R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.CA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.CA NISTIR MAPPING**	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.CA NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.CA NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.CA NISTIR MAPPING**	
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.CA NISTIR MAPPING**	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.CA NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.		

R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.		
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.		
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.		
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.CA NISTIR MAPPING**	
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.CA NISTIR MAPPING**	
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.CA NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.		

R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.CA NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.CA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.CA NISTIR MAPPING**	
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.CA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.CA NISTIR MAPPING**	
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.CA NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.CA NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.CA NISTIR MAPPING**	

R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.CA NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.CA NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.	**NO SG.CA NISTIR MAPPING**	
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.CA NISTIR MAPPING**	
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.CA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.CA NISTIR MAPPING**	
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.CA NISTIR MAPPING**	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.CA NISTIR MAPPING**

NISTIR Requirement		SG.CM-1
NERC CIP		Configuration Management Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.		
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.		
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.		
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.		
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:		
R2, 1.1: Personnel Security		
R2, 1.2: Electronic Security Parameters		
R2, 1.3: Remote Access		
R2, 1.4: Physical Security		
R2, 1.5: System Security		
R2, 1.6: Incident Response		
R2, 1.7: Recovery Plans		
R2, 1.8: Configuration Change Management		3 - CIP provides more information about the specifics of what a change management process should include in section 2.8.
R2, 1.9: Information Protection		

R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances		
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.		(this is related to all of the -1 SG high level requirements.
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.		
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.		
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.		
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.		
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.		
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.		
R2, 2.1: Define the roles that require training.		
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.		
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.		
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.		
R2, 2.5: Training on the visitor control program.		
R2, 2.6: Training on handling of BES Cyber System Information and storage media.		
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.		

R2, 2.8: Training on recovery plans for BES Cyber Systems.		
R2, 2.9: Training on response to BES Cyber Security Incidents.		
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.		
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.		
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.		
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.		
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.		
R4, 4.1: An initial personnel risk assessment that includes identity verification.		
R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.		
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.		
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.		
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.		
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.		
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.		

R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.		
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.		
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.		
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.		
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.		
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.		
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.		
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.		

R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.		
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.		
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.		
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).		
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.		
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.		
R1, 1.5: A documented method for detecting malicious communications at each EAP.		
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.		
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.		
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.		
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.		
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.		
R1, 1.1: Define operational or procedural controls to restrict physical access.		
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.		

R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.		
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.		
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.		
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.		
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.		
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.		
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.		
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.		
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.		
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.		
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.		
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.		
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.		
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.		

R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.		X
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.		X
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.		
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.		
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.		
R3, 3.2: Disarm or remove identified malicious code.		
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).		
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.		
R3, 3.5: Log each Transient Cyber Asset connection.		
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.		
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.		
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.		
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.		
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.		
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.		

R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.		
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.		
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.		
R5, 5.3: Identify individuals who have authorized access to shared accounts.		
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.		
R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.		
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.		
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.		
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.		
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.		

R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.		
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.		
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.		
R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.		
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.		
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.		
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.		
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.		
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.		
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.		
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.		
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		

R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.		
R1, 1.1: Conditions for activation of the recovery plan(s).		
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.		
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.		
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.		
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.		
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.		
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.		
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.		
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.		
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.		
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.		
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.		

R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.		
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.		
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.		
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.		
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.		2 - CIP identifies specific information used to describe the baseline configuration including physical location, OS, applications, network ports and security patch levels.
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.		
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.		
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.		

R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.		X
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.		
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.		X
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.		
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.		
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.		
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.		
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.		
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.		

R1, 1.1: One or more methods to identify BES Cyber System Information.		
R1, 1.2: Access control and handling procedures for BES Cyber System Information.		
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.		
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.		
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.		
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.

NISTIR Requirement	
NERC CIP	
Note that only the language from the requirement section of CIPv5 is included in this table.	
GENERAL NOTES	
Notes: CIP 9 compliance not required for LOW impact systems, whereas NISTIR has CP requirements for LOW systems	
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization	
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.	**NO SG.CP NISTIR MAPPING**
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.CP NISTIR MAPPING**
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.CP NISTIR MAPPING**
CIP-003-5: Cyber Security — Security Management Controls	
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.CP NISTIR MAPPING**
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.CP NISTIR MAPPING**
R2, 1.1: Personnel Security	**NO SG.CP NISTIR MAPPING**
R2, 1.2: Electronic Security Parameters	**NO SG.CP NISTIR MAPPING**
R2, 1.3: Remote Access	**NO SG.CP NISTIR MAPPING**
R2, 1.4: Physical Security	**NO SG.CP NISTIR MAPPING**
R2, 1.5: System Security	**NO SG.CP NISTIR MAPPING**

R2, 1.6: Incident Response	**NO SG.CP NISTIR MAPPING**
R2, 1.7: Recovery Plans	
R2, 1.8: Configuration Change Management	**NO SG.CP NISTIR MAPPING**
R2, 1.9: Information Protection	**NO SG.CP NISTIR MAPPING**
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.CP NISTIR MAPPING**
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.CP NISTIR MAPPING**
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.CP NISTIR MAPPING**
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.CP NISTIR MAPPING**
CIP 004-5: Cyber Security – Personnel and Training	
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.CP NISTIR MAPPING**
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.CP NISTIR MAPPING**
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.CP NISTIR MAPPING**
R2, 2.1: Define the roles that require training.	**NO SG.CP NISTIR MAPPING**

R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.CP NISTIR MAPPING**
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.CP NISTIR MAPPING**
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.CP NISTIR MAPPING**
R2, 2.5: Training on the visitor control program.	**NO SG.CP NISTIR MAPPING**
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.CP NISTIR MAPPING**
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.CP NISTIR MAPPING**
R2, 2.8: Training on recovery plans for BES Cyber Systems.	
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.CP NISTIR MAPPING**
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.CP NISTIR MAPPING**
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.CP NISTIR MAPPING**
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.CP NISTIR MAPPING**
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.CP NISTIR MAPPING**
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.	**NO SG.CP NISTIR MAPPING**
R4, 4.1: An initial personnel risk assessment that includes identity verification.	**NO SG.CP NISTIR MAPPING**

R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	**NO SG.CP NISTIR MAPPING**
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.	**NO SG.CP NISTIR MAPPING**
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.	**NO SG.CP NISTIR MAPPING**
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.	**NO SG.CP NISTIR MAPPING**
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.	**NO SG.CP NISTIR MAPPING**
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.CP NISTIR MAPPING**
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.CP NISTIR MAPPING**
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.CP NISTIR MAPPING**
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.CP NISTIR MAPPING**
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.CP NISTIR MAPPING**
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.CP NISTIR MAPPING**

R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.CP NISTIR MAPPING**
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.CP NISTIR MAPPING**
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.	**NO SG.CP NISTIR MAPPING**
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.CP NISTIR MAPPING**
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.	**NO SG.CP NISTIR MAPPING**
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.	**NO SG.CP NISTIR MAPPING**
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.	**NO SG.CP NISTIR MAPPING**
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)	
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.CP NISTIR MAPPING**
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.CP NISTIR MAPPING**
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	**NO SG.CP NISTIR MAPPING**
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	**NO SG.CP NISTIR MAPPING**
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	**NO SG.CP NISTIR MAPPING**
R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.CP NISTIR MAPPING**

R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.CP NISTIR MAPPING**
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	**NO SG.CP NISTIR MAPPING**
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.CP NISTIR MAPPING**
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.CP NISTIR MAPPING**
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems	
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.CP NISTIR MAPPING**
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.CP NISTIR MAPPING**
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.CP NISTIR MAPPING**
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.CP NISTIR MAPPING**
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.CP NISTIR MAPPING**
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.CP NISTIR MAPPING**
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.CP NISTIR MAPPING**
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.CP NISTIR MAPPING**
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.CP NISTIR MAPPING**
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.CP NISTIR MAPPING**

R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.CP NISTIR MAPPING**
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.CP NISTIR MAPPING**
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.CP NISTIR MAPPING**
CIP-007-5: Cyber Security-Systems Security Management	
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.CP NISTIR MAPPING**
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.CP NISTIR MAPPING**
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.CP NISTIR MAPPING**
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.CP NISTIR MAPPING**
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.CP NISTIR MAPPING**
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.CP NISTIR MAPPING**
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.CP NISTIR MAPPING**
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.CP NISTIR MAPPING**
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.CP NISTIR MAPPING**
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.CP NISTIR MAPPING**
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.CP NISTIR MAPPING**
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.CP NISTIR MAPPING**

R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.CP NISTIR MAPPING**
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.CP NISTIR MAPPING**
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.CP NISTIR MAPPING**
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.CP NISTIR MAPPING**
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.CP NISTIR MAPPING**
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.CP NISTIR MAPPING**
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.CP NISTIR MAPPING**
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.CP NISTIR MAPPING**
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	**NO SG.CP NISTIR MAPPING**
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.CP NISTIR MAPPING**
R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.CP NISTIR MAPPING**
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.CP NISTIR MAPPING**

R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.CP NISTIR MAPPING**
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.CP NISTIR MAPPING**
CIP-008-5: Cyber Security-Incident Reporting and Response Planning	
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.CP NISTIR MAPPING**
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.CP NISTIR MAPPING**
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.CP NISTIR MAPPING**
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.CP NISTIR MAPPING**
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.CP NISTIR MAPPING**
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.CP NISTIR MAPPING**

R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.CP NISTIR MAPPING**
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.CP NISTIR MAPPING**
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.CP NISTIR MAPPING**
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.CP NISTIR MAPPING**
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.CP NISTIR MAPPING**
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.CP NISTIR MAPPING**
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.CP NISTIR MAPPING**
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems	
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.	**NO SG.CP NISTIR MAPPING**
R1, 1.1: Conditions for activation of the recovery plan(s).	
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	

R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	

R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments	
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.CP NISTIR MAPPING**

R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.CP NISTIR MAPPING**
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.CP NISTIR MAPPING**
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.CP NISTIR MAPPING**
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.CP NISTIR MAPPING**
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.CP NISTIR MAPPING**
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.CP NISTIR MAPPING**
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.CP NISTIR MAPPING**
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.CP NISTIR MAPPING**

R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.CP NISTIR MAPPING**
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.CP NISTIR MAPPING**
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.CP NISTIR MAPPING**
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.CP NISTIR MAPPING**
CIP-011-1: Cyber Security-Information Protection	
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.CP NISTIR MAPPING**
R1, 1.1: One or more methods to identify BES Cyber System Information.	**NO SG.CP NISTIR MAPPING**
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.CP NISTIR MAPPING**
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.CP NISTIR MAPPING**
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.CP NISTIR MAPPING**
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.CP NISTIR MAPPING**
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.CP NISTIR MAPPING**

NISTIR Requirement		SG.IA-1
NERC CIP		Identification and Authentication Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.	**NO SG.IA NISTIR MAPPING**	
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.IA NISTIR MAPPING**	
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.IA NISTIR MAPPING**	
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.IA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.IA NISTIR MAPPING**	
R2, 1.1: Personnel Security	**NO SG.IA NISTIR MAPPING**	
R2, 1.2: Electronic Security Parameters	**NO SG.IA NISTIR MAPPING**	
R2, 1.3: Remote Access	**NO SG.IA NISTIR MAPPING**	
R2, 1.4: Physical Security	**NO SG.IA NISTIR MAPPING**	
R2, 1.5: System Security	**NO SG.IA NISTIR MAPPING**	

R2, 1.6: Incident Response	**NO SG.IA NISTIR MAPPING**	
R2, 1.7: Recovery Plans	**NO SG.IA NISTIR MAPPING**	
R2, 1.8: Configuration Change Management	**NO SG.IA NISTIR MAPPING**	
R2, 1.9: Information Protection	**NO SG.IA NISTIR MAPPING**	
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.IA NISTIR MAPPING**	
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	**NO SG.IA NISTIR MAPPING**	
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.IA NISTIR MAPPING**	
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.IA NISTIR MAPPING**	
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.IA NISTIR MAPPING**	
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.IA NISTIR MAPPING**	
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.IA NISTIR MAPPING**	
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.IA NISTIR MAPPING**	
R2, 2.1: Define the roles that require training.	**NO SG.IA NISTIR MAPPING**	

R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.IA NISTIR MAPPING**	
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.IA NISTIR MAPPING**	
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.IA NISTIR MAPPING**	
R2, 2.5: Training on the visitor control program.	**NO SG.IA NISTIR MAPPING**	
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.IA NISTIR MAPPING**	
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.IA NISTIR MAPPING**	
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.IA NISTIR MAPPING**	
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.IA NISTIR MAPPING**	
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.IA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.IA NISTIR MAPPING**	
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.IA NISTIR MAPPING**	
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.IA NISTIR MAPPING**	
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.	**NO SG.IA NISTIR MAPPING**	
R4, 4.1: An initial personnel risk assessment that includes identity verification.	**NO SG.IA NISTIR MAPPING**	

R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	**NO SG.IA NISTIR MAPPING**	
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.	**NO SG.IA NISTIR MAPPING**	
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.	**NO SG.IA NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.	**NO SG.IA NISTIR MAPPING**	
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.	**NO SG.IA NISTIR MAPPING**	
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.IA NISTIR MAPPING**	
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.IA NISTIR MAPPING**	
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.IA NISTIR MAPPING**	
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.IA NISTIR MAPPING**	
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.IA NISTIR MAPPING**	
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.IA NISTIR MAPPING**	

R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.IA NISTIR MAPPING**	
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.IA NISTIR MAPPING**	
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.	**NO SG.IA NISTIR MAPPING**	
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.IA NISTIR MAPPING**	
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.	**NO SG.IA NISTIR MAPPING**	
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.	**NO SG.IA NISTIR MAPPING**	
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.	**NO SG.IA NISTIR MAPPING**	
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.IA NISTIR MAPPING**	

R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.		2 - CIP requirement is more granular to direct definition of controls to restrict unauthorized access to critical cyber assets - NISTIR only states to address the implementation of the identification and authentication security policy and associated identification and authentication protection requirements.
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).		2 - CIP requirement is more granular to direct definition of controls through electronic access points - NISTIR only states to address the implementation of the identification and authentication security policy and associated identification and authentication protection requirements.

R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.		2 - CIP requirement is more granular to require explicit inbound/outbound access permissions at each point
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.		2 - CIP requirement is more granular to address dial-up access - NISTIR does not specifically mention dial-up access
R1, 1.5: A documented method for detecting malicious communications at each EAP.		
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.		2 - CIP requirement is more granular with remote access requirements - NISTIR does not specifically discuss remote access

R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.		
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.IA NISTIR MAPPING**	
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.IA NISTIR MAPPING**	
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.IA NISTIR MAPPING**	
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.IA NISTIR MAPPING**	
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.IA NISTIR MAPPING**	
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.IA NISTIR MAPPING**	
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.IA NISTIR MAPPING**	

R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.IA NISTIR MAPPING**	
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.IA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.IA NISTIR MAPPING**	
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.IA NISTIR MAPPING**	
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.IA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.IA NISTIR MAPPING**	
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.IA NISTIR MAPPING**	
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.IA NISTIR MAPPING**	
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.IA NISTIR MAPPING**	
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.IA NISTIR MAPPING**	
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.IA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.IA NISTIR MAPPING**	
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.IA NISTIR MAPPING**	

R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.IA NISTIR MAPPING**	
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.IA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.IA NISTIR MAPPING**	
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.IA NISTIR MAPPING**	
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.IA NISTIR MAPPING**	
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.IA NISTIR MAPPING**	
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.IA NISTIR MAPPING**	
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.IA NISTIR MAPPING**	
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.IA NISTIR MAPPING**	
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.IA NISTIR MAPPING**	
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.IA NISTIR MAPPING**	
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.IA NISTIR MAPPING**	
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.IA NISTIR MAPPING**	

R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.IA NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.IA NISTIR MAPPING**	
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.		
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.IA NISTIR MAPPING**	
R5, 5.3: Identify individuals who have authorized access to shared accounts.		
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.IA NISTIR MAPPING**	

R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.IA NISTIR MAPPING**	
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.		
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.IA NISTIR MAPPING**	
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.IA NISTIR MAPPING**	
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.IA NISTIR MAPPING**	
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.IA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.IA NISTIR MAPPING**	
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.IA NISTIR MAPPING**	

R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	**NO SG.IA NISTIR MAPPING**	
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.IA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.IA NISTIR MAPPING**	
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.IA NISTIR MAPPING**	
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.IA NISTIR MAPPING**	
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.IA NISTIR MAPPING**	
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.IA NISTIR MAPPING**	
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.IA NISTIR MAPPING**	
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.	**NO SG.IA NISTIR MAPPING**	
R1, 1.1: Conditions for activation of the recovery plan(s).	**NO SG.IA NISTIR MAPPING**	
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	**NO SG.IA NISTIR MAPPING**	
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	**NO SG.IA NISTIR MAPPING**	

R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	**NO SG.IA NISTIR MAPPING**	
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.IA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.IA NISTIR MAPPING**	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.IA NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.IA NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.IA NISTIR MAPPING**	
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.IA NISTIR MAPPING**	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.IA NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.IA NISTIR MAPPING**	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.IA NISTIR MAPPING**	
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.IA NISTIR MAPPING**	
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.IA NISTIR MAPPING**	

CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.IA NISTIR MAPPING**	
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.IA NISTIR MAPPING**	
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.IA NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.IA NISTIR MAPPING**	
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.IA NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.IA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.IA NISTIR MAPPING**	

R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.IA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.IA NISTIR MAPPING**	
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.IA NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.IA NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.IA NISTIR MAPPING**	
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.IA NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.IA NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.	**NO SG.IA NISTIR MAPPING**	
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.IA NISTIR MAPPING**	
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.IA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.IA NISTIR MAPPING**	

R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.IA NISTIR MAPPING**	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.IA NISTIR MAPPING**	

SG.IA-2	SG.IA-3	SG.IA-4	SG.IA-5
Identifier Management	Authenticator Management	User Identification and Authentication	Device Identification and Authentication
NO CIP MAPPING			

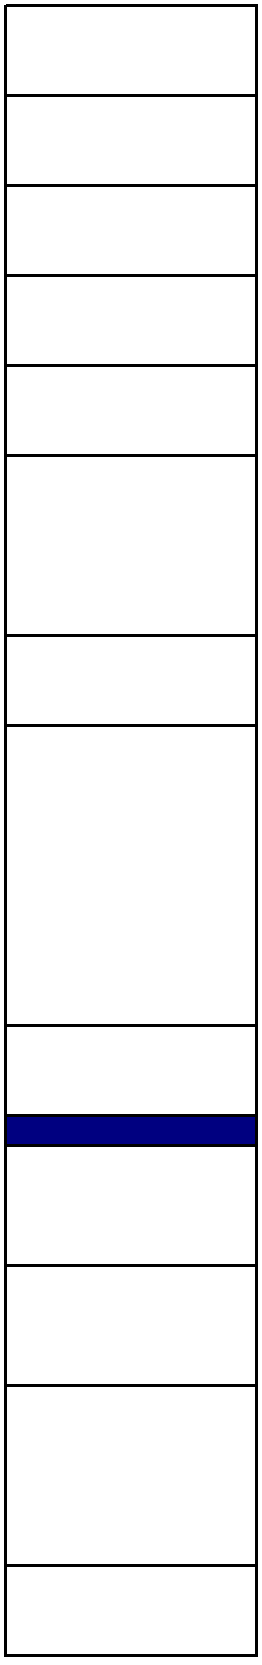
	3 - NISTIR is more granular through specific authentication credential management requirements (initial authentication credential content; administrative procedures for initial authentication credential distribution/lost credentials/lost, compromised, or damaged authentication credentials/revoking authentication credentials; changing/refreshing authentication credentials on an organization-defined frequency; and specifying measures to safeguard authentication credentials).	2 - CIP requirement is more granular for access requirements at electronic access points	3 - NISTIR is specific for all devices to be identified and authenticated before establishing a connection - whereas the CIP requirement identifies and controls established access points/critical cyber assets but does not specifically all devices to be identified/authenticated (only "users")

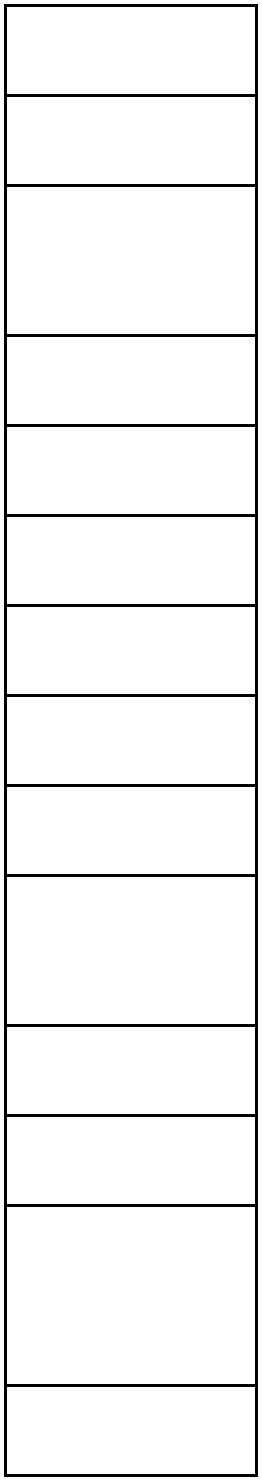
		2 - CIP requirement is more granular for specific inbound/outbound access	3 - NISTIR is specific for all devices to be identified and authenticated before establishing a connection - whereas the CIP requirement identifies and controls established access points/critical cyber assets but does not specify all devices to be identified/authenticated (only "users")
		1 - CIP and NISTIR both require authentication, but NISTIR does not specifically mention dial-up connectivity	1 - CIP and NISTIR both require authentication, but NISTIR does not specifically mention dial-up connectivity
	2 - CIP requirement is more granular to document potential malicious communications - NISTIR only provides additional consideration to employ automated tools to determine if credentials can resist attack (malicious communications)		
			2 - CIP is more granular to require multi-factor authentication for remote access

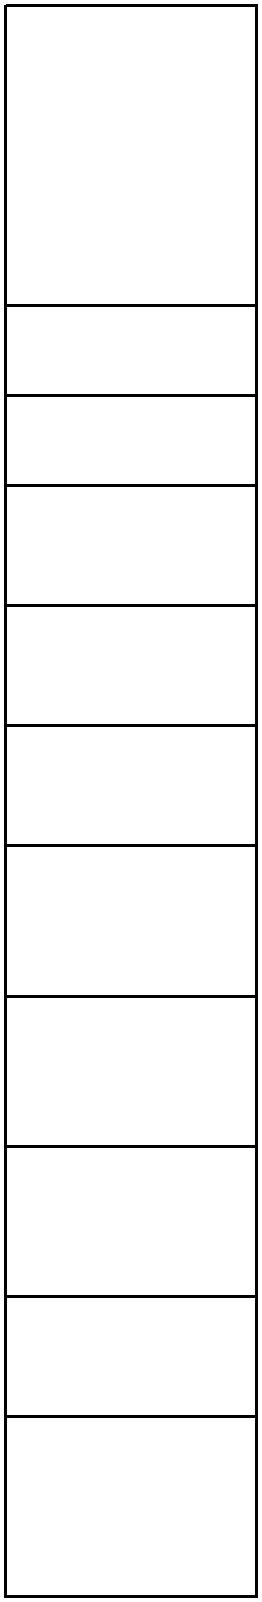
			2 - CIP is more granular to require multi-factor authentication for remote access
			1 - Both CIP and NISTIR require encryption for remote access connections (both require this for MED and HIGH systems)
		2 - CIP is more granular to require multi-factor authentication for remote access, whereas NISTIR recommends multi-factor authentication for remote access to non-privileged and privileged accounts as additional considerations.	

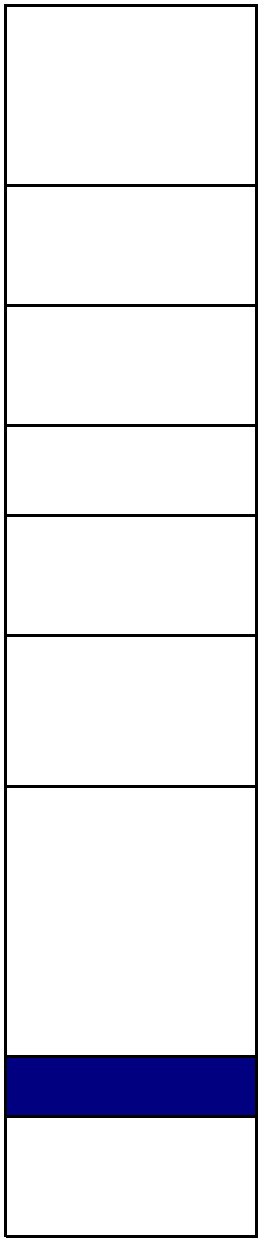
			3 - NISTIR is specific for all devices to be identified and authenticated before establishing a connection - whereas the CIP requirement validates credentials but does not specify all devices to be identified/authenticated (only "users")
		1	
	3- NISTIR is more specific on requirements for managing authentication credentials for users/devices, including supplemental guidance to safeguard credentials by not loaning/sharing credentials (each individual must be identified for any shared account as opposed to sharing credentials)	1 - CIP and NISTIR are similar, although NISTIR does not specifically address "shared accounts" in IA set (stating that all users or processes are uniquely identified and authenticated)	

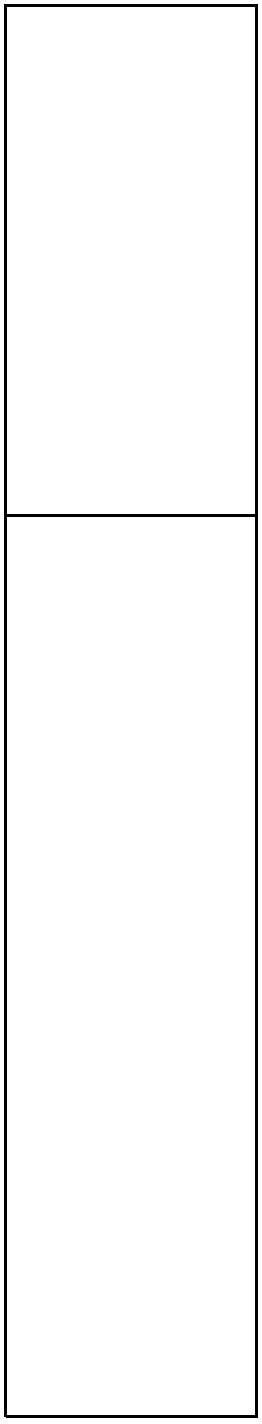
SG.IA-6
Authenticator Feedback
NO CIP MAPPING

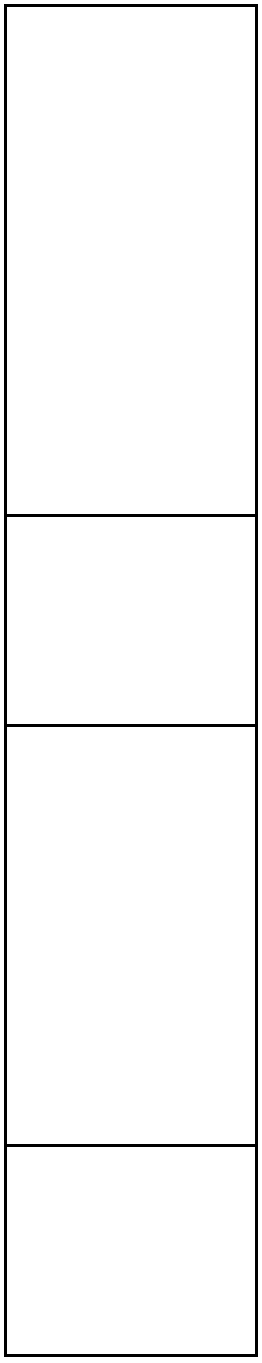




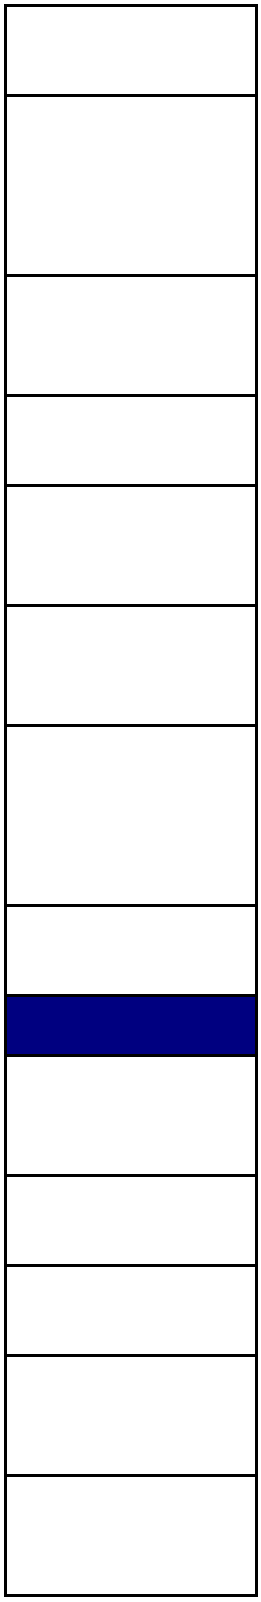


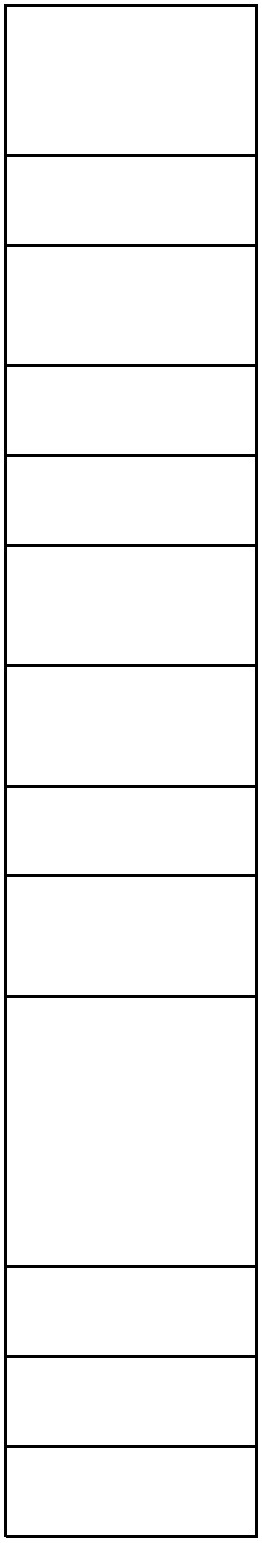


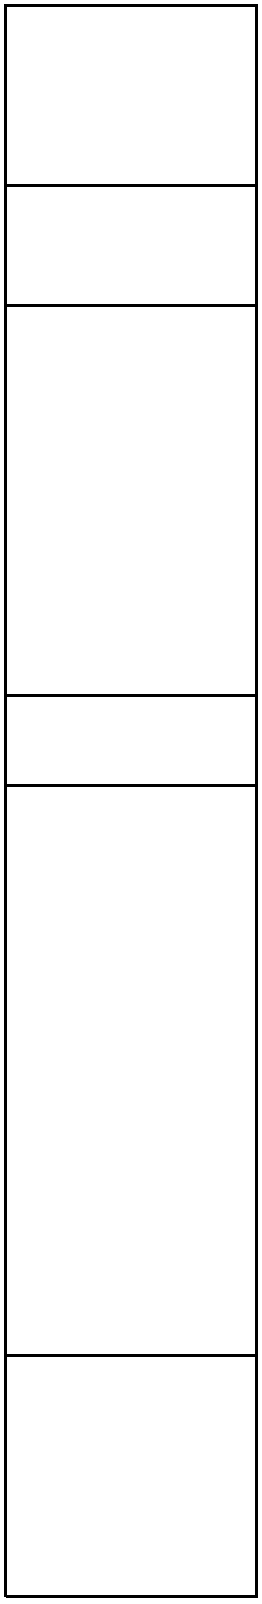




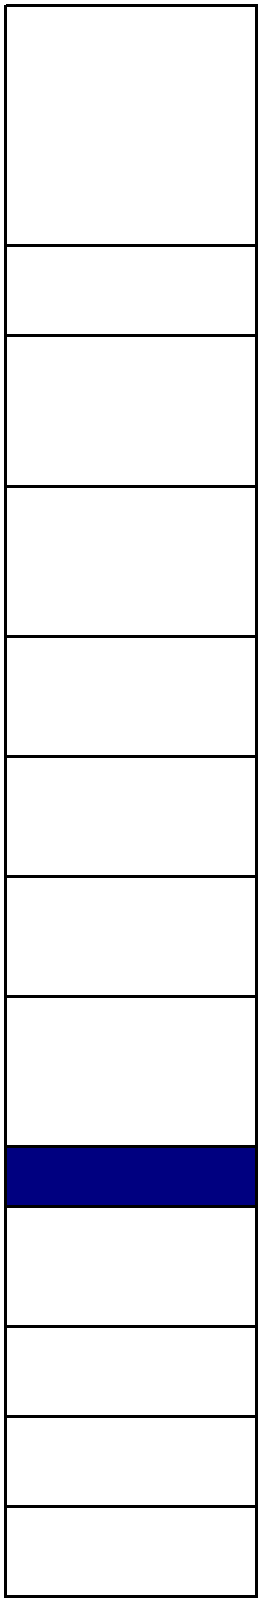
(NOTE: some similarity to NISTIR IA-6 which requires authentication mechanism to "obscure feedback of authentication information" to help protect information. CIP-005 requires an intermediate device to protect assets)

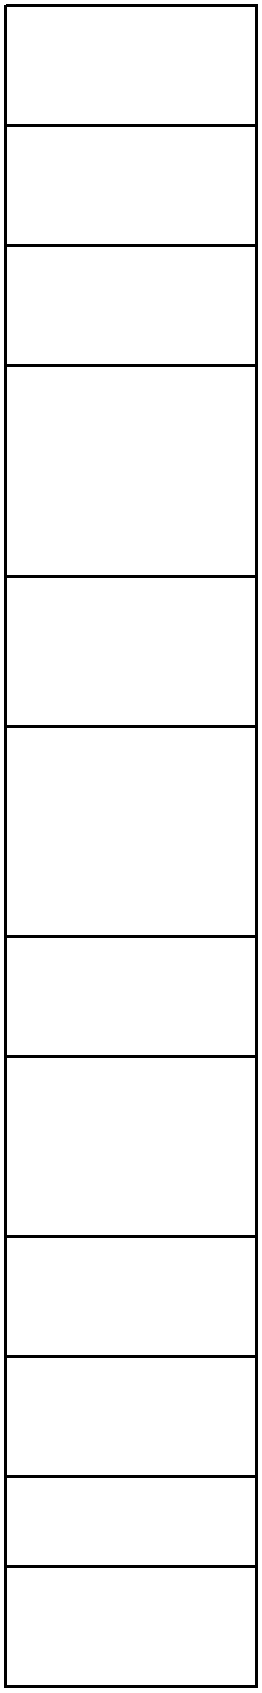


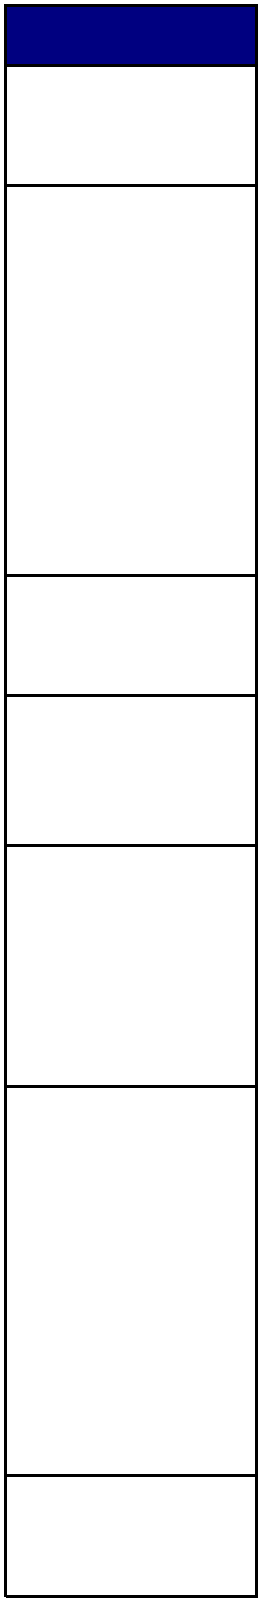


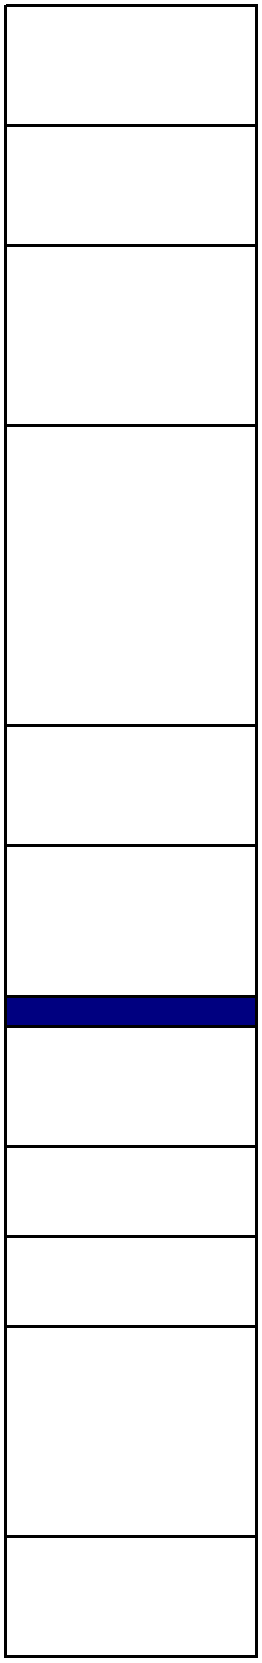


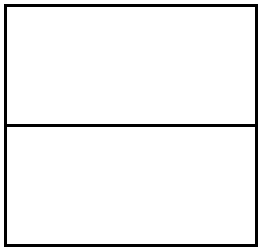
difficult to map – different detailed aspects of issue addressed











NISTIR Requirement		SG.ID-1
NERC CIP		Information and Document Management Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
GENERAL NOTES		
Notes: none of CIP-11 is applicable to LOW impact systems under CIP standards, whereas NISTIR recommends measures for LOW		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.	**NO SG.ID NISTIR MAPPING**	
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.ID NISTIR MAPPING**	
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.ID NISTIR MAPPING**	
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.ID NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.ID NISTIR MAPPING**	
R2, 1.1: Personnel Security	**NO SG.ID NISTIR MAPPING**	
R2, 1.2: Electronic Security Parameters	**NO SG.ID NISTIR MAPPING**	
R2, 1.3: Remote Access	**NO SG.ID NISTIR MAPPING**	

R2, 1.4: Physical Security	**NO SG.ID NISTIR MAPPING**	
R2, 1.5: System Security	**NO SG.ID NISTIR MAPPING**	
R2, 1.6: Incident Response	**NO SG.ID NISTIR MAPPING**	
R2, 1.7: Recovery Plans	**NO SG.ID NISTIR MAPPING**	
R2, 1.8: Configuration Change Management	**NO SG.ID NISTIR MAPPING**	
R2, 1.9: Information Protection		3 - NISTIR requirement is more granular - CIP requirement does not specify required elements of information protection in CIP-003-5, but does in CIP-11
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.ID NISTIR MAPPING**	
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	**NO SG.ID NISTIR MAPPING**	
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.ID NISTIR MAPPING**	
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.ID NISTIR MAPPING**	
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.ID NISTIR MAPPING**	
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.ID NISTIR MAPPING**	

R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.ID NISTIR MAPPING**	
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.ID NISTIR MAPPING**	
R2, 2.1: Define the roles that require training.	**NO SG.ID NISTIR MAPPING**	
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.ID NISTIR MAPPING**	
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.ID NISTIR MAPPING**	
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.ID NISTIR MAPPING**	
R2, 2.5: Training on the visitor control program.	**NO SG.ID NISTIR MAPPING**	
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.ID NISTIR MAPPING**	
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.ID NISTIR MAPPING**	
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.ID NISTIR MAPPING**	
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.ID NISTIR MAPPING**	
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.ID NISTIR MAPPING**	
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.ID NISTIR MAPPING**	
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.ID NISTIR MAPPING**	
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.ID NISTIR MAPPING**	

R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.	**NO SG.ID NISTIR MAPPING**	
R4, 4.1: An initial personnel risk assessment that includes identity verification.	**NO SG.ID NISTIR MAPPING**	
R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	**NO SG.ID NISTIR MAPPING**	
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.	**NO SG.ID NISTIR MAPPING**	
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.	**NO SG.ID NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.	**NO SG.ID NISTIR MAPPING**	
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.	**NO SG.ID NISTIR MAPPING**	
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.ID NISTIR MAPPING**	
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.ID NISTIR MAPPING**	
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.ID NISTIR MAPPING**	
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.ID NISTIR MAPPING**	
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.ID NISTIR MAPPING**	

R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.ID NISTIR MAPPING**	
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.ID NISTIR MAPPING**	
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.ID NISTIR MAPPING**	
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.	**NO SG.ID NISTIR MAPPING**	
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.ID NISTIR MAPPING**	
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.	**NO SG.ID NISTIR MAPPING**	
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.	**NO SG.ID NISTIR MAPPING**	
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.	**NO SG.ID NISTIR MAPPING**	
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.ID NISTIR MAPPING**	
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.ID NISTIR MAPPING**	
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	**NO SG.ID NISTIR MAPPING**	

R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	**NO SG.ID NISTIR MAPPING**	
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	**NO SG.ID NISTIR MAPPING**	
R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.ID NISTIR MAPPING**	
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.ID NISTIR MAPPING**	
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	**NO SG.ID NISTIR MAPPING**	
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.ID NISTIR MAPPING**	
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.ID NISTIR MAPPING**	
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.ID NISTIR MAPPING**	
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.ID NISTIR MAPPING**	
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.ID NISTIR MAPPING**	
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.ID NISTIR MAPPING**	
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.ID NISTIR MAPPING**	
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.ID NISTIR MAPPING**	
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.ID NISTIR MAPPING**	

R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.ID NISTIR MAPPING**	
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.ID NISTIR MAPPING**	
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.ID NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.ID NISTIR MAPPING**	
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.ID NISTIR MAPPING**	
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.ID NISTIR MAPPING**	
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.ID NISTIR MAPPING**	
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.ID NISTIR MAPPING**	
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.ID NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.ID NISTIR MAPPING**	
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.ID NISTIR MAPPING**	
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.ID NISTIR MAPPING**	
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.ID NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.ID NISTIR MAPPING**	

R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.ID NISTIR MAPPING**	
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.ID NISTIR MAPPING**	
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.ID NISTIR MAPPING**	
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.ID NISTIR MAPPING**	
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.ID NISTIR MAPPING**	
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.ID NISTIR MAPPING**	
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.ID NISTIR MAPPING**	
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.ID NISTIR MAPPING**	
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.ID NISTIR MAPPING**	
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.ID NISTIR MAPPING**	
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.ID NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.ID NISTIR MAPPING**	
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	**NO SG.ID NISTIR MAPPING**	
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.ID NISTIR MAPPING**	

R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.ID NISTIR MAPPING**	
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.ID NISTIR MAPPING**	
R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.ID NISTIR MAPPING**	
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.ID NISTIR MAPPING**	
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.ID NISTIR MAPPING**	
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.ID NISTIR MAPPING**	
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.ID NISTIR MAPPING**	
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.ID NISTIR MAPPING**	

R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.ID NISTIR MAPPING**	
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.ID NISTIR MAPPING**	
R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	**NO SG.ID NISTIR MAPPING**	
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.ID NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.ID NISTIR MAPPING**	
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.ID NISTIR MAPPING**	
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.ID NISTIR MAPPING**	
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.ID NISTIR MAPPING**	
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.ID NISTIR MAPPING**	
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.ID NISTIR MAPPING**	
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.	**NO SG.ID NISTIR MAPPING**	
R1, 1.1: Conditions for activation of the recovery plan(s).	**NO SG.ID NISTIR MAPPING**	

R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	**NO SG.ID NISTIR MAPPING**	
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	**NO SG.ID NISTIR MAPPING**	
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	**NO SG.ID NISTIR MAPPING**	
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.ID NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.ID NISTIR MAPPING**	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.ID NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.ID NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.ID NISTIR MAPPING**	
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.ID NISTIR MAPPING**	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.ID NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.ID NISTIR MAPPING**	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.ID NISTIR MAPPING**	

R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.ID NISTIR MAPPING**	
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.ID NISTIR MAPPING**	
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.ID NISTIR MAPPING**	
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.ID NISTIR MAPPING**	
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.ID NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.ID NISTIR MAPPING**	
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.ID NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.ID NISTIR MAPPING**	

R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.ID NISTIR MAPPING**	
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.ID NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.ID NISTIR MAPPING**	
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.ID NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.ID NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.ID NISTIR MAPPING**	
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.ID NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.ID NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.		

R1, 1.2: Access control and handling procedures for BES Cyber System Information.		
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.		
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.ID NISTIR MAPPING**	
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.ID NISTIR MAPPING**	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.ID NISTIR MAPPING**	

SG.ID-2	SG.ID-3	SG.ID-4	SG.ID-5
Information and Document Retention	Information Handling	Information Exchange	Automated Labeling
		NO DIRECT MAPPING	**CIP standards do not require "automatic" labeling**

	2 - CIP requirement is more granular with handling requirements		3 - NISTIR requirement is more granular and requires "automatic" labeling - CIP requirement including labeling as evidence of indications on information (automatic labeling is not a requirement)

3 - NISTIR requirement is more granular with retention requirements as applicable to law/regulations - CIP requirement focuses only on controlling access to retained documents (no specific retention requirements)	2 - CIP requirement is more granular with handling requirements		3 - NISTIR requirement is more granular and requires "automatic" labeling - CIP requirement including labeling as evidence of indications on information (automatic labeling is not a requirement)
	2 - CIP requirement is more granular with specific time requirements - NISTIR states review frequency as an "organization-defined frequency"		

NISTIR Requirement		SG.IR-1
NERC CIP		Incident Response Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.	**NO SG.IR NISTIR MAPPING**	
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.IR NISTIR MAPPING**	
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.IR NISTIR MAPPING**	
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.IR NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.IR NISTIR MAPPING**	
R2, 1.1: Personnel Security	**NO SG.IR NISTIR MAPPING**	
R2, 1.2: Electronic Security Parameters	**NO SG.IR NISTIR MAPPING**	
R2, 1.3: Remote Access	**NO SG.IR NISTIR MAPPING**	
R2, 1.4: Physical Security	**NO SG.IR NISTIR MAPPING**	
R2, 1.5: System Security	**NO SG.IR NISTIR MAPPING**	

R2, 1.6: Incident Response		3 - NISTIR requirement is more granular - NISTIR specifies details on what the policy should address including objectives, roles and responsibilities, and the scope of the incident response program. The NISTIR also requires the identification and classifications of potential interruptions.
R2, 1.7: Recovery Plans	**NO SG.IR NISTIR MAPPING**	
R2, 1.8: Configuration Change Management	**NO SG.IR NISTIR MAPPING**	
R2, 1.9: Information Protection	**NO SG.IR NISTIR MAPPING**	
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.IR NISTIR MAPPING**	
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	**NO SG.IR NISTIR MAPPING**	
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.IR NISTIR MAPPING**	
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.IR NISTIR MAPPING**	
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.IR NISTIR MAPPING**	
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.IR NISTIR MAPPING**	

R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.IR NISTIR MAPPING**	
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.IR NISTIR MAPPING**	
R2, 2.1: Define the roles that require training.	**NO SG.IR NISTIR MAPPING**	
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.IR NISTIR MAPPING**	
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.IR NISTIR MAPPING**	
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.IR NISTIR MAPPING**	
R2, 2.5: Training on the visitor control program.	**NO SG.IR NISTIR MAPPING**	
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.IR NISTIR MAPPING**	
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.		
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.IR NISTIR MAPPING**	
R2, 2.9: Training on response to BES Cyber Security Incidents.		
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.IR NISTIR MAPPING**	
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.IR NISTIR MAPPING**	

R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.IR NISTIR MAPPING**	
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.IR NISTIR MAPPING**	
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.	**NO SG.IR NISTIR MAPPING**	
R4, 4.1: An initial personnel risk assessment that includes identity verification.	**NO SG.IR NISTIR MAPPING**	
R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	**NO SG.IR NISTIR MAPPING**	
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.	**NO SG.IR NISTIR MAPPING**	
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.	**NO SG.IR NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.	**NO SG.IR NISTIR MAPPING**	
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.	**NO SG.IR NISTIR MAPPING**	
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.IR NISTIR MAPPING**	
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.IR NISTIR MAPPING**	
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.IR NISTIR MAPPING**	

R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.IR NISTIR MAPPING**	
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.IR NISTIR MAPPING**	
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.IR NISTIR MAPPING**	
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.IR NISTIR MAPPING**	
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.IR NISTIR MAPPING**	
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.	**NO SG.IR NISTIR MAPPING**	
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.IR NISTIR MAPPING**	
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.	**NO SG.IR NISTIR MAPPING**	
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.	**NO SG.IR NISTIR MAPPING**	
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.	**NO SG.IR NISTIR MAPPING**	
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.IR NISTIR MAPPING**	

R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.IR NISTIR MAPPING**	
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	**NO SG.IR NISTIR MAPPING**	
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	**NO SG.IR NISTIR MAPPING**	
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	**NO SG.IR NISTIR MAPPING**	
R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.IR NISTIR MAPPING**	
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.IR NISTIR MAPPING**	
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	**NO SG.IR NISTIR MAPPING**	
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.IR NISTIR MAPPING**	
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.IR NISTIR MAPPING**	
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.IR NISTIR MAPPING**	
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.IR NISTIR MAPPING**	
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.IR NISTIR MAPPING**	
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.IR NISTIR MAPPING**	
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.IR NISTIR MAPPING**	
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.IR NISTIR MAPPING**	

R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.IR NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.IR NISTIR MAPPING**	
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.IR NISTIR MAPPING**	
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.IR NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.IR NISTIR MAPPING**	
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.IR NISTIR MAPPING**	
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.IR NISTIR MAPPING**	
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.IR NISTIR MAPPING**	
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.IR NISTIR MAPPING**	
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.IR NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.IR NISTIR MAPPING**	
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.IR NISTIR MAPPING**	
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.IR NISTIR MAPPING**	

R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.IR NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.IR NISTIR MAPPING**	
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.IR NISTIR MAPPING**	
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.IR NISTIR MAPPING**	
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.IR NISTIR MAPPING**	
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.IR NISTIR MAPPING**	
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.IR NISTIR MAPPING**	
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.IR NISTIR MAPPING**	
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.		
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.		
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.IR NISTIR MAPPING**	
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.IR NISTIR MAPPING**	
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.IR NISTIR MAPPING**	

R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.IR NISTIR MAPPING**	
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	**NO SG.IR NISTIR MAPPING**	
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.IR NISTIR MAPPING**	
R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.IR NISTIR MAPPING**	
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.IR NISTIR MAPPING**	
R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.IR NISTIR MAPPING**	
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.IR NISTIR MAPPING**	
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.IR NISTIR MAPPING**	
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.		1 - NISTIR and CIP requirements have similar granularity.
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.		1 - NISTIR and CIP requirements have similar granularity.

R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.		
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.IR NISTIR MAPPING**	
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.		1 - NISTIR and CIP requirements have similar granularity.
R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.		
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.		
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.IR NISTIR MAPPING**	
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.		2 - CIP requirement is more granular - CIP specifies time frame for review of the IR plan for accuracy and completeness.

R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.		
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.		
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.IR NISTIR MAPPING**	
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.		2 - CIP requirement is more granular - CIP specifies a time frame for communicating IR plan updates to each person with a defined role in the plan.
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.		
R1, 1.1: Conditions for activation of the recovery plan(s).		
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.		
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.		
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.		
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.IR NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.IR NISTIR MAPPING**	

R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.IR NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.IR NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.IR NISTIR MAPPING**	
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.IR NISTIR MAPPING**	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.IR NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.IR NISTIR MAPPING**	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.IR NISTIR MAPPING**	
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.IR NISTIR MAPPING**	
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.IR NISTIR MAPPING**	
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.IR NISTIR MAPPING**	

R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.IR NISTIR MAPPING**	
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.IR NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.IR NISTIR MAPPING**	
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.IR NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.IR NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.IR NISTIR MAPPING**	
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.IR NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.IR NISTIR MAPPING**	

R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.IR NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.IR NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.IR NISTIR MAPPING**	
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.IR NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.IR NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.	**NO SG.IR NISTIR MAPPING**	
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.IR NISTIR MAPPING**	
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.IR NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.IR NISTIR MAPPING**	
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.IR NISTIR MAPPING**	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.IR NISTIR MAPPING**	

SG.IR-2	SG.IR-3	SG.IR-4	SG.IR-5
Incident Response Roles and Responsibilities	Incident Response Training	Incident Response Testing and Exercises	Incident Handling

	3 - NISTIR requirement is more granular - NISTIR specifies that refresher training should be received on an organization-defined basis.		
	3 - NISTIR requirement is more granular - NISTIR specifies training on roles and responsibilities.		

			1 - NISTIR and CIP requirements have similar granularity.

1 - NISTIR and CIP requirements have similar granularity.			1 - NISTIR and CIP requirements have similar granularity.
			2 - CIP requirement is more granular - CIP specifies that deviations taken from the plan during the incident or test are recorded.
		2 - CIP requirement is more granular - CIP specifies testing frequency requirements and the types of testing that are acceptable.	
			2 - CIP requirement is more granular - CIP specifies document retention time.

		2 - CIP requirement is more granular - CIP specifies time frame for documenting lessons learned from exercise of the response plan.	2 - CIP requirement is more granular - CIP specifies time frame for review and documentation of any exercise of the IR plan.
			2 - CIP requirement is more granular - CIP specifies time frame for updating IR plan after completion of a review.

SG.IR-6	SG.IR-7	SG.IR-8	SG.IR-9
Incident Monitoring	Incident Reporting	Incident Response Investigation and Analysis	Corrective Action
			NO CIP MAPPING

2 - CIP requirement is more granular - CIP specifies the activities that must be logged and tracked.			
3 - NISTIR requirement is more granular - NISTIR specifies that an automated mechanisms be used.			

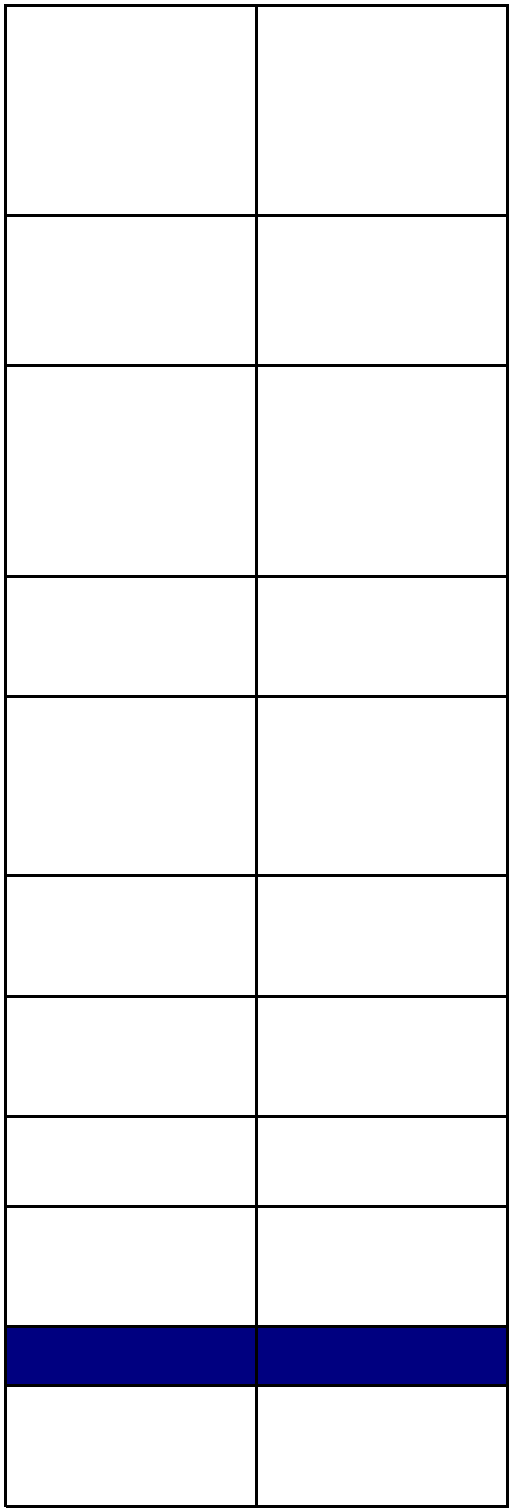
	1 - NISTIR and CIP requirements have similar granularity.		

	3 - NISTIR requirement is more granular - NISTIR specifies that data is reported in compliance with applicable laws and regulations.		
3 - NISTIR requirement is more granular - NISTIR specifies that an automated mechanisms be used.			
	2 - CIP requirement is more granular - CIP specifies retention (including retention time) for reportable incident documentation.	3 - NISTIR requirement is more granular - NISTIR outlines specific steps to be taken to analyze an incident response investigation.	

SG.IR-10	SG.IR-11
Smart Grid Information System Backup	Coordination of Emergency Response

	3 - NISTIR requirement is more granular - NISTIR specifies (but does not limit) external entities that should be considered for not only communication but coordinated effort related to cyber security incidents.

3 - NISTIR requirement is more granular - NISTIR provides specifics on the information to be backed up.	
2 - CIP requirement is more granular - CIP specifies the frequency of verification	



NISTIR Requirement		SG.MA-1
NERC CIP		Smart Grid Information System Maintenance Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.	**NO SG.MA NISTIR MAPPING**	
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.MA NISTIR MAPPING**	
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.MA NISTIR MAPPING**	
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.MA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.MA NISTIR MAPPING**	
R2, 1.1: Personnel Security	**NO SG.MA NISTIR MAPPING**	
R2, 1.2: Electronic Security Parameters	**NO SG.MA NISTIR MAPPING**	
R2, 1.3: Remote Access	**NO SG.MA NISTIR MAPPING**	
R2, 1.4: Physical Security	**NO SG.MA NISTIR MAPPING**	
R2, 1.5: System Security	**NO SG.MA NISTIR MAPPING**	

R2, 1.6: Incident Response	**NO SG.MA NISTIR MAPPING**	
R2, 1.7: Recovery Plans	**NO SG.MA NISTIR MAPPING**	
R2, 1.8: Configuration Change Management	**NO SG.MA NISTIR MAPPING**	
R2, 1.9: Information Protection	**NO SG.MA NISTIR MAPPING**	
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.MA NISTIR MAPPING**	
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	**NO SG.MA NISTIR MAPPING**	
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.MA NISTIR MAPPING**	
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.MA NISTIR MAPPING**	
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.MA NISTIR MAPPING**	
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.MA NISTIR MAPPING**	
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.MA NISTIR MAPPING**	
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.MA NISTIR MAPPING**	
R2, 2.1: Define the roles that require training.	**NO SG.MA NISTIR MAPPING**	

R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.MA NISTIR MAPPING**	
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.MA NISTIR MAPPING**	
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.MA NISTIR MAPPING**	
R2, 2.5: Training on the visitor control program.	**NO SG.MA NISTIR MAPPING**	
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.MA NISTIR MAPPING**	
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.MA NISTIR MAPPING**	
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.MA NISTIR MAPPING**	
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.MA NISTIR MAPPING**	
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.MA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.MA NISTIR MAPPING**	
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.MA NISTIR MAPPING**	
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.MA NISTIR MAPPING**	
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.	**NO SG.MA NISTIR MAPPING**	
R4, 4.1: An initial personnel risk assessment that includes identity verification.	**NO SG.MA NISTIR MAPPING**	

R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	**NO SG.MA NISTIR MAPPING**	
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.	**NO SG.MA NISTIR MAPPING**	
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.	**NO SG.MA NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.	**NO SG.MA NISTIR MAPPING**	
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.	**NO SG.MA NISTIR MAPPING**	
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.MA NISTIR MAPPING**	
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.MA NISTIR MAPPING**	
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.MA NISTIR MAPPING**	
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.MA NISTIR MAPPING**	
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.MA NISTIR MAPPING**	
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.MA NISTIR MAPPING**	

R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.MA NISTIR MAPPING**	
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.MA NISTIR MAPPING**	
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.	**NO SG.MA NISTIR MAPPING**	
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.MA NISTIR MAPPING**	
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.	**NO SG.MA NISTIR MAPPING**	
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.	**NO SG.MA NISTIR MAPPING**	
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.	**NO SG.MA NISTIR MAPPING**	
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.MA NISTIR MAPPING**	
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.MA NISTIR MAPPING**	
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	**NO SG.MA NISTIR MAPPING**	
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	**NO SG.MA NISTIR MAPPING**	
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	**NO SG.MA NISTIR MAPPING**	

R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.MA NISTIR MAPPING**	
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.MA NISTIR MAPPING**	
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	**NO SG.MA NISTIR MAPPING**	
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.MA NISTIR MAPPING**	
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.MA NISTIR MAPPING**	
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.MA NISTIR MAPPING**	
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.MA NISTIR MAPPING**	
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.MA NISTIR MAPPING**	
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.MA NISTIR MAPPING**	
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.MA NISTIR MAPPING**	
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.MA NISTIR MAPPING**	
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.MA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.MA NISTIR MAPPING**	
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.MA NISTIR MAPPING**	

R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.MA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.MA NISTIR MAPPING**	
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.MA NISTIR MAPPING**	
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.MA NISTIR MAPPING**	
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.MA NISTIR MAPPING**	
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.MA NISTIR MAPPING**	
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.MA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.MA NISTIR MAPPING**	
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.		4 - CIP defines the specific need for patching policy while NISTIR is a universal policy
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.		

R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.		4 - CIP defines the specific need for patching policy while NISTIR is a universal policy
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.MA NISTIR MAPPING**	
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.MA NISTIR MAPPING**	
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.MA NISTIR MAPPING**	
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.MA NISTIR MAPPING**	
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.MA NISTIR MAPPING**	
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.MA NISTIR MAPPING**	
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.MA NISTIR MAPPING**	
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.MA NISTIR MAPPING**	
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.MA NISTIR MAPPING**	
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.MA NISTIR MAPPING**	
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.MA NISTIR MAPPING**	

R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.MA NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.MA NISTIR MAPPING**	
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	**NO SG.MA NISTIR MAPPING**	
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.MA NISTIR MAPPING**	
R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.MA NISTIR MAPPING**	
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.MA NISTIR MAPPING**	
R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.MA NISTIR MAPPING**	
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.MA NISTIR MAPPING**	
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.MA NISTIR MAPPING**	

R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.MA NISTIR MAPPING**	
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.MA NISTIR MAPPING**	
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.MA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.MA NISTIR MAPPING**	
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.MA NISTIR MAPPING**	
R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	**NO SG.MA NISTIR MAPPING**	
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.MA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.MA NISTIR MAPPING**	
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.MA NISTIR MAPPING**	
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.MA NISTIR MAPPING**	
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.MA NISTIR MAPPING**	
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.MA NISTIR MAPPING**	

R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.MA NISTIR MAPPING**	
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.	**NO SG.MA NISTIR MAPPING**	
R1, 1.1: Conditions for activation of the recovery plan(s).	**NO SG.MA NISTIR MAPPING**	
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	**NO SG.MA NISTIR MAPPING**	
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	**NO SG.MA NISTIR MAPPING**	
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	**NO SG.MA NISTIR MAPPING**	
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.MA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.MA NISTIR MAPPING**	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.MA NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.MA NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.MA NISTIR MAPPING**	
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.MA NISTIR MAPPING**	

R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.MA NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.MA NISTIR MAPPING**	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.MA NISTIR MAPPING**	
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.MA NISTIR MAPPING**	
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.MA NISTIR MAPPING**	
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.MA NISTIR MAPPING**	
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.MA NISTIR MAPPING**	
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.MA NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.MA NISTIR MAPPING**	

R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.MA NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.MA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.MA NISTIR MAPPING**	
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.MA NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.MA NISTIR MAPPING**	
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.MA NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.MA NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.MA NISTIR MAPPING**	

R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.MA NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.MA NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.	**NO SG.MA NISTIR MAPPING**	
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.MA NISTIR MAPPING**	
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.MA NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.MA NISTIR MAPPING**	
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.MA NISTIR MAPPING**	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.MA NISTIR MAPPING**

NISTIR Requirement		SG.MP-1
NERC CIP		Media Protection Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.	**NO SG.MP NISTIR MAPPING**	
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.MP NISTIR MAPPING**	
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.MP NISTIR MAPPING**	
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.MP NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.MP NISTIR MAPPING**	
R2, 1.1: Personnel Security	**NO SG.MP NISTIR MAPPING**	
R2, 1.2: Electronic Security Parameters	**NO SG.MP NISTIR MAPPING**	
R2, 1.3: Remote Access	**NO SG.MP NISTIR MAPPING**	
R2, 1.4: Physical Security	**NO SG.MP NISTIR MAPPING**	
R2, 1.5: System Security	**NO SG.MP NISTIR MAPPING**	

R2, 1.6: Incident Response	**NO SG.MP NISTIR MAPPING**	
R2, 1.7: Recovery Plans	**NO SG.MP NISTIR MAPPING**	
R2, 1.8: Configuration Change Management	**NO SG.MP NISTIR MAPPING**	
R2, 1.9: Information Protection		3 - NISTIR is more detailed including what to address under media protection policy.
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.MP NISTIR MAPPING**	
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	**NO SG.MP NISTIR MAPPING**	
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.MP NISTIR MAPPING**	
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.MP NISTIR MAPPING**	
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.MP NISTIR MAPPING**	
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.MP NISTIR MAPPING**	
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.MP NISTIR MAPPING**	
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.MP NISTIR MAPPING**	

R2, 2.1: Define the roles that require training.	**NO SG.MP NISTIR MAPPING**	
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.MP NISTIR MAPPING**	
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.MP NISTIR MAPPING**	
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.MP NISTIR MAPPING**	
R2, 2.5: Training on the visitor control program.	**NO SG.MP NISTIR MAPPING**	
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.MP NISTIR MAPPING**	
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.MP NISTIR MAPPING**	
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.MP NISTIR MAPPING**	
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.MP NISTIR MAPPING**	
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.MP NISTIR MAPPING**	
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.MP NISTIR MAPPING**	
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.MP NISTIR MAPPING**	
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.MP NISTIR MAPPING**	
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.	**NO SG.MP NISTIR MAPPING**	
R4, 4.1: An initial personnel risk assessment that includes identity verification.	**NO SG.MP NISTIR MAPPING**	

R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	**NO SG.MP NISTIR MAPPING**	
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.	**NO SG.MP NISTIR MAPPING**	
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.	**NO SG.MP NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.	**NO SG.MP NISTIR MAPPING**	
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.	**NO SG.MP NISTIR MAPPING**	
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.MP NISTIR MAPPING**	
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.MP NISTIR MAPPING**	
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.MP NISTIR MAPPING**	
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.MP NISTIR MAPPING**	
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.MP NISTIR MAPPING**	
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.MP NISTIR MAPPING**	

R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.MP NISTIR MAPPING**	
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.MP NISTIR MAPPING**	
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.	**NO SG.MP NISTIR MAPPING**	
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.MP NISTIR MAPPING**	
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.	**NO SG.MP NISTIR MAPPING**	
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.	**NO SG.MP NISTIR MAPPING**	
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.	**NO SG.MP NISTIR MAPPING**	
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.MP NISTIR MAPPING**	
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.MP NISTIR MAPPING**	
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	**NO SG.MP NISTIR MAPPING**	
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	**NO SG.MP NISTIR MAPPING**	
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	**NO SG.MP NISTIR MAPPING**	

R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.MP NISTIR MAPPING**	
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.MP NISTIR MAPPING**	
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	**NO SG.MP NISTIR MAPPING**	
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.MP NISTIR MAPPING**	
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.MP NISTIR MAPPING**	
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.MP NISTIR MAPPING**	
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.MP NISTIR MAPPING**	
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.MP NISTIR MAPPING**	
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.MP NISTIR MAPPING**	
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.MP NISTIR MAPPING**	
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.MP NISTIR MAPPING**	
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.MP NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.MP NISTIR MAPPING**	
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.MP NISTIR MAPPING**	

R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.MP NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.MP NISTIR MAPPING**	
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.MP NISTIR MAPPING**	
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.MP NISTIR MAPPING**	
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.MP NISTIR MAPPING**	
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.MP NISTIR MAPPING**	
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.MP NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.MP NISTIR MAPPING**	
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.MP NISTIR MAPPING**	
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.MP NISTIR MAPPING**	
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.MP NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.MP NISTIR MAPPING**	
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.MP NISTIR MAPPING**	
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.MP NISTIR MAPPING**	

R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.MP NISTIR MAPPING**	
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.MP NISTIR MAPPING**	
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.MP NISTIR MAPPING**	
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.MP NISTIR MAPPING**	
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.MP NISTIR MAPPING**	
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.MP NISTIR MAPPING**	
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.MP NISTIR MAPPING**	
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.MP NISTIR MAPPING**	
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.MP NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.MP NISTIR MAPPING**	
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	**NO SG.MP NISTIR MAPPING**	
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.MP NISTIR MAPPING**	
R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.MP NISTIR MAPPING**	

R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.MP NISTIR MAPPING**	
R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.MP NISTIR MAPPING**	
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.MP NISTIR MAPPING**	
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.MP NISTIR MAPPING**	
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.MP NISTIR MAPPING**	
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.MP NISTIR MAPPING**	
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.MP NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.MP NISTIR MAPPING**	

R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.MP NISTIR MAPPING**	
R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	**NO SG.MP NISTIR MAPPING**	
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.MP NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.MP NISTIR MAPPING**	
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.MP NISTIR MAPPING**	
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.MP NISTIR MAPPING**	
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.MP NISTIR MAPPING**	
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.MP NISTIR MAPPING**	
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.MP NISTIR MAPPING**	
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.	**NO SG.MP NISTIR MAPPING**	
R1, 1.1: Conditions for activation of the recovery plan(s).	**NO SG.MP NISTIR MAPPING**	
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	**NO SG.MP NISTIR MAPPING**	

R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	**NO SG.MP NISTIR MAPPING**	
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	**NO SG.MP NISTIR MAPPING**	
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.MP NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.MP NISTIR MAPPING**	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.MP NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.MP NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.MP NISTIR MAPPING**	
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.MP NISTIR MAPPING**	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.MP NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.MP NISTIR MAPPING**	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.MP NISTIR MAPPING**	
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.MP NISTIR MAPPING**	

R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.MP NISTIR MAPPING**	
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.MP NISTIR MAPPING**	
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.MP NISTIR MAPPING**	
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.MP NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.MP NISTIR MAPPING**	
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.MP NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.MP NISTIR MAPPING**	

R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.MP NISTIR MAPPING**	
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.MP NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.MP NISTIR MAPPING**	
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.MP NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.MP NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.MP NISTIR MAPPING**	
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.MP NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.MP NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.	**NO SG.MP NISTIR MAPPING**	
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.MP NISTIR MAPPING**	
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.MP NISTIR MAPPING**	

R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.MP NISTIR MAPPING**	
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.		4 - CIP specifies that all media must follow a process so that the media can not be retrieved by unauthorized users, NISTIR is a general policy that can but may not include this.
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.		4 - CIP specifies that all media must follow a process so that the media can not be retrieved by unauthorized users, NISTIR is a general policy that can but may not include this.

