majority of commenters, the drafting team made changes to the Measures to bring them into conformance with the adopted suggestions from question 4 for improving the Requirements. Specifically, a new R1 was added to require that reliability directives be identified as such – and the two requirements from the last posting were rephrased and rearranged for clarity. The Measures were changed to match the revised requirements.

Organization	Yes or No	Question 5 Comment
Illinois Municipal Electric Agency		Conforming changes are required to the Measures based on the suggested modifications to the requirements in Question 4.
<b>Response: The RC SDT thanks you for your comment. The measures were revised to reflect changes to the requirements.</b>		
Hydro-Québec TransEnergie (HQT)	No	Address the new proposed Requirements above in Question 4.
Northeast Power Coordinating Council	No	Addressed the new proposed Requirements above in Question 4.
<b>Response: The RC SDT thanks you for your comment. The measures were revised to reflect changes to the requirements.</b>		
Duke Energy	No	Change “emergency” to “Emergency” per comment on R1 above. Also change the phrase “required the recipient of the verbal directive to repeat” to “had the recipient of the verbal directive repeat” per our comment on R1 above.
<b>Response: The RC SDT thanks you for your comment. We have removed the word “emergency” and are proposing a definition of Reliability Directive which includes the defined term “Emergency” and which is being posted for comment.</b>		
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
<b>Response: The RC SDT thanks you for your comment. See response to Question 4. The measures have been revised to reflect changes to the requirements.</b>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 5 Comment
Central Lincoln	No	M2 goes beyond R2 in requiring recordings. This will be cost prohibitive for small entities that have little impact on the BES. Telephone recording equipment will be needed on company phones, and some way to handle the recording of directives and responses that occur after hours on home or cell phones must be handled. Drafters seem to have missed the fact that not all the applicable entities have 24/7 dispatch centers.
<p><b>Response: The RC SDT thanks you for your comment. The measure lists possible examples of evidence to prove compliance with the requirement. It does not impose any additional requirements or the purchase of recording systems. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</b></p>		
JEA	No	Not all entities have recorded lines. The standard does not directly require the to record their lines, but the measure implies it. It seems that a written log should be sufficient. Since both sides of the conversation gets audited, the auditors will have ample opportunity to check up on both sides.
<p><b>Response: The RC SDT thanks you for your comment. The measure lists possible examples of evidence to prove compliance with the requirement. It does not impose any additional requirements or the purchase of recording systems. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</b></p>		
Northeast Utilities	No	NU agrees with expanding the applicability of the Standard beyond the Reliability Coordinators, Balancing Authorities and Transmission Operators to ensure that the recipient of a verbal directive repeats back the directive to the issuer (R2). Despite NU's agreement with R2, NU believes that M2 is duplicative to the intent of M1 and unnecessarily requires the installation of voice recording capabilities at the entities other than a RC, BA or TOP. It is our belief that the voice recordings of the RC, BA and TOP (M1) provide the evidentiary support required by all applicable entities.
<p><b>Response: The RC SDT thanks you for your comment. The measure lists possible examples of evidence to prove compliance with the requirement. It does not impose any additional requirements or the purchase of recording systems. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</b></p>		
Independent Electricity System Operator	No	Comments: Some changes may be necessary based on the SDT's response to our suggestion in Q4.
<p><b>Response: The RC SDT thanks you for your comment. See response to your comments on question 4.</b></p>		
MRO NSRS	No	MRO NSRS largely agrees with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.

**6. Do you agree with the revisions made to the Violation Severity Levels in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration:** Several stakeholders suggested revisions to the VSLs based on suggested revisions to the requirements. The RC SDT made changes to the VSLs to conform to revisions to the requirements.