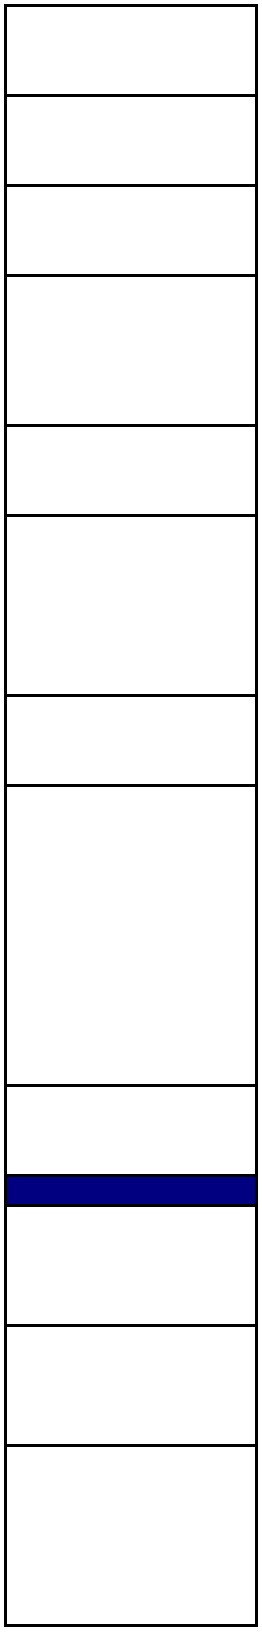
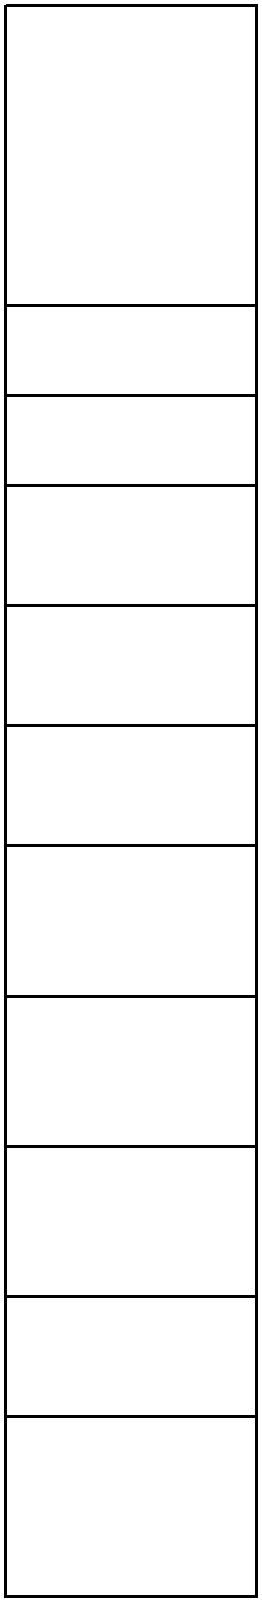
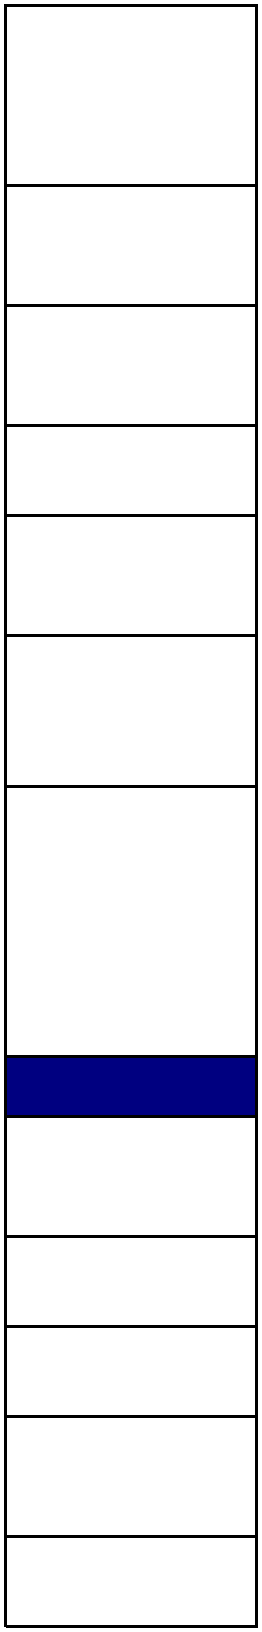
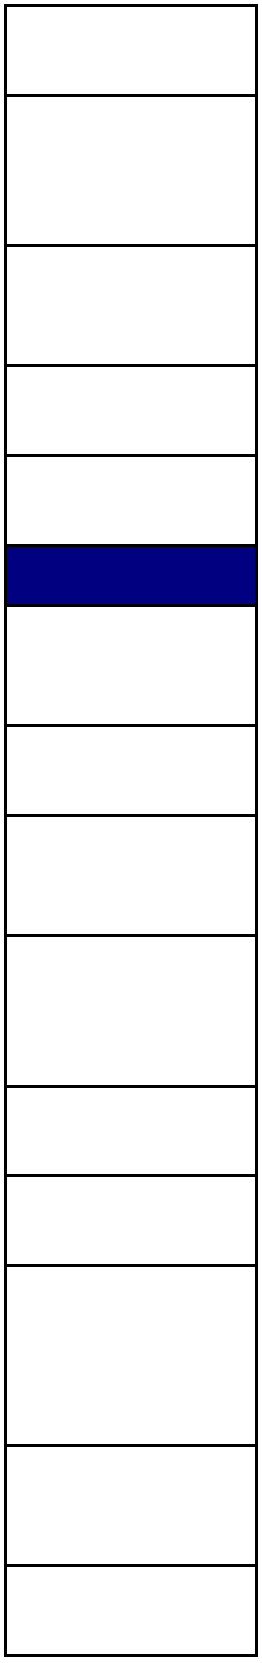
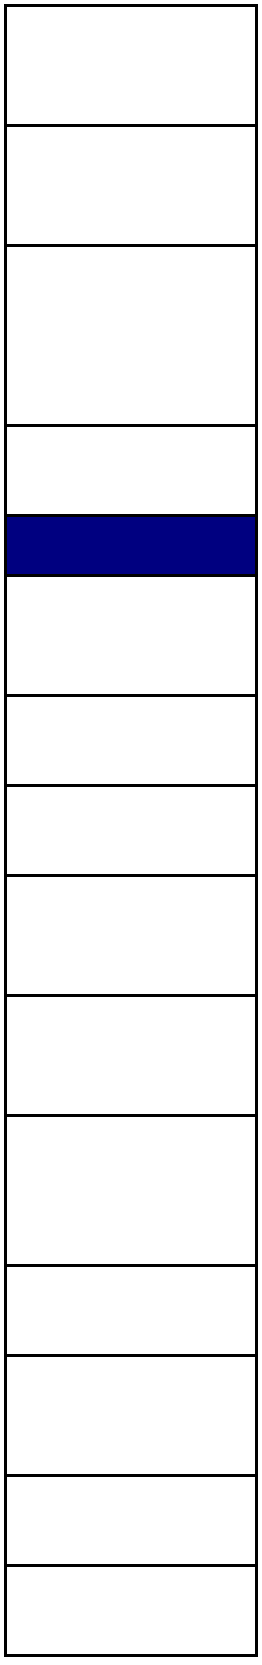
SG.MP-6
Media Sanitization and Disposal

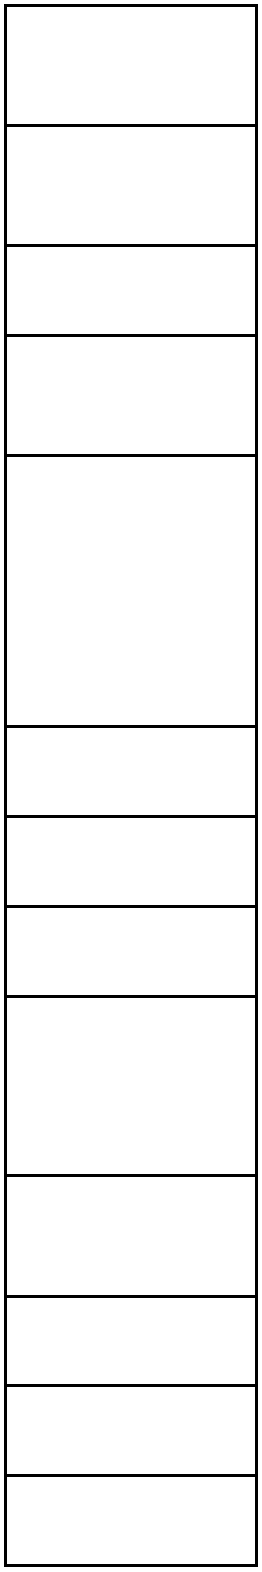


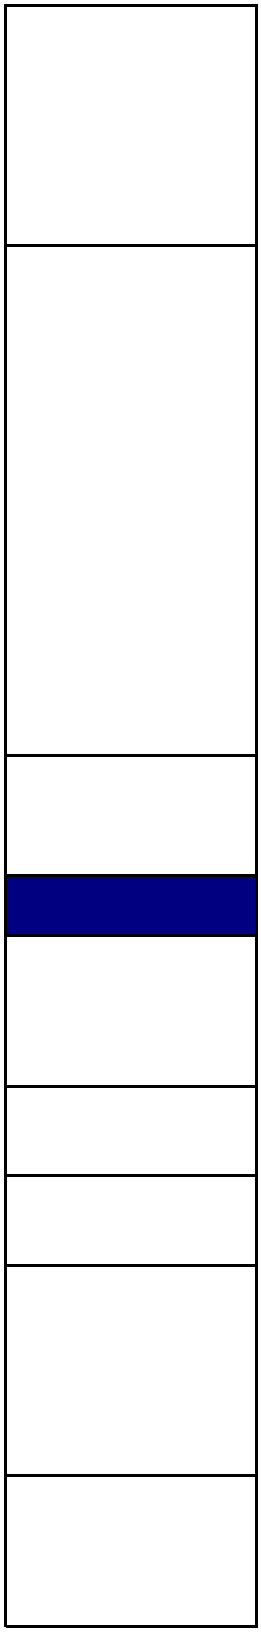


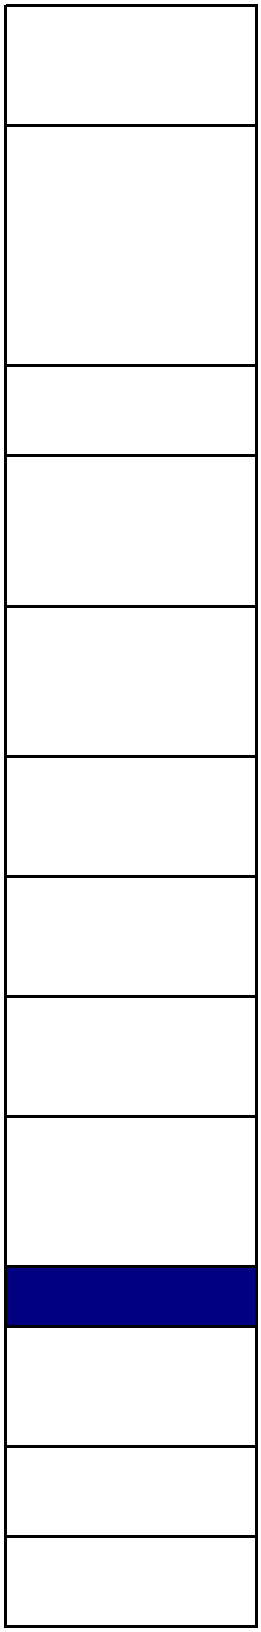


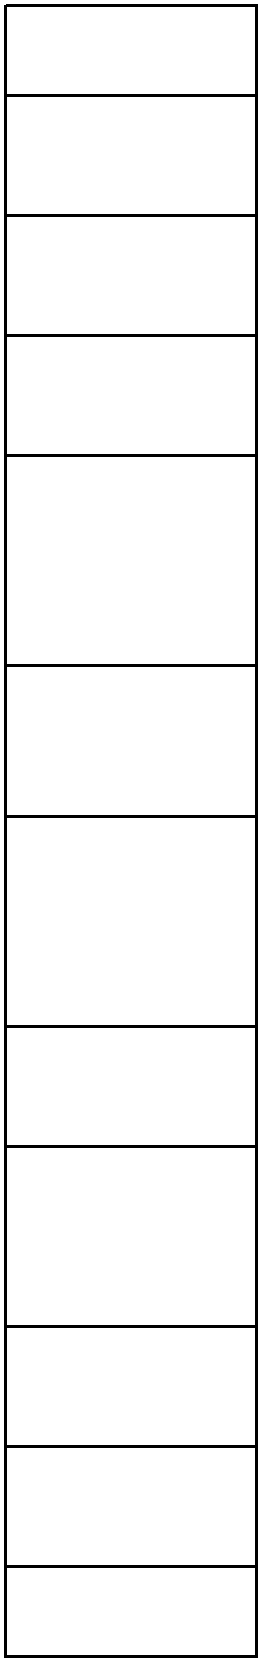


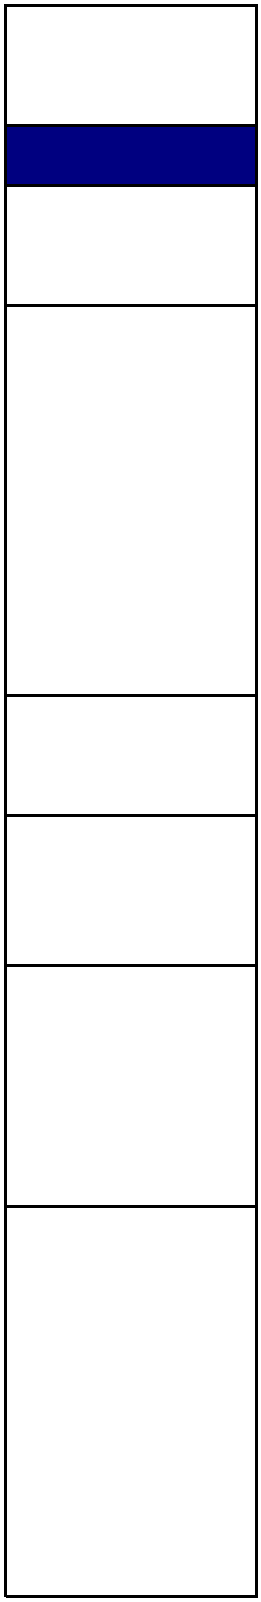


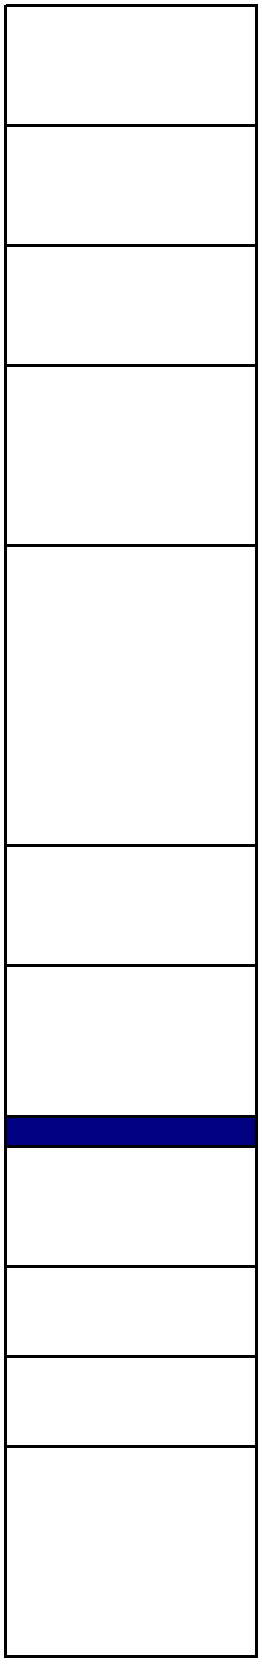












3 - NISTIR requires that no retrieval is possible even authorized before resuse or disposal. Also NISTIR requires the sanitization equipment be tested on a defined frequency
3 - NISTIR requires that no retrieval is possible even authorized before resuse or disposal. Also NISTIR requires the sanitization equipment be tested on a defined frequency

NISTIR Requirement		SG.PE-1
NERC CIP		Physical and Environmental Security Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.		4 - BES Cyber System Identification includes physical access control security configuration, floor plans, equipment layouts, disaster recovery and incident response plans. This satisfies the requirement for a "physical and environmental security policy" from the SG.PE-1
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.PE NISTIR MAPPING**	
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.PE NISTIR MAPPING**	
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.PE NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.PE NISTIR MAPPING**	
R2, 1.1: Personnel Security	**NO SG.PE NISTIR MAPPING**	
R2, 1.2: Electronic Security Parameters	**NO SG.PE NISTIR MAPPING**	

R2, 1.3: Remote Access	**NO SG.PE NISTIR MAPPING**	
R2, 1.4: Physical Security	**NO SG.PE NISTIR MAPPING**	
R2, 1.5: System Security	**NO SG.PE NISTIR MAPPING**	
R2, 1.6: Incident Response	**NO SG.PE NISTIR MAPPING**	
R2, 1.7: Recovery Plans	**NO SG.PE NISTIR MAPPING**	
R2, 1.8: Configuration Change Management	**NO SG.PE NISTIR MAPPING**	
R2, 1.9: Information Protection	**NO SG.PE NISTIR MAPPING**	
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.PE NISTIR MAPPING**	
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	**NO SG.PE NISTIR MAPPING**	
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.PE NISTIR MAPPING**	
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.PE NISTIR MAPPING**	
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.PE NISTIR MAPPING**	
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.PE NISTIR MAPPING**	
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.PE NISTIR MAPPING**	

R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.PE NISTIR MAPPING**	
R2, 2.1: Define the roles that require training.	**NO SG.PE NISTIR MAPPING**	
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.PE NISTIR MAPPING**	
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.PE NISTIR MAPPING**	
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.PE NISTIR MAPPING**	
R2, 2.5: Training on the visitor control program.	**NO SG.PE NISTIR MAPPING**	
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.PE NISTIR MAPPING**	
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.PE NISTIR MAPPING**	
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.PE NISTIR MAPPING**	
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.PE NISTIR MAPPING**	
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.PE NISTIR MAPPING**	
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.PE NISTIR MAPPING**	
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.PE NISTIR MAPPING**	
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.PE NISTIR MAPPING**	
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.	**NO SG.PE NISTIR MAPPING**	

R4, 4.1: An initial personnel risk assessment that includes identity verification.	**NO SG.PE NISTIR MAPPING**	
R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	**NO SG.PE NISTIR MAPPING**	
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.	**NO SG.PE NISTIR MAPPING**	
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.	**NO SG.PE NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.	**NO SG.PE NISTIR MAPPING**	
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.	**NO SG.PE NISTIR MAPPING**	
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.PE NISTIR MAPPING**	
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.PE NISTIR MAPPING**	
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.PE NISTIR MAPPING**	
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.PE NISTIR MAPPING**	
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.PE NISTIR MAPPING**	

R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.		
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.		
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.PE NISTIR MAPPING**	
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.	**NO SG.PE NISTIR MAPPING**	
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.PE NISTIR MAPPING**	
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.	**NO SG.PE NISTIR MAPPING**	
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.	**NO SG.PE NISTIR MAPPING**	
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.	**NO SG.PE NISTIR MAPPING**	
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.PE NISTIR MAPPING**	
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.PE NISTIR MAPPING**	

R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	**NO SG.PE NISTIR MAPPING**	
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	**NO SG.PE NISTIR MAPPING**	
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	**NO SG.PE NISTIR MAPPING**	
R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.PE NISTIR MAPPING**	
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.PE NISTIR MAPPING**	
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	**NO SG.PE NISTIR MAPPING**	
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.PE NISTIR MAPPING**	
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.PE NISTIR MAPPING**	
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.PE NISTIR MAPPING**	
R1, 1.1: Define operational or procedural controls to restrict physical access.		1 - Basically a direct match, though SG.PE-1 is more verbose about definitions.
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.		4 - This requirement provides details of the required physical and environmental security policy and procedures.
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.		4 - This requirement provides details of the required physical and environmental security policy and procedures.

R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.		
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.		
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.		
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.		4 - CIP specifies details of a physical access security system, as an instance of the type of policy required by the NISTIR.
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.		4 - CIP specifies details of a physical access security system, as an instance of the type of policy required by the NISTIR.
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.		
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.PE NISTIR MAPPING**	
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.PE NISTIR MAPPING**	

R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.PE NISTIR MAPPING**	
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.PE NISTIR MAPPING**	
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.PE NISTIR MAPPING**	
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.PE NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.PE NISTIR MAPPING**	
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.PE NISTIR MAPPING**	
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.PE NISTIR MAPPING**	
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.PE NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.PE NISTIR MAPPING**	
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.PE NISTIR MAPPING**	
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.PE NISTIR MAPPING**	
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.PE NISTIR MAPPING**	
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.PE NISTIR MAPPING**	
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.PE NISTIR MAPPING**	
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.PE NISTIR MAPPING**	

R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.PE NISTIR MAPPING**	
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.PE NISTIR MAPPING**	
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.PE NISTIR MAPPING**	
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.PE NISTIR MAPPING**	
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.PE NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.PE NISTIR MAPPING**	
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	**NO SG.PE NISTIR MAPPING**	
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.PE NISTIR MAPPING**	
R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.PE NISTIR MAPPING**	
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.PE NISTIR MAPPING**	

R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.PE NISTIR MAPPING**	
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.PE NISTIR MAPPING**	
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.PE NISTIR MAPPING**	
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.PE NISTIR MAPPING**	
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.PE NISTIR MAPPING**	
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.PE NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.PE NISTIR MAPPING**	
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.PE NISTIR MAPPING**	

R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	**NO SG.PE NISTIR MAPPING**	
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.PE NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.PE NISTIR MAPPING**	
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.PE NISTIR MAPPING**	
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.PE NISTIR MAPPING**	
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.PE NISTIR MAPPING**	
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.PE NISTIR MAPPING**	
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.PE NISTIR MAPPING**	
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.	**NO SG.PE NISTIR MAPPING**	
R1, 1.1: Conditions for activation of the recovery plan(s).	**NO SG.PE NISTIR MAPPING**	
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	**NO SG.PE NISTIR MAPPING**	
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	**NO SG.PE NISTIR MAPPING**	

R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	**NO SG.PE NISTIR MAPPING**	
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.PE NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.PE NISTIR MAPPING**	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.PE NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.PE NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.PE NISTIR MAPPING**	
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.PE NISTIR MAPPING**	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.PE NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.PE NISTIR MAPPING**	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.PE NISTIR MAPPING**	
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.PE NISTIR MAPPING**	
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.PE NISTIR MAPPING**	

CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.PE NISTIR MAPPING**	
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.PE NISTIR MAPPING**	
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.PE NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.PE NISTIR MAPPING**	
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.PE NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.PE NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.PE NISTIR MAPPING**	

R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.PE NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.PE NISTIR MAPPING**	
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.PE NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.PE NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.PE NISTIR MAPPING**	
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.PE NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.PE NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.	**NO SG.PE NISTIR MAPPING**	
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.PE NISTIR MAPPING**	
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.PE NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.PE NISTIR MAPPING**	

R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.PE NISTIR MAPPING**	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.PE NISTIR MAPPING**

NISTIR Requirement		SG.PL-1
NERC CIP		Strategic Planning Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		**NO NERC CIP MAPPING**
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.	**NO SG.PL NISTIR MAPPING**	
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.PL NISTIR MAPPING**	
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.PL NISTIR MAPPING**	
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.		
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:		
R2, 1.1: Personnel Security		
R2, 1.2: Electronic Security Parameters		
R2, 1.3: Remote Access		
R2, 1.4: Physical Security		

R2, 1.5: System Security		
R2, 1.6: Incident Response		
R2, 1.7: Recovery Plans		
R2, 1.8: Configuration Change Management		
R2, 1.9: Information Protection		
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances		
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	**NO SG.PL NISTIR MAPPING**	
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.		
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.PL NISTIR MAPPING**	
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.PL NISTIR MAPPING**	
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.PL NISTIR MAPPING**	
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.		
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.		
R2, 2.1: Define the roles that require training.	**NO SG.PL NISTIR MAPPING**	
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.PL NISTIR MAPPING**	
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.PL NISTIR MAPPING**	

R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.PL NISTIR MAPPING**	
R2, 2.5: Training on the visitor control program.	**NO SG.PL NISTIR MAPPING**	
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.PL NISTIR MAPPING**	
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.PL NISTIR MAPPING**	
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.PL NISTIR MAPPING**	
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.PL NISTIR MAPPING**	
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.PL NISTIR MAPPING**	
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.PL NISTIR MAPPING**	
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.PL NISTIR MAPPING**	
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.PL NISTIR MAPPING**	
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.		
R4, 4.1: An initial personnel risk assessment that includes identity verification.		
R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.		
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.		

R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.		
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.		
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.		
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.PL NISTIR MAPPING**	
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.PL NISTIR MAPPING**	
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.PL NISTIR MAPPING**	
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.PL NISTIR MAPPING**	
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.PL NISTIR MAPPING**	
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.PL NISTIR MAPPING**	
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.PL NISTIR MAPPING**	
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.PL NISTIR MAPPING**	
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.		

R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.PL NISTIR MAPPING**	
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.		
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.		
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.		
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.PL NISTIR MAPPING**	
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.PL NISTIR MAPPING**	
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	**NO SG.PL NISTIR MAPPING**	
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	**NO SG.PL NISTIR MAPPING**	
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	**NO SG.PL NISTIR MAPPING**	
R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.PL NISTIR MAPPING**	
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.PL NISTIR MAPPING**	
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	**NO SG.PL NISTIR MAPPING**	
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.PL NISTIR MAPPING**	

R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.PL NISTIR MAPPING**	
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.PL NISTIR MAPPING**	
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.PL NISTIR MAPPING**	
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.PL NISTIR MAPPING**	
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.PL NISTIR MAPPING**	
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.PL NISTIR MAPPING**	
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.PL NISTIR MAPPING**	
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.PL NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.PL NISTIR MAPPING**	
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.PL NISTIR MAPPING**	
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.PL NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.PL NISTIR MAPPING**	
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.PL NISTIR MAPPING**	

R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.PL NISTIR MAPPING**	
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.PL NISTIR MAPPING**	
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.PL NISTIR MAPPING**	
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.PL NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.PL NISTIR MAPPING**	
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.PL NISTIR MAPPING**	
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.PL NISTIR MAPPING**	
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.PL NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.PL NISTIR MAPPING**	
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.PL NISTIR MAPPING**	
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.PL NISTIR MAPPING**	
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.PL NISTIR MAPPING**	
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.PL NISTIR MAPPING**	
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.PL NISTIR MAPPING**	
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.PL NISTIR MAPPING**	

R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.PL NISTIR MAPPING**	
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.PL NISTIR MAPPING**	
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.PL NISTIR MAPPING**	
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.PL NISTIR MAPPING**	
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.PL NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.PL NISTIR MAPPING**	
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	**NO SG.PL NISTIR MAPPING**	
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.PL NISTIR MAPPING**	
R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.PL NISTIR MAPPING**	
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.PL NISTIR MAPPING**	

R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.PL NISTIR MAPPING**	
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.PL NISTIR MAPPING**	
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.		
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.PL NISTIR MAPPING**	
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.PL NISTIR MAPPING**	
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.PL NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.PL NISTIR MAPPING**	
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.PL NISTIR MAPPING**	

R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	**NO SG.PL NISTIR MAPPING**	
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.PL NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.PL NISTIR MAPPING**	
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.PL NISTIR MAPPING**	
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.PL NISTIR MAPPING**	
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.PL NISTIR MAPPING**	
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.PL NISTIR MAPPING**	
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.PL NISTIR MAPPING**	
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.		
R1, 1.1: Conditions for activation of the recovery plan(s).	**NO SG.PL NISTIR MAPPING**	
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	**NO SG.PL NISTIR MAPPING**	
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	**NO SG.PL NISTIR MAPPING**	

R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	**NO SG.PL NISTIR MAPPING**	
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.PL NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.PL NISTIR MAPPING**	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.PL NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.PL NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.PL NISTIR MAPPING**	
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.PL NISTIR MAPPING**	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.PL NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.PL NISTIR MAPPING**	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.PL NISTIR MAPPING**	
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.PL NISTIR MAPPING**	
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.PL NISTIR MAPPING**	

CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.PL NISTIR MAPPING**	
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.PL NISTIR MAPPING**	
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.PL NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.PL NISTIR MAPPING**	
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.PL NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.PL NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.PL NISTIR MAPPING**	

R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.PL NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.PL NISTIR MAPPING**	
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.PL NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.PL NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.PL NISTIR MAPPING**	
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.PL NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.PL NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.	**NO SG.PL NISTIR MAPPING**	
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.PL NISTIR MAPPING**	
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.PL NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.PL NISTIR MAPPING**	

R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.PL NISTIR MAPPING**	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.PL NISTIR MAPPING**	

SG.PL-2	SG.PL-3	SG.PL-4	SG.PL-5
Smart Grid Information System Security Plan	Rules of Behavior	Privacy Impact Assessment	Security-Related Activity Planning
			NO NERC CIP MAPPING
2 - CIP's Senior Manager has much more explicit responsibilities than the vague "management" and "the organization" in NERC			
2 - CIP's cyber security policy is an example of an information system security plan, and includes a number of specific topics, especially in the guidelines and technical basis section.

NISTIR Requirement		SG.PM-1
NERC CIP		Security Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.		SGIP should include following Requirement from CIP-002-5R1:Organizations shall identify and categorize High and Medium impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.

R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.		SGIP shall include following requirement from CIP-002-5 R1.1 to Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.PM NISTIR MAPPING**	
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.PM NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.PM NISTIR MAPPING**	
R2, 1.1: Personnel Security	**NO SG.PM NISTIR MAPPING**	
R2, 1.2: Electronic Security Parameters	**NO SG.PM NISTIR MAPPING**	
R2, 1.3: Remote Access	**NO SG.PM NISTIR MAPPING**	
R2, 1.4: Physical Security	**NO SG.PM NISTIR MAPPING**	
R2, 1.5: System Security	**NO SG.PM NISTIR MAPPING**	

R2, 1.6: Incident Response	**NO SG.PM NISTIR MAPPING**	
R2, 1.7: Recovery Plans	**NO SG.PM NISTIR MAPPING**	
R2, 1.8: Configuration Change Management	**NO SG.PM NISTIR MAPPING**	
R2, 1.9: Information Protection	**NO SG.PM NISTIR MAPPING**	
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.PM NISTIR MAPPING**	
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.		
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.PM NISTIR MAPPING**	

R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.		
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.PM NISTIR MAPPING**	
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.PM NISTIR MAPPING**	
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.PM NISTIR MAPPING**	
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.PM NISTIR MAPPING**	
R2, 2.1: Define the roles that require training.	**NO SG.PM NISTIR MAPPING**	
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.PM NISTIR MAPPING**	
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.PM NISTIR MAPPING**	

R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.PM NISTIR MAPPING**	
R2, 2.5: Training on the visitor control program.	**NO SG.PM NISTIR MAPPING**	
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.PM NISTIR MAPPING**	
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.PM NISTIR MAPPING**	
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.PM NISTIR MAPPING**	
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.PM NISTIR MAPPING**	
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.PM NISTIR MAPPING**	
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.PM NISTIR MAPPING**	
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.PM NISTIR MAPPING**	
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.PM NISTIR MAPPING**	
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.	**NO SG.PM NISTIR MAPPING**	
R4, 4.1: An initial personnel risk assessment that includes identity verification.	**NO SG.PM NISTIR MAPPING**	
R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	**NO SG.PM NISTIR MAPPING**	
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.	**NO SG.PM NISTIR MAPPING**	

R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.	**NO SG.PM NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.	**NO SG.PM NISTIR MAPPING**	
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.	**NO SG.PM NISTIR MAPPING**	
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.PM NISTIR MAPPING**	
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.PM NISTIR MAPPING**	
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.PM NISTIR MAPPING**	
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.PM NISTIR MAPPING**	
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.PM NISTIR MAPPING**	
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.PM NISTIR MAPPING**	
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.PM NISTIR MAPPING**	
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.PM NISTIR MAPPING**	
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.	**NO SG.PM NISTIR MAPPING**	

R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.PM NISTIR MAPPING**	
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.	**NO SG.PM NISTIR MAPPING**	
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.	**NO SG.PM NISTIR MAPPING**	
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.	**NO SG.PM NISTIR MAPPING**	
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.PM NISTIR MAPPING**	
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.PM NISTIR MAPPING**	
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	**NO SG.PM NISTIR MAPPING**	
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	**NO SG.PM NISTIR MAPPING**	
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	**NO SG.PM NISTIR MAPPING**	
R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.PM NISTIR MAPPING**	
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.PM NISTIR MAPPING**	
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	**NO SG.PM NISTIR MAPPING**	
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.PM NISTIR MAPPING**	

R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.PM NISTIR MAPPING**	
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.PM NISTIR MAPPING**	
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.PM NISTIR MAPPING**	
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.PM NISTIR MAPPING**	
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.PM NISTIR MAPPING**	
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.PM NISTIR MAPPING**	
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.PM NISTIR MAPPING**	
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.PM NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.PM NISTIR MAPPING**	
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.PM NISTIR MAPPING**	
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.PM NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.PM NISTIR MAPPING**	
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.PM NISTIR MAPPING**	

R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.PM NISTIR MAPPING**	
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.PM NISTIR MAPPING**	
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.PM NISTIR MAPPING**	
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.PM NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.PM NISTIR MAPPING**	
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.PM NISTIR MAPPING**	
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.PM NISTIR MAPPING**	
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.PM NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.PM NISTIR MAPPING**	
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.PM NISTIR MAPPING**	
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.PM NISTIR MAPPING**	
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.PM NISTIR MAPPING**	
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.PM NISTIR MAPPING**	
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.PM NISTIR MAPPING**	
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.PM NISTIR MAPPING**	

R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.PM NISTIR MAPPING**	
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.PM NISTIR MAPPING**	
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.PM NISTIR MAPPING**	
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.PM NISTIR MAPPING**	
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.PM NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.PM NISTIR MAPPING**	
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	**NO SG.PM NISTIR MAPPING**	
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.PM NISTIR MAPPING**	
R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.PM NISTIR MAPPING**	
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.PM NISTIR MAPPING**	

R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.PM NISTIR MAPPING**	
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.PM NISTIR MAPPING**	
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.PM NISTIR MAPPING**	
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.PM NISTIR MAPPING**	
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.PM NISTIR MAPPING**	
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.PM NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.PM NISTIR MAPPING**	
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.PM NISTIR MAPPING**	

R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	**NO SG.PM NISTIR MAPPING**	
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.PM NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.PM NISTIR MAPPING**	
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.PM NISTIR MAPPING**	
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.PM NISTIR MAPPING**	
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.PM NISTIR MAPPING**	
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.PM NISTIR MAPPING**	
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.PM NISTIR MAPPING**	
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.	**NO SG.PM NISTIR MAPPING**	
R1, 1.1: Conditions for activation of the recovery plan(s).	**NO SG.PM NISTIR MAPPING**	
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	**NO SG.PM NISTIR MAPPING**	
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	**NO SG.PM NISTIR MAPPING**	

R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	**NO SG.PM NISTIR MAPPING**	
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.PM NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.PM NISTIR MAPPING**	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.PM NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.PM NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.PM NISTIR MAPPING**	
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.PM NISTIR MAPPING**	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.PM NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.PM NISTIR MAPPING**	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.PM NISTIR MAPPING**	
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.PM NISTIR MAPPING**	
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.PM NISTIR MAPPING**	

CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.PM NISTIR MAPPING**	
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.		
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.PM NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.PM NISTIR MAPPING**	
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.PM NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.PM NISTIR MAPPING**	

R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.PM NISTIR MAPPING**	
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.PM NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.PM NISTIR MAPPING**	
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.PM NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.PM NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.PM NISTIR MAPPING**	
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.PM NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.PM NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.		
R1, 1.2: Access control and handling procedures for BES Cyber System Information.		

R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.		
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.PM NISTIR MAPPING**	
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.PM NISTIR MAPPING**	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.PM NISTIR MAPPING**	

SG.PM-2	SG.PM-3	SG.PM-4
Security Program Plan	Senior Management Authority	Security Architecture

SGIP shall include following requirement from NERC CIP-003-5 R3 to review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.		

	SGIP shall include following requirement from NERC CIP-003-5 R3 to incorporate delegation of Senior Manager authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	

		SGIP should include CIP-010-1 R1.1.1 to develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.

		SGIP shall include following Requirement: Organizations shall implement document process and criteria to identify BES Cyber System Information.
		SGIP shall include following Requirement: Organizations shall implement Access control and handling procedures for BES Cyber System Information.

SG.PM-5	SG.PM-6	SG.PM-7	SG.PM-8
Risk Management Strategy	Security Authorization to Operate Process	Mission/Business Process Definition	Management Accountability
NO NERC CIP MAPPING		**NO NERC CIP MAPPING**	**NO NERC CIP MAPPING**

	SGIP shall include following Requirement: Organizations shall implement Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.		

NISTIR Requirement		SG.PS-1
NERC CIP		Personnel Security Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.	**NO SG.PS NISTIR MAPPING**	
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.PS NISTIR MAPPING**	
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.PS NISTIR MAPPING**	
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.PS NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.PS NISTIR MAPPING**	
R2, 1.1: Personnel Security	**NO SG.PS NISTIR MAPPING**	
R2, 1.2: Electronic Security Parameters	**NO SG.PS NISTIR MAPPING**	
R2, 1.3: Remote Access	**NO SG.PS NISTIR MAPPING**	
R2, 1.4: Physical Security	**NO SG.PS NISTIR MAPPING**	
R2, 1.5: System Security	**NO SG.PS NISTIR MAPPING**	

R2, 1.6: Incident Response	**NO SG.PS NISTIR MAPPING**	
R2, 1.7: Recovery Plans	**NO SG.PS NISTIR MAPPING**	
R2, 1.8: Configuration Change Management	**NO SG.PS NISTIR MAPPING**	
R2, 1.9: Information Protection	**NO SG.PS NISTIR MAPPING**	
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.PS NISTIR MAPPING**	
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	**NO SG.PS NISTIR MAPPING**	
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.PS NISTIR MAPPING**	
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.PS NISTIR MAPPING**	
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.PS NISTIR MAPPING**	
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.PS NISTIR MAPPING**	
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.PS NISTIR MAPPING**	
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.PS NISTIR MAPPING**	
R2, 2.1: Define the roles that require training.	**NO SG.PS NISTIR MAPPING**	

R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.PS NISTIR MAPPING**	
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.PS NISTIR MAPPING**	
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.PS NISTIR MAPPING**	
R2, 2.5: Training on the visitor control program.	**NO SG.PS NISTIR MAPPING**	
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.PS NISTIR MAPPING**	
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.PS NISTIR MAPPING**	
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.PS NISTIR MAPPING**	
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.PS NISTIR MAPPING**	
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.PS NISTIR MAPPING**	
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.PS NISTIR MAPPING**	
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.PS NISTIR MAPPING**	
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.PS NISTIR MAPPING**	
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.		2(SGIP should include CIP-004-5 Table R4 – Personnel Risk Assessment Program)

R4, 4.1: An initial personnel risk assessment that includes identity verification.		2- SGIP should include CIP-004-5 R4.4.1 as follows: Organizations shall implement initial personnel risk assessment that includes identity verification.
R4.4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.		
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.		
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.		
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.		
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.		
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.PS NISTIR MAPPING**	

R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.		

R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.		
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.		
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.		
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.		
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.		
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.		
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.		

R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.		
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.PS NISTIR MAPPING**	
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.PS NISTIR MAPPING**	
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	**NO SG.PS NISTIR MAPPING**	
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	**NO SG.PS NISTIR MAPPING**	
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	**NO SG.PS NISTIR MAPPING**	
R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.PS NISTIR MAPPING**	
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.PS NISTIR MAPPING**	
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	**NO SG.PS NISTIR MAPPING**	
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	**NO SG.PS NISTIR MAPPING**	
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.PS NISTIR MAPPING**	
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.PS NISTIR MAPPING**	
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.PS NISTIR MAPPING**	

R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.PS NISTIR MAPPING**	
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.PS NISTIR MAPPING**	
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.PS NISTIR MAPPING**	
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.PS NISTIR MAPPING**	
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.PS NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.PS NISTIR MAPPING**	
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.PS NISTIR MAPPING**	
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.PS NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.PS NISTIR MAPPING**	
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.PS NISTIR MAPPING**	
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.PS NISTIR MAPPING**	
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.PS NISTIR MAPPING**	
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	**NO SG.PS NISTIR MAPPING**	

R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	**NO SG.PS NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.PS NISTIR MAPPING**	
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.PS NISTIR MAPPING**	
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.PS NISTIR MAPPING**	
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.PS NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.PS NISTIR MAPPING**	
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.PS NISTIR MAPPING**	
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.PS NISTIR MAPPING**	
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.PS NISTIR MAPPING**	
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.PS NISTIR MAPPING**	
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.PS NISTIR MAPPING**	
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.PS NISTIR MAPPING**	
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.PS NISTIR MAPPING**	
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.PS NISTIR MAPPING**	

R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.PS NISTIR MAPPING**	
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.PS NISTIR MAPPING**	
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.PS NISTIR MAPPING**	
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.PS NISTIR MAPPING**	
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	**NO SG.PS NISTIR MAPPING**	
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.PS NISTIR MAPPING**	
R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.PS NISTIR MAPPING**	
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.PS NISTIR MAPPING**	
R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.PS NISTIR MAPPING**	
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.PS NISTIR MAPPING**	
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		

R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.PS NISTIR MAPPING**	
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.PS NISTIR MAPPING**	
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.PS NISTIR MAPPING**	
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.PS NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.PS NISTIR MAPPING**	
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.PS NISTIR MAPPING**	
R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	**NO SG.PS NISTIR MAPPING**	
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.PS NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.PS NISTIR MAPPING**	
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.PS NISTIR MAPPING**	
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.PS NISTIR MAPPING**	
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.PS NISTIR MAPPING**	

R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.PS NISTIR MAPPING**	
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.PS NISTIR MAPPING**	
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.	**NO SG.PS NISTIR MAPPING**	
R1, 1.1: Conditions for activation of the recovery plan(s).	**NO SG.PS NISTIR MAPPING**	
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	**NO SG.PS NISTIR MAPPING**	
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	**NO SG.PS NISTIR MAPPING**	
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	**NO SG.PS NISTIR MAPPING**	
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.PS NISTIR MAPPING**	
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.PS NISTIR MAPPING**	
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.PS NISTIR MAPPING**	
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.PS NISTIR MAPPING**	
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.PS NISTIR MAPPING**	

R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.PS NISTIR MAPPING**	
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.PS NISTIR MAPPING**	
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.PS NISTIR MAPPING**	
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.PS NISTIR MAPPING**	
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.PS NISTIR MAPPING**	
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.PS NISTIR MAPPING**	
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.PS NISTIR MAPPING**	
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.PS NISTIR MAPPING**	
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.PS NISTIR MAPPING**	
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.PS NISTIR MAPPING**	

R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.PS NISTIR MAPPING**	
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.PS NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.PS NISTIR MAPPING**	
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.PS NISTIR MAPPING**	
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.PS NISTIR MAPPING**	
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.PS NISTIR MAPPING**	
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.PS NISTIR MAPPING**	
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.PS NISTIR MAPPING**	

R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.PS NISTIR MAPPING**	
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.PS NISTIR MAPPING**	
R1, 1.1: One or more methods to identify BES Cyber System Information.	**NO SG.PS NISTIR MAPPING**	
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.PS NISTIR MAPPING**	
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.PS NISTIR MAPPING**	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.PS NISTIR MAPPING**	
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.PS NISTIR MAPPING**	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	**NO SG.PS NISTIR MAPPING**	

SG.PS-2	SG.PS-3	SG.PS-4
Position Categorization	Personnel Screening	Personnel Termination
NO NERC CIP MAPPING		

	3- NERC CIP-004-5 R4.4.1 should include detailed personnel screening requirement detailed in SG.PS-3 as follows: Basic screening requirements should include: 1. Employment history; 2. Verification of the highest education degree received; 3. Residency; 4. References; and 5. Law enforcement records.	
	2- SGIP should include CIP requirement for seven years history records as follows: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	
	2(SGIP should include CIP-004-5 Table R4 – Personnel Risk Assessment Program to determine when to deny authorized access.)	
	2(SGAP should include CIP-004-5 Table R5)	
	2(SGAP should include personnel risk assessment for CIP exceptional Circumstances to include following: 1. Processes to invoke special procedures in the event of a CIP Exceptional Circumstance 2. Processes to allow for exceptions to policy that do not violate CIP requirements)	

		2(SGIP should include table CIP-004-5 Table R7 – Access Revocation)
		3(CIP-004-5-R7.1 shall include requirement of exit interview to convey the constraints imposed on the individuals/ contractors/ Third Party Service Providers, due to revocation of privileges caused by change in assignments or termination of job .)
		2(SGIP should include calendar day criteria)
		2(SGIP should include calendar day criteria)
		2(SGIP should include 30 calendar day criteria)

		2(SGIP should include 30 calendar day criteria and change of password for group passwords)

SG.PS-5	SG.PS-6	SG.PS-7	SG.PS-8
Personnel Transfer	Access Agreements	Contractor and Third-Party Personnel Security	Personnel Accountability
	NO NERC CIP MAPPING		**NO NERC CIP MAPPING**

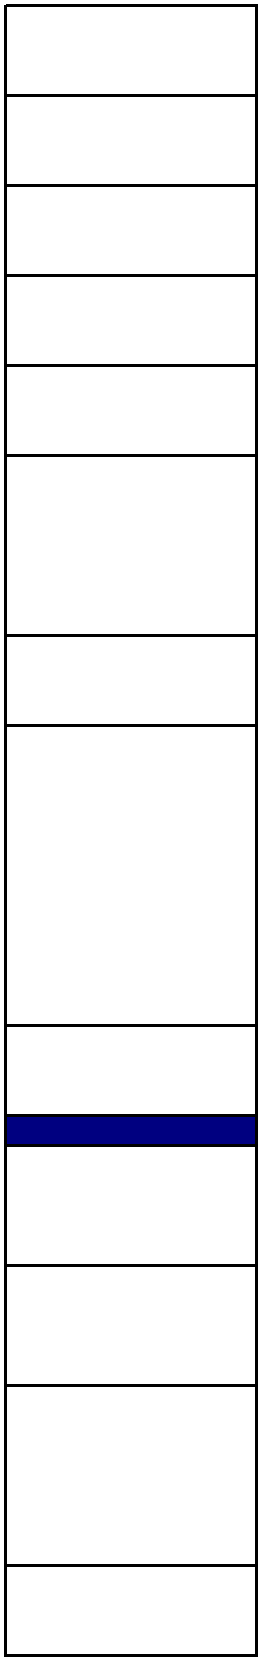
		X	

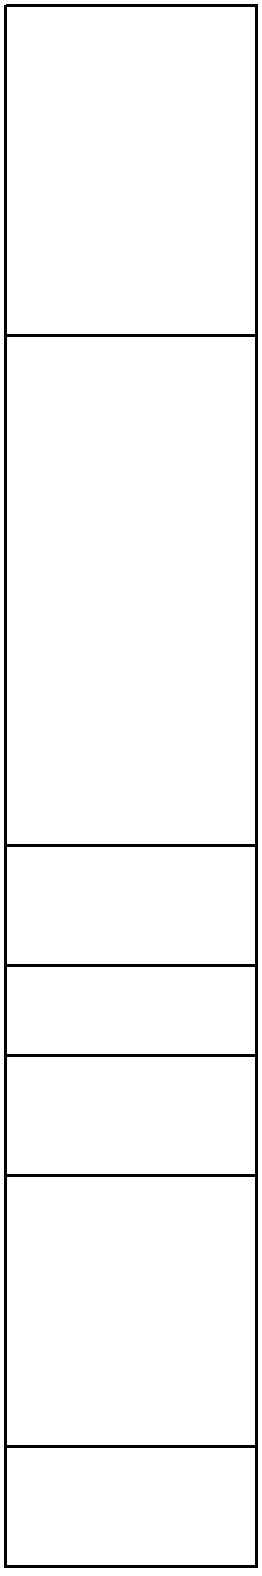
		2(SGIP should include CIP-004-5 Table R4 – Personnel Risk Assessment Program)	

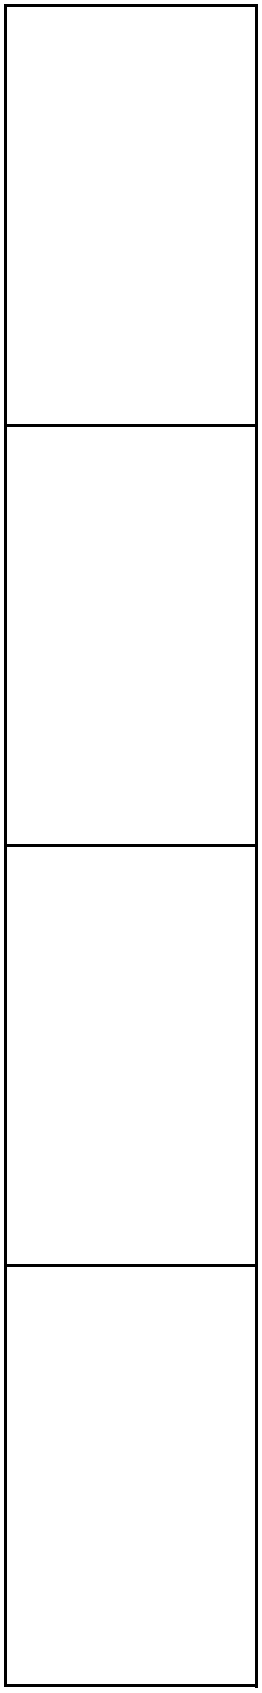
		3(CIP-004-5 R6.1 shall include security authorization for granting escorted/ unescorted access permission for performing assigned work functions for contractors and third party providers, including service bureaus and other organizations providing Smart Grid information system operation and maintenance, development, IT services, outsourced applications, and network and security management.	
		3(CIP-004-5 R6.2 shall include security authorization for granting escorted/ unescorted access permission for performing assigned work functions for contractors and third party providers, including service bureaus and other organizations providing Smart Grid information system operation and maintenance, development, IT services, outsourced applications, and network and security management.	
		3(CIP-004-5 R6.3 shall include security authorization for granting escorted/ unescorted access permission for performing assigned work functions for contractors and third party providers, including service bureaus and other organizations providing Smart Grid information system operation and maintenance, development, IT services, outsourced applications, and network and security management.	
		3(CIP-004-5 R6.4 shall include security authorization for granting escorted/ unescorted access permission for performing assigned work functions for contractors and third party providers, including service bureaus and other organizations providing Smart Grid information system operation and maintenance, development, IT services, outsourced applications, and network and security management.	

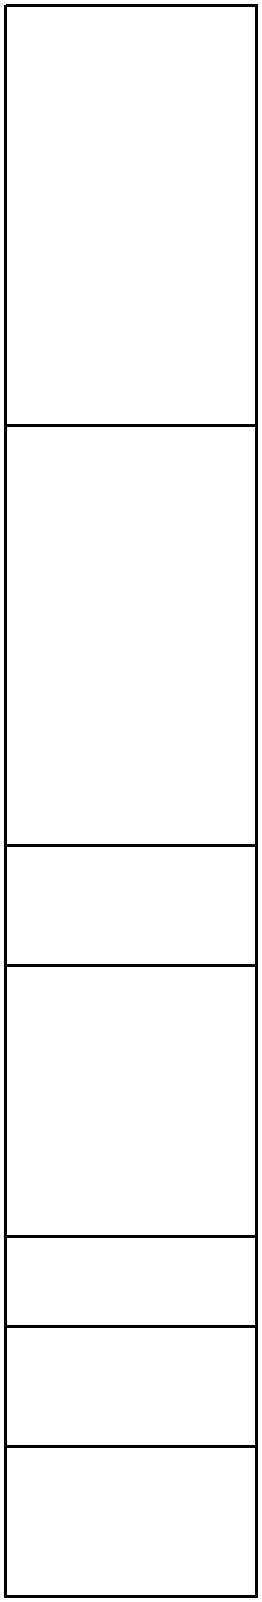
		3(CIP-004-5 R6.5 shall include security authorization for periodic review of permission for performing assigned work functions for contractors and third party providers, including service bureaus and other organizations providing Smart Grid information system operation and maintenance, development, IT services, outsourced applications, and network and security management.	
		3(CIP-004-5 R6.6 shall include security authorization for periodic review of permission for performing assigned work functions for contractors and third party providers, including service bureaus and other organizations providing Smart Grid information system operation and maintenance, development, IT services, outsourced applications, and network and security management).	
2(SGIP should include calendar day criteria)			

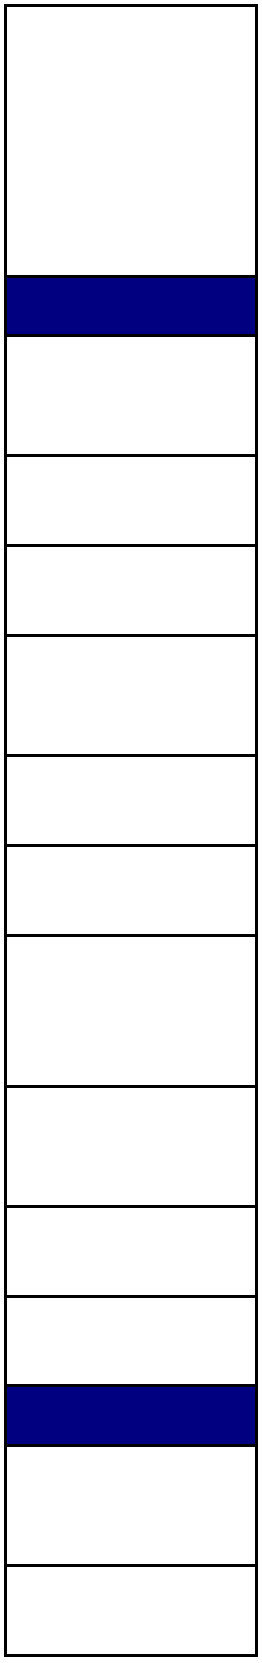
SG.PS-9
Personnel Roles
NO NERC CIP MAPPING

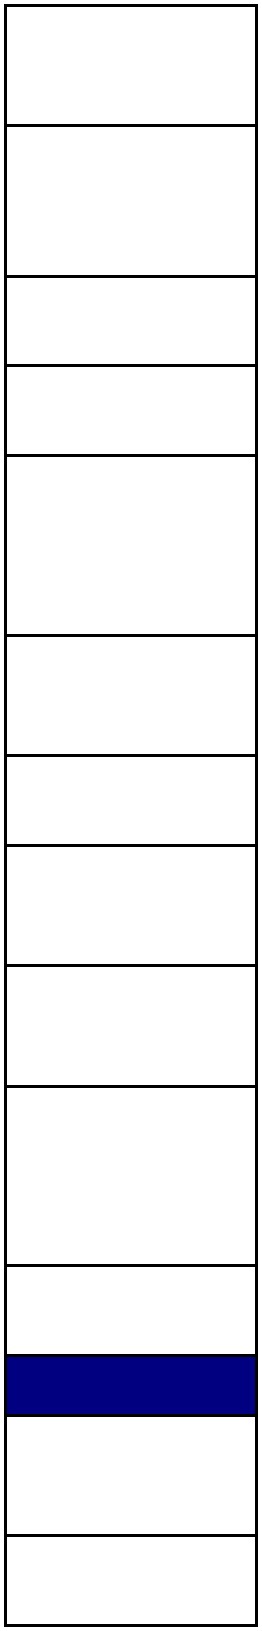


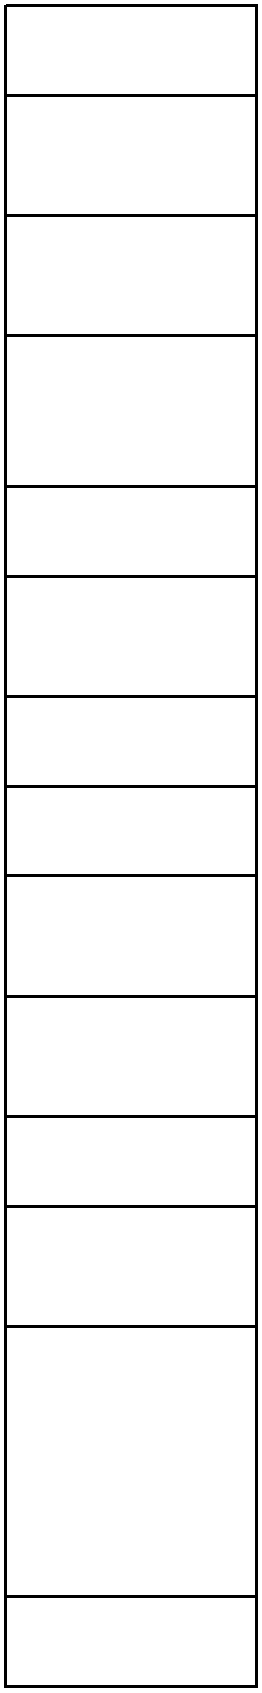


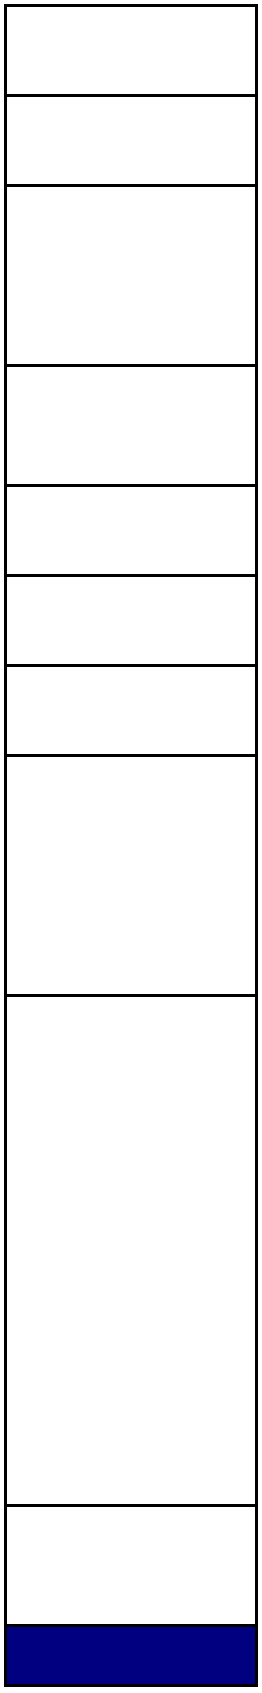


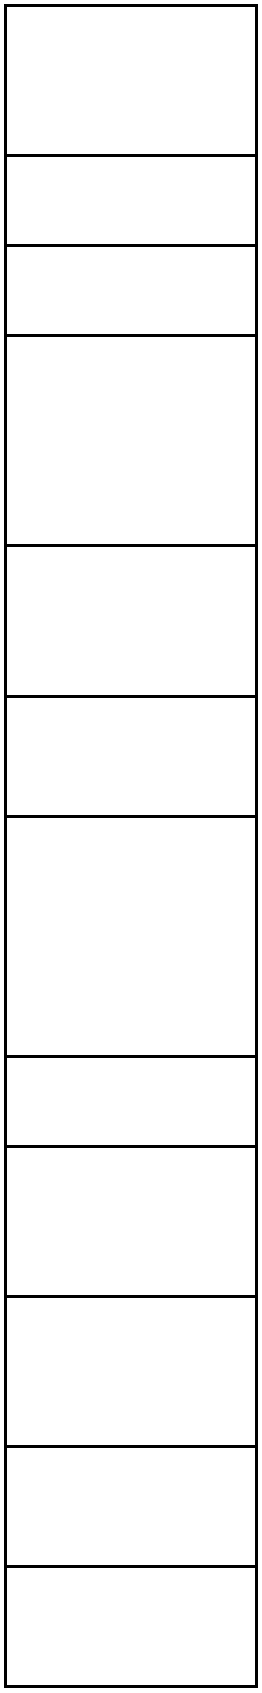


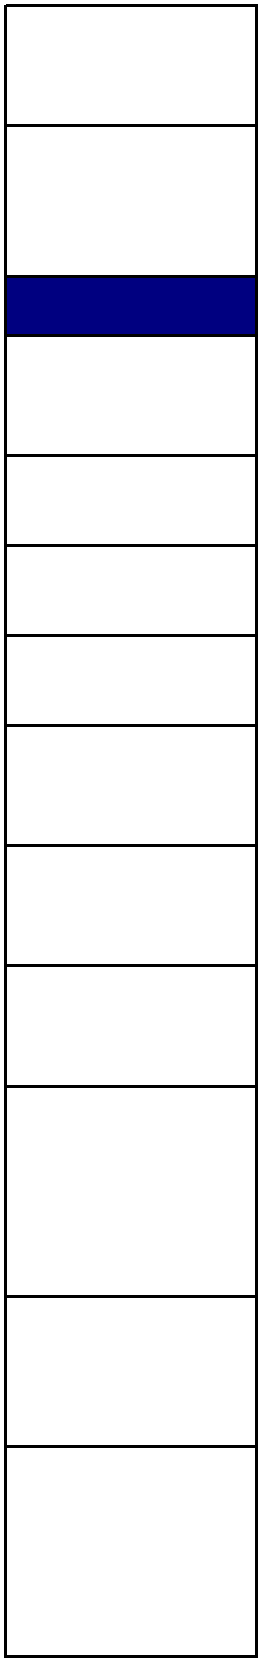


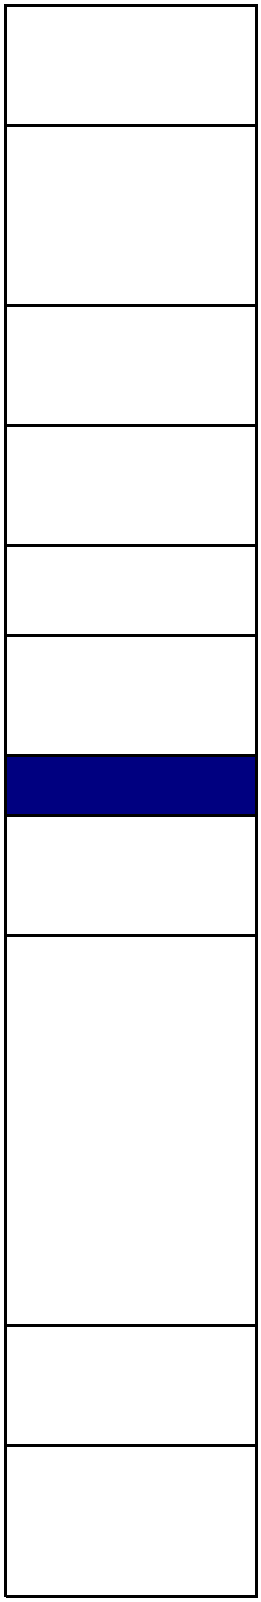


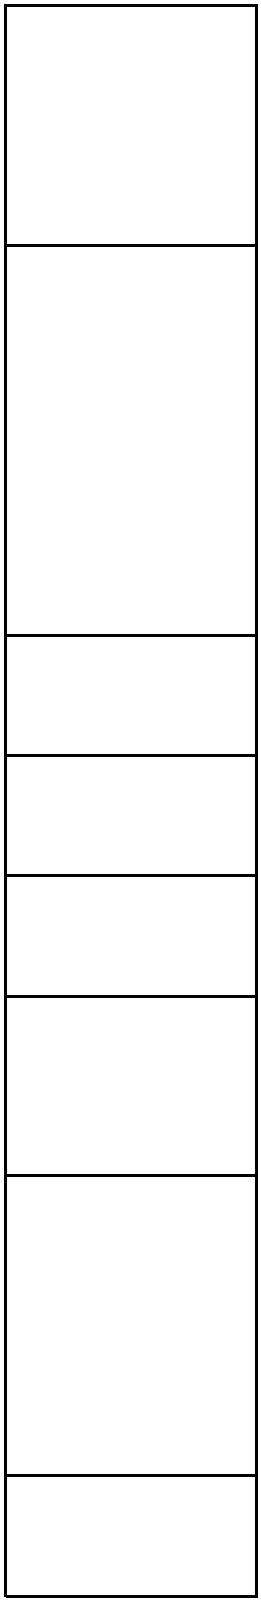


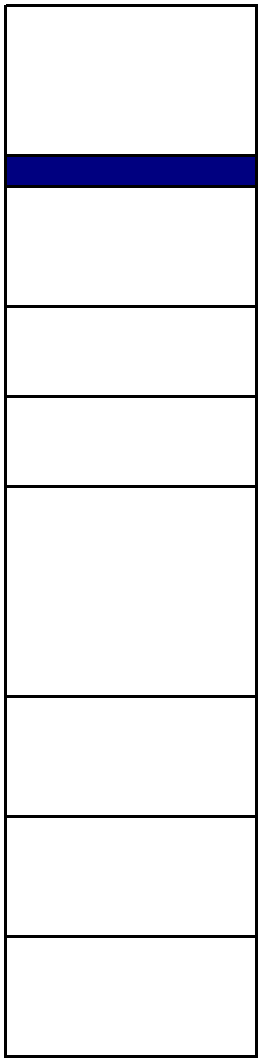












NISTIR Requirement		SG.RA-1
NERC CIP		Risk Assessment Policy and Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.		
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.		
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.		
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.		
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:		
R2, 1.1: Personnel Security		
R2, 1.2: Electronic Security Parameters		
R2, 1.3: Remote Access		
R2, 1.4: Physical Security		
R2, 1.5: System Security		
R2, 1.6: Incident Response		
R2, 1.7: Recovery Plans		
R2, 1.8: Configuration Change Management		
R2, 1.9: Information Protection		
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances		
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.		

R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.		
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.		
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.		
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.		
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.		
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.		
R2, 2.1: Define the roles that require training.		
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.		
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.		
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.		
R2, 2.5: Training on the visitor control program.		
R2, 2.6: Training on handling of BES Cyber System Information and storage media.		
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.		
R2, 2.8: Training on recovery plans for BES Cyber Systems.		
R2, 2.9: Training on response to BES Cyber Security Incidents.		
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.		

R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.		
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.		
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.		
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.		
R4, 4.1: An initial personnel risk assessment that includes identity verification.		
R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.		
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.		
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.		
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.		
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.		
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.		
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		

R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.		
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.		
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.		
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.		
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.		
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.		
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.		
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.		
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.		

CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.		
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.		
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).		
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.		
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.		
R1, 1.5: A documented method for detecting malicious communications at each EAP.		
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.		
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.		
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.		
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.		
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.		
R1, 1.1: Define operational or procedural controls to restrict physical access.		
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.		
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.		
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.		

R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.		
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.		
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.		
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.		
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.		
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.		
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.		
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.		
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.		
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.		
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.		
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.		
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.		

R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.		
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.		
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.		
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.		
R3, 3.2: Disarm or remove identified malicious code.		
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).		
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.		
R3, 3.5: Log each Transient Cyber Asset connection.		
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.		
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.		
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.		
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.		
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.		
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.		
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.		
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.		

R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.		
R5, 5.3: Identify individuals who have authorized access to shared accounts.		
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.		
R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.		
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.		
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.		
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.		
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.		
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.		

R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.		
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.		
R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.		
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.		
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.		
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.		
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.		
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.		
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.		
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.		
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.		
R1, 1.1: Conditions for activation of the recovery plan(s).		

R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.		
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.		
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.		
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.		
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.		
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.		
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.		
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.		
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.		
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.		
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.		
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.		

R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.		
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.		
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.		
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.		
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.		
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.		
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.		
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.		

R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.		
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.		
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.		
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.		
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.		
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.		
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.		
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.		
R1, 1.1: One or more methods to identify BES Cyber System Information.		
R1, 1.2: Access control and handling procedures for BES Cyber System Information.		
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.		

R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.		
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.		
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.

NISTIR Requirement		SG.SA-1
NERC CIP		Smart Grid Information System & Services Acquisition Policy & Procedures
Note that only the language from the requirement section of CIPv5 is included in this table.		
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization		
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.		
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.		
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.		
CIP-003-5: Cyber Security — Security Management Controls		
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.		
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:		
R2, 1.1: Personnel Security		
R2, 1.2: Electronic Security Parameters		
R2, 1.3: Remote Access		
R2, 1.4: Physical Security		
R2, 1.5: System Security		
R2, 1.6: Incident Response		
R2, 1.7: Recovery Plans		
R2, 1.8: Configuration Change Management		
R2, 1.9: Information Protection		
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances		

R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.		
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.		
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.		
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.		
CIP 004-5: Cyber Security – Personnel and Training		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.		
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.		
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.		
R2, 2.1: Define the roles that require training.		
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.		
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.		
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.		
R2, 2.5: Training on the visitor control program.		
R2, 2.6: Training on handling of BES Cyber System Information and storage media.		
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.		
R2, 2.8: Training on recovery plans for BES Cyber Systems.		

R2, 2.9: Training on response to BES Cyber Security Incidents.		
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.		
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.		
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.		
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.		
R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.		
R4, 4.1: An initial personnel risk assessment that includes identity verification.		
R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.		
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.		
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.		
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.		
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.		
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.		

R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.		
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.		
R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.		
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.		
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.		
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.		
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.		
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.		
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.		

R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.		
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.		
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.		
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).		
R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.		
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.		
R1, 1.5: A documented method for detecting malicious communications at each EAP.		
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.		
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.		
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.		
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.		
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems		
R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.		
R1, 1.1: Define operational or procedural controls to restrict physical access.		
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.		

R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.		
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.		
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.		
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.		
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.		
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.		
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.		
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.		
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.		
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.		
CIP-007-5: Cyber Security-Systems Security Management		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.		
R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.		
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.		
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.		

R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.		
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.		
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.		
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.		
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.		
R3, 3.2: Disarm or remove identified malicious code.		
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).		
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.		
R3, 3.5: Log each Transient Cyber Asset connection.		
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.		
R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.		
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.		
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.		
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.		
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.		

R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.		
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.		
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.		
R5, 5.3: Identify individuals who have authorized access to shared accounts.		
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.		
R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.		
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.		
CIP-008-5: Cyber Security-Incident Reporting and Response Planning		
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.		
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.		
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.		

R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.		
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.		
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.		
R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.		
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.		
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.		
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.		
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.		
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.		
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.		
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.		
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems		

R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.		
R1, 1.1: Conditions for activation of the recovery plan(s).		
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.		
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.		
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.		
R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.		
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.		
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.		
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.		
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.		
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.		
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.		
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.		

R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.		
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.		
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.		
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.		
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.		
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.		
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.		
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.		

R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.		
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.		
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.		
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.		
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.		
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.		
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.		
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.		
CIP-011-1: Cyber Security-Information Protection		
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.		

R1, 1.1: One or more methods to identify BES Cyber System Information.		
R1, 1.2: Access control and handling procedures for BES Cyber System Information.		
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.		
R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.		
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.		
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.

NISTIR Requirement	
NERC CIP	
Note that only the language from the requirement section of CIPv5 is included in this table.	
CIP-002-5: Cyber Security — BES Cyber Asset and BES Cyber System Categorization	
R1: Each Responsible Entity that owns BES Cyber Assets and BES Cyber Systems shall identify and categorize its High and Medium Impact BES Cyber Assets and BES Cyber Systems according to the criteria contained in CIP-002-5 Attachment I – Impact Categorization of BES Cyber Assets and BES Cyber Systems. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed to be Low Impact and do not require discrete identification.	**NO SG.SC NISTIR MAPPING**
R1, 1.1: Update the identification and categorization within 30 calendar days of a change to BES Elements and Facilities is placed into operation, that is intended to be in service for more than 6 calendar months and that causes a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.	**NO SG.SC NISTIR MAPPING**
R2: The Responsible Entity shall have its CIP Senior Manager or delegate approve the identification and categorization required by R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between approvals, even if it has no identified High or Medium BES Cyber Assets or BES Cyber Systems.	**NO SG.SC NISTIR MAPPING**
CIP-003-5: Cyber Security — Security Management Controls	
R1: Each Responsible Entity shall identify, by name, a CIP Senior Manager.	**NO SG.SC NISTIR MAPPING**
R2: Each Responsible Entity shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addresses the following topics:	**NO SG.SC NISTIR MAPPING**
R2, 1.1: Personnel Security	**NO SG.SC NISTIR MAPPING**
R2, 1.2: Electronic Security Parameters	**NO SG.SC NISTIR MAPPING**
R2, 1.3: Remote Access	**NO SG.SC NISTIR MAPPING**
R2, 1.4: Physical Security	**NO SG.SC NISTIR MAPPING**
R2, 1.5: System Security	**NO SG.SC NISTIR MAPPING**
R2, 1.6: Incident Response	**NO SG.SC NISTIR MAPPING**
R2, 1.7: Recovery Plans	**NO SG.SC NISTIR MAPPING**
R2, 1.8: Configuration Change Management	**NO SG.SC NISTIR MAPPING**

R2, 1.9: Information Protection	
R2, 1.10: Provisions for declaring and responding to CIP Exceptional Circumstances	**NO SG.SC NISTIR MAPPING**
R3: Each Responsible Entity shall review each of its cyber security policies and obtain the approval of its CIP Senior Manager, initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.	**NO SG.SC NISTIR MAPPING**
R4: Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function.	**NO SG.SC NISTIR MAPPING**
R5: The CIP Senior Manager shall be responsible for all approvals and authorizations required in the CIP standards. The CIP Senior Manager may delegate the authority for any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated. These delegations shall be documented (by position or name of the delegate), dated, and approved and shall specify the authority that is being delegated.	**NO SG.SC NISTIR MAPPING**
R6: Changes to the CIP Senior Manager and any delegations shall be documented within thirty calendar days of the change.	**NO SG.SC NISTIR MAPPING**

CIP 004-5: Cyber Security – Personnel and Training	
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-004-5 Table R1 – Security Awareness Program.	**NO SG.SC NISTIR MAPPING**
R1, 1.1: A security awareness program that conveys security awareness concepts and provides on-going reinforcement of such concepts on at least a quarterly basis.	**NO SG.SC NISTIR MAPPING**
R2: Each Responsible Entity shall have a role-based cyber security training program for personnel who need authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in CIP-004-5 Table R2 – Cyber Security Training Program.	**NO SG.SC NISTIR MAPPING**
R2, 2.1: Define the roles that require training.	**NO SG.SC NISTIR MAPPING**
R2, 2.2: Training on the security controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.SC NISTIR MAPPING**
R2, 2.3: Training on the proper use of physical access controls protecting the Responsible Entity's BES Cyber Systems.	**NO SG.SC NISTIR MAPPING**
R2, 2.4: Training on the electronic access controls protecting the Responsible Entity's BES Cyber Systems. Evidence may include, but is not limited to, training material on the electronic access controls to protect BES Cyber Systems.	**NO SG.SC NISTIR MAPPING**
R2, 2.5: Training on the visitor control program.	**NO SG.SC NISTIR MAPPING**
R2, 2.6: Training on handling of BES Cyber System Information and storage media.	**NO SG.SC NISTIR MAPPING**
R2, 2.7: Training on identification of a potential BES Cyber Security Incident and associated notifications.	**NO SG.SC NISTIR MAPPING**
R2, 2.8: Training on recovery plans for BES Cyber Systems.	**NO SG.SC NISTIR MAPPING**
R2, 2.9: Training on response to BES Cyber Security Incidents.	**NO SG.SC NISTIR MAPPING**
R2, 2.10: Training on BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	**NO SG.SC NISTIR MAPPING**
R3: Each Responsible Entity shall implement its documented cyber security training program for each individual needing authorized electronic or unescorted physical access that includes each of the applicable items in CIP-004-5 Table R3 - Cyber Security Training.	**NO SG.SC NISTIR MAPPING**
R3, 3.1: Require completion of the training specified in CIP-004-5 R2 prior to granting authorized access, except during CIP Exceptional Circumstances.	**NO SG.SC NISTIR MAPPING**
R3, 3.2: Require completion of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	**NO SG.SC NISTIR MAPPING**

R4: Each Responsible Entity shall have one or more documented personnel risk assessment programs for individuals needing authorized electronic or unescorted physical access that collectively includes each of the applicable items in CIP-004-5 Table R4 – Personnel Risk Assessment Program.	**NO SG.SC NISTIR MAPPING**
R4, 4.1: An initial personnel risk assessment that includes identity verification.	**NO SG.SC NISTIR MAPPING**
R4,4.2: Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	**NO SG.SC NISTIR MAPPING**
R4, 4.3: Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.	**NO SG.SC NISTIR MAPPING**
R4, 4.4: Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4.	**NO SG.SC NISTIR MAPPING**
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable elements in CIP-004-5 Table R5 – Personnel Risk Assessment.	**NO SG.SC NISTIR MAPPING**
R5, 5.1: Perform a personnel risk assessment as specified in CIP-004-5 R4 prior to being granted authorized electronic or unescorted physical access, except for CIP Exceptional Circumstances.	**NO SG.SC NISTIR MAPPING**
R6: Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in CIP-004-5 Table R6 – Access Management Program.	**NO SG.SC NISTIR MAPPING**
R6, 6.1: The CIP Senior Manager or delegate shall authorize electronic access, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.SC NISTIR MAPPING**
R6, 6.2: The CIP Senior Manager or delegate shall authorize unescorted physical access to BES Cyber Systems, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.SC NISTIR MAPPING**
R6, 6.3: The CIP Senior Manager or delegate shall authorize access to BES Cyber System Information, except for CIP Exceptional Circumstances. Access permissions shall be the minimum necessary for performing assigned work functions.	**NO SG.SC NISTIR MAPPING**
R6, 6.4: Verify at least once each calendar quarter that individuals provisioned for unescorted physical or electronic access to BES Cyber Systems were authorized for such access.	**NO SG.SC NISTIR MAPPING**

R6, 6.5: Verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.SC NISTIR MAPPING**
R6, 6.6: Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, of access privileges to BES Cyber System Information to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.	**NO SG.SC NISTIR MAPPING**
R7: Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in CIP-004-5 Table R7 – Access Revocation.	**NO SG.SC NISTIR MAPPING**
R7, 7.1: For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time of the resignation or termination.	**NO SG.SC NISTIR MAPPING**
R7, 7.2: For reassignments or transfers, revoke the individual's unneeded electronic and physical access to BES Cyber Systems by the end of the next calendar day.	**NO SG.SC NISTIR MAPPING**
R7, 7.3: For resignations or terminations, revoke the individual's access to BES Cyber System Information by the end of the next calendar day following the resignation or termination.	**NO SG.SC NISTIR MAPPING**
R7, 7.4: For resignations or terminations, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with R7.1 or 7.3) within thirty (30) calendar days of the date of initial access revocation.	**NO SG.SC NISTIR MAPPING**
R7, 7.5: For terminations, resignations, reassignments, or transfers, change passwords for shared account(s) known to the user within thirty (30) calendar days of the termination, resignation, reassignment, or transfer of the user. In extenuating circumstances that require a longer time period, document the extenuating circumstances and change the password(s) within ten calendar days following the end of the extenuating circumstances.	**NO SG.SC NISTIR MAPPING**
CIP-005-5: Cyber Security - Electronic Security Perimeter(s)	
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-005-5 Table R1 – Electronic Security Perimeter.	**NO SG.SC NISTIR MAPPING**
R1, 1.1: Define technical or procedural controls to restrict unauthorized electronic access.	**NO SG.SC NISTIR MAPPING**
R1, 1.2: Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	

R1, 1.3: Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions.	
R1, 1.4: Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	
R1, 1.5: A documented method for detecting malicious communications at each EAP.	**NO SG.SC NISTIR MAPPING**
R2: Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in CIP-005-5 Table R2 – Remote Access Management.	**NO SG.SC NISTIR MAPPING**
R2, 2.1: Require an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	
R2, 2.2: Require encryption for all Interactive Remote Access sessions to protect the confidentiality and integrity of each Interactive Remote Access session.	
R2, 2.3: Require multi-factor authentication for all Interactive Remote Access sessions.	**NO SG.SC NISTIR MAPPING**
CIP-006-5: Cyber Security - Physical Security of BES Cyber Systems	

R1: Each Responsible Entity shall implement one or more documented physical security plans that include each of the applicable items in CIP-006-5 Table R1 – Physical Security Plan.	**NO SG.SC NISTIR MAPPING**
R1, 1.1: Define operational or procedural controls to restrict physical access.	**NO SG.SC NISTIR MAPPING**
R1, 1.2: Utilize at least one physical access control to establish one or more Defined Physical Boundaries that restricts access to only those individuals that are authorized.	**NO SG.SC NISTIR MAPPING**
R1, 1.3: Utilize two or more different and complementary physical access controls to establish one or more Defined Physical Boundaries that restricts physical access to only those users that are authorized, where technically feasible.	**NO SG.SC NISTIR MAPPING**
R1, 1.4: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access through any access point in a Defined Physical Boundary.	**NO SG.SC NISTIR MAPPING**
R1, 1.5: Issue real-time alerts (to individuals responsible for response) in response to unauthorized physical access to Physical Access Control Systems.	**NO SG.SC NISTIR MAPPING**
R1, 1.6: Log (through automated means or by personnel who control entry) of physical entry into each Defined Physical Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient information to uniquely identify the individual and date of entry.	**NO SG.SC NISTIR MAPPING**
R2: Each Responsible Entity shall implement its documented visitor control program that includes each of the applicable items in CIP-006-5 Table R2 – Visitor Control Program.	**NO SG.SC NISTIR MAPPING**
R2, 2.1: Require continuous escorted access of visitors (individuals not authorized for unescorted physical access) within any Defined Physical Boundary.	**NO SG.SC NISTIR MAPPING**
R2, 2.2: A process requiring manual or automated logging of the entry and exit of visitors that includes date and time of the entry and exit on a per 24-hour basis, the visitor's name, and individual point of contact.	**NO SG.SC NISTIR MAPPING**
R3: Each Responsible Entity shall implement one or more documented maintenance and testing programs that collectively include each of the applicable items in CIP-006-5 Table R3 – Maintenance and Testing Program.	**NO SG.SC NISTIR MAPPING**
R3, 3.1: Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance and testing of the Physical Access Control Systems and locally mounted hardware or devices at the Defined Physical Boundary to ensure the required functionality is being provided.	**NO SG.SC NISTIR MAPPING**
R3, 3.2: Log dates, time, and duration for failures or outages of access control, logging, and alerting systems.	**NO SG.SC NISTIR MAPPING**
CIP-007-5: Cyber Security-Systems Security Management	
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R1 – Ports and Services.	**NO SG.SC NISTIR MAPPING**

R1, 1.1: Disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.	
R1, 1.2: Disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R2 – Security Patch Management.	**NO SG.SC NISTIR MAPPING**
R2, 2.1: Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.	**NO SG.SC NISTIR MAPPING**
R2, 2.2: Identify applicable security-related patches or updates and create a remediation plan, or revise an existing remediation plan, within 30 days of release from the identified source that addresses the vulnerabilities within a defined timeframe.	**NO SG.SC NISTIR MAPPING**
R2, 2.3: A process for remediation, including any exceptions for CIP Exceptional Circumstances.	**NO SG.SC NISTIR MAPPING**
R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R3 – Malicious Code Prevention.	**NO SG.SC NISTIR MAPPING**
R3, 3.1: Deploy method(s) to deter, detect, or prevent malicious code.	**NO SG.SC NISTIR MAPPING**
R3, 3.2: Disarm or remove identified malicious code.	**NO SG.SC NISTIR MAPPING**
R3, 3.3: Update malicious code protections within 30 calendar days of signature or pattern update availability (where the malicious code protections use signatures or patterns).	**NO SG.SC NISTIR MAPPING**
R3, 3.4: Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.	**NO SG.SC NISTIR MAPPING**
R3, 3.5: Log each Transient Cyber Asset connection.	**NO SG.SC NISTIR MAPPING**
R4: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R4 – Security Event Monitoring.	**NO SG.SC NISTIR MAPPING**

R4, 4.1: Log generated events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. Any detected failed access attempts at Electronic Access Points 4.1.2. Any detected successful and failed login attempts 4.1.3. Any detected malware 4.1.4. Any detected potential malicious activity.	**NO SG.SC NISTIR MAPPING**
R4, 4.2: Generate alerts for events that the Responsible Entity determines to necessitate a real-time alert.	**NO SG.SC NISTIR MAPPING**
R4, 4.3: Detect and activate a response to event logging failures before the end of the next calendar day.	**NO SG.SC NISTIR MAPPING**
R4, 4.4: Retain BES Cyber System security-related event logs identified in 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	**NO SG.SC NISTIR MAPPING**
R4, 4.5: Review a summarization or sampling of logged events every two weeks to identify unanticipated BES Cyber Security Incidents and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.	**NO SG.SC NISTIR MAPPING**
R5: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-007-5 Table R5 – System Access Controls.	**NO SG.SC NISTIR MAPPING**
R5, 5.1 : Validate credentials before granting electronic access to each BES Cyber System.	
R5, 5.2: The CIP Senior Manager or delegate must authorize the use of administrator, shared, default, and other generic account types.	**NO SG.SC NISTIR MAPPING**
R5, 5.3: Identify individuals who have authorized access to shared accounts.	**NO SG.SC NISTIR MAPPING**
R5, 5.4: Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	**NO SG.SC NISTIR MAPPING**

R5, 5.5: For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	**NO SG.SC NISTIR MAPPING**
R5, 5.6: A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.	**NO SG.SC NISTIR MAPPING**
CIP-008-5: Cyber Security-Incident Reporting and Response Planning	
R1: Each Responsible Entity shall have one or more BES Cyber Security Incident response plan(s) that collectively include each of the applicable items in CIP-008-5 Table R1 – BES Cyber Security Incident Response Plan Specifications.	**NO SG.SC NISTIR MAPPING**
R1, 1.1: Processes to identify, classify, and respond to BES Cyber Security Incidents.	**NO SG.SC NISTIR MAPPING**
R1, 1.2: A process to determine if an identified BES Cyber Security Incident is a Reportable BES Cyber Security Incident.	**NO SG.SC NISTIR MAPPING**
R1, 1.3: Define: 1.3.1. The roles and responsibilities of BES Cyber Security Incident response personnel; 1.3.2. The BES Cyber Security Incident handling procedures; 1.3.3. Internal staff and external organizations that should receive communication of the incident.	**NO SG.SC NISTIR MAPPING**
R2: Each Responsible Entity shall implement its documented BES Cyber Security Incident response plan(s) to collectively include each of the applicable items in CIP-008-5 Table R2 – BES Cyber Security Incident Response Plan Implementation and Testing.	**NO SG.SC NISTIR MAPPING**
R2, 2.1: When a BES Cyber Security Incident occurs, the incident response plans must be used when incidents occur and include recording of deviations taken from the plan during the incident or test.	**NO SG.SC NISTIR MAPPING**

R2, 2.2: Implement the BES Cyber Security Incident response plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s): • by responding to an actual incident, or • with a paper drill or table top exercise, or • with a full operational exercise.	**NO SG.SC NISTIR MAPPING**
R2, 2.3: Retain relevant documentation related to Reportable BES Cyber Security Incidents for three calendar years.	**NO SG.SC NISTIR MAPPING**
R3: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-008-5 Table R3 – BES Cyber Security Incident Response Plan Review, Update, and Communication.	**NO SG.SC NISTIR MAPPING**
R3, 3.1: Review each BES Cyber Security Incident response plan for accuracy and completeness initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews, and update if necessary.	**NO SG.SC NISTIR MAPPING**
R3, 3.2: Review the results of BES Cyber Security Incident Response Plan(s) test or actual incident response within thirty calendar days of the execution, documenting any lessons learned associated with the response plan.	**NO SG.SC NISTIR MAPPING**
R3, 3.3: Update the BES Cyber Security Incident response plan based on any documented lessons learned within sixty calendar days of the completion of the review of that plan.	**NO SG.SC NISTIR MAPPING**
R3, 3.4: Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	**NO SG.SC NISTIR MAPPING**
R3, 3.5: Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	**NO SG.SC NISTIR MAPPING**
CIP-009-5: Cyber Security-Recovery Plans for BES Cyber Assets and Systems	
R1: Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in CIP-009-5 Table R1 – Recovery Plan Specifications.	**NO SG.SC NISTIR MAPPING**
R1, 1.1: Conditions for activation of the recovery plan(s).	**NO SG.SC NISTIR MAPPING**
R1, 1.2: Roles and responsibilities of responders, including identification of the individuals, either by name or by title, responsible for recovery efforts.	**NO SG.SC NISTIR MAPPING**
R1, 1.3: One or more processes for the backup, storage, and protection of information required to restore BES Cyber System functionality.	**NO SG.SC NISTIR MAPPING**
R1, 1.4: Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	**NO SG.SC NISTIR MAPPING**

R1, 1.5: Preserve data, where technically feasible, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s) as required in Requirement R1.	**NO SG.SC NISTIR MAPPING**
R2: Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.	**NO SG.SC NISTIR MAPPING**
R2, 2.1: Implement the recovery plan(s) referenced in R1 initially upon the effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between executions of the plan: • by recovering from an actual incident, or • with a paper drill or tabletop exercise, or • with a full operational exercise.	**NO SG.SC NISTIR MAPPING**
R2, 2.2: Test any information used in the recovery of BES Cyber systems that is stored on backup media initially and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and reflects current configurations.	**NO SG.SC NISTIR MAPPING**
R2, 2.3: Test each of the recovery plans referenced in Requirement R1, initially upon the effective date of the standard, and at least once every 39 calendar months thereafter through an operational exercise of the recovery plans in a representative environment that reflects the production environment. An actual recovery response may substitute for an operational exercise.	**NO SG.SC NISTIR MAPPING**
R3: Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.	**NO SG.SC NISTIR MAPPING**
R3, 3.1: Review the recovery plan(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between reviews, or when BES Cyber Systems are replaced, and document any identified deficiencies or lessons learned.	**NO SG.SC NISTIR MAPPING**
R3, 3.2: Review the results of each recovery plan test or actual incident recovery within thirty calendar days of the completion of the exercise, documenting any identified deficiencies or lessons learned.	**NO SG.SC NISTIR MAPPING**
R3, 3.3: Update the recovery plan(s) based on any documented deficiencies or lessons learned within thirty calendar days of the review required in Requirement R3, Part 3.2.	**NO SG.SC NISTIR MAPPING**
R3, 3.4: Update recovery plan(s) to address any organizational or technology changes within thirty calendar days of such change.	**NO SG.SC NISTIR MAPPING**
R3, 3.5: Communicate all recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within thirty calendar days of the update being completed.	**NO SG.SC NISTIR MAPPING**
CIP-010-1: Cyber Security-Configuration Management and Vulnerability Assessments	

R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R1 – Configuration Change Management.	**NO SG.SC NISTIR MAPPING**
R1, 1.1: Develop a baseline configuration of the BES Cyber System, which shall include the following for each BES Cyber Asset identified, individually or by specified grouping: 1.1.1. Physical location; 1.1.2. Operating system(s) (including version); 1.1.3. Any commercially available application software (including version) intentionally installed on the BES Cyber Asset; 1.1.4. Any custom software and scripts developed for the entity; 1.1.5. Any logical network accessible ports; and 1.1.6. Any security-patch levels.	**NO SG.SC NISTIR MAPPING**
R1, 1.2: Authorization, by the CIP Senior Manager or delegate, and document changes to the BES Cyber System that deviate from the existing baseline configuration.	**NO SG.SC NISTIR MAPPING**
R1, 1.3: Update the baseline configuration and other documentation required by a NERC CIP Standard, including identification and categorization of the BES Cyber Systems, as necessary within 30 calendar days of completing the change.	**NO SG.SC NISTIR MAPPING**
R1, 1.4: For a change to the BES Cyber System that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls that could be impacted by the change; 1.4.2. Following the change, verify these required controls and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	**NO SG.SC NISTIR MAPPING**
R1, 1.5: For each change that deviates from the existing baseline configuration for Control Centers: 1.5.1. Prior to implementing any change in the production environment, test the changes to the BES Cyber System in a test environment that models the baseline configuration of the BES Cyber System to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.SC NISTIR MAPPING**
R2: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R2 – Configuration Monitoring.	**NO SG.SC NISTIR MAPPING**
R2, 2.1: Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.	**NO SG.SC NISTIR MAPPING**

R3: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-010-1 Table R3– Vulnerability Assessments.	**NO SG.SC NISTIR MAPPING**
R3, 3.1: Initially upon the effective date of the standard and at least every calendar year thereafter, not to exceed 15 calendar months between assessments, conduct a paper or active assessment of the security controls to determine the extent to which the controls are implemented correctly and operating as designed.	**NO SG.SC NISTIR MAPPING**
R3, 3.2: Initially upon the effective date of the standard and at least once every 3 calendar years thereafter, not to exceed 39 calendar months between assessments, perform an active vulnerability assessment in a test environment that models the baseline configuration of the BES Cyber System in a production environment. Document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	**NO SG.SC NISTIR MAPPING**
R3, 3.3: Except for CIP Exceptional Circumstances, prior to adding a new Cyber Asset to a BES Cyber System or Electronic Access Control or Monitoring System, perform an active vulnerability assessment of the Cyber Asset.	**NO SG.SC NISTIR MAPPING**
R3, 3.4: Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of that action plan.	**NO SG.SC NISTIR MAPPING**
CIP-011-1: Cyber Security-Information Protection	
R1: Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in CIP-011-1 Table R1 – Information Protection.	**NO SG.SC NISTIR MAPPING**
R1, 1.1: One or more methods to identify BES Cyber System Information.	
R1, 1.2: Access control and handling procedures for BES Cyber System Information.	**NO SG.SC NISTIR MAPPING**
R1, 1.3: Initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection process, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	**NO SG.SC NISTIR MAPPING**

R2: Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in CIP-011-1 Table R2 – Media Reuse and Disposal.	**NO SG.SC NISTIR MAPPING**
R2, 2.1: Prior to the release for reuse of BES Cyber Asset media, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	
R2, 2.2: Prior to the disposal of BES Cyber Asset media, the Responsible Entity shall destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media.	