Organization	Yes or No	Question 6 Comment
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
<b>Response: The RC SDT thanks you for your comment. The Measures have been revised to reflect changes to the requirements.</b>		
Northeast Power Coordinating Council	No	Address the new proposed Requirements.
<b>Response: The RC SDT thanks you for your comment. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement. The new proposed Requirements have been addressed.</b>		
Bonneville Power Administration	No	<p>Comments: Issue #1: Violation Severity Level. The Moderate and Severe VSLs for Requirement R1 can lead to confusion. For instance, the Moderate VSL states that the responsible entity “did not acknowledge the recipient was correct in the repeated directive OR (emphasis theirs) failed to repeat the intent of the original statement to resolve any misunderstandings. ”What is it saying here? Is it dinging the responsible entity for making no response at all to the recipient after they repeated the intent of the message? Or is that what the Severe VSL is dinging for when it includes an AND rather than an OR in the statement? I can’t tell what the drafting team was intending with their statements, but one of the statements seem to infer that the responsible entity can actually be dinged for not doing both, acknowledging the recipient as being correct in their response and at the very same time repeating the intent of the original statement to resolve any misunderstandings because the recipient was incorrect in their response. This then argues that the recipient can be both correct and incorrect at the same time. I didn’t think that was possible “similar to binary code” either you get a one or a zero, but not both and never neither!</p> <p>I would argue that the drafting team should rewrite their VSLs to succinctly state that the responsible entity failed to respond after the recipient repeated the intent of the message. With that in mind, either the Moderate or the Severe VSL will be rewritten in an understandable way and the other VSL will disappear in the realms of impossible things.</p>
<b>Response: The RC SDT thanks you for your comment. We have eliminated the Moderate VSL and only have the Severe.</b>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 6 Comment
IRC Standards Review Committee	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Additionally, we believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the Directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the Directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p><b>Response: The RC SDT thanks you for your comment. We have modified all the requirements in a way that addresses your comments. Conforming changes to the VSLs have been made.</b></p>		
Midwest ISO Standards Collaborators	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Severe VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p><b>Response: The RC SDT thanks you for your comment. We have modified all the requirements in a way that addresses your comments. Conforming changes to the VSLs have been made.</b></p>		
Illinois Municipal Electric Agency	No	<p>Conforming changes are required to the VSLs based on the suggested modifications to the requirements in Question 4.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT feels that there is a difference between complying with a Reliability Directive and communicating the Reliability Directive effectively. The requirements of COM-002 for LSE, PSE and DP simply state that the entity has to repeat the intent of the directive back since these entities may receive Reliability Directives. The drafting team feels that the current draft adds clarity to the requirements. The VSLs were revised to match the revised requirements.</b></p>		
Hydro-Québec TransEnergie (HQT)	No	<p>address the new proposed Requirements.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT does not see a reliability benefit to having an Operational Procedure requirement, as it would be redundant since the Standard COM-002 would be mandatory and enforceable and requires the actions in the Operational Procedure that you suggest. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement.</b></p>		
Duke Energy	No	<p>Change “emergency” to “Emergency” in the VSLs per our comment on R1 above. Also, we don’t see a tangible difference between the Moderate and Severe VSLs, and the High VSL should really be the Severe VSL. We suggest having just a High and a Severe VSL as follows:” High VSL: “The responsible entity issued a verbal directive associated with real-time operating Emergency conditions and had the recipient repeat back the intent of the directive, but did not either acknowledge the recipient was correct in the repeated directive or failed to repeat the intent of the original statement to resolve any misunderstandings.” Severe VSL: “The responsible entity issued a verbal directive associated with real-time operating</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 6 Comment
		Emergency conditions, but did not have the recipient repeat back the intent of the directive.”
<p><b>Response: The RC SDT thanks you for your comment. We have removed the word “emergency” and are proposing a definition of Reliability Directive which will be posted for comment. Our proposed definition is:</b></p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p><b>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive. Conforming changes to the VSLs have been modified.</b></p>		
Independent Electricity System Operator	No	<p>The sequence of communication required under R1 is intended to ensure that directives from the issuing entities are clearly understood. The earlier this sequence is broken, the greater the uncertainty that this goal is achieved and the greater should be the severity level. Thus, failure to request that the recipient entity repeat the intent of the directive “ the earliest step in the sequence - should attract the “Severe” VSL.Also, failing to repeat the original directive when there is any misunderstanding, again, in our view, leaves the intent of the directive equally unclear and should also attract a “Severe” VSL.Failing to acknowledge the recipient was correct in the repeating the intent of the directive “ the last step in the sequence “ is already assigned a “Moderate” VSL and this should not be repeated in the “Severe” VSL.We therefore suggest that the two conditions under “High” and “Severe” in R1 be combined as one under “Severe” as follows: The responsible entity issued a verbal directive associated with real-time operating emergency conditions but did not require the recipient to repeat the intent of the directive;ORThe responsible entity issued a verbal directive associated with real-time operating emergency conditions and required the recipient to repeat the intent of the directive, but failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p><b>Response: The RC SDT thanks you for your comment. In the revised standard, R2 requires the recipient to repeat the intent of the directive. We have removed the part of R1, (now R3), that states the issuer shall “require” the recipient to repeat the directive. We have made revisions to the VSLs to match the requirements.</b></p>		
MRO NSRS	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Additionally, MRO NSRS believes the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, MRO NSRS believes the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. MRO NSRS agrees that these distinctions make sense but offer the following changes to clarify the intent.</p> <p>Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

**Summary Consideration:** Stakeholders generally agreed with the revisions to the requirements. Several stakeholders suggested adding the words “an issued” before “directive in R3. The RC SDT agreed and made the change. No further revisions were made to the requirements.

Organization	Yes or No	Question 8 Comment
Northwest LSE Group	No	<p>To reduce the compliance burden on smaller entities that would never receive a Reliability Coordinator directive and reduce needless Regional Entity auditing, it would be most helpful to require the RC to publish its list of entities responsible for receiving reliability directives.</p> <p>Also, any Registered Entity should be able to request copies of digital audio recordings or transcripts of the audio recordings if available from the RC.</p>
<p><b>Response: The RC SDT thanks you for your comment. An RC may issue a directive to any registered entity within its footprint. The burden of compliance is assigned by the NERC registration process and is outside of the scope of this drafting team.</b></p> <p><b>The requirements of IRO-001 do not preclude an entity from requesting copies of digital audio recordings or transcripts from the RC.</b></p>		
Northeast Power Coordinating Council	No	<p>Add “an issued” to the wording as shown following: The Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and/or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the its Reliability Coordinator upon recognition of its inability to perform the issued directive.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT agrees and has added “an issued” before directive. We have also changed directive to Reliability Directive and included the definition at the beginning of IRO-001 and COM-002</b></p> <p>Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p>		
SERC OC Standards Review Group	No	<p>If R2 of IRO-001-1 is retired, what process is in place to ensure that reliability plans are kept up to date and are reviewed to approve footprint changes?</p>
<p><b>Response: The RC SDT thanks you for your comment. As stated in the posted implementation of IRO-001, this is covered in NERC Rules of Procedure, Section 503, item 2.2:</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 8 Comment
<p><b>“Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”.</b>  <b>The RC SDT proposed retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.</b></p>		
FirstEnergy	No	<p>Regarding the retirement of IRO-001-1 R7 We are not convinced that this requirement is redundant with IRO-014-1 R1. The existing requirement requires the RC to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated". IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. For IRO-001-1 R7 to be properly retired, the "mitigation of SOL and IROL violations" should be explicitly stated in IRO-014-2 R1 as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT believes that R1.6 of IRO-014-2 addresses your concern as the procedures, processes or plans include:</b></p> <p style="padding-left: 40px;">Authority to act to prevent and mitigate conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.</p> <p><b>The definitions of each are:</b></p> <p><b>IROL: A System Operating Limit that, if violated, could lead to instability, uncontrolled separation, or Cascading Outages that adversely impact the reliability of the Bulk Electric System.</b></p> <p><b>Adverse Reliability Impacts: The impact of an event that results in Bulk Electric System instability; uncontrolled separation or Cascading.</b></p>		
Midwest ISO Standards Collaborators	No	<p>We agree with many of the changes. However, we believe R5 is not necessary for reliability. We agree the RC should notify impacted entities when the transmission problem has been mitigated; however, if the RC fails to notify the impacted entities, it will not result in an Adverse Reliability Impact. Thus, it is not necessary as a sanctionable requirement.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 notifies entities when the system is in a stable state and facilitates Interpersonal Communication between entities.</b></p>		
Liberty Electric Power LLC	No	<p>Similar objection to COM-002-3: There should be a requirement to the RC to declare the nature of the directive, emergency or economic.</p>
<p><b>Response: The RC SDT thanks you for your comment. The reliability standards do not address economic issues. The RC SDT has developed a</b></p>		

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 8 Comment
<p><b>proposed definition of Reliability Directive that should address your concern.</b></p> <p><b>Reliability Directive:</b> A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p>		
Manitoba Hydro	No	R5 does not make sense as it doesn't create an adverse reliability impact should the RC fail to notify impacted entities.
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 let's entities know when the system is in a stable state and facilitates Interpersonal Communication between entities.</b></p>		
Illinois Municipal Electric Agency	No	<p>IMEA supports the comments submitted by the MISO Standards Collaboration Group.</p> <p>In addition, while we agree with the proposed revisions to IRO-001-2 R2, IMEA recommends (as indicated in our comments to Question 4) that a reference be made to COM-002-3 R1 in IRO-001-2 R2. By including this reference, it is understood the applicable entities successfully repeated the directive in order to comply with the directive.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 notifies entities when the system is in a stable state and facilitates Interpersonal Communication between entities.</b></p> <p><b>We have included our proposed definition of Reliability Directive in both COM-002 and IRO-001 and used the term in the appropriate requirements. This will provide the linkage you suggest.</b></p>		
Hydro-Québec TransEnergie (HQT)	No	Add "an issued" to the wording as shown following: Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform "an issued" directive.
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT agrees and has added "an issued" before directive. We have also changed directive to Reliability Directive and included the definition at the beginning of IRO-001 and COM-002.</b></p> <p><b>Reliability Directive:</b> A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p>		
Northeast Utilities	No	The intent of R3 is not clear - i.e., " shall inform its Reliability Coordinator upon recognition of its inability to perform a directive". Does this requirement pre-suppose a directive has been given? Suggest adding clarifying language that