SG.SC-1	SG.SC-2
System and Communication Protection Policy and Procedures	Communications Partitioning

the CIP standards listed here, you must also consider CIP-004 R6 related to Access Management which requires the following: 004 R6.1 - Requires all electronic access to be properly authorized and limited based on need 004 R6.2 - Requires all unescorted physical access to be properly authorized and limited based on need 004 R6.3 - Requires all access to CIP Information (in any form) to be properly authorized and limited based on need. 004 R 6.4 - Requires quarterly review to verify all electronic and physical access is authorized 004 R 6.5 - Requires annual review of individual access rights to ensure that all accounts/account groups or role categories and their specific, associated privileges are correct and the minimum necessary for performing assigned work functions 004 R 6.6 - Requires annual review of all access to CIP information to ensure privileges are correct and the minimum necessary for performing assigned work functions The CIP Standards do not, however specifically require data communications to be addressed in the information	

	3- CIP-011-1-R1.1 should include this requirement to partition the communications for telemetry/data acquisition services and management functionality. The information system management communications path needs to be physically or logically separated from the telemetry/data acquisition services communications path

SG.SC-3	SG.SC-4
Security Function Isolation	Information Remnants

3- CIP-011-1-R1.1 should include this requirement to information system employs underlying hardware separation mechanisms to facilitate security function isolation; and isolate security functions (e.g., functions enforcing access and information flow control) from both non-security functions and from other security functions.	

	2- SGIP should include this requirement to take action to prevent the unauthorized retrieval of BES Cyber System Information from the media, Prior to the release for reuse of BES Cyber Asset media.
	2- SGIP should include this requirement to destroy or take action to prevent the unauthorized retrieval of BES Cyber System Information from the media, Prior to the disposal of BES Cyber Asset media.

SG.SC-5	SG.SC-6	SG.SC-7	SG.SC-8
Denial-of-Service Protection	Resource Priority	Boundary Protection	Communication Integrity
NO NERC CIP MAPPING	**NO NERC CIP MAPPING**		**NO NERC CIP MAPPING**

		2- SGIP should include this requirement to Control and secure all routable and dial-up connectivity through the use of identified Electronic Access Points (EAPs).	

		2- SGIP should include this requirement to Require explicit inbound and outbound access permissions at each identified Electronic Access Point using routable protocols, including explicit criteria for granting or denying access permissions..	
		2- SGIP should include this requirement to Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	

		2(SGIP shall include CIP-007-5-R1.1 to disable or restrict access to unnecessary logical network accessible ports and document the need for any remaining logical network accessible ports.)	
		2(SGIP shall include CIP-007-5-R1.2 to disable or restrict the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media)	

		3(CIP-007-5 R5.1 shall include following requirement: Responsible Entity shall prevent public access into the information system networks except as appropriately mediated.	

SG.SC-9	SG.SC-10	SG.SC-11	SG.SC-12
Communication Confidentiality	Trusted Path	Cryptographic Key Establishment and Management	Use of Validated Cryptography
NO NERC CIP MAPPING	**NO NERC CIP MAPPING**		

		3 - NISTIR specifies cryptographic key controls which must be in place. CIP only requires encryption, but the type of key controls required by NISTIR are typically not applicable due to the use of two-factor authentication which is required to establish an encrypted tunnel into an ESP.	3 - CIP does not specify any encryption standards which must be used.

SG.SC-13	SG.SC-14	SG.SC-15	SG.SC-16
Collaborative Computing	Transmission of Security Parameters	Public Key Infrastructure Certificates	Mobile Code
NO NERC CIP MAPPING	**NO NERC CIP MAPPING**	**NO NERC CIP MAPPING**	**NO NERC CIP MAPPING**

SG.SC-17	SG.SC-18	SG.SC-19	SG.SC-20
Voice-Over Internet Protocol	System Connections	Security Roles	Message Authenticity
NO NERC CIP MAPPING	**NO NERC CIP MAPPING**	**NO NERC CIP MAPPING**	**NO NERC CIP MAPPING**

SG.SC-21	SG.SC-22	SG.SC-23	SG.SC-24
Secure Name/Address Resolution Service	Fail in Known State	Thin Nodes	Honeypots
NO NERC CIP MAPPING	**NO NERC CIP MAPPING**	**NO NERC CIP MAPPING**	**NO NERC CIP MAPPING**

SG.SC-25	SG.SC-26	SG.SC-27
Operating System-Independent Applications	Confidentiality of Information at Rest	Heterogeneity
NO NERC CIP MAPPING	**NO NERC CIP MAPPING**	**NO NERC CIP MAPPING**

SG.SC-28	SG.SC-29	SG.SC-30
Virtualization Technique	Application Partitioning	Information System Partitioning
	NO NERC CIP MAPPING	**NO NERC CIP MAPPING**

3- CIP-005-5-R2.1 should include the requirement's follows: A1. The organization employs virtualization techniques to deploy a diversity of operating systems environments and applications; A2. The organization changes the diversity of operating systems and applications on an organization-defined frequency; and A3. The organization employs randomness in the implementation of the virtualization.

NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Draft CIP Standards Version 5

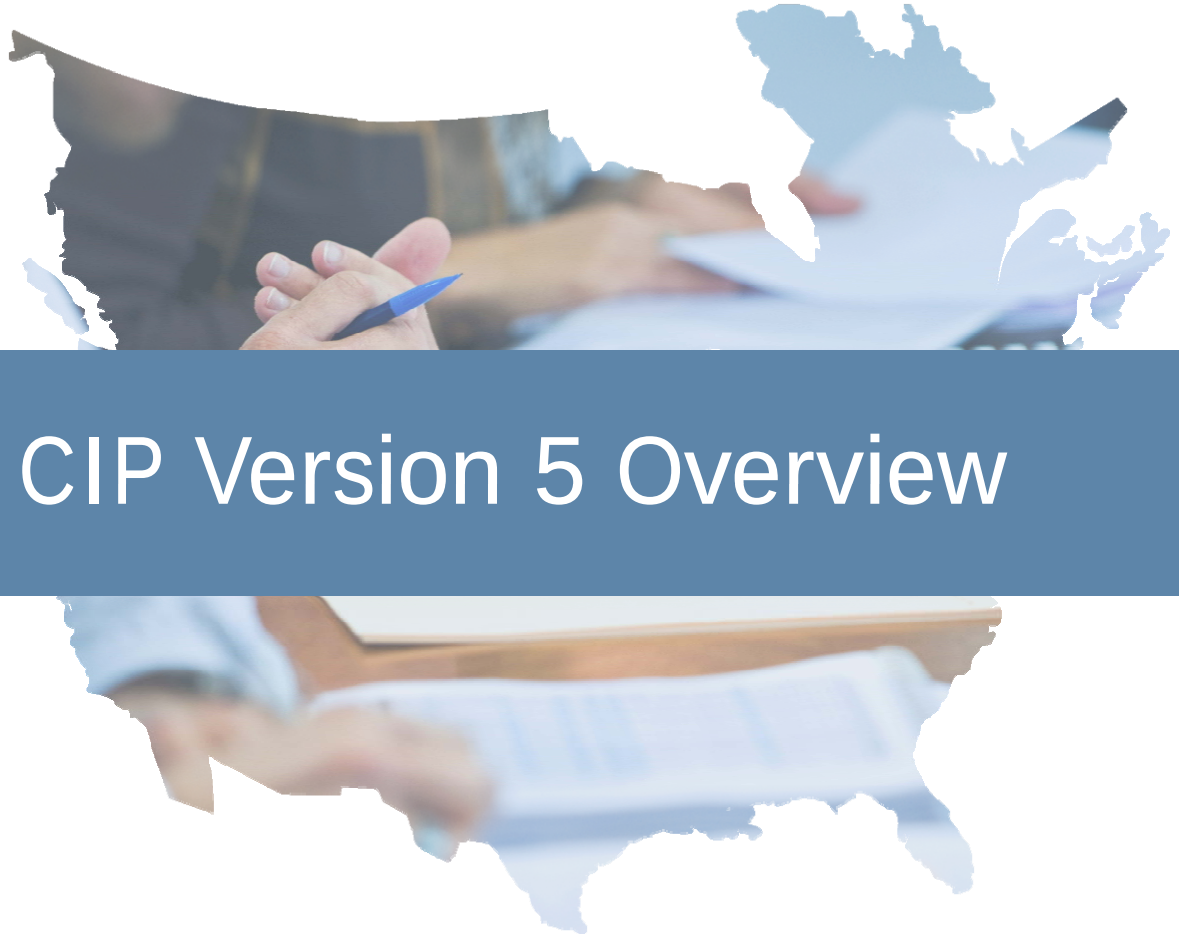
Project 2008-06 Cyber Security Order 706 Standards Drafting Team
April 10, 2012

RELIABILITY | ACCOUNTABILITY

Agenda

- Opening Remarks – John Lim, Consolidated Edison, Chair
- Version 5 Overview – Philip Huff, AECC, Vice Chair
- Version 5, Highlights of Draft 2 – John Lim, Consolidated Edison; David Revill, Georgia Transmission Corporation; and Jay Cribb, Southern Company
- Comment and Ballot Process – Steven Noess, NERC and Jay Cribb, Southern Company
- Questions and Answers – Moderated by Steven Noess, NERC

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

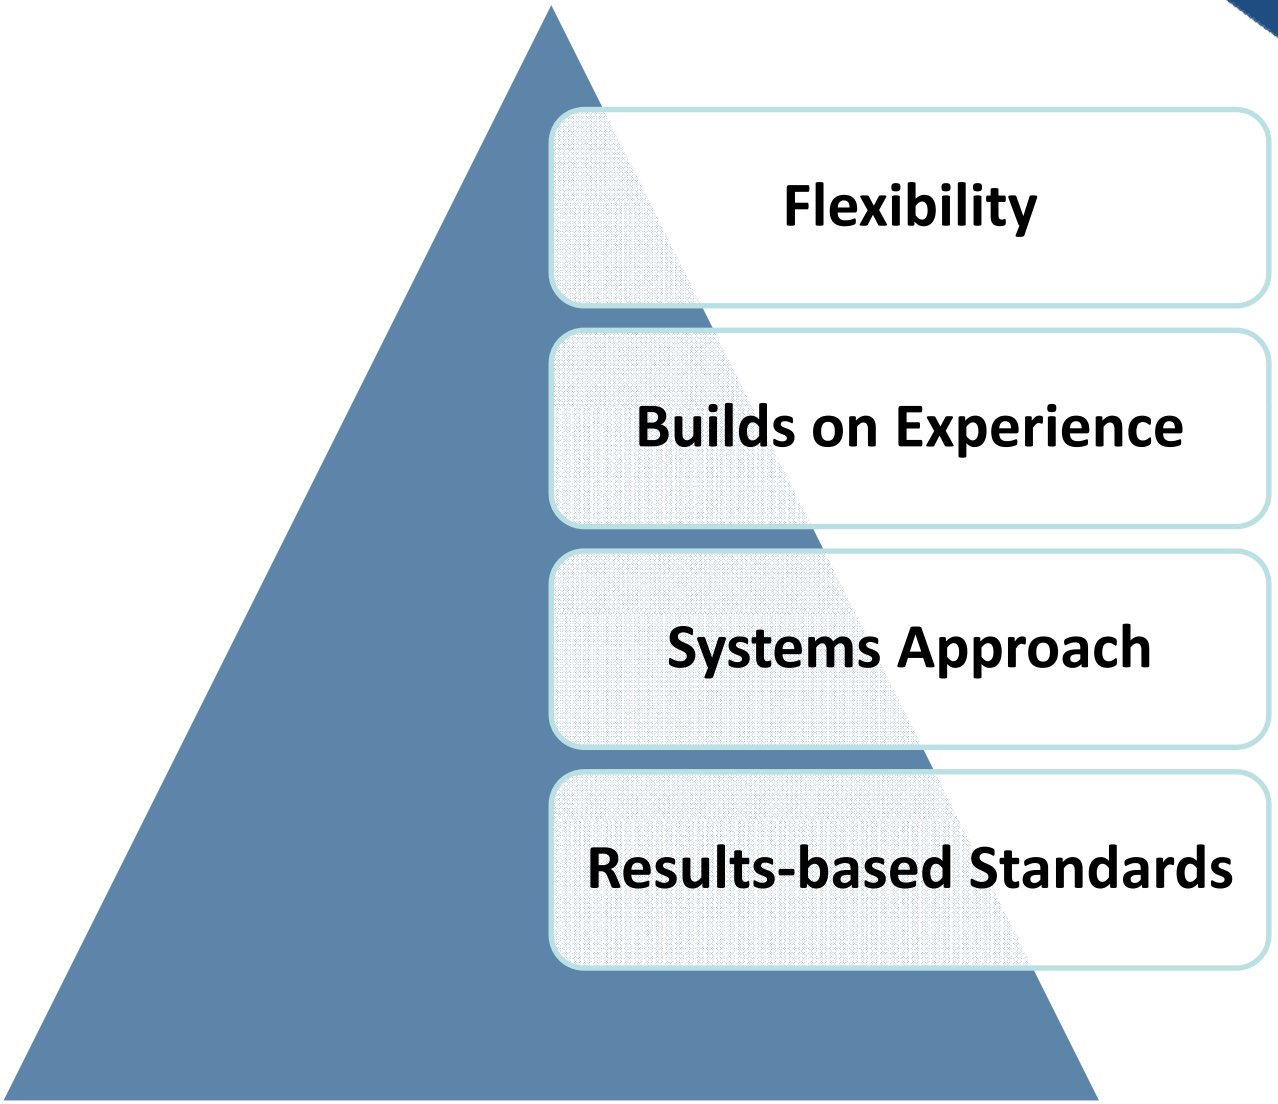


CIP Version 5 Overview

Comparative Table

Version 4	Version 5
42 requirements; 113 parts	37 requirements; 148 Parts
No contextual information	Includes background, rationale, and guidelines and Technical Basis
Measures on high level requirement only	Measures for each requirement, including parts
14 requirements with Technical Feasibility Exception (TFE) triggering language	12 requirements with TFE triggering language
Undefined periodic terms	Clear periodic requirements: initial requirements in Implementation Plan
Many binary Violation Severity Levels (VSLs)	More gradated VSLs

Advantages of Version 5



Closes FERC Order 706

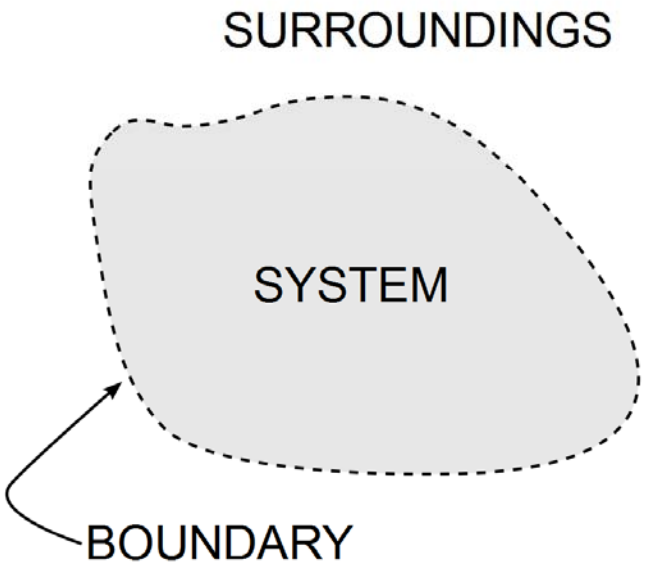
- Addresses the remainder of 60 directives in FERC Order No. 706
- Closes the continuous development cycle for CIP standards
- Allows industry to better implement long-term security solutions and audit programs

Results-based Standards

- Focuses on the reliability and security result
- Eliminates unnecessary documentation requirements
- Identifies examples of evidence
- Provides guidance and context alongside each requirement

Systems Approach

- Cyber Assets function together as a complex system
- Identify the system and apply requirements to the whole rather than the part



Risk-based Requirements

- Systems performing a Bulk Electric System (BES) function receive an appropriate level of protection
  - Systems are no longer “in or out”
- Impact and connectivity inform applicability
- Non-technology specific
- More appropriate use of TFE process
- Framework for establishing a culture of security

Building on Experience

- Informed by and responsive to implementation and audit lessons from Versions 1 through 3
- Industry has progressed with better, alternative ways to meet a requirement objective
- Cyber risk and the tools to mitigate risk have changed

Balanced Flexibility

- Demonstrates clear accountability for CIP, yet…
- Balances the need to be both:
  - **Specific** enough to objectively demonstrate compliance and
  - **Broad** enough to allow effective risk mitigation
- **Specific** in *when* and *what* to achieve but **broad** in *how* to get there

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

CIP Version 5 – Highlights of Draft 2 Changes

Applicability – Section 4

- Applicability – Section 4
  - Distribution Provider/LSE
    - UVLS/UFLS
  - Distribution Provider
    - Cranking Path Elements

CIP-002-5

- Facilities-based approach
  - Identify High Impact and Medium Impact Facilities, Systems, and Equipment
  - Identify and categorize associated BES Cyber Systems and BES Cyber Assets
  - Attachment 1 criteria closer to Version 4 language
- BES Reliability Operating Services – No longer used
- Sixty days for update due to BES change

CIP-002-5 Restoration Assets

- Restoration Facilities, Systems, and equipment
  - Blackstart Resources
  - Cranking Paths
- Concerns on overall effect on BES restoration resources
  - NERC Operating Committee/Planning Committee discussion (March meetings)
- No longer in Medium Impact criteria
  - In scope
  - Default to Low Impact

CIP-002-5 Related Definitions

- BES Cyber Asset

  "A Cyber Asset that if rendered unavailable, degraded, or misused would, within 15 minutes of its required operation, mis-operation, or non-operation, adversely impact one or more Facilities, Systems, or equipment; which, if destroyed, degraded, or otherwise rendered unavailable when needed, would affect the reliable operation of the Bulk Electric System. Redundancy of affected Facilities, Systems and equipment shall not be considered when determining adverse impact. Each BES Cyber Asset is included in one or more BES Cyber Systems. (A Cyber Asset is not a BES Cyber Asset if, for 30 consecutive calendar days or less, it is directly connected to a Cyber Asset within an ESP, or to a BES Cyber Asset, and it is used for data transfer, vulnerability assessment, maintenance, or troubleshooting purposes.)"

CIP-002-5 Related Definitions

- BES Cyber System
  - "One or more BES Cyber Assets logically grouped by a responsible entity to perform one or more reliability tasks for a functional entity."
- BES Reliability Operating Services
  - Removed as a NERC Glossary Term and from references in the requirements or other definitions
  - Moved as guidance to Guidelines and Technical Basis

Definitions

- Control Center
  - "One or more facilities hosting operating personnel that monitor and control the BES in real-time to perform the reliability functional tasks of: 1) a Reliability Coordinator, 2) a Balancing Authority, 3) a Transmission Operator for Transmission Facilities at two or more locations, or 4) a Generation Operator for generation Facilities at two or more locations."

Low Impact Requirements

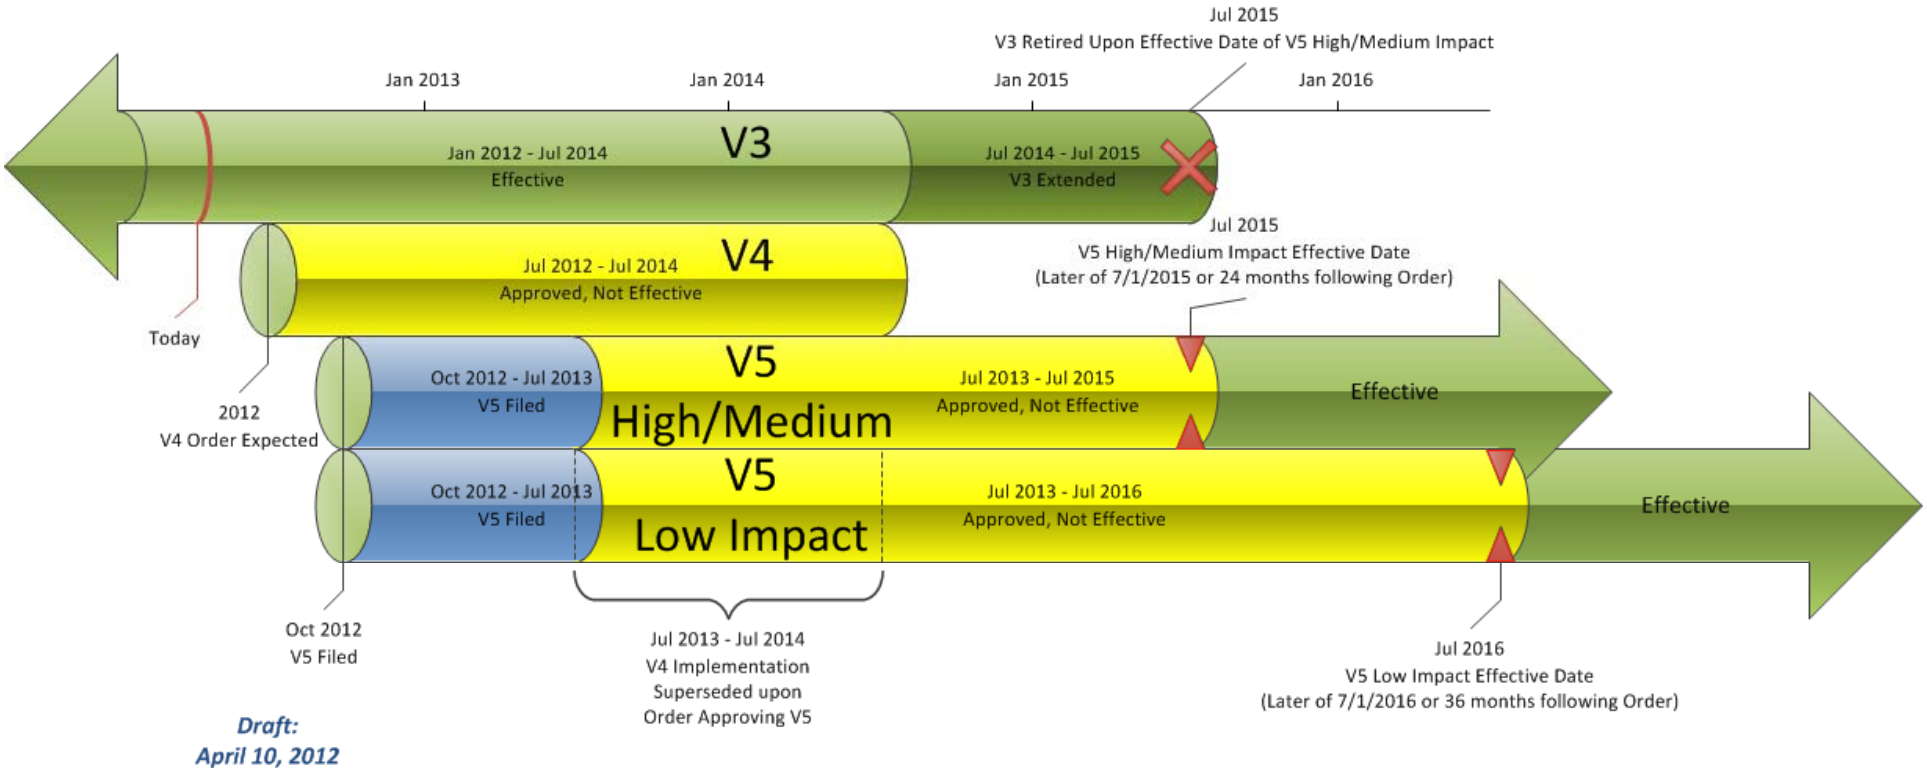
- Dispersed requirements were hard to find and identify
  - "All Responsible Entity" requirements also applied to Low Impact
- Removed all Low Impact requirements from CIP-004 though CIP-011
- Now only a single requirement (CIP-003 R2) – Low Impact Policy
  - 2.1 Cyber security awareness;
  - 2.2 Physical access control;
  - 2.3 Electronic access control; and
  - 2.4 Incident response to a BES Cyber Security Incident.
  - An inventory, list, or discrete identification of BES Cyber Systems is not required.

Initial Performance – Periodic Requirements

- Modified timing language in the standards
  - "~~initially upon the effective date of the standard and~~ at least once each calendar year ~~thereafter~~, not to exceed 15 calendar months"
- Initial performance clarified in Implementation Plan
  - On or before the Effective Date
  - Within X calendar days/months/years of the Effective Date

Implementation Plan

Proposed Implementation Plan for Version 5 of CIP Cyber Security Standards
(Graphic for illustrative purposes only; dates are estimates only and based on assumptions.
There is no way to know or anticipate when FERC may take action on pending matters.)

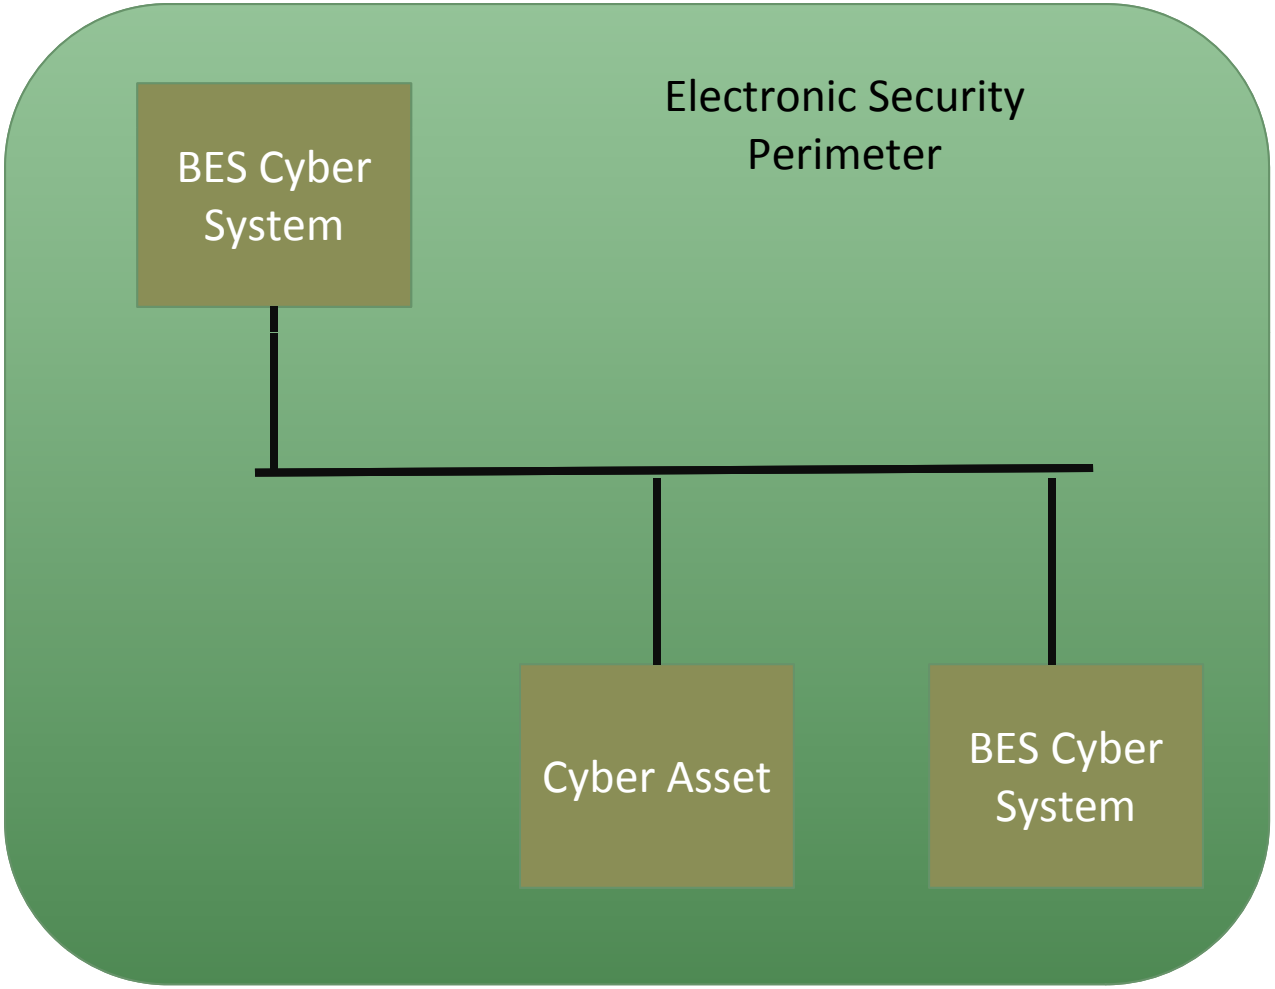


Draft:
April 10, 2012

ESPs - High Watermarking

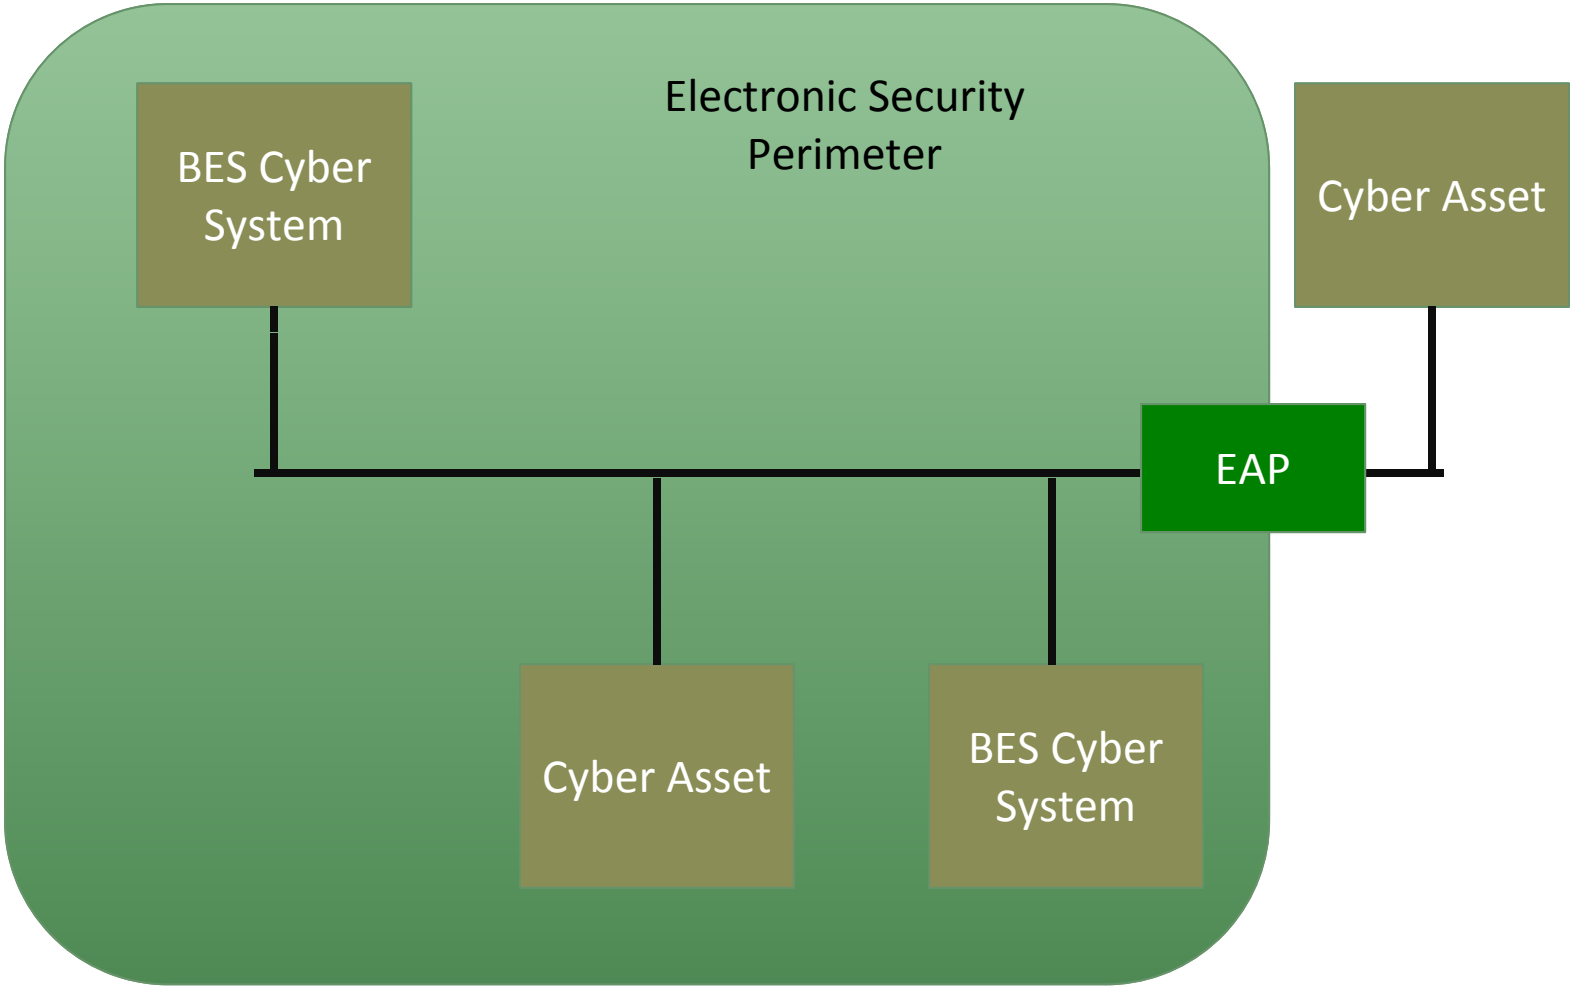
- Electronic Security Perimeter (ESP)
  - "The logical border surrounding a network to which BES Cyber Systems are connected using a routable protocol."
- Protected Cyber Asset (PCA)
  - "A Cyber Asset connected using a routable protocol within an Electronic Security Perimeter that is not part of the highest impact BES Cyber System within the same ESP (a Cyber Asset is not a Protected Cyber Asset if, for 30 consecutive calendar days or less, it is directly connected to a Cyber Asset within an ESP or to a BES Cyber Asset, and it is used for data transfer, vulnerability assessment, maintenance, or troubleshooting purposes)."

ESPs - High Watermarking

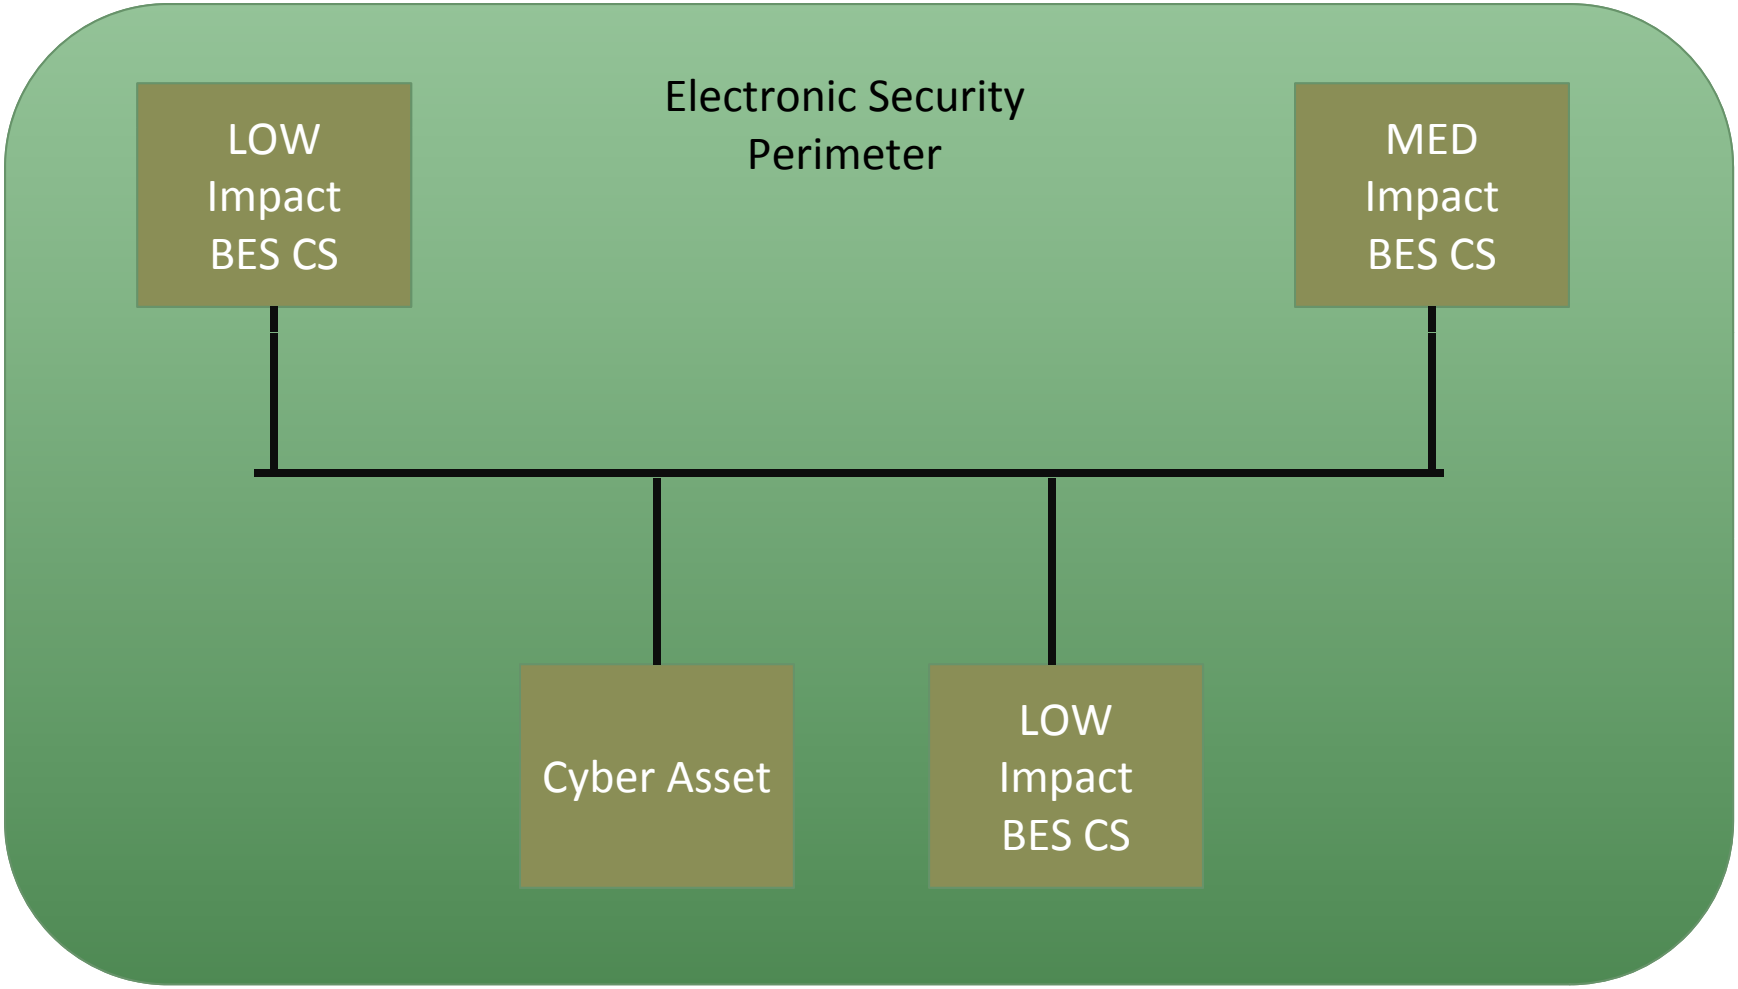


No External Routable Connectivity

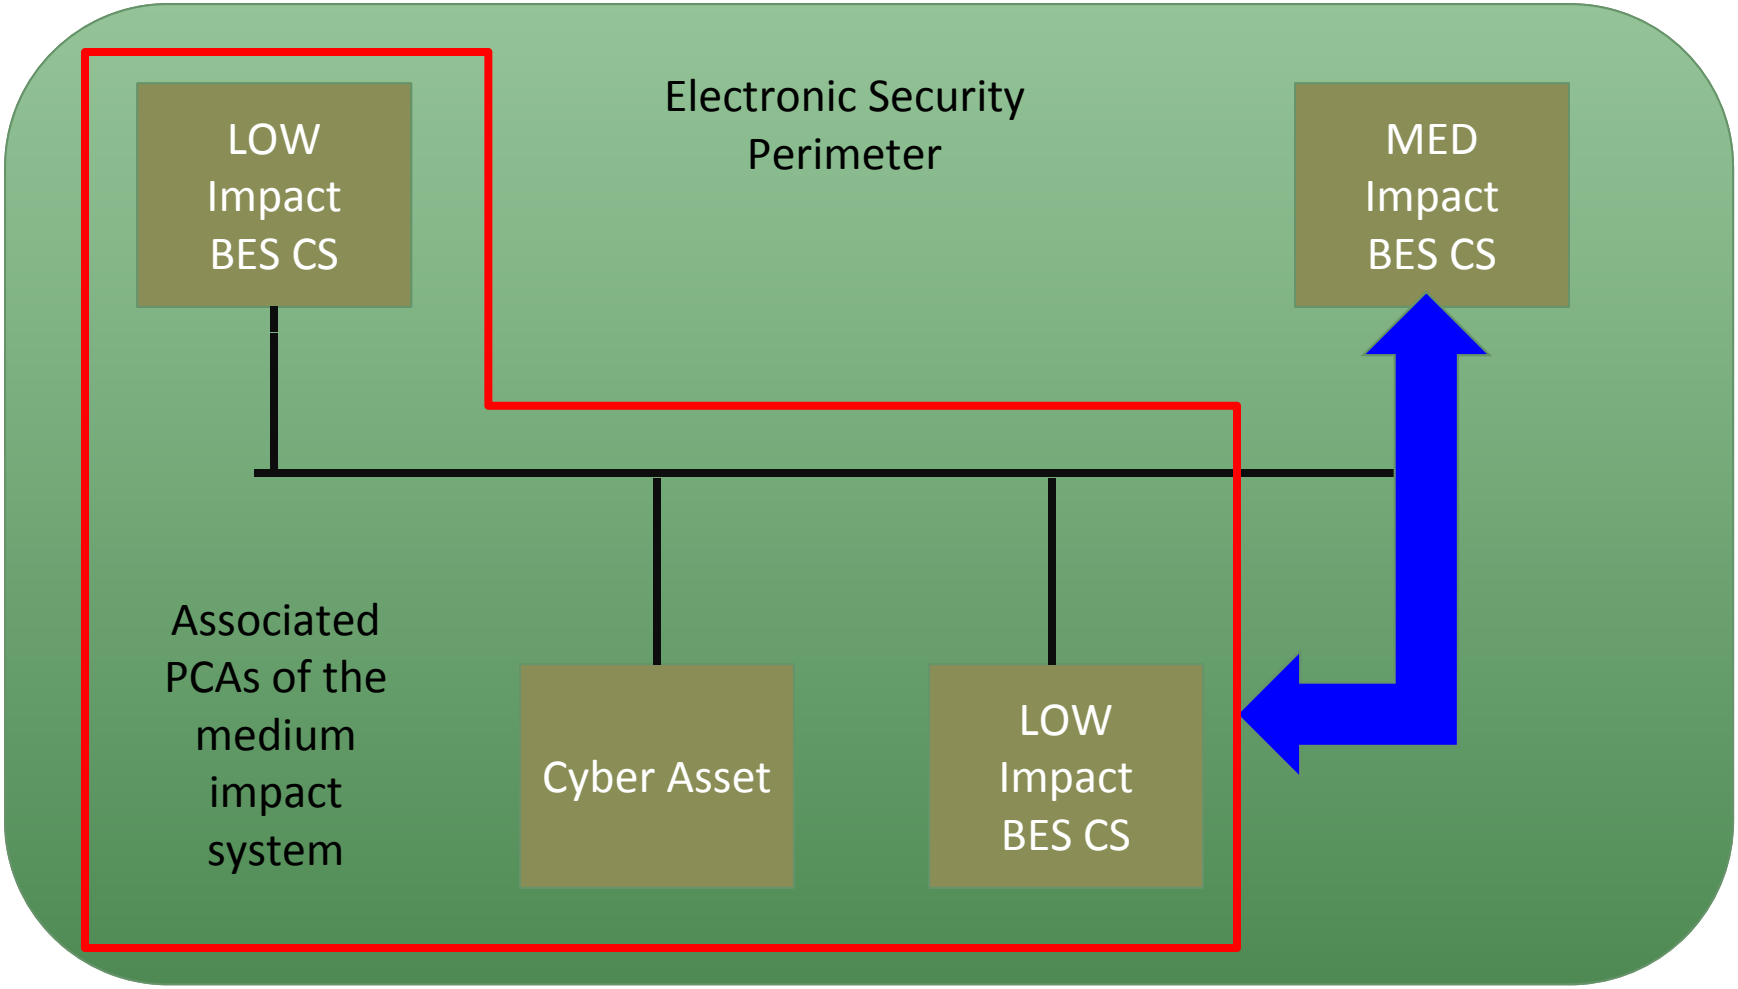
ESPs - High Watermarking



ESPs - High Watermarking



ESPs - High Watermarking



Physical Security and External Connectivity

- All High and Medium Impact BES Cyber Systems
  - "Define operational or procedural controls to restrict physical access"
  - This includes standalone and serial connected BES Cyber Assets
- Additional items for Medium Impact BES Cyber Systems with External Routable Connectivity and High Impact BES Cyber Systems
  - Control, monitor, and log access to Physical Security Perimeters
  - Allow access to only individuals who have authorized unescorted physical access
  - Visitor control program, maintenance, and testing

More Definitions

- “Physical Security Perimeter” term replaces “Defined Physical Boundary”
- “Transient Cyber Asset” deleted
- “External Connectivity” deleted

VSLs

- VSLs modified to include more granularity and gradation
  - Reduction in binary/severe nature
  - Gradated timeframes
  - Gradated percent of assets in violation

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

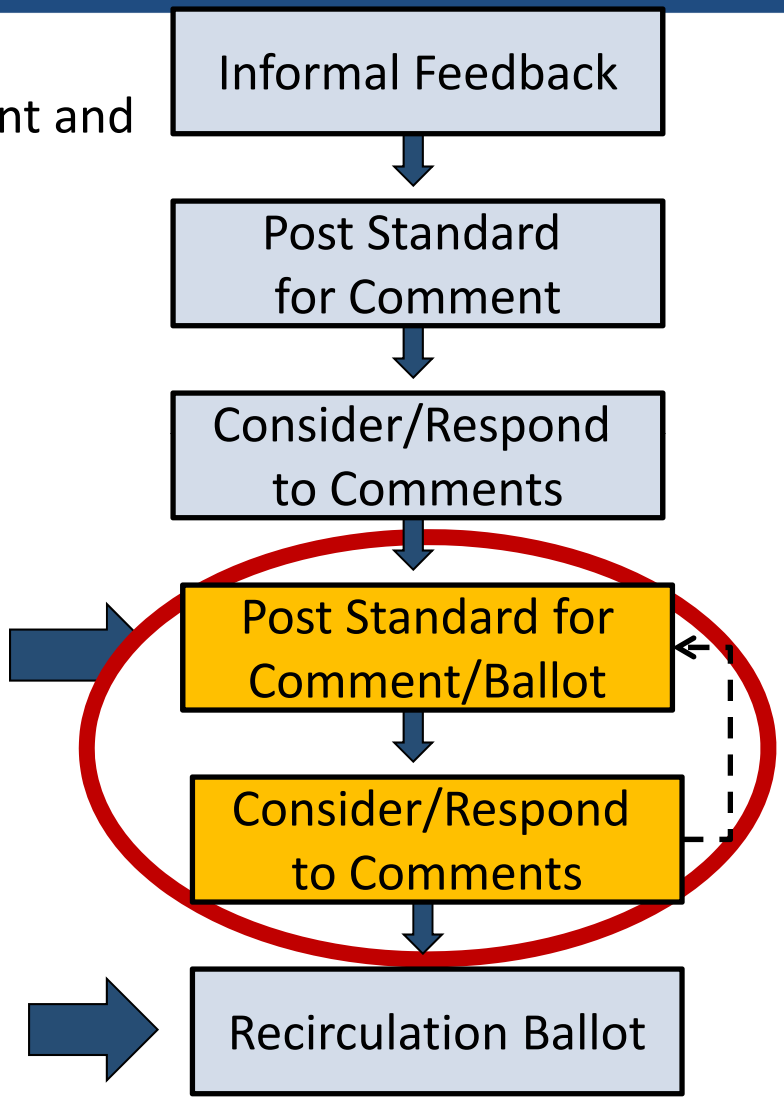
Comment and Ballot Process

Stakeholder Consensus Process

CIP Version 5 posted for 40-day formal comment and simultaneous 10-day successive ballot period

New/Successive Ballot:
At this step, the standard is either "new" or significantly changed from the last version posted for comment/ ballot. The ballot record starts with no votes and no comments.

Recirculation Ballot:
At this step, there have been no significant changes to the standard from the last ballot. The ballot record starts with all votes and comments from the previous ballot.



Comment and Ballot Period

- April 12, 2012 through May 21, 2012
  - Formal 40-day comment period
- May 11, 2012 through May 21, 2012
  - Twelve Successive Ballots open
    - Ten Standards
    - Definitions
    - Implementation Plan

Navigating Stakeholder Input Toward Consensus

- Stakeholder feedback is essential
- Almost 2000 pages of comments
- Very constructive comments during last posting
- Drafting team considered all viewpoints

Submitting Comments

- Ballot Comments
  - Submit through “checkbox form” – not within ballot
  - No need to submit same comment more than once
- Comments on proposed standards
  - Submit through electronic form
  - Be brief
  - Focus on question asked
  - Indicating agreement with others is preferred over copying the comments (e.g., “ABC agrees with XYZ’s comments”)

Comment Form

- Unofficial comment form
  - Provided to assist comment development
  - Divided into four forms (A through D)
  - Formatting will not transfer from unofficial form to official form (web-based)

- Warning included on comment form:

VERY IMPORTANT:
Please note that **the official comment form *does not* retain formatting** (even if it appears to transfer formatting when you copy from the unofficial Word version of the form into the official electronic comment form). If you enter extra carriage returns, bullets, automated numbering, symbols, bolding, italics, or any other formatting, that formatting will not be retained when you submit your comments. Therefore, if you would like to separate portions of your comment by idea, e.g., the drafting team requests that each distinct idea in the same comment block be prefaced with (1), (2), etc., instead of using formatting such as extra carriage returns, bullets, automated numbering, bolding, or italics.

Comment Form

5. CIP-009-5 R1 states "Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in *CIP-009-5 Table R1 – Recovery Plan Specifications*." The requirement then proceeds to define the requirement parts in the table. Do you agree with the proposed Requirement R1?

- ☐ Yes
- ☐ No

6. CIP-009-5 R2 states "Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in *CIP-009-5 Table R2 – Recovery Plan Implementation and Testing*." The requirement then proceeds to define the requirement parts in the table. Do you agree with the proposed Requirement R2?

- ☐ Yes
- ☐ No

7. CIP-009-5 R3 states "Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in *CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication*." The requirement then proceeds to define the requirement parts in the table. Do you agree with the proposed Requirement R3?

- ☐ Yes
- ☐ No

8. CIP-009-5: If you disagree with the changes made to CIP-009-5 since the last formal comment period, what, specifically, do you disagree with? Please provide specific suggestions or proposals for any alternative language.

Comments:

Standard Drafting Team Response Process

- Issues and responses for each individual requirement
- Effective feedback
  - Specific to question
  - Provided proposed change/rationale
- Less effective feedback
  - Repeating comment multiple times/responses to entire standard in every question
  - No reference to where suggested change should occur
  - Non-technology agnostic requirements that can't be applied to all Cyber Assets in a mandatory and enforceable environment.

Questions?

- Please submit your questions via the ReadyTalk chat window
- Moderator and point of contact – Steven Noess, NERC
  - steven.noess@nerc.net
- Key dates:
  - April 12, 2012 through May 21, 2012 – Formal Comment Period
  - May 11, 2012 through May 21, 2012 – Ballots Open
- Slides and recording of this webinar will be posted to the NERC website (usually within three business days)

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards, with some changes, and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a Responsible Entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

3	12/16/09	Updated version number from -2 to -3. Approved by the NERC Board of Trustees.	Update
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — BES Cyber System Categorization

2. Number: CIP-002-5

3. Purpose: To identify and categorize BES Cyber Systems and their associated BES Cyber Assets for the application of cyber security requirements commensurate with the adverse impact that loss, compromise, or misuse of those BES Cyber Systems could have on the reliable operation of the BES. Identification and categorization of BES Cyber Systems support appropriate protection against compromises that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

4.1.7 Reliability Coordinator

4.1.8 Transmission Operator

4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more
- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

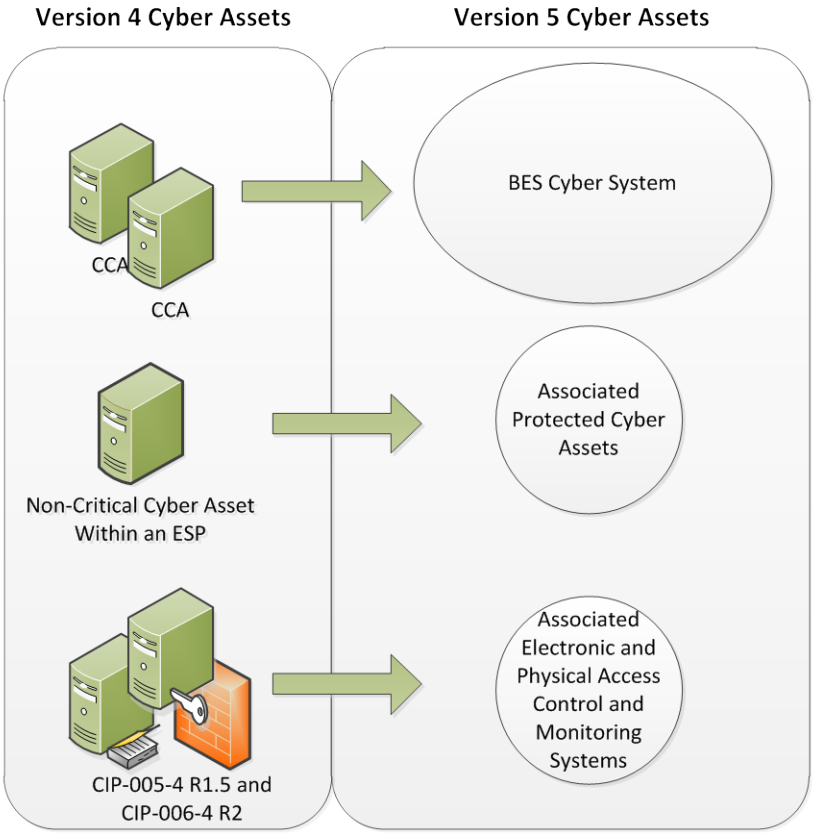
4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

This standard provides “bright-line” criteria for applicable Responsible Entities to categorize their BES Cyber Systems based on the impact of their associated Facilities, Systems, and equipment; which, if destroyed, degraded, or otherwise rendered unavailable, would affect the reliable operation of the Bulk Electric System. Several concepts provide the basis for the approach to the standard.

BES Cyber Systems

One of the fundamental differences between Versions 4 and 5 of the CIP Cyber Security Standards is the shift from identifying Critical Cyber Assets to identifying BES Cyber Systems. This change results from the drafting team’s review of the NIST Risk Management Framework and the use of an analogous term “information system” as the target for categorizing and applying security controls.



In transitioning from Version 4 to Version 5, a BES Cyber System can be viewed simply as a grouping of Critical Cyber Assets (as that term is used in Version 4). The CIP Cyber Security Standards use the "BES Cyber System" term primarily to provide a higher level for referencing the object of a requirement. For example, it becomes possible to apply requirements dealing with recovery and malware protection to a grouping rather than individual Cyber Assets. So it becomes clearer in the requirement that malware protection applies to the system as a whole and may not be necessary for every individual device to comply.

Another reason for using the term "BES Cyber System" is to provide a convenient level at which a Responsible Entity can organize their documented implementation of the requirements and compliance evidence. Responsible Entities can use the well-developed concept of a *security plan* for each BES Cyber System to document the programs, processes, and plans in place to comply with security requirements.

It is left up to the Responsible Entity to determine the level of granularity at which to identify a BES Cyber System. For example, the Responsible Entity might choose to view an entire plant control system as a single BES Cyber System, or it might choose to view certain components of the plant control system as distinct BES Cyber Systems. The Responsible Entity should take into consideration the operational environment and scope of management when defining the BES Cyber System boundary in order to

maximize efficiency in secure operations. Defining the boundary too tightly may result in redundant paperwork and authorizations, while defining the boundary too broadly could make the secure operation of the BES Cyber System difficult to monitor and assess.

Reliable Operation of the BES

The scope of the CIP Cyber Security Standards is restricted to BES Cyber Systems that would impact the reliable operation of the BES. In order to identify them, Responsible Entities determine whether the BES Cyber Systems perform or support any BES reliability function according to those reliability tasks identified for functional entities in the NERC Functional Model. This ensures that the *initial* scope for consideration includes only those BES Cyber Systems and their associated BES Cyber Assets that perform or support the reliable operation of the BES. The definition of BES Cyber Asset provides the basis for this scoping.

Real-time Operations

One characteristic of the BES Cyber Asset is a real-time scoping characteristic. The time horizon that is significant for BES Cyber Systems and BES Cyber Assets subject to the application of these Version 5 CIP Cyber Security Standards is defined as that which is material to real-time operations for the reliable operation of the BES. To provide a better defined time horizon than "Real-time," BES Cyber Assets are those Cyber Assets that, if rendered unavailable, degraded, or misused, would adversely impact the reliable operation of the BES within 15 minutes of the activation or exercise of the compromise. This time window must not include in its consideration the activation of redundant BES Cyber Assets or BES Cyber Systems: from the cyber security standpoint, redundancy does not mitigate cyber security vulnerabilities.

Categorization Criteria

The criteria defined in Attachment 1 are used to categorize BES Cyber Systems into impact categories. Requirement 1 only requires the discrete identification of BES Cyber Systems and their associated BES Cyber Assets for those in the high impact and medium impact categories. All BES Cyber Systems for Facilities not included in Attachment 1 – Impact Rating Criteria, Parts 1.1 to 1.4 and Parts 2.1 to 2.11 default to be low impact.

This general process of categorization of BES Cyber Systems based on impact on the reliable operation of the BES is consistent with risk management approaches for the purpose of application of cyber security requirements in the rest of Version 5 Cyber Security Standards.

Associated Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets

BES Cyber Systems have associated Cyber Assets, which, if compromised, pose a threat to the BES Cyber System by virtue of: (a) their proximity within the Electronic

Security Perimeter (Protected Cyber Assets), or (b) the security control function they perform (Electronic Access Control or Monitoring Systems and Physical Access Control Systems). These Cyber Assets include:

Electronic Access Control or Monitoring Systems – Examples include: Electronic Access Points, Intermediate Devices, authentication servers (e.g., RADIUS servers, Active Directory servers, Certificate Authorities), security event monitoring systems, and intrusion detection systems.

Physical Access Control Systems – Examples include: authentication servers, card systems, and badge control systems.

Protected Cyber Assets – Examples may include, to the extent they are within the ESP: file servers, ftp servers, time servers, LAN switches, networked printers, digital fault recorders, and emission monitoring systems.

B. Requirements and Measures

Rationale – R1:

BES Cyber Systems and their associated BES Cyber Assets have varying impact on the reliable operation of the BES. Once they have been identified, they must be categorized according to their impact so that the appropriate measures can be applied, commensurate with their impact. Attachment 1 provides a set of "bright-line" criteria that the Responsible Entity must use to categorize these BES Cyber Systems in accordance with their impact on the BES. These impact categories will be the basis for the application of appropriate requirements in CIP-003-CIP-011.

The configuration of the BES is subject to changes due to new demands and requirements for Bulk Power and to environmental changes and operational events. When changes to the BES are planned, the effect of these changes on the set of identified and categorized BES Cyber Systems must be analyzed to ensure that the adequate level of protection is still applied to them.

R1. Each Responsible Entity shall: *[Violation Risk Factor: High][Time Horizon: Operations Planning]*

1.1. Identify Facilities, Systems, or equipment that meet the criteria specified in CIP-002-5, Attachment 1 – Impact Rating Criteria Parts 1.1 to 1.4 and Parts 2.1 to 2.11;

1.2. Identify each high impact BES Cyber System and its associated BES Cyber Asset(s) used for the Facilities, Systems, or equipment identified in Requirement R1 Part 1.1 according to the criteria contained in CIP-002-5, Attachment 1 – Impact Rating Criteria;

1.3. Identify each medium impact BES Cyber System and its associated BES Cyber Asset(s) used for the Facilities, Systems, or equipment identified in Requirement R1 Part 1.1 according to the criteria contained in CIP-002-5, Attachment 1 – Impact Rating Criteria;

- BES Cyber Systems which are not included in high impact or medium impact shall default to the category of low impact and do not require discrete identification; and

1.4. Review (and update as needed) the identification in Requirement R1, Parts 1.1, 1.2, and 1.3 within 60 calendar days of when a change to BES Elements or Facilities is placed into operation, which is planned to be in service for more than six calendar months and causes a change in the identification or

categorization of the BES Cyber Systems from a lower to a higher impact category.

M1. Acceptable evidence includes, but is not limited to, dated electronic or physical lists required by Requirement R1, Parts 1.1, 1.2 and 1.3, and a list of changes to the BES (with a date for each change) that cause a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category.

Rationale – R2

The lists required by Requirement R1 are reviewed once a year to ensure that all BES Cyber Systems required to be categorized have been properly identified and categorized. The miscategorization or non-categorization of a BES Cyber System can lead to the application of inadequate or non-existent cyber security controls that can lead to compromise or misuse that can affect the real-time operation of the BES. The CIP Senior Manager's approval ensures proper oversight of the process by the appropriate Responsible Entity personnel.

R2. The Responsible Entity shall have its CIP Senior Manager or delegate approve the identifications required by Requirement R1 at least once each calendar year, not to exceed 15 calendar months between approvals, even if it has no identified items in Requirement R1, Parts 1.1, 1.2, or 1.3. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning].*

M2. Acceptable evidence includes, but is not limited to, electronic or physical dated and signed records to demonstrate that the Responsible Entity has had its CIP Senior Manager or delegate review and update, where applicable, the identification and categorization of Facilities, Systems, and equipment, and their associated BES Cyber Systems and BES Cyber Assets, at least once each calendar year, not to exceed 15 calendar months between occurrences, even if it has none identified in Requirement R1, Parts 1.1, 1.2, or 1.3, as required by requirement R2.

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information

- None

CIP-002-5 - Attachment 1

Impact Rating Criteria

1. High Impact Rating (H)

Each BES Cyber System used by and located at:

1.1. Each Control Center, backup Control Center, and associated data centers used to perform the functional obligations of the Reliability Coordinator.

1.2. Each Control Center, backup Control Center, and associated data centers used to perform the functional obligations of the Balancing Authority 1) for generation equal to or greater than an aggregate of 1500 MW in a single Interconnection or 2) that includes control of one or more of the generation assets that meet criteria 2.3, 2.6, and 2.9.

1.3. Each Control Center, backup Control Center, and associated data centers used to perform the functional obligations of the Transmission Operator, that includes control of one or more of the assets that meet criteria 2.2, 2.4, 2.5, 2.7, 2.8, 2.9, or 2.10.

1.4 Each Control Center, backup Control Center, and associated data centers used to perform the functional obligations of the Generation Operator that includes control 1) for generation equal to or greater than an aggregate of 1500 MW in a single Interconnection or 2) that includes control of one or more of the generation assets that meet criteria 2.3, 2.6, and 2.9.

2. Medium Impact Rating (M)

Each BES Cyber System, not included in Section 1, above, associated with the following:

2.1. Commissioned generation, by each group of generating units at a single plant location, with an aggregate highest rated net Real Power capability of the preceding 12 calendar months equal to or exceeding 1500 MW in a single Interconnection. For each group of generating units, the only BES Cyber Systems that meet this criterion are those shared BES Cyber Systems that could, within 15 minutes, adversely impact the reliable operation of any combination of units that in aggregate equal or exceed 1500 MW in a single Interconnection.

2.2. Each BES reactive resource or group of resources at a single location (excluding generation Facilities) with an aggregate Reactive Power nameplate rating of 1000 MVAR or greater (excluding those at generation Facilities). The only BES Cyber Systems that meet this criterion are those shared BES Cyber Systems that could, within 15 minutes, adversely impact the reliable operation of any combination of resources that in aggregate equal or exceed 1000 MVAR.

2.3. Each generation Facility that its Planning Coordinator or Transmission Planner designates and informs the Generator Owner or Generator Operator, as necessary, to avoid an Adverse Reliability Impact in the planning horizon of more than one year.

2.4. Transmission Facilities operated at 500 kV or higher.

2.5. Transmission Facilities at a single station or substation that are operating between 200 kV and 499 kV, are connected to three or more other Transmission stations or substations, and which possess "aggregate weighted values" exceeding 3000. The "aggregate weighted value" for a Transmission Facility is determined by summing the "weight value per line" shown in the table below for each incoming or outgoing BES Transmission Line that is connected to another Transmission station or substation.

Voltage Value of a Line	Weight Value per Line
100kV to 199 kV	0 (not applicable)
200 kV to 299 kV	700
300 kV to 499 kV	1300

2.6. Generation at a single plant location or Transmission Facilities at a single station or substation location that are identified by its Reliability Coordinator, Planning Coordinator or Transmission Planner as critical to the derivation of Interconnection Reliability Operating Limits (IROLs) and their associated contingencies.

2.7. Transmission Facilities identified as essential to meeting Nuclear Plant Interface Requirements.

2.8. Transmission Facilities providing the generation interconnection required to connect generator output to the Transmission Systems that, if destroyed, degraded, misused, or otherwise rendered unavailable, would result in the loss of the generation Facilities identified by any Generator Owner as a result of its application of Attachment 1, Parts 2.1 or 2.3.

2.9. Each Special Protection System (SPS), Remedial Action Scheme (RAS) or automated switching Systems that operates BES Elements that, if destroyed, degraded, misused or otherwise rendered unavailable, would cause one or more Interconnection Reliability Operating Limits (IROLs) violations for failure to operate as designed or cause a reduction in one or more IROLs if destroyed, degraded, misused, or otherwise rendered unavailable.

2.10. Each System or group of Elements that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more implementing Under Voltage Load Shedding (UVLS) or Under Frequency Load Shedding (UFLS), as required by its regional load shedding program.

2.11. Control Centers and associated data centers not included in High Impact Rating (H), above, that: (1) perform the functional obligations of Balancing Authority or Transmission Operator, or (2) control an aggregate highest rated net Real Power

capability of the preceding 12 calendar months equal to or exceeding 300 MW or more of BES generation.

3. Low Impact Rating (L)

Each BES Cyber System associated with:

3.1. BES Facilities not categorized in Section 1 as having a High Impact Rating (H) or Section 2 as having a Medium Impact Rating (M).

3.2. Blackstart Resources.

3.3. Elements in the Cranking Path and initial switching requirements.

BES Cyber Systems that are not included in high impact and medium impact shall default to the category of low impact and do not require discrete identification.

Guidelines and Technical Basis

CIP-002-5 requires that applicable Responsible Entities categorize their BES Cyber Systems and associated BES Cyber Assets according to the criteria in Attachment 1. A BES Cyber Asset includes in its definition, "…that if rendered unavailable, degraded, or misused would, within 15 minutes adversely impact the reliable operation of the BES."

The following provides guidance that a Responsible Entity may use to identify the BES Cyber Systems that would be in scope. The concept of BES reliability operating service is useful in providing Responsible Entities with the option of a defined process for scoping those BES Cyber Systems that would be subject to CIP-002-5. The concept includes a number of named BES reliability operating services. These named services include:

Dynamic Response to BES conditions
Balancing Load and Generation
Controlling Frequency (Real Power)
Controlling Voltage (Reactive Power)
Managing Constraints
Monitoring & Control
Restoration of BES
Situational Awareness
Inter-Entity Real-Time Coordination and Communication

Responsibility for the reliable operation of the BES is spread across all Entity Registrations. Each entity registration has its own special contribution to reliable operations and the following discussion helps identify which entity registration performs which reliability operating service, as a process to identify BES Cyber Systems that would be in scope. The following provides guidance for Responsible Entities to determine applicable reliability operations services according to their Function Registration type.

Entity Registration	RC	BA	TOP	TO	DP	LSE	GOP	GO
Dynamic Response		X	X	X	X	X	X	X
Balancing Load & Generation	X	X	X	X	X	X	X	X
Controlling Frequency		X					X	X
Controlling Voltage			X	X	X	X		X
Managing Constraints	X		X				X	
Monitoring and Control			X				X	
Restoration			X				X	
Situation Awareness	X	X	X				X	
Inter-Entity coordination	X	X	X	X			X	X

Dynamic Response

The Dynamic Response Operating Service includes those actions performed by BES Elements or subsystems which are automatically triggered to initiate a response to a BES condition. These actions are triggered by a single element or control device or a combination of these elements or devices in concert to perform an action or cause a condition in reaction to the triggering action or condition. The types of dynamic responses that may be considered as potentially having an impact on the BES are:

- Spinning reserves (contingency reserves)
  - Providing actual reserve generation when called upon (GO,GOP)
  - Monitoring that reserves are sufficient (BA)
- Governor Response
  - Control system used to actuate governor response (GO)
- Protection Systems (transmission & generation)
  - Lines, buses, x-formers, generators (TO, TOP, GO, GOP)
  - Zone protection for breaker failure (TO, TOP)
  - Breaker protection (TO, TOP)
  - Current, frequency, speed, phase (TO,TOP, GO,GOP)
- Special Protection Systems or Remedial Action Schemes
  - Sensors, relays & breakers, possibly software (TO, TOP)
- Under and Over Frequency relay protection (includes automatic load shedding)
  - Sensors, relays & breakers (DP,LSE)
- Under and Over Voltage relay protection (includes automatic load shedding)
  - Sensors, relays & breakers (DP,LSE)
- Power System Stabilizers (GO)

Balancing Load and Generation

The Balancing Load and Generation Operations Service includes activities, actions and conditions necessary for monitoring and controlling generation and load in the operations planning horizon and in real-time. Aspects of the Balancing Load and Generation function include, but are not limited to:

- Calculation of Area Control Error (ACE)
  - Field data sources (real time tie flows, frequency sources, time error, etc) (TO, TOP)
  - Software used to perform calculation (BA) (RC)

- Demand Response
  - Ability to identify load change need (BA)
  - Ability to implement load changes (TOP,DP,LSE)
- Manually Initiated Load shedding
  - Ability to identify load change need (BA)
  - Ability to implement load changes (TOP, DP,LSE)
- Non-spinning reserve (contingency reserve)
  - Know generation status, capability, ramp rate, start time (GO, BA)
  - Start units and provide energy (GOP)

Controlling Frequency (Real Power)

The Controlling Frequency Operations Service includes activities, actions and conditions which ensure, in real time, that frequency remains within bounds acceptable for the reliability or operability of the BES. Aspects of the Controlling Frequency function include, but are limited to:

- Generation Control (such as AGC)
  - ACE, current generator output, ramp rate, unit characteristics (BA, GOP, GO)
  - Software to calculate unit adjustments (BA)
  - Transmit adjustments to individual units (GOP)
  - Unit controls implementing adjustments (GOP)
- Regulation (regulating reserves)
  - Frequency source, schedule (BA)
  - Governor control system (GO)

Controlling Voltage (Reactive Power)

The Controlling Voltage Operations Service includes activities, actions and conditions which ensure, in real time, that voltage remains within bounds acceptable for the reliability or operability of the BES. Aspects of the Controlling Voltage function include, but are not limited to:

- Automatic Voltage Regulation (AVR)
  - Sensors, stator control system, feedback (GO)
- Capacitive resources
  - Status, control (manual or auto), feedback (TOP, TO,DP)

- Inductive resources (transformer tap changer, or inductors)
  - Status, control (manual or auto), feedback (TOP,TO,DP)
- Static VAR Compensators (SVC)
  - Status, computations, control (manual or auto), feedback (TOP, TO,DP)

Managing Constraints

Managing Constraints includes activities, actions and conditions that are necessary to ensure that elements of the BES operate within design limits and constraints established for the reliability and operability of the BES. Aspects of the Managing Constraints include, but are not limited to:

- Available Transfer Capability (ATC) (TOP)
- Interchange schedules (TOP, RC)
- Generation re-dispatch and unit commit (GOP)
- Identify and monitor SOL's & IROL's (TOP, RC)
- Identify and monitor Flow gates (TOP, RC)

Monitoring and Control

Monitoring and Control includes those activities, actions and conditions that provide monitoring and control of BES Elements. An example aspect of the Control and Operation function is:

- All methods of operating breakers and switches
  - SCADA (TOP, GOP)
  - Substation automation (TOP)

Restoration of BES

The Restoration of BES Operations Service includes activities, actions and conditions necessary to go from a shutdown condition to an operating condition delivering electric power without external assistance. Aspects of the Restoration of BES function include, but are not limited to:

- Restoration including planned cranking path
  - Through black start units (TOP, GOP)
  - Through tie lines (TOP, GOP)
- Off-site power for nuclear facilities. (TOP)
- Coordination

Situational Awareness

The Situational Awareness function includes activities, actions and conditions established by policy, directive or standard operating procedure necessary to assess the current condition of the BES and anticipate effects of planned and unplanned changes to conditions. Aspects of the Situation Awareness function include:

- Monitoring and alerting (such as EMS alarms) (TOP, GOP, RC,BA)
- Change management (TOP,GOP,RC,BA)
- Current Day & Next Day planning (TOP)
- Contingency Analysis (RC)
- Frequency monitoring (BA, RC)

Inter-Entity Coordination

The Inter-Entity coordination and communication function includes activities, actions, and conditions established by policy, directive, or standard operating procedure necessary for the coordination and communication between Responsible Entities to ensure the reliability and operability of the BES. Aspects of the Inter-Entity Coordination and Communication function include:

- Scheduled interchange (BA,TOP,GOP,RC)
- Facility operational data and status (TO, TOP, GO, GOP, RC, BA)
- Operational directives (TOP, RC, BA)

Applicability to Distribution Providers and Load Serving Entities

It is expected that only Distribution Providers that own or operate facilities that qualify in the Applicability section will be subject to these Version 5 Cyber Security Standards. Distribution Providers that do not own or operate any facility that qualifies are not subject to these standards. The qualifications are based on the requirements for registration as a Distribution Provider and on the requirements applicable to Distribution Providers in NERC Standard EOP-005.