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 8 Comment
		indicates that the requirement is applicable subsequent to a directive being received. It is our belief that the wording of Measure M3 supports the suggested changes to R3.
<p><b>Response: The RC SDT thanks you for your comment. R3 has been revised to add clarity per your comment:</b></p>		
<p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform an issued Reliability Directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p>		
Independent Electricity System Operator	No	Comments: Change “inability to perform a directive.” to “inability to perform an issued directive.”
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT agrees and has added “an issued” before directive. We have also changed directive to Reliability Directive and included the definition at the beginning of IRO-001 and COM-002.</b></p>		
<p><b>Reliability Directive:</b> A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency</p>		
MRO NSRS	No	MRO NSRS agrees with many of the changes. However, we believe R5 is not necessary for reliability. MRO NSRS agrees the RC should notify impacted entities when the transmission problem has been mitigated; however, if the RC fails to notify the impacted entities, it will not result in an Adverse Reliability Impact. Thus, it is not necessary as a sanctionable requirement.
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 notifies entities when the system is in a stable state and facilitates Interpersonal Communication between entities.</b></p>		
Xcel Energy	No	R6 – while this requirement has merits, it does not appear to fall under the stated purpose of the standard “To establish requirements for issuance of and complying with Reliability Coordinator directives or notification within the Reliability Coordinator Areas.”. Either the purpose should be modified or this requirement should be placed in a more appropriate location, e.g. IRO-002-2 (along with R8).
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT moved this requirement into IRO-001 from IRO-002 rather than have a single requirement standard.</b></p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 8 Comment
Western Area Power Administration	Yes	Suggest changing the word "complying" to "compliance" in the purpose statement.
<b>Response: The RC SDT thanks you for your comment. The RC SDT had made the suggested edit.</b>		
Bonneville Power Administration	Yes	
WECC Reliability Coordinator	Yes	
PacifiCorp	Yes	
Calpine Corporation	Yes	
Southern Company	Yes	
ReliabilityFirst Corporation	Yes	
American Electric Power	Yes	
Georgia Transmission Corporation	Yes	
Duke Energy	Yes	
American Transmission Company	Yes	

9. Do you agree with the revisions to the Measures in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.

**Summary Consideration:** Stakeholders agreed with the measures for IRO-001-2. The measure M3 was revised to reflect the revision to R3 and the word, “directive” was changed to the defined term, “Reliability Directive” in M1 through M3. No other revisions were suggested for the measures.

Organization	Yes or No	Question 9 Comment
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
<b>Response: The RC SDT thanks you for your comment. The measures were revised as appropriate to reflect revisions to the requirements.</b>		
SERC OC Standards Review Group	No	The measures should indicate how long records should be kept to verify compliance with the requirements.
<b>Response: The RC SDT thanks you for your comment. This is covered in the Data Retention section of the Standard.</b>		
Midwest ISO Standards Collaborators	No	Measurement 5 needs to be struck if R5 is struck per question 8.
<b>Response: The RC SDT thanks you for your comment. The RC SDT retained R5 and M5. Please see discussion above in Q8.</b>		
Manitoba Hydro	No	Measure for R5 would need to be struck should R5 be struck as per question 8.
<b>Response: The RC SDT thanks you for your comment. The RC SDT retained R5 and M5. Please see discussion above in Q8.</b>		
Illinois Municipal Electric Agency	No	IMEA supports the comments submitted by the MISO Standards Collaboration Group.
<b>Response: The RC SDT thanks you for your comment. The RC SDT retained R5 and M5. Please see discussion above in Q8.</b>

**10. Do you agree with the revisions to the Violation Severity Levels in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration:** Several stakeholders suggested revisions to the VSLs for R4 and R5. The RC SDT concurs that improvements are warranted for the VSLs for R4 and R5. The VSLs have been changed accordingly. The VSL for R3 was revised to add the word “issued” before Reliability Directive to match the revised requirement. The VSLs for R4 and R5 were modified to clarify that if the responsible entity did not notify any others, then this is a Severe VSL.