Similarly, it is expected that only Load-Serving Entities that own or operate facilities that qualify in the Applicability section will be subject to these Version 5 Cyber Security Standards. These qualifications are based on the requirements for registration as a Load Serving Entity. Additional qualifications for thresholds in Attachment 1, as specified in Section 4 of CIP-002, also apply.

Requirement R1:

R1 implements the methodology for the categorization of BES Cyber Systems and their associated BES Cyber Assets according to their impact on the BES. Using the traditional risk assessment equation, it reduces the measure of the risk to an impact (consequence) assessment, assuming the vulnerability index of 1 (the Systems are assumed to be vulnerable) and a probability of threat of 1 (100 percent). The criteria in Attachment 1 provide a measure of the impact that the Facilities, Systems and equipment that these BES Cyber Systems support, on the reliable operation of the BES.

Responsible Entities are required to identify and categorize those BES Cyber Systems that have high and medium impact. BES Cyber Systems for Facilities, Systems and equipment not specified in Parts 1.1 – 1.4 and Parts 2.1 – 2.11 default to low impact.

Attachment 1

Overall Application

In the application of the criteria in Attachment 1, Responsible Entities should note that the approach used is based on the impact of the BES Cyber System as measured by the bright-line criteria defined in Attachment 1. While the criteria are based on the scope of the BES Facilities, Systems and equipment, this is used here as a measure of the impact of the BES Cyber System for the purpose of categorization.

- When the drafting team uses the term “Facilities”, it leaves some latitude to Responsible Entities to determine included Facilities. The term Facility is defined in the NERC Glossary of Terms as “A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.).” In most cases, the criteria refer to a group of Facilities in a given location that supports the reliable operation of the BES. For example, for Transmission assets, the substation may be designated as the group of Facilities. However, in a substation that includes equipment that supports BES operations along with equipment that only supports Distribution operations, the Responsible Entity may be better served to consider only the group of Facilities that supports BES operation. In that case, the Responsible Entity may designate the group of Facilities by location, with qualifications on the group of Facilities that supports reliable operation of the BES, as the Facilities that are subject to the criteria for categorization of BES Cyber Systems. Generation Facilities are separately discussed in the Generation section below.
- In certain cases, a BES Cyber System may be categorized by meeting multiple criteria. In such cases, the Responsible Entity may choose to document all criteria that result in the categorization. This will avoid inadvertent miscategorization when it no longer meets one of the criteria, but still meets another.
- It is recommended that each BES Cyber System should be listed by only one Responsible Entity. Where there is joint ownership, it is advisable that the owning Responsible Entities

should formally agree on the designated Responsible Entity responsible for compliance with the standards.

High Impact Rating (H)

This category includes those BES Cyber Systems, used by and at Control Centers and associated data centers, that perform the functional obligations of the Reliability Coordinator (RC), Balancing Authority (BA), Transmission Operator (TOP), or Generation Operator (GOP), as defined in the NERC Functional Model, and as scoped by the qualification in Attachment 1, Parts 1.1, 1.2, 1.3 and 1.4. While those entities that have been registered as the above-named Functional Entities are specifically referenced, it must be noted that there may be agreements where some of the functional obligations of a Transmission Operator may be delegated to a Transmission Owner (TO). In these cases, BES Cyber Systems at these TO Control Centers that perform these functional obligations would be subject to categorization as high impact. The criteria notably specifically emphasize functional obligations, not necessarily the RC, BA, TOP, or GOP facilities.

Additional thresholds as specified in the criteria apply for this category.

Medium Impact Rating (M)

Generation

The criteria in Attachment 1's medium impact category that generally apply to Generation Owner and Operator (GO/GOP) Registered Entities are parts 2.1, 2.3, 2.6, 2.9, and 2.11.

- Part 2.1 designates as medium impact those BES Cyber Systems that impact generation with a net Real Power capability exceeding 1500 MW. The 1500 MW criterion is sourced partly from the Contingency Reserve requirements in NERC standard BAL-002, whose purpose is "to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance." In particular, it requires that "as a minimum, the Balancing Authority or Reserve Sharing Group shall carry at least enough Contingency Reserve to cover the most severe single contingency." The drafting team used 1500 MW as a number derived from the most significant Contingency Reserves operated in various BAs in all regions.

  In the use of net Real Power capability, the drafting team sought to use a value that could be verified through existing requirements as proposed by NERC standard MOD-024 and current development efforts in that area.

  By using 1500 MW as a bright-line, the intent of the drafting team was to ensure that BES Cyber Systems with common mode vulnerabilities that could result in the loss of generation at a single plant for a unit or group of units with capability higher than 1500 MW are adequately protected.

The drafting team also used additional time and value parameters to ensure the bright-lines and the values used to measure against them were relatively stable over the review period. Hence, where multiple values of net Real Power capability could be used for the Facilities' qualification against these bright-lines, the highest value was used.

- In Part 2.3, the drafting team sought to ensure that BES Cyber Systems for those generation Facilities that have been designated by the Planning Coordinator as necessary to avoid BES Adverse Reliability Impacts in the long term planning horizon are categorized as medium impact. These Facilities may be designated as "Reliability Must Run," and this designation is distinct from those generation Facilities designated as "must run" for market stabilization purposes. Because the use of the term "must run" creates some confusion in many areas, the drafting team chose to avoid using this term and instead drafted the requirement in more generic reliability language. In particular, the focus on preventing an Adverse Reliability Impact dictates that these units are designated as must run for reliability purposes beyond the local area. Those units designated as must run for voltage support in the local area would not generally be given this designation. In cases where there is no designated Planning Coordinator, the Transmission Planner is included as the Registered Entity that performs this designation.

  In the specification of the "long-term planning horizon," in this criterion, the drafting team sought to ensure that such BES Facilities would be designated in the time horizon described in the NERC document "Time Horizons," which defines long-term planning horizon as "a planning horizon of one year or longer."

  If it is determined through System studies that a unit must run in order to preserve the reliability of the BES, such as due to a Category C3 contingency as defined in TPL-003, or a Category D contingency as defined in TPL-004, then BES Cyber Systems for that unit are categorized as medium impact.

- Part 2.6 includes BES Cyber Systems for those Generation Facilities that have been identified as critical to the derivation of IROLs and their associated contingencies, as specified by FAC-014-2, **Establish and Communicate System Operating Limits**, R5.1.1 and R5.1.3.

  IROLs may be based on dynamic System phenomena such as instability or voltage collapse. Derivation of these IROLs and their associated contingencies often considers the effect of generation inertia and AVR response.

- Part 2.9 categorizes BES Cyber Systems for Special Protection Systems and Remedial Action Schemes as medium impact. Special Protection Systems and Remedial Action Schemes may be implemented to prevent disturbances that would result in exceeding IROLs if they do not provide the function required at the time it is required or if it operates outside of the parameters it was designed for Generation Owners and Operators which own BES Cyber Systems for such Systems and schemes designate them as medium impact.

- Part 2.11 categorizes as medium impact BES Cyber Systems used by and at Control Centers that perform the functional obligations of the Transmission Operator or Balancing Authority, and Generation Operator for an aggregate generation of 300 MW or higher, and which have not already included in Part 1. The value of 300 MW is the same value used for UFLS and UVLS. This ensures that Control Centers for significant impact are included. Smaller Control Centers that qualify for the definition of generation Control Centers, but which are really controlling local generation for small downstream generation facilities and do not meet the 300 MW threshold are categorized as low impact.

Transmission

- Parts 2.2, 2.4-2.11 in Attachment 1 are the criteria that are applicable to Transmission Owners and Operators. In many of the criteria, the impact threshold is defined as the capability of the failure or compromise of a System to result in exceeding one or more Interconnection Reliability Operating Limits (IROLs). Part 2.2 includes BES Cyber Systems for those Facilities in Transmission Systems that provide reactive resources to enhance and preserve the reliability of the BES. The nameplate value is used here because there is no NERC requirement to verify actual capability of these Facilities. The value of 1000 MVARs used in this criterion is a value deemed reasonable for the purpose of determining criticality.

- Part 2.4 includes BES Cyber Systems for any Transmission Facility at a substation operated at 500 kV or higher. While the drafting team felt that Facilities operated at 500 kV or higher did not require any further qualification for their role as components of the backbone on the Interconnected BES, Facilities in the lower EHV range should have additional qualifying criteria for inclusion in the medium impact category.

  It must be noted that if the collector bus for a generation plant (i.e. the plant is smaller in aggregate than the threshold set for generation in Part 1.1) is operated at 500kV, the collector bus should be considered a Generation Interconnection Facility, and not a Transmission Facility, according to the "Final Report from the Ad Hoc Group for Generation Requirements at the Transmission Interface." This collector bus would not be a facility for a medium impact BES Cyber System because it doesn't significantly affect the 500kV Transmission grid; it only affects a plant which is below the generation threshold.

- Part 2.5 includes BES Cyber Systems for facilities at the lower end of BES Transmission with qualifications for inclusion if they are deemed highly likely to have significant impact on the BES. While the criterion has been specified as part of the rationale for requiring protection for significant impact on the BES, the drafting team included, in this criterion, additional qualifications that would ensure the required level of impact to the BES. The drafting team:

  - Excluded radial facilities that would only provide support for single generation facilities.

- Specified interconnection to at least three transmission stations or substations to ensure that the level of impact would be appropriate.

The total aggregated weighted value of 3,000 was derived from weighted values related to three connected 345 kV lines and five connected 230 kV lines at a transmission station or substation. The total aggregated weighted value is used to account for the true impact to the BES, irrespective of line kV rating and mix of multiple kV rated lines.

Additionally, in NERC's document "Integrated Risk Assessment Approach – Refinement to Severity Risk Index", Attachment 1, the report used an average MVA line loading based on kV rating:

- 230 kV –> 700 MVA
- 345 kV –> 1,300 MVA
- 500 kV –> 2,000 MVA
- 765 kV –> 3,000 MVA

In the case of autotransformers in a station, Responsible Entities have flexibility in determining whether the groups of Facilities are considered a single substation or station location. In most cases, Responsible Entities would probably consider them as Facilities at a single substation or station unless geographically dispersed. In these cases of these transformers being within the "fence" of the substation or station, autotransformers would not count as separate connections to other stations. The use of common BES Cyber Systems may negate any rationale for any consideration otherwise. In the case of autotransformers that are geographically dispersed from a station location, the calculation would take into account the connections in and out of each station or substation location.

- Part 2.6 include BES Cyber Systems for those Transmission Facilities that have been identified as critical to the derivation of IROLs and their associated contingencies, as specified by FAC-014-2, **Establish and Communicate System Operating Limits**, R5.1.1 and R5.1.3.

- Part 2.7 is sourced from the NUC-001 NERC standard for the support of Nuclear Facilities. NUC-001 ensures that reliability of NPIR's are ensured through adequate coordination between the Nuclear Generator Owner/Operator and its Transmission provider "for the purpose of ensuring nuclear plant safe operation and shutdown." In particular, there are specific requirements to coordinate physical and cyber security protection of these interfaces.

- Part 2.8 designates as medium impact those BES Cyber Systems that impact Transmission Facilities necessary to directly support generation that meet the criteria in Parts 2.1 (generation Facilities with output greater than 1500 MW) and 2.3 (generation Facilities generally designated as "must run" for wide area reliability in the planning horizon).

- Part 2.9 designates as medium impact those BES Cyber Systems for those Special Protection Systems (SPS), Remedial Action Schemes (RAS), or automated switching Systems installed to ensure BES operation within IROLs. The degradation, compromise or unavailability of these BES Cyber Systems would result in exceeding IROLs if they fail to operate as designed. By the definition of IROL, the loss or compromise of any of these have Wide Area impacts.

- Part 2.10 designates as medium impact those BES Cyber Systems for Systems or Elements that perform automatic Load shedding, without human operator initiation, of 300 MW or more. The SDT spent considerable time discussing the wording of Part 2.12, and chose the term "Each" to represent that the criterion applied to a discrete System or Facility. In the drafting of this criterion, the drafting team sought to include only those Systems that did not require human operator initiation, and targeted in particular those Under Frequency Load Shedding (UFLS) facilities and Systems and Under Voltage Load Shedding (UVLS) Systems and Elements that would be implemented as part of a regional load shedding requirement to prevent Adverse Reliability Impact. These include automated Under Frequency Load Shedding Systems or Under Voltage Load Shedding Systems that are capable of load shedding 300 MW or more. It should be noted that those qualifying Systems which require a human operator to arm the System, but once armed, trigger automatically, are still to be considered as not requiring human operator initiation and should be designated as medium impact. The 300 MW threshold has been defined as the aggregate of the highest MW rating for the preceding 12 months to account for seasonal fluctuations.

  Within an operational environment, the drafting team understands that the real-time impact to the Bulk Electric System of a loss of load, or the equivalent amount of generation, will be similar, with loss of load resulting in a frequency high condition and a loss of generation resulting in a frequency low condition. This particular threshold (300 MW) was provided in CIP, Version 1. The SDT believes that the threshold should be lower than the 1500MW generation requirement since it is specifically addressing UVLS and UFLS, which are last ditch efforts to save the Bulk Electric System and hence requires a lower threshold.

  In ERCOT, the Load acting as a Resource ("LaaR") Demand Response Program is not part of the regional load shedding program, but an ancillary services market.

- Part 2.11 categorizes as medium impact those BES Cyber Systems used by and at Control Centers and associated data centers performing the functional obligations of Balancing Authorities or Transmission Operators not already categorized as high impact and at generation Control Centers that control generation of 300 MW or more. These include Control Centers for Transmission Owners which perform the function obligation of a Transmission Operator.

Low Impact Rating (L)

BES Cyber Systems not categorized in high impact or medium impact default to low impact. Note that these BES Cyber Systems do not require discrete identification.

Restoration Facilities

- Several discussions on the CIP Version 5 standards suggest entities owning Blackstart Resources and Cranking Paths might elect to remove those services to avoid higher compliance costs. For example, one Reliability Coordinator reported a 25% reduction of Blackstart Resources as a result of the Version 1 language, and there could be more entities that make this choice under Version 5.

  In response, the CIP Version 5 drafting team sought informal input from NERC's Operating and Planning Committees. The committees indicate there has already been a reduction in Blackstart Resources because of increased CIP compliance costs, environmental rules, and other risks; continued inclusion within Version 5 at a category that would very significantly increase compliance costs can result in further reduction of a vulnerable pool.

  The drafting team moved from the categorization of restoration assets such as Blackstart Resources and Cranking Paths as medium impact (as was the case in earlier drafts) to categorization of these assets as low impact as a result of these considerations. This will not relieve asset owners of all responsibilities, as would have been the case in CIP-002, Versions 1-4 (since only Cyber Assets with routable connectivity which are essential to restoration assets are included in those versions). Under the low impact categorization, those assets will be protected in the areas of cyber security awareness, physical access control, and electronic access control, and they will have obligations regarding incident response. This represents a net gain to bulk power system reliability, however, since many of those assets do not meet criteria for inclusion under Versions 1-4.

  Weighing the risks to overall BES reliability, the drafting team determined that this re-categorization represents the option that would be the least detrimental to restoration function and, thus, overall BES reliability. Removing Blackstart Resources and Cranking Paths from medium impact promotes overall reliability, as the likely alternative is fewer Blackstart Resources supporting timely restoration when needed.

  BES Cyber Systems for generation resources that have been designated as Blackstart Resources in the Transmission Operator's restoration plan default to low impact. NERC Standard EOP-005-2 requires the Transmission Operator to have a Restoration Plan and to list its Blackstart Resources in its plan, as well as requirements to test these Resources. This criterion designates only those generation Blackstart Resources that have been designated as such in the Transmission Operator's restoration plan. The glossary term Blackstart Capability Plan has been retired.

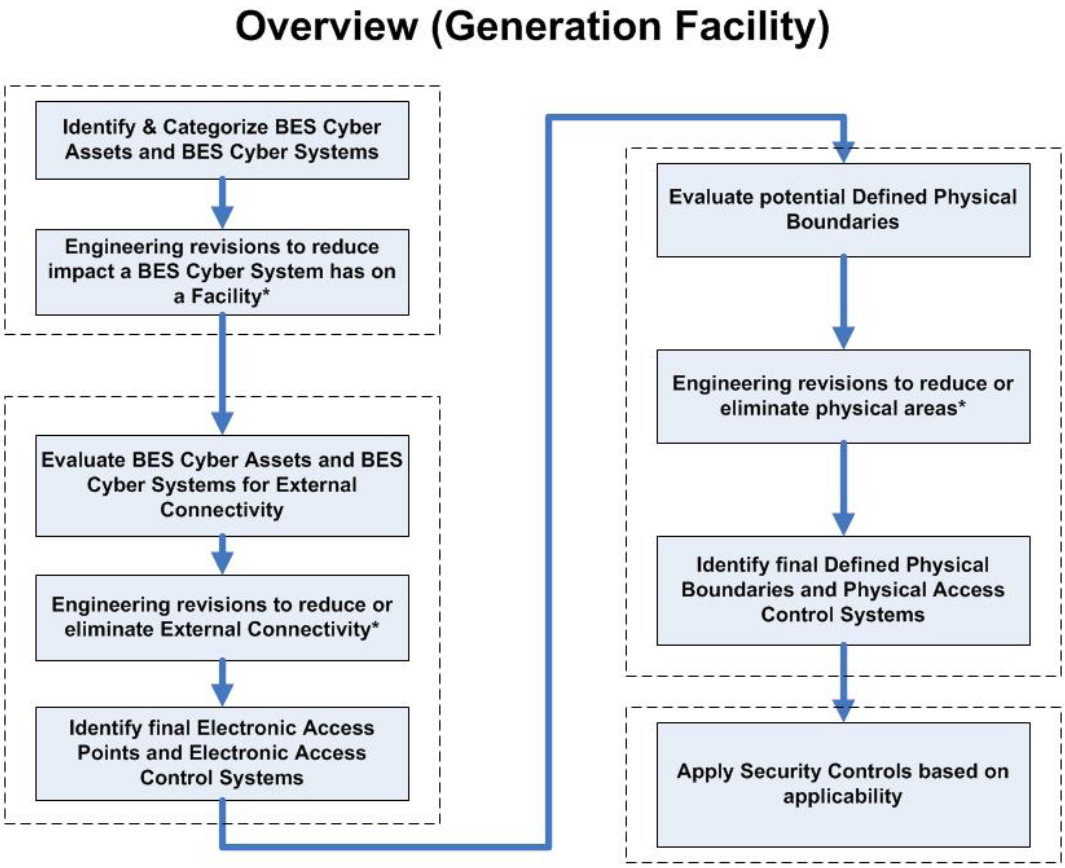
  Regarding concerns of communication to BES Asset Owners and Operators of their role in the Restoration Plan, Transmission Operators are required in NERC Standard EOP-005-2 to "provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan."

- BES Cyber Systems for Facilities and Elements comprising the Cranking Paths and meeting the initial switching requirements from the Blackstart Resource to the first Interconnection point of the generation unit(s) to be started, as identified in the Transmission Operator's restoration plan, default to the category of low impact: however, these systems are explicitly called out to ensure consideration for inclusion in the scope of the version 5 CIP standards. This requirement for inclusion in the scope is sourced from requirements in NERC standard EOP-005-2, which requires the Transmission Operator to include in its Restoration Plan the Cranking Paths and initial switching requirements from the Blackstart Resource and the unit(s) to be started.

  Distribution Providers may note that they may have BES Cyber Systems that must be scoped in if they have Elements listed in the Transmission Operator’s Restoration Plan that are components of the Cranking Path.

Use Case: CIP Process Flow

The following CIP use case process flow for a generator Operator/Owner was provided by a participant in the development of the Version 5 standards and is provided here as an example of a process used to identify and categorize BES Cyber Systems and BES Cyber Assets; review, develop, and implement strategies to mitigate overall risks; and apply applicable security controls.



* - Engineering revisions will need to be reviewed for cost justification, operational\safety requirements, support requirements, and technical limitations.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the ~~first~~second posting of Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (~~A first posting of Version 5~~)~~ was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards, with some changes, and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. ~~18~~24 **Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the ~~standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of ~~Trustees~~Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center~~"~~."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a ~~responsible entity.~~Responsible Entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated version number from -2 to -3. Approved by the NERC Board of Trustees.	Update
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification-.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — BES Cyber ~~Asset and BES Cyber~~ System Categorization

2. Number: CIP-002-5

3. Purpose: To identify and categorize BES Cyber ~~Assets and BES Cyber~~ Systems ~~that execute or enable functions essential to reliable operation of the BES,~~and their associated BES Cyber Assets for the application of cyber security requirements commensurate with the adverse impact that loss, compromise, or misuse of those BES Cyber ~~Assets~~Systems could have on the reliable operation of the BES. Identification and categorization of BES Cyber Systems ~~could have on the reliability of~~support appropriate protection against compromises that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities ~~that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~ **described in 4.2.2**

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~
- ~~A Special Protection System or Remedial Action Scheme required by a NERC or Regional Reliability Standard~~
- ~~A Transmission Protection System required by a NERC or Regional Reliability Standard~~
- ~~Its Transmission Operator's restoration plan~~

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities ~~that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~ **described in 4.2.1**

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~

- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

~~4.1.7 NERC~~

~~4.1.8 Regional Entity~~

~~4.1.9~~4.1.7 **Reliability Coordinator**

~~4.1.10~~4.1.8 **Transmission Operator**

~~4.1.11~~4.1.9 **Transmission Owner**

4.2. Facilities:

~~4.2.1~~ **Load Serving Entity:** One or more ~~Facilities~~of the UFLS or UVLS Systems that are part of ~~any of the following systems or programs designed, installed, and operated for the protection of the BES:~~

- ~~4.2.1~~ ~~A UFLS~~a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

4.2.2 Distribution ~~Providers~~Provider: One or more ~~Facilities that are part of any of the following systems~~of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- ~~A~~ UFLS ~~program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS~~or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- ~~A~~ Special Protection System or Remedial Action Scheme ~~required by a NERC or Regional Reliability Standard~~
- ~~A Transmission~~ where the Special Protection System ~~required by a NERC~~ or Remedial Action Scheme is required by a NERC or Regional Reliability Standard

- ~~Its Transmission Operator's restoration plan~~

- ~~**All other**~~ A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard

- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities~~:~~ listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

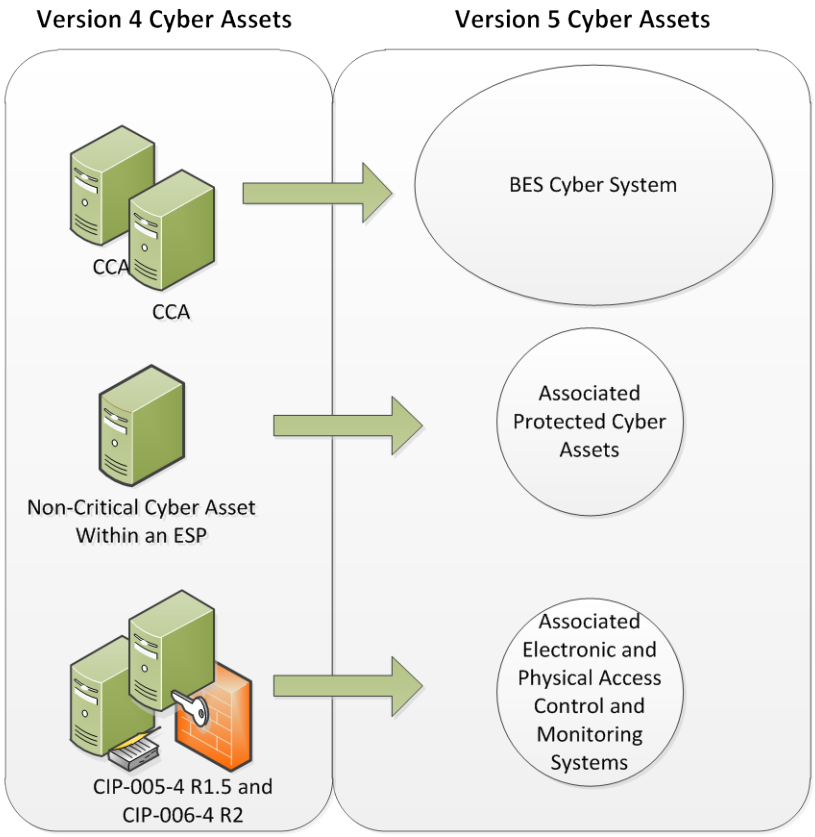
4.2.4.3 In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.~~-~~R. Section 73.54.

5. Background:

This standard provides "bright-line" criteria for applicable Responsible Entities to categorize their BES Cyber Systems ~~and BES Cyber Assets~~ based on ~~their~~the impact ~~on the real-time~~of their associated Facilities, Systems, and equipment; which, if destroyed, degraded, or otherwise rendered unavailable, would affect the reliable operation of the Bulk Electric System ~~(BES)~~. Several concepts provide the basis for the approach to the standard.

BES Cyber Systems

One of the fundamental differences between Versions 4 and 5 of the CIP Cyber Security Standards is the shift from identifying Critical Cyber Assets to identifying BES Cyber Systems. This change results from the drafting team's review of the NIST Risk Management Framework and the use of an analogous term "information system" as the target for categorizing and applying security controls.



In transitioning from Version 4 to Version 5, a BES Cyber System can be viewed simply as a grouping of Critical Cyber Assets~~.~~ (as that term is used in Version 4). The CIP Cyber Security Standards use ~~this~~the "BES Cyber System" term primarily to provide a higher level for referencing the object of a requirement. For example, it becomes possible to apply requirements dealing with recovery and malware protection to a grouping rather than individual Cyber Assets. So it becomes clearer in the requirement that malware protection applies to the system as a whole and may not be necessary for every individual device to comply.

Another reason for using the term "BES Cyber System" is to provide a convenient level at which a Responsible Entity can organize their documented implementation of the requirements and compliance evidence. Responsible Entities can use the well-developed concept of a *security plan* for each BES Cyber System to document the programs, processes, and plans in place to comply with security requirements.

It is left up to the Responsible Entity to determine the level of granularity at which to identify a BES Cyber System. For example, the Responsible Entity might choose to view an entire plant control system as a single BES Cyber System, or ~~they~~it might choose to view certain components of the plant control system as distinct BES Cyber Systems. The Responsible Entity should take into consideration the operational environment and scope of management when defining the BES Cyber System

boundary in order to maximize efficiency in secure operations. Defining the boundary too tightly may result in redundant paperwork and authorizations, while defining the boundary too broadly could make the secure operation of the BES Cyber System difficult to monitor and assess.

~~**BES Reliability Operating Services**~~

Reliable Operation of the BES

The scope of the CIP Cyber Security Standards is restricted to BES Cyber ~~Assets and BES Cyber~~ Systems that would impact the reliable operation of the BES. In order to identify them, Responsible Entities determine whether the BES Cyber ~~Assets~~Systems perform or support any BES ~~Reliability Operating Service. These services are functions that provide services~~reliability function according to those reliability tasks identified for ~~the reliable operation of the BES and are based on the functions defined~~functional entities in the NERC Functional Model. This ensures that the *initial* scope for consideration includes only those BES Cyber ~~Assets~~Systems and their associated BES Cyber ~~Systems~~Assets that perform or support ~~BES Reliability Operating Services.~~the reliable operation of the BES. The definition of BES Cyber Asset provides the basis for this scoping.

Real-time Operations

One characteristic of the BES Cyber Asset is a real-time scoping characteristic. The time horizon that is significant for BES Cyber Systems and BES Cyber Assets subject to the application of these Version 5 CIP Cyber Security Standards is defined as that which is material to real-time operations for the ~~reliability and operability~~reliable operation of the BES. To provide a better defined time horizon than "~~real~~Real-time~~",~~" BES Cyber Assets are those ~~cyber assets~~Cyber Assets that, if rendered unavailable, degraded, or misused, would adversely impact the ~~BES Reliability Operating Services~~reliable operation of the BES within 15 minutes of the activation or exercise of the compromise. This time window must not include in its consideration the activation of redundant BES ~~cyber assets~~Cyber Assets or BES Cyber Systems: from the cyber security standpoint, redundancy does not mitigate cyber security vulnerabilities.

Categorization Criteria

The criteria defined in Attachment 1 are used to categorize BES Cyber Systems ~~and their BES Cyber Assets~~ into impact categories. Requirement 1 only requires the discrete identification of BES Cyber Systems and their associated BES Cyber Assets for those in the ~~High~~high impact and ~~Medium~~medium impact categories. All ~~other~~ BES Cyber Systems ~~are deemed~~for Facilities not included in Attachment 1 – Impact Rating Criteria, Parts 1.1 to 1.4 and Parts 2.1 to 2.11 default to be ~~Low Impact~~low impact.

This general process of categorization of BES Cyber Systems ~~and BES Cyber Assets~~ based on impact on the ~~BES Reliability Operating Services~~reliable operation of the BES is consistent with risk management approaches for the purpose of application of

cyber security ~~controls~~requirements in the rest of Version 5 ~~cyber~~ Cyber Security Standards.

Associated Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets

BES Cyber Systems have associated Cyber Assets, which, if compromised, pose a threat to the BES Cyber System by virtue of: (a) their proximity within the Electronic Security Perimeter (Protected Cyber Assets), or (b) the security ~~standards.~~control function they perform (Electronic Access Control or Monitoring Systems and Physical Access Control Systems). These Cyber Assets include:

Electronic Access Control or Monitoring Systems – Examples include: Electronic Access Points, Intermediate Devices, authentication servers (e.g., RADIUS servers, Active Directory servers, Certificate Authorities), security event monitoring systems, and intrusion detection systems.

Physical Access Control Systems – Examples include: authentication servers, card systems, and badge control systems.

Protected Cyber Assets – Examples may include, to the extent they are within the ESP: file servers, ftp servers, time servers, LAN switches, networked printers, digital fault recorders, and emission monitoring systems.

~~**Rationale – R1:**~~

~~Cyber Assets and Cyber Systems have varying impact on the reliability and operability of the BES. Once they have been identified, they must be categorized according to their impact so that the appropriate measures can be applied, commensurate with their impact. Attachment I provides a set of "bright-line" criteria that the Responsible Entity must use to categorize these BES Cyber Assets and BES Cyber Systems in accordance with their impact on the BES. These impact categories will be the basis for the application of appropriate requirements in CIP-003-CIP-011.~~

~~The configuration of the BES is subject to changes due to new demands and requirements for Bulk Power and to environmental changes and operational events. When changes to the BES are planned, the effect of these changes on the set of identified and categorized BES Cyber Assets and BES Cyber Systems must be analyzed to ensure that the adequate level of protection is still applied to them.~~

B. Requirements and Measures

Rationale – R1:

BES Cyber Systems and their associated BES Cyber Assets have varying impact on the reliable operation of the BES. Once they have been identified, they must be categorized according to their impact so that the appropriate measures can be applied, commensurate with their impact. Attachment 1 provides a set of "bright-line" criteria that the Responsible Entity must use to categorize these BES Cyber Systems in accordance with their impact on the BES. These impact categories will be the basis for the application of appropriate requirements in CIP-003-CIP-011.

The configuration of the BES is subject to changes due to new demands and requirements for Bulk Power and to environmental changes and operational events. When changes to the BES are planned, the effect of these changes on the set of identified and categorized BES Cyber Systems must be analyzed to ensure that the adequate level of protection is still applied to them.

R1. Each Responsible Entity ~~that owns BES Cyber Assets and BES Cyber Systems~~ shall ~~identify and categorize its High and Medium~~: *[Violation Risk Factor: High][Time Horizon: Operations Planning]*

1.1. Identify Facilities, Systems, or equipment that meet the criteria specified in CIP-002-5, Attachment 1 – Impact Rating Criteria Parts 1.1 to 1.4 and Parts 2.1 to 2.11;

1.2. Identify each high impact BES Cyber ~~Assets~~System and its associated BES Cyber Asset(s) used for the Facilities, Systems, or equipment identified in Requirement R1 Part 1.1 according to the criteria contained in CIP-002-5, Attachment ~~1~~1 – Impact ~~*Categorization of*~~Rating Criteria;

1.3. Identify each medium impact BES Cyber ~~*Assets*~~System and its associated BES Cyber Asset(s) used for the Facilities, Systems~~. All other BES Cyber Assets and BES Cyber Systems that it owns shall be deemed~~, or equipment identified in Requirement R1 Part 1.1 according to ~~be Low~~the criteria contained in CIP-002-5, Attachment 1 – Impact Rating Criteria;

~~**R1.**~~• BES Cyber Systems which are not included in high impact or medium impact shall default to the category of low impact and do not require discrete identification~~. *[Violation Risk Factor: High][Time Horizon: Operations Planning]*~~; and

~~**Rationale – R2**~~

~~The lists required by R1 are reviewed once a year to ensure that all BES Cyber Systems required to be categorized have been properly identified and categorized. The mis-categorization or non-categorization of a BES Cyber System or BES Cyber Asset can lead to the application of inadequate or non-existent cyber security controls that can lead to compromise or misuse that can affect the real-time operation of the BES. The CIP Senior Manager's approval ensures proper oversight of the process by the appropriate Responsible Entity personnel.~~

Rationale – R2

The lists required by Requirement R1 are reviewed once a year to ensure that all BES Cyber Systems required to be categorized have been properly identified and categorized. The miscategorization or non-categorization of a BES Cyber System can lead to the application of inadequate or non-existent cyber security controls that can lead to compromise or misuse that can affect the real-time operation of the BES. The CIP Senior Manager's approval ensures proper oversight of the process by the appropriate Responsible Entity personnel.

~~**1.1.**~~**1.4.** ~~Update~~Review (and update as needed) the identification in Requirement R1, Parts 1.1, 1.2, and ~~categorization~~1.3 within ~~30~~60 calendar days of when a change to BES Elements ~~and~~or Facilities is placed into operation, ~~that~~which is ~~intended~~planned to be in service for more than ~~6~~six calendar months and ~~that~~ causes a change in the identification or categorization of the BES Cyber ~~Assets or BES Cyber~~ Systems from a lower to a higher impact category.

M1. Acceptable evidence includes, but is not limited to, dated electronic or physical lists ~~identifying the categorization of each of its BES Cyber Assets and BES Cyber Systems in the High and Medium categories as~~ required ~~in R1~~ by Requirement R1, Parts 1.1, 1.2 and 1.3, and a list of changes to the BES (with a date for each change) that cause a change in the identification or categorization of the BES Cyber Assets or BES Cyber Systems from a lower to a higher impact category. ~~Evidence of categorization of Low Impact BES Cyber Assets and BES Cyber Systems may be demonstrated by the application of the required controls.~~

R2. The Responsible Entity shall have its CIP Senior Manager or delegate approve the ~~identification and categorization~~identifications required by Requirement R1 ~~initially upon the effective date of the standard and~~ at least once each calendar year ~~thereafter~~, not to exceed 15 calendar months between approvals, even if it has no

identified ~~High~~items in Requirement R1, Parts 1.1, 1.2, or ~~Medium BES Cyber Assets or BES Cyber Systems~~1.3. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning~~]~~].*

M2. Acceptable evidence includes, but is not limited to, electronic or physical dated and signed records to demonstrate that the Responsible Entity has had its CIP Senior Manager or delegate review and update, where applicable, the identification and categorization of ~~BES Cyber Assets~~Facilities, Systems, and equipment, and their associated BES Cyber Systems and BES Cyber ~~Systems initially upon the effective date of the standard and~~ Assets, at least once each ~~subsequent~~ calendar year, not to exceed 15 calendar months between occurrences, even if it has ~~no~~none identified ~~High or Medium BES Cyber Assets~~in Requirement R1, Parts 1.1, 1.2, or ~~BES Cyber Systems. (~~1.3, as required by requirement R2~~)~~.

~~B.~~C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

- The Regional Entity~~; or~~
- ~~If the Responsible Entity works for~~ shall serve as the Compliance Enforcement Authority ("CEA") unless the ~~Regional Entity, then the~~ applicable entity is owned, operated, or controlled by the Regional Entity ~~will establish an agreement with~~. In such cases the ERO or ~~another~~a Regional entity approved by ~~the ERO and FERC (i.e., another Regional Entity) to be responsible for compliance enforcement.~~
- ~~If the Responsible Entity is also a Regional Entity, the ERO or a Regional Entity approved by the ERO and~~ FERC or other applicable governmental ~~authorities shall serve as the Compliance Enforcement Authority.~~
- ~~If the Responsible Entity is NERC, a third-party monitor without vested interest in the outcome for NERC~~authority shall serve as the ~~Compliance Enforcement Authority~~CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was ~~complaint~~compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information

- None

CIP-002-5 - Attachment ~~I~~1

~~Impact Categorization of BES Cyber Assets and BES Cyber Systems~~

Impact Rating Criteria

1. High Impact Rating (H)

Each BES Cyber ~~Asset or BES Cyber~~ System ~~that if rendered unavailable, degraded, or misused would, within 15 minutes adversely impact one or more BES Reliability Operating Services~~ used by and located at:

1.1. Each Control Center ~~or~~, backup Control Center, and associated data centers used to perform the functional obligations of the Reliability Coordinator.

1.2. Each Control Center ~~or~~, backup Control Center, and associated data centers used to perform the functional obligations of the Balancing Authority 1) for generation equal to or greater than an aggregate of 1500 MW in a single Interconnection or 2) that includes control of one or more of the generation assets that meet criteria 2.3, 2.6, and 2.9.

1.3. Each Control Center ~~or~~, backup Control Center, and associated data centers used to perform the functional obligations of the Transmission Operator ~~or Transmission Owner~~, that includes control of one or more of the assets ~~identified in~~ that meet criteria 2.2, 2.4, 2.5, 2.~~6, 2.~~7, 2.8, 2.9, or 2.10~~, 2.11 or 2.12 below~~.

1.4 Each Control Center ~~or~~, backup Control Center, and associated data centers used to perform the functional obligations of the Generation Operator that includes control 1) for generation equal to or greater than an aggregate of 1500 MW in a single Interconnection or 2) that includes control of one or more of the generation assets ~~identified in~~that meet criteria 2.~~1, 2.~~3, 2.~~4, or~~6, and 2.~~12, below~~9.

2. Medium Impact Rating (M)

Each BES Cyber ~~Asset or BES Cyber~~ System, not included in Section 1, above, ~~that if rendered unavailable, degraded, or misused would, within 15 minutes adversely impact one or more BES Reliability Operating Services for~~associated with the following:

2.1. ~~**2.1. Generation**~~Commissioned generation, by each group of generating units at a single plant location, with an aggregate highest rated net Real Power capability of the preceding 12 calendar months equal to or exceeding 1500 MW in a single Interconnection. For each group of generating units, the only BES Cyber Systems that meet this criterion are those shared BES Cyber Systems that could, within 15 minutes, adversely impact the reliable operation of any combination of units that in aggregate equal or exceed 1500 MW in a single Interconnection.

2.2. ~~**2.2.** An~~Each BES reactive resource or group of resources at a single location (excluding generation Facilities) with an aggregate ~~net~~ Reactive Power nameplate rating of 1000 MVAR or greater (excluding those at generation Facilities). The only BES Cyber Systems that meet this criterion are those shared BES Cyber Systems that could, within 15 minutes, adversely impact the reliable operation of any combination of resources that in aggregate equal or exceed 1000 MVAR.

2.3. ~~**2.3.**~~ Each generation Facility that its Planning Coordinator or Transmission Planner designates and informs the Generator Owner or Generator Operator, as necessary, to avoid ~~BES~~an Adverse Reliability ~~Impacts~~Impact in the ~~long-term~~ planning horizon~~.~~ of more than one year.

~~**2.4.** Each Blackstart Resource identified in its Transmission Operator's restoration plan.~~

~~**2.5.** The Facilities comprising the Cranking Paths and meeting the initial switching requirements from the Blackstart Resource~~

- ~~Up to and including the first interconnection point of the generation unit(s) to be started, or~~
- ~~up to the point on the Cranking Path where two or more path options exist and including any single failure points in the Cranking Path to and including the first interconnection point of the generation unit(s) to be started, or~~
- ~~up to and including the point on the Cranking Path where two or more path options exist to two or more independent generation unit(s) to be started as identified in its Transmission Operator's restoration plan.~~

2.4. ~~**2.6.**~~ Transmission Facilities operated at 500 kV or higher.

2.5. ~~**2.7.**~~ Transmission Facilities ~~operating at 200 kV or higher, but at less than 500 kV,~~ at a single station or substation that ~~is~~ are operating between 200 kV and 499 kV, are connected to three or more ~~transmission~~ other Transmission stations or substations ~~and where the "total weighted aggregate value" of all~~, and which possess "aggregate weighted values" exceeding 3000. The "aggregate weighted value" for a Transmission Facility is determined by summing the "weight value per line" shown in the table below for each incoming or outgoing BES Transmission ~~Lines at a single~~Line that is connected to another Transmission station or substation ~~operated at 200 KV or higher connected to other transmission stations or substations, including incoming and outgoing lines, exceeds a value of 3,000. The following "weight value per line" operated at the associated voltage value of a line will be used for the determination of the total weighted aggregate value~~.

Voltage Value of a Line	Weight Value per Line
100kV to 199 kV	0 (not applicable)
200 kV to 299 kV	700

300 kV to 499 kV	1300

~~2.8.~~

2.6. Generation at a single plant location or Transmission Facilities at a single station or substation location that are identified by its Reliability Coordinator, Planning ~~Authority~~Coordinator or Transmission Planner as critical to the derivation of Interconnection Reliability Operating Limits (IROLs) and their associated contingencies.

~~In the WECC Region, Transmission Facilities at a single station or substation location that are identified by its Reliability Coordinator, Planning Authority or Transmission Planner as critical to the derivation of SOLs and their contingencies for transmission paths listed in the most current Table titled "Major WECC Transfer Paths in the Bulk Electric System".~~

~~**2.9.** Flexible AC Transmission Systems (FACTS), at a single station or substation location, that are identified by its Reliability Coordinator, Planning Authority or Transmission Planner as critical to the derivation of Interconnection Reliability Operating Limits (IROLs), and their associated contingencies.~~

~~In the WECC Region, Flexible AC Transmission Systems (FACTS), at a single station or substation location that are identified by its Reliability Coordinator, Planning Authority or Transmission Planner as critical to the derivation of SOLs and their contingencies for transmission paths listed in the most current Table titled "Major WECC Transfer Paths in the Bulk Electric System."~~

2.7. ~~**2.10.**~~ Transmission Facilities identified as essential to meeting Nuclear Plant Interface Requirements.

2.8. ~~**2.11.**~~ Transmission Facilities providing the generation interconnection required to connect generator output to the Transmission Systems that, if destroyed, degraded, misused, or otherwise rendered unavailable, would result in the loss of the generation Facilities identified by any Generator Owner as a result of its application of Attachment 1, Parts 2.1 or 2.3.

2.9. Each Special Protection System (SPS), Remedial Action Scheme (RAS) or automated switching ~~system~~Systems that operates BES Elements that, if destroyed, degraded, misused or otherwise rendered unavailable, would cause one or more Interconnection Reliability Operating Limits (IROLs) violations~~.~~ for failure to operate as designed or cause a reduction in one or more IROLs if destroyed, degraded, misused, or otherwise rendered unavailable.

~~In the WECC Region, each Special Protection System (SPS), Remedial Action Scheme (RAS) or automated switching system that operates BES Elements that, if destroyed,~~

~~degraded, misused or otherwise rendered unavailable, would cause one or more System Operating Limits (SOLs) violations for transmission paths listed in the most current Table titled "Major WECC Transfer Paths in the Bulk Electric System" and each RAS listed in the most current table titled " Major WECC Remedial Action Schemes (RAS)."~~

2.10. ~~**2.12.** Each system or Facility that performs automatic load shedding~~Each System or group of Elements that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more implementing Under Voltage Load Shedding (UVLS) or Under Frequency Load Shedding (UFLS~~)~~), as required by its regional load shedding program.

2.11. ~~**2.13.**~~ Control Centers and associated data centers not included in High Impact Rating (H), above, that: (1) perform ~~(1)~~ the functional obligations of ~~Transmission Operators~~Balancing Authority or Transmission ~~Owners;~~Operator, or (2) ~~generation~~ control ~~centers that control~~an aggregate highest rated net Real Power capability of the preceding 12 calendar months equal to or exceeding 300 MW or more of BES generation.

3. Low Impact Rating (L)

~~All other~~Each BES Cyber ~~Assets and~~ System associated with:

3.1. BES ~~Cyber Systems~~ Facilities not categorized in Section 1 as having a High Impact Rating (H) or Section 2 as having a Medium Impact Rating (M).

3.2. Blackstart Resources.

3.3. Elements in the Cranking Path and initial switching requirements.

BES Cyber Systems that are not included in high impact and medium impact shall default to the category of low impact and do not require discrete identification.

Guidelines and Technical Basis

CIP-002-5 requires that applicable Responsible Entities categorize their BES Cyber Systems and associated BES Cyber Assets according to the criteria in Attachment 1. A BES Cyber Asset includes in its definition, "…that if rendered unavailable, degraded, or misused would, within 15 minutes adversely impact ~~one or more~~the reliable operation of the BES ~~**Reliability Operating Services**.~~" ~~The new term BES Reliability Operating Service is a defined NERC Glossary term that in turn includes a number of defined named BES Reliability Operating Services. These named, defined services include:~~."

The following provides guidance that a Responsible Entity may use to identify the BES Cyber Systems that would be in scope. The concept of BES reliability operating service is useful in providing Responsible Entities with the option of a defined process for scoping those BES Cyber Systems that would be subject to CIP-002-5. The concept includes a number of named BES reliability operating services. These named services include:

Dynamic Response to BES conditions
Balancing Load and Generation
Controlling Frequency (Real Power)
Controlling Voltage (Reactive Power)
Managing Constraints
Monitoring & Control
Restoration of BES
Situational Awareness
Inter-Entity Real-Time Coordination and Communication

Responsibility for the reliable operation of the BES is spread across all Entity Registrations. Each entity registration has its own special contribution to reliable operations and the following discussion helps identify which entity registration performs which reliability ~~operations~~operating service, ~~which determines what each entity needs~~as a process to ~~address with their CIP program.~~identify BES Cyber Systems that would be in scope. The following provides guidance for Responsible Entities to determine applicable ~~Reliability Operations Services~~reliability operations services according to their Function Registration type.

Entity Registration	RC	BA	TOP	TO	DP	LSE	GOP	GO
Dynamic Response		X	X	X	X	X	X	X
Balancing Load & Generation	X	X	X	X	X	X	X	X
Controlling Frequency		X					X	X
Controlling Voltage			X	X	X	X		X

Managing Constraints	X		X				X	
Monitoring and Control			X				X	
Restoration			X				X	
Situation Awareness	X	X	X				X	
Inter-Entity coordination	X	X	X	X			X	X

Dynamic Response

The Dynamic Response Operating Service includes those actions performed by BES ~~elements~~Elements or subsystems which are automatically triggered to initiate a response to a BES condition. These actions are triggered by a single element or control device or a combination of these elements or devices in concert to perform an action or cause a condition in reaction to the triggering action or condition. The types of dynamic responses that ~~should~~may be considered as potentially having an impact on the BES are:

- Spinning reserves (contingency reserves)
  - Providing actual reserve generation when called upon (GO,GOP)
  - Monitoring that reserves are sufficient (BA)
- Governor Response
  - Control system used to actuate governor response (GO)
- Protection Systems (transmission & generation)
  - Lines, buses, x-formers, generators (TO, TOP, GO, GOP)
  - Zone protection for breaker failure (TO, TOP)
  - Breaker protection (TO, TOP)
  - Current, frequency, speed, phase (TO,TOP, GO,GOP)
- Special Protection Systems or Remedial Action Schemes
  - Sensors, relays & breakers, possibly software (TO, TOP)
- Under and Over Frequency relay protection (includes automatic load shedding)
  - Sensors, relays & breakers (DP,LSE)
- Under and Over Voltage relay protection (includes automatic load shedding)
  - Sensors, relays & breakers (DP,LSE)
- Power System Stabilizers (GO)

Balancing Load and Generation

The Balancing Load and Generation Operations Service includes activities, actions and conditions necessary for monitoring and controlling generation and load in the operations planning horizon and in real-time. Aspects of the Balancing Load and Generation function include, but are not limited to:

- Calculation of Area Control Error (ACE)
  - Field data sources (real time tie flows, frequency sources, time error, etc) (TO, TOP)
  - Software used to perform calculation (BA) (RC)
- Demand Response
  - Ability to identify load change need (BA)
  - Ability to implement load changes (TOP,DP,LSE)
- Manually Initiated Load shedding
  - Ability to identify load change need (BA)
  - Ability to implement load changes (TOP, DP,LSE)
- Non-spinning reserve (contingency reserve)
  - Know generation status, capability, ramp rate, start time (GO, BA)
  - Start units and provide energy (GOP)

Controlling Frequency (Real Power)

The Controlling Frequency Operations Service includes activities, actions and conditions which ensure, in real time, that frequency remains within bounds acceptable for the reliability or operability of the BES. Aspects of the Controlling Frequency function include, but are limited to:

- Generation Control (such as AGC)
  - ACE, current generator output, ramp rate, unit characteristics (BA, GOP, GO)
  - Software to calculate unit adjustments (BA)
  - Transmit adjustments to individual units (GOP)
  - Unit controls implementing adjustments (GOP)
- Regulation (regulating reserves)
  - Frequency source, schedule (BA)
  - Governor control system (GO)

Controlling Voltage (Reactive Power)

The Controlling Voltage Operations Service includes activities, actions and conditions which ensure, in real time, that voltage remains within bounds acceptable for the reliability or operability of the BES. Aspects of the Controlling Voltage function include, but are not limited to:

- Automatic Voltage Regulation (AVR)
  - Sensors, stator control system, feedback (GO)
- Capacitive resources
  - Status, control (manual or auto), feedback (TOP, TO,DP)
- Inductive resources (transformer tap changer, or inductors)
  - Status, control (manual or auto), feedback (TOP,TO,DP)
- Static VAR Compensators (SVC)
  - Status, computations, control (manual or auto), feedback (TOP, TO,DP)

Managing Constraints

Managing Constraints includes activities, actions and conditions that are necessary to ensure that elements of the BES operate within design limits and constraints established for the reliability and operability of the BES. Aspects of the Managing Constraints include, but are not limited to:

- Available Transfer Capability (ATC) (TOP)
- Interchange schedules (TOP, RC)
- Generation re-dispatch and unit commit (GOP)
- Identify and monitor SOL's & IROL's (TOP, RC)
- Identify and monitor ~~Flowgates~~Flow gates (TOP, RC)

Monitoring and Control

Monitoring and Control includes those activities, actions and conditions that provide monitoring and control of BES ~~elements~~Elements. An example aspect of the Control and Operation function is:

- All methods of operating breakers and switches
  - SCADA (TOP, GOP)
  - Substation automation (TOP)

Restoration of BES

The Restoration of BES Operations Service includes activities, actions and conditions necessary to go from a shutdown condition to an operating condition delivering electric power without external assistance. Aspects of the Restoration of BES function include, but are not limited to:

- Restoration including planned cranking path
  - Through black start units (TOP, GOP)
  - Through tie lines (TOP, GOP)
- Off-site power for nuclear facilities. (TOP)
- Coordination

Situational Awareness

The Situational Awareness function includes activities, actions and conditions established by policy, directive or standard operating procedure necessary to assess the current condition of the BES and anticipate effects of planned and unplanned changes to conditions. Aspects of the Situation Awareness function include~~, but are not limited to~~:

- Monitoring and alerting (such as EMS alarms) (TOP, GOP, RC,BA)
- Change management (TOP,GOP,RC,BA)
- Current Day & Next Day planning (TOP)
- Contingency Analysis (RC)
- Frequency monitoring (BA, RC)

Inter-Entity Coordination~~ and Communication~~

The Inter-Entity coordination and communication function includes activities, actions, and conditions established by policy, directive, or standard operating procedure necessary for the coordination and communication between Responsible Entities to ensure the reliability and operability of the BES. Aspects of the Inter-Entity Coordination and Communication function include~~, but are not limited to~~:

- Scheduled interchange (BA,TOP,GOP,RC)
- Facility operational data and status (TO, TOP, GO, GOP, RC, BA)
- Operational directives (TOP, RC, BA)

Applicability to Distribution Providers and Load Serving Entities

It is expected that only Distribution Providers that own or operate facilities that qualify in the Applicability section will be subject to these Version 5 Cyber Security Standards. Distribution Providers that do not own or operate any facility that qualifies are not subject to these standards. The qualifications are based on the requirements for registration as a Distribution

Provider and on the requirements applicable to Distribution Providers in NERC ~~standard~~Standard EOP-005.

Similarly, it is expected that only Load~~-~~-Serving Entities that own or operate facilities that qualify in the Applicability section will be subject to these Version 5 Cyber Security Standards. These qualifications are based on the requirements for registration as a Load Serving Entity. Additional qualifications for thresholds in Attachment 1, as specified in Section 4 of CIP-002, also apply.

Requirement R1:

R1 implements the methodology for the categorization of BES Cyber Systems and their associated BES Cyber Assets according to their impact on the BES. Using the traditional risk assessment equation, it reduces the measure of the risk to an impact (consequence) assessment, assuming the vulnerability index of 1 (the ~~systems~~Systems are assumed to be vulnerable) and a probability of threat of 1 (100~~%).~~ percent). The criteria in ~~attachment~~Attachment 1 provide a measure of the impact that the Facilities, Systems and equipment that these BES Cyber Systems support, on the ~~reliability and operability~~reliable operation of the BES.

Responsible Entities are required to identify and categorize those ~~systems~~ BES Cyber Systems that have high and medium impact. ~~Other BES~~ BES Cyber Systems for Facilities, Systems and ~~BES Cyber Assets are deemed~~equipment not specified in Parts 1.1 – 1.4 and Parts 2.1 – 2.11 default to ~~be~~ low impact.

Attachment 1

Overall Application

In the application of the criteria in Attachment 1, Responsible Entities should note that the approach used is based on the impact of the BES Cyber System~~.~~ as measured by the bright-line criteria defined in Attachment 1. While the criteria are based on the scope of the BES ~~asset~~Facilities, Systems and equipment, this is used here as a measure of the impact of the BES Cyber System for the purpose of categorization.

- When the drafting team uses the term “Facilities”, it leaves some latitude to Responsible Entities to determine included Facilities. The term Facility is defined in the NERC Glossary of Terms as “A set of electrical equipment that operates as a single Bulk Electric System Element (e.g., a line, a generator, a shunt compensator, transformer, etc.).” In most cases, the criteria refer to a group of Facilities in a given location that ~~support~~supports the reliable operation of the BES. For example, for Transmission assets, the substation may be designated as the group of Facilities. However, in a substation that includes equipment that supports BES operations along with equipment that only supports Distribution operations, the Responsible Entity may be better served to consider only the group of Facilities that

supports BES operation. In that case, the Responsible Entity may designate the group of Facilities by location, with qualifications on the group of Facilities that ~~support~~supports reliable operation of the BES, as the Facilities that are subject to the criteria for categorization of BES Cyber Systems~~–~~. Generation Facilities are separately discussed in the Generation section below.

- In certain cases, a BES Cyber System may be categorized by meeting multiple criteria. In such cases, the Responsible Entity may choose to document all criteria that result in the categorization. This will avoid inadvertent miscategorization when it no longer meets one of the criteria, but still meets another.
- ~~A~~It is recommended that each BES Cyber System should be listed by only one Responsible Entity. Where there is joint ownership, it is advisable that the owning Responsible Entities should formally agree on the designated Responsible Entity responsible for compliance with the standards.

High Impact Rating (H)

This category includes those BES Cyber Systems, used by and at Control Centers and associated data centers, that perform the functional obligations of the Reliability Coordinator (RC), Balancing Authority (BA), Transmission Operator (TOP), ~~Transmission Owner (TO)~~ or Generation Operator (GOP), as defined in the NERC Functional Model~~.~~, and as scoped by the qualification in Attachment 1, Parts 1.1, 1.2, 1.3 and 1.4. While those entities that have been registered as the above~~-~~named Functional Entities are specifically referenced, it must be noted that there may be agreements where some of the functional obligations of a Transmission Operator may be delegated to a Transmission Owner (TO). In these cases, BES Cyber Systems at these TO Control Centers that perform these functional obligations ~~must~~would be subject to categorization as ~~High Impact.~~high impact. The criteria notably specifically emphasize functional obligations, not necessarily the RC, BA, TOP, or GOP facilities.

Additional thresholds as specified in the criteria apply for this category.

Medium Impact Rating (M)

Generation

The criteria in Attachment ~~1, Medium Impact~~1's medium impact category that generally apply to Generation Owner and Operator (GO/GOP) Registered Entities are parts 2.1, 2.3, 2.~~4~~6, 2.~~5, 2.11~~9, and 2.~~13~~11.

- Part 2.1 designates as medium impact those BES Cyber Systems that impact generation with a net Real Power capability exceeding 1500 MW. The 1500 MW criterion is sourced partly from the Contingency Reserve requirements in NERC standard BAL-002, whose purpose is "to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance~~".~~." In particular, it requires that "as a minimum, the Balancing Authority or Reserve Sharing Group shall carry at least enough Contingency

Reserve to cover the most severe single contingency." The drafting team used 1500 MW as a number derived from the most significant Contingency Reserves operated in various BAs in all regions.

In the use of net Real Power capability, the drafting team sought to use a value that could be verified through existing requirements as proposed by NERC standard MOD-024 and current development efforts in that area.

By using 1500 MW as a bright-line, the intent of the drafting team was to ensure that BES Cyber Systems with common mode vulnerabilities that could result in the loss of generation at a single plant for a unit or group of units with capability higher than 1500 MW are adequately protected.

The drafting team also used additional time and value parameters to ensure the bright-lines and the values used to measure against them were relatively stable over the review period. Hence, where multiple values of net Real Power capability could be used for the Facilities' qualification against these bright-lines, the highest value was used.

- In ~~part~~Part 2.3, the drafting team sought to ensure that BES Cyber Systems for those generation Facilities that have been designated by the Planning Coordinator as necessary to avoid BES Adverse Reliability Impacts in the long term planning horizon are categorized as ~~Medium Impact.~~medium impact. These Facilities may be designated as "Reliability Must Run~~"~~," and this designation is distinct from those generation Facilities designated as "must run" for market stabilization purposes. Because the use of the term "must run" creates some confusion in many areas, the drafting team chose to avoid using this term and instead drafted the requirement in more generic reliability language. In particular, the focus on preventing an Adverse Reliability Impact dictates that these units are designated as must run for reliability purposes beyond the local area. Those units designated as must run for voltage support in the local area would not generally be given this designation. In cases where there is no designated Planning Coordinator, the Transmission Planner is included as the Registered Entity that performs this designation.

  In the specification of the "long-term planning horizon~~"~~," in this criterion, the drafting team sought to ensure that such BES ~~facilities~~Facilities would be designated in the time horizon described in the NERC document "Time Horizons~~"~~," which defines long-term planning horizon as "a planning horizon of one year or longer~~"~~."

  If it is determined through ~~system~~System studies that a unit must run in order to preserve the reliability of the BES, such as due to a ~~category~~Category C3 contingency as defined in TPL-003, or a ~~category~~Category D contingency as defined in TPL-004, then BES Cyber Systems for that unit ~~must be~~are categorized as ~~Medium Impact~~medium impact.

  ~~In part 2.4, BES Cyber Systems for generation resources that have been designated as Blackstart Resources in the Transmission Operator's restoration plan are categorized as Medium Impact. NERC standard EOP-005-2 requires the Transmission Operator to have~~

~~a Restoration Plan and to list its Blackstart Resources in its plan as well as requirements to test these Resources.~~

- Part 2.6 includes BES Cyber Systems for those Generation Facilities that have been identified as critical to the derivation of IROLs and their associated contingencies, as specified by FAC-014-2, **Establish and Communicate System Operating Limits**, R5.1.1 and R5.1.3.

  IROLs may be based on dynamic System phenomena such as instability or voltage collapse. Derivation of these IROLs and their associated contingencies often considers the effect of generation inertia and AVR response.

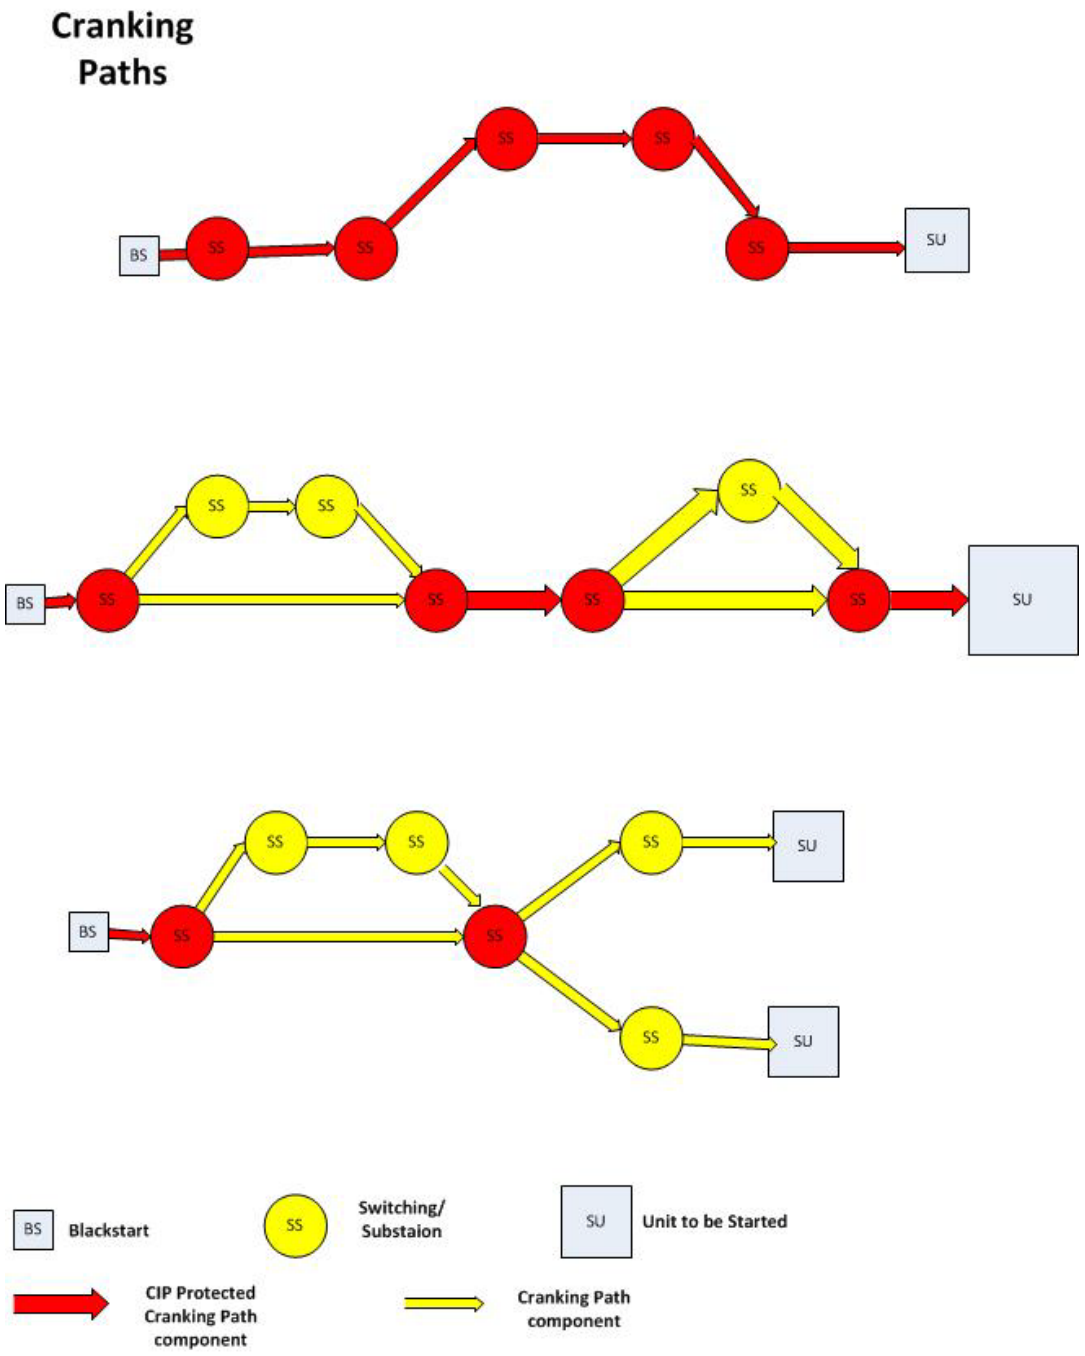
- ~~This criterion designates only those generation Blackstart Resources that have been designated as such in the Transmission Operator's restoration plan. The glossary term Blackstart Capability Plan has been retired.~~ ~~While the definition of Blackstart Resource includes the fact that it is in a Transmission Operator's Restoration Plan, the drafting team included the term in the criterion for clarity.~~

  ~~Regarding concerns of communication to BES Asset Owners and Operators of their role in the Restoration Plan, Transmission Operators are required in NERC standard EOP-005-2 to "provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan."~~

- ~~Part 2.5 categorizes BES Cyber Systems for Facilities comprising the Cranking Paths and meeting the initial switching requirements from the Blackstart Resource to the first interconnection point of the generation unit(s) to be started, as identified in the Transmission Operator's restoration plan, with the qualifications stated in the requirement part. This criterion is sourced from requirements in NERC standard EOP-005-2, which requires the Transmission Operator to include in its Restoration Plan the Cranking Paths and initial switching requirements from the Blackstart Resource and the unit(s) to be started. The drafting team further qualified the Facilities to be designated as subject to BES Cyber System categorization as only those in the Cranking Path up to the point where two or more paths exist to the units to be started and subject to the qualifications in the requirement part.~~

  ~~Distribution Providers should note that they may have BES Cyber Systems that must be categorized as Medium Impact if they have facilities listed in the Transmission Operator's Restoration Plan.~~

  ~~The following illustrates the parts of the Cranking Path that are subject to CIP Cranking Path criterion.~~



- Part 2.~~11~~9 categorizes BES Cyber Systems for Special Protection Systems and Remedial Action Schemes as ~~Medium Impact.~~medium impact. Special Protection Systems and Remedial Action Schemes may be implemented to prevent disturbances that would result in exceeding IROLs if they do not provide the function required at the time it is required or if it operates outside of the parameters it was designed for~~.~~ Generation Owners and Operators which own BES Cyber Systems for such ~~systems~~Systems and schemes ~~must~~ designate them as ~~Medium Impact~~medium impact.

- Part 2.~~13~~11 categorizes as ~~Medium Impact~~medium impact BES Cyber Systems used by and at Control Centers that perform the functional obligations of the Transmission Operator or Balancing Authority, and Generation Operator for an aggregate generation of 300 MW or higher~~.~~, and which have not already included in Part 1. The value of 300 MW is the same value used for UFLS and UVLS. This ensures that Control Centers for significant impact are included. Smaller Control Centers that qualify for the definition of generation Control Centers, but which are really controlling local generation for small downstream generation facilities and do not meet the 300 MW threshold are categorized as ~~Low~~low impact.

Transmission

Parts 2.~~1, 2.~~, 2~~, .~~.4-2.~~5 2.13~~11 in Attachment 1 are the criteria that are applicable to Transmission Owners and Operators. In many of the criteria, the impact threshold is defined as the capability of the failure or compromise of a ~~system~~System to result in exceeding one or more Interconnection Reliability Operating Limits (IROLs). ~~For the WECC region where IROLs are not defined, alternative criteria are defined.~~

- ~~Part 2.1 designates as medium impact those BES Cyber Systems that impact generation with a net Real Power capability exceeding 1500 MW. In the case of BES Cyber Systems and BES Cyber Assets owned by Transmission Owners and Operators, this part identifies as Medium Impact those BES Cyber Systems for Transmission Facilities that provide the generation interconnection for Generation of 1500 MW or more to the Transmission system. The intent is to ensure the availability of Facilities necessary to support those generation facilities.~~

- Part 2.2 includes BES Cyber Systems for those Facilities in Transmission ~~systems~~Systems that provide reactive resources to enhance and preserve the reliability of the BES. The nameplate value is used here because there is no NERC requirement to verify actual capability of these Facilities. The value of 1000 MVARs used in this criterion is a value deemed reasonable for the purpose of determining criticality.

- ~~In Part 2.5, the intent is to ensure that BES Cyber Systems for the Cranking Paths and other BES Transmission Facilities required to support the Transmission Operator's restoration plan required by EOP-005-2 receive consideration for protection from cyber threats. Transmission Owners and Operators own and operate a large number of these Facilities. EOP-005-2 specifies Facilities that comprise the "Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started".~~

  ~~Regarding concerns of communication to BES Asset Owners and Operators of their role in the Restoration Plan, Transmission Operators are required in EOP-005-2 to "provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan."~~

- ~~Part 2.6~~Part 2.4 includes BES Cyber Systems for any Transmission Facility at a substation operated at 500 kV or higher. While the drafting team felt that Facilities operated at 500 kV or higher did not require any further qualification for their role as components of the backbone on the Interconnected BES, Facilities in the lower EHV range should have additional qualifying criteria for inclusion in the ~~Medium Impact~~medium impact category.

  It must be noted that if the collector bus for a generation plant (i.e. the plant is smaller in aggregate than the threshold set for generation in Part 1.1) is operated at 500kV, the collector bus should be considered a Generation Interconnection Facility, and not a Transmission Facility, according to the "Final Report from the Ad Hoc Group for Generation Requirements at the Transmission Interface~~".~~." This collector bus would not be a facility for a ~~Medium Impact~~medium impact BES Cyber System because it doesn't significantly affect the 500kV Transmission grid; it only affects a plant which is below the generation threshold.

- Part 2.~~7~~5 includes BES Cyber Systems for facilities at the lower end of BES Transmission with qualifications for inclusion if they are deemed highly likely to have significant impact on the BES. While the criterion has been specified as part of the rationale for requiring protection for significant impact on the BES, the drafting team included, in this criterion, additional qualifications that would ensure the required level of impact to the BES. The drafting team:

  - Excluded radial facilities that would only provide support for single generation facilities.
  - Specified interconnection to at least three transmission stations or substations to ensure that the level of impact would be appropriate.

  The total aggregated weighted value of 3,000 was derived from weighted values related to three connected 345 kV lines and five connected 230 kV lines at a transmission station or substation. The total aggregated weighted value is used to account for the true impact to the BES, irrespective of line kV rating and mix of multiple kV rated lines.

  Additionally, in NERC's document "Integrated Risk Assessment Approach – Refinement to Severity Risk Index", Attachment 1, the report used an average MVA line loading based on kV rating:

  - 230 kV –> 700 MVA
  - 345 kV –> 1,300 MVA
  - 500 kV –> 2,000 MVA
  - 765 kV –> 3,000 MVA

  ~~Parts 2.8 and 2.9~~In the case of autotransformers in a station, Responsible Entities have flexibility in determining whether the groups of Facilities are considered a single substation or station location. In most cases, Responsible Entities would probably

consider them as Facilities at a single substation or station unless geographically dispersed. In these cases of these transformers being within the "fence" of the substation or station, autotransformers would not count as separate connections to other stations. The use of common BES Cyber Systems may negate any rationale for any consideration otherwise. In the case of autotransformers that are geographically dispersed from a station location, the calculation would take into account the connections in and out of each station or substation location.

- Part 2.6 include BES Cyber Systems for those Transmission Facilities that have been identified as critical to the derivation of IROLs and their associated contingencies, as specified by FAC-014-2, **Establish and Communicate System Operating Limits**, R5.1.1 and R5.1.3.

~~Alternate thresholds are used for WECC, where IROLs are not used.~~

- Part 2.~~10~~7 is sourced from the NUC-001 NERC standard for the support of Nuclear Facilities. NUC-001 ensures that reliability of NPIR's are ensured through adequate coordination between the Nuclear Generator Owner/Operator and its Transmission provider "for the purpose of ensuring nuclear plant safe operation and shutdown~~".~~." In particular, there are specific requirements to coordinate physical and cyber security protection of these interfaces.

- Part 2.~~11~~8 designates as ~~Medium Impact~~medium impact those BES Cyber Systems that impact Transmission Facilities necessary to directly support generation that meet the criteria in Parts 2.1 (generation Facilities with output greater than 1500 MW) and 2.3 (generation Facilities generally designated as "must run" for wide area reliability in the planning horizon).

- Part 2.9 designates as medium impact those BES Cyber Systems for those Special Protection Systems (SPS), Remedial Action Schemes (RAS), or automated switching ~~systems~~Systems installed to ensure BES operation within IROLs. The degradation, compromise or unavailability of these BES Cyber Systems would result in exceeding IROLs if they fail to operate as designed. By the definition of IROL, the loss or compromise of any of these have Wide Area impacts.

~~For the WECC region, alternative thresholds are defined because IROLs are not defined for the region.~~

- Part 2.~~12~~10 designates as ~~Medium Impact~~medium impact those BES Cyber Systems for ~~systems~~Systems or ~~Facilities~~Elements that ~~are capable of performing~~perform automatic ~~load~~Load shedding, without human operator initiation, of 300 MW or more. The SDT spent considerable time discussing the wording of ~~criterion~~Part 2.~~13~~12, and chose the term "Each" to represent that the criterion applied to a discrete ~~system~~System or Facility. In the drafting of this criterion, the drafting team sought to include only those ~~systems~~Systems that did not require human operator initiation, and targeted in particular those Under Frequency Load Shedding (UFLS) facilities and ~~systems~~Systems and Under Voltage Load

Shedding (UVLS) ~~facilities~~Systems and ~~systems~~Elements that would be implemented as part of a regional load shedding requirement to prevent Adverse Reliability Impact. These include automated Under Frequency Load Shedding ~~systems~~Systems or Under Voltage Load Shedding Systems that are capable of load shedding 300 MW or more. It should be noted that those qualifying ~~systems~~Systems which require a human operator to arm the ~~system~~System, but once armed, trigger automatically, are still to be considered as not requiring human operator initiation and should be designated as ~~Medium Impact.~~ medium impact. The 300 MW threshold has been defined as the aggregate of the highest MW rating for the preceding 12 months to account for seasonal fluctuations.

Within an operational environment, the drafting team understands that the real-time impact to the Bulk Electric System of a loss of load, or the equivalent amount of generation, will be similar, with loss of load resulting in a frequency high condition and a loss of generation resulting in a frequency low condition. This particular threshold (300 MW) was provided in CIP ~~version~~, Version 1. The SDT believes that the threshold should be lower than the 1500MW generation requirement since it is specifically addressing UVLS and UFLS, which are last ditch efforts to save the Bulk Electric System and hence requires a lower threshold.

In ERCOT, the Load acting as a Resource ("LaaR") Demand Response Program is not part of the regional load shedding program, but an ancillary services market.

- Part 2.~~13~~11 categorizes as ~~Medium Impact~~ medium impact those ~~cyber systems~~ BES Cyber Systems used by and at Control Centers and associated data centers performing the functional obligations of Balancing Authorities or Transmission Operators ~~and Owners Control Centers~~ not already categorized as ~~High Impact~~high impact and at generation Control Centers that control generation of 300 MW or more. These include Control Centers for Transmission Owners which perform the function obligation of a Transmission Operator.

Low Impact Rating (L)

BES Cyber Systems not categorized in high impact or medium impact default to low impact. Note that these BES Cyber Systems do not require discrete identification.

Restoration Facilities

- Several discussions on the CIP Version 5 standards suggest entities owning Blackstart Resources and Cranking Paths might elect to remove those services to avoid higher compliance costs. For example, one Reliability Coordinator reported a 25% reduction of Blackstart Resources as a result of the Version 1 language, and there could be more entities that make this choice under Version 5.

  In response, the CIP Version 5 drafting team sought informal input from NERC's Operating and Planning Committees. The committees indicate there has already been a reduction in

Blackstart Resources because of increased CIP compliance costs, environmental rules, and other risks; continued inclusion within Version 5 at a category that would very significantly increase compliance costs can result in further reduction of a vulnerable pool.

The drafting team moved from the categorization of restoration assets such as Blackstart Resources and Cranking Paths as medium impact (as was the case in earlier drafts) to categorization of these assets as low impact as a result of these considerations. This will not relieve asset owners of all responsibilities, as would have been the case in CIP-002, Versions 1-4 (since only Cyber Assets with routable connectivity which are essential to restoration assets are included in those versions). Under the low impact categorization, those assets will be protected in the areas of cyber security awareness, physical access control, and electronic access control, and they will have obligations regarding incident response. This represents a net gain to bulk power system reliability, however, since many of those assets do not meet criteria for inclusion under Versions 1-4.

Weighing the risks to overall BES reliability, the drafting team determined that this re-categorization represents the option that would be the least detrimental to restoration function and, thus, overall BES reliability. Removing Blackstart Resources and Cranking Paths from medium impact promotes overall reliability, as the likely alternative is fewer Blackstart Resources supporting timely restoration when needed.

BES Cyber Systems for generation resources that have been designated as Blackstart Resources in the Transmission Operator's restoration plan default to low impact. NERC Standard EOP-005-2 requires the Transmission Operator to have a Restoration Plan and to list its Blackstart Resources in its plan, as well as requirements to test these Resources. This criterion designates only those generation Blackstart Resources that have been designated as such in the Transmission Operator's restoration plan. The glossary term Blackstart Capability Plan has been retired.

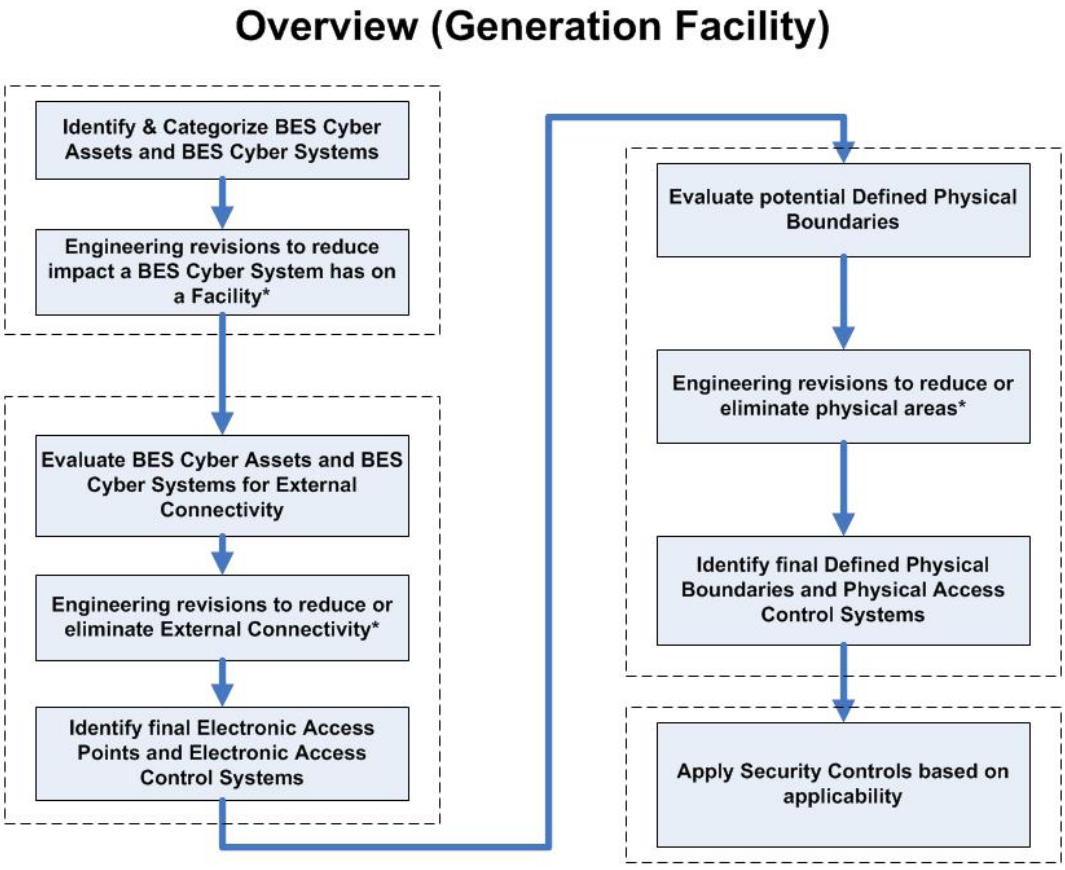
Regarding concerns of communication to BES Asset Owners and Operators of their role in the Restoration Plan, Transmission Operators are required in NERC Standard EOP-005-2 to "provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan."

- BES Cyber Systems for Facilities and Elements comprising the Cranking Paths and meeting the initial switching requirements from the Blackstart Resource to the first Interconnection point of the generation unit(s) to be started, as identified in the Transmission Operator's restoration plan, default to the category of low impact: however, these systems are explicitly called out to ensure consideration for inclusion in the scope of the version 5 CIP standards. This requirement for inclusion in the scope is sourced from requirements in NERC standard EOP-005-2, which requires the Transmission Operator to include in its Restoration Plan the Cranking Paths and initial switching requirements from the Blackstart Resource and the unit(s) to be started.

Distribution Providers may note that they may have BES Cyber Systems that must be scoped in if they have Elements listed in the Transmission Operator's Restoration Plan that are components of the Cranking Path.

Use Case: CIP Process Flow

The following CIP use case process flow for a generator Operator/Owner was provided by a participant in the development of the Version 5 standards and is provided here as an example of a process used to identify and categorize BES Cyber Systems and BES Cyber Assets; review, develop, and implement strategies to mitigate overall risks; and apply applicable security controls.



* - Engineering revisions will need to be reviewed for cost justification, operational\safety requirements, support requirements, and technical limitations.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated version number from -2 to -3 Approved by the NERC Board of Trustees.	
3	3/31/10	Approved by FERC.	
4	1/24/11	Update version from "3" to "4". Approved by the NERC Board of Trustees.	Update to conform to changes to CIP-002-4 (Project 2008-06)
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Security Management Controls

2. Number: CIP-003-5

3. Purpose: To specify consistent and sustainable security management controls that establish responsibility and accountability to protect BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

4.1.7 Reliability Coordinator

4.1.8 Transmission Operator

4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

Standard CIP-003-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational, and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

Measures provide examples of evidence to show documentation and implementation of the requirement. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not imply any naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the standards.

Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

B. Requirements and Measures

Rationale – R1:

One or more security policies enable effective implementation of the standard's requirements. The purpose of policies is to provide a management and governance foundation for all requirements that apply to personnel who have authorized electronic access and/or authorized unescorted physical access to its BES Cyber Systems. The Responsible Entity can demonstrate through its policies that its management supports the accountability and responsibility necessary for effective implementation of the standard's requirements.

R1. Each Responsible Entity for its high impact and medium impact BES Cyber Systems shall implement one or more documented cyber security policies that address the following topics: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

- **1.1** Personnel security;
- **1.2** Electronic Security Perimeters;
- **1.3** Interactive Remote Access;
- **1.4** Physical security;
- **1.5** System security;
- **1.6** Incident response;
- **1.7** Recovery plans;
- **1.8** Configuration change management;
- **1.9** Information protection; and
- **1.10** Provisions for declaring and responding to CIP Exceptional Circumstances.

M1. Evidence must include one or more documented cyber security policies and evidence of processes, procedures, or plans that demonstrate the implementation of the required topics.

Rationale – R2:

One or more security policies enable effective implementation of the standard's requirements. The purpose of policies is to provide a management and governance foundation for all requirements that apply to personnel who have authorized electronic access and/or authorized unescorted physical access to its BES Cyber Systems. The Responsible Entity can demonstrate through its policies that its management supports the accountability and responsibility necessary for effective implementation of the standard's requirements.

R2. For BES Cyber Systems not identified as high impact or medium impact, each Responsible Entity shall implement one or more documented cyber security policies that address the following topics: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

- **2.1** Cyber security awareness;
- **2.2** Physical access control;
- **2.3** Electronic access control; and
- **2.4** Incident response to a BES Cyber Security Incident.

An inventory, list, or discrete identification of BES Cyber Systems is not required.

M2. Evidence must include one or more documented cyber security policies and evidence of processes, procedures, or plans that demonstrate the implementation of the required topics.

Rationale – R3:

The identification and documentation of the single CIP Senior Manager ensures that there is clear authority and ownership for the CIP program within an organization, as called for in Blackout Report Recommendation 43. The language that identifies CIP Senior Manager responsibilities is included in the *Glossary of Terms used in NERC Reliability Standards* so that it may be used across the body of CIP standards without an explicit cross-reference.

FERC Order No. 706, Paragraph 296, requests that the SDT consider whether the single senior manager should be a corporate officer or equivalent. The SDT believes that the requirement that the senior manager have "the overall authority and responsibility for leading and managing implementation of the requirements within this set of standards" ensures that the senior manager is of sufficient position in the Responsible Entity to ensure that cyber security receives the prominence that is necessary. In addition, given the range of business models for responsible entities, from municipal, cooperative, federal agencies, investor owned utilities, privately owned utilities, and everything in between, the SDT believes that requiring the senior manager to be a "corporate officer or equivalent" would be extremely difficult to interpret and enforce on a consistent basis.

R3. Each Responsible Entity shall identify a CIP Senior Manager by name. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M3. Evidence may include, but is not limited to:

- A dated and signed document from a high level official designating the name of the individual identified as the CIP Senior Manager; or
- A dated organizational chart designating the name of the individual identified as the CIP Senior Manager.

Rationale – R4:

Annual review and approval of the cyber security policy ensures that the policy is kept up-to-date and periodically reaffirms management's commitment to the protection of its BES Cyber Systems.

R4. Each Responsible Entity shall review and obtain CIP Senior Manager approval for cyber security policies identified in Requirements R1 and R2, at least once each calendar year, not to exceed 15 calendar months between reviews and between approvals. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M4. Evidence may include, but is not limited to:

1. Revision history, records of review, or workflow evidence from a document management system that indicate annual review of each cyber security policy; and
2. A dated signature by the CIP Senior Manager for each cyber security policy that indicates annual approval.

Rationale – R5:

The intent of the requirement is to ensure clear accountability within an organization for certain security matters.

In FERC Order No. 706, Paragraphs 379 and 381, the Commission notes that Recommendation 43 of the 2003 Blackout Report calls for "clear lines of authority and ownership for security matters." With this in mind, the Standard Drafting Team has sought to provide clarity in the requirement for delegations so that this line of authority is clear and apparent from the documented delegations.

R5. Where allowed by the CIP Standards, the CIP Senior Manager may delegate authority for specific actions to a delegate or delegates. These delegations shall be documented, including the name or title of the delegate and the date of the delegation, and approved by the CIP Senior Manager. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M5. Evidence may include, but is not limited to, a dated document, signed by the CIP Senior Manager, listing named personnel (by name or title) who are delegated the authority to approve or authorize specifically identified items.

Rationale – R6:

The intent of the requirement is to ensure that delegations are kept up-to-date and that individuals do not assume undocumented authority.

R6. Each Responsible Entity shall document any changes to the CIP Senior Manager or any delegations within thirty calendar days of the change. Delegation changes do not need to be reinstated with a change to the delegator. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M6. Evidence may include, but is not limited to, dated documentation that includes the name of the CIP Senior Manager or documentation that includes the names or titles of any delegations, that is current to within 30 days with the name or title of anyone who performed a required approval or authorization.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Operations Planning**	**Medium**	N/A	N/A	The Responsible Entity has implemented at least one cyber security policy, but has failed to address one of the required Parts 1.1 to 1.10.	The Responsible Entity has not implemented any cyber security policy, Or The Responsible Entity has implemented at least one policy but has failed to address two or more of the required Parts 1.1 to 1.10.
R2	**Operations Planning**	**Medium**	**N/A**	**N/A**	The Responsible Entity has implemented at least one cyber security policy, but has failed to address one of the required Parts 2.1 to 2.4.	The Responsible Entity has not implemented any cyber security policy, Or The Responsible Entity has implemented at least one policy but has failed to address two or more of the required Parts 2.1 to 2.4.
R3	**Operations**	**Medium**	**N/A**	**N/A**	**N/A**	The Responsible Entity has not identified, by

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
	Planning					name, a single senior management official ("the CIP Senior Manager") with overall authority and responsibility for leading and managing implementation of the requirements within the CIP group of standards.
R4	**Operations Planning**	**Lower**	N/A	N/A	The Responsible Entity has reviewed its cyber security policy or policies, but not all of them have been approved by the CIP Senior Manager within the required time period.	The Responsible Entity has not reviewed the cyber security policy or policies and the CIP Senior Manager has not approved all of them within the required time period.
R5	**Operations Planning**	**Lower**	N/A	The Responsible Entity failed to document the approval and authorization of one delegation (by title or name of the delegate) as required.	The Responsible Entity failed to document the approval and authorization of two delegations (by title or name of the delegate) as required.	The Responsible Entity failed to document the approval and authorization of three or more delegations (by title or name of the delegate) as required.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R6	**Operations Planning**	**Lower**	N/A	NA	Change to one delegation was not documented within 30 calendar days of the effective date.	A change to the CIP Senior Manager, Or more than one delegation was not documented within 30 calendar days of the effective date.

D. Regional Variances

None.

E. Interpretations

None.

F. Associated Documents

None.

Guidelines and Technical Basis

Requirement R1:

The number of policies and their specific language are guided by a Responsible Entity's management structure and operating conditions. Policies might be included as part of a general information security program for the entire organization, or as components of specific programs. The cyber security policy must cover in sufficient detail the 10 topical areas required by CIP-003-5, Requirement R1. The Responsible Entity has the flexibility to develop a single comprehensive cyber security policy covering these topics, or it may choose to develop a single high-level umbrella policy and provide additional policy detail in lower level documents in its documentation hierarchy. In the case of a high-level umbrella policy, the Responsible Entity would be expected to provide the high-level policy as well as the additional documentation in order to demonstrate compliance with CIP-003-5, Requirement R1. The Responsible Entity should consider the following for each of the required topics in its cyber security policy:

1.1 Personnel Security

- Organization position on acceptable background investigations
- Identification of possible disciplinary action for violating this policy
- Account Management

1.2 Electronic Security Perimeters

- Organization stance on use of wireless networks
- Identification of acceptable authentication methods
- Identification of trusted and untrusted resources
- Monitoring and logging of ingress and egress at Electronic Access Points

1.3. Remote Access

- Maintaining up-to-date anti-malware software before initiating Interactive Remote Access
- Maintaining up-to-date patch levels for operating system and applications used to initiate the Interactive Remote Access before initiating Interactive Remote Access
- Disabling VPN “split-tunneling” or “dual-homed” workstations before initiating Interactive Remote Access
- For vendors, contractors, or consultants: include language in contracts that requires adherence to the Responsible Entity’s Interactive Remote Access controls

1.4 Physical Security

- Strategy for protecting Cyber Assets from unauthorized physical access
- Acceptable physical access control methods
- Monitoring and logging of physical ingress and egress

1.5 System Security

- Strategies for system hardening
- Acceptable methods of authentication and access control
- Password policies including length, complexity, enforcement, prevention of brute force attempts
- Monitoring and logging of BES Cyber Systems

1.6 Incident Response

- Recognition of Cyber Security Incidents
- Appropriate notifications upon discovery of an incident
- Obligations to report Cyber Security Incidents

1.7 Recovery Plans

- Availability of spare components
- Availability of system backups

1.8 Configuration Change Management

- Initiation of change requests
- Approval of changes
- Break-fix processes

1.9 Information Protection

- Information access control methods
- Notification of unauthorized information disclosure
- Information access on a need-to-know basis

1.10 Provisions for CIP Exceptional Circumstances

- Processes to invoke special procedures in the event of a CIP Exceptional Circumstance
- Processes to allow for exceptions to policy that do not violate CIP requirements

The SDT has removed requirements relating to exceptions to a Responsible Entity's security policies since it is a general management issue that is not within the scope of a compliance requirement. The SDT considers it to be an internal policy requirement and not a reliability requirement. However, the SDT encourages Responsible Entities to continue this practice as a component of its cyber security policy.

Requirement R2:

As with Requirement R1, the number of policies and their specific language would be guided by a Responsible Entity's management structure and operating conditions. Policies might be included as part of a general information security program for the entire organization or as

components of specific programs. The cyber security policy must cover in sufficient detail the 4 topical areas required by CIP-003-5, Requirement R2. The Responsible Entity has flexibility to develop a single comprehensive cyber security policy covering these topics, or it may choose to develop a single high-level umbrella policy and provide additional policy detail in lower level documents in its documentation hierarchy. In the case of a high-level umbrella policy, the Responsible Entity would be expected to provide the high-level policy as well as the additional documentation in order to demonstrate compliance with CIP-003-5, Requirement R2. The intent of the requirement is to outline a set of basic protections that all low impact BES Cyber Systems should receive without requiring a significant administrative and compliance overhead. The SDT intends that demonstration of this requirement can be reasonably accomplished through providing evidence of related processes, procedures, or plans. While the audit staff may choose to review an example low impact BES Cyber System, the SDT believes strongly that the current method (as of this writing) of reviewing a statistical sample of systems is not necessary. The SDT also notes that in topics 2.2 and 2.3, the SDT uses the term "access control" in the general sense, i.e., to control access, and not in the specific technical sense requiring authentication, authorization, and auditing.

Requirement R3:

In this and all subsequent required approvals in the NERC CIP Standards, the Responsible Entity may elect to use hardcopy or electronic approvals to the extent that there is sufficient evidence to ensure the authenticity of the approving party.

Requirement R5:

As indicated in the rationale for CIP-003-5, Requirement R5, this requirement is intended to demonstrate a clear line of authority and ownership for security matters. The intent of the Standard Drafting Team was not to impose any particular organizational structure, but, rather, the Responsible Entity should have significant flexibility to adapt this requirement to their existing organizational structure. As detailed in the examples provided in the Measure, a Responsible Entity may satisfy this requirement through a single delegation document or through multiple delegation documents. The Responsible Entity can make use of the delegation of the delegation authority itself to increase the flexibility in how this applies to its organization. In such a case, delegations may exist in numerous documentation records as long as the collection of these documentation records provides a clear line of authority back to the CIP Senior Manager. In addition, the CIP Senior Manager could also choose not to delegate any authority and meet this requirement without such delegation documentation.

Requirement R6:

The Responsible Entity must keep its documentation of the CIP Senior Manager and any delegations up to date. This is to ensure that individuals do not assume any undocumented authority. However, delegations do not have to be re-instated if the individual who delegated the task changes roles or is replaced. For instance, assume that John Doe is named the CIP Senior Manager and he delegates a specific task to the Substation Maintenance Manager. If John Doe is replaced as the CIP Senior Manager, the CIP Senior Manager documentation must be updated within the specified timeframe, but the existing delegation to the Substation

Maintenance Manager remains in effect as approved by the previous CIP Senior Manager, John Doe.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

~~**Note**: On November 21, 2011, NERC was alerted that the text contained in some of the Rationale boxes for the requirements of CIP-003-5 appeared to be incomplete.~~

~~This revised draft corrects the text box size to display all of the text (none of the text was changed).~~

~~No other changes were made to this standard or any of the other CIP V5 standards currently posted.~~

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the ~~first~~second posting of Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (Version 5)~~A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. ~~18~~24 **Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the ~~standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of ~~Trustees~~Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center~~"~~."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated version number from -2 to -3 Approved by the NERC Board of Trustees.	
3	3/31/10	Approved by FERC.	
4	1/24/11	Update version from "3" to "4". Approved by the NERC Board of Trustees.	Update to conform to changes to CIP-002-4 (Project 2008-06)
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Security Management Controls

2. Number: CIP-003-5

3. Purpose: ~~Standard CIP-003-5 requires that Responsible Entities have minimum~~To specify consistent and sustainable security management controls ~~in place~~that establish responsibility and accountability to protect BES Cyber ~~Assets and BES Cyber~~ Systems~~.~~ against compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities ~~that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~ **described in 4.2.2**

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~
- ~~A Special Protection System or Remedial Action Scheme required by a NERC or Regional Reliability Standard~~
- ~~A Transmission Protection System required by a NERC or Regional Reliability Standard~~
- ~~Its Transmission Operator's restoration plan~~

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities ~~that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~ **described in 4.2.1**

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

~~**4.1.7 NERC**~~

~~**4.1.8 Regional Entity**~~

4.1.94.1.7 Reliability Coordinator

4.1.104.1.8 Transmission Operator

4.1.114.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more Facilitiesof the UFLS or UVLS Systems that are part of any of the following systems or programs designed, installed, and operated for the protection of the BES:

- **4.2.1** A UFLSa Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

- A UVLS program required by a NERC or Regional Reliability Standard

4.2.2 Distribution ProvidersProvider: One or more Facilities that are part of any of the following systemsof the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS program required by a NERC or Regional Reliability Standard

- A UVLSor UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme required by a NERC or Regional Reliability Standard

- A Transmission where the Special Protection System required by a NERC or Remedial Action Scheme is required by a NERC or Regional Reliability Standard

- Its Transmission Operator's restoration plan

- **All other** A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard

- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities: listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-003002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.~~-~~R. Section 73.54.

~~**4.2.4.4** Except for R1, R5 and R6, Responsible Entities that, in compliance with Standard CIP-002-5, identify that they have no BES Cyber Systems~~

5. Background:

Standard CIP-003-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational, and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

~~Each requirement opens with *"Each Responsible Entity shall implement one or more documented processes that include the required items in [Table Reference]."* The referenced table requires the specific elements in the procedures for a common subject matter as applicable.~~

Measures ~~for the initial requirement are simply the documented processes themselves. Measures in the table rows~~ provide examples of evidence to show documentation and implementation of ~~specific elements required in the documented processes.~~the requirement. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not ~~infer~~imply any naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e~~.~~., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the ~~Standards~~standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the ~~Standards~~standards.

~~**Applicability**~~

~~Each table row has an applicability column to further define the scope to which a specific requirement row applies. The CSO706 SDT adapted this concept from the NIST Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.~~

- ~~**All Responsible Entities** – Applies to all Responsible Entities listed in the Applicability section of the Standard. This requirement applies at an organizational level rather than individually to each BES Cyber System. Requirements having this applicability comprise basic elements of an organizational CIP cyber security program.~~
- ~~**High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as High Impact according to the CIP-002-5 identification and categorization processes.~~

Responsible Entities can implement common controls that meet requirements for multiple ~~High~~high and ~~Medium Impact~~medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

- ~~**Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as Medium Impact according to the CIP-002-5 identification and categorization processes.~~
- ~~**Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as Medium Impact according to the CIP-002-5 identification and categorization processes.~~
- ~~**Medium Impact BES Cyber Systems with External Routable Connectivity** – Only applies to Medium Impact BES Cyber Systems with External Routable Connectivity. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity.~~
- ~~**Low Impact BES Cyber Systems with External Routable Connectivity** – Applies to each Low Impact BES Cyber Systems with External Routable Connectivity according to the CIP-002-5 identification and categorization process, which includes all other BES Cyber Systems not categorized as High or Medium.~~
- ~~**Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding~~

High or Medium Impact BES Cyber Systems. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems

- **Associated Physical Access Control Systems –** Applies to each Physical Access Control System associated with a corresponding High or Medium Impact BES Cyber Systems.
- **Associated Protected Cyber Assets –** Applies to each Protected Cyber Asset associated with a corresponding High or Medium Impact BES Cyber Systems.
- **Electronic Access Points –** Applies at Electronic Access Points (with External Routable Connectivity or dial-up connectivity) associated with a referenced BES Cyber System.
- **Electronic Access Points with External Routable Connectivity –** Applies at Electronic Access Points with External Routable Connectivity. This excludes those Electronic Access Points with dial-up connectivity.
- **Locally Mounted Hardware or Devices Associated with Defined Physical Boundaries –** Applies to the locally mounted hardware (e.g. such as motion sensors, electronic lock control mechanisms, and badge readers) associated with a Defined Physical Boundary for High or Medium Impact BES Cyber Systems. These hardware and devices are excluded in the definition of Physical Access Control Systems.

Rationale – R1:

The identification and documentation of the single CIP Senior Manager and any delegations ensures that there is clear authority and ownership for the CIP program within an organization, as called for in Blackout Report Recommendation 43.

In FERC Order 706, paragraph 296, it requests that the SDT consider whether the single senior manager should be a corporate officer or equivalent. The SDT believes that the requirement that the senior manager have "the overall authority and responsibility for leading and managing implementation of the requirements within this set of standards" ensures that the senior manager is of the sufficient position in the responsible entity to ensure that cyber security receives the prominence that is necessary. In addition, given the range of business models for responsible entities, from municipal, cooperative, federal agencies, investor owned utilities, privately owned utilities, and everything in between, the SDT believes that requiring the senior manager to be a "corporate officer or equivalent" would be extremely difficult to interpret and enforce on a consistent basis.

B. Requirements and Measures

Rationale – R1:

One or more security policies enable effective implementation of the standard's requirements. The purpose of policies is to provide a management and governance foundation for all requirements that apply to personnel who have authorized electronic access and/or authorized unescorted physical access to its BES Cyber Systems. The Responsible Entity can demonstrate through its policies that its management supports the accountability and responsibility necessary for effective implementation of the standard's requirements.

R1. Each Responsible Entity ~~shall identify, by name, a CIP Senior Manager. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*~~

~~**M1.** Evidence may include, but is not limited to:~~

- ~~A dated and signed document from a~~ for its high ~~level official designating the name of the individual identified as the CIP Senior Manager~~
- ~~A dated organizational chart designating the name of the individual identified as the CIP Senior Manager.~~

Rationale – R2:

One or more security policies enable effective implementation of the standard's requirements. The purpose of policies is to provide a management and governance foundation for all requirements that apply to personnel who have authorized electronic access and/or authorized unescorted physical access to its BES Cyber Systems. The Responsible Entity can demonstrate through its policies that its management supports the accountability and responsibility necessary for effective implementation of the standard's requirements.

R2 Each Responsible Entity impact and medium impact BES Cyber Systems shall implement one or more documented cyber security policies that represents the Responsible Entity's commitment to the protection of its BES Cyber Systems and addressesaddress the following topics: *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

1.1.1.1 Personnel Securitysecurity;

1.2.1.2 Electronic Security Perimeters;

1.3.1.3 Interactive Remote Access;

1.4.1.4 Physical Securitysecurity;

1.5.1.5 System Securitysecurity;

1.6.1.6 Incident Responseresponse;

1.7.1.7 Recovery Plansplans;

1.8.1.8 Configuration Change Managementchange management;

1.9.1.9 Information Protectionprotection; and

1.10.1.10 Provisions for declaring and responding to CIP Exceptional Circumstances.

M2M1. Evidence maymust include, but is not limited to:

- One one or more documented cyber security policies, and

2.Records and evidence of processes, procedures, or plans that indicatedemonstrate the implementation of the required ten topics were implemented.

~~**Rationale – R3:**~~

~~Annual review and approval of the cyber security policy ensures that the policy is kept up-to-date and periodically reaffirms management's commitment to the protection of its BES Cyber Systems.~~

~~**R3.** Each Responsible Entity shall review~~

Rationale – R2:

One or more security policies enable effective implementation of the standard's requirements. The purpose of policies is to provide a management and governance foundation for all requirements that apply to personnel who have authorized electronic access and/or authorized unescorted physical access to its BES Cyber Systems. The Responsible Entity can demonstrate through its policies that its management supports the accountability and responsibility necessary for effective implementation of the standard's requirements.

R2. For BES Cyber Systems not identified as high impact or medium impact, each ~~of its~~Responsible Entity shall implement one or more documented cyber security policies ~~and obtain the approval of its CIP Senior Manager, initially upon~~that address the ~~effective date of the standard and at least once each calendar year thereafter, not to exceed 15 calendar months between reviews and between approvals.~~following topics: *[Violation Risk Factor: ~~Lower~~Low] [Time Horizon: Operations Planning]*

2.1 Cyber security awareness;

2.2 Physical access control;

2.3 Electronic access control; and

2.4 Incident response to a BES Cyber Security Incident.

An inventory, list, or discrete identification of BES Cyber Systems is not required.

M2. Evidence must include one or more documented cyber security policies and evidence of processes, procedures, or plans that demonstrate the implementation of the required topics.

Rationale – R3:

The identification and documentation of the single CIP Senior Manager ensures that there is clear authority and ownership for the CIP program within an organization, as called for in Blackout Report Recommendation 43. The language that identifies CIP Senior Manager responsibilities is included in the *Glossary of Terms used in NERC Reliability Standards* so that it may be used across the body of CIP standards without an explicit cross-reference.

FERC Order No. 706, Paragraph 296, requests that the SDT consider whether the single senior manager should be a corporate officer or equivalent. The SDT believes that the requirement that the senior manager have "the overall authority and responsibility for leading and managing implementation of the requirements within this set of standards" ensures that the senior manager is of sufficient position in the Responsible Entity to ensure that cyber security receives the prominence that is necessary. In addition, given the range of business models for responsible entities, from municipal, cooperative, federal agencies, investor owned utilities, privately owned utilities, and everything in between, the SDT believes that requiring the senior manager to be a "corporate officer or equivalent" would be extremely difficult to interpret and enforce on a consistent basis.

R3. Each Responsible Entity shall identify a CIP Senior Manager by name. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

M3. Evidence may include, but is not limited to:

- A dated and signed document from a high level official designating the name of the individual identified as the CIP Senior Manager; or
- A dated organizational chart designating the name of the individual identified as the CIP Senior Manager.

Rationale – R4:

The intent of the SDT is to ensure that the responsible entity takes sufficient measures to make its cyber security policy available and accessible to personnel. It is not the intent of the SDT for the responsible entity to have the burden of proving

R4. Each Responsible Entity shall review and obtain CIP Senior Manager approval for cyber security policies identified in Requirements R1 and R2, at least once each calendar year, not to exceed 15 calendar months between reviews and between approvals. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M4. Evidence may include, but is not limited to:

1. Revision history, records of review, or workflow evidence from a document management system that indicate annual review of each cyber security policy~~,~~; and
2. A dated signature by the CIP Senior Manager for each cyber security policy that indicates annual approval.

~~**Rationale – R4:**~~

~~The intent of the SDT is to ensure that the responsible entity takes sufficient measures to make its cyber security policy available and accessible to personnel. It is not the intent of the SDT for the responsible entity to have the burden of proving~~

~~**R4.** Each Responsible Entity shall make individuals who have access to BES Cyber Systems aware of elements of its cyber security policies appropriate for their job function. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*~~

~~**M4.** Evidence may include, but is not limited to:~~

- ~~Policies are accessible on the corporate Intranet site~~
- ~~Documented records that policies have been provided to contactors where access to BES Cyber Systems is authorized~~
- ~~Policies are posted on company bulletin boards~~
- ~~Policies are accessible to individuals with all types of job functions that have access to BES Cyber Systems~~
- ~~Dated training records to show that individuals have received periodic training on necessary elements of the cyber security policy~~

~~**Rationale – R5:**~~

~~In FERC Order 706, paragraphs 379 and 381, the Commission notes that Recommendation 43 of the 2003 Blackout Report calls for "clear lines of authority and ownership for security matters." With this in mind, the Standard Drafting Team has sought to provide clarity in the requirement for delegations in order that this line of authority is clear and apparent from the documented delegations.~~

Rationale – R5:

The intent of the requirement is to ensure clear accountability within an organization for certain security matters.

In FERC Order No. 706, Paragraphs 379 and 381, the Commission notes that Recommendation 43 of the 2003 Blackout Report calls for "clear lines of authority and ownership for security matters." With this in mind, the Standard Drafting Team has sought to provide clarity in the requirement for delegations so that this line of authority is clear and apparent from the documented delegations.

R5 ~~The .~~ Where allowed by the CIP ~~Senior Manager shall be responsible for all approvals and authorizations required in~~Standards, the CIP ~~standards. The CIP~~ Senior Manager may delegate ~~the~~ authority for ~~any approvals and authorizations required in the CIP standards with the exception of the approval of the Cyber Security Policy required in CIP-003-5 R3. The authority for subsequent delegations may also be delegated~~specific actions to a delegate or delegates. These delegations shall be documented ~~(by position or~~, including the name or title of the delegate~~), dated~~ and the date of the delegation, and approved ~~and shall specify the authority that is being delegated.~~by the CIP Senior Manager. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M5. Evidence may include, but is not limited to~~:~~, a dated document, signed by the CIP Senior Manager, listing named personnel (by name or title) who are delegated the authority to approve or authorize specifically identified items.

~~A dated~~

Rationale – R6:

The intent of the requirement is to ensure that delegations are kept up-to-date and that individuals do not assume undocumented authority.

- **R6.** Each Responsible Entity shall document~~, signed by~~ any changes to the CIP Senior Manager ~~listing personnel (by title) who are delegated the authority to approve~~ or ~~authorize specifically identified items (i.e. substation maintenance manager may authorize unescorted physical access to substation control houses), or~~
- ~~A dated document, signed by the CIP Senior Manager listing individuals who are delegated the authority to approve or authorize specific actions by requirement (i.e., 'name of individual' who may approve CIP-002-5 R3), or~~
- ~~A dated document, signed by the CIP Senior Manager delegating to a named individual the authority for all approvals in CIP-002-5 and CIP-004-5 through CIP-011-1 as well as the authority to approve subsequent~~any delegations~~; a dated document, signed by the previous named individual delegating to a 3rd named individual the authority for all approvals in CIP-004-5 through CIP-011-1 as well as the authority to approve subsequent delegations; and a dated document, signed by the 3rd named individual delegating to each of the plant managers (by title) the authority for all approvals and authorizations required in CIP-004-5 through CIP-011-1 for each of the their plants, respectively.~~

~~**Rationale – R6:**~~

~~The intent of the SDT is to ensure that delegations are kept up-to-date and that individuals do not assume undocumented authority.~~

R6. ~~Changes to the CIP Senior Manager and any delegations shall be documented~~ within thirty calendar days of the change~~2~~. Delegation changes do not need to be reinstated

~~2 Delegations do not need to be reinstated with a change in the CIP Senior Manager position or other position with delegation authority.~~

with a change to the delegator. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M6. Evidence may include, but is not limited to, dated documentation that includes the name of the CIP Senior Manager or documentation that includes the names or ~~positions~~titles of any delegations, that is current to within 30 days with the name or ~~position~~title of anyone who performed a required approval or authorization.

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority:

- ~~The~~ Regional Entity~~.~~
- ~~If the Responsible Entity works for~~ shall serve as the Compliance Enforcement Authority ("CEA") unless the ~~Regional Entity, then the~~ applicable entity is owned, operated, or controlled by the Regional Entity ~~will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity) to be responsible for compliance enforcement.~~
- ~~For Responsible Entities that are also Regional Entities,~~. In such cases the ERO or a Regional ~~Entity~~entity approved by ~~the ERO and~~ FERC or other applicable governmental ~~authorities shall serve as the Compliance Enforcement Authority.~~
- ~~For NERC, a third-party monitor without vested interest in the outcome for NERC~~authority shall serve as the ~~Compliance Enforcement Authority~~CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was ~~complaint~~compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting

- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Operations Planning**	**Medium**	N/A	N/A	~~N/A~~The Responsible Entity has implemented at least one cyber security policy, but has failed to address one of the required Parts 1.1 to 1.10.	The Responsible Entity has not ~~identified, by name, a single senior management official ("the CIP Senior Manager") with overall authority and responsibility for leading and managing implementation~~implemented any cyber security policy, Or The Responsible Entity has implemented at least one policy but has failed to address two or more of the ~~requirements within the CIP group of standards~~required Parts 1.1 to 1.10.
R2	**Operations Planning**	**Medium**	**N/A**	**N/A**	The Responsible Entity has implemented at least one cyber security policy, but has failed to address one of the	The Responsible Entity has not implemented any cyber security policy, Or The Responsible Entity has implemented at least one

F. Associated Documents

None.

Guidelines and Technical Basis

Requirement ~~R2~~R1:

The number of policies and their specific language ~~would be~~are guided by a Responsible Entity's management structure and operating conditions. Policies might be included as part of a general information security program for the entire organization, or as components of specific programs. The cyber security policy must cover in sufficient detail the ~~ten~~10 topical areas required by CIP-003-5~~ R2~~, Requirement R1. The Responsible Entity has the flexibility to develop a single comprehensive cyber security policy covering these topics, or it may choose to develop a single high-level umbrella policy and provide additional policy detail in lower level documents in its documentation hierarchy. In ~~this~~the case of a high-level umbrella policy, ~~it~~the Responsible Entity would be expected ~~that the entity~~to provide the high-level policy as well as the additional documentation in order to ~~prove~~demonstrate compliance with CIP-003-5~~ R2~~, Requirement R1. The Responsible Entity should consider the following for each of the required topics in its cyber security policy:

~~2~~1.1 Personnel Security

- Organization position on acceptable background investigations
- Identification of possible disciplinary action for violating this policy
- Account Management

~~2.2~~1.2 Electronic Security Perimeters

- Organization stance on use of wireless networks
- Identification of acceptable authentication methods
- Identification of trusted and untrusted resources
- Monitoring and logging of ingress and egress at Electronic Access Points

~~2~~1.3. Remote Access

- Maintaining up-to-date anti-malware software before initiating ~~interactive remote access~~Interactive Remote Access
- Maintaining up-to-date patch levels for operating system and applications used to initiate the ~~interactive remote access~~Interactive Remote Access before initiating ~~interactive remote access~~Interactive Remote Access
- Disabling VPN “split-tunneling” or “dual-homed” workstations before initiating ~~interactive remote access~~Interactive Remote Access
- For vendors, contractors, or consultants: include language in contracts that requires adherence to the Responsible Entity’s ~~interactive remote access~~Interactive Remote Access controls

~~2.4~~1.4 Physical Security

- Strategy for protecting ~~cyber assets~~Cyber Assets from unauthorized physical access

- Acceptable physical access control methods
- Monitoring and logging of physical ingress and egress

~~2.5~~1.5 System Security

- Strategies for system hardening
- Acceptable methods of authentication and access control
- Password policies including length, complexity, enforcement, prevention of brute force attempts
- Monitoring and logging of BES Cyber Systems

~~2.6~~1.6 Incident Response

- Recognition of Cyber Security Incidents
- Appropriate notifications upon discovery of an incident
- Obligations to report Cyber Security Incidents

~~2~~1.7 Recovery Plans

- Availability of spare components
- Availability of system backups

~~2~~1.8 Configuration Change Management

- Initiation of change requests
- Approval of changes
- Break-fix processes

~~2~~1.9 Information Protection

- Information access control methods
- Notification of unauthorized information disclosure
- Information access on a need-to-know basis

~~2~~1.10 Provisions for CIP Exceptional Circumstances

- Processes to invoke special procedures in the event of a CIP Exceptional Circumstance
- Processes to allow for exceptions to policy that do not violate CIP requirements

The SDT has removed requirements relating to exceptions to a Responsible Entity's security policies since it ~~considers this~~is a general management issue that is not within the scope of a compliance requirement. The SDT considers ~~this~~it to be an internal policy requirement and not a reliability requirement. However, the SDT encourages Responsible Entities to continue this practice as a component of its cyber security policy.

Requirement R2:

As with Requirement R1, the number of policies and their specific language would be guided by a Responsible Entity's management structure and operating conditions. Policies might be included as part of a general information security program for the entire organization or as components of specific programs. The cyber security policy must cover in sufficient detail the 4 topical areas required by CIP-003-5, Requirement R2. The Responsible Entity has flexibility to develop a single comprehensive cyber security policy covering these topics, or it may choose to develop a single high-level umbrella policy and provide additional policy detail in lower level documents in its documentation hierarchy. In the case of a high-level umbrella policy, the Responsible Entity would be expected to provide the high-level policy as well as the additional documentation in order to demonstrate compliance with CIP-003-5, Requirement R2. The intent of the requirement is to outline a set of basic protections that all low impact BES Cyber Systems should receive without requiring a significant administrative and compliance overhead. The SDT intends that demonstration of this requirement can be reasonably accomplished through providing evidence of related processes, procedures, or plans. While the audit staff may choose to review an example low impact BES Cyber System, the SDT believes strongly that the current method (as of this writing) of reviewing a statistical sample of systems is not necessary. The SDT also notes that in topics 2.2 and 2.3, the SDT uses the term "access control" in the general sense, i.e., to control access, and not in the specific technical sense requiring authentication, authorization, and auditing.

Requirement R3:

In this and all subsequent required approvals in the NERC CIP Standards, the Responsible Entity may elect to use hardcopy or electronic approvals to the extent that there is sufficient evidence to ensure the authenticity of the approving party.

Requirement R5:

As indicated in the rationale for CIP-003-5, Requirement R5, this requirement is intended to demonstrate a clear line of authority and ownership for security matters. The intent of the Standard Drafting Team was not to impose any particular organizational structure, but, rather, the Responsible Entity should have significant flexibility to adapt this requirement to their existing organizational structure. As detailed in the examples provided in the Measure, a Responsible Entity may satisfy this requirement ~~may be met~~ through a single delegation document or through multiple delegation documents. The Responsible Entity can make use of the delegation of the delegation authority itself to increase the flexibility in how this applies to ~~their~~its organization. In such a case, delegations may exist in numerous documentation records as long as the collection of these documentation records provides a clear line of authority back to the CIP Senior Manager. In addition, the CIP Senior Manager could also choose not to delegate any authority and meet this requirement without such delegation documentation.

Requirement R6:

The Responsible Entity must keep its documentation of the CIP Senior Manager and any delegations up to date. This is to ensure that individuals do not assume any undocumented authority. However, delegations do not have to be re-instated if the individual who delegated

the task changes roles or is replaced. For instance, assume that John Doe is named the CIP Senior Manager and he delegates a specific task to the Substation Maintenance Manager. If John Doe is replaced as the CIP Senior Manager, the CIP Senior Manager documentation must be updated within the specified timeframe, but the existing delegation to the Substation Maintenance Manager remains in effect as approved by the previous CIP Senior Manager, John Doe.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated version number from -2 to -3 Approved by the NERC Board of Trustees.	
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. **Title:** Cyber Security — Personnel & Training

2. **Number:** CIP-004-5

3. **Purpose:** To minimize the risk from individuals accessing BES Cyber Systems by requiring an appropriate level of personnel risk assessment, training, and security awareness in support of protecting BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. **Applicability:**

   4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

   4.1.1 Balancing Authority

   4.1.2 Distribution Provider that owns Facilities described in 4.2.2

   4.1.3 Generator Operator

   4.1.4 Generator Owner

   4.1.5 Interchange Coordinator

   4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

   4.1.7 Reliability Coordinator

   4.1.8 Transmission Operator

   4.1.9 Transmission Owner

   4.2. Facilities:

   4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

   4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

   - A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

Standard CIP-004-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1 and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the applicable items in [Table Reference].*" The referenced table requires the applicable items in the procedures for a common subject matter.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the standards.

Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as high impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity** – Only applies to medium impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity.
- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability

column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.

- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.

B. Requirements and Measures

Rationale for R1: Ensures that Responsible Entities with personnel who have authorized electronic or authorized unescorted physical access to BES Cyber Assets take action so that those personnel with such authorized electronic or authorized unescorted physical access maintain awareness of the Responsible Entity's security practices.

Summary of Changes: Reformatted into table structure.

R1. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-004-5 Table R1 – Security Awareness Program*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-004-5 Table R1 – Security Awareness Program* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-004-5 Table R1 – Security Awareness Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	A security awareness program that, at least once each calendar quarter, conveys ongoing reinforcement of cyber security practices for the Responsible Entity's personnel who have authorized electronic or authorized unescorted physical access to BES Cyber Systems.	Evidence must include the documented security awareness program, and additional evidence to demonstrate that this program was implemented. Evidence of implementation may include, but not limited to, documentation that the quarterly reinforcement has been provided. Evidence of reinforcement may include dated copies of information used to reinforce security awareness, as well as evidence of distribution such as: direct communications (for example, e-mails, memos, computer-based training); indirect communications (for example, posters, intranet, or brochures); management support and reinforcement (for example, presentations or meetings).
Reference to prior version: *CIP-004-4, R1*		**Change Rationale:** *Changed to remove the need to ensure everyone with authorized* electronic or authorized unescorted physical *access "received" ongoing reinforcement – to state that the program conveys awareness and measures that reinforcement "has been provided."* *Moved example mechanisms to guidance.* *Changed to record delivery.*	

Rationale for R2: To ensure that the Responsible Entity's training program for personnel who need authorized electronic access and/or authorized unescorted physical access to BES Cyber Systems covers the proper policies, access controls, and procedures to protect BES Cyber Systems.

Based on their role, some personnel may not require training on all topics.

Summary of Changes:

1. Addition of specific role training for:
   - The visitor control program
   - Electronic interconnectivity supporting the operation and control of BES Cyber Systems
   - Storage media as part of the handling of BES Cyber Systems information
2. Change references from Critical Cyber Assets to BES Cyber Systems

R2. Each Responsible Entity shall have a role-based cyber security training program to attain and retain authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in *CIP-004-5 Table R2 – Cyber Security Training Program*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M2. Evidence must include the training program that includes each of the applicable items in *CIP-004-5 Table R2 – Cyber Security Training Program*.

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Identification of each role and training required for each role.	Acceptable evidence must include a list of roles and what training is needed for each role.
Reference to prior version: NEW		**Change Rationale:** *The first thing needed in a role-based training program is to understand what roles individuals have so that the Responsible Entity can plan what training modules it needs to provide.*	
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on the cyber security policies protecting the Responsible Entity's BES Cyber Systems.	Evidence may include, but is not limited to, training material on the security controls that have been implemented to protect BES Cyber Systems.
Reference to prior version: *CIP004-4, R2.2.1*		**Change Rationale:** *Removed to address cyber security issues, not the business function. The previous version was focused more on the business or functional use of the BES Cyber System and is outside the scope of cyber security.*	

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on the physical access controls protecting the Responsible Entity's BES Cyber Systems.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the proper use of physical access controls for BES Cyber Systems.
Reference to prior version: *CIP004-4, R2.2.1 and R2.2.2*		**Change Rationale:** *Minor wording changes.*	
2.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on the electronic access controls protecting the Responsible Entity's BES Cyber Systems.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the electronic access controls to protect BES Cyber Systems.
Reference to prior version: *CIP004-4, R2.2.1 and R2.2.2*		**Change Rationale:** *Minor wording changes.*	

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on the visitor control program.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the visitor control program.
Reference to prior version: *NEW*		**Change Rationale:** *No significant change from previous versions.*	
2.6	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on handling of BES Cyber System Information and its storage.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the handling of BES Cyber System Information, including its storage.
Reference to prior version: *CIP004-4, R2.2.3*		**Change Rationale:** *Core training on the handling of BES Cyber System (not Critical Cyber Assets) Information, with the addition of storage media; FERC Order No. 706, paragraph 413 and paragraphs 632-634, 688, 732-734; DHS 2.4.16.*	

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.7	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on identification of a potential BES Cyber Security Incident and initial notifications in accordance with the entity's incident response plan	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the identification of a potential BES Cyber Security Incident and associated notifications.
Reference to prior version: *CIP-004-4, R2.2.4 (new; implied but not stated in CIP-004-4 or CIP-008-4)*		**Change Rationale:** *Core training on the identification and reporting of a Cyber Security Incident; FERC Order No. 706, Paragraph 413; Related to CIP-008-5 & DHS Incident Reporting requirements for those with roles in incident reporting.*	
2.8	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on recovery plans for BES Cyber Systems.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on recovery plans for BES Cyber Systems.
Reference to prior version: *CIP004-4, R2.2.4*		**Change Rationale:** *Core training on the action plans and procedures to recover or re-establish BES Cyber Systems for personnel having a role in the recovery; FERC Order No. 706, Paragraph 413.*	

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.9	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on response to BES Cyber Security Incidents.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the response to a BES Cyber Security Incident.
Reference to prior version: *CIP004-4, R2.2.4*		**Change Rationale:** *Minor wording changes.*	
2.10	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on risks associated with a BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the electronic interconnectivity and interoperability with other Cyber Assets.
Reference to prior version: *NEW*		**Change Rationale:** *Core training programs are intended to encompass networking hardware and software and other issues of electronic interconnectivity supporting the operation and control of BES Cyber Systems; FERC Order No. 706, Paragraph 434.*	

Rationale for R3: To ensure that personnel with authorized electronic access or authorized unescorted physical access are trained in the policies, access controls, and procedures to protect the BES Cyber Systems.

Summary of Changes: Re-organization of the training requirements into the respective requirements for "program" and "implementation" of the training.

R3. Each Responsible Entity shall implement its documented role-based cyber security training program to attain and retain authorized electronic or unescorted physical access to BES Cyber Systems that includes each of the applicable items in *CIP-004-5 Table R3 - Cyber Security Training. [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations].*

M3. Evidence must include, but is not limited to, documentation that the training was provided as defined in *CIP-004-5 Table R3 - Cyber Security Training*.

CIP-004-5 Table R3 – Cyber Security Training			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Require completion and documentation of the training specified in CIP-004-5, Requirement R2 prior to granting authorized electronic access and authorized unescorted physical access to BES Cyber Systems, except during CIP Exceptional Circumstances.	Evidence may include, but is not limited to, for each individual requiring authorized electronic or authorized unescorted physical access, dated individual training records, the date authorized electronic or authorized unescorted physical access was first granted, or a dated log or documentation of when CIP Exceptional Circumstances were invoked and revoked.
Reference to prior version: *CIP004-4, R2.1*		**Change Rationale:** *Addition of exceptional circumstances parameters as directed in FERC Order No. 706, Paragraph 431 is detailed in CIP-003-5.*	

CIP-004-5 Table R3 – Cyber Security Training			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Require completion and documentation of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	Evidence may include, but is not limited to, dated individual training records.
Reference to prior version: *CIP004-4, R2.3*		**Change Rationale:** *Updated to further define what "Annual" training means.*	

Rationale for R4: To ensure that individuals who need authorized electronic or unescorted physical access to BES Cyber Systems have been assessed for risk.

Summary of Changes: Specify that the seven year criminal history check covers all locations where the individual has resided, been employed, and/or attended school for six months or more, including current residence regardless of duration.

R4. Each Responsible Entity shall have one or more documented personnel risk assessment programs to attain and retain authorized electronic or authorized unescorted physical access to BES Cyber Systems that collectively includes each of the applicable items in *CIP-004-5 Table R4 – Personnel Risk Assessment Program*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning].*

M4. Evidence must include the documented personnel risk assessment program that collectively includes each of the applicable items in *CIP-004-5 Table R4 – Personnel Risk Assessment Program*.

CIP-004-5 Table R4 – Personnel Risk Assessment Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	An initial personnel risk assessment ("PRA") that includes identity verification.	Acceptable evidence must include the documented personnel risk assessment program with a requirement for an initial personnel risk assessment that includes identity verification.
Reference to prior version: *CIP004-4, R3.1*		**Change Rationale:** *Addressed interpretation request in guidance. Specified that identity verification is only required for each individual's initial assessment. The implementation plan clarifies that a documented identity verification conducted under an earlier version of the CIP standards is sufficient.*	

CIP-004-5 Table R4 – Personnel Risk Assessment Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the seven years immediately prior to the date of the criminal history records check, the subject has, for six months or more: 4.2.1. resided; 4.2.2. been employed (if applicable); and 4.2.3. attended school (if applicable). If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	Acceptable evidence must include the documented personnel risk assessment program with a requirement for a seven-year criminal history record check in accordance with this part.
Reference to prior version: *CIP004-4, R3.1*		**Change Rationale:** *Specify that the seven year criminal history check covers all locations where the individual has resided, been employed, and/or attended school for six months or more, including current residence regardless of duration. Added additional wording based on interpretation request. Provision is made for when a full seven-year check cannot be performed.*	

CIP-004-5 Table R4 – Personnel Risk Assessment Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Process or criteria used to evaluate personnel risk assessments to determine when to deny authorized access.	Acceptable evidence must include the documented personnel risk assessment program with the process or criteria identified.
Reference to prior version: *NEW*		Change Rationale: *There should be documented criteria or a process used to evaluate personnel risk assessments.*	
4.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4, Parts 4.1 through 4.3.	Acceptable evidence must include the documented personnel risk assessment program with the criteria or process identified.
Reference to prior version: *CIP-004-4, R3.3*		Change Rationale: *Separated into its own table item.*	

Rationale for R5: To ensure that individuals who have authorized access to BES Cyber Systems have been assessed for risk.

R5. Each Responsible Entity shall implement one or more documented processes to attain and retain authorized electronic or authorized unescorted physical access to BES Cyber Systems that collectively include each of the applicable elements in *CIP-004-5 Table R5 – Personnel Risk Assessment. [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations]*

M5. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-004-5 Table R5 – Personnel Risk Assessment* and additional evidence to demonstrate that these processes were implemented as described in the Measures column of the table.

CIP-004-5 Table R5 – Personnel Risk Assessment			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirement**	**Measures**
5.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Have a personnel risk assessment performed as specified in CIP-004-5, Requirement R4 prior to being granted authorized electronic or authorized unescorted physical access, except for CIP Exceptional Circumstances.	Evidence may include, but is not limited to: • Dated records showing that personnel risk assessments were completed before authorized electronic or authorized unescorted physical access was authorized; or • Dated records showing that, before authorized electronic or authorized unescorted access was authorized, the Responsible Entity received dated documentation or attestations from contractors or service vendors verifying that personnel risk assessments were conducted pursuant to CIP-004-5, Requirement R4.
Reference to prior version: *CIP-004-3, R3, R3.3*		**Change Rationale**: *Minor wording changes and added the ability to accept attestations from contractors or vendors.*	

CIP-004-5 Table R5 – Personnel Risk Assessment			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirement**	**Measures**
5.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Update each personnel risk assessment at least once every seven calendar years after the initial or previous personnel risk assessment such that the current PRA is no older than seven years.	Evidence may include, but is not limited to, current and previous personnel risk assessment records.
Reference to prior version: *CIP-004-4, R3.2*		**Change Rationale:** *Eliminated the "for cause" renewal.*	

Rationale for R6: To ensure that individuals with access to BES Cyber Systems and the physical and electronic locations where BES Cyber System Information is stored by the Responsible Entity have been properly authorized for such access. "Authorization" should be considered to be a grant of permission by a person or persons empowered by the Responsible Entity to perform such grants and included in the delegations referenced in CIP-003-5. "Provisioning" should be considered the actions to provide access to an individual.

Access is physical, logical, and remote permissions granted to all Cyber Assets composing the BES Cyber System or allowing access to the BES Cyber System. When granting, reviewing, or revoking access, the Responsible Entity must address the Cyber Asset specifically as well as the systems used to enable such access (i.e., physical access control system, remote access system, directory services).

CIP Exceptional Circumstances are defined in a Responsible Entity's policy from CIP-003-5 and allow an exception to the requirement for authorization to BES Cyber Systems and BES Cyber System Information.

Quarterly reviews in Part 6.5 are to perform a validation that only authorized users have been granted access to BES Cyber Systems. This is achieved by comparing individuals actually provisioned to a BES Cyber System against records of individuals authorized to access the BES Cyber System. The focus of this requirement is on the integrity of provisioning access rather than individual accounts on all BES Cyber Assets. The list of provisioned individuals can be an automatically generated account listing. However, in a BES Cyber System with several account databases, the list of provisioned individuals may come from other records such as provisioning workflow or a user account database where provisioning typically initiates.

If the results of quarterly or annual account reviews indicate an administrative or clerical error in which access was not actually provisioned, then the SDT intends that the error should not be considered a violation of this requirement.

For BES Cyber Systems that do not have user accounts defined, the controls listed in Requirement R6 are not applicable. However, the Responsible Entity should document such configurations.

Summary of Changes: The primary change was in pulling the access management requirements from CIP-003-4, CIP-004-4, and CIP-007-4 into a single requirement. The requirements from Version 4 remain largely unchanged except to clarify some terminology. The purpose for combining these requirements is to remove the perceived redundancy in authorization and review. The requirement in CIP-004-4 R4 to maintain a list of authorized personnel has been removed because the list represents only one form of evidence to demonstrate compliance that only authorized persons have access.

R6. Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in *CIP-004-5 Table R6 – Access Management Program. [Violation Risk Factor: Lower] [Time Horizon: Operations Planning and Same Day Operations].*

M6. Evidence must include the documented processes that collectively include each of the applicable items in *CIP-004-5 Table R6 – Access Management Program* and additional evidence to demonstrate that the access management program was implemented as described in the Measures column of the table.

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Designate one or more individual(s) to authorize: 6.1.1. electronic access; 6.1.2. unescorted physical access; and 6.1.3. access to the physical and electronic locations where BES Cyber System Information is stored by the Responsible Entity.	Evidence may include, but is not limited dated documentation designating one or more individual(s) to authorize electronic access, unescorted physical access, and access to the physical and electronic locations where BES Cyber System Information is stored by the Responsible Entity.
Reference to prior version: *CIP 003-4, R5.1; CIP-007-4, R5.1.1*		**Change Rationale:** Combined requirements from CIP-003-4, CIP-007-4, and CIP-006-4 to make the authorization process clear and consistent.	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	The individual(s) designated in Part 6.1 shall authorize electronic access that the Responsible Entity determines is necessary for performing assigned work functions, except for CIP Exceptional Circumstances.	Evidence may include, but is not limited to, a signed document, automated workflow approval, or email showing persons with electronic access have authorization, and similar or the same records showing the consideration of appropriate privileges on the basis of need in performing a work function were considered as part of the authorization.
Reference to prior version: *CIP 007-4 R5.1, CIP 004-4 R4*		**Change Rationale:** *CIP-003-4, CIP-004-4, CIP-006-4, and CIP-007-4 all reference authorization of access in some form, and CIP-003-4 and CIP-007-4 require authorization on a "need to know" basis or with respect to work functions performed. These were consolidated to ensure consistency in the requirement language.*	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	The individual(s) designated in Part 6.1 shall authorize unescorted physical access that the Responsible Entity determines is necessary for performing assigned work functions, except for CIP Exceptional Circumstances.	Evidence may include, but is not limited to, a system generated list of people with unescorted physical access, a signed document, automated workflow approval, or email showing persons with unescorted physical access have authorization, and similar or the same records showing the consideration of appropriate privileges on the basis of need in performing a work function were considered as part of the authorization.
Reference to prior version: *CIP-006-4 R1.5*		**Change Rationale:** *CIP-003-4, CIP-004-4, CIP-006-4, and CIP-007-4 all reference authorization of access in some form, and CIP-003-4 and CIP-007-4 require authorization on a "need to know" basis or with respect to work functions performed. These were consolidated to ensure consistency in the requirement language.*	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	The individual(s) designated in Part 6.1 shall authorize access to the physical and electronic locations where BES Cyber System Information is stored by the Responsible Entity that the Responsible Entity determines are necessary for performing assigned work functions, except for CIP Exceptional Circumstances.	A signed document, automated workflow approval or email showing persons with access to BES Cyber System Information have authorization, and similar or the same records showing the consideration of appropriate privileges on the basis of need in performing a work function were considered as part of the authorization.
Reference to prior version: *CIP-003-4, R5.2*		**Change Rationale:** *CIP-003-4, CIP-004-4, CIP-006-4, and CIP-007-4 all reference authorization of access in some form, and CIP-003 and CIP-007 require authorization on a "need to know" basis or with respect to work functions performed. These were consolidated to ensure consistency in the requirement language.*	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Verify at least once each calendar quarter that individuals provisioned for authorized electronic access or authorized unescorted physical access have associated authorization records.	Evidence may include, but is not limited to: • Dated documentation of the verification between the system generated list of individuals who have been authorized for access (i.e., workflow database) and a system generated list of personnel who have access (i.e., user account listing), or • Documentation of the dated verification between a list of individuals who have been authorized for access (i.e. authorization forms) and a list of individuals provisioned for access (i.e. provisioning forms or shared account listing).
Reference to prior version: *CIP 004-4, R4.1*		**Change Rationale:** *Feedback among team members, observers, and regional CIP auditors indicates there has been confusion in implementation around what the term "review" entailed in CIP-004-4, Requirement R4.1. This requirement clarifies the review should occur between the provisioned access and authorized access.*	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.6	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	For electronic access, verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all user accounts, user account groups, or user role categories, and their specific, associated privileges are correct and are those that the Responsible Entity determines necessary for performing assigned work functions.	Evidence may include, but is not limited to, documentation of the review including: 1. A dated listing of all accounts/account groups or roles within the system; 2. A summary description of privileges associated with each group or role; 3. Accounts assigned to the group or role; and 4. Dated evidence showing verification of the privileges for the group are authorized and appropriate to the work function performed by people assigned to each account.
Reference to prior version: *CIP 007-4, R5.1.3*		**Change Rationale:** *Moved requirements to ensure consistency and eliminate the cross-referencing of requirements. Clarified what was necessary in performing verification by stating the objective was to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.*	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.7	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, that access to the physical and electronic locations where BES Cyber System Information is stored by the Responsible Entity are correct and those that the Responsible Entity determines necessary for performing assigned work functions.	Evidence may include, but is not limited to, the following documentation of the review: 1. A dated listing of authorizations for BES Cyber System information; 2. Any privileges associated with the authorizations; and 3. Dated evidence showing a verification of the authorizations and any privileges were confirmed correct and the minimum necessary for performing assigned work functions.
Reference to prior version: *CIP-003-4, R5.1.2*		**Change Rationale:** *Moved requirement to ensure consistency among access reviews. Clarified precise meaning of annual. Clarified what was necessary in performing a verification by stating the objective was to confirm access privileges are correct and the minimum necessary for performing assigned work functions.*	

Rationale for R7: The timely revocation of electronic access to BES Cyber Systems is an essential element of an access management regime. When an individual no longer requires access to a BES Cyber System to perform his or her assigned functions, that access should be revoked. This is of particular importance in situations where a change of assignment or employment is involuntary, as there is a risk the individual(s) involved will react in a hostile or destructive manner.

In considering how to address directives in FERC Order No. 706 directing "immediate" revocation of access for involuntary separation, the SDT chose not to specify hourly time parameters in the requirement (i.e., revoking access within 1 hour). The point in time at which an organization terminates a person cannot generally be determined down to the hour. However, most organizations have formal termination processes, and the timeliest revocation of access occurs in concurrence with the initial processes of termination.

Access is physical, logical, and remote permissions granted to all Cyber Assets composing the BES Cyber System or allowing access to the BES Cyber System. When granting, reviewing, or revoking access, the Responsible Entity must address the Cyber Asset specifically as well as the systems used to enable such access (i.e., physical access control system, remote access system, directory services).

Summary of Changes: FERC Order No. 706, Paragraphs 460 and 461, state the following: The Commission adopts the CIP NOPR proposal to direct the ERO to develop modifications to CIP-004-1 to require immediate revocation of access privileges when an employee, contractor or vendor no longer performs a function that requires physical or electronic access to a Critical Cyber Asset for any reason (including disciplinary action, transfer, retirement, or termination).

As a general matter, the Commission believes that revoking access when an employee no longer needs it, either because of a change in job or the end of employment, must be immediate.

R7. Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in *CIP-004-5 Table R7 – Access Revocation*. *[Violation Risk Factor: Lower] [Time Horizon: Same Day Operations and Operations Planning].*

M7. Evidence must include each of the applicable documented programs that collectively include each of the applicable items in *CIP-004-5 Table R7 – Access Revocation* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-004-5 Table R7 – Access Revocation			
Part	**Applicability**	**Requirements**	**Measures**
7.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	For all termination actions, initiate the process to revoke the individual's unescorted physical access and Interactive Remote Access upon the effective date and time of the termination action, and complete the revocation within 24 hours after the effective date and time of the termination action.	Evidence may include, but is not limited to: 1. Dated workflow or sign-off form verifying access removal associated with the termination action; and 2. Logs or other demonstration showing such persons no longer have access.
77Reference to prior version: *CIP 004-4, R4.2*		**Change Rationale:** *The FERC Order No. 706, Paragraphs 460 and 461, directs modifications to the Standards* ***to require immediate revocation*** *for any person no longer needing access. To address this directive, this requirement specifies revocation concurrent with the termination instead of within 24 hours.*	

CIP-004-5 Table R7 – Access Revocation			
Part	**Applicability**	**Requirements**	**Measures**
7.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	For reassignments or transfers, revoke the individual's electronic and physical access that the Responsible Entity determines is not necessary by the end of the next calendar day following the reassignment or transfer.	Evidence may include, but is not limited to: 1. Dated workflow or sign-off form showing a review of logical and physical access; and 2. Logs or other demonstration showing such persons no longer have access that the Responsible Entity determines is not necessary.
Reference to prior version: *CIP-004-4, R4.2*		**Change Rationale:** *FERC Order No. 706, Paragraph 460 and 461, direct modifications to the Standards to require immediate revocation for any person no longer needing access, including transferred employees. In reviewing how to modify this requirement, the SDT determined the date a person no longer needs access after a transfer was problematic because the need may change over time. As a result, the SDT adapted this requirement from NIST 800-53 Version 3 to review access authorizations on the date of the transfer. The SDT felt this was a more effective control in accomplishing the objective to prevent a person from accumulating unnecessary authorizations through transfers.*	

CIP-004-5 Table R7 – Access Revocation			
Part	**Applicability**	**Requirements**	**Measures**
7.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	For termination actions, revoke the individual's access to the physical and electronic locations where BES Cyber System Information is stored by the Responsible Entity by the end of the next calendar day following the effective date and time of the termination action.	Evidence may include, but is not limited to, workflow or sign-off form verifying access removal to designated physical areas or cyber systems containing BES Cyber System Information associated with the terminations and dated within the next calendar day of the termination action.
Reference to prior version: *NEW*		**Change Rationale:** *FERC Order No. 706, Paragraph 386, directs modifications to the standards to require prompt revocation of access to protected information. To address this directive, Responsible Entities are required to revoke access to areas designated for BES Cyber System Information. This could include records closets, substation control houses, records management systems, file shares or other physical and logical areas under the Responsible Entity's control.*	

CIP-004-5 Table R7 – Access Revocation			
Part	**Applicability**	**Requirements**	**Measures**
7.4	High Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	For termination actions, revoke the individual's user accounts on BES Cyber Assets (unless already revoked in accordance with Requirements R7.1 or R7.3) within 30 calendar days of the effective date of the termination action.	Evidence may include, but is not limited to, workflow or sign-off form showing access removal for any individual BES Cyber Assets and software applications as determined necessary to completing the revocation of access and dated within thirty calendar days of the termination actions.
Reference to prior version: *NEW*		**Change Rationale:** *FERC Order No. 706, Paragraph 460 and 461, direct modifications to the Standards to require immediate revocation for any person no longer needing access. In order to meet the immediate timeframe, Responsible Entities will likely have initial revocation procedures to prevent remote and physical access to the BES Cyber System. Some cases may take more time to coordinate access revocation on individual Cyber Assets and applications without affecting reliability. This requirement provides the additional time to review and complete the revocation process. Although the initial actions already prevent further access, this step provides additional assurance in the access revocation process.*	

CIP-004-5 Table R7 – Access Revocation			
Part	**Applicability**	**Requirements**	**Measures**
7.5	High Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	For termination actions, reassignments, or transfers, change passwords for shared account(s) known to the user within 30 calendar days of the termination action, reassignment, or transfer of the user. If the Responsible Entity determines and documents that extenuating operating circumstances require a longer time period, change the password(s) within 10 calendar days following the end of the operating circumstances.	Evidence may include, but is not limited to: • Workflow or sign-off form showing password reset within 30 calendar days of the termination; or • Workflow or sign-off form showing password reset within 30 calendar days of the reassignments or transfers.
Reference to prior version: *CIP-007-4, R5.2.3*		**Change Rationale:** *To provide clarification of expected actions in managing the passwords.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Guidelines and Technical Basis

Requirement R1:

The security awareness program is intended to be an informational program, not a formal training program. It should reference sound security practices to ensure that personnel maintain awareness of best practices for both physical and electronic security to protect its BES Cyber Systems. The Responsible Entity is not required to provide records that show that each individual received or understood the information, but they must maintain documentation of the program materials utilized in the form of posters, memos, and/or presentations.

Examples of possible mechanisms which can be used are:

- Direct communications (e.g., emails, memos, computer based training, etc.);
- Indirect communications (e.g., posters, intranet, brochures, etc.);
- Management support and reinforcement (e.g., presentations, meetings, etc.).

Guidance: Describe example mechanisms used to demonstrate the availability of this information

Requirement R2:

Training shall cover the policies, access controls, and procedures as developed for the BES Cyber Systems and include, at a minimum, the required items appropriate to personnel roles and responsibilities from Table R2. The training may consist of multiple modules and multiple delivery mechanisms.

Note: Provide guidance or a local definition of “role appropriate” as it is used in this standard.

Requirement R3:

Each Responsible Entity shall ensure all personnel who are granted authorized electronic access and/or authorized unescorted physical access to its BES Cyber Systems, including contractors and service vendors, complete cyber security training prior to their being granted authorized access, except for program specified exceptional circumstances that are approved by the single senior management official or their delegate and impact the reliability of the BES or emergency response.

NOTE: Program specified exceptional circumstances can include a specified individual to declare an emergency.

Requirement R4 and R5:

Each Responsible Entity shall ensure a personnel risk assessment is performed for all personnel who are granted authorized electronic access and/or authorized unescorted physical access to its BES Cyber Systems, including contractors and service vendors, prior to their being granted authorized access when called for in CIP-004-1 Table R4 – Personnel Risk Assessment, except for program specified exceptional circumstances that are approved by the single senior management official or their delegate and impact the reliability of the BES or emergency response, to ensure that personnel who have such access have had their identity verified, then

been assessed for risk, in accordance with federal, state, provincial, and local laws, and subject to existing collective bargaining unit agreements.

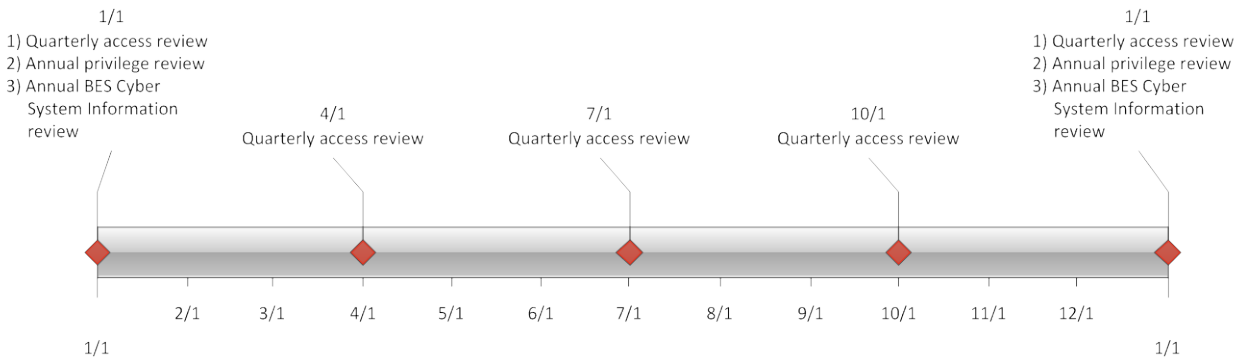
When it is not possible to perform a full seven year criminal history check, documentation must be made of what criminal history check was performed, and the reasons a full seven-year check could not be performed. Examples of this could include individuals under the age of 25 where a juvenile criminal history may be protected by law, or individuals who may have resided in locations from where it is not possible to obtain a criminal history records check.

Requirement R6:

Authorization for electronic and unescorted physical access and access to BES Cyber System Information must be on the basis of necessity in the individual performing a work function. Documentation showing the authorization should have some justification of the business need included. To ensure proper segregation of duties, access authorization and provisioning should not be performed by the same person where possible.

This requirement specifies both quarterly and annual reviews. Quarterly reviews are to perform a validation that only authorized users have been granted access to BES Cyber Systems. This is achieved by comparing individuals actually provisioned to a BES Cyber System against records of individuals authorized to the BES Cyber System. The focus of this requirement is on the integrity of provisioning access rather than individual accounts on all BES Cyber Assets. The list of provisioned individuals can be an automatically generated account listing. However, in a BES Cyber System with several account databases, the list of provisioned individuals may come from other records such as provisioning workflow or a user account database where provisioning typically initiates.

The annual privilege review is more detailed to ensure an individual's associated privileges are the minimum necessary to perform their work function (i.e., least privilege). Entities can more efficiently perform this review by implementing role-based access. This involves determining the specific roles on the system (e.g., system operator, technician, report viewer, administrator, etc.) then grouping access privileges to the role and assigning users to the role. Role-based access does not assume any specific software and can be implemented by defining specific provisioning processes for each role where access group assignments cannot be performed. Role-based access permissions eliminate the need to perform the privilege review on individual accounts. An example timeline of all the reviews in Requirement R6 is included below.



Separation of duties should be considered when performing the reviews in Requirement R6. The person reviewing should be different than the person provisioning access.

If the results of quarterly or annual account reviews indicate an administrative or clerical error in which access was not actually provisioned, then the SDT intends that this error should not be considered a violation of this requirement.

For BES Cyber Systems that do not have user accounts defined, the controls listed in Requirement R6 are not applicable. However, the Responsible Entity should document such configurations.

Requirement R7:

The requirement to revoke access at the time of the termination action includes procedures showing revocation of access concurrent with the termination action. This requirement recognizes that the timing of the termination action may vary depending on the circumstance. Some common examples and possible processes on when the termination action occurs are provided in the following table.

Scenario	Possible Process
Immediate involuntary termination	Human resources or corporate security escorts the individual off site and the supervisor or human resources personnel notify the appropriate personnel to begin the revocation process.
Scheduled involuntary termination	Human resources personnel are notified of the termination and work with appropriate personnel to schedule the revocation of access at the time of termination.
Termination prior to notification	Human resources personnel are notified of the termination and work with appropriate personnel to schedule the revocation of access at the time of termination.
Voluntary termination	Human resources personnel are notified of the termination and work with appropriate personnel to schedule the revocation of access at the time of termination.
Retirement where the last working day is several weeks prior to the termination date	Human resources personnel coordinate with manager to determine the final date access is no longer needed and schedule the revocation of access on the determined day.
Death	Human resources personnel are notified of the death and work with appropriate personnel to begin the revocation process.

Revocation of electronic access should be understood to mean a process with the end result that electronic access to BES Cyber Systems is no longer possible using credentials assigned to

or known by the individual(s) whose access privileges are being revoked. Steps taken to accomplish this outcome may include deletion or deactivation of accounts used by the individual(s), but no specific actions are prescribed. Entities should consider the ramifications of deleting an account may include incomplete event log entries due to an unrecognized account or system services using the account to log on.

The initial revocation required in Requirement R7.1 includes unescorted physical access and Interactive Remote Access. These two actions should prevent any further access by the individual after termination. If an individual still has local access accounts on BES Cyber Assets, then the Responsible Entity has 30 days to complete the revocation process for those accounts. However, nothing prevents a Responsible Entity from performing all of the access revocation at the time of termination.

For transferred or reassigned individuals, the requirement states a review of access privileges must be performed. This review could entail a simple listing of all authorizations for an individual and working with the respective managers to determine which access will still be needed in the new position. For instances in which the individual still needs to retain access as part of a transitory period, the entity should schedule a time to review these access privileges or include the privileges in the quarterly account review or annual privilege review.

Revocation of access to shared accounts is called out separately to prevent the situation where passwords on substation and generation devices are constantly changed due to staff turnover.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the ~~first~~second posting of ~~the~~ Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (Version 5)~~A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. ~~18~~24 **Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the ~~standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center~~"~~."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated version number from -2 to -3 Approved by the NERC Board of Trustees.	
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. **Title:** Cyber Security — Personnel & Training

2. **Number:** CIP-004-5

3. **Purpose:** ~~Standard CIP-004-5 requires that personnel having authorized cyber or authorized unescorted physical access to BES Cyber Assets and BES Cyber Systems, including contractors and service vendors, have~~To minimize the risk from individuals accessing BES Cyber Systems by requiring an appropriate level of personnel risk assessment, training, and security awareness in support of protecting BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. **Applicability:**

   4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

   4.1.1 Balancing Authority

   4.1.2 Distribution Provider that owns Facilities ~~that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~ **described in 4.2.2**

   - ~~A UFLS program required by a NERC or regional Reliability Standard~~
   - ~~A UVLS program required by a NERC or regional Reliability Standard~~
   - ~~A Special Protection System or Remedial Action Scheme required by a NERC or regional Reliability Standard~~
   - ~~A Transmission Protection System required by a NERC or regional Reliability Standard~~
   - ~~Its Transmission Operator's restoration plan~~

   4.1.3 Generator Operator

   4.1.4 Generator Owner

   4.1.5 Interchange Coordinator

   4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

   ~~4.1.6~~4.1.7 Reliability Coordinator

   4.1.8 ~~that are part of any of the following systems~~Transmission Operator

   4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

~~4.1.7~~4.2.2 **Distribution Provider**: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or ~~regional~~Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more
- ~~A UVLS program~~A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or ~~regional~~Regional Reliability Standard

~~4.1.8 NERC~~

~~4.1.9 Regional Entity~~

~~4.1.10~~4.2.3 A Protection System that applies to ~~Reliability Coordinator~~

~~4.1.11~~ Transmission ~~Operator~~

~~4.1.12 Transmission Owner~~

~~4.2. Facilities:~~

~~4.2.1 Load Serving Entity: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for~~where the ~~protection of the BES:~~

- ~~A UFLS program~~Protection System is required by a NERC or ~~regional~~Regional Reliability Standard
- ~~A UVLS program required by a NERC or regional Reliability Standard~~

~~4.2.2 Distribution Providers: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~

- ~~A UFLS program required by a NERC or regional Reliability Standard~~
- ~~A UVLS program required by a NERC or regional Reliability Standard~~
- ~~A Special Protection System or Remedial Action Scheme required by a NERC or regional Reliability Standard~~

- ~~A Transmission Protection System required by a NERC or regional Reliability Standard~~
- ~~Its Transmission Operator's restoration plan~~
- ~~**All other**~~ Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

~~**4.2.3**~~**4.2.4 Responsible Entities**~~:~~ **listed in 4.1 other than Distribution Providers and Load-Serving Entities**: All BES Facilities.

~~**4.2.4**~~**4.2.5 Exemptions:** The following are exempt from Standard CIP-~~004~~002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.~~-~~R. Section 73.54.

~~**4.2.4.4** Responsible Entities that, in compliance with Standard CIP-002-5, identify that they have no BES Cyber Systems.~~

5. Background:

Standard CIP-004-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1 and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

~~Each requirement opens~~Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the ~~required~~applicable items in [Table Reference].*" The referenced table requires the ~~specific elements~~applicable items in the procedures for a common subject matter ~~as applicable~~.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of ~~specific elements required~~applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance

to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not ~~infer~~imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e.~~.~~, incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the ~~Standards~~standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the ~~Standards.~~standards.

Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies~~.~~ to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- ~~**All Responsible Entities** – Applies to all Responsible Entities listed in the Applicability section of the Standard. This requirement applies at an organizational level rather than individually to each BES Cyber System. Requirements having this applicability comprise basic elements of an organizational CIP cyber security program.~~

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~High Impact~~high impact according to the CIP-002-5 identification and categorization processes. ~~Responsible Entities can implement common controls that meet requirements for multiple High and Medium Impact BES Cyber Systems. For example,~~

~~a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.~~

- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.

- ~~**Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as Medium Impact according to the CIP-002-5 identification and categorization processes.~~

- **Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity** – Only applies to ~~Medium Impact~~medium impact BES Cyber Systems with External Routable Connectivity~~. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity~~ or dial-up connectivity.

- ~~**Low Impact BES Cyber Systems with External Routable Connectivity** – Applies to each Low Impact BES Cyber Systems with External Routable Connectivity according to the CIP-002-5 identification and categorization process, which includes all other BES Cyber Systems not categorized as High or Medium.~~

- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding ~~High or Medium Impact BES Cyber Systems.~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.

- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding ~~High~~high impact BES Cyber System or ~~Medium Impact BES Cyber Systems.~~

- ~~**Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding High or Medium Impact~~medium impact BES Cyber ~~Systems.~~

- ~~**Electronic Access Points** – Applies at Electronic Access Points (with~~ System with External Routable Connectivity ~~or dial-up connectivity) associated with a referenced BES Cyber System.~~

- ~~**Electronic Access Points with External Routable Connectivity** – Applies at Electronic Access Points with External Routable Connectivity. This excludes those Electronic Access Points with dial-up connectivity.~~

- ~~**Locally Mounted Hardware or Devices Associated with Defined Physical Boundaries** – Applies to the locally mounted hardware (e.g. such as motion sensors, electronic lock control mechanisms, and badge readers) associated with a Defined Physical Boundary for High or Medium Impact BES Cyber Systems. These hardware and devices are excluded~~ in the ~~definition of Physical Access Control Systems.~~

- applicability column.

B. Requirements and Measures

Rationale for R1: Ensures that Responsible Entities with personnel who have authorized electronic ~~access and/~~or authorized unescorted physical access to BES Cyber ~~Systems~~ Assets take action so that those personnel with such authorized electronic or authorized unescorted physical access maintain awareness of ~~best~~the Responsible Entity's security practices.

Summary of Changes: Reformatted into table structure.

R1. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-004-5 Table R1 – Security Awareness Program*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M1. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-004-5 Table R1 – Security Awareness Program* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-004-5 Table R1 – Security Awareness Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	~~All Responsible Entities~~High Impact BES Cyber Systems Medium Impact BES Cyber Systems	A security awareness program that, at least once each calendar quarter, conveys ~~security awareness concepts and provides on going~~ongoing reinforcement of ~~such concepts on at least a quarterly basis.~~cyber security practices for the Responsible Entity's personnel who have authorized electronic or authorized unescorted physical access to BES Cyber Systems.	Evidence must include the documented security awareness program, and additional evidence to demonstrate that this program was implemented ~~such as, but not limited to, the quarterly reinforcement material that has been distributed.~~ . Evidence of implementation may include, but not limited to, documentation that the quarterly reinforcement has been provided. Evidence of reinforcement may include dated copies of information used to reinforce security awareness, as well as evidence of distribution such as: direct communications (for example, e-mails, memos, computer-based training); indirect communications (for example, posters, intranet, or brochures); management support and reinforcement (for example, presentations or meetings).
Reference to prior version: *CIP-004-4, R1*		**Change Rationale:** *Changed to remove the need to ensure everyone with authorized electronic or authorized unescorted physical access ~~receives this~~"received" ongoing reinforcement – to state that the program conveys awareness~~.~~ and measures that reinforcement "has been provided."* *Moved example mechanisms to guidance.*	

CIP-004-5 Table R1 – Security Awareness Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
		Changed to record delivery.	