Organization	Yes or No	Question 10 Comment
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
<b>Response: The RC SDT thanks you for your comment. The measures were revised to reflect changes to the requirements as necessary.</b>		
Northeast Power Coordinating Council	No	(i) R4: Since failing to issue an alert to 3 entities already attracts a “High” VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a “Severe” VSL. We suggest to change the High VSL to: “failed to issue an alert to three, but not all, impacted”. and the Severe VSL to: “failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a “Severe” violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a “High” violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a “Severe” violation.  (ii) (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.
<b>Response: The RC SDT thanks you for your comment. We concur that improvements are warranted for the VSLs for R4 and R5. The VSLs have been revised per your suggestion accordingly.</b>		
Midwest ISO Standards Collaborators	No	The Commission stated in their order on VSLs in June of 2008 their preference for as many VSLs as possible. We believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause “but not all”. It is not necessary.
<b>Response: The RC SDT thanks you for your comment. The VSL for R1 was revised as recommended. There is not a Moderate VSL for R2.</b>		
Liberty Electric Power LLC	No	The VSL's have a "Severe" VSL attached to a GO who fails to inform the RC when the Go becomes aware it is are unable to fully comply with a directive. However, the RC failing to inform two TO's - who potentially could have many

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 10 Comment
		GOs supplying power to their systems - of an emergency is only a "Moderate" VSL.
<b>Response: The RC SDT thanks you for your comment. The VSLs for R4 and R5 have been revised to more closely fit the intent of the requirements.</b>		
E.ON U.S.	No	E.ON U.S. suggests that the VSL for R4 should be binary with the Severe VSL for failing to notify all entities as per R4. Partially meeting R4 is not consistent with the language in R4. E.ON U.S. also suggests that the VSL for R5 should be binary with the Severe VSL for failing to notify all entities as per R5. Partially meeting R5 is not consistent with the language in R5 but the reliability impact of partially meeting R5 is low.
<b>Response: The RC SDT thanks you for your comment. The requirements R4 and R5 are not binary in nature and therefore do not meet the VSL guideline for binary. We have revised the High and Severe VSLs for R4 and R5 (see comment of NPCC above).</b>		
Manitoba Hydro	No	Believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause "but not all". It is not necessary.
<b>Response: The RC SDT thanks you for your comment. We concur with your suggestion to split the single VSL into two separate VSLs, one addressing prevention and one mitigation. The VSLs for R1 have been changed accordingly.</b>		
Illinois Municipal Electric Agency	No	IMEA supports the comments submitted by the MISO Standards Collaboration Group.
<b>Response: The RC SDT thanks you for your comment. Please review the response to MISO SCG comments.</b>		
Hydro-Québec TransEnergie (HQT)	No	<p>(i) R4: Since failing to issue an alert to 3 entities already attracts a "High" VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a "Severe" VSL. We suggest to change the High VSL to: "failed to issue an alert to three, but not all, impacted". and the Severe VSL to: "failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Western Area Power Administration	Yes	
Southern Company	Yes	
ReliabilityFirst Corporation	Yes	
American Electric Power	Yes	
Georgia Transmission Corporation	Yes	
Duke Energy	Yes	

**11. Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration:** Stakeholders suggested revising R8 to include provisions for avoiding implementing actions that would violate safety, equipment or regulatory or statutory requirements. The RC SDT agreed and added this to the requirement. Other stakeholders suggested adding "For conditions or activities that impact other Reliability Coordinator Areas,..." at the beginning of R1 and R3. The RC SDT agreed and added this to the requirements. The Time Horizons for R2 were revised as suggested to "Same Day Operations and Operations Planning". Several stakeholders expressed concerns regarding having R6-R8 as separate requirements. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT contends the requirements are adequate as written.

Organization	Yes or No	Question 11 Comment
Northwest LSE Group		Abstain
Northeast Power Coordinating Council	No	The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.
<p><b>Response:</b> The RC SDT thanks you for your comment. The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. This was done to eliminate a compound requirement (a requirement that contained multiple separate requirements). Each requirement is different and requires different specific actions. Please see the posted implementation plan for IRO-014 for details.</p> <p><a href="http://www.nerc.com/docs/standards/sar/IRO-014-2_Implementation_Plan_Clean_2009July9.pdf">http://www.nerc.com/docs/standards/sar/IRO-014-2_Implementation_Plan_Clean_2009July9.pdf</a></p>		
SERC OC Standards Review Group	No	Does the STD intend to give a Reliability Coordinator the authority to direct reliability outside their reliability area? This appears to be in conflict with IRO-001.
<p><b>Response:</b> The RC SDT thanks you for your comment. IRO-014 deals with coordinating plans, processes and procedures ahead of time. The requirements state that RCs will follow these agreed to plans, processes or procedures.</p>		
FirstEnergy	No	See our comments from Questions 8. If IRO-001 R7 is retired and deemed covered by IRO-014 R1, then IRO-014 R1 should include the "mitigation of SOL and IROL violations" as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.

Organization	Yes or No	Question 11 Comment
<p><b>Response: The RC SDT thanks you for your comment. Please see response to question 8. The RC SDT did not make any revisions as this issue is covered by R1.6 relating to Adverse Reliability Impacts.</b></p>		
<p>IRC Standards Review Committee</p>	<p>No</p>	<p>(1) R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, placing the burden on the same RC to obtain the agreement of impacted RCs may not be appropriate since the RC experiencing the Adverse Reliability Impact may not be able to force impacted RC to concur. We suggest the SDT to consider: a. Remove the bullet to require agreement from the impacted RC; b. Add a new requirement that the impacted RC shall acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given.</p> <p>(2) We realize that R7 implies that the RC experiencing the Adverse Reliability Impact has come up with an alternative plan when its initial plan was not agreed to, but the alternative may still be disagreed by the impacted RC. Simply implementing the alternative plan, as stipulated in R8, could expose the impacted RC to operate in an unreliable or unsafe domain. We therefore request the SDT to assess if any requirements need to be introduced to resolve this difference with due regard to reliability concerns in both RC areas when agreement cannot be reached even on the alternative plan.</p>
<p><b>Response: The RC SDT thanks you for your comment.</b></p> <p><b>1) R2 deals with procedures, processes and plans identified and developed ahead of time. If the plan of one RC requires action from another RC, the RC SDT feels it is necessary to get agreement from the second RC to take action, otherwise the plan is not a plan that will maintain reliability. The intent of R6, 7, and 8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT believes the requirements are adequate as written.</b></p> <p><b>2) We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement.</b></p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations</i></p>		
<p>Midwest ISO Standards Collaborators</p>	<p>No</p>	<p>Requirements R2 and R8 need additional work. R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable.</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 11 Comment
		<p>Further, the drafting team needs to clarify that R2 also applies to the mitigation plan in R7. Because R7 requires the RC experiencing the Adverse Reliability Impact to develop the mitigation plan, the mitigation plan may not be agreed to by the impacted RC. The impacted RC may have a perfectly valid reliability, statutory, legal, or regulatory reason for not agreeing to the mitigation plan. R8 still obligates the RC to implement the mitigation plan developed in R7 though it may be contrary to reliability. R8 needs to allow the RC to refuse to implement the mitigation plan if the impacted RC has a reliability, statutory, legal or regulatory reason. Further the drafting team should consider if the impacted RC could refuse because the RC experiencing the Adverse Reliability Impact has not implemented comparable measures in their own area. R8 as written could allow an RC to simply pass cost on to the neighboring RC in the name of reliability. For example, the RC may not want to order a unit to be committed to avoid certain startup costs but they ask the neighboring RC to start up a unit in their footprint.</p>
<p><b>Response: The RC SDT thanks you for your comment.</b></p> <p><b>R2 deals with procedures, processes and plans identified and developed ahead of time. If the plan of one RC requires action from another RC, the RC SDT feels it is necessary to get agreement from the second RC to take action, otherwise the plan is not a plan that will maintain reliability. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT believes the requirements are adequate as written.</b></p> <p><b>R7/R8: We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement.</b></p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p><b>The second comment deals with economic issues and not with reliability. We cannot address economic issues, but it would be reasonable to expect that plans developed in advance could include equity considerations. Also, it is possible to postulate a scenario where the RC experiencing the Adverse Reliability Impact may not have actions to take that are effective and the other impacted RC could have very effective actions to take and should take them regardless of whether the RC developing the mitigation plan has taken comparable measures in its own area.</b></p>		
Southern Company	No	<p>IRO-001-1 Requirement 3 states that, “The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing- Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System.” This does not give one RC the authority to direct another RC. Requirement 7 and 8 would allow one RC to give a directive to another RC if they disagree. This would allow an RC with bad information to require another RC to carry out a mitigation plan that could degrade system reliability. For example, RC1 identifies a possible SOL violation in RC2s reliability area due to RC1s generation pattern. RC1 and RC2 can’t agree that there is a problem. In order to mitigate the SOL a mitigation plan is developed by RC1 that requires RC2 to redispatch generation and reconfigure transmission in RC2’s area so that the generation and transmission in RC1’s area won’t have</p>