Rationale for R2: To ensure that the Responsible Entity's training program for personnel who need authorized electronic access and/or authorized unescorted physical access to BES Cyber Systems ~~contains~~ covers the proper policies, access controls, and procedures to protect BES Cyber Systems.

Based on their role, some personnel may not require training on all topics.

Summary of Changes:

1. Addition of specific role training for:
   - ~~the~~The visitor control program~~;~~
   - ~~electronic~~Electronic interconnectivity supporting the operation and control of BES Cyber Systems
   - ~~storage~~Storage media as part of the handling of BES Cyber Systems information
2. Change references from Critical Cyber Assets to BES Cyber Systems

R2. Each Responsible Entity shall have a role-based cyber security training program ~~for personnel who need~~to attain and retain authorized electronic access or authorized unescorted physical access to BES Cyber Systems that includes each of the applicable items in *CIP-004-5, Table R2 – Cyber Security Training Program*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]*

M2. Evidence must include the training program that includes each of the applicable items in *CIP-004-5, Table R2 – Cyber Security Training Program*.

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	~~Define the roles that require~~Identification of each role and training required for each role.	Acceptable evidence must include a list of roles and what training is needed for each role.
Reference to prior version: NEW		**Change Rationale:** *The first thing needed in a role-~~-~~based training program is to understand what roles ~~your people~~individuals have ~~to help~~so that the Responsible Entity can plan what training modules ~~you need~~it needs to provide.*	

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on the cyber security ~~controls~~policies protecting the Responsible Entity's BES Cyber Systems.	Evidence may include, but is not limited to, training material on the security controls that have been implemented to protect BES Cyber Systems.
Reference to prior version: *CIP004-4, R2.2.1*		**Change Rationale:** *~~Minor wording changes. Changed~~Removed to address cyber security issues, not the business function. The previous version was focused more on the business or functional use of the BES Cyber System and is outside the scope of cyber security.*	
2.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on the ~~proper use of~~ physical access controls protecting the Responsible Entity's BES Cyber Systems.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the proper use of physical access controls for BES Cyber Systems.
Reference to prior version: *CIP004-4, R2.2.1 and R2.2.2*		**Change Rationale:** *Minor wording changes.*	

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on the electronic access controls protecting the Responsible Entity's BES Cyber Systems.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the electronic access controls to protect BES Cyber Systems.
Reference to prior version: *CIP004-4, R2.2.1 and R2.2.2*		**Change Rationale:** *Minor wording changes.*	
2.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on the visitor control program.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the visitor control program.
Reference to prior version: *NEW*		~~**Change Rationale:** *Personnel administering the **visitor control program** and/or providing escort should be part of the core training; FERC Order 706 paragraph 432.*~~ **Change Rationale:** *No significant change from previous versions.*	

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.6	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on handling of BES Cyber System Information and its storage ~~media.~~.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the handling of BES Cyber System Information, including its storage ~~media~~.
Reference to prior version: *CIP004-4, R2.2.3*		**Change Rationale:** *Core training on the handling of BES Cyber System (not Critical Cyber Assets) Information, with the addition of storage media; FERC Order No. 706~~–~~, paragraph 413 and paragraphs 632-634, 688, 732-734; DHS 2.4.16~~)~~.*	
2.7	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on identification of a potential BES Cyber Security Incident and ~~associated~~initial notifications~~.~~ in accordance with the entity's incident response plan	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the identification of a potential BES Cyber Security Incident and associated notifications.
Reference to prior version: *~~CIP004~~CIP-004-4, R2.2.4 (new; implied but not stated in CIP-004-4 or CIP-008-4)*		**Change Rationale:** *Core training on the identification and reporting of a Cyber Security Incident; FERC Order No. 706~~ paragraph~~, Paragraph 413; Related to CIP-008-5 & DHS Incident Reporting requirements for those with roles in incident reporting.*	

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.8	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on recovery plans for BES Cyber Systems.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on recovery plans for BES Cyber Systems.
Reference to prior version: *CIP004-4, R2.2.4*		**Change Rationale:** *Core training on the action plans and procedures to recover or re-establish BES Cyber Systems for personnel having a role in the recovery; FERC Order No. 706 ~~paragraph~~, Paragraph 413.*	
2.9	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training content on response to BES Cyber Security Incidents.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the response to a BES Cyber Security Incident.
Reference to prior version: *CIP004-4, R2.2.4*		**Change Rationale:** *Minor wording changes.*	

CIP-004-5 Table R2 – Cyber Security Training Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.10	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Training ~~on~~content on risks associated with a BES Cyber System's electronic interconnectivity and interoperability with other Cyber Assets.	Evidence may include, but is not limited to, training material such as power point presentations, instructor notes, student notes, handouts, or other training materials on the electronic interconnectivity and interoperability with other Cyber Assets.
Reference to prior version: *NEW*		**Change Rationale:** *Core training programs are intended to encompass networking hardware and software and other issues of electronic interconnectivity supporting the operation and control of BES Cyber Systems; FERC Order No. 706 ~~paragraph~~, Paragraph 434.*	

Rationale for R3: To ensure that personnel with authorized electronic access or authorized unescorted physical access are trained in the policies, access controls, and procedures to protect the BES Cyber Systems.

Summary of Changes: Re-organization of the training requirements into the respective requirements for "program" and "implementation" of the training.

R3. Each Responsible Entity shall implement its documented role-based cyber security training program ~~for each individual needing~~to attain and retain authorized electronic or unescorted physical access to BES Cyber Systems that includes each of the applicable items in *CIP-004-5 Table R3 - Cyber Security Training. [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations~~]~~.*

M3. Evidence must include, but is not limited to, documentation that the training was provided as defined in *CIP-004-5 Table R3 - Cyber Security Training*.

CIP-004-5 Table R3 – Cyber Security Training			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	Require completion and documentation of the training specified in CIP-004-5, Requirement R2 prior to granting authorized electronic access and authorized unescorted physical access to BES Cyber Systems, except during CIP Exceptional Circumstances.	Evidence may include, but is not limited to, for each individual requiring authorized electronic or authorized unescorted physical access, dated individual training records, the date authorized electronic or authorized unescorted physical access was first granted, or a dated log or documentation of when CIP Exceptional Circumstances were invoked and revoked.
Reference to prior version: *CIP004-4, R2.1*		**Change Rationale:** *Addition of exceptional circumstances parameters as directed in FERC Order No. 706~~, paragraph~~, Paragraph 431 is detailed in CIP-003-5~~.~~.*	

CIP-004-5 Table R3 – Cyber Security Training			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	Require completion and documentation of the training specified in CIP-004-5, Requirement R2 at least once every calendar year, but not to exceed 15 calendar months.	Evidence may include, but is not limited to, dated individual training records.
Reference to prior version: *CIP004-4, R2.3*		**Change Rationale:** *Updated to further define what "Annual" training means.*	

~~**Rationale for R4:** To ensure that individuals who need authorized electronic or unescorted physical access to BES Cyber Systems have been assessed for risk.~~

~~**Summary of Changes:** Specify that the seven year criminal history check covers all locations where the individual has resided, been employed, and/or attended school for six months or more, including current residence regardless of duration.~~

R4. Each Responsible Entity shall have one or more documented personnel risk assessment programs ~~for individuals needing~~to attain and retain authorized electronic or authorized unescorted physical access to BES Cyber Systems that collectively includes each of the applicable items in *CIP-004-5 Table R4 – Personnel Risk Assessment Program*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning~~]~~].*

M4. Evidence must include the documented personnel risk assessment program that collectively includes each of the applicable items in *CIP-004-5 Table R4 – Personnel Risk Assessment Program*.

CIP-004-5 Table R4 – Personnel Risk Assessment Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	An initial personnel risk assessment ("PRA") that includes identity verification.	Acceptable evidence must include the documented personnel risk assessment program with a requirement for an initial personnel risk assessment that includes identity verification.
Reference to prior version: *CIP004-4, R3.1*		**Change Rationale:** *Addressed interpretation request in guidance. Specified that ~~identify~~identity verification is only required for each individual's initial assessment. The implementation plan clarifies that a documented identity verification conducted under an earlier version of the CIP standards is sufficient.*	

CIP-004-5 Table R4 – Personnel Risk Assessment Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the seven years immediately prior to the date of the criminal history records check, the subject has, for six months or more: 4.2.1. resided; 4.2.2. been employed (if applicable); and 4.2.3. attended school (if applicable). If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.	Acceptable evidence must include the documented personnel risk assessment program with a requirement for a seven-year criminal history record check in accordance with this part.
Reference to prior version: *CIP004-4, R3.1*		**Change Rationale:** *Specify that the seven year criminal history check covers all locations where the individual has resided, been employed, and/or attended school for six months or more, including current residence regardless of duration. Added additional wording based on interpretation request. Provision is made for when a full seven-year check cannot be performed.*	

Reference to prior version: *CIP004-4 R3.1*	**Change Rationale:** *Specify that the seven year criminal history check covers all locations where the individual has resided, been employed, and/or attended school for six months or more, including current residence regardless of duration. Added additional wording based on interpretation request. Provision is made for when a full seven year check cannot be performed.*

CIP-004-5 Table R4 – Personnel Risk Assessment Program			
Part	**ApplicabilityApplicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.23	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Seven year criminal history records check including current residence, regardless of duration, and covering at least all locations where, during the previous seven years up to the current time, the subject has resided, been employed, and/or attended school for six months or more. If it is not possible to perform a full seven year criminal history records check, conduct as much of the seven year criminal history records check as possible and document the reason the full seven year criminal history records check could not be performed.Process or criteria used to evaluate personnel risk assessments to determine when to deny authorized access.	Acceptable evidence must include the documented personnel risk assessment program with a requirement for a seven year criminal history record check in accordance with Requirement R4, Part 4.2. the process or criteria identified.

~~CIP-004-5 Table R4 – Personnel Risk Assessment Program~~			
~~Part~~	~~Applicability~~	~~Requirements~~	~~Measures~~
~~4.3~~	~~High Impact BES Cyber Systems~~ ~~Medium Impact BES Cyber Systems~~	~~Criteria or process used to evaluate personnel risk assessments to determine when to deny authorized access.~~	~~Acceptable evidence must include the documented risk assessment program with the criteria or process identified in Requirement R4, Part 4.3.~~

Reference to prior version: *NEW*		Change Rationale: *There should be documented criteria or a process used to evaluate personnel risk assessments.*	
4.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Criteria or process for verifying that personnel risk assessments performed for contractors or service vendors are conducted pursuant to CIP-004-5 R4~~.~~, Parts 4.1 through 4.3.	Acceptable evidence must include the documented personnel risk assessment program with the criteria or process identified ~~in Requirement R4, Part 4.4.~~ .
Reference to prior version: *CIP-004-4, R3.3*		Change Rationale: *Separated into its own table item.*	

Rationale for R5: To ensure that individuals who have authorized access to BES Cyber Systems have been assessed for risk.

R5. Each Responsible Entity shall implement one or more documented processes to attain and retain authorized electronic or authorized unescorted physical access to BES Cyber Systems that collectively include each of the applicable elements in *CIP-004-5 Table R5 – Personnel Risk Assessment*~~.~~ *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations]*

M5. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-004-5 Table R5 – Personnel Risk Assessment* and additional evidence to demonstrate that these processes were implemented as described in the Measures column of the table.

CIP-004-5 Table R5 – Personnel Risk Assessment			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirement**	**Measures**
5.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	~~Perform~~Have a personnel risk assessment performed as specified in CIP-004-5, Requirement R4 prior to being granted authorized electronic or authorized unescorted physical access, except for CIP Exceptional Circumstances.	Evidence may include, but is not limited to: • Dated records showing that personnel risk assessments were completed before authorized electronic or authorized unescorted physical access was authorized; or • ~~Dated~~Dated records showing that, before authorized electronic or authorized unescorted access was authorized, the Responsible Entity received dated documentation or attestations from contractors or service vendors verifying that personnel risk assessments were conducted pursuant to CIP-004-5, Requirement R4 ~~before access was authorized~~.
Reference to prior version: *CIP-004-3, R3, R3.3*		**Change Rationale**: *Minor wording changes and added the ability to accept attestations from contractors or vendors.*	

CIP-004-5 Table R5 – Personnel Risk Assessment			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirement**	**Measures**
5.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	Update each personnel risk assessment at least once every seven calendar years after the initial or previous personnel risk assessment such that the current PRA is no older than seven years.	Evidence may include, but is not limited to, current and ~~former~~previous personnel risk assessment records.
Reference to prior version: *CIP-004-4, R3.2*		**Change Rationale:** *Eliminated the "for cause" renewal.*	

Rationale for R6: To ensure that individuals with access to BES Cyber Systems have been properly authorized for such access. "Authorization" should be considered to be a grant of permission by a person or persons empowered by the Responsible Entity to perform such grants and part of the delegations referenced in CIP-003-5.

Access is considered to be physical, logical, and remote permissions granted to all Cyber Assets comprising or allowing access to the BES Cyber System. When granting, reviewing, or revoking access, the Responsible Entity must address the Cyber Asset specifically as well as the systems used to enable such access (i.e.: physical access control system, remote access system, directory services).

CIP Exceptional Circumstances are defined in a Responsible Entity's policy from CIP-003-5 and allow an exception to the requirement for authorization to BES Cyber Systems and BES Cyber System Information.

Quarterly reviews in 6.4 are to perform a validation that only authorized users have been granted access to BES Cyber Systems. This is achieved by comparing individuals actually provisioned to a BES Cyber System against records of individuals authorized to the BES Cyber System. The focus of this requirement is on the integrity of provisioning access rather than individual accounts on all BES Cyber Assets. The list of provisioned individuals can be an automatically generated account listing. However, in a BES Cyber System with several account databases, the list of provisioned individuals may come from other records such as provisioning workflow or a user account database where provisioning typically initiates.

If the results of quarterly or annual account reviews indicate an administrative or clerical error in which access was not actually provisioned, then the error should not be considered a violation of this requirement.

For BES Cyber Systems that do not have user accounts defined, the controls listed in R6 are not applicable. However, the Responsible Entity should document such configurations.

Summary of Changes: The primary change here involves pulling the access management requirements from CIP-003-4, CIP-004-4 and CIP-007-4 into a single requirement. The requirements from version 4 remain largely unchanged except to clarify some terminology. The purpose for combining these requirements is to remove the perceived redundancy in authorization and review. The requirement in CIP-004-4 R4 to maintain a list of authorized personnel has been removed because the list represents only one form of evidence to demonstrate compliance that only authorized persons have access.

Rationale for R6: To ensure that individuals with access to BES Cyber Systems and the physical and electronic locations where BES Cyber System Information is stored by the Responsible Entity have been properly authorized for such access. "Authorization" should be considered to be a grant of permission by a person or persons empowered by the Responsible Entity to perform such grants and included in the delegations referenced in CIP-003-5. "Provisioning" should be considered the actions to provide access to an individual.

Access is physical, logical, and remote permissions granted to all Cyber Assets composing the BES Cyber System or allowing access to the BES Cyber System. When granting, reviewing, or revoking access, the Responsible Entity must address the Cyber Asset specifically as well as the systems used to enable such access (i.e., physical access control system, remote access system, directory services).

CIP Exceptional Circumstances are defined in a Responsible Entity's policy from CIP-003-5 and allow an exception to the requirement for authorization to BES Cyber Systems and BES Cyber System Information.

Quarterly reviews in Part 6.5 are to perform a validation that only authorized users have been granted access to BES Cyber Systems. This is achieved by comparing individuals actually provisioned to a BES Cyber System against records of individuals authorized to access the BES Cyber System. The focus of this requirement is on the integrity of provisioning access rather than individual accounts on all BES Cyber Assets. The list of provisioned individuals can be an automatically generated account listing. However, in a BES Cyber System with several account databases, the list of provisioned individuals may come from other records such as provisioning workflow or a user account database where provisioning typically initiates.

If the results of quarterly or annual account reviews indicate an administrative or clerical error in which access was not actually provisioned, then the SDT intends that the error should not be considered a violation of this requirement.

For BES Cyber Systems that do not have user accounts defined, the controls listed in Requirement R6 are not applicable. However, the Responsible Entity should document such configurations.

Summary of Changes: The primary change was in pulling the access management requirements from CIP-003-4, CIP-004-4, and CIP-007-4 into a single requirement. The requirements from Version 4 remain largely unchanged except to clarify some terminology. The purpose for combining these requirements is to remove the perceived redundancy in authorization and review. The requirement in CIP-004-4 R4 to maintain a list of authorized personnel has been removed because the list represents only one form of evidence to demonstrate compliance that only authorized persons have access.

R6. Each Responsible Entity shall implement one or more documented access management programs that collectively include each of the applicable elements in *CIP-004-5 Table R6 – Access Management Program. [Violation Risk Factor: Lower] [Time Horizon: Operations Planning and Same Day Operations]*.

M6. Evidence must include the documented processes that collectively include each of the applicable items in *CIP-004-5 Table R6 – Access Management Program* and additional evidence to demonstrate that the access management program was implemented as described in the Measures column of the table.

CIP-004-5 Table R6 – Access Management Program

Part	Applicability	Requirements	Measures
6.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Designate one or more individual(s) to authorize: 6.1.1. electronic access; 6.1.2. unescorted physical access; and 6.1.3. access to the physical and electronic locations where BES Cyber System Information is stored by the Responsible Entity.	Evidence may include, but is not limited dated documentation designating one or more individual(s) to authorize electronic access, unescorted physical access, and access to the physical and electronic locations where BES Cyber System Information is stored by the Responsible Entity.

Reference to prior version: *CIP 003-4, R5.1; CIP-007-4, R5.1.1*	**Change Rationale:** Combined requirements from CIP-003-4, CIP-007-4, and CIP-006-4 to make the authorization process clear and consistent.

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.~~1~~2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	The ~~CIP Senior Manager or delegate~~individual(s) designated in Part 6.1 shall authorize electronic access~~,~~ ~~except for CIP Exceptional Circumstances. Evidence may include, but is not limited to~~:~~ ~~(i),~~ a system generated list of people with unescorted physical access ~~through the Defined Physical Boundary and a sampling of accounts (for automated physical access control) to verify unauthorized users do not have access,~~ ~~(ii),~~ a signed document, automated workflow approval, or email showing ~~such~~ persons with unescorted physical access have authorization, and ~~(iii)~~ similar or the same records showing the consideration of appropriate privileges on the basis of need in performing a work function were considered as part of the authorization.
Reference to prior version: *CIP-006-4 R1.5*		**Change Rationale:** *CIP-003-4, CIP-004-4, CIP-006-4, and CIP-007-4 all reference authorization of access in some form, and CIP-003-4 and CIP-007-4 require authorization on a "need to know" basis or with respect to work functions performed. These were consolidated to ensure consistency in the requirement language.*	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.~~3~~4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	The ~~CIP Senior Manager or delegate~~individual(s) designated in Part 6.1 shall authorize access to the physical and electronic locations where BES Cyber System Information~~, except for CIP Exceptional Circumstances. Access permissions shall be the minimum~~ is stored by the Responsible Entity that the Responsible Entity determines are necessary for performing assigned work functions, except for CIP Exceptional Circumstances.	~~Evidence may include, but is not limited to:~~ ~~(i) a list of people with access to BES Cyber System Information and a sampling of accounts (on electronic document systems) to verify unauthorized users do not have access,~~ ~~(ii) a~~A signed document, automated workflow approval or email showing ~~such~~ persons with access to BES Cyber System Information have authorization, and ~~(iii)~~ similar or the same records showing the consideration of appropriate privileges on the basis of need in performing a work function were considered as part of the authorization.
Reference to prior version: *CIP-003-4, R5.2*		**Change Rationale:** *CIP-003-4, CIP-004-4, CIP-006-4, and CIP-007-4 all reference authorization of access in some form, and CIP-003 and CIP-007 require authorization on a "need to know" basis or with respect to work functions performed. These were consolidated to ensure consistency in the requirement language.*	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.~~4~~5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	Verify at least once each calendar quarter that individuals provisioned for authorized electronic access or authorized unescorted physical ~~or electronic access to BES Cyber Systems were authorized for such~~ access have associated authorization records.	Evidence may include, but is not limited to: • Dated documentation of the verification between the system generated list of individuals who have been authorized for access (i.e., workflow database) and a system generated list of personnel who have access (i.e., user account listing), or • Documentation of the dated verification between a list of individuals who have been authorized for access (i.e. authorization forms) and a list of individuals provisioned for access~~.~~ (i.e. provisioning forms or shared account listing).
Reference to prior version: *CIP 004-4~~,~~ R4.1*		**Change Rationale:** *Feedback among team members, observers, and regional CIP auditors indicates there has been confusion in implementation around what the term "review" entailed in CIP-004-4, Requirement R4.1. This requirement clarifies the review should occur between the provisioned access and authorized access.*	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.~~5~~6	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	~~Verify~~For electronic access, verify at least once each calendar year, not to exceed 15 calendar months between verifications, that all user accounts~~/~~, user account groups, or user role categories, and their specific, associated privileges are correct and ~~the minimum~~are those that the Responsible Entity determines necessary for performing assigned work functions.	Evidence may include, but is not limited to, documentation of the review including: 1. ~~(i) a~~A dated listing of all accounts/account groups or roles within the system~~,~~; 2. ~~(ii) a~~A summary description of privileges associated with each group or role~~,~~; 3. ~~(iii) accounts~~Accounts assigned to the group or role; and ~~(iv) dated~~ 4. Dated evidence showing verification of the privileges for the group are authorized and appropriate to the work function performed by people assigned to each account.
Reference to prior version: *CIP 007-4, R5.1.3*		**Change Rationale:** *Moved requirements to ensure consistency and eliminate the cross-referencing of requirements. Clarified what was necessary in performing verification by stating the objective was to confirm that access privileges are correct and the minimum necessary for performing assigned work functions.*	

CIP-004-5 Table R6 – Access Management Program			
Part	**Applicability**	**Requirements**	**Measures**
6.~~6~~7	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	Verify at least once per calendar year, but not to exceed 15 calendar months between verifications, ~~of~~that access ~~privileges~~ to the physical and electronic locations where BES Cyber System Information ~~to confirm that access privileges~~is stored by the Responsible Entity are correct and ~~the minimum~~those that the Responsible Entity determines necessary for performing assigned work functions.	Evidence may include, but is not limited to, the following documentation of the review ~~including~~ : 1. ~~(i) a~~A dated listing of authorizations for BES Cyber System information~~,~~; 2. ~~(ii) any~~Any privileges associated with the authorizations~~,~~; and 3. ~~(iii) dated~~Dated evidence showing a verification of the authorizations and any privileges were confirmed correct and the minimum necessary for performing assigned work functions.
Reference to prior version: *CIP-003-4, R5.1.2*		**Change Rationale:** *Moved requirement to ensure consistency among access reviews. Clarified precise meaning ~~in the term~~of annual. Clarified what was necessary in performing a verification by stating the objective was to confirm access privileges are correct and the minimum necessary for performing assigned work functions.*	

Rationale for R7: The timely revocation of electronic access to BES Cyber Systems is an essential element of an access management regime. When an individual no longer requires access to a BES Cyber System to perform his or her assigned functions, that access should be revoked. This is of particular importance in situations where a change of assignment or employment is involuntary, as there is a risk the individual(s) involved will react in a hostile or destructive manner.

In considering how to address directives in FERC Order No. 706 directing "immediate" revocation of access for involuntary separation, the SDT chose not to specify hourly time parameters in the requirement (i.e., revoking access within 1 hour). The point in time at which an organization terminates a person cannot generally be determined down to the hour. However, most organizations have formal termination processes, and the timeliest revocation of access occurs in concurrence with the initial processes of termination.

Access is physical, logical, and remote permissions granted to all Cyber Assets composing the BES Cyber System or allowing access to the BES Cyber System. When granting, reviewing, or revoking access, the Responsible Entity must address the Cyber Asset specifically as well as the systems used to enable such access (i.e., physical access control system, remote access system, directory services).

Summary of Changes: FERC Order No. 706, Paragraphs 460 and 461, state the following: The Commission adopts the CIP NOPR proposal to direct the ERO to develop modifications to CIP-004-1 to require immediate revocation of access privileges when an employee, contractor or vendor no longer performs a function that requires physical or electronic access to a Critical Cyber Asset for any reason (including disciplinary action, transfer, retirement, or termination).

As a general matter, the Commission believes that revoking access when an employee no longer needs it, either because of a change in job or the end of employment, must be immediate.

R7. Each Responsible Entity shall implement one or more documented access revocation programs that collectively include each of the applicable items in *CIP-004-5 Table R7 – Access Revocation*. *[Violation Risk Factor: Lower] [Time Horizon: Same Day Operations and Operations Planning~~]~~].*

Rationale for R7: The timely revocation of electronic access to cyber systems is an essential element of an access management regime. When an individual no longer requires access to a BES Cyber System to perform his or her assigned functions, that access should be revoked. This is of particular importance in situations where a change of assignment or employment is involuntary, as there is a risk the individual(s) involved will react in a hostile or destructive manner.

In considering how to address the FERC Order directing immediate revocation of access for involuntary separation, the SDT chose not to specify hourly time parameters in the requirement (i.e. revoking access within 1 hour). The point in time at which an organization terminates a person cannot generally be determined down to the hour. However, most organizations have formal termination processes, and the timeliest revocation of access occurs in concurrence with the initial processes of termination.

Access is considered to be physical, logical, and remote permissions granted to all Cyber Assets comprising or allowing access to the BES Cyber System. When granting, reviewing, or revoking access, the Responsible Entity must address the Cyber Asset specifically as well as the systems used to enable such access (i.e.: physical access control system, remote access system, directory services).

Summary of Changes: Paragraphs 460 and 461 of FERC Order 706 state the following: The Commission adopts the CIP NOPR proposal to direct the ERO to develop modifications to CIP-004-1 to require immediate revocation of access privileges when an employee, contractor or vendor no longer performs a function that requires physical or electronic access to a critical cyber asset for any reason (including disciplinary action, transfer, retirement, or termination).

As a general matter, the Commission believes that revoking access when an employee no longer needs it, either because of a change in job or the end of employment, must be immediate.

M7. Evidence must include– each of the applicable documented programs that collectively include each of the applicable items in *CIP-004-5 Table R7 – Access Revocation* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-004-5 Table R7 – Access Revocation			
Part	**Applicability**	**Requirements**	**Measures**
7.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For resignations or terminations, revoke the individual's unescorted physical access and Interactive Remote Access to BES Cyber Systems at the time[2] of the resignation or termination.	Evidence may include, but is not limited to (i) workflow or sign-off form verifying access removal associated with the terminations and dated concurrent or prior to the date of the termination action, and (ii) a system-generated listing of user accounts or other demonstration showing such persons no longer have access.
Reference to prior version: *CIP-004-4 R4.2*		**Change Rationale:** *The FERC Order 706 Paragraph 460 and 461 directs modifications to the Standards to require immediate revocation for any person no longer needing access. To address this directive, this requirement specifies revocation concurrent with the termination instead of within 24 hours.*	

[2] Since a termination action is often recorded without consideration to the time of day, "at the time" does not require a to-the-minute or to-the-hour time-stamped comparison of access logs and the termination action.

CIP-004-5 Table R7 – Access Revocation			
Part	**Applicability**	**Requirements**	**Measures**
7.~~2~~1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity or dial-up connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	For ~~reassignments or transfers,~~ all termination actions, initiate the process to revoke the individual's ~~unneeded electronic and~~ unescorted physical access ~~to BES Cyber Systems by the end~~and Interactive Remote Access upon the effective date and time of the ~~next calendar day.~~ termination action, and complete the revocation within 24 hours after the effective date and time of the termination action.	Evidence may include, but is not limited to~~,~~: 1. ~~(i)~~Dated workflow or sign-off form ~~showing~~verifying access removal associated with the ~~review of logical~~termination action; and ~~physical authorizations dated on the same calendar day as the transfer or reassignment and~~ 2. ~~(ii) a system-generated listing of user accounts~~Logs or other demonstration showing such persons no longer have access ~~where the review determined it was no longer needed.~~.
~~**Reference7**~~**Reference to prior version:** *CIP~~-~~ 004-4, R4.2*	**Change Rationale:** *The FERC Order No. 706 ~~Paragraph~~, Paragraphs 460 and 461, directs modifications to the Standards* ***to require immediate revocation*** *for any person no longer needing access~~, including transferred employees. In reviewing how to modify this requirement, the SDT determined the date a person no longer needs access after a transfer was problematic because the need may change over time. As a result, the SDT adapted this requirement from NIST 800-53 version 3 to review access authorizations on the date of the transfer. The SDT felt this was a more effective control in accomplishing the objective to prevent a person from accumulating unnecessary authorizations through transfers.~~. To address this directive, this requirement specifies revocation concurrent with the termination instead of within 24 hours.*		

CIP-004-5 Table R7 – Access Revocation			
Part	**Applicability**	**Requirements**	**Measures**

7.5	High Impact BES Cyber Systems ~~Medium Impact BES Cyber Systems.~~ Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	For ~~terminations, resignations~~termination actions, reassignments, or transfers, change passwords for shared account(s) known to the user within ~~thirty (~~30~~)~~ calendar days of the termination~~, resignation~~ action, reassignment, or transfer of the user. ~~In~~ If the Responsible Entity determines and documents that extenuating operating circumstances ~~that~~ require a longer time period, ~~document the extenuating circumstances and~~ change the password(s) within ~~ten~~10 calendar days following the end of the ~~extenuating~~operating circumstances.	Evidence may include, but is not limited to: • Workflow or sign-off form showing password reset within ~~thirty~~30 calendar days of the termination; or • Workflow or sign-off form showing password reset within ~~thirty~~30 calendar days of the reassignments or transfers.
Reference to prior version: *CIP-007-4, R5.2.3*		**Change Rationale:** *To provide clarification of expected actions in managing the passwords.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

- The Regional Entity; or
- If the Responsible Entity works for shall serve as the Compliance Enforcement Authority ("CEA") unless the Regional Entity, then the applicable entity is owned, operated, or controlled by the Regional Entity will establish an agreement with. In such cases the ERO or another a Regional entity approved by the ERO and FERC (i.e. another Regional Entity) to be responsible for compliance enforcement.
- If the Responsible Entity is also a Regional Entity, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.
- If the Responsible Entity is NERC, a third-party monitor without vested interest in the outcome for NERCauthority shall serve as the Compliance Enforcement AuthorityCEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until found compliantmitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Operations Planning**	**Lower**	~~N/A~~The Responsible Entity did not convey on-going security awareness reinforcement at least once for a calendar quarter and did so less than 10 calendar days after the start of a subsequent calendar quarter. (1.1)	~~N/A~~The Responsible Entity did not convey on-going security awareness reinforcement at least once for a calendar quarter and did so between 10 and 30 calendar days after the start of a subsequent calendar quarter. (1.1)	The Responsible Entity did not ~~provide~~convey on-going security awareness reinforcement ~~on~~ at least once for a ~~quarterly basis~~calendar quarter and did so beyond 30 calendar days after the start of a subsequent calendar quarter. (1.1)	The Responsible Entity did not document ~~or implement~~ a security awareness program. (R1)
R2	**Operations Planning**	**Lower**	~~N/A~~The Responsible Entity did define the roles that require training and did have the required role-based training, but did not include 1 of the required training content as detailed in 2.2 through 2.10.	~~N/A~~The Responsible Entity did define the roles that require training and did have the required role-based training, but did not include 2 of the required training content as detailed in 2.2 through 2.10. Guidelines and Technical Basis

Requirement R1:

The security awareness program is intended to be an informational program, not a formal training program. It should reference sound security practices to ensure that personnel maintain awareness of best practices for both physical and electronic security to protect its BES Cyber Systems. The Responsible Entity is not required to provide records that show that each individual received or understood the information, but they must maintain documentation of the program materials utilized in the form of posters, memos, and/or presentations.

Examples of possible mechanisms which can be used are:

- Direct communications (e.g., emails, memos, computer based training, etc.);
- Indirect communications (e.g., posters, intranet, brochures, etc.);
- Management support and reinforcement (e.g., presentations, meetings, etc.).

Guidance: Describe example mechanisms used to demonstrate the availability of this information

Requirement R2:

Training shall cover the policies, access controls, and procedures as developed for the BES Cyber Systems and include, at a minimum, the ~~following~~ required items appropriate to personnel roles and responsibilities from Table ~~R4.~~R2. The training may consist of multiple modules and multiple delivery mechanisms.

Note: Provide guidance or a local definition of "role appropriate" as it is used in this standard.

Requirement R3:

Each Responsible Entity shall ensure all personnel who are granted authorized electronic access and/or authorized unescorted physical access to its BES Cyber Systems, including contractors and service vendors, complete cyber security training prior to their being granted authorized access, except for program specified exceptional circumstances that are approved by the single senior management official ~~identified in Requirement R1~~ or their delegate and impact the reliability of the BES or emergency response.

NOTE: Program specified exceptional circumstances can include a specified individual to declare an emergency.

Requirement R4 and R5:

Each Responsible Entity shall ensure a personnel risk assessment is performed for all personnel who are granted authorized electronic access and/or authorized unescorted physical access to its BES Cyber Systems, including contractors and service vendors, prior to their being granted authorized access when called for in CIP-~~011~~004-1 Table R4 – Personnel Risk Assessment, except for program specified exceptional circumstances that are approved by the single senior management official ~~identified in Requirement R1~~ or their delegate and impact the reliability of the BES or emergency response, to ensure that personnel who have such access have had their

identity verified, then been assessed for risk, in accordance with federal, state, provincial, and local laws, and subject to existing collective bargaining unit agreements.

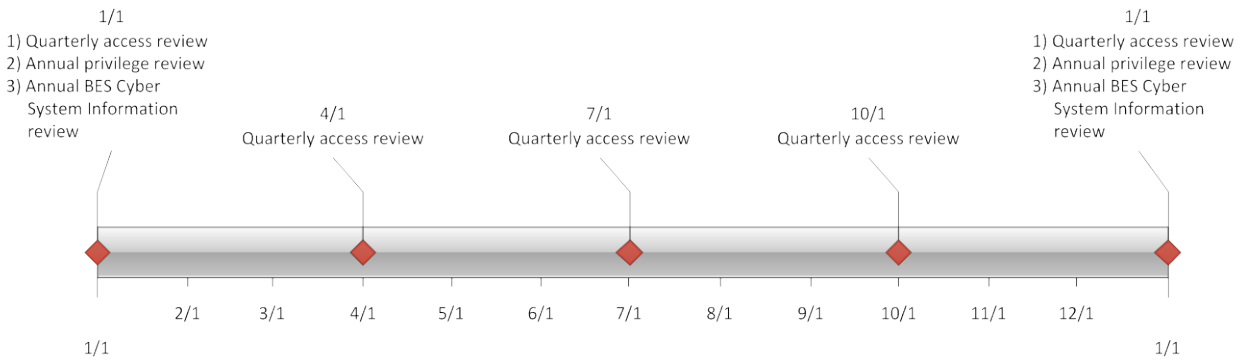
When it is not possible to perform a full seven year criminal history check, documentation must be made of what criminal history check was performed, and the reasons a full seven-year check could not be performed. Examples of this could include individuals under the age of 25 where a juvenile criminal history may be protected by law, or individuals who may have resided in locations from where it is not possible to obtain a criminal history records check.

Requirement R6:

Authorization for electronic and unescorted physical access and access to BES Cyber System ~~information~~Information must be on the basis of necessity in the individual performing a work function. Documentation showing the authorization should have some justification of the business need included. To ensure proper segregation of duties, access authorization and provisioning should not be performed by the same person where possible.

This requirement specifies both quarterly and annual reviews. Quarterly reviews are to perform a validation that only authorized users have been granted access to BES Cyber Systems. This is achieved by comparing individuals actually provisioned to a BES Cyber System against records of individuals authorized to the BES Cyber System. The focus of this requirement is on the integrity of provisioning access rather than individual accounts on all BES Cyber Assets. The list of provisioned individuals can be an automatically generated account listing. However, in a BES Cyber System with several account databases, the list of provisioned individuals may come from other records such as provisioning workflow or a user account database where provisioning typically initiates.

The annual privilege review is more detailed to ensure an individual's associated privileges are the minimum necessary to perform their work function (i.e~~.~~., least privilege). Entities can more efficiently perform this review by implementing role-based access. This involves determining the specific roles on the system (e.g~~.~~., system operator, technician, report viewer, administrator, etc.) then grouping access privileges to the role and assigning users to the role. Role-based access does not assume any specific software and can be implemented by defining specific provisioning processes for each role where access group assignments cannot be performed. Role-based access permissions eliminate the need to perform the privilege review on individual accounts. An example timeline of all the reviews in Requirement R6 is included



below.

Separation of duties should be considered when performing the reviews in Requirement R6. The person reviewing should be different than the person provisioning access.

If the results of quarterly or annual account reviews indicate an administrative or clerical error in which access was not actually provisioned, then the SDT intends that this error should not be considered a violation of this requirement.

For BES Cyber Systems that do not have user accounts defined, the controls listed in Requirement R6 are not applicable. However, the Responsible Entity should document such configurations.

Requirement R7:

The requirement to revoke access at the time of the termination action includes procedures showing revocation of access concurrent with the termination action. This requirement recognizes that the timing of the termination action may vary depending on the circumstance. Some common examples and possible processes on when the termination action occurs are provided in the following table.

Scenario	Possible Process
Immediate involuntary termination	Human resources or corporate security escorts the individual off site and the supervisor or human resources personnel notify the appropriate personnel to begin the revocation process.
Scheduled involuntary termination	Human ~~resource~~resources personnel are notified of the termination and work with appropriate personnel to schedule the revocation of access at the time of termination.
Termination prior to notification	Human ~~resource~~resources personnel are notified of the termination and work with appropriate personnel to schedule the revocation of access at the time of termination.
Voluntary termination	Human ~~resource~~resources personnel are notified of the termination and ~~works~~work with appropriate personnel to schedule the revocation of access at the time of termination.
Retirement where the last working day is several weeks prior to the termination date	Human ~~resource~~resources personnel coordinate with manager to determine the final date access is no longer needed and schedule the revocation of access on the determined day.
Death	~~No action is required.~~Human resources personnel are notified of the death and work with appropriate personnel to begin the revocation process.

Revocation of electronic access should be understood to mean a process with the end result that electronic access to BES Cyber Systems is no longer possible using credentials assigned to or known by the individual(s) whose access privileges are being revoked. Steps taken to accomplish this outcome may include deletion or deactivation of accounts used by the individual(s), but no specific actions are prescribed. Entities should consider the ramifications of deleting an account may include incomplete event log entries due to an unrecognized account or system services using the account to log on.

The initial revocation required in ~~7~~Requirement R7.1 includes unescorted physical access and Interactive Remote Access. These two actions should prevent any further access by the individual after termination. If an individual still has local access accounts on BES Cyber Assets, then the Responsible Entity has 30 days to complete the revocation process for those accounts. However, nothing prevents ~~an~~a Responsible Entity from performing all of the access revocation at the time of termination.

For transferred or reassigned individuals, the requirement states a review of access privileges must be performed. This review could entail a simple listing of all authorizations for an individual and working with the respective managers to determine which access will still be needed in the new position. For instances in which the individual still needs to retain access as part of a transitory period, the entity should schedule a time to review these access privileges or include the privileges in the quarterly account review or annual privilege review.

Revocation of access to shared accounts is called out separately to prevent the situation where passwords on substation and generation devices are constantly changed due to staff turnover.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated version number from -2 to -3 Approved by the NERC Board of Trustees.	
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. **Title:** Cyber Security — Electronic Security Perimeter(s)

2. **Number:** CIP-005-5

3. **Purpose:** To manage electronic access to BES Cyber Systems by specifying a controlled Electronic Security Perimeter in support of protecting BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. **Applicability:**

   4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

   4.1.1 Balancing Authority

   4.1.2 Distribution Provider that owns Facilities described in 4.2.2

   4.1.3 Generator Operator

   4.1.4 Generator Owner

   4.1.5 Interchange Coordinator

   4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

   4.1.7 Reliability Coordinator

   4.1.8 Transmission Operator

   4.1.9 Transmission Owner

   4.2. Facilities:

   4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

   4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

   - A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

Standard CIP-005-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the applicable items in [Table Reference].*" The referenced table requires the applicable items in the procedures for a common subject matter.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the standards.
Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as high impact according to the CIP-002-5 identification and categorization processes.
- **High Impact BES Cyber Systems with dial-up connectivity** – Only applies to high impact BES Cyber Systems with dial-up connectivity.
- **Medium Impact BES Cyber Systems** – Applies to each BES Cyber Systems categorized as medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as medium impact according to the CIP-002-5 identification and categorization processes.

- **Medium Impact BES Cyber Systems with dial-up connectivity** – Only applies to medium impact BES Cyber Systems with dial-up connectivity.
- **Medium Impact BES Cyber Systems with External Routable Connectivity** – Only applies to medium impact BES Cyber Systems with External Routable Connectivity. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity.
- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column.
- **Electronic Access Points** – Applies at Electronic Access Points associated with a referenced high impact BES Cyber System or medium impact BES Cyber System in the applicability column.

B. Requirements and Measures

Rationale for R1: The Electronic Security Perimeter ("ESP") serves to control traffic at the external electronic boundary of the BES Cyber System. It provides a first layer of defense for network based attacks as it limits reconnaissance of targets, restricts and prohibits traffic to a specified rule set, and assists in containing any successful attacks.

Summary of Changes: CIP-005, Requirement R1 has taken more of a focus on the discrete Electronic Access Points, rather than the logical "perimeter".

CIP-005 (V1 through V4), Requirement R1.2 has been deleted from V5. This requirement was definitional in nature and used to bring dial-up modems using non-routable protocols into the scope of CIP-005. The non-routable protocol exclusion no longer exists as a blanket CIP-002 filter for applicability in V5, therefore there is no need for this requirement.

CIP-005 (V1 through V4), Requirement R1.1 and R1.3 were also definitional in nature and have been deleted from V5 as separate requirements but the concepts were integrated into the definitions of ESP and Electronic Access Point ("EAP").

R1. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-005-5 Table R1 – Electronic Security Perimeter*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning and Same Day Operations].*

M1. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-005-5 Table R1 – Electronic Security Perimeter* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-005-5 Table R1 – Electronic Security Perimeter			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	All BES Cyber Assets and associated Protected Cyber Assets connected to a network via a routable protocol shall reside within a defined ESP.	Evidence may include, but is not limited to, a list of all ESPs with all uniquely identifiable Cyber Assets within each ESP.
Reference to prior version: *CIP-005-4, R1*		**Change Rationale:** E*xplicitly clarifies that BES Cyber Assets connected via routable protocol must be in an Electronic Security Perimeter.*	
1.2	High Impact BES Cyber Systems with External Routable Connectivity Medium Impact BES Cyber Systems with External Routable Connectivity Associated Protected Cyber Assets	All External Routable Connectivity through the ESP must be through an identified Electronic Access Point (EAP).	Evidence may include, but is not limited to, network diagrams showing all external routable communication paths and the identified EAPs.
Reference to prior version: *CIP-005-4, R1*		**Change Rationale:** *Changed to refer to the defined term Electronic Access Point and BES Cyber System.*	

CIP-005-5 Table R1 – Electronic Security Perimeter			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.3	Electronic Access Points for High Impact BES Cyber Systems Electronic Access Points for Medium Impact BES Cyber Systems	Require inbound and outbound access permissions, including the rationale for granting access, and deny all other access by default.	Evidence may include, but is not limited to, a list of rules (firewall, access control lists, etc.) that demonstrate that only permitted access is allowed and that each access rule has a documented reason.
Reference to prior version: *CIP-005-4, R2.1*		**Change Rationale:** *Changed to refer to the defined term Electronic Access Point and to focus on the entity knowing and having a reason for what it allows through the EAP in both inbound and outbound directions.*	
1.4	High Impact BES Cyber Systems with dial-up connectivity Medium Impact BES Cyber Systems with dial-up connectivity	Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	Evidence may include, but is not limited to, a documented process that describes how the Responsible Entity is providing authenticated access through each dial-up connection.
Reference to prior version: *CIP-005-4, R2.3*		**Change Rationale:** *Added clarification that dial-up connectivity should perform authentication so that the BES Cyber System is not directly accessible with a phone number only.*	

CIP-005-5 Table R1 – Electronic Security Perimeter			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.5	Electronic Access Points for High Impact BES Cyber Systems Electronic Access Points for Medium Impact BES Cyber Systems at Control Centers	Have a method for detecting malicious communications.	Evidence may include, but is not limited to: 1. Evidence that intrusion detection systems are functioning: • Configuration files of intrusion detection systems deployed to monitor an EAP; or • Logs that were generated by an intrusion detection system; and 2. Documentation showing where intrusion detection systems were deployed.
Reference to prior version: *CIP-005-4, R1*		**Change Rationale:** *Per FERC Order No. 706, Paragraphs 496-503, ESPs need two distinct security measures such that the Cyber Assets do not lose all perimeter protection if one measure fails or is mis-configured. The Order makes clear this is not simple redundancy of firewalls, thus the SDT has decided to add the security measure of malicious traffic inspection as a requirement for these ESPs.*	

Rationale for R2: Discovery and announcement of vulnerabilities for remote access methods and technologies, that were previously thought secure and in use by a number of electric sector entities, necessitate changes to industry security control standards. Currently, no requirements or guidance documents are available to either require or recommend how secure remote access to BES Cyber Systems can or should be accomplished. Inadequate safeguards for remote access can allow unauthorized access to the organization's network, with potentially serious consequences.

Remote access control procedures must provide adequate safeguards through robust identification, authentication and encryption techniques. Remote access to the organization's network and resources will only be permitted providing that authorized users are authenticated, data is encrypted across the network, and privileges are restricted.

Additional information is provided in ***Guidance for Secure Interactive Remote Access*** published by NERC in July 2011.

Summary of Changes: This is a new requirement to continue the efforts of the Urgent Action team for Project 2010-15: Expedited Revisions to CIP-005-3.

R2. Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in *CIP-005-5 Table R2 – Interactive Remote Access Management*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning and Same Day Operations].*

M2. Evidence must include the documented processes that collectively address each of the applicable items in *CIP-005-5 Table R2 – Interactive Remote Access Management* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-005-5 Table R2 – Interactive Remote Access Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Protected Cyber Assets	Utilize an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	Evidence may include, but is not limited to, network diagrams or architecture documents.
Reference to prior version: *New*		**Change Rationale:** *This is a new requirement to continue the efforts of the Urgent Action team for Project 2010-15: Expedited Revisions to CIP-005-3.*	
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Protected Cyber Assets	Utilize encryption for all Interactive Remote Access sessions that terminate at an Intermediate Device in order to protect the confidentiality and integrity of each Interactive Remote Access session.	Evidence may include, but is not limited to, architecture documents detailing where encryption initiates and terminates.
Reference to prior version: *CIP-007-5, R3.1*		**Change Rationale:** *This is a new requirement to continue the efforts of the Urgent Action team for Project 2010-15: Expedited Revisions to CIP-005-3.*	

CIP-005-5 Table R2 – Interactive Remote Access Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Protected Cyber Assets	Require multi-factor authentication for all Interactive Remote Access sessions. Factors must be at least two of the three following categories: • Something the individual knows (including, but not limited to, passwords or PINs. User ID is not an authentication factor); • Something the individual has (including, but not limited to, tokens, digital certificates, or smart cards); or • Something the individual is (including, but not limited to, fingerprints, iris scans, or other biometric characteristic).	Evidence may include, but is not limited to, architecture documents detailing the authentication factors used.
Reference to prior version: *CIP-007-5, R3.2*		**Change Rationale:** *This is a new requirement to continue the efforts of the Urgent Action team for Project 2010-15: Expedited Revisions to CIP-005-3. The multi-factor authentication methods are also the same as those identified in the Homeland Security Presidential Directive 12 (HSPD-12), issued August 12, 2007.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Guidelines and Technical Basis

Requirement R1:

CIP-005-5, Requirement R1 requires segmenting of BES Cyber Systems from other systems of differing trust levels by requiring controlled Electronic Access Points between the different trust zones. Electronic Security Perimeters are also used as a primary defense layer for some BES Cyber Systems that may not inherently have sufficient cyber security functionality, such as devices that lack authentication capability.

All BES Cyber Systems that are connected to a network via a routable protocol must have a defined Electronic Security Perimeter (ESP). Even standalone networks that have no external connectivity to other networks must have a defined ESP. The ESP defines a zone of protection around the BES Cyber System, and it also provides clarity for entities to determine what systems or Cyber Assets are in scope and what requirements they must meet. The ESP is used in:

- Defining the scope of 'Associated Protected Cyber Assets' that must also meet certain CIP requirements.
- Defining the boundary in which all of the Cyber Assets must meet the requirements of the highest impact BES Cyber System that is in the zone (the 'high water mark').

The standard does not require segmenting of BES Cyber Systems by impact classification, and many different impact classifications can be mixed within an ESP. However, all of the Cyber Assets and systems within the ESP will be elevated to the level of the highest impact BES Cyber System present in the ESP. The standard handles this by defining all other Cyber Assets within the ESP, even other BES Cyber Systems of lesser impact, as "Protected Cyber Assets" of the highest impact system in the ESP.

For example, if an ESP contains both a high impact BES Cyber System and a low impact BES Cyber System, the each Cyber Asset of the low impact BES Cyber System is an "Associated Protected Cyber Asset" of the high impact BES Cyber System and must meet all requirements with that designation in the applicability columns of the requirement tables.

If there is routable connectivity across the ESP into any Cyber Asset, then an Electronic Access Point (EAP) must control traffic into and out of the ESP. Responsible Entities should know what traffic needs to cross an EAP and document those reasons to ensure the EAPs limit the traffic to only those known communication needs. These include, but are not limited to, communications needed for normal operations, emergency operations, support, maintenance, and troubleshooting.

The EAP should control both inbound and outbound traffic. The standard added outbound traffic control, as it is a prime indicator of compromise. If Cyber Assets within the ESP become compromised and attempt to communicate to unknown hosts outside the ESP (usually 'command and control' hosts on the Internet, or compromised 'jump hosts' within the Responsible Entity's other networks acting as intermediaries), the EAPs should function as a first level of defense in stopping the exploit. This does not limit the Responsible Entity from controlling outbound traffic at the level of granularity that it deems appropriate, and large

ranges of internal addresses may be allowed. The SDT's intent is that the Responsible Entity knows what other Cyber Assets or ranges of addresses a BES Cyber System needs to communicate with and limits the communications to that known range. For example, most BES Cyber Systems within a Responsible Entity should not have the ability to communicate through an EAP to any network address in the world, but should probably be at least limited to the address space of the Responsible Entity, and preferably to individual subnet ranges or individual hosts within the Responsible Entity's address space. The SDT's intent is not for Responsible Entities to document the inner workings of stateful firewalls, where connections initiated in one direction are allowed a return path. The intent is to know and document what systems can talk to what other systems or ranges of systems on the other side of the EAP, such that rogue connections can be detected and blocked.

This requirement applies only to communications for which access lists and 'deny by default' type requirements can be universally applied, which today are those that employ routable protocols. Direct serial, non-routable, connections are not included as there is no perimeter or firewall type security that should be universally mandated across all entities and all serial communication situations. There is no firewall or perimeter capability for an RS232 cable run between two Cyber Assets. Without a clear 'perimeter type' security control that can be applied in practically every circumstance, such a requirement would mostly generate technical feasibility exceptions ("TFEs") rather than increased security.

As for dial-up connectivity, the SDT's intent of this requirement is to prevent situations where only a phone number can establish direct connectivity to the BES Cyber Asset. If a dial-up modem is implemented in such a way that it simply answers the phone and connects the line to the BES Cyber Asset with no authentication of the calling party, it is a vulnerability to the BES Cyber System. The requirement calls for some form of authentication of the calling party before completing the connection to the BES Cyber System. Some examples of acceptable methods include dial-back modems, modems that must be remotely enabled or powered up, and modems that are only powered on by onsite personnel when needed along with policy that states they are disabled after use. If the dial-up connectivity is used for Interactive Remote Access, then the Requirement R2 requirements also apply.

The standard adds a requirement to detect malicious communications for Control Centers. This is in response to FERC Order No. 706, Paragraphs 496-503, where ESPs are required to have two distinct security measures such that the BES Cyber Systems do not lose all perimeter protection if one measure fails or is mis-configured. The Order makes clear that this is not simple redundancy of firewalls, thus the SDT has decided to add the security measure of malicious traffic inspection as a requirement for these ESPs. Technologies meeting this requirement include Intrusion Detection or Intrusion Prevention Systems (IDS/IPS) or other forms of deep packet inspection. These technologies go beyond source/destination/port rule sets and thus provide another distinct security measure at the ESP.

Requirement R2:

See Secure Remote Access Reference Document (see remote access alert).

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the ~~first~~second posting of ~~the~~ Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (Version 5)~~A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. ~~18~~24 **Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the ~~standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of ~~Trustees~~Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center~~"~~."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated version number from -2 to -3 Approved by the NERC Board of Trustees.	
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Electronic Security Perimeter(s)

2. Number: CIP-005-5

3. Purpose: ~~Standard CIP-005-5 requires the identification of all Electronic Access Points on the~~To manage electronic access to BES Cyber Systems by specifying a controlled Electronic Security Perimeter~~(s), the protection of the communication through those points, and specific protections for interactive user remote access.~~ in support of protecting BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

~~4.1.2~~4.1.3 Generator Operator

~~4.1.3~~4.1.4 Generator Owner

~~4.1.4~~4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

~~4.1.5~~4.1.7 Reliability Coordinator

~~4.1.6~~4.1.8 Transmission Operator

~~4.1.7~~4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 ~~that are part of any of the following systems~~Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

~~4.2.1~~4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS ~~program required by a NERC~~ or ~~Regional Reliability Standard~~

- ~~A UVLS~~UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more
- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional ~~reliability standard~~Reliability Standard
- ~~A~~A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard

~~• Its Transmission Operator's restoration plan~~

- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

~~4.2.2~~4.2.3 Responsible Entities listed in 4.1 other than ~~Generator Operator~~

~~4.2.3~~4.2.4 ~~Generator Owner~~

~~4.2.4~~4.2.5 ~~Interchange Coordinator~~

~~4.2.5 Load Serving Entity~~ ~~that owns Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~

~~• A UFLS program required by a NERC or Regional Reliability Standard~~

~~• A UVLS program required by a NERC or regional Reliability Standard~~

~~4.2.6 NERC~~

~~4.2.7 Regional Entity~~

~~4.2.8~~4.2.6 ~~Reliability Coordinator~~

~~4.2.9~~4.2.7 ~~Transmission Operator~~

~~4.2.10~~4.2.8 ~~Transmission Owner~~

4.3. ~~Facilities:~~

~~4.3.1 Load Serving Entity:~~ ~~One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection of the BES:~~

~~• A UFLS program required by a NERC or Regional Reliability Standard~~

~~• A UVLS program required by a NERC or Regional Reliability Standard~~

~~4.3.2~~ **Distribution Providers**~~: One or more Facilities that are part of any of the following systems or programs designed, installed,~~ **and** ~~operated for the protection or restoration of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~
- ~~A Special Protection System or Remedial Action Scheme~~
- ~~A Transmission Protection System required by a NERC or Regional Reliability Standard~~
- ~~Its Transmission Operator's restoration plan~~

~~4.3.3~~4.3.1 **Load-Serving Entities**: All ~~**other Responsible Entities: All**~~ BES Facilities.

~~4.3.4~~4.3.2 **Exemptions:** The following are exempt from Standard CIP-~~005~~002-5:

~~4.3.4.1~~4.3.2.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

~~4.3.4.2~~4.3.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

~~4.3.4.3~~4.3.2.3 In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

~~4.3.4.4 Responsible Entities that, in compliance with Standard CIP-002-5, identify that they have no BES Cyber Systems.~~

5. Background:

Standard CIP-005-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

~~Each requirement opens~~Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the ~~required~~applicable items in [Table Reference].*" The referenced table requires the ~~specific elements~~applicable items in the procedures for a common subject matter ~~as applicable~~.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show

documentation and implementation of ~~specific elements required~~applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not ~~infer~~imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e.~~.~~, incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the ~~Standards~~standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the ~~Standards.~~standards. Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies~~.~~ to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- ~~**All Responsible Entities –** Applies to all Responsible Entities listed in the Applicability section of the Standard. This requirement applies at an organizational level rather than individually to each BES Cyber System. Requirements having this applicability comprise basic elements of an organizational CIP cyber security program.~~

- **High Impact BES Cyber Systems** – Applies to ~~each~~ BES Cyber Systems categorized as ~~High Impact~~high impact according to the CIP-002-5 identification and

categorization processes. ~~Responsible Entities can implement common controls that meet requirements for multiple High and Medium Impact~~

- **~~High Impact BES Cyber Systems with~~ dial-up connectivity** – Only applies to high impact BES Cyber Systems~~. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems~~ with dial-up connectivity.
- **Medium Impact BES Cyber Systems** – Applies to each BES Cyber Systems categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems with dial-up connectivity** – Only applies to medium impact BES Cyber Systems with dial-up connectivity.
- **Medium Impact BES Cyber Systems with External Routable Connectivity** – Only applies to ~~Medium Impact~~medium impact BES Cyber Systems with External Routable Connectivity. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity.
- ~~**Low Impact BES Cyber Systems with External Routable Connectivity** – Applies to each Low Impact BES Cyber Systems with External Routable Connectivity according to the CIP-002-5 identification and categorization process, which includes all other BES Cyber Systems not categorized as High or Medium.~~
- ~~**Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding High or Medium Impact BES Cyber Systems. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.~~
- ~~**Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding High or Medium Impact BES Cyber Systems.~~
- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column.
- **Electronic Access Points** – Applies at Electronic Access Points ~~(with External Routable Connectivity or dial-up connectivity)~~ associated with a referenced high impact BES Cyber System~~.~~

- ~~**Electronic Access Points with External Routable Connectivity –** Applies at Electronic Access Points with External Routable Connectivity. This excludes those Electronic Access Points with dial-up connectivity.~~
- ~~**Locally Mounted Hardware or Devices Associated with Defined Physical Boundaries –** Applies to the locally mounted hardware (e.g. such as motion sensors, electronic lock control mechanisms, and badge readers) associated with a Defined Physical Boundary for High or Medium Impact~~ or medium impact BES Cyber ~~Systems. These hardware and devices are excluded~~System in the ~~definition of Physical Access Control Systems.~~ applicability column.

B. Requirements and Measures

~~**Rationale for R1:** The Electronic Security Perimeter serves to control and monitor traffic at the external boundary of the BES Cyber System. It provides a first layer of defense for network based attacks as it limits reconnaissance of targets, restricts and prohibits traffic to a specified rule set, and assists in containing any successful attacks.~~

~~**Summary of Changes:** CIP-005 R1 has taken more of a focus on the discrete Electronic Access points rather than the logical "perimeter".~~

~~CIP-005 R1.2 has been deleted. This requirement was definitional in nature and used to bring dialup modems using non-routable protocols into the scope of CIP-005. The non-routable protocol exclusion no longer exists, therefore there is no need for this requirement.~~

~~CIP-005 R1.1 and 1.3 were also definitional in nature and have been deleted as separate requirements but the concepts were integrated into the definitions of ESP and EAP.~~

R1. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-005-5 Table R1 – Electronic Security Perimeter*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning and Same Day Operations~~]~~].*

M1. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-005-5 Table R1 – Electronic Security Perimeter* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-005-5 Table R1 – Electronic Security Perimeter			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	~~Low~~High Impact BES Cyber Systems ~~with External Routable Connectivity~~ Medium Impact BES Cyber Systems	~~Define technical or procedural controls to restrict unauthorized electronic access.~~All BES Cyber Assets and associated Protected Cyber Assets connected to a network via a routable protocol shall reside within a defined ESP.	Evidence may include, but is not limited to, ~~documented technical and procedural controls that exist and have been implemented~~a list of all ESPs with all uniquely identifiable Cyber Assets within each ESP.
Reference to prior version: *CIP-005~~-4~~, R1*		~~**Change Rationale:** *Entities are to document perimeter type security controls they have implemented to segment low impact BES Cyber Systems from public or other less trusted network zones and to prevent access to an aggregation of enough low impact BES Cyber Systems at various locations to a degree that can cause higher level impacts to the BES.*~~**Change Rationale:** *Explicitly clarifies that BES Cyber Assets connected via routable protocol must be in an Electronic Security Perimeter.*	
1.2	High Impact BES Cyber Systems with External Routable Connectivity Medium Impact BES Cyber Systems~~.~~ ~~Associated Physical Access Control Systems~~ with External Routable Connectivity Associated Protected Cyber Assets	~~Control and secure all routable and dial-up connectivity~~All External Routable Connectivity through the ~~use of~~ESP must be through an identified Electronic Access ~~Points (EAPs~~Point (EAP).	Evidence may include, but is not limited to~~:~~ • ~~Network~~, network diagrams showing ~~EAP identification or~~ • ~~A list of uniquely identifiable Cyber Assets within the BES Cyber System~~all external routable communication paths and ~~associated~~the identified EAPs.

CIP-005-5 Table R1 – Electronic Security Perimeter			
Part	~~**Applicability**~~**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-005-4, R1*		**Change Rationale:** *Changed to refer to the defined term Electronic Access Point and BES Cyber System.*	

CIP-005-5 Table R1 – Electronic Security Perimeter			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.3	Electronic Access Points ~~at~~ for High Impact BES Cyber Systems Electronic Access Points ~~at~~for Medium Impact BES Cyber Systems ~~with External Routable Connectivity.~~	Require ~~explicit~~ inbound and outbound access permissions ~~at each identified Electronic Access Point using routable protocols~~, including ~~explicit criteria~~the rationale for granting ~~or denying~~ access ~~permissions~~, and deny all other access by default.	Evidence may include, but is not limited to, a list of rules (firewall, access control lists, etc.) that demonstrate that only ~~explicit~~permitted access is allowed and that each access rule has a documented reason.
Reference to prior version: *CIP-005-4, R2.1*		**Change Rationale:** *Changed to refer to the defined term Electronic Access Point and to focus on the entity knowing and having ~~justification~~a reason for what it allows through the EAP in both inbound and outbound directions.*	
1.4	~~Electronic Access Points that use dial-up access for non-Interactive Remote Access at~~ High Impact BES Cyber Systems with dial-up connectivity ~~Electronic Access Points that use dial-up access for non-Interactive Remote Access at~~ Medium Impact BES Cyber Systems~~.~~ with dial-up connectivity	Perform authentication when establishing dial-up connectivity with the BES Cyber System, where technically feasible.	Evidence may include, but is not limited to, a documented process ~~identified in Requirement R1, Part 1.4~~ that describes how the Responsible Entity is providing authenticated access through each dial-up ~~Electronic Access Point~~connection.
Reference to prior version: *CIP-005-4, R2.3*		**Change Rationale:** ~~*Changed to refer to the defined term Electronic Access Point.*~~ *Added clarification ~~as to the goal of "secure", which is~~ that dial-up connectivity should perform authentication so that the BES Cyber System ~~should~~is not ~~be~~ directly accessible with a phone number only.*	

CIP-005-5 Table R1 – Electronic Security Perimeter			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.5	Electronic Access Points ~~with External Routable Connectivity at~~for High Impact BES Cyber Systems Electronic Access Points ~~with External Routable Connectivity at~~for Medium Impact BES Cyber Systems at Control Centers~~.~~	~~A documented~~Have a method for detecting malicious communications ~~at each EAP~~.	Evidence may include, but is not limited to: 1. Evidence that intrusion detection systems are functioning: ~~1.~~• Configuration files of ~~an~~ intrusion detection systems deployed ~~at~~to monitor an EAP; or ~~2.~~• Logs that were generated by an intrusion detection system; and ~~3.~~2. Documentation showing where intrusion detection systems were deployed.
Reference to prior version: *CIP-005-4, R1*		**Change Rationale:** *Per FERC Order No. 706, ~~p~~Paragraphs 496-503, ~~ESP's~~ESPs need two distinct security measures such that the ~~cyber assets~~Cyber Assets do not lose all perimeter protection if one measure fails or is mis-configured. The Order makes clear this is not simple redundancy of firewalls, thus the ~~drafting team~~SDT has decided to add the security measure of malicious traffic inspection ~~(intrusion detection systems / intrusion protection systems)~~as a requirement for these ESPs.*	

Rationale for R2: Discovery and announcement of vulnerabilities for remote access methods and technologies, that were previously thought secure and in use by a number of ~~large~~ electric sector entities, necessitate changes to industry security control standards. Currently, no requirements or guidance documents are available to either require or recommend how secure remote access to BES Cyber Systems can or should be accomplished. Inadequate safeguards for remote access can allow unauthorized access to the organization's network, with potentially serious consequences.

Remote access control procedures must provide adequate safeguards through robust identification, authentication and encryption techniques. Remote access to the organization's network and resources will only be permitted providing that authorized users are authenticated, data is encrypted across the network, and privileges are restricted.

Additional information is provided in ***Guidance for Secure Interactive Remote Access*** published by NERC in July 2011.

Summary of Changes: This is a new requirement to continue the efforts of the Urgent Action team for Project 2010-15: Expedited Revisions to CIP-005-3.

R2. Each Responsible Entity allowing Interactive Remote Access to BES Cyber Systems shall implement one or more documented processes that collectively include the applicable items, where technically feasible, in *CIP-005-5 Table R2 – Interactive Remote Access Management*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning and Same Day Operations~~]~~].*

M2. Evidence must include the documented processes that collectively address each of the applicable items in *CIP-005-5 Table R2 – Interactive Remote Access Management* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-005-5 Table R2 – Interactive Remote Access Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ Associated Protected Cyber Assets	~~Require~~Utilize an Intermediate Device such that the Cyber Asset initiating Interactive Remote Access does not directly access a BES Cyber System or Protected Cyber Asset.	Evidence may include, but is not limited to, network diagrams or architecture documents.
Reference to prior version: *New*		**Change Rationale:** *This is a new requirement to continue the efforts of the Urgent Action team for Project 2010-15: Expedited Revisions to CIP-005-3.*	
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ Associated Protected Cyber Assets	~~Require~~Utilize encryption for all Interactive Remote Access sessions that terminate at an Intermediate Device in order to protect the confidentiality and integrity of each Interactive Remote Access session.	Evidence may include, but is not limited to, architecture documents detailing where encryption initiates and terminates.
Reference to prior version: *CIP-007~~-~~5, R3.1*		**Change Rationale:** *This is a new requirement to continue the efforts of the Urgent Action team for Project 2010-15: Expedited Revisions to CIP-005-3.*	

CIP-005-5 Table R2 – Interactive Remote Access Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ Associated Protected Cyber Assets	Require multi-factor authentication for all Interactive Remote Access sessions. Factors must be at least two of the three following categories: • Something the individual knows (including, but not limited to, passwords or PINs. User ID is not an authentication factor); • Something the individual has (including, but not limited to, tokens, digital certificates, or smart cards); or • Something the individual is (including, but not limited to, fingerprints, iris scans, or other biometric characteristic).	Evidence may include, but is not limited to, architecture documents detailing the authentication factors used.~~ Note that a UserID is not considered an authentication factor.~~
Reference to prior version: *CIP-007-5, R3.2*		**Change Rationale:** *This is a new requirement to continue the efforts of the Urgent Action team for Project 2010-15: Expedited Revisions to CIP-005-3. The multi-factor authentication methods are also the same as those identified in the Homeland Security Presidential Directive 12 (HSPD-12), issued August 12, 2007.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

- The Regional Entity~~; or~~
- ~~If the Responsible Entity works for~~ shall serve as the Compliance Enforcement Authority ("CEA") unless the ~~Regional Entity, then the~~ applicable entity is owned, operated, or controlled by the Regional Entity ~~will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity) to be responsible for compliance enforcement.~~
- ~~For Responsible Entities that are also Regional Entities,~~. In such cases the ERO or a Regional ~~Entity~~entity approved by ~~the ERO and~~ FERC or other applicable governmental ~~authorities shall serve as the Compliance Enforcement Authority.~~
- ~~For NERC, a third-party monitor without vested interest in the outcome for NERC~~authority shall serve as the ~~Compliance Enforcement Authority~~CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

Guidelines and Technical Basis

Requirement R1:

CIP-005-5, Requirement R1 requires ~~that~~ segmenting of BES Cyber Systems ~~must be segmented~~ from other systems of differing trust levels by requiring controlled ~~electronic access points~~Electronic Access Points between the different trust zones. ~~ESP's~~ Electronic Security Perimeters are also ~~are~~ used as a primary defense layer for some BES Cyber Systems that may not inherently have sufficient cyber security functionality, such as devices that lack authentication ~~capabilities~~capability.

All BES Cyber Systems that are connected to ~~be protected~~a network via a routable protocol must have a defined Electronic Security Perimeter (ESP). Even standalone networks that have no external connectivity to other networks must have a defined ESP. The ESP defines a zone of protection around the BES Cyber System, and it also provides clarity for entities to determine what systems or Cyber Assets are in scope and what requirements they must meet. The ESP is used in:

- Defining the scope of 'Associated Protected Cyber Assets' that must also meet certain CIP requirements.
- Defining the boundary in which all of the Cyber Assets must meet the requirements of the highest impact BES Cyber System that is in the zone (the 'high water mark').

The standard does not require segmenting of BES Cyber Systems by impact classification, and many different impact classifications can be mixed within an ESP. However, all of the Cyber Assets and systems within the ESP will be elevated to the level of the highest impact BES Cyber System present in the ESP. The standard handles this by defining all other Cyber Assets within the ESP, even other BES Cyber Systems of lesser impact, as "Protected Cyber Assets" of the highest impact system in the ESP.

For example, if an ESP contains both a high impact BES Cyber System and a low impact BES Cyber System, the each Cyber Asset of the low impact BES Cyber System is an "Associated Protected Cyber Asset" of the high impact BES Cyber System and must meet all requirements with that designation in the applicability columns of the requirement tables.

If there is routable connectivity across the ESP into any Cyber Asset, then an Electronic Access ~~Points (EAP's) that~~ Point (EAP) must control traffic into and out of the ~~BES Cyber System.~~ESP. Responsible Entities ~~(RE's)~~ should know what traffic needs to cross an EAP and document those ~~justifications and insure~~reasons to ensure the ~~EAP's~~EAPs limit the traffic to only those known~~, justified~~ communication needs. These include, but are not limited to, communications needed for normal operations, emergency operations, support, maintenance, and troubleshooting.

The EAP should control both inbound and outbound traffic. The standard added outbound traffic control, as it is a prime indicator of compromise. If Cyber Assets within the ESP become compromised and attempt to communicate to unknown hosts outside the ESP (usually 'command and control' hosts on the Internet, or compromised 'jump hosts' within the Responsible Entity's other networks acting as intermediaries), the EAPs should function as a first level of defense in stopping the exploit. This does not limit the Responsible Entity from

controlling outbound traffic at the level of granularity that it deems appropriate, and large ranges of internal addresses may be allowed. The SDT's intent is that the Responsible Entity knows what other Cyber Assets or ranges of addresses a BES Cyber System needs to communicate with and limits the communications to that known range. For example, most BES Cyber Systems within a Responsible Entity should not have the ability to communicate through an EAP to any network address in the world, but should probably be at least limited to the address space of the Responsible Entity, and preferably to individual subnet ranges or individual hosts within the Responsible Entity's address space. The SDT's intent is not for Responsible Entities to document the inner workings of stateful firewalls, where connections initiated in one direction are allowed a return path. The intent is to know and document what systems can talk to what other systems or ranges of systems on the other side of the EAP, such that rogue connections can be detected and blocked.

This requirement applies only to communications for which access lists and 'deny by default' type requirements can be universally applied, which today are those that employ routable protocols ~~and dialup modems. Direct serial, non-routable connections are not included.~~ . Direct serial, non-routable, connections are not included as there is no perimeter or firewall type security that should be universally mandated across all entities and all serial communication situations. There is no firewall or perimeter capability for an RS232 cable run between two Cyber Assets. Without a clear 'perimeter type' security control that can be applied in practically every circumstance, such a requirement would mostly generate technical feasibility exceptions ("TFEs") rather than increased security.

~~The intent of securing dialup~~As for dial-up connectivity, the SDT's intent of this requirement is to prevent situations where only a phone number can establish direct connectivity ~~is established directly~~ to the BES Cyber Asset ~~with only a phone number.~~. If a ~~dialup~~dial-up modem is implemented in such a way that it simply answers the phone and connects the line to the BES Cyber Asset with no authentication of the calling party, it is ~~not functioning as an Electronic Access Point.~~a vulnerability to the BES Cyber System. The requirement calls for some form of authentication of the calling party ~~when connectivity is granted~~before completing the connection to the BES Cyber ~~Asset~~System. Some examples of acceptable methods include dial-back modems, modems that must be remotely enabled or powered up, and modems that are only powered on by onsite personnel when needed along with policy that states they are disabled after use. If the dial-up connectivity is used for Interactive Remote Access, then the Requirement R2 requirements also apply.

~~Since low impact BES Cyber Systems can impact BES Reliability Operating Services in real time, they should not be located directly on public networks or other networks of lesser trust. The intent is to prevent access to an aggregation of enough low impact BES Cyber Systems at various locations to a degree that can cause higher level impacts to the BES. Entities are to document perimeter type security controls they have implemented to segment low impact BES Cyber Systems from public or other less trusted network zones.~~

The standard adds a requirement to detect malicious communications for Control Centers. This is in response to FERC Order No. 706, Paragraphs 496-503, where ESPs are required to have two distinct security measures such that the BES Cyber Systems do not lose all perimeter protection

if one measure fails or is mis-configured. The Order makes clear that this is not simple redundancy of firewalls, thus the SDT has decided to add the security measure of malicious traffic inspection as a requirement for these ESPs. Technologies meeting this requirement include Intrusion Detection or Intrusion Prevention Systems (IDS/IPS) or other forms of deep packet inspection. These technologies go beyond source/destination/port rule sets and thus provide another distinct security measure at the ESP.

Requirement R2:

See Secure Remote Access Reference Document (see remote access alert).

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated Version Number from -2 to -3 In Requirement 1.6, deleted the sentence pertaining to removing component or system from service in order to perform testing, in response to FERC order issued September 30, 2009.	
3	12/16/09	Approved by the NERC Board of Trustees.	
3	3/31/10	Approved by FERC.	
4	1/24/11	Approved by the NERC Board of Trustees.	
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Physical Security of BES Cyber Systems

2. Number: CIP-006-5

3. Purpose: To manage physical access to BES Cyber Systems by specifying a physical security plan in support of protecting BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

4.1.7 Reliability Coordinator

4.1.8 Transmission Operator

4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

Standard CIP-006-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the applicable items in [Table Reference].*" The referenced table requires the applicable items in the procedures for a common subject matter.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the standards.

Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as high impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems with External Routable Connectivity** – Only applies to medium impact BES Cyber Systems with External Routable Connectivity. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity.

- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.
- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.
- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column.
- **Locally mounted hardware or devices at the Physical Security Perimeter** – Applies to the locally mounted hardware or devices (e.g. such as motion sensors, electronic lock control mechanisms, and badge readers) at a Physical Security Perimeter associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column, and that does not contain or store access control information or independently perform access authentication. These hardware and devices are excluded in the definition of Physical Access Control Systems.

B. Requirements and Measures

Rationale: Each Responsible Entity shall ensure that physical access to all BES Cyber Systems is restricted and appropriately managed.

Summary of Changes: The entire contents of CIP-006-5 are intended to constitute a physical security program. This represents a change from previous versions, since there was no specific requirement to have a physical security program in previous versions of the standards, only requirements for physical security plans.

Added details to address FERC Order No. 706, Paragraph 572, directives for physical security defense in depth.

Additional guidance on physical security defense in depth provided to address the directive in FERC Order No. 706, Paragraph 575.

R1. Each Responsible Entity shall implement one or more documented physical security plans for its BES Cyber Assets, BES Cyber Systems, Electronic Access Control or Monitoring Systems, Physical Access Control Systems and Protected Cyber Assets that collectively include all of the applicable items in *CIP-006-5 Table R1 – Physical Security Plan*. *[Violation Risk Factor: Medium] [Time Horizon: Long Term Planning and Same Day Operations].*

M1. Evidence must include each of the documented physical security plan or plans that collectively include all of the applicable items in *CIP-006-5 Table R1 – Physical Security Plan* and additional evidence to demonstrate implementation of the plan or plans as described in the Measures column of the table.

CIP-006-5 Table R1 – Physical Security Plan			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Physical Access Control Systems	Define operational or procedural controls to restrict physical access.	Evidence may include, but is not limited to, documentation that operational or procedural controls exist and have been implemented.
Reference to prior version: *CIP-006-4c, R2.1 for Physical Access Control Systems* *New Requirement for Medium Impact BES Cyber Systems not having External Routable Connectivity*		**Change Description and Justification:** ***Change Description and Justification:*** *To allow for programmatic protection controls as a baseline (which also includes how the entity plans to protect Medium Impact BES Cyber Systems that do not have External Routable Connectivity not otherwise covered under Part 1.2, and it does not require a detailed list of individuals with access). Physical Access Control Systems do not themselves need to be protected by a Physical Access Control System.*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.2	Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Utilize at least one physical access control to allow physical access into each applicable Physical Security Perimeter to only those individuals who have authorized unescorted physical access.	Evidence may include, but is not limited to, language in the physical security plan that describes each Physical Security Perimeter and how access is controlled by one or more different methods and proof that access is restricted to only authorized individuals, such as a list of authorized individuals accompanied by card reader logs.
Reference to prior version: *CIP006-4c, R3 & R4*		**Change Description and Justification:** *This requirement has been made more general to allow for alternate measures of restricting physical access. Specific examples of methods a Responsible Entity can take to restricting access to BES Cyber Systems has been moved to the Guidelines and Technical Basis section.*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.3	High Impact BES Cyber Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Where technically feasible, utilize two or more different physical access controls to collectively allow physical access into Physical Security Perimeters to only those individuals who have authorized unescorted physical access.	Evidence may include, but is not limited to, language in the physical security plan that describes the Physical Security Perimeters and how access is controlled by two or more different methods and proof that access is restricted to only authorized individuals, such as a list of authorized individuals accompanied by card reader logs.
Reference to prior version: CIP006-4c, R3 & R4		**Change Description and Justification:** *The specific examples that specify methods a Responsible Entity can take to restricting access to BES Cyber Systems has been moved to the Guidelines and Technical Basis section. This requirement has been made more general to allow for alternate measures of controlling physical access.* *Added to address FERC Order No. 706, Paragraph 572, related directives for physical security defense in depth.* *FERC Order No. 706, Paragraph 575, directives addressed by providing the examples in the guidance document of physical security defense in depth via multi-factor authentication or layered Physical Security Perimeter(s).*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Have controls that monitor the Physical Security Perimeter twenty four hours a day, seven days a week (with 99.9% availability), for unauthorized circumvention of a physical access control into a Physical Security Perimeter.	Evidence may include, but is not limited to, documentation of controls that monitor the Physical Security Perimeter for unauthorized circumvention of a physical access control into a Physical Security Perimeter.
Reference to prior version: *CIP006-4c, R5*		**Change Description and Justification:** *Examples of monitoring methods have been moved to the Guidelines and Technical Basis section.*	
1.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Issue an alarm or alert in response to detected unauthorized circumvention of a physical access control into a Physical Security Perimeter to the personnel identified in the BES Cyber Security Incident Response Plan within 15 minutes of detection.	Evidence may include, but is not limited to, language in the physical security plan that describes the issuance of an alarm or alert in response to unauthorized circumvention of a physical access control into a Physical Security Perimeter and additional evidence that the alarm or alert was issued and communicated as identified in the BES Cyber Security Incident Response Plan, such as manual or electronic alarm or alert logs, cell phone or pager logs, or other evidence that documents that the alarm or alert was generated and communicated.
Reference to prior version: *CIP006-4c, R5*		**Change Description and Justification:** *Examples of monitoring methods have been moved to the Guidelines and Technical Basis section.*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.6	Physical Access Control Systems Associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity	Have controls that monitor each Physical Access Control System twenty four hours a day, seven days a week (with 99.9% availability), for unauthorized physical access to a Physical Access Control System.	Evidence may include, but is not limited to, documentation of controls that monitor the Physical Security Perimeter for unauthorized circumvention of a physical access control into a Physical Security Perimeter.
Reference to prior version: CIP006-4c, R5		**Change Description and Justification:** *Addresses the prior CIP-006-4c, Requirement R5 requirement for Physical Access Control Systems.*	
1.7	Physical Access Control Systems Associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity	Issue an alarm or alert in response to detected unauthorized physical access to a Physical Access Control System to the personnel identified in the BES Cyber Security Incident Response Plan within 15 minutes of the unauthorized physical access.	Evidence may include, but is not limited to, language in the physical security plan that describes the issuance of an alarm or alert in response to unauthorized physical access to Physical Access Control Systems and additional evidence that the alarm or alerts was issued and communicated as identified in the BES Cyber Security Incident Response Plan, such as alarm or alert logs, cell phone or pager logs, or other evidence that the alarm or alert was generated and communicated.
Reference to prior version: CIP006-4c, R5		**Change Description and Justification:** *Addresses the prior CIP-006-4c, Requirement R5 requirement for Physical Access Control Systems.*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.8	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Log (through automated means or by personnel who control entry) entry of each individual with authorized unescorted physical access into each Physical Security Perimeter, with information to identify the individual and date and time of entry.	Evidence may include, but is not limited to, language in the physical security plan that describes logging and recording of physical entry into each Physical Security Perimeter and additional evidence to demonstrate that this logging has been implemented, such as logs of physical access into Physical Security Perimeters that show the individual and the date and time of entry into Physical Security Perimeter.
Reference to prior version: CIP-006-4c, R6		**Change Description and Justification:** *CIP-006-4c, Requirement R6 was specific to the logging of access at identified access points. This requirement more generally requires logging of authorized physical access into the Physical Security Perimeter.* *Examples of logging methods have been moved to the Guidelines and Technical Basis section.*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.9	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Retain physical access logs of entry of individuals with authorized unescorted physical access into each Physical Security Perimeter for at least ninety calendar days.	Evidence may include, but is not limited to, dated documentation such as logs of physical access into Physical Security Perimeters that show the date and time of entry into Physical Security Perimeter.
Reference to prior version: CIP-006-4c, R7		**Change Description and Justification:** *No change.*	

Rationale: To control when personnel without authorized unescorted physical access can be in any Physical Security Perimeters protecting BES Cyber Systems or Electronic Access Control or Monitoring Systems, as applicable in Table R2.