Organization	Yes or No	Question 11 Comment
		<p>to be redispached or reconfigured. Suggested rewording of R7 and R8</p> <p>R7. When Reliability Coordinators can not agree that a problem exists a mitigation plan will be developed by each Reliability Coordinator that will restore system reliability in their respective reliability areas. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed to relieve the identified Adverse Reliability Impact in their reliability area when the impacted Reliability Coordinators can not agree that a problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>
<p><b>Response: The RC SDT thanks you for your comment. IRO-014 deals with coordinating plans, processes and procedures ahead of time. The requirements state that RCs will follow these plans processes or procedures. We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance.</b></p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>		
Manitoba Hydro	No	<p>Requirements R2 and R8 need additional work. R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable.</p> <p>Further, the drafting team needs to clarify that R2 also applies to the mitigation plan in R7. Because R7 requires the RC experiencing the Adverse Reliability Impact to develop the mitigation plan, the mitigation plan may not be agreed to by the impacted RC. The impacted RC may have a perfectly valid reliability, statutory, legal, or regulatory reason for not agreeing to the mitigation plan. R8 still obligates the RC to implement the mitigation plan developed in R7 though it may be contrary to reliability. R8 needs to allow the RC to refuse to implement the mitigation plan if the impacted RC has a reliability, statutory, legal or regulatory reason. Further the drafting team should consider if the impacted RC could refuse because the RC experiencing the Adverse Reliability Impact has not implemented comparable measures in their own area. R8 as written could allow an RC to simply pass cost on to the neighboring RC in the name of reliability. For example, the RC may not want to order a unit to be committed to avoid certain startup costs but they ask the neighboring RC to start up a unit in their footprint.</p>

Organization	Yes or No	Question 11 Comment
<p><b>Response:</b> The RC SDT thanks you for your comment.</p> <p>R2 deals with procedures, processes and plans identified and developed ahead of time. If the plan of one RC requires action from another RC, the RC SDT feels it is necessary to get agreement from the second RC to take action, otherwise the plan is not a plan that will maintain reliability. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT contends the requirements are adequate as written.</p> <p><b>R8: We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement.</b></p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations</i></p> <p><b>The second comment deals with economic issues and not with reliability. **Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 11 Comment
Independent Electricity System Operator	No	<p>(i) Definition of Adverse Reliability Impact is duplicated as it is already defined in IRO-001-2</p> <p>(ii) We do not see the need for R7 and R8 since R6 already stipulates the necessary actions to be taken, it is not necessary for the Reliability Coordinator with the identified Adverse Reliability Impact to develop (re-develop?) a mitigation plan when the impacted Reliability Coordinators did not agree that the problem exists. What may be needed is the insertion of “shall develop a mitigation plan” before “notify impacted Reliability Coordinators” in R5. We suggest removing these requirements (R7 and R8).</p>
<p><b>Response: The RC SDT thanks you for your comment. i)...The SDT acknowledges that the definition of Adverse Reliability Impact is duplicated in IRO-001-2 and in IRO-014-2. The SDT repeated it in the two standards to facilitate review and consistency. When the standards are approved, the definition will be moved into the NERC Glossary of Terms...only once.</b></p> <p><b>ii) The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. This was done to eliminate a compound requirement (it contained multiple requirements for different actions in a single requirement. Each requirement is different and requires different specific actions. Please see the posted implementation plan for IRO-014 for details.</b></p> <p><a href="http://www.nerc.com/docs/standards/sar/IRO-014-2_Implementation_Plan_Clean_2009July9.pdf">http://www.nerc.com/docs/standards/sar/IRO-014-2_Implementation_Plan_Clean_2009July9.pdf</a></p>		
MRO NSRS	No	<p>In bullet 2.1 of Requirement R2, what does the requirement that all RCs that are required to take action must agree to it really mean? Does this mean that if the RCs don't agree that in reality an Operating Procedure, Process or Plan doesn't really exist and thus is not subject to R2? Further, how can one RC require another RC to agree with an Operating Procedure, Process or Plan? Either they agree or they don't. Isn't what is really needed is a requirement for the impacted RC to review and acknowledge the plan? That is give it a thumbs up or a thumbs down?</p> <p>In requirement R4, the clause “at least weekly” should be struck. If the RCs agree that a bi-weekly call is sufficient unless conditions change significantly why must they be held to a weekly standard. Our experience has been that most RCs participate in daily calls anyway based on an agreed need.</p> <p>Please strike IRO-014-2 R7 as it is redundant with IRO-001-2 R1. IRO-001-2 R1 already requires that RC with the identified Adverse Reliability Impact to act or direct actions to prevent or mitigate the magnitude or duration of the event.</p> <p>MRO NSRS does not believe IRO-014-2 R8, yet properly considers why the RCs may not agree on a mitigation plan. If RC A develops a mitigation plan for an identified Adverse Reliability Impact on their system and RC B does not agree with RC A's mitigation plan, RC B will be in violation of R8 if they do not follow the mitigation plan. What if the mitigation plan has an Adverse Reliability Impact on RC B's footprint? They should not have to follow the mitigation plan.</p>
<p><b>Response: The RC SDT thanks you for your comment. Requirement R2 addresses processes, procedures, and plans developed in advance. Such plans reasonably can be expected to contain agreement. The goal is to ensure reliability; refusal to agree based upon equity issues is unacceptable. If inability to agree is based upon differing opinions as to whether the problem exists, then the coordination requirements are out of</b></p>

Organization	Yes or No	Question 11 Comment
Georgia Transmission Corporation		N/A
<b>Response: The RC SDT thanks you for your comment.</b>		

**12. Do you agree with the revisions to the Measures in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration:** Stakeholders agreed with the Measures, except to make conforming changes for revisions to the requirements (M1, M3 and M8). The RC SDT has revised the measures based on the new requirements. One stakeholder suggested revision to the Data Retention for R5-R8. Data Retention was revised for R5 to 12 months, however the RC SDT believes that three years is the correct period for R6-8.

Organization	Yes or No	Question 12 Comment
Northwest LSE Group		Abstain
Northeast Power Coordinating Council	No	The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
<b>Response: The RC SDT thanks you for your comment. R7 and R8 were not removed, therefore the measures will remain in place.</b>		
IRC Standards Review Committee	No	Conforming changes to the Measurements will be required if changes as suggested in Question 11 are introduced.
<b>Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements.</b>		
Midwest ISO Standards Collaborators	No	Conforming changes to the Measurements will be required for accepted changes from question 11.
Manitoba Hydro	No	Conforming changes to the Measurements will be required for accepted changes from question 11.
<b>Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements.</b>		
Hydro-Québec TransEnergie (HQT)	No	The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 12 Comment
<b>Response: The RC SDT thanks you for your comment. R7 and R8 were not removed, therefore the measures will remain in place</b>		
Duke Energy	No	Need to revise the Measures to coincide with the recommended changes to the requirements in #11 above. Also under Data Retention, 12 months of evidence is needed for R3, R4 and M3, M4. However 3 years plus the current year is required for R5 through R8 and M5 through M8. We see no reason the data requirements to be different and believe 12 months is the proper amount of data retention.
<b>Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements. The RC SDT concurs with the suggested revision to Data Retention for R5. The infrequency of occurrences of R6-8 clearly support a 3 year retention period.</b>		
Northeast Utilities	No	The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
<b>Response: The RC SDT thanks you for your comment. R7 and R8 were not removed, therefore the measures will remain in place</b>		
Independent Electricity System Operator	No	Depending on the response of the SDT, changes to M5 to M8 may be required.
<b>Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements</b>		
MRO NSRS	No	Conforming changes to the Measurements will be required for accepted changes from question 11.
<b>Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements</b>

**13. Do you agree with the revisions to the Violation Severity Levels in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.**

**Summary Consideration:** Several stakeholders suggested developing four VSLs for R5. Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSLs to represent both the large and small scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios. Other stakeholders suggested four VSLs for R4. The essence of R4 is written to require impacted RC's to talk at least weekly and is singular in nature. VSL's can not be written for conference calls that exceed the singular requirement.

Organization	Yes or No	Question 13 Comment
Northwest LSE Group		Abstain
Northeast Power Coordinating Council	No	(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT's response to our comments under Q11.
<p><b>Response:</b> The RC SDT thanks you for your comment. Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSLs to represent both the large and small scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios.</p> <p>The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. Please see the posted implementation plan for IRO-014 for details; as such, the VSL's remain.</p>		
IRC Standards Review Committee	No	(1) In the Commission's June 2008 order on VSLs, they expressed their preference for having as many VSLs as possible. We believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. We also believe this would be consistent with the Commission's guideline 4 because the requirement is written in the plural, that is conference calls, so all conference calls must be considered in aggregate. Thus, failure to participate in more than

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 13 Comment
		<p>one conference call does not represent distinct violations but a single violation.</p> <p>(2) Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any. Note: CAISO abstains from these comments.</p>