Summary of Changes: Reformatted into table structure. Originally added in Version 3 per FERC Order issued September 30, 2009.

R2. Each Responsible Entity shall implement one or more documented visitor control programs that include each of the applicable items in *CIP-006-5 Table R2 – Visitor Control Program. [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations.]*

M2. Evidence must include one or more documented visitor control programs that collectively include each of the applicable items in *CIP-006-5 Table R2 – Visitor Control Program* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-006-5 Table R2 – Visitor Control Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Require continuous escorted access of visitors (individuals who are known or guests, and not authorized for unescorted physical access) within each Physical Security Perimeter, except during CIP Exceptional Circumstances.	Evidence may include, but is not limited to, language in a visitor control program that requires continuous escorted access of visitors within Physical Security Perimeters and additional evidence to demonstrate that the process was implemented, such as visitor logs.
Reference to prior version: *CIP-006-4c, R1.6.2*		**Change Description and Justification:** *Added the ability to not do this during CIP Exceptional Circumstances.*	

CIP-006-5 Table R2 – Visitor Control Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Require manual or automated logging of the entry and exit of visitors into the Physical Security Perimeter that includes date and time of the initial entry and last exit, the visitor's name, and the name of an individual point of contact responsible for the visitor, except during CIP Exceptional Circumstances.	Evidence may include, but is not limited to, language in a visitor control program that requires continuous escorted access of visitors within Physical Security Perimeters and additional evidence to demonstrate that the process was implemented, such as dated visitor logs that include the required information.
Reference to prior version: *CIP-006-4c R1.6.1*		**Change Description and Justification:** *Added the ability to not do this during CIP Exceptional Circumstances, addressed multi-entry scenarios of the same person in a day (log first entry and last exit), and name of the person who is responsible or sponsor for the visitor. There is no requirement to document the escort or handoffs between escorts.*	
2.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Retain visitor logs for at least ninety calendar days.	Evidence may include, but is not limited to, documentation showing logs have been retained for at least ninety calendar days.
Reference to prior version: CIP-006-4c, R7		**Change Description and Justification:** *No change*	

Rationale: To ensure all Physical Access Control Systems and devices continue to function properly.

Summary of Changes: Reformatted into table structure.

Added details to address FERC Order No. 706, Paragraph 581, directives to test more frequently than every three years.

R3. Each Responsible Entity shall implement one or more documented Physical Access Control System maintenance and testing programs that collectively include each of the applicable items in *CIP-006-5 Table R3 – Maintenance and Testing Program*. *[Violation Risk Factor: Lower] [Time Horizon: Long Term Planning].*

M3. Evidence must include each of the documented Physical Access Control System maintenance and testing programs that collectively include each applicable item in *CIP-006-5 Table R3 – Maintenance and Testing Program* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-006-5 Table R3 – Physical Access Control System Maintenance and Testing Program			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirement**	**Measures**
3.1	Physical Access Control Systems associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity Locally mounted hardware or devices at the Physical Security Perimeter associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity	Maintenance and testing of each Physical Access Control System and locally mounted hardware or devices at the Physical Security Perimeter at least once every 24 calendar months to ensure they function properly.	Evidence may include, but is not limited to, a maintenance and testing program that provides for testing each Physical Access Control System and locally mounted hardware or devices associated with each applicable Physical Security Perimeter at least once every 24 calendar months and additional evidence to demonstrate that this testing was done, such as dated maintenance records, or other documentation showing testing and maintenance has been performed on each applicable device or system at least once every 24 calendar months.
Reference to prior version: *CIP-006-4c, R8.1 and R8.2*		**Change Description and Justification:** *Added details to address FERC Order No. 706, Paragraph 581 directives to test more frequently than every three years. The SDT determined that annual testing was too often and agreed on two years.*	

CIP-006-5 Table R3 – Physical Access Control System Maintenance and Testing Program

3.2	Physical Access Control Systems associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity Locally mounted hardware or devices at the Physical Security Perimeter associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity	Document outages for physical access control, logging, and alerting systems and retain the outage records for at least 12 calendar months.	Evidence may include, but is not limited to, the outage records and availability of outage records for the preceding 12 calendar months.
Reference to prior version: *CIP-006-4c, R8.3*		**Change Description and Justification:** *No change.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Long Term Planning** **Same-Day Operations**	**Medium**	The Responsible Entity has documented and implemented physical access controls, but logging of authorized physical entry through any Physical Security Perimeter does not provide sufficient information to uniquely identify the individual and date of entry. (1.8) OR The Responsible Entity retained physical access logs for 75 or more calendar days, but for less than 90 calendar days. (1.9)	The Responsible Entity has documented and implemented physical access controls, but it does not alert for unauthorized physical access to Physical Access Control Systems or does not communicate such alerts within 15 minutes to identified personnel(1.7) OR The Responsible Entity retained physical access logs for 60 or more calendar days, but for less than 75 calendar days. (1.9)	The Responsible Entity has documented and implemented physical access controls, but does not alert for unauthorized circumvention of a physical access control into a Physical security Perimeter or does not communicate such alerts within 15 minutes to identified personnel. (1.5) OR The Responsible Entity has does not have controls that monitor each Physical Access Control System twenty four hours a day, seven days a week (with 99.9% availability), for unauthorized physical access to a Physical	The Responsible Entity did not document or implement operational or procedural controls to restrict physical access to only those individuals who are authorized. (1.1) OR The Responsible Entity has documented and implemented physical access controls, but at least one method does not exist to restrict access to Medium Impact BES Cyber Systems with External Routable Connectivity or External Dial-up Connectivity. Guidelines and Technical Basis

While the focus is shifted from the definition and management of a completely enclosed "six-wall" boundary, it is expected in many instances this will remain a primary mechanism for controlling, alerting, and logging access to BES Cyber Systems. Taken together, these controls will effectively constitute the physical security plan to manage physical access to BES Cyber Systems.

Requirement R1:

Methods to restrict physical access include:

- Card Key: A means of electronic access where the access rights of the card holder are predefined in a computer database. Access rights may differ from one perimeter to another.
- Special Locks: These include, but are not limited to, locks with "restricted key" systems, magnetic locks that can be operated remotely, and "man-trap" systems.
- Security Personnel: Personnel responsible for controlling physical access who may reside on-site or at a monitoring station.
- Other Authentication Devices: Biometric, keypad, token, or other equivalent devices that control physical access into the Physical Security Perimeter.

Methods to monitor physical access include:

- Alarm Systems: Systems that alarm to indicate interior motion or when a door, gate, or window has been opened without authorization. These alarms must provide for immediate notification to personnel responsible for response.
- Human Observation of Access Points: Monitoring of physical access points by security personnel who are also controlling physical access.

Methods to log physical access include:

- Computerized Logging: Electronic logs produced by the Responsible Entity's selected access control and alerting method.
- Video Recording: Electronic capture of video images of sufficient quality to determine identity.
- Manual Logging: A log book or sign-in sheet, or other record of physical access maintained by security or other personnel authorized to control and monitor physical access.

The FERC Order No. 706, Paragraph 572, directive discussed utilizing two or more different and complementary physical access controls to provide defense in depth. It does not require two or more Physical Security Perimeters, nor does it exclude the use of layered perimeters. Use of two-factor authentication would be acceptable at the same entry points for a non-layered single perimeter. For example, a sole perimeter's controls could include either a combination of card key and pin code (something you know and something you have), or a card key and biometric scanner (something you have and something you are), or a physical key in

combination with a guard-monitored remote camera and door release, where the “guard” has adequate information to authenticate the person they are observing or talking to prior to permitting access (something you have and something you are). The two-factor authentication could be implemented using a single Physical Access Control System but more than one authentication method must be utilized. For physically layered protection, a locked gate in combination with a locked control-building could be acceptable, provided no single authenticator (i.e., key or card key) would provide access through both.

Typically any opening greater than 96 square inches, with one side greater than six inches in length, would be considered an access point into the Physical Security Perimeter. Protective measures such as bars, wire mesh, or other permanently installed metal barrier could be used to reduce the opening size, as long as it is leaves no opening greater than 96 square inches, or no more than six inches on its shortest side.

Requirement R2:

The logging of visitors should capture each visit of the individual and does not need to capture each entry or exit during that visit. This is meant to allow a visitor to temporarily exit the Physical Security Perimeter to obtain something they left in their vehicle or outside the area without requiring a new log entry for each and every entry during the visit.

The SDT also determined that a Point of Contact should be documented who can provide additional details about the visit if questions arise in the future. The point of contact could be the escort, but there is no need to document everyone that acted as an escort for the visitor.

Requirement R3:

This includes the testing of locally mounted hardware or devices used in controlling, alerting or logging access to the Physical Security Perimeter. This includes motion sensors, electronic lock control mechanisms, and badge readers which are not deemed to be part of the Physical Access Control System but are required for the protection of the BES Cyber Systems.

Outage records should address when the installed control, monitor, and logging systems or hardware at access points are broken or unavailable.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. ~~CSO706 SDT appointed (August 7, 2008)~~
4. ~~Version 1 of CIP-002 to CIP-009 approved by FERC (January 18, 2008)~~
5. ~~Version 2 of CIP-002 to CIP-009 approved by FERC (September 30, 2009)~~
6. ~~Version 3 of CIP-002 to CIP-009 approved by FERC (September 30, 2009)~~
7. ~~Version 4 of CIP-002 to CIP-009 approved by NERC Board of Trustees (January 24, 2011) and filed with FERC (February 10, 2011)~~
8. ~~3.~~ ~~Version 5 of CIP-002 to CIP-011 posted~~First posting for 60-day formal comment period and concurrent ballot (~~mm-dd-yy~~November 2011).

Description of Current Draft

This is the ~~first~~second posting of Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (Version 5)~~A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012

Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. ~~18~~24 **Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]

~~1.~~2. In those jurisdictions where no regulatory approval is required, the ~~standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of ~~Trustees~~Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center~~"~~."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated ~~version number~~Version Number from -2 to -3 In Requirement 1.6, deleted the sentence pertaining to removing component or system from service in order to perform testing, in response to FERC order issued September 30, 2009.	
3	12/16/09	Approved by the NERC Board of Trustees~~-~~.	
3	3/31/10	Approved by FERC.	
4	1/24/11	Approved by the NERC Board of Trustees.	
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. **Title:** Cyber Security — Physical Security of BES Cyber Systems

2. **Number:** CIP-006-5

3. **Purpose:** ~~Standard CIP-006-5 requires the implementation of~~ To manage physical access to BES Cyber Systems by specifying a physical security plan ~~for the protection~~in support of protecting BES Cyber Systems~~.~~ against compromise that could lead to misoperation or instability in the BES.

4. **Applicability:**

   4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

   4.1.1 Balancing Authority

   4.1.2 Distribution Provider that owns Facilities ~~that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~ **described in 4.2.2**

   - ~~A UFLS program required by a NERC or Regional Reliability Standard~~
   - ~~A UVLS program required by a NERC or Regional Reliability Standard~~
   - ~~A Special Protection System or Remedial Action Scheme required by a NERC or Regional Reliability Standard~~
   - ~~A Transmission Protection System required by a NERC or Regional Reliability Standard~~
   - ~~Its Transmission Operator's restoration plan~~

   4.1.3 Generator Operator

   4.1.4 Generator Owner

   4.1.5 Interchange Coordinator

   4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

   ~~4.1.6~~4.1.7 Reliability Coordinator

   4.1.8 ~~that are part of any of the following systems~~Transmission Operator

   4.1.9 Transmission Owner

   4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

~~4.1.7~~**4.2.2 Distribution Provider**: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more
- ~~A UVLS program~~A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard

~~**4.1.8 NERC**~~

~~**4.1.9 Regional Entity**~~

~~4.1.10~~**4.2.3** A Protection System that applies to ~~**Reliability Coordinator**~~

~~**4.1.11** Transmission **Operator**~~

~~**4.1.12 Transmission Owner**~~

~~**4.2. Facilities:**~~

~~**4.2.1 Load Serving Entity:** One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for~~where the ~~protection of the BES:~~

- ~~A UFLS program~~Protection System is required by a NERC or Regional Reliability Standard
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

~~**4.2.2 Distribution Providers**: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~
- ~~A Special Protection System or Remedial Action Scheme required by a NERC or Regional Reliability Standard~~
- ~~A Transmission Protection System required by a NERC or Regional Reliability Standard~~
- ~~Its Transmission Operator's restoration plan~~

- **~~All other~~** Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

~~4.2.3~~4.2.4 Responsible Entities~~:~~ listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

~~4.2.4~~4.2.5 Exemptions: The following are exempt from Standard CIP-~~006~~002-5:

~~4.2.4.1~~4.2.5.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

~~4.2.4.2~~4.2.5.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

~~4.2.4.3~~ In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.~~-~~R. Section 73.54.

~~4.2.4.4~~4.2.5.3 ~~Responsible Entities that, in compliance with Standard CIP-002-5, identify that they have no BES Cyber Systems.~~

5. Background:

Standard CIP-006-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

~~Each requirement opens~~Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the ~~required~~applicable items in [Table Reference].*" The referenced table requires the ~~specific elements~~applicable items in the procedures for a common subject matter ~~as applicable~~.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of ~~specific elements required.~~applicable items in the documented processes~~.~~. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not ~~infer~~imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e~~.~~., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the ~~Standards~~standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the ~~Standards.~~standards.

Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies~~.~~ to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- ~~**All Responsible Entities** – Applies to all Responsible Entities listed in the Applicability section of the Standard. This requirement applies at an organizational level rather than individually to each BES Cyber System. Requirements having this applicability comprise basic elements of an organizational CIP cyber security program.~~

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~High Impact~~high impact according to the CIP-002-5 identification and categorization processes. ~~Responsible Entities can implement common controls that meet requirements for multiple High and Medium Impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.~~

- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems with External Routable Connectivity** – Only applies to ~~Medium Impact~~medium impact BES Cyber Systems with External Routable Connectivity. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity.
- ~~**Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as Medium Impact according to the CIP-002-5 identification and categorization processes.~~
- ~~**Low Impact BES Cyber Systems** – Applies to BES Cyber Systems not categorized as High Impact or Medium Impact according to the CIP-002-5 identification and categorization processes.~~
- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding ~~High or Medium Impact BES Cyber Systems.~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.
- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.
- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column.
- ~~**Electronic Access Points** – Applies at Electronic Access Points (with External Routable Connectivity or dial-up connectivity) associated with a referenced BES Cyber System.~~
- ~~**Electronic Access Points with External Routable Connectivity** – Applies at Electronic Access Points with External Routable Connectivity. This excludes those Electronic Access Points with dial-up connectivity.~~
- **Locally ~~Mounted Hardware or Devices Associated with Defined~~ mounted hardware or devices at the Physical ~~Boundaries~~Security Perimeter** – Applies to the locally mounted hardware or devices (e.g. such as motion sensors, electronic lock control mechanisms, and badge readers) ~~associated with~~at a ~~Defined~~ Physical ~~Boundary for High~~Security Perimeter associated with a corresponding high impact BES Cyber System or ~~Medium Impact~~medium impact BES Cyber ~~Systems.~~System with External Routable Connectivity in the applicability column, and that does not

contain or store access control information or independently perform access authentication. These hardware and devices are excluded in the definition of Physical Access Control Systems.

B. Requirements and Measures

Rationale: Each Responsible Entity shall ensure that physical access to all BES Cyber Systems is restricted and appropriately managed.

Summary of Changes: The entire contents of CIP-006-5 ~~were~~are intended to constitute a physical security program~~, though~~. This represents a change from previous versions, since there was no specific requirement ~~dictating the need for such a~~ to have a physical security program in previous versions of the standards, only requirements for physical security plans.

Added details to address FERC Order No. 706, ~~paragraph~~Paragraph 572, directives for physical security defense in depth.

Additional guidance on physical security defense in depth provided to address the directive in FERC Order No. 706 ~~p575 directive~~, Paragraph 575.

R1. Each Responsible Entity shall implement one or more documented physical security plans ~~that include each~~for its BES Cyber Assets, BES Cyber Systems, Electronic Access Control or Monitoring Systems, Physical Access Control Systems and Protected Cyber Assets that collectively include all of the applicable items in *CIP-006-5 Table R1 – Physical Security Plan*. *[Violation Risk Factor: Medium] [Time Horizon: Long Term Planning and Same Day Operations~~]~~].*

M1. Evidence must include~~s~~ each of the documented physical security plan or plans that collectively include ~~each~~all of the applicable items in *CIP-006-5 Table R1 – Physical Security Plan* and additional evidence to demonstrate implementation of the plan or plans as described in the Measures column of the table.

CIP-006-5 Table R1 – Physical Security Plan			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Physical Access Control Systems ~~Low Impact BES Cyber Systems.~~	Define operational or procedural controls to restrict physical access.	Evidence may include, but is not limited to, ~~documented~~documentation that operational ~~and~~or procedural controls exist and have been implemented.
Reference to prior version: *CIP-006-4c, R2.1 for Physical Access Control Systems* *New Requirement for ~~Low~~Medium Impact BES Cyber Systems not having External Routable Connectivity*		**Change Description and Justification:** ***Change Description and Justification:*** *To allow for programmatic protection controls as a baseline~~, this~~ (which also includes how the entity plans to protect ~~Low~~Medium Impact BES Cyber Systems ~~and~~that do not have External Routable Connectivity not otherwise covered under Part 1.2, and it does not require a detailed list of individuals with access~~.~~). Physical Access Control Systems do not themselves need to be protected by a Physical Access Control System.*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.2	Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Utilize at least one physical access control to ~~establish one or more Defined~~allow physical access into each applicable Physical ~~Boundaries that restricts access~~ Security Perimeter to only those individuals ~~that are~~who have authorized~~.~~ unescorted physical access.	Evidence may include, but is not limited to, language in the physical security plan that describes ~~the physical boundaries~~each Physical Security Perimeter and how ~~ingress and egress~~access is controlled by one or more different methods and proof that access is restricted to only authorized individuals, such as a list of authorized individuals accompanied by card reader logs.
Reference to prior version: *CIP006-4c, R3 & R4*		**Change Description and Justification:** *This requirement has been made more general to allow for alternate measures of restricting physical access ~~to reflect the change from Physical Security Perimeter to Defined Physical Boundary. The specific examples that specify~~. Specific examples of methods a Responsible Entity can take to restricting access to BES Cyber Systems has been moved to the Guidelines and Technical Basis section~~.~~.*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.3	High Impact BES Cyber Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Utilize~~Where technically feasible, utilize two or more different ~~and complementary~~ physical access controls to ~~establish one or more Defined Physical Boundaries that restricts~~collectively allow physical access into Physical Security Perimeters to only those ~~users that are~~individuals who have authorized~~,~~ ~~where technically feasible.~~ unescorted physical access.	Evidence may include, but is not limited to, language in the physical security plan that describes the ~~physical boundaries~~Physical Security Perimeters and how ~~ingress and egress~~access is controlled by two or more different methods and proof that access is restricted to only authorized individuals, such as a list of authorized individuals accompanied by card reader logs.
Reference to prior version: CIP006-4c, R3 & R4		**Change Description and Justification:** *The specific examples that specify methods a Responsible Entity can take to restricting access to BES Cyber Systems has been moved to the Guidelines and Technical Basis section. This requirement has been made more general to allow for alternate measures of controlling physical access.* *Added to address FERC Order No. 706 ~~p572~~, Paragraph 572, related directives for physical security defense in depth.* *FERC Order No. 706 ~~p575~~, Paragraph 575, directives addressed by providing the examples in the guidance document of physical security defense in depth via ~~multifactor~~multi-factor authentication or layered ~~defined physical boundary~~Physical Security Perimeter(s).*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Have controls that monitor the Physical Security Perimeter twenty four hours a day, seven days a week (with 99.9% availability), for unauthorized circumvention of a physical access control into a Physical Security Perimeter.	Evidence may include, but is not limited to, documentation of controls that monitor the Physical Security Perimeter for unauthorized circumvention of a physical access control into a Physical Security Perimeter.
Reference to prior version: *CIP006-4c, R5*		**Change Description and Justification:** *Examples of monitoring methods have been moved to the Guidelines and Technical Basis section.*	
1.~~4~~5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Issue ~~real-time alerts (to individuals responsible for response)~~an alarm or alert in response to detected unauthorized circumvention of a physical access ~~through any access point in a Defined~~control into a Physical ~~Boundary.~~Security Perimeter to the personnel identified in the BES Cyber Security Incident Response Plan within 15 minutes of detection.	Evidence may include, but is not limited to, language in the physical security plan that describes the issuance of ~~alerts~~ an alarm or alert in response to unauthorized circumvention of a physical access ~~through any access point in a Defined~~control into a Physical ~~Boundary~~Security Perimeter and additional evidence that ~~these alerts were~~the alarm or alert was issued and communicated as identified in the BES Cyber Security Incident Response Plan, such as manual or electronic alarm or alert logs, cell phone or pager logs, or other evidence that documents that ~~these alerts were~~the alarm or alert was generated and communicated.

CIP-006-5 Table R1 – Physical Security Plan			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP006-4c, R5*		**Change Description and Justification:** *Examples of monitoring methods have been moved to the Guidelines and Technical Basis section~~..~~.*	
1.6	Physical Access Control Systems Associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity	Have controls that monitor each Physical Access Control System twenty four hours a day, seven days a week (with 99.9% availability), for unauthorized physical access to a Physical Access Control System.	Evidence may include, but is not limited to, documentation of controls that monitor the Physical Security Perimeter for unauthorized circumvention of a physical access control into a Physical Security Perimeter.
Reference to prior version: CIP006-4c, R5		**Change Description and Justification:** *Addresses the prior CIP-006-4c, Requirement R5 requirement for Physical Access Control Systems.*	
1.~~5~~7	~~Associated~~ Physical Access Control Systems Associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity	Issue ~~real-time alerts (to individuals responsible for response)~~an alarm or alert in response to detected unauthorized physical access to a Physical Access Control ~~Systems.~~ System to the personnel identified in the BES Cyber Security Incident Response Plan within 15 minutes of the unauthorized physical access.	Evidence may include, but is not limited to, language in the physical security plan that describes the issuance of ~~alerts~~an alarm or alert in response to unauthorized physical access to Physical Access Control Systems and additional evidence that ~~these~~the alarm or alerts ~~were~~was issued and communicated as identified in the BES Cyber Security Incident Response Plan, such as alarm or alert logs, cell phone or pager logs, or other evidence that ~~these alerts were~~the alarm or alert was generated and

CIP-006-5 Table R1 – Physical Security Plan			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
			communicated.
Reference to prior version: CIP006-4c ~~R2.2~~, R5		**Change Description and Justification:** *Addresses the ~~old~~prior CIP-006-4c, Requirement R5 requirement for Physical Access Control Systems.*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.~~6~~8	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Log (through automated means or by personnel who control entry) entry of each individual with authorized unescorted physical ~~entry~~access into each ~~Defined~~ Physical ~~Boundary protecting applicable BES Cyber Systems or Electronic Access Control or Monitoring Systems, which records sufficient~~Security Perimeter, with information to ~~uniquely~~ identify the individual and date and time of entry.	Evidence may include, but is not limited to, language in the physical security plan that describes logging and recording of physical entry into ~~Defined~~each Physical ~~Boundaries~~Security Perimeter and additional evidence to demonstrate that this logging ~~and recording~~ has been implemented, such as logs of physical access into ~~Defined~~ Physical ~~Boundaries~~Security Perimeters that show the individual and the date and time of entry into ~~Defined~~ Physical ~~Boundaries~~Security Perimeter.
Reference to prior version: CIP-006-4c, R6		**Change Description and Justification:** *CIP-006-4c, Requirement R6 was specific to the logging of access at identified access points. This requirement more generally requires logging of authorized physical access into the ~~Defined~~ Physical ~~Boundary~~Security Perimeter.* *Examples of logging methods have been moved to the Guidelines and Technical Basis section~~.~~.*	

CIP-006-5 Table R1 – Physical Security Plan			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.9	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Retain physical access logs of entry of individuals with authorized unescorted physical access into each Physical Security Perimeter for at least ninety calendar days.	Evidence may include, but is not limited to, dated documentation such as logs of physical access into Physical Security Perimeters that show the date and time of entry into Physical Security Perimeter.
Reference to prior version: CIP-006-4c, R7		**Change Description and Justification:** *No change.*	

Rationale: To control when personnel without authorized unescorted physical access can be in any ~~Defined~~ Physical ~~Boundaries~~Security Perimeters protecting BES Cyber Systems or Electronic Access Control or Monitoring Systems, as applicable in ~~table~~Table R2.

Summary of Changes: Reformatted into table structure. Originally added in Version 3 per FERC Order issued September 30, 2009.

R2. Each Responsible Entity shall implement ~~its~~one or more documented visitor control ~~program~~programs that ~~includes~~include each of the applicable items in *CIP-006-5 Table R2 – Visitor Control Program. [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations~~].~~]*

M2. Evidence must include ~~the~~one or more documented visitor control ~~program~~programs that collectively ~~includes~~include each of the applicable items in *CIP-006-5 Table R2 – Visitor Control Program* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-006-5 Table R2 – Visitor Control Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Require continuous escorted access of visitors (individuals who are known or guests, and not authorized for unescorted physical access) within ~~any Defined~~each Physical ~~Boundary~~Security Perimeter, except during CIP Exceptional Circumstances.	Evidence may include, but is not limited to, language in a visitor control program that requires continuous escorted access of visitors within ~~Defined~~ Physical ~~Boundaries~~Security Perimeters and additional evidence to demonstrate that the process was implemented, such as visitor logs.
Reference to prior version: *CIP-006-4c, R1.6.2*		**Change Description and Justification:** ~~*No change*~~*Added the ability to not do this during CIP Exceptional Circumstances*.	

CIP-006-5 Table R2 – Visitor Control Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~A process requiring~~Require manual or automated logging of the entry and exit of visitors into the Physical Security Perimeter that includes date and time of the initial entry and last exit~~ on a per 24-hour basis~~, the visitor's name, and the name of an individual point of contact~~.~~ responsible for the visitor, except during CIP Exceptional Circumstances.	Evidence may include, but is not limited to, language in a visitor control program that ~~provides logging of the entry and exit~~requires continuous escorted access of visitors ~~including date, time, and visitor name along with the individual point of contact;~~within Physical Security Perimeters and additional evidence to demonstrate that the process was implemented, such as dated visitor logs ~~for each Defined Physical Boundary that~~ that include the ~~same~~ required information.
Reference to prior version: *CIP-006-4c R1.6.1*		**Change Description and Justification:** ~~*Addressed*~~*Added the ability to not do this during CIP Exceptional Circumstances, addressed multi-~~ entry ~~*requirements*~~*scenarios of the same person in a day (log first entry and ~~added the point of contact which is~~ last exit), and name of the person who ~~can be considered the~~ is responsible or sponsor for the visitor. There is no ~~need~~requirement to document the escort or handoffs between escorts.*	

CIP-006-5 Table R2 – Visitor Control Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Retain visitor logs for at least ninety calendar days.	Evidence may include, but is not limited to, documentation showing logs have been retained for at least ninety calendar days.
Reference to prior version: CIP-006-4c, R7		**Change Description and Justification:** *No change*	

Rationale: To ensure all Physical Access Control Systems and devices continue to function properly.

Summary of Changes: Reformatted into table structure.

Added details to address FERC Order No. 706, ~~paragraph~~Paragraph 581, directives ~~for~~to test more frequently than every three

R3. Each Responsible Entity shall implement one or more documented Physical Access Control System maintenance and testing programs that collectively include each of the applicable items in *CIP-006-5 Table R3 – Maintenance and Testing Program*. *[Violation Risk Factor: Lower] [Time Horizon: Long Term Planning~~]~~].*

M3. Evidence must include each of the documented Physical Access Control System maintenance and testing programs that collectively include each applicable item in *CIP-006-5 Table R3 – Maintenance and Testing Program* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-006-5 Table R3 – Physical Access Control System Maintenance and Testing Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirement**	**Measures**
3.1	~~Associated~~ Physical Access Control Systems associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity Locally mounted hardware or devices ~~associated with Defined~~at the Physical ~~Boundaries~~Security Perimeter associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity	~~Prior to commissioning, and at least once every 24 calendar months thereafter, maintenance~~Maintenance and testing of ~~the~~each Physical Access Control ~~Systems~~System and locally mounted hardware or devices at the ~~Defined~~ Physical ~~Boundary~~ Security Perimeter at least once every 24 calendar months to ensure ~~the required functionality is being provided~~they function properly.	Evidence may include, but is not limited to~~,~~ a maintenance and testing program that provides for testing ~~the~~each Physical Access Control ~~Systems~~System and locally mounted hardware or devices associated with ~~Defined~~each applicable Physical ~~Boundaries prior to commissioning and~~Security Perimeter at least once every 24 calendar months ~~thereafter,~~ and ~~provides~~ additional evidence to demonstrate that this testing was done, such as dated maintenance records, or other documentation showing testing and maintenance has been performed ~~at least once~~ on each applicable device or system at least once every 24 calendar months.
Reference to prior version: *CIP-006-4c, R8.1 and R8.2*		**Change Description and Justification:** *Added details to address FERC Order No. 706 ~~p581~~, Paragraph 581 directives to test more frequently than every three years. ~~It was felt annually~~The SDT determined that annual testing was too often and agreed on two years.*	

CIP-006-5 Table R3 – Physical Access Control System Maintenance and Testing Program			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirement**	**Measures**
3.2	~~Associated~~ Physical Access Control ~~or Monitoring~~ Systems associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity Locally mounted hardware or devices at the Physical Security Perimeter associated with: • High Impact BES Cyber Systems • Medium Impact BES Cyber Systems with External Routable Connectivity	~~Log dates, time, and duration for failures or~~Document outages ~~of~~for physical access control, logging, and alerting systems~~.~~ and retain the outage records for at least 12 calendar months.	Evidence may include, but is not limited to, ~~availability of~~ the outage records and availability of outage records for the preceding 12 calendar months.
Reference to prior version: *CIP-006-4c, R8.3*		**Change Description and Justification:** ~~*Outage records shall be generated but the retention period is addressed in the retention section*~~*No change*.	

C. Compliance

1. Compliance Monitoring Process:

~~5.1.~~1.1. Compliance Enforcement Authority~~.~~:

- ~~The~~ Regional Entity~~; or~~
- ~~If the Responsible Entity works for~~ shall serve as the Compliance Enforcement Authority ("CEA") unless the ~~Regional Entity, then the~~ applicable entity is owned, operated, or controlled by the Regional Entity ~~will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity) to be responsible for compliance enforcement.~~
- ~~For responsible entities that are also Regional Entities,~~. In such cases the ERO or a Regional ~~Entity~~entity approved by ~~the ERO and~~ FERC or other applicable governmental ~~authorities shall serve as the Compliance Enforcement Authority.~~
- ~~For NERC, a third-party monitor without vested interest in the outcome for NERC~~authority shall serve as the ~~Compliance Enforcement Authority~~CEA.

~~5.2.~~1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

~~5.3.~~1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting

- Complaint

~~5.4.~~1.4. Additional Compliance Information:

None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Long Term Planning** **Same-Day Operations**	**Medium**	The Responsible Entity has documented and implemented physical access controls, but logging of authorized physical entry through any ~~Defined~~ Physical ~~Boundary~~Security Perimeter does not provide sufficient information to uniquely identify the individual and date of entry. (~~Part~~ 1.~~7~~8) OR The Responsible Entity retained physical access logs for 75 or more calendar days, but for less than 90 calendar days. (1.9)	The Responsible Entity has documented and implemented physical access controls, but it does not alert for unauthorized physical access to Physical Access Control Systems ~~(Part 1.5~~or does not communicate such alerts within 15 minutes to identified personnel(1.7) OR The Responsible Entity retained physical access logs for 60 or more calendar days, but for less than 75 calendar days. (1.9)	The Responsible Entity has documented and implemented physical access controls, but does not alert for unauthorized ~~access through any access point in a Defined Physical Boundary. (Part 1.4~~circumvention of a physical access control into a Physical security Perimeter or does not communicate such alerts within 15 minutes to identified personnel. (1.5) OR The Responsible Entity has ~~documented and implemented physical access~~does not have controls~~, but does not initiate a response within 15 minutes of a~~	The Responsible Entity did not document or implement operational or procedural controls to restrict physical access to only those individuals who are authorized. (1.1) OR The Responsible Entity has documented and implemented physical access controls, but at least one method does not exist to restrict access to Medium Impact BES Cyber Systems with External Routable Connectivity or External Dial-up Connectivity. (1.2) OR

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
					~~detected~~ that monitor each Physical Access Control System twenty four hours a day, seven days a week (with 99.9% availability), for unauthorized physical access ~~into~~to a ~~Defined~~ Physical ~~Boundary. (Part~~ Access Control Systems. (1.6) OR The Responsible Entity retained physical access logs for 45 or more calendar days, but for less than 60 calendar days. (1.9)	The Responsible Entity has documented and implemented physical access controls, but two or more different ~~and complementary~~ methods do not exist to restrict access to High Impact BES Cyber Systems. (~~Part~~ 1.3) OR The Responsible Entity has does not have controls that monitor the Physical Security Perimeter twenty four hours a day, seven days a week (with 99.9% availability), for unauthorized circumvention of a physical access control into a Physical Security Perimeter. (1.4) OR The Responsible Entity

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						retained physical access logs for less than 45 calendar days. (1.9)
R2	**Same-Day Operations**	**Medium**	N/A	The Responsible Entity included a visitor control program in its physical security plan, but did not log each of the initial entry and last exit dates and times of the visitor on a daily basis, the visitor's name, and the point of contact. (2.2) OR The Responsible Entity included a visitor control program in its physical security plan, but failed to retain visitor logs for at least ninety days. (2.3)	The Responsible Entity included a visitor control program in its physical security plan, but it ~~does~~did not meet the requirements ~~of~~for continuous escort. (2.1)	The Responsible Entity has failed to include or implement a visitor control program to provide required escorted access of visitors within any ~~Defined~~ Physical ~~Boundary protecting BES Cyber Systems.~~ Security Perimeter. (2.1)

Guidelines and Technical Basis

While the focus is shifted from the definition and management of a completely enclosed "six-wall" boundary, it is expected in many instances this will remain a primary ~~control~~mechanism for controlling, alerting, and logging access to BES Cyber Systems. Taken together, these controls will effectively constitute the physical security plan to manage physical access to BES Cyber Systems.

Requirement R1:

Methods to restrict physical access include:

- Card Key: A means of electronic access where the access rights of the card holder are predefined in a computer database. Access rights may differ from one perimeter to another.
- Special Locks: These include, but are not limited to, locks with "restricted key" systems, magnetic locks that can be operated remotely, and "man-trap" systems.
- Security Personnel: Personnel responsible for controlling physical access who may reside on-site or at a monitoring station.
- Other Authentication Devices: Biometric, keypad, token, or other equivalent devices that control physical access into the ~~Defined~~ Physical ~~Boundary~~Security Perimeter.

Methods to ~~alert on~~monitor physical access include:

- Alarm Systems: Systems that alarm to indicate interior motion or when a door, gate, or window has been opened without authorization. These alarms must provide for immediate notification to personnel responsible for response.
- Human Observation of Access Points: Monitoring of physical access points by security personnel who are also controlling physical access.

Methods to log physical access include:

- Computerized Logging: Electronic logs produced by the Responsible Entity's selected access control and alerting method.
- Video Recording: Electronic capture of video images of sufficient quality to determine identity.
- Manual Logging: A log book or sign-in sheet, or other record of physical access maintained by security or other personnel authorized to control and monitor physical access.

The FERC Order No. 706 ~~p572~~, Paragraph 572, directive~~, directed the intent of~~ discussed utilizing two or more different and complementary physical access controls to provide defense in depth. It does not require two or more ~~Defined~~ Physical ~~Boundaries~~Security Perimeters, nor does it exclude the use of layered perimeters. Use of two-factor authentication would be acceptable at the same entry points for a non-layered single perimeter. For example, a sole perimeter's controls could include either a combination of card key and pin- code (something you know and something you have), or a card key and biometric scanner (something you have

and something you are), or a physical key in combination with a guard-monitored remote camera and door release, where the "guard" has adequate information to authenticate the person they are observing or talking to prior to permitting access (something you have and something you are). The two-factor authentication could be implemented using a single Physical Access Control System but more than one authentication method must be utilized. For physically layered protection, a locked gate in combination with a locked control-building could be acceptable, provided no single authenticator (i.e., key or card key) would provide access through both.

Typically any opening greater than 96 square inches, with one side greater than six inches in length, would be considered an access point into the Defined Physical Boundary.Security Perimeter. Protective measures such as bars, wire mesh, or other permanently installed metal barrier could be used to reduce the opening size, as long as it is leaves no opening greater than 96 square inches, or no more than six inches on its shortest side.

Requirement R2:

The logging of visitors should capture each visit of the individual and does not need to capture each entry or exit during that visit. This is meant to allow a visitor to temporarily exit the Defined Physical BoundarySecurity Perimeter to obtain something they left in their vehicle or outside the area without requiring a new log entry for each and every entry during the visit.

It isThe SDT also feltdetermined that a Point of Contact should be documented who can provide additional details about the visit if questions arise in the future. The point of contact could be the escort, but there is no need to document everyone that acted as an escort for the visitor.

Requirement R3:

This includes the testing of locally mounted hardware or devices used in controlling, alerting or logging access to the Defined Physical Boundary.Security Perimeter. This includes motion sensors, electronic lock control mechanisms, and badge readers which are not deemed to be part of the Physical Access Control System but are required for the protection of the BES Cyber Systems.

Outage records should address when the installed control, monitor, and logging systems or hardware at access points are broken or unavailable.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated version number from -2 to -3 Approved by the NERC Board of Trustees.	
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — System Security Management

2. Number: CIP-007-5

3. Purpose: To manage system security by specifying select technical, operational, and procedural requirements in support of protecting BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

4.1.7 Reliability Coordinator

4.1.8 Transmission Operator

4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

Standard CIP-007-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the applicable items in [Table Reference].*" The referenced table requires the applicable items in the procedures for a common subject matter.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the standards.
Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:
Each table row has an applicability column to further define the scope to which a specific requirement row applies to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as high impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems with External Routable Connectivity** – Only applies to medium impact BES Cyber Systems with External Routable Connectivity. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity.

- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.
- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.
- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column.

B. Requirements and Measures

Rationale for R1: The requirement is intended to minimize the attack surface of BES Cyber Systems through disabling or limiting access to unnecessary network accessible logical ports and services.

Summary of Changes: Changed the 'needed for normal or emergency operations' to those ports that are needed.

R1. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5 Table R1 – Ports and Services*. *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations.]*

M1. Evidence must include the documented processes that collectively include each of the applicable items in *CIP-007-5 Table R1 – Ports and Services* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R1– Ports and Services			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For applicable Cyber Assets and where technically feasible, enable only logical network accessible ports needed, including port ranges or services where needed to handle dynamic ports.	Evidence may include, but is not limited to: • Listings of the needed ports by Cyber Asset or class of Cyber Assets; • Listings of the listening ports on the Cyber Assets from either the device configuration files, command output (such as netstat), or network scans of open ports; or • Configuration files of host-based firewalls or other device level mechanisms that only allow needed ports and deny all others.
Reference to prior version: *CIP-007-4, R2.1 and R2.2*		**Change Description and Justification:** *The requirement focuses on the entity knowing and only allowing those ports that are necessary. The additional classification of 'normal or emergency' added no value and has been removed.*	

CIP-007-5 Table R1– Ports and Services			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers	Protect against the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	Evidence may include, but is not limited to, documentation showing types of protection of physical input/output ports, either logically through system configuration or physically using a port lock or signage.
Reference to prior version: *NEW*		**Change Description and Justification:** *In the March 18, 2010 FERC issued an order to approve NERC's interpretation of Requirement R2 of CIP-007-2. In this order, FERC agreed the term "ports" in "ports and services" refers to logical communication (e.g. TCP/IP) ports, but they also encouraged the drafting team to address unused physical ports.*	

Rationale for R2: Security patch management is a proactive way of monitoring and addressing known security vulnerabilities in software before those vulnerabilities can be exploited in a malicious manner to gain control of or render a BES Cyber Asset or BES Cyber System inoperable.

The remediation plan can be updated as necessary to maintain the reliability of the BES, including an explanation of any rescheduling of the remediation actions.

Summary of Changes: The existing wordings of CIP-007, Requirements R3, R3.1, and R3.2, were separated into individual line items to provide more granularity. The documentation of a source(s) to monitor for release of security related patches, hot fixes, and/or updates for BES Cyber System or BES Cyber Assets was added to provide context as to when the "release" date was. The current wording stated "document the assessment of security patches and security upgrades for applicability within thirty calendar days of availability of the patches or upgrades" there has been confusion as to what constitutes the availability. Due to issues that may occur regarding Control System vendor license and service agreements, flexibility must be given to Responsible Entities to define what sources are being monitored for BES Cyber Assets.

R2. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5 Table R2 – Security Patch Management*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning].*

M2. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-007-5 Table R2 – Security Patch Management* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R2 – Security Patch Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	A patch management program for tracking, evaluating, and installing cyber security patches for applicable Cyber Assets. The tracking portion shall include the identification of a source or sources that the Responsible Entity tracks for the release of cyber security patches for applicable Cyber Assets that are updateable and for which a patching source exists.	Evidence must include documentation of a patch management program and documentation or lists of sources that are monitored, whether on an individual BES Cyber System or Cyber Asset basis.
Reference to prior version: *CIP-007, R3*		**Change Rationale:** *The requirement is brought forward from previous CIP versions with the addition of defining the source(s) that a Responsible Entity monitors for the release of security related patches. Documenting the source is used to determine when the assessment timeframe clock starts. This requirement also handles the situation where security patches can come from an original source (such as an operating system vendor), but must be approved or certified by another source (such as a control system vendor) before they can be assessed and applied in order to not jeopardize the availability or integrity of the control system.*	

CIP-007-5 Table R2 – Security Patch Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Evaluate the security patches for applicability within 30 calendar days of availability of the patch from the source or sources identified in Part 2.1.	Evidence may include, but is not limited to, an evaluation conducted by, referenced by, or on behalf of a Responsible Entity of security-related patches released by the documented sources within 30 calendar days of availability.
Reference to prior version: *CIP-007, R3.1*		**Change Rationale:** *Similar to the current wording but added "from the source or sources identified in 2.1" to clarify the 30-day time frame.*	

CIP-007-5 Table R2 – Security Patch Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For applicable patches identified in Part 2.2, create a dated plan or revise an existing plan within 30 calendar days of the evaluation completion. The plan shall include the Responsible Entity's planned actions to mitigate the vulnerabilities exposed by each security patch and a timeframe to complete these mitigations.	Evidence may include, but is not limited to, a dated plan showing when and how the vulnerability will be addressed, to include documentation of the actions to be taken by the Responsible Entity to mitigate the vulnerabilities exposed by the security patch and a timeframe for the completion of these mitigations.
Reference to prior version: *CIP-007, R3.2*		**Change Rationale:** *The requirement has been changed to handle the situations where it is more of a reliability risk to patch a running system than the vulnerability presents. In all cases, the entity documents (either through the creation of a new or update of an existing mitigation plan) what they are going to do to mitigate the vulnerability and when they are going to do so. The mitigation plan may, and in many cases will, consist of installing the patch. However, there are times when it is in the best interest of reliability to not install a patch, and the entity can document what they have done to mitigate the vulnerability.*	

CIP-007-5 Table R2 – Security Patch Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For each plan created or revised in Part 2.3, implement the plan as created or revised within the timeframe specified in the plan, except for CIP Exceptional Circumstances.	Evidence may include, but is not limited to: • Records of the installation of the patch; • Records of implementation of vendor recommended mitigations; • Exports from automated patch management tools that provide installation date; • Verification of BES Cyber System Component software revision; • Registry exports that show software has been installed; or • Evidence that affected services have been disabled.
Reference to prior version: *CIP-007, R3.2*		**Change Rationale:** *Similar to the current wording but added "from the source or sources identified in Part 2.1" to clarify the 30-day time frame.*	

Rationale for R3: Malicious code prevention has the purpose of limiting and detecting the addition of malicious code onto the applicable Cyber Assets of a BES Cyber System. Malicious code (viruses, worms, botnets, targeted code such as Stuxnet, etc.) may compromise the availability or integrity of the BES Cyber System.

Summary of Changes: In prior versions, this requirement has arguably been the single greatest generator of TFEs as it prescribed a particular technology to be used on every CCA regardless of that asset's susceptibility or capability to use that technology. As the scope of Cyber Assets in scope of these standards expands to more field assets, this issue will only grow exponentially. The drafting team is taking the approach of making this requirement a competency based requirement where the entity must document how the malware risk is handled for each BES Cyber System, but it does not prescribe a particular technical method nor does it prescribe that it must be used on every Cyber Asset. The BES Cyber System is the object of protection.

Beginning in Paragraphs 619-622 of FERC Order No. 706, and in particular Paragraph 621, FERC agrees that the standard "does not need to prescribe a single method…However, how a responsible entity does this should be detailed in its cyber security policy so that it can be audited for compliance…"

In Paragraph 622, FERC directs that the requirement be modified to include safeguards against personnel introducing, either maliciously or unintentionally, viruses or malicious software through remote access, electronic media, or other means. The drafting team believes that addressing this issue holistically at the BES Cyber System level and regardless of technology, along with the enhanced change management requirements, meets this directive.

R3. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5 Table R3 – Malicious Code Prevention*. *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations].*

M3. Evidence must include each of the documented processes that collectively include each of the applicable items in *CIP-007-5 Table R3 – Malicious Code Prevention* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R3 – Malicious Code Prevention			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Deploy method(s) to deter, detect, or prevent malicious code.	Evidence may include, but is not limited to, records of the Responsible Entity's performance of these processes (e.g., through traditional antivirus, system hardening, policies, etc.).
Reference to prior version: *CIP-007-4, R4; CIP-007-4, R4.1*		**Change Rationale:** *See the Summary of Changes. FERC Order No. 706, Paragraph 621, states the standards development process should decide to what degree to protect BES Cyber Systems from personnel introducing malicious software.*	
3.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Mitigate the threat of identified malicious code.	Evidence may include, but is not limited to: • Predetermined response actions for malicious code detection; • Configuration of anti-virus response actions (e.g., quarantine, alert, etc.) to detected malicious code; or • Configuration of white-listing application to notify appropriate personnel of unauthorized applications.

CIP-007-5 Table R3 – Malicious Code Prevention			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-007-4, R4* *CIP-007-4, R4.1*		**Change Rationale:** *See the Summary of Changes.*	
3.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Update malicious code protections that use signatures or patterns at least once within 35 calendar days of each available signature or pattern release (this does not require use of every available release, but that for every release that is available, at least one update has occurred within 35 calendar days from that release), except for signature or pattern releases that the Responsible Entity documents as negatively affecting the Cyber Asset or BES Cyber System.	Evidence may include, but is not limited to: • Documentation showing the configuration of signature, or pattern updates for automated controls; or • Work logs showing the signature, or pattern updates for manual controls.
Reference to prior version: *CIP-007-4, R4; CIP-007-4, R4.2*		**Change Rationale:** *See the Summary of Changes. This part is written to ensure that signatures or patterns are updated within 35 days of release, but does not require installation of all releases so long as any given update occurs within 35 calendar days of each release. The part does not require update within 35 days of a particular release in cases where the Responsible Entity documents that the signature or pattern release negatively affects the Cyber Asset or BES Cyber System. Thirty-five Calendar days allows for a "once-a-month" frequency with slight flexibility to account for months with 31 days or for beginning or endings of months on weekends.*	

Rationale for R4: Security event monitoring has the purpose of detecting unauthorized access, reconnaissance and other malicious activity on BES Cyber Systems and comprises of the activities involved with the collection, processing, alerting and retention of security-related computer logs. These logs can provide both (1) the immediate detection of an incident and (2) useful evidence in the investigation of an incident. The retention of security-related logs is intended to support post-event data analysis.

Audit processing failures are not penalized in this requirement. Instead, the requirement specifies processes which must be in place to monitor and respond to audit processing failures.

Summary of Changes: Beginning in Paragraph 525 and also Paragraph 628 of the FERC Order No. 706, the Commission directs a manual review of security event logs on a more periodic basis. This requirement combines CIP-005-4, R5 and CIP-007-4, R6 and addresses both directives from a system-wide perspective. The primary feedback received on this requirement from the informal comment period was the vagueness of terms "security event" and "monitor."

The term "security event" or "events related to cyber security" is problematic because it does not apply consistently across all platforms and applications. To resolve this term, the requirement takes an approach similar to NIST 800-53 and requires the entity to define the security events relevant to the System.

In addition, this requirement sets up parameters for the monitor and review processes. It is rarely feasible or productive to look at every security log on the system. Paragraph 629 of the FERC Order No. 706 acknowledges this reality when directing a manual log review. As a result, this requirement allows the manual review to consist of a sampling or summarization of security events occurring since the last review.

R4. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5 Table R4 – Security Event Monitoring*. *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Assessment.]*

M4. Evidence must include each of the documented processes that collectively include each of the applicable items in *CIP-007-5 Table R4 – Security Event Monitoring* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Log events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. detected and logged failed access attempts at Electronic Access Points; 4.1.2. detected and logged successful and failed login attempts; 4.1.3. detected and logged malicious software; and 4.1.4. detected and logged malicious activity.	Evidence may include, but is not limited to, a paper or system generated listing of event types for which the BES Cyber System is capable of detecting and, for generated events, is configured to log. This listing must include the required event types.
Reference to prior version: *CIP-005-4, R3; CIP-007-4, R5, R5.1.2, R6.1, andR6.3*		**Change Description and Justification:** *This requirement is derived from NIST 800-53 version 3 AU-2, which requires organizations to determine system events to audit for incident response purposes. The industry expressed confusion in the term "system events related to cyber security" from informal comments received on CIP-011. Access logs from the ESP as required in CIP-005-4 Requirement R3 and user access and activity logs as required in CIP-007-5 Requirement R5 are also included here.*	

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Generate alerts for security events that the Responsible Entity determines necessitate a real-time alert, that includes, as a minimum, each of the following types of events where technically feasible: 4.2.1. detected malicious activity; and 4.2.2. detected failure of 4.1 event logging.	Evidence may include, but is not limited to paper or system-generated listing of security events which the Responsible Entity determined necessitate real-time alerts and paper or system generated list showing how real-time alerts are configured.
Reference to prior version: *CIP-005-4, R3.2; CIP-007-4, R6.2*		**Change Description and Justification:** *This requirement is derived from alerting requirements in CIP-005-4, Requirement R3.2 and CIP-007-4, Requirement R6.2 in addition to NIST 800-53 version 3 AU-6. Previous CIP Standards required alerting on unauthorized access attempts and detected Cyber Security Incidents, which can be vast and difficult to determine from day to day. Changes to this requirement allow the entity to determine events that necessitate an immediate response.*	

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Activate a response to detected event logging failures before the end of the next calendar day.	Evidence may include, but is not limited to, documentation describing the response and its timing, or an attestation indicating that no such events occurred.
Reference to prior version: *New Requirement*		**Change Rationale:** *This requirement was derived from NIST 800-53 version 3 AU-5, which addresses response to audit processing failures. Misunderstandings with previous versions considered the failure of the security event monitoring and alerting system itself to be a violation. The purpose of this requirement is to have mitigation in place rather than penalizing audit processing failures.*	

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Retain BES Cyber System security-related event logs identified in Part 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	Evidence may include, but is not limited to: 1. security-related event logs from the past 90 days; 2. records of disposition of security-related event logs beyond 90 days up to the evidence retention period; and 3. paper or system generated reports showing log retention configuration set at 90 days or greater.
Reference to prior version: *CIP-005-4, R3.2; CIP-007-4, R6.4*		**Change Rationale:** *No substantive change.*	

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.5	High Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Review a summarization or sampling of logged events at a minimum every two weeks to identify undetected Cyber Security Incidents.	Evidence may include, but is not limited to, documentation describing the review, any findings from the review (if any), signed and dated documentation showing the review occurred.
Reference to prior version: *CIP-005-4, R3.2; CIP-007-4, R6.5*		**Change Description and Justification:** *Beginning in Paragraph 525 and also 628 of the FERC Order No. 706, the Commission directs a manual review of security event logs on a more periodic basis and suggests a weekly review. The Order acknowledges it is rarely feasible to review all system logs. Indeed, log review is a dynamic process that should improve over time and with additional threat information. Changes to this requirement allow for a weekly summary or sampling review of logs.*	

Rationale for R5: To help ensure that no authorized individual can gain electronic access to a BES Cyber System until the individual has been authenticated, i.e., until the individual's logon credentials have been validated. Requirement R5 also seeks to reduce the risk that static passwords, where used as authenticators, may be compromised.

Changing default passwords closes an easily exploitable vulnerability in many systems and applications.

For password-based user authentication, using strong passwords and changing them periodically helps mitigate the risk of successful password cracking attacks and the risk of accidental password disclosure to unauthorized individuals. In these requirements, the drafting team considered multiple approaches to ensuring this requirement was both effective and flexible enough to allow Responsible Entities to make good security decisions. One of the approaches considered involved requiring minimum password entropy, but the calculation for true information entropy is more highly complex and makes several assumptions in the passwords users choose. Users can pick poor passwords well below the calculated minimum entropy.

The drafting team also chose to not require technical feasibility exceptions for devices that cannot meet the length and complexity requirements in password parameters. The objective of this requirement is to apply a measurable password policy to deter password cracking attempts, and replacing devices to achieve a specified password policy does not meet this objective. At the same time, this requirement has been strengthened to require account lockout or alerting for failed login attempts, which in many instances better meets the requirement objective.

The requirement to change passwords exists to address password cracking attempts if an encrypted password were somehow attained and also to refresh passwords which may have been accidentally disclosed over time. The requirement permits the entity to specify the periodicity of change to accomplish this objective. Specifically, the drafting team felt determining the appropriate periodicity based on a number of factors is more effective than specifying the period for every BES Cyber System in the Standard. In general, passwords for user authentication should be changed at least annually. The periodicity may increase in some cases. For example, application passwords that are long and pseudo-randomly generated could have a very long periodicity. Also, passwords used only as a weak form of application authentication, such as accessing the configuration of a relay may only need to be changed as part of regularly scheduled maintenance.

The Cyber Asset should automatically enforce the password policy for individual user accounts. However, for shared accounts in which no mechanism exists to enforce password policies, the Responsible Entity can enforce the password policy procedurally and through internal assessment and audit.

Summary of Changes (From R5): CIP-007-4, Requirements R5.2.2 and R5.2.3 requiring the identification and management of shared account access have been removed. These requirements already exist in the authorization, security event monitoring and revocation of access, and guidance for these requirements makes clear the consideration of shared accounts. The requirement to identify and determine acceptable use for these accounts remains and the standard includes additional guidance on types of accounts to identify and appropriate use of these account types.

CIP-007-4, Requirement R5.3 requires the use of passwords and specifies a specific policy of six characters or more with a combination of alpha-numeric and special characters. The level of detail in these requirements can restrict more effective security measures. For example, many have interpreted the password for tokens or biometrics must satisfy this policy and in some cases prevents the use of this stronger authentication. Also, longer passwords may preclude the use of strict complexity requirements. The password requirements have been changed to allow the entity to specify the most effective password parameters based on the impact of the BES Cyber System, the way passwords are used, and the significance of passwords in restricting access to the system. The SDT feels these changes strengthen the authentication mechanism by requiring entities to look at the most effective use of passwords in their environment. Otherwise, prescribing a strict password policy has the potential to limit the effectiveness of security mechanisms and preclude better mechanisms in the future.

R5. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5 Table R5 – System Access Controls*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning].*

M5. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-007-5 Table 5 – System Access Controls* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R5 – System Access Control			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Enforce authentication of all user access, where technically feasible.	Evidence may include, but is not limited to, documentation describing how access is authenticated.
Reference to prior version: *CIP-007-4, R5*		**Change Rationale:** *The requirement to enforce authentication for all user access is included here. The requirement to establish, implement, and document controls is included in this introductory requirement. The requirement to have technical and procedural controls was removed because technical controls suffice when procedural documentation is already required. The phrase "that minimize the risk of unauthorized access" was removed and more appropriately captured in the rationale statement.*	

CIP-007-5 Table R5 – System Access Control			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	The CIP Senior Manager or delegate must authorize enabled default or other generic account types, either by system, by groups of systems, by location, or by system type(s).	Evidence may include, but is not limited to, a listing of accounts by account types and signed documentation or workflow by a CIP Senior Manager or delegate showing the approval of enabled or generic account types in use for the BES Cyber System.
Reference to prior version: *CIP-007-4, R5.2 and R5.2.1*		**Change Rationale:** *CIP-007-4 requires entities to minimize and manage the scope and acceptable use of account privileges. The requirement to minimize account privileges has been removed because the implementation of such a policy is difficult to measure at best.*	
5.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Identify individuals who have authorized access to shared accounts.	Evidence may include, but is not limited to, listing of shared accounts and the individuals who have access to each shared account.
Reference to prior version: *CIP-007-4, R5.2.2*		**Change Rationale:** *No significant changes. Added "authorized" access to make clear that individuals storing, losing or inappropriately sharing a password is not a violation of this requirement.*	

CIP-007-5 Table R5 – System Access Control			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Change default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on Cyber Assets.	Evidence may include, but is not limited to: • Records of a procedure that passwords are changed when new devices are deployed; or • Documentation in system manuals or other vendor documents showing default vendor passwords were generated pseudo-randomly and are thereby unique to the device.
Reference to prior version: *CIP-007-4, R5.2.1*		**Change Rationale:** *The requirement for the "removal, disabling or renaming of such accounts where possible" has been removed and incorporated into guidance for acceptable use of account types. This was removed because those actions are not appropriate on all account types. Added the option of having unique default passwords to permit cases where a system may have generated a default password or a hard-coded uniquely generated default password was manufactured with the BES Cyber System.*	

CIP-007-5 Table R5 – System Access Control			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is, at least, the lesser of eight characters or the maximum length supported by the Cyber Asset; and 5.5.2. Minimum password complexity that is the lesser of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the Cyber Asset.	Evidence may include, but is not limited to: • System-generated reports or screen-shots of the system-enforced password parameters, including length and complexity; or • Attestations by individuals that the procedurally enforced passwords meet the password parameters.
Reference to prior version: *CIP-007-4, R5.3*		**Change Rationale:** *CIP-007-4, Requirement R5.3 requires the use of passwords and specifies a specific policy of six characters or more with a combination of alpha-numeric and special characters. The level of detail in these requirements can restrict more effective security measures. The password requirements have been changed to permit the maximum allowed by the device in cases where the password parameters could otherwise not achieve a stricter policy. This change still achieves the requirement objective to minimize the risk of unauthorized disclosure of password credentials while recognizing password parameters alone do not achieve this. The drafting team felt allowing the Responsible Entity the flexibility of applying the strictest password policy allowed by a device outweighed the need to track a relatively minimally effective control through the TFE process.*	

CIP-007-5 Table R5 – System Access Control			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.6	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For password-based user authentication, either technically or procedurally enforce password changes or an obligation to change the password at least once each calendar year, not to exceed 15 calendar months between changes.	Evidence may include, but is not limited to: • System-generated reports or screen-shots of the system-enforced periodicity of changing passwords; or • Attestations by individuals that the procedurally enforced passwords meet the password parameters.
Reference to prior version: *CIP-007-4, R5.3.3*		**Change Rationale:** **This was originally Requirement R5.5.3, but moved to add "external routable connectivity" to medium impact in response to comments. This requirement is limited in scope because the risk to performing an online password attack is lessened by its lack of external routable connectivity. Frequently changing passwords at field assets can entail significant effort with minimal risk reduction.*	

CIP-007-5 Table R5 – System Access Control			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.7	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Limit, where technically feasible, the number of unsuccessful authentication attempts or generate alerts after a threshold of unsuccessful login attempts.	Evidence may include, but is not limited to: • Documentation of the account-lockout parameters; or • Rules in the alerting configuration showing how the system notified individuals after a determined number of unsuccessful login attempts.
Reference to prior version: *New Requirement*		**Change Rationale:** *Minimizing the number of unsuccessful login attempts significantly reduces the risk of live password cracking attempts. This is a more effective control in live password attacks than password parameters.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Guidelines and Technical Basis

Requirement R1:

Requirement 1 exists to reduce the attack surface of Cyber Assets by requiring entities to disable known unnecessary ports. The SDT intends for the entity to know what network accessible ("listening") ports and associated services are accessible on their assets and systems, whether they are needed for that Cyber Asset's function, and disable or restrict access to all other ports.

1.1. This requirement is most often accomplished by disabling the corresponding service or program that is listening on the port or configuration settings within the Cyber Asset. It can also be accomplished through using host-based firewalls, TCP_Wrappers, or other means on the Cyber Asset to restrict access. Note that the requirement is applicable at the Cyber Asset level. The Cyber Assets are those which comprise the applicable BES Cyber Systems and their associated Cyber Assets. This control is another layer in the defense against network-based attacks, therefore the SDT intends that the control be on the device itself, or positioned inline in a non-bypassable manner. Blocking ports at the ESP border is a requirement in CIP-005, Requirement R1 to protect the network and does not substitute for this device level requirement. If a device has no provision for disabling or restricting logical ports on the device (example - purpose built devices that run from firmware with no port configuration available) then those ports that are open are deemed 'needed.'

1.2. Examples of physical I/O ports include network, serial and USB ports external to the device casing. BES Cyber Systems should exist within a Physical Security Perimeter in which case the physical I/O ports have protection from unauthorized access, but it may still be possible for accidental use such as connecting a modem, connecting a network cable that bridges networks, or inserting a USB drive. The protection of these ports can be accomplished in several ways including, but not limited to:

- Disabling all unneeded physical ports within the Cyber Asset's configuration
- Prominent signage, tamper tape, or other means of conveying that the ports should not be used without proper authorization
- Physical port obstruction through removable locks

Requirement R2:

The SDT's intent of Requirement R2 is to require entities to know, track, and mitigate the known software vulnerabilities associated with their BES Cyber Assets. It is not strictly an "install every security patch" requirement; the main intention is to "be aware of in a timely manner and manage all known vulnerabilities" requirement.

Patch management is required for BES Cyber Systems that are accessible remotely as well as standalone systems. Stand alone systems are vulnerable to intentional or unintentional introduction of malicious code. A sound defense-in-depth security strategy employs additional measures such as physical security, malware prevention software, and software patch management to reduce the introduction of malicious code or the exploit of known vulnerabilities.

One or multiple processes could be utilized. An overall assessment process may exist in a top tier document with a low tier documents establishing the more detailed process followed for individual systems. Low tier documents could be used to cover BES Cyber System nuances that may occur at the system level.

2.1. The Responsible Entity is to have a patch management program that covers tracking, evaluating, and installing cyber security patches. The requirement covers only patches that involve cyber security fixes and does not cover patches that are purely functionality related with no cyber security impact. Tracking involves processes for notification of the availability of new cyber security patches for the Cyber Assets. Documenting the patch source in the tracking portion of the process is required to determine when the assessment timeframe clock starts. This requirement handles the situation where security patches can come from an original source (such as an operating system vendor), but must be approved or certified by another source (such as a control system vendor) before they can be assessed and applied in order to not jeopardize the availability or integrity of the control system. The source can take many forms. The National Vulnerability Database, Operating System vendors, or Control System vendors could all be sources to monitor for release of security related patches, hotfixes, and/or updates. A patch source is not required for Cyber Assets that have no updateable software or firmware, or those Cyber Assets that have no existing source of patches such as vendors that no longer exist.

2.2. Responsible Entities are to perform an assessment of security related patches within 30 days of release from their monitored source. An assessment should consist of determination of the applicability of each patch to the entity's specific environment and systems. If the patch is determined to be non-applicable, that is documented with the reasons why and the entity is compliant. If the patch is applicable, the assessment can include a determination of the risk involved, how the vulnerability can be remediated, the urgency and timeframe of the remediation, and the steps the entity has previously taken or will take. Considerable care must be taken in applying security related patches, hotfixes, and/or updates or applying compensating measures to BES Cyber System or BES Cyber Assets that are no longer supported by vendors. The security patches, hotfixes, and/or updates or compensating measures may reduce the reliability of the system. The Responsible Entity must be allowed to evaluate their individual risk exposure and determine if actions must be taken to secure the system. The Responsible Entities can use the information provided in the Department of Homeland Security "Quarterly Report on Cyber Vulnerabilities of Potential Risk to Control Systems" as a source. The DHS document "Recommended Practice for Patch Management of Control Systems" provides guidance on an evaluative process. It uses severity levels determined using the Common Vulnerability Scoring System Version 2. Determination that a security related patch, hotfix, and/or update poses too great a risk to install on a system or is not applicable due to the system configuration should not require a TFE.

When documenting the remediation plan measures it may not be necessary to document them on a one to one basis. The remediation plan measures may be cumulative. A measure to address a software vulnerability may involve disabling a particular service. That same service may be exploited through other software vulnerabilities. Therefore disabling the single service has addressed multiple patched vulnerabilities.

2.3. For those security related patches that are determined to be applicable, the Responsible Entity must create a dated plan within 30 days which will outline the actions to be taken or those that have already been taken by the Responsible Entity to mitigate the vulnerabilities exposed by the security patch. Timeframes do not have to be designated as a particular calendar day but can have event designations such as "at next scheduled outage of at least two days duration". If the entity is going to install the patch, the plan can consist of a a simple record that normal patch installation process from 2.1 will be followed and designate the date of the patch installation.

2.4. The entity has been notified of, has assessed, and has developed a plan to remediate the known risk and that plan must be implemented. Remediation plans that only include steps that have been previously taken are considered implemented upon completion of the documentation. Remediation plans that have steps to be taken to remediate the vulnerability must be implemented by the timeframe the entity documented in their plan. There is no maximum timeframe in this requirement as patching and other system changes carries its own risk to the availability and integrity of the systems and may require waiting until a planned outage. In periods of high demand or threatening weather, changes to systems may be curtailed or denied due to the risk to reliability.

Requirement R3:

3.1. Due to the wide range of equipment comprising the BES Cyber Systems and the wide variety of vulnerability and capability of that equipment to malware, it is not practical within the standard to prescribe how malware is to be addressed on each Cyber Asset. Rather, the Responsible Entity determines on a BES Cyber System basis which Cyber Assets have susceptibility to malware intrusions and documents their plans and processes for addressing those risks and provides evidence that they follow those plans and processes. There are numerous options available including traditional antivirus solutions for common operating systems, white-listing solutions, network isolation techniques, portable storage media policies, Intrusion Detection/Prevention (IDS/IPS) solutions, etc. If an entity has numerous BES Cyber Systems or Cyber Assets that are of identical architecture, they may provide one process that describes how all the like Cyber Assets are covered. If a specific Cyber Asset has no updateable software and its executing code cannot be altered, then that Cyber Asset is considered to have its own internal method of deterring malicious code and should not require a TFE.

3.2. When malicious code is detected on a Cyber Asset within the applicability of this requirement, the threat posed by that code must be mitigated. In situations where traditional antivirus products are used, they may be configured to automatically remove or quarantine the malicious code. In white-listing situations, the white-listing tool itself can mitigate the threat as it will not allow the code to execute, however steps should still be taken to remove the malicious code from the Cyber Asset. In some instances, it may be in the best interest of reliability to not immediately remove or quarantine the malicious code, such as when availability of the system may be jeopardized by removal while operating and a rebuild of the system needs to be scheduled. In that case, monitoring may be increased and steps taken to insure the malicious code cannot communicate with other systems. In some instances the entity may be working with law enforcement or other governmental entities to closely monitor

the code and track the perpetrator(s). For these reasons, there is no maximum timeframe or method prescribed for the removal of the malicious code, but the requirement is to mitigate the threat posed by the now identified malicious code.

3.3. In instances where malware detection technologies depend on signatures or patterns of known attacks, the effectiveness of these tools against evolving threats is tied to the ability to keep these signatures and patterns updated in a timely manner. The requirement is written to handle two update frequency situations.

1) For those technologies that are providing very frequent updates (at most monthly but often daily or sometimes hourly), the updates applied to the applicable Cyber Assets should be no more than 35 calendar days old. In these instances, this is a 'maximum staleness' requirement. It does not require that every update within a 35 day period be applied, but that the currently installed update be no more than 35 days old.

2) For those technologies that provide less frequent updates that are more than 35 days, the requirements should be applied within 35 days of the last available update.

Testing of signature or pattern updates is not required. In a BES Cyber System, there may be some Cyber Assets that would benefit from the more timely installation of the updates where availability of that Cyber Asset would not jeopardize the availability of the BES Cyber System's ability to perform its function. For example, some HMI workstations where portable media is utilized may benefit from having the very latest updates at all times. Other Cyber Assets should have any updates tested before implementation where the result of a 'false positive' could harm the availability of the BES Cyber System. The testing should not negatively impact the reliability of the BES. The testing should be focused on the update itself and if it will have an adverse impact on the BES Cyber System. Testing in no way implies that the entity is testing to ensure that malware is indeed detected by introducing malware into the environment. It is strictly focused on ensuring that the update does not negatively impact the BES Cyber System before those updates are placed into production.

Requirement R4:

Refer to NIST 800-92 for additional guidance in security event monitoring.

4.1. In a complex computing environment and faced with dynamic threats and vulnerabilities, it is not practical within the standard to enumerate all security-related events necessary to support the activities for alerting and incident response. Rather, the Responsible Entity determines which computer generated events are necessary to log, provide alerts and monitor for their particular BES Cyber System environment.

Specific security events already required in Version 4 of the CIP Standards carry forward in this version. This includes access attempts at the Electronic Access Points, if any have been identified for a BES Cyber Systems. Examples of access attempts include: (i) blocked network access attempts, (ii) successful and unsuccessful remote user access attempts, (iii) blocked network access attempts from a remote VPN, and (iv) successful network access attempts or network flow information.

User access and activity events include those events generated by Cyber Assets within the Electronic Security Perimeter that have access control capability. These types of events include: (i) successful and unsuccessful authentication, (ii) account management, (iii) object access, and (iv) processes started and stopped.

It is not the intent of the SDT that if a device cannot log a particular event that a TFE must be generated. The SDT's intent is that if any of the items in the bulleted list (for example, user logouts) can be logged by the device, but the entity disables or neglects to enable that logging, it is a violation. If the device does not have the capability of logging that event, the entity remains compliant.

4.2. Real-time alerting allows the cyber system to automatically communicate events of significance to designated responders. This involves configuration of a communication mechanism and log analysis rules. Alerts can be configured in the form of an email, text message, or system display and alarming. The log analysis rules can exist as part of the operating system, specific application or a centralized security event monitoring system. On one end, a real-time alert could consist of a set point on an RTU for a login failure, and on the other end, a security event monitoring system could provide multiple alerting communications options triggered on any number of complex log correlation rules.

The events triggering a real-time alert may change from day to day as system administrators and incident responders better understand the types of events that might be indications of a cyber-security incident. Configuration of alerts also must balance the need for responders to know an event occurred with the potential inundation of insignificant alerts. The following list includes examples of events a Responsible Entity should consider in configuring real-time alerts:

- Detected known or potential malware or malicious activity
- Login failures for critical accounts
- Interactive login of system accounts
- Enabling of accounts
- Newly provisioned accounts
- System administration or change tasks by an unauthorized user
- Authentication attempts on certain accounts during non-business hours
- Unauthorized configuration changes
- Insertion of removable media in violation of a policy

4.3. Event logging failures occur when the components of the BES Cyber System cannot log events the Responsible Entity designated in 4.1. The most common reason for event logging failures is the event log being filled up beyond its configured storage threshold. However, there may be any number of other reasons for event logging failures.

For centralized logging systems, it should not be considered a failure if communication goes down between the Cyber Asset and the logging system if the Cyber Asset can store the logs locally for a period of time until the communication comes back up.

4.5. Reviewing logs every two weeks can consist of analyzing a summarization or sampling of logged events. NIST SP800-92 provides a lot of guidance in periodic log analysis. If a centralized security event monitoring system is used, log analysis can be performed top-down starting with a review of trends from summary reports. The log review can also be an extension of the exercise in identifying those events needing real-time alerts by analyzing events that are not fully understood or could possibly inundate the real-time alerting.

Requirement R5:

Account types referenced in this guidance typically include:

- Shared user account: An account used by multiple users for normal business functions by employees or contractors. Usually on a device that does not support Individual User Accounts.
- Individual user account: An account used by a single user.
- Administrative account: An account with elevated privileges for performing administrative or other specialized functions. These can be individual or shared accounts.
- System account: Accounts used to run services on a system (web, DNS, mail etc). No users have access to these accounts.
- Application account: A specific system account, with rights granted at the application level often used for access into a Database.
- Guest account: An individual user account not typically used for normal business functions by employees or contractors and not associated with a specific user. May or may not be shared by multiple users.
- Remote access account: An individual user account only used for obtaining Interactive Remote Access to the BES Cyber System.

5.4. Where possible, any accounts provided by a vendor should be removed, renamed, or disabled prior to production use of the Cyber Asset or BES Cyber System. If this is not possible, the passwords must be changed from the default provided by the vendor. Default passwords can be commonly published in vendor documentation that is readily available to all customers using that type of equipment and possibly published online.

The requirement option to have unique password addresses cases where the Cyber Asset generates or has assigned pseudo-random default passwords at the time of production or installation. In these cases, the default password does not have to change because the system or manufacturer created it specific to the Cyber Asset.

5.5. Technical or procedural enforcement of password parameters are required where passwords are the only credential used to authenticate individuals. Technical enforcement of the password parameters means a Cyber Asset verifies an individually selected password meets the required parameters before allowing the account to authenticate with the selected password. Technical enforcement should be used in most cases when the authenticating Cyber

Asset supports enforcing password parameters. Likewise, procedural enforcement means requiring the password parameters through procedures. Individuals choosing the passwords have the obligation of ensuring the password meets the required parameters.

Password complexity refers to the policy set by a Cyber Asset to require passwords to have one or more of the following types of characters: (1) lowercase alphabetic, (2) uppercase alphabetic, (3) numeric, and (4) non-alphanumeric or "special" characters (e.g. #, $, @, &), in various combinations.

The requirement to change passwords permits the Responsible Entity to determine the periodicity of the password change in their policies and procedures based on a number of factors. The following table suggests appropriate periodicity requirements for passwords based on these factors.

Account Type	Impact Level	Significance of passwords in preventing unauthorized access	Existing Service Agreements	Suggested Periodicity of Password Change
User account password	High	Primary access path	None.	90 days
User account password	Medium	Primary access path	None.	180 days
Shared account Password for a microprocessor relay, PLC, RTU, etc.	Medium	Local access path. Individuals must authenticate at an upstream device prior to gaining access.	None.	During regularly scheduled maintenance
Shared account password for a generation control system	Medium	Local access path. Individuals must authenticate at an upstream device prior to gaining access.	None.	During scheduled plant outages
Administrative account passphrase with 15+ characters	High or Medium	Local access path. Remote user must be authenticated using a different account	None.	One year
System account password with 25+ pseudo-random characters	High or Medium	Local access path	None.	Two years or more

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the ~~first~~second posting of ~~the~~ Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (Version 5)~~A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. ~~18~~24 **Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the ~~standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of ~~Trustees~~Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center~~"~~."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3	12/16/09	Updated version number from -2 to -3 Approved by the NERC Board of Trustees.	
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — System Security Management

2. Number: CIP-007-5

3. Purpose: ~~Standard CIP-007-5 requires the implementation of~~ To manage system security by specifying select technical ~~mechanisms for reducing the risk of loss of availability due to degradation~~, operational, and ~~misuse of~~procedural requirements in support of protecting BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

~~4.1.2~~4.1.3 Generator Operator

~~4.1.3~~4.1.4 Generator Owner

~~4.1.4~~4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

~~4.1.5~~4.1.7 Reliability Coordinator

~~4.1.6~~4.1.8 Transmission Operator

~~4.1.7~~4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 ~~that are part of any of the following systems~~Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

~~4.2.1~~4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS ~~program required by a NERC~~ or ~~Regional Reliability Standard~~

- ~~A UVLS~~UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- ~~A Special Protection System or Remedial Action Scheme required by a NERC or Regional Reliability Standard~~
- ~~A Transmission Protection System required by a NERC or Regional Reliability Standard~~
- ~~Its Transmission Operator's restoration plan~~

~~4.2.2~~4.2.3 where the~~Generator Operator~~

~~4.2.3~~4.2.4 ~~Generator Owner~~

~~4.2.4~~4.2.5 ~~Interchange Coordinator~~

~~4.2.5 Load Serving Entity that owns Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

~~4.2.6 NERC~~

~~4.2.7 Regional Entity~~

~~4.2.8~~4.2.6 ~~Reliability Coordinator~~

~~4.2.9~~4.2.7 ~~Transmission Operator~~

~~4.2.10~~4.2.8 ~~Transmission Owner~~

4.3. ~~Facilities:~~

~~4.3.1 Load Serving Entity: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

~~4.3.2 Distribution Providers: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~
- ~~A~~ Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard

- A ~~Transmission~~ Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard

- ~~Its Transmission Operator's restoration plan~~

- ~~**All other**~~ Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

~~**4.3.3**~~**4.3.1 Responsible Entities~~:~~ listed in 4.1 other than Distribution Providers and Load-Serving Entities**: All BES Facilities.

~~**4.3.4**~~**4.3.2 Exemptions:** The following are exempt from Standard CIP-~~007~~002-5:

~~**4.3.4.1**~~**4.3.2.1** Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

~~**4.3.4.2**~~**4.3.2.2** Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

~~**4.3.4.3**~~**4.3.2.3** In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.~~-~~R. Section 73.54.

~~**4.3.4.4 Responsible Entities that, in compliance with Standard CIP-002-5, identify that they have no BES Cyber Systems.**~~

5. Background:

Standard CIP-007-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

~~Each requirement opens~~Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the ~~required~~applicable items in [Table Reference].*" The referenced table requires the ~~specific elements~~applicable items in the procedures for a common subject matter ~~as applicable~~.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of ~~specific elements required~~applicable items in

the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not ~~infer~~imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e.~~.~~, incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the ~~Standards~~standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the ~~Standards.~~standards. Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies~~.~~ to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- ~~**All Responsible Entities –** Applies to all Responsible Entities listed in the Applicability section of the Standard. This requirement applies at an organizational level rather than individually to each BES Cyber System. Requirements having this applicability comprise basic elements of an organizational CIP cyber security program.~~

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~High Impact~~high impact according to the CIP-002-5 identification and categorization processes. ~~Responsible Entities can implement common controls~~

~~that meet requirements for multiple High and Medium Impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.~~

- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems with External Routable Connectivity** – Only applies to ~~Medium Impact~~medium impact BES Cyber Systems with External Routable Connectivity. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity.
- ~~**Low Impact BES Cyber Systems with External Routable Connectivity –** Applies to each Low Impact BES Cyber Systems with External Routable Connectivity according to the CIP-002-5 identification and categorization process, which includes all other BES Cyber Systems not categorized as High or Medium.~~
- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding ~~High or Medium Impact BES Cyber Systems.~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.
- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.
- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column.
- ~~**Electronic Access Points –** Applies at Electronic Access Points (with External Routable Connectivity or dial-up connectivity) associated with a referenced BES Cyber System.~~
- ~~**Electronic Access Points with External Routable Connectivity –** Applies at Electronic Access Points with External Routable Connectivity. This excludes those Electronic Access Points with dial-up connectivity.~~
- ~~**Locally Mounted Hardware or Devices Associated with Defined Physical Boundaries –** Applies to the locally mounted hardware (e.g. such as motion~~

~~sensors, electronic lock control mechanisms, and badge readers) associated with a Defined Physical Boundary for High or Medium Impact BES Cyber Systems. These hardware and devices are excluded in the definition of Physical Access Control Systems.~~

B. Requirements and Measures

Rationale for R1: The requirement is intended to minimize the attack surface of BES Cyber Systems through disabling or limiting access to unnecessary network accessible logical ports and ~~physical I/O ports~~services.

Summary of Changes: Changed the 'needed for normal or emergency operations' to those ports that are ~~documented with reasons why they are necessary. In the March 18, 2010 FERC issued an order to approve NERC's interpretation of Requirement R2 of CIP-007-2. In this order, FERC agreed the term "ports" in "ports and services" refers to logical communication (e.g. TCP/IP) ports, but they also encouraged the drafting team to address unused physical ports.~~needed.

R1. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5 Table R1 – Ports and Services*. *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations~~].~~]*

M1. Evidence must include the documented processes that collectively include each of the applicable items in *CIP-007-5 Table R1 – Ports and Services* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R1– Ports and Services			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Disable or restrict access to unnecessary~~For applicable Cyber Assets and where technically feasible, enable only logical network accessible ports ~~and document the need for any remaining logical network accessible~~needed, including port ranges or services where needed to handle dynamic ports.	Evidence may include, but is not limited to~~, documentation~~: • Listings of the ~~need for each network-accessible port and screen shots showing the accessible~~needed ports ~~of BES~~by Cyber Asset or class of Cyber Assets~~.~~; • Listings of the listening ports on the Cyber Assets from either the device configuration files, command output (such as netstat), or network scans of open ports; or • Configuration files of host-based firewalls or other device level mechanisms that only allow needed ports and deny all others.
Reference to prior version: *CIP-007-4, R2.1 and R2.2*		**Change Description and Justification:** *The requirement focuses on the entity knowing and only allowing those ports that are necessary. The additional classification of 'normal or emergency' added no value and has been removed.*	

CIP-007-5 Table R1– Ports and Services			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers	~~Disable or restrict~~Protect against the use of unnecessary physical input/output ports used for network connectivity, console commands, or removable media.	Evidence may include, but is not limited to, documentation ~~stating specific or~~ showing types of protection of physical input/output ports ~~to restrict and screen shots or pictures showing the ports restricted~~, either logically through system configuration or physically using a port lock or signage.
Reference to prior version: *NEW*		**Change Description and Justification:** *In the March 18, 2010 FERC issued an order to approve NERC's interpretation of Requirement R2 of CIP-007-2. In this order, FERC agreed the term "ports" in "ports and services" refers to logical communication (e.g. TCP/IP) ports, but they also encouraged the drafting team to address unused physical ports.*	

Rationale for R2: Security patch management is a proactive way of monitoring and addressing known security vulnerabilities in software before those vulnerabilities can be exploited in a malicious manner to gain control of or render a BES Cyber Asset or BES Cyber System inoperable.

The remediation plan can be updated as necessary to maintain the reliability of the BES, including an explanation of any rescheduling of the remediation actions.

Summary of Changes: The existing wordings of CIP-007, Requirements R3, R3.1, and R3.2, were separated into individual line items to provide more granularity. The documentation of a source~~-~~(s) to monitor for release of security related patches, ~~hotfixes~~hot fixes, and/or updates for BES Cyber System or BES Cyber Assets was added to provide context as to when the "release" date was. The current wording stated "document the assessment of security patches and security upgrades for applicability within thirty calendar days of availability of the patches or upgrades" there has been confusion as to what constitutes the availability. Due to issues that may occur regarding Control System vendor license and service agreements, flexibility must be given to Responsible Entities to define what sources are being monitored for BES Cyber Assets.

R2. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5 Table R2 – Security Patch Management*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning~~]~~].*

M2. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-007-5 Table R2 – Security Patch Management* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R2 – Security Patch Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Identify a source or sources that are monitored for the release of security related patches, or updates for all software and firmware associated with BES Cyber System or BES Cyber Assets.~~ A patch management program for tracking, evaluating, and installing cyber security patches for applicable Cyber Assets. The tracking portion shall include the identification of a source or sources that the Responsible Entity tracks for the release of cyber security patches for applicable Cyber Assets that are updateable and for which a patching source exists.	Evidence ~~may~~must include~~, but is not limited to,~~ documentation of a ~~list~~patch management program and documentation or lists of sources that are monitored, whether on an individual BES Cyber System or ~~BES~~ Cyber Asset basis. ~~The list could be sorted by BES Cyber System or source.~~
Reference to prior version: ~~New~~*CIP-007, R3*		**Change Rationale:** ~~*Defining*~~*The requirement is brought forward from previous CIP versions with the addition of defining the source(s) that a Responsible Entity monitors for the release of security related patches~~*~~, hotfixes, and/or updates will provide a starting point for assessing the effectiveness of the patch management program.~~*. *Documenting the source is* ~~*also*~~ *used to determine when the assessment timeframe clock starts. This requirement also handles the situation where security patches can come from an original source (such as an operating system vendor), but must be approved or certified by another source (such as a control system vendor) before they can be assessed and applied in order to not jeopardize the availability or integrity of the control system.*	

CIP-007-5 Table R2 – Security Patch Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Evaluate the security patches for applicability within 30 calendar days of availability of the patch from the source or sources identified in Part 2.1.	Evidence may include, but is not limited to, an evaluation conducted by, referenced by, or on behalf of a Responsible Entity of security-related patches released by the documented sources within 30 calendar days of availability.
Reference to prior version: *CIP-007, R3.1*		**Change Rationale:** *Similar to the current wording but added "from the source or sources identified in 2.1" to clarify the 30-day time frame.*	

CIP-007-5 Table R2 – Security Patch Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.~~2~~3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Identify~~For applicable ~~security related~~ patches ~~or updates and~~ identified in Part 2.2, create a ~~remediation~~dated plan~~,~~ or revise an existing ~~remediation~~ plan~~,~~ within 30 calendar days of ~~release from~~ the ~~identified source that addresses~~evaluation completion. The plan shall include the Responsible Entity's planned actions to mitigate the vulnerabilities ~~within~~ exposed by each security patch and a ~~defined~~ timeframe~~.~~ to complete these mitigations.	Evidence may include, but is not limited to, ~~an assessment conducted by, referenced by, or on behalf of a Registered Entity of security related patches or updates released by the documented sources, and a~~ a dated ~~remediation~~ plan showing when and how the vulnerability will be addressed~~.~~ , to include documentation of the actions to be taken by the Responsible Entity to mitigate the vulnerabilities exposed by the security patch and a timeframe for the completion of these mitigations.

CIP-007-5 Table R2 – Security Patch Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-007, R3.~~1~~2*		***~~Change Rationale:~~*** *~~Similar to the current wording but added "from the identified source" to establish where the release is from. The current wording: "The Responsible Entity shall document the assessment of security patches and security upgrades for applicability within thirty calendar days of availability of the patches or upgrades" has led to varying opinions as to what constitutes "availability" of the patches or upgrades. The addition attempts to clarify where the release is from.~~* **Change Rationale:** *The requirement has been changed to handle the situations where it is more of a reliability risk to patch a running system than the vulnerability presents. In all cases, the entity documents (either through the creation of a new or update of an existing mitigation plan) what they are going to do to mitigate the vulnerability and when they are going to do so. The mitigation plan may, and in many cases will, consist of installing the patch. However, there are times when it is in the best interest of reliability to not install a patch, and the entity can document what they have done to mitigate the vulnerability.*	

CIP-007-5 Table R2 – Security Patch Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.~~3~~4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~A process for remediation, including any exceptions~~For each plan created or revised in Part 2.3, implement the plan as created or revised within the timeframe specified in the plan, except for CIP Exceptional Circumstances.	Evidence may include, but is not limited to: • Records of the installation of the patch; • Records of implementation of vendor recommended mitigations; • Exports from automated patch management tools that provide installation date; • Verification ~~screen captures that show~~of BES Cyber System Component software revision; • Registry exports that show software has been installed; or • Evidence that affected services have been disabled~~;~~. ~~• Implementation evidence of software configuration changes recommended by the operating system or Control System vendors.~~

CIP-007-5 Table R2 – Security Patch Management			
Part	~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets	**Requirements**	**Measures**
Reference to prior version: *CIP-007, R3.2*		~~**Change Rationale:** This is the same concept as in the current CIP-007 R3.2 wording however a 30-day window was given to allow for documentation of the actual implementation in a less time constrained manner where manual processes are used. Splitting the implementation of security related patches, hotfixes, and/or updates into a separate item from compensating measures will provide granularity. Automated processes allow the implementation to be documented and confirmed electronically in a short time period. Manual processes may take an extended period of time to complete documentation of the installation. Priority should be given to the implementation rather than the documentation.~~**Change Rationale:** *Similar to the current wording but added "from the source or sources identified in Part 2.1" to clarify the 30-day time frame.*	

Rationale for R3: Malicious code prevention has the purpose of limiting and detecting the addition of malicious code onto the applicable ~~components~~Cyber Assets of a BES Cyber ~~system~~System. Malicious code (viruses, worms, botnets, targeted code such as Stuxnet, etc.) may compromise the availability or integrity of the BES Cyber System.

~~The requirement for Maintenance Cyber Assets or media in 3.4 is intended to ensure that devices used for maintenance do not accidently introduce malicious code into the BES Cyber System or introduce an unauthorized external access point to the BES Cyber System.~~

~~This requirement also clarifies that these devices may be temporarily connected to the BES Cyber System, but do not become a part of the BES Cyber System, nor are they considered Protected Cyber Assets. These devices may be temporarily connected locally to the BES Cyber System for maintenance, but must be protected from introducing malicious code.~~

Summary of Changes: In prior versions, this requirement has arguably been the single greatest generator of ~~TFE's~~TFEs as it prescribed a particular technology to be used on every CCA regardless of that asset's susceptibility or capability to use that technology. As the scope of ~~cyber assets~~Cyber Assets in scope of these standards expands to more field assets, this issue will only grow exponentially. The drafting team is taking the approach of making this requirement a competency based requirement where the entity must document how the malware risk is handled for each BES Cyber System, but it does not prescribe a particular technical method nor does it prescribe that it must be used on every ~~component~~Cyber Asset. The BES Cyber System is the object of protection.

Beginning in ~~paragraph~~Paragraphs 619-622 of FERC Order No. 706, and in particular Paragraph 621, FERC agrees that the standard "does not need to prescribe a single method…However, how a responsible entity does this should be detailed in its cyber security policy so that it can be audited for compliance…"

In ~~paragraph~~Paragraph 622, FERC directs that the requirement be modified to include safeguards against personnel introducing, either maliciously or unintentionally, viruses or malicious software through remote access, electronic media, or other means. The drafting team believes that addressing this issue holistically at the BES Cyber System level and regardless of technology, along with the enhanced change management requirements, meets this directive.

R3. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5, Table R3 – Malicious Code Prevention*. *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations~~]~~].*

M3. Evidence must include each of the documented processes that collectively include each of the applicable items in *CIP-007-5, Table R3 – Malicious Code Prevention* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R3 – Malicious Code Prevention			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Deploy method(s) to deter, detect, or prevent malicious code.	Evidence may include, but is not limited to, records of the Responsible Entity's performance of these processes (~~i.~~e.g., through traditional antivirus, system hardening, policies, etc.).
Reference to prior version: *CIP-007-4, R4* *; CIP-007-4, R4.1*		**Change Rationale:** *See the Summary of Changes. FERC Order No. 706, Paragraph 621, states the standards development process should decide to what degree to protect BES Cyber Systems from personnel introducing malicious software.*	
3.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Disarm or remove~~Mitigate the threat of identified malicious code.	Evidence may include, but is not limited to: • Predetermined response actions for malicious code detection; • Configuration of anti-virus response actions (~~i.~~e.g., quarantine, alert, etc.) to detected malicious code; or • Configuration of white-listing application to notify appropriate personnel of unauthorized applications.

CIP-007-5 Table R3 – Malicious Code Prevention			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-007-4, R4* *CIP-007-4, R4.1*		**Change Rationale:** *See the Summary of Changes.*	
3.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Update malicious code protections that use signatures or patterns at least once within ~~30~~35 calendar days of each available signature or pattern release (this does not require use of every available release, but that for every release that is available, at least one update ~~availability (where~~has occurred within 35 calendar days from that release), except for signature or pattern releases that the ~~malicious code protections use signatures or patterns).~~ Responsible Entity documents as negatively affecting the Cyber Asset or BES Cyber System.	Evidence may include, but is not limited to~~, (i) current signature or pattern updates, and (ii) either screen shots~~: • Documentation showing the configuration of signature, or pattern updates for automated controls~~,~~; or ~~work~~ • Work logs showing the signature, or pattern updates for manual controls.
~~**Reference to prior version:**~~ ~~*CIP-007-4 R4*~~ ~~*CIP-007-4 R4.2*~~		~~**Change Rationale:** *See the Summary of Changes.*~~	

CIP-007-5 Table R3 – Malicious Code Prevention			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
~~3.4~~	~~High Impact BES Cyber Systems~~ ~~Medium Impact BES Cyber Systems~~ ~~Associated Physical Access Control Systems~~ ~~Associated Electronic Access Control or Monitoring Systems~~ ~~Associated Protected Cyber Assets~~	~~Deploy method(s) to deter, detect, or prevent malicious code on Transient Cyber Assets and removable media when connecting them to BES Cyber Assets or Protected Cyber Assets.~~	~~Evidence may include, but is not limited to, logs showing when Transient Cyber Assets and removable media were connected to BES Cyber Assets or Protected Cyber Assets, and an inventory of Transient Cyber Assets and the methods used to detect, deter, or prevent malicious code.~~
Reference to prior version: ~~*New*~~*CIP-007-4, R4; CIP-007-4, R4.2*		~~**Change Rationale:** *FERC Order 706 paragraph 621 states the standards development process should decide to what degree to protect BES Cyber Systems from personnel introducing malicious software. In addition, a common interpretation of the current standards is that any device connecting inside the ESP must at that point be in compliance with the full set of Standards. This requirement makes clear that the device performing maintenance is not considered a part of the BES Cyber System.~~**Change Rationale:** *See the Summary of Changes. This part is written to ensure that signatures or patterns are updated within 35 days of release, but does not require installation of all releases so long as any given update occurs within 35 calendar days of each release. The part does not require update within 35 days of a particular release in cases where the Responsible Entity documents that the signature or pattern release negatively affects the Cyber Asset or BES Cyber System. Thirty-five Calendar days allows for a "once-a-month" frequency with slight flexibility to account for months with 31 days or for beginning or endings of months on weekends.*	

CIP-007-5 Table R3 – Malicious Code Prevention			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
~~3.5~~	~~High Impact BES Cyber Systems~~ ~~Medium Impact BES Cyber Systems~~ ~~Associated Physical Access Control Systems~~ ~~Associated Electronic Access Control or Monitoring Systems~~ ~~Associated Protected Cyber Assets~~	~~Log each Transient Cyber Asset connection.~~	~~Evidence may include, but is not limited to, logs showing when Transient Cyber Assets were connected to BES Cyber Assets or Protected Cyber Assets.~~
~~**Reference to prior version:**~~ ~~*New*~~		~~**Change Rationale:** *FERC Order 706 paragraph 621 states the standards development process should decide to what degree to protect BES Cyber Systems from personnel introducing malicious software. In addition, a common interpretation of the current standards is that any device connecting inside the ESP must at that point be in compliance with the full set of Standards. This requirement makes clear that the device performing maintenance is not considered a part of the BES Cyber System.*~~	

Rationale for R4: Security event monitoring has the purpose of detecting unauthorized access, reconnaissance and other malicious activity on BES Cyber Systems and comprises of the activities involved with the collection, processing, alerting and retention of security-related computer logs. These logs can provide both (1) the immediate detection of an incident and (2) useful evidence in the investigation of an incident. The retention of security-related logs is intended to support post-event data analysis.

Audit processing failures are not penalized in this requirement. Instead, the requirement specifies processes which must be in place to monitor and respond to audit processing failures.

Summary of Changes: Beginning in ~~paragraph~~Paragraph 525 and also Paragraph 628 of the FERC Order No. 706, the ~~commission~~Commission directs a manual review of security event logs on a more periodic basis. This requirement combines CIP-005-4, R5 and CIP-007-4, R6 and addresses both directives from a system-wide perspective. The primary feedback received on this requirement from the informal comment period was the vagueness of terms "security event" and "monitor~~".~~."

The term "security event" or "events related to cyber security" is problematic because it does not apply consistently across all platforms and applications. To resolve this term, the requirement takes an approach similar to NIST 800-53 and requires the entity to define the security events relevant to the ~~system~~System.

In addition, this requirement sets up parameters for the monitor and review processes. It is rarely feasible or productive to look at every security log on the system. Paragraph 629 of the FERC Order No. 706 acknowledges this reality when directing a manual log review. As a result, this requirement allows the manual review to consist of a sampling or summarization of security events occurring since the last review.

R4. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5 Table R4 – Security Event Monitoring*. *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Assessment~~]~~.]*

M4. Evidence must include each of the documented processes that collectively include each of the applicable items in *CIP-007-5 Table R4 – Security Event Monitoring* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Log ~~generated~~ events for identification of, and after-the-fact investigations of, Cyber Security Incidents that includes, as a minimum, each of the following types of events: 4.1.1. ~~Any~~ detected and logged failed access attempts at Electronic Access Points; 4.1.2. ~~Any~~ detected and logged successful and failed login attempts; 4.1.3. ~~Any~~ detected ~~malware~~ and logged malicious software; and 4.1.4. ~~Any~~ detected ~~potential~~and logged malicious activity.	Evidence may include, but is not limited to, a paper or system generated listing of event ~~classes~~types for which the BES Cyber System is capable of detecting and, for generated events, is configured to ~~generate logs.~~log. This listing must include the required event types.
Reference to prior version: *CIP-005-4, R3~~;~~; CIP-007-4, R5, R5.1.2, R6.1, ~~R6~~andR6.3*		**Change Description and Justification:** *This requirement is derived from NIST 800-53 version 3 AU-2, which requires organizations to determine system events to audit for incident response purposes. The industry expressed confusion in the term "system events related to cyber security" from informal comments received on CIP-011. ~~Changes made here clarify this term by allowing entities to first define these security events.~~ Access logs from the ESP as required in CIP-005-4 Requirement R3 and user access and activity logs as required in CIP-007-5 Requirement R5 are also included here.*	

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Generate alerts for security events that the Responsible Entity determines ~~to~~ necessitate a real-time alert, that includes, as a minimum, each of the following types of events where technically feasible: 4.2.1. detected malicious activity; and 4.2.2. detected failure of 4.1 event logging.	Evidence may include, but is not limited to paper or system-generated listing of ~~event classes and conditions~~ security events which the Responsible Entity determined necessitate real-time alerts~~; Assessment documentation~~ and paper or ~~report showing analysis was performed to determine which events the Responsible Entity determines necessitate a real-time alert; Screen-shots~~system generated list showing how real-time alerts are configured.
Reference to prior version: *CIP-005-4, R3.2~~;~~; CIP-007-4, R6.2*		**Change Description and Justification:** *This requirement is derived from alerting requirements in CIP-005-4, Requirement R3.2 and CIP-007-4, Requirement R6.2 in addition to NIST 800-53 version 3 AU-6. Previous CIP Standards required alerting on unauthorized access attempts and detected Cyber Security Incidents, which can be vast and difficult to determine from day to day. Changes to this requirement allow the entity to determine events that necessitate an immediate response.*	

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Detect and activate~~Activate a response to detected event logging failures before the end of the next calendar day.	Evidence may include, but is not limited to, ~~(i) dated event logging failures~~documentation describing the response and ~~screen shots showing how real-time alerts were configured~~ ~~(ii) dated records showing~~its timing, or an attestation indicating that ~~personnel were dispatched or a work ticket was opened to review and repair logging failures.~~no such events occurred.
Reference to prior version: *New Requirement*		**Change Rationale:** *This requirement was derived from NIST 800-53 version 3 AU-5, which addresses response to audit processing failures. ~~Some interpretations of version 4 CIP Cyber Security Standards~~Misunderstandings with previous versions considered the failure of the security event monitoring and alerting system itself to be a violation. The purpose of this requirement is to have mitigation in place rather than penalizing audit processing failures.*	

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Retain BES Cyber System security-related event logs identified in Part 4.1 for at least the last 90 consecutive calendar days, where technically feasible.	Evidence may include, but is not limited to~~,~~ : 1. security-related event logs from the past ~~ninety~~90 days ~~and~~ ; 2. records of disposition of security-related event logs beyond ~~ninety~~90 days up to the evidence retention period; and 3. paper or system generated reports showing log retention configuration set at 90 days or greater.
Reference to prior version: *CIP-005-4, R3.2~~;~~ CIP-007-4, R6.4*		**Change Rationale:** *No substantive change.*	

CIP-007-5 Table R4 – Security Event Monitoring			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
4.5	High Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Review a summarization or sampling of logged events at a minimum every two weeks to identify ~~unanticipated BES~~undetected Cyber Security Incidents ~~and potential event logging failures. Activate a response to rectify any deficiency identified from the review before the end of the next calendar day.~~.	Evidence may include, but is not limited to, documentation describing the review, any findings from the review (if any), signed and dated documentation showing the review occurred~~, and dated evidence showing that personnel were dispatched or a work ticket was opened to rectify the deficiency.~~.
Reference to prior version: *CIP-005-4, R3.2~~;~~; CIP-007-4, R6.5*		**Change Description and Justification:** *Beginning in ~~paragraph~~Paragraph 525 and also 628 of the FERC Order No. 706, the ~~commission~~Commission directs a manual review of security event logs on a more periodic basis and suggests a weekly review. The Order acknowledges it is rarely feasible to review all system logs. Indeed, log review is a dynamic process that should improve over time and with additional threat information. Changes to this requirement allow for a weekly summary or sampling review of logs.*	

Rationale for R5: To help ensure that no authorized individual can gain electronic access to a BES Cyber System until the individual has been authenticated, i.e., until the individual's logon credentials have been validated. Requirement R5 also seeks to reduce the risk that static passwords, where used as authenticators, may be compromised.

Changing default passwords closes an easily exploitable vulnerability in many systems and applications.

For password-based user authentication, using strong passwords and changing them periodically helps mitigate the risk of successful password cracking attacks and the risk of accidental password disclosure to unauthorized individuals. In these requirements, the drafting team considered multiple approaches to ensuring this requirement was both effective and flexible enough to allow Responsible Entities to make good security decisions. One of the approaches considered involved requiring minimum password entropy, but the calculation for true information entropy is more highly complex and makes several assumptions in the passwords users choose. Users can pick poor passwords well below the calculated minimum entropy.

The drafting team also chose to not require technical feasibility exceptions for devices that cannot meet the length and complexity requirements in password parameters. The objective of this requirement is to apply a measurable password policy to deter password cracking attempts, and replacing devices to achieve a specified password policy does not meet this objective. At the same time, this requirement has been strengthened to require account lockout or alerting for failed login attempts, which in many instances better meets the requirement objective.

The requirement to change passwords exists to address password cracking attempts if an encrypted password were somehow attained and also to refresh passwords which may have been accidentally disclosed over time. The requirement permits the entity to specify the periodicity of change to accomplish this objective. Specifically, the drafting team felt determining the appropriate periodicity based on a number of factors is more effective than specifying the period for every BES Cyber System in the Standard. In general, passwords for user authentication should be changed at least annually. The periodicity may increase in some cases. For example, application passwords that are long and pseudo-randomly generated could have a very long periodicity. Also, passwords used only as a weak form of application authentication, such as accessing the configuration of a relay may only need to be changed as part of regularly scheduled maintenance.

The Cyber Asset should automatically enforce the password policy for individual user accounts. However, for shared accounts in which no mechanism exists to enforce password policies, the Responsible Entity can enforce the password policy procedurally and through internal assessment and audit.

Summary of Changes (From R5): CIP-007-4, Requirements R5.2.2 and R5.2.3 requiring the identification and management of shared account access have been removed. These requirements already exist in the authorization, security event monitoring and revocation of access, and guidance for these requirements makes clear the consideration of shared accounts. The requirement to identify and determine acceptable use for these accounts remains and the ~~Standard~~standard includes additional guidance on types of accounts to identify and appropriate use of these account types.

CIP-007-4, Requirement R5.3 requires the use of passwords and specifies a specific policy of ~~6~~six characters or more with a combination of alpha-numeric and special characters. The level of detail in these requirements can restrict more effective security measures. For example, many have interpreted the password for tokens or biometrics must satisfy this policy and in some cases prevents the use of this stronger authentication. Also, longer passwords may preclude the use of strict complexity requirements. The password requirements have been changed to allow the entity to specify the most effective password parameters based on the impact of the BES Cyber System, the way passwords are used, and the significance of passwords in restricting access to the system. The SDT feels these changes strengthen the authentication mechanism by requiring entities to look at the most effective use of passwords in their environment. Otherwise, prescribing a strict password policy has the potential to limit the effectiveness of security mechanisms and preclude better mechanisms in the future.

R5. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-007-5 Table R5 – System Access Controls*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning~~]~~].*

M5. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-007-5 Table 5 – System Access Controls* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-007-5 Table R5 – System Access Control			
Part	~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets	**Requirements**	**Measures**
5.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Validate credentials before granting electronic access to each BES Cyber System.~~ Enforce authentication of all user access, where technically feasible.	Evidence may include, but is not limited to, documentation describing how ~~users are~~access is authenticated ~~before being granted access and demonstrations showing authenticated access enforcement of internal and remote paths to the BES Cyber System~~.
Reference to prior version: *CIP-007-4, R5*		**Change Rationale:** *The requirement to enforce authentication for all user access is included here. The requirement to establish, implement, and document controls is included in this introductory requirement. The requirement to have technical and procedural controls was removed because technical controls suffice when procedural documentation is already required. The phrase "that minimize the risk of unauthorized access" was removed and more appropriately captured in the rationale statement.*	

CIP-007-5 Table R5 – System Access Control			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	The CIP Senior Manager or delegate must authorize enabled default or other generic account types, either by system, by groups of systems, by location, or by system type(s).	Evidence may include, but is not limited to, a listing of accounts by account types and signed documentation or workflow by a CIP Senior Manager or delegate showing the approval of enabled or generic account types in use for the BES Cyber System.
Reference to prior version: *CIP-007-4, R5.2 and R5.2.1*		**Change Rationale:** *CIP-007-4 requires entities to minimize and manage the scope and acceptable use of account privileges. The requirement to minimize account privileges has been removed because the implementation of such a policy is difficult to measure at best.*	
5.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems with External Routable Connectivity. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Identify individuals who have authorized access to shared accounts.	Evidence may include, but is not limited to, listing of shared accounts and the individuals who have access to each shared account.
Reference to prior version: *CIP-007-4, R5.2.2*		**Change Rationale:** *No significant changes. Added "authorized" access to make clear that individuals storing, losing or inappropriately sharing a password is not a violation of this requirement.*	

CIP-007-5 Table R5 – System Access Control			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Change default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on Cyber Assets.	Evidence may include, but is not limited to: • Records of a procedure that passwords are changed when new devices are deployed; or • Documentation in system manuals or other vendor documents showing default vendor passwords were generated pseudo-randomly and are thereby unique to the device.
Reference to prior version: *CIP-007-4, R5.2.1*		**Change Rationale:** *The requirement for the "removal, disabling or renaming of such accounts where possible" has been removed and incorporated into guidance for acceptable use of account types. This was removed because those actions are not appropriate on all account types. Added the option of having unique default passwords to permit cases where a system may have generated a default password or a hard-coded uniquely generated default password was manufactured with the BES Cyber System.*	

CIP-007-5 Table R5 – System Access Control			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.~~2~~5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~The CIP Senior Manager~~For password-based user authentication, either technically or ~~delegate must authorize~~procedurally enforce the ~~use~~following password parameters: 5.5.1. Password length that is, at least, the lesser of ~~administrator, shared, default,~~eight characters or the maximum length supported by the Cyber Asset; and ~~other generic account~~ Minimum password complexity that is the lesser of three or more different types~~.~~ 5.5.2. of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the Cyber Asset.	Evidence may include, but is not limited to~~, a listing~~: • System-generated reports or screen-shots of ~~accounts by account types~~the system-enforced password parameters, including length and ~~signed documentation or workflow by a CIP Senior Manager or delegate showing the approval of account types in use for~~complexity; or • Attestations by individuals that the ~~BES Cyber System.~~ procedurally enforced passwords meet the password parameters.

Reference to prior version: *CIP-007-4, R5.~~2, R5.2.1~~3*	**Change Rationale:** *CIP-007-4, Requirement R5.3 requires the use of passwords and specifies a specific policy of six characters or more with a combination of alpha-numeric and special characters. The level of detail in these requirements can restrict more effective security measures. The password requirements have been changed to permit the maximum allowed by the device in cases where the password parameters could otherwise not achieve a stricter policy. This change still achieves the requirement objective to minimize the risk of unauthorized disclosure of password credentials while recognizing password parameters alone do not achieve this.* ~~**Change Rationale:** CIP-007-4 requires entities to minimize and manage the scope and acceptable use of account privileges. The requirement to minimize account privileges has been removed because the implementation of such a policy is difficult to measure at best.~~ *The drafting team felt allowing the Responsible Entity the flexibility of applying the strictest password policy allowed by a device outweighed the need to track a relatively minimally effective control through the TFE process.*

~~5.3~~	~~High Impact BES Cyber Systems~~ ~~Medium Impact BES Cyber Systems.~~ ~~Associated Physical Access Control Systems~~ ~~Associated Electronic Access Control or Monitoring Systems~~ ~~Associated Protected Cyber Assets~~	~~Identify individuals who have authorized access to shared accounts.~~	~~Evidence may include, but is not limited to, listing of shared accounts and the individuals who have access to each shared account.~~
~~**Reference to prior version:**~~ ~~*CIP-007-4 R5.2.2*~~		~~**Change Rationale:** *No significant changes. Added "authorized" access to make clear that individuals storing, losing or inappropriately sharing a password is not a violation of this requirement.*~~	

CIP-007-5 Table R5 – System Access Control			
Part	**Applicability**	**Requirements**	**Measures**
5.4	All Responsible Entities	Procedural controls for initially changing default passwords, where technically feasible, unless the default password is unique to the device or instance of the application, on BES Cyber Assets, Electronic Access Control or Monitoring Systems, Physical Access Control Systems, and Protected Cyber Assets. For the purposes of this requirement an inventory of Cyber Assets is not required.	Evidence may include, but is not limited to: • Demonstration showing default vendor passwords have been changed, sampled on a locational basis. • Records of a procedure that passwords are changed when new devices are deployed. • Documentation in system manuals or other vendor documents showing default vendor passwords were generated pseudo-randomly and are thereby unique to the device.
Reference to prior version: *CIP-007-4 R5.2.1*		**Change Rationale:** *The requirement for the "removal, disabling or renaming of such accounts where possible" has been removed and incorporated into guidance for acceptable use of account types. This was removed because those actions are not appropriate on all account types. Added the option of having unique default passwords to permit cases where a system may have generated a default password or a hard-coded uniquely generated default password was manufactured with the BES Cyber System.*	

Part	Applicability	Requirements	Measures
5.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For password-based user authentication, either technically or procedurally enforce the following password parameters: 5.5.1. Password length that is the lesser of at least eight characters or the maximum length supported by the BES Cyber System. 5.5.2. Minimum password complexity of three or more different types of characters (e.g., uppercase alphabetic, lowercase alphabetic, numeric, non-alphanumeric) or the maximum complexity supported by the BES Cyber System. 5.5.3. Password change or an obligation to change the password on an entity-specified time frame based on the impact level of the BES Cyber System, the significance of passwords in the set of controls used to prevent unauthorized access to the BES Cyber System and existing service agreements, warranties or licenses.	Evidence may include, but is not limited to: • System-generated reports or screen-shots of the system-enforced password parameters, including length, complexity and periodicity of changing passwords. • Attestations by individuals that the procedurally enforced passwords meet the password parameters.

Reference to prior version: *CIP-007-4 R5.3*	**Change Rationale:** *CIP-007-4 R5.3 requires the use of passwords and specifies a specific policy of 6 characters or more with a combination of alpha-numeric and special characters. The level of detail in these requirements can restrict more effective security measures. The password requirements have been changed to permit the maximum allowed by the device in cases where the password parameters could otherwise not achieve a stricter policy. This change still achieves the requirement objective to minimize the risk of unauthorized disclosure of password credentials while recognizing password parameters alone do not achieve this. The drafting team felt allowing the Responsible Entity the flexibility of applying the strictest password policy allowed by a device outweighed the need to track a relatively minimally effective control through the TFE process..*	

5.6	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centerswith External Routable Connectivity Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	A process to limit, where technically feasible, the number of unsuccessful authentication attempts or generating alerts after a threshold of unsuccessful login attempts.For password-based user authentication, either technically or procedurally enforce password changes or an obligation to change the password at least once each calendar year, not to exceed 15 calendar months between changes.	Evidence may include, but is not limited to: • ScreenSystem-generated reports or screen-shots of the account-lockout parameters • Rules in the alerting configuration showing how the system notified enforced periodicity of changing passwords; or • Attestations by individuals after a determined number of unsuccessful login attemptsthat the procedurally enforced passwords meet the password parameters.

Reference to prior version: ~~*New Requirement*~~*CIP-007-4, R5.3.3*	~~**Change Rationale:** *Minimizing the number of unsuccessful login attempts significantly reduces the risk of live password cracking attempts. This is a more effective control in live password attacks than password parameters.*~~**Change Rationale:** **This was originally Requirement R5.5.3, but moved to add "external routable connectivity" to medium impact in response to comments. This requirement is limited in scope because the risk to performing an online password attack is lessened by its lack of external routable connectivity. Frequently changing passwords at field assets can entail significant effort with minimal risk reduction.*

CIP-007-5 Table R5 – System Access Control			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
5.7	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Limit, where technically feasible, the number of unsuccessful authentication attempts or generate alerts after a threshold of unsuccessful login attempts.	Evidence may include, but is not limited to: • Documentation of the account-lockout parameters; or • Rules in the alerting configuration showing how the system notified individuals after a determined number of unsuccessful login attempts.
Reference to prior version: *New Requirement*		**Change Rationale:** *Minimizing the number of unsuccessful login attempts significantly reduces the risk of live password cracking attempts. This is a more effective control in live password attacks than password parameters.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

- ~~The~~ Regional Entity~~; or~~
- ~~If the Responsible Entity works for~~ shall serve as the Compliance Enforcement Authority ("CEA") unless the ~~Regional Entity, then the~~ applicable entity is owned, operated, or controlled by the Regional Entity ~~will establish an agreement with~~. In such cases the ERO or ~~another~~a Regional entity approved by ~~the ERO and FERC (i.e. another Regional Entity) to be responsible for compliance enforcement.~~
- ~~If the Responsible Entity is also a Regional Entity the ERO or a Regional Entity approved by the ERO and~~ FERC or other applicable governmental ~~authorities shall serve as the Compliance Enforcement Authority.~~
- ~~If the Responsible Entity is NERC, a third-party monitor without vested interest in the outcome for NERC~~authority shall serve as the ~~Compliance Enforcement Authority~~CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was ~~complaint~~compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Guidelines and Technical Basis

Requirement R1:

Requirement 1 exists to reduce the attack surface of ~~BES~~ Cyber Assets by requiring entities to disable known unnecessary ports. The ~~intent is~~SDT intends for the entity to know what ~~is~~ network accessible ("listening") ports and associated services are accessible on their assets and systems, ~~why~~whether they are needed for that Cyber Asset's function, and disable or restrict access to all other ports.

1.1. ~~For the logical network ports this~~This requirement is most often accomplished by disabling the corresponding service or program that is listening on the port~~.~~ or configuration settings within the Cyber Asset. It can also be accomplished through using host-based firewalls, TCP Wrappers, or other means on the ~~device~~Cyber Asset to restrict access. Note that the requirement is applicable at the Cyber Asset level. The Cyber Assets are those which comprise the applicable BES Cyber Systems and their associated Cyber Assets. This control is another layer in the defense against network-based attacks, therefore ~~it is~~ the ~~intent~~SDT intends that the control be on the device itself~~; blocking~~, or positioned inline in a non-bypassable manner. Blocking ports at ~~a perimeter~~the ESP border is a requirement in CIP-005, Requirement R1 to protect the network and does not ~~satisfy~~substitute for this device level requirement. If a device has no provision for disabling or restricting logical ports on the device (example - purpose built devices that run from firmware with no port configuration available) then those ports that are open are deemed ~~necessary.~~'needed.'

1.2. Examples of physical I/O ports include network, serial and USB ports external to the device casing. BES Cyber Systems should exist within a ~~Defined~~Physical Security ~~Boundary~~Perimeter in which case the physical I/O ports have protection from unauthorized access, but it may still be possible for accidental use such as connecting a modem, connecting a network cable that bridges networks, or inserting a USB drive ~~with auto-run capability. In cases where the Component cannot logically restrict physical~~. The protection of these ports~~, entities should have clear signs or obstructions indicating the unnecessary ports are~~ can be accomplished in several ways including, but not limited to ~~be used.~~:

- Disabling all unneeded physical ports within the Cyber Asset's configuration
- Prominent signage, tamper tape, or other means of conveying that the ports should not be used without proper authorization
- Physical port obstruction through removable locks

Requirement R2:

The SDT's intent of Requirement R2 is to require entities to know, track, and mitigate the known software vulnerabilities associated with their BES Cyber Assets. It is not strictly an "install every security patch" requirement; ~~its~~the main intention is to "be aware of in a timely manner and manage all known vulnerabilities" requirement.

Patch management is required for BES Cyber Systems that are accessible remotely as well as standalone systems. Stand alone systems are vulnerable to intentional or unintentional introduction of malicious code. A sound defense-in-depth security strategy employs additional

measures such as physical security, malware prevention software, and software patch management to reduce the introduction of malicious code or the exploit of known vulnerabilities.

One or multiple processes could be utilized. An overall assessment process may exist in a top tier document with a low tier documents establishing the more detailed process followed for individual systems. Low tier documents could be used to cover BES Cyber System nuances that may occur at the system level.

~~**2.1.** *Documenting the source*~~**2.1.** The Responsible Entity is to have a patch management program that covers tracking, evaluating, and installing cyber security patches. The requirement covers only patches that involve cyber security fixes and does not cover patches that are purely functionality related with no cyber security impact. Tracking involves processes for notification of the availability of new cyber security patches for the Cyber Assets. Documenting the patch source in the tracking portion of the process is required to determine when the assessment timeframe clock starts. This requirement handles the situation where security patches can come from an original source (such as an operating system vendor), but must be approved or certified by another source (such as a control system vendor) before they can be assessed and applied in order to not jeopardize the availability or integrity of the control system. The source can take many forms. The National Vulnerability Database, Operating System vendors, or Control System vendors could all be sources to monitor for release of security related patches, hotfixes, and/or updates. ~~In the event~~A patch source is not required for Cyber Assets that have no updateable software or firmware~~ is~~, or those Cyber Assets that have no existing source of patches such as vendors that no longer ~~supported by~~exist.

2.2. Responsible Entities are to perform an assessment of security related patches within 30 days of release from their monitored source. An assessment should consist of determination of the applicability of each patch to the entity's specific environment and systems. If the patch is determined to be non-applicable, that is documented with the reasons why and the entity is compliant. If the patch is applicable, the assessment can include a ~~software or firmware vendor~~determination of the risk involved, how the vulnerability can be remediated, the urgency and timeframe of the remediation, and the steps the entity has previously taken or ~~Control System vendor it can be noted in your source document.~~ will take. Considerable care must be taken in applying security related patches, hotfixes, and/or updates or applying compensating measures to BES Cyber System or BES Cyber Assets that are no longer supported by vendors. The security patches, hotfixes, and/or updates or compensating measures may reduce the reliability of the system. The Responsible Entity must be allowed to evaluate their individual risk exposure and determine if actions must be taken to secure the system.

~~**2.2.** The intent is for Responsible Entities to perform an assessment of security related patches as they are released from their monitored source and create a remediation plan for applicable patches as to how the vulnerability will or has already been remediated. An assessment should consist of determination of the applicability of the entity's specific environment and systems. IF the patch is determined to be non-applicable, that is documented with the reasons why and the entity is compliant. If the patch is applicable, the assessment can include a determination of the risk involved, how the vulnerability can be remediated, and the~~

~~steps the entity has previously taken or will take. If the entity has to take steps to mitigate this new vulnerability, the remediation plan will include a timeframe. Timeframes do not have to be designated as a particular calendar day but can have event designations such as "at next scheduled outage of at least two days duration".~~ The Responsible Entities can use the information provided in the Department of Homeland Security "Quarterly Report on Cyber Vulnerabilities of Potential Risk to Control Systems" as a source. The DHS document "Recommended Practice for Patch Management of Control Systems" provides guidance on an evaluative process. It uses severity levels determined using the Common Vulnerability Scoring System Version 2. Determination that a security related patch, hotfix, and/or update poses too great a risk to install on a system or is not applicable due to the system configuration should not require a TFE.

When documenting the remediation plan measures it may not be necessary to document them on a one to one basis. The remediation plan measures may be cumulative. A measure to address a software vulnerability may involve disabling a particular service. That same service may be exploited through other software vulnerabilities. Therefore disabling the single service has addressed multiple patched vulnerabilities.

~~2.3~~2.3. For those security related patches that are determined to be applicable, the Responsible Entity must create a dated plan within 30 days which will outline the actions to be taken or those that have already been taken by the Responsible Entity to mitigate the vulnerabilities exposed by the security patch. Timeframes do not have to be designated as a particular calendar day but can have event designations such as "at next scheduled outage of at least two days duration". If the entity is going to install the patch, the plan can consist of a a simple record that normal patch installation process from 2.1 will be followed and designate the date of the patch installation.

2.4. The entity has been notified of, has assessed, and has developed a plan to remediate the known risk and that plan must be implemented. Remediation plans that only include steps that have been previously taken are considered implemented upon completion of the documentation. Remediation plans that have steps to be taken to remediate the vulnerability must be implemented by the timeframe the entity documented in their plan. There is no maximum timeframe in this requirement as patching and other system changes carries its own risk to the availability and integrity of the systems and may require waiting until a planned outage. In periods of high demand or threatening weather, changes to systems may be curtailed or denied due to the risk to reliability.

Requirement R3:

~~Common malware introduction methods include web browsing, email attachments, and portable storage media.~~ **3.1.** Due to the wide range of equipment comprising the BES Cyber Systems and the wide variety of vulnerability and capability of that equipment to malware, it is not practical within the standard to prescribe how malware is to be addressed on each ~~component~~Cyber Asset. Rather, the Responsible Entity determines on a BES Cyber System basis

which ~~components~~Cyber Assets have susceptibility to malware intrusions and documents their plans and processes for addressing those risks and provides evidence that they follow those plans and processes. There are numerous options available including traditional ~~anti-virus~~antivirus solutions for common operating systems, white-listing solutions, network isolation techniques, portable storage media policies, Intrusion Detection/Prevention (IDS/IPS) solutions, etc. If an entity has numerous BES Cyber Systems or ~~components~~Cyber Assets that are of identical architecture, they may provide one process that describes how all the ~~components~~like Cyber Assets are covered. If a specific Cyber Asset has no updateable software and its executing code cannot be altered, then that Cyber Asset is considered to have its own internal method of deterring malicious code and should not require a TFE.

3.2. When malicious code is detected on a Cyber Asset within the applicability of this requirement, the threat posed by that code must be mitigated. In situations where traditional antivirus products are used, they may be configured to automatically remove or quarantine the malicious code. In white-listing situations, the white-listing tool itself can mitigate the threat as it will not allow the code to execute, however steps should still be taken to remove the malicious code from the Cyber Asset. In some instances, it may be in the best interest of reliability to not immediately remove or quarantine the malicious code, such as when availability of the system may be jeopardized by removal while operating and a rebuild of the system needs to be scheduled. In that case, monitoring may be increased and steps taken to insure the malicious code cannot communicate with other systems. In some instances the entity may be working with law enforcement or other governmental entities to closely monitor the code and track the perpetrator(s). For these reasons, there is no maximum timeframe or method prescribed for the removal of the malicious code, but the requirement is to mitigate the threat posed by the now identified malicious code.

3.3. In instances where malware detection technologies ~~that are updated in response to evolving threats or~~ depend on signatures or patterns of known attacks, the ~~entity must specify how~~effectiveness of these tools against evolving threats is tied to the ability to keep these signatures and patterns updated in a timely manner. The requirement is written to handle two update frequency situations.

1) For those technologies that are providing very frequent updates ~~are~~ (at most monthly but often daily or sometimes hourly), the updates applied to the applicable Cyber Assets should be no more than 35 calendar days old. In these instances, this is a 'maximum staleness' requirement. It does not require that every update within a 35 day period be applied, but that the currently installed update be no more than 35 days old.

2) For those technologies that provide less frequent updates that are more than 35 days, the requirements should be applied within 35 days of the last available update.

Testing of signature or pattern updates is not required. In a BES Cyber System, there may be some Cyber Assets that would benefit from the more timely installation of the updates where availability of that Cyber Asset would not jeopardize the availability of the BES Cyber System's ability to perform its function. For example, some HMI workstations where portable media is utilized may benefit from having the very latest updates at all times. Other Cyber Assets should have any updates tested before implementation where the result of a 'false positive' could

harm the availability of the BES Cyber System. The testing should not negatively impact the reliability of the BES. The testing ~~is~~should be focused on the update itself and if it will have an adverse impact on the BES Cyber System. ~~The testing~~Testing in no way implies that the entity is testing to ensure that malware is indeed detected by introducing malware into the environment. It is strictly focused on ~~insuring~~ensuring that the update does not negatively impact the BES Cyber System before those updates are placed into production. ~~This includes the instance where the update may provide a "false positive."~~

Requirement R4:

Refer to NIST 800-92 for additional guidance in security event monitoring.

4.1. In a complex computing environment and faced with dynamic threats and vulnerabilities, it is not practical within the ~~Standard~~standard to enumerate all security-related events necessary to support the activities for alerting and incident response. Rather, the Responsible Entity determines which computer generated events are necessary to log, provide alerts and monitor for their particular BES Cyber System environment.

Specific security events already required in ~~version~~Version 4 of the CIP Standards carry forward in this version. This includes access attempts at the Electronic Access Points, if any have been identified for a BES Cyber Systems. Examples of access attempts include: (i) blocked network access attempts, (ii) successful and unsuccessful remote user access attempts, (iii) blocked network access attempts from a remote VPN, and (iv) successful network access attempts or network flow information.

User access and activity events include those events generated by Cyber Assets within the Electronic Security Perimeter that have access control capability. These types of events include: (i) successful and unsuccessful authentication, (ii) account management, (iii) object access, and (iv) processes started and stopped.

It is not the intent of the SDT that if a device cannot log a particular event that a TFE must be generated. The SDT's intent is that if any of the items in the bulleted list (for example, user logouts) can be logged by the device, but the entity disables or neglects to enable that logging, it is a violation. If the device does not have the capability of logging that event, the entity remains compliant.

4.2. Real-time alerting allows the cyber system to automatically communicate events of significance to designated responders. This involves configuration of a communication mechanism and log analysis rules. Alerts can be configured in the form of an email, text message, or system display and alarming. The log analysis rules can exist as part of the operating system, specific application or a centralized security event monitoring system. On one end, a real-time alert could consist of a set point on an RTU for a login failure, and on the other end, a security event monitoring system could provide multiple alerting communications options triggered on any number of complex log correlation rules.

The events triggering a real-time alert may change from day to day as system administrators and incident responders better understand the types of events that might be indications of a cyber-security incident. Configuration of alerts also must balance the need for responders to

know an event occurred with the potential inundation of insignificant alerts. The following list includes examples of events a Responsible Entity should consider in configuring real-time alerts:

- Detected known or potential malware or malicious activity
- Login failures for critical accounts
- Interactive login of system accounts
- Enabling of accounts
- Newly provisioned accounts
- System administration or change tasks by an unauthorized user
- Authentication attempts on certain accounts during non-business hours
- Unauthorized configuration changes
- Insertion of removable media in violation of a policy

4.3. Event logging failures occur when the components of the BES Cyber System cannot log events the Responsible Entity designated in 4.1. The most common reason for event logging failures is the event log being filled up beyond its configured storage threshold. However, there may be any number of other reasons for event logging failures.

For centralized logging systems, it should not be considered a failure if communication goes down between the ~~cyber asset~~Cyber Asset and the logging system if the ~~cyber asset~~Cyber Asset can store the logs locally for a period of time until the communication comes back up.

4.5. Reviewing logs every two weeks can consist of analyzing a summarization or sampling of logged events. NIST SP800-92 provides a lot of guidance in periodic log analysis. If a centralized security event monitoring system is used, log analysis can be performed top-down starting with a review of trends from summary reports. The log review can also be an extension of the exercise in identifying those events needing real-time alerts by analyzing events that are not fully understood or could possibly inundate the real-time alerting.

Requirement R5:

Account types referenced in this guidance typically include:

- Shared user account: An account used by multiple users for normal business functions by employees or contractors. Usually on a device that does not support Individual User Accounts.
- Individual user account: An account used by a single user.
- Administrative account: An account with elevated privileges for performing administrative or other specialized functions. These can be individual or shared accounts.
- System account: Accounts used to run services on a system (web, DNS, mail etc). No users have access to these accounts.
- Application account: A specific system account, with rights granted at the application level often used for access into a ~~Data Base~~Database.

- Guest account: An individual user account not typically used for normal business functions by employees or contractors and not associated with a specific user. May or may not be shared by multiple users.
- Remote access account: An individual user account only used for obtaining Interactive Remote Access to the BES Cyber System.

5.~~3~~4. Where possible, any accounts provided by a vendor should be removed, renamed, or disabled prior to production use of the Cyber Asset or BES Cyber System. If this is not possible, the passwords must be changed from the default provided by the vendor. Default passwords can be commonly published in vendor documentation that is readily available to all customers using that type of equipment and possibly published online.

The requirement option to have unique password addresses cases where the Cyber Asset generates or has assigned pseudo-random default passwords at the time of production or installation. In these cases, the default password does not have to change because the system or manufacturer created it specific to the Cyber Asset.

5.5. Technical or procedural enforcement of password parameters are required where passwords are the only credential used to authenticate individuals. Technical enforcement of the password parameters means a Cyber Asset verifies an individually selected password meets the required parameters before allowing the account to authenticate with the selected password. Technical enforcement should be used in most cases when the authenticating Cyber Asset supports enforcing password parameters. Likewise, procedural enforcement means requiring the password parameters through procedures. Individuals choosing the passwords have the obligation of ensuring the password meets the required parameters.

Password complexity refers to the policy set by a Cyber Asset to require passwords to have one or more of the following types of characters: (1) lowercase alphabetic, (2) uppercase alphabetic, (3) numeric, and (4) non-alphanumeric or "special" characters (e.g. #, $, @, &), in various combinations.

The requirement to change passwords permits the Responsible Entity to determine the periodicity of the password change in their policies and procedures based on a number of factors. The following table suggests appropriate periodicity requirements for passwords based on these factors.

Account Type	Impact Level	Significance of passwords in preventing unauthorized access	Existing Service Agreements	Suggested Periodicity of Password Change
User account password	High	Primary access path	None.	90 days
User account password	Medium	Primary access path	None.	180 days
Shared account	Medium	Local access path.	None.	During regularly

Account Type	Impact Level	Significance of passwords in preventing unauthorized access	Existing Service Agreements	Suggested Periodicity of Password Change
Password for a microprocessor relay, PLC, RTU, etc.		Individuals must authenticate at an upstream device prior to gaining access.		scheduled maintenance
Shared account password for a generation control system	Medium	Local access path. Individuals must authenticate at an upstream device prior to gaining access.	None.	During scheduled plant outages
Administrative account passphrase with 15+ characters	High or Medium	Local access path. Remote user must be authenticated using a different account	None.	~~1~~One year
System account password with 25+ pseudo-random characters	High or Medium	Local access path	None.	~~2~~Two years or more

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes, and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a Responsible Entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3		Updated version number from -2 to -3 In Requirement 1.6, deleted the sentence pertaining to removing component or system from service in order to perform testing, in response to FERC order issued September 30, 2009.	
3	12/16/09	Approved by the NERC Board of Trustees.	Update
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Incident Reporting and Response Planning

2. Number: CIP-008-5

3. Purpose: To mitigate the risk to the reliable operation of the BES as the result of a Cyber Security Incident by specifying incident response requirements.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

4.1.7 Reliability Coordinator

4.1.8 Transmission Operator

4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

Standard CIP-008-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational, and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the applicable items in [Table Reference].*" The referenced table requires the applicable items in the procedures for a common subject matter.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the standards.
Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:
Each table row has an applicability column to further define the scope to which a specific requirement row applies to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- **High Impact BES Cyber Systems –** Applies to BES Cyber Systems categorized as high impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems –** Applies to BES Cyber Systems categorized as medium impact according to the CIP-002-5 identification and categorization processes.

B. Requirements and Measures

Rationale for R1: The implementation of an effective Cyber Security Incident response plan mitigates the risk to the reliable operation of the BES caused as the result of a Cyber Security Incident and provides feedback to Responsible Entities for improving the security controls applying to BES Cyber Systems. Preventative activities can lower the number of incidents, but not all incidents can be prevented. A preplanned incident response capability is therefore necessary for rapidly detecting incidents, minimizing loss and destruction, mitigating the weaknesses that were exploited, and restoring computing services. Once the severity of an event or events rises to the level of becoming a Reportable Cyber Security Incident, NERC EOP-004 directs further external reporting actions and timing requirements. An enterprise or single incident response plan for all BES Cyber Systems may be used to meet the Requirement. An organization may have a common plan for multiple registered entities it owns.

Summary of Changes: The requirement to report the incident has been removed and incorporated in the draft EOP-004-2 Standard. Other wording changes have been incorporated based primarily on industry feedback to more specifically describe required actions. These are described below each Requirement Part.

R1. Each Responsible Entity shall document one or more Cyber Security Incident response plan(s) that collectively include each of the applicable items in *CIP-008-5 Table R1 – Cyber Security Incident Response Plan Specifications*. *[Violation Risk Factor: Lower] [Time Horizon: Long Term Planning].*

M1. Evidence must include each of the documented plan(s) that collectively include each of the applicable items in *CIP-008-5 Table R1 – Cyber Security Incident Response Plan Specifications*.

CIP-008-5 Table R1 – Cyber Security Incident Response Plan Specifications			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Processes to identify, classify, and respond to Cyber Security Incidents.	Evidence may include, but is not limited to, dated documentation of Cyber Security Incident response plan(s) that include the process to identify, classify, and respond to Cyber Security Incidents.
Reference to prior version: *CIP-008, R1.1*		**Change Description and Justification:** *"Characterize" has been changed to "identify" for clarity. "Response actions" has been changed to "respond to" for clarity.*	
1.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	A process to determine if an identified Cyber Security Incident is a Reportable Cyber Security Incident.	Evidence may include, but is not limited to, dated documentation of Cyber Security Incident response plan(s) that provide guidance or thresholds for determining which Cyber Security Incidents are also Reportable Cyber Security Incidents.
Reference to prior version: *CIP-008, R1.1*		**Change Description and Justification:** *EOP-004-2 will address the reporting requirements from previous versions of CIP-008. This requirement part only obligates entities to have a process for determining Reportable Cyber Security Incidents.*	

CIP-008-5 Table R1 – Cyber Security Incident Response Plan Specifications			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	The roles and responsibilities of Cyber Security Incident response groups or individuals.	Evidence may include, but is not limited to, dated Cyber Security Incident response process(es) or procedure(s) that define roles and responsibilities (e.g., monitoring, reporting, initiating, documenting, etc.) of Cyber Security Incident response groups or individuals.
Reference to prior version: *CIP-008, R1.2*		**Change Description and Justification:** *Replaced incident response teams with incident response "groups or individuals" to avoid the interpretation that roles and responsibilities sections must reference specific teams.*	
1.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Incident handling procedures for Cyber Security Incidents.	Evidence may include, but is not limited to, dated Cyber Security Incident response process(es) or procedure(s) that address incident handling (e.g., containment, eradication, recovery, post-incident analysis).
Reference to prior version: *CIP-008, R1.2*		**Change Description and Justification:** *Conforming change to reference new defined term Cyber Security Incidents.*	

CIP-008-5 Table R1 – Cyber Security Incident Response Plan Specifications			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Internal groups or individuals and external organizations that should receive communication of the Cyber Security Incidents.	Evidence may include, but is not limited to, dated Cyber Security Incident response process(es) or procedure(s) that list internal groups or individuals (e.g., other departments, monitoring staff) and external organizations (e.g., law enforcement, ES-ISAC, software vendors, other affected entities) that should receive communication.
Reference to prior version: *CIP-008, R1.2*		**Change Description and Justification:** *Clarified the term "communication plan" by specifying the elements that need to be included.*	

Rationale for R2: The implementation of an effective Cyber Security Incident response plan mitigates the risk to the reliable operation of the BES caused as the result of a Cyber Security Incident and provides feedback to Responsible Entities for improving the security controls applying to BES Cyber Systems. This requirement ensures implementation of the response plans. Requirement Part 2.3 ensures the retention of incident documentation for post event analysis.

This requirement obligates entities to follow the incident response plan when an incident occurs or when testing, but does not restrict entities from taking needed deviations from the plan. It ensures the plan represents the actual response and does not exist for documentation only. If a plan is written at a high enough level, then every action during the response should not be subject to scrutiny. The plan will likely allow for the appropriate variance in tactical decisions made by incident responders. Deviations from the plan can be documented during the incident response or afterward as part of the review.

Summary of Changes: Added testing requirements to verify the Responsible Entity's response plan's effectiveness and consistent application in responding to a Cyber Security Incident(s) impacting a BES Cyber System.

R2. Each Responsible Entity shall implement its documented Cyber Security Incident response plan(s) to collectively include each of the applicable items in *CIP-008-5 Table R2 – Cyber Security Incident Response Plan Implementation and Testing. [Violation Risk Factor: Lower] [Time Horizon: Operations Planning and Real-Time Operations].*

M2. Evidence must include, but is not limited to, documentation that collectively demonstrates implementation of each of the applicable items in *CIP-008-5 Table R2 – Cyber Security Incident Response Plan Implementation and Testing*.

CIP-008-5 Table R2 – Cyber Security Incident Response Plan Implementation and Testing			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Test the BES Cyber Security Incident response plan(s) at least once every calendar year, not to exceed 15 months between executions of the plan(s): • By responding to an actual Reportable Cyber Security Incident; • With a paper drill or tabletop exercise; or • With a full operational exercise.	Evidence may include, but is not limited to, dated evidence of a lessons-learned report that includes a summary of the test or a compilation of notes, logs, and communication resulting from the test. Types of exercises may include discussion or operations based exercises.
Reference to prior version: *CIP-008, R1.6*		**Change Description and Justification:** *Minor wording changes; essentially unchanged.*	
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Use the incident response plan under Requirement R1 when responding to or performing an exercise of a Reportable Cyber Security Incident. Document deviations from the plan during the response to the incident or exercise.	Evidence may include, but is not limited to, incident reports, logs, and notes that were kept during the incident response process, and follow-up documentation that describes deviations taken from the plan during the incident or exercise.
Reference to prior version: *CIP-008, R1.6*		**Change Description and Justification:** *Allows deviation from plan(s) during actual events or testing if deviations are recorded for review.*	

CIP-008-5 Table R2 – Cyber Security Incident Response Plan Implementation and Testing			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Retain relevant records related to Reportable Cyber Security Incidents.	Evidence may include, but is not limited to, dated documentation; such as security logs, police reports, emails, response forms or checklists, forensic analysis results, restoration records, and post-incident review notes related to Reportable Cyber Security Incidents.
Reference to prior version: *CIP-008, R2*		**Change Description and Justification:** *Removed references to the retention period because the Standard addresses data retention in the Compliance Section.*	

Rationale for R3: Conduct sufficient reviews, updates and communications to verify the Responsible Entity's response plan's effectiveness and consistent application in responding to a Cyber Security Incident(s) impacting a BES Cyber System. A separate plan is not required for those requirement parts of the table applicable to High or Medium Impact BES Cyber Systems. If an entity has a single incident response plan and High or Medium Impact BES Cyber Systems, then the additional requirements would apply to the single plan.

Summary of Changes: Changes here address the FERC Order 706, Paragraph 686, which includes a directive to perform after-action review for tests or actual incidents and update the plan based on lessons learned. Additional changes include specification of what it means to review the plan and specification of changes that would require an update to the plan.

R3. Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in *CIP-008-5 Table R3 – Cyber Security Incident Response Plan Review, Update, and Communication*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Assessment].*

M3. Evidence must include each of the applicable documented processes that include each of the applicable items in *CIP-008-5 Table R3 – Cyber Security Incident Response Plan Review, Update and Communication* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-008-5 Table R3 – Cyber Security Incident Response Plan Review, Update, and Communication			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Review and update each Cyber Security Incident response plan for accuracy and completeness at least once each calendar year, not to exceed 15 calendar months between reviews.	Evidence may include, but is not limited to, dated documentation of a review of each Cyber Security Incident response plan(s) at least once every calendar year, not to exceed 15 calendar months between reviews, and an updated Cyber Security Incident response plan if necessary.
Reference to prior version: *CIP-008, R1.5*		**Change Description and Justification:** *Specified what the annual review entails.*	

CIP-008-5 Table R3 – Cyber Security Incident Response Plan Review, Update, and Communication			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Document any lessons learned associated with a Cyber Security Incident test or actual incident response to a Reportable Cyber Security Incident within 30 calendar days after completion of the test or actual incident response.	Evidence may include, but is not limited to, dated documentation of lessons learned, if any, associated with the Cyber Security Incident Response Plan(s) test or actual incident response within 30 calendar days after completion of the test or actual incident response.
Reference to prior version: *CIP-008, R1.5*		**Change Description and Justification:** *Addresses FERC Order 706, Paragraph 686 to document test or actual incidents and lessons learned.*	
3.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Update the Cyber Security Incident response plan based on any documented lessons learned within 30 calendar days after the documentation required by Part 3.2.	Evidence may include, but is not limited to: • Dated, documented lessons learned from the Cyber Security Incident documentation required by Part 3.2 and the dated, revised Cyber Security Incident response plan showing any changes based on that documentation; or • A dated action plan from the documentation required by Part 3.2 showing the resolved action item for Cyber Security Incident response plan updates.

Reference to prior version: *CIP-008, R1.4*		**Change Description and Justification:** *Included additional specification on update of response plan addresses FERC Order No. 706, Paragraph 686, to modify on lessons learned.*	
CIP-008-5 Table R3 – Cyber Security Incident Response Plan Review, Update, and Communication			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Update the Cyber Security Incident response plan(s) within 30 calendar days of any of the following changes that the Responsible Entity determines would impact the ability to execute the plan: • Roles or responsibilities; • Cyber Security Incident response groups or individuals; or • Technology changes.	Evidence may include, but is not limited to, dated documentation reflecting changes made to the Cyber Security Incident response plan within 30 calendar days from and in response to the following changes that the Responsible Entity determined would impact the ability to execute the plan: • Roles or responsibilities; • Cyber Security Incident response groups or individuals; or • Technology changes.
Reference to prior version: *CIP-008, R1.4*		**Change Description and Justification:** *Specifies the activities required to maintain the plan. The previous version required entities to update the plan in response to any changes. The modifications make clear the changes that would require an update.*	

3.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Distribute updates of the Cyber Security Incident response plan to each person or group with a defined role in the Cyber Security Incident response plan within 30 calendar days of the update being completed.	Evidence of distribution of updates may include, but is not limited to: • Emails; • USPS or other mail service; • Electronic distribution system; or • Training sign-in sheets.
Reference to prior version: *New Requirement*		**Change Description and Justification:** *Specifies activities required to maintain the plan.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Long Term Planning**	**Lower**	N/A	N/A	The Responsible Entity has developed the Cyber Security Incident response plan(s), but the plan does not include the roles and responsibilities of Cyber Security Incident response groups or individuals. (1.3) OR The Responsible Entity has developed the Cyber Security Incident response plan(s), but the plan does not include incident handling procedures for Cyber Security Incidents. (1.4) OR The Responsible Entity has developed the Cyber Security Incident response plan(s), but	The Responsible Entity has not developed a Cyber Security Incident response plan to identify, classify, and respond to Cyber Security Incidents. (1.1) OR The Responsible Entity has developed a Cyber Security Incident response plan, but the plan does not include processes to identify Reportable Cyber Security Incidents. (1.2)

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
					the plan does not include internal groups or individuals or external organizations that should receive communication of the Cyber Security Incident. (1.5)	
R2	**Operations Planning** **Real-time Operations**	**Lower**	The Responsible Entity has not tested the Cyber Security Incident response plan(s) according to R2 Part 2.1 within 15 calendar months, not exceeding 16 calendar months between tests of the plan. (2.1)	The Responsible Entity has not tested the Cyber Security Incident response plan(s) within 16 calendar months, not exceeding 17 calendar months between tests of the plan. (2.1)	The Responsible Entity has not tested the Cyber Security Incident response plan(s) according to R2 Part 2.1 within 17 calendar months, not exceeding 18 calendar months between tests of the plan. (2.1) OR The Responsible Entity does not document deviations, if any, from the plan during a test or when a Reportable Cyber Security Incident occurs. (2.2)	(2.1) The Responsible Entity has not tested the Cyber Security Incident response plan(s) within 19 calendar months between tests of the plan. OR The Responsible Entity does not use its Cyber Security Incident response plan during a test or when a Reportable Cyber Security Incident occurs. (2.2) OR

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						The Responsible Entity does not retain relevant records related to Reportable Cyber Security Incidents. (2.3)
R3	**Operations Assessment**	**Lower**	The Responsible Entity has not distributed updates of the Cyber Security Incident response plan to each person or group with a defined role in the Cyber Security Incident response plan within 30 and less than 60 calendar days of the update being completed. (3.4)	The Responsible Entity has not updated the Cyber Security Incident response plan based on any documented lessons learned within 30 and less than 60 calendar days after the documentation required by 3.1. (3.2) OR The Responsible Entity has not updated the Cyber Security Incident response plan(s) within 30 and less than 60 calendar days of any of the following changes that the responsible entity	The Responsible Entity has not documented any lessons learned within 30 and less than 60 calendar days of a test or actual incident response to a Reportable Cyber Security Incident. (3.1) OR The Responsible Entity has not updated the Cyber Security Incident response plan based on any documented lessons learned within 60 calendar days after the documentation required by 3.1. (3.2) OR	The Responsible Entity has not documented any lessons learned within 60 calendar days of a test or actual incident response to a Reportable Cyber Security Incident. (3.1)

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
				determines would impact the ability to execute the plan: (3.3) • roles or responsibilities, or • Cyber Security Incident response groups or individuals, or • technology changes. OR The Responsible Entity has not distributed updates of the Cyber Security Incident response plan to each person or group with a defined role in the Cyber Security Incident response plan within 60 calendar days of the update being completed. (3.4)	The Responsible Entity has not updated the Cyber Security Incident response plan(s) within 60 calendar days of any of the following changes that the responsible entity determines would impact the ability to execute the plan: (3.3) • roles or responsibilities, or • Cyber Security Incident response groups or individuals, or • technology changes.

None.

Guidelines and Technical Basis

Requirement R1:

The following guidelines are available to assist in addressing the required components of an incident response plan:

- Department of Homeland Security, Control Systems Security Program, *Developing an Industrial Control Systems Cyber Security Incident Response Capability*, 2009, online at http://www.us-cert.gov/control_systems/practices/documents/final-RP_ics_cybersecurity_incident_response_100609.pdf
- National Institute of Standards and Technology, *Computer Security Incident Handling Guide*, Special Publication 800-61 revision 1, March 2008, online at http://csrc.nist.gov/publications/nistpubs/800-61-rev1/SP800-61rev1.pdf

For Part 1.2, a Reportable Cyber Security Incident is a Cyber Security Incident that has compromised or disrupted one or more reliability tasks of a functional entity. It is helpful to distinguish Reportable Incidents as one resulting in a necessary response action. A response action can fall into one of two categories: Necessary or elective. The distinguishing characteristic is whether or not action was taken in response to an event. Precautionary measures that are not in response to any persistent damage or effects may be designated as elective. All other response actions to avoid any persistent damage or adverse effects should be designated as necessary.

The reporting obligations for Reportable Cyber Security Incidents are found in EOP-004-2. This standard only requires the entity to identify such incidents. However, an entity may include identification and reporting procedures in the same plan to comply with both standards.

Requirement R2:

Requirement R2 ensures entities periodically test the incident response plan. This includes the requirement in Part 2.2 to ensure the plan is actually used when testing. The testing requirements are specifically for *Reportable Cyber Security Incidents*.

Entities may use an actual response to a *Reportable Cyber Security Incident* as a substitute for exercising the plan annually. Otherwise, entities must exercise the plan with a paper drill, tabletop exercise, or full operational exercise. For more specific types of exercises, refer to the FEMA Homeland Security Exercise and Evaluation Program (HSEEP). It lists the following four types of discussion-based exercises: seminar, workshop, tabletop, and games. In particular, it defines that, "A tabletop exercise involves key personnel discussing simulated scenarios in an informal setting. TTXs can be used to assess plans, policies, and procedures."

The HSEEP lists the following three types of operations-based exercises: Drill, functional exercise, and full-scale exercise. It defines that, "[A] full-scale exercise is a multi-agency, multi-jurisdictional, multi-discipline exercise involving functional (e.g., joint field office, Emergency operation centers, etc.) and 'boots on the ground' response (e.g., firefighters decontaminating mock victims)."

In addition to the requirements to implement the response plan, Part 2.3 specifies entities must retain relevant records for *Reportable Cyber Security Incidents*. There are several examples of specific types of evidence listed in the measure. Entities should refer to their handling procedures to determine the types of evidence to retain and how to transport and store the evidence. For further information in retaining incident records, refer to the NIST Guide to Integrating Forensic Techniques into Incident Response (SP800-86). The NIST guideline includes a section (Section 3.1.2) on acquiring data when performing forensics.

Requirement R3:

This requirement ensures entities maintain Cyber Security Incident response plans. There are two requirement parts that trigger plan updates: (1) lessons learned from Part 3.2 and (2) organizational or technology changes from Part 3.4.

The documentation of lessons learned from Part 3.2 is associated with each Reportable Cyber Security Incident and involves the activities as illustrated in Figure 1, below. The deadline to document lessons learned starts after the completion of the incident in recognition that complex incidents on complex systems can take a few days or weeks to complete response activities. The process of conducting lessons learned can involve the response team discussing the incident to determine gaps or areas of improvement within the plan. Any documented deviations from the plan from Part 2.2 can serve as input to the lessons learned. It is possible to have a BES Reportable Cyber Security Incident without any documented lessons learned.

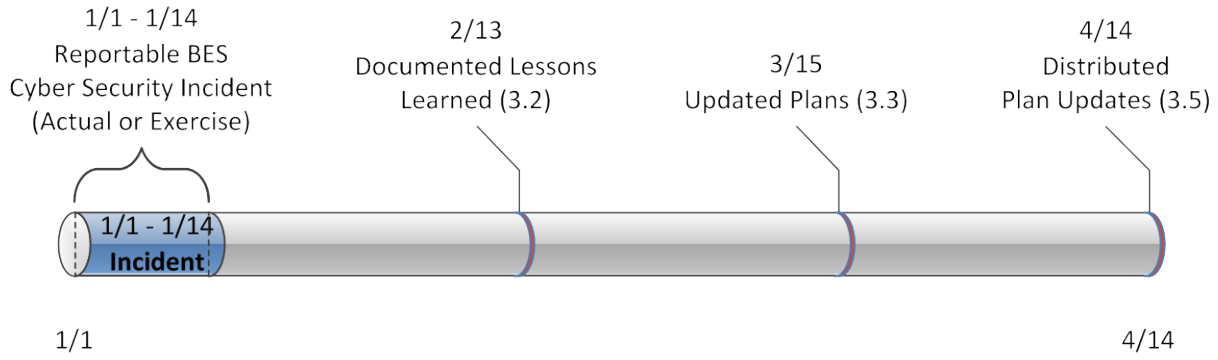

Figure 1: CIP-008-5 R3 Timeline for Reportable Cyber Security Incidents

Part 3.3 requires an entity to update the plan within 30 days of the documented lessons learned. This recognizes the time it may take to propose solutions to the lessons learned and complete the review and approval process.

Part 3.5 requires an entity to distribute the plan within 30 calendar days of the plan update. The measure specifies this can be accomplished through email, USPS, electronic distribution system (e.g., workflow software), or training records.

The plan change requirement in Part 3.4 is associated with organization and technology changes referenced in the plan and involves the activities illustrated in Figure 2, below. Organizational changes include changes to the roles and responsibilities people have in the plan or changes to the response groups or individuals. This may include changes to the names or

contact information listed in the plan. Technology changes affecting the plan may include referenced information sources, communication systems or ticketing systems.

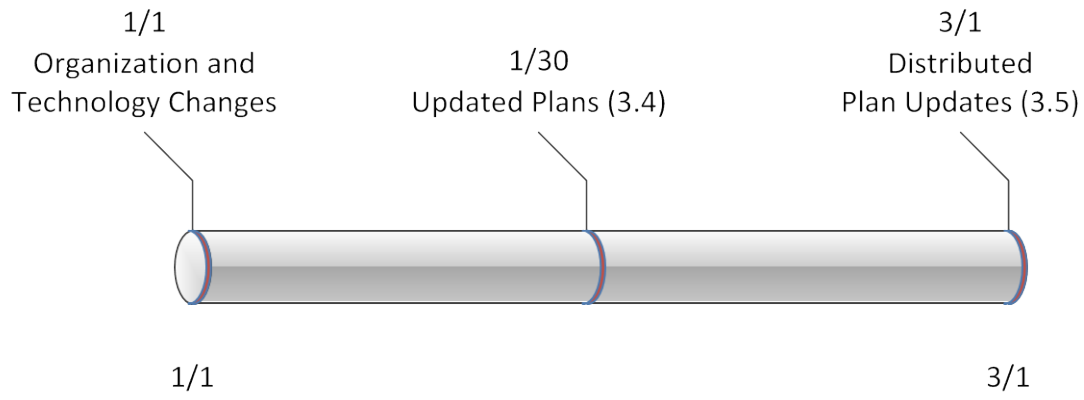

Figure 2: Timeline for Plan Changes in 3.4

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008~~)~~).
2. SC authorized moving the SAR forward to standard development (July 10, 2008~~)~~).
3. ~~CSO706 SDT appointed (August 7, 2008)~~
4. ~~Version 1 of CIP-002 to CIP-009 approved by FERC (January 18, 2008)~~
5. ~~Version 2 of CIP-002 to CIP-009 approved by FERC (September 30, 2009)~~
6. ~~Version 3 of CIP-002 to CIP-009 approved by FERC (September 30, 2009)~~
7. ~~Version 4 of CIP-002 to CIP-009 approved by NERC Board of Trustees (January 24, 2011) and filed with FERC (February 10, 2011)~~

~~8.~~3. ~~Version 5 of CIP-002 to CIP-011 posted~~First posting for 60-day formal comment period and concurrent ballot (~~mm-dd-yy~~)November 2011).

Description of Current Draft

This is the ~~first~~second posting of Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (~~A first posting of Version 5~~)~~ was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes, and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012
Recirculation ballot	June 2012

BOT adoption	June 2012

Effective Dates

1. ~~18~~24 **Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]

~~1.~~2. In those jurisdictions where no regulatory approval is required, the ~~standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of ~~Trustees~~Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center~~".~~."	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a ~~responsible entity.~~Responsible Entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3		Updated version number from -2 to -3 In Requirement 1.6, deleted the sentence pertaining to removing component or system from service in order to perform testing, in response to FERC order issued September 30, 2009.	
3	12/16/09	Approved by the NERC Board of Trustees.	Update
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	Update
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Incident Reporting and Response Planning

2. Number: CIP-008-5

3. Purpose: ~~Standard CIP-008-5 requires~~To mitigate the ~~identification, classification, response, and reporting~~risk to the reliable operation of the BES as the result of a Cyber Security ~~Incidents related to BES Cyber Assets and BES Cyber Systems.~~ Incident by specifying incident response requirements.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

~~4.1.2~~4.1.3 Generator Operator

~~4.1.3~~4.1.4 Generator Owner

~~4.1.4~~4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

~~4.1.5~~4.1.7 Reliability Coordinator

~~4.1.6~~4.1.8 Transmission Operator

~~4.1.7~~4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 ~~that are part of any of the following systems~~Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

~~4.2.1~~4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS~~UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs

automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme ~~required by a NERC or Regional Reliability Standard~~
- ~~A Transmission Protection System required by a NERC or Regional Reliability Standard~~
- ~~Its Transmission Operator's restoration plan~~

~~4.2.2~~4.2.3 where the~~Generator Operator~~

~~4.2.3~~4.2.4 ~~Generator Owner~~

~~4.2.4~~4.2.5 ~~Interchange Coordinator~~

~~4.2.5 Load Serving Entity that owns Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

~~4.2.6 NERC~~

~~4.2.7 Regional Entity~~

~~4.2.8~~4.2.6 ~~Reliability Coordinator~~

~~4.2.9~~4.2.7 ~~Transmission Operator~~

~~4.2.10~~4.2.8 ~~Transmission Owner~~

4.3. ~~Facilities:~~

~~4.3.1 Load Serving Entity: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

~~4.3.2 Distribution Providers: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~
- ~~A~~ Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A ~~Transmission~~ Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard

- ~~Its Transmission Operator's restoration plan~~
- ~~All other~~ Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

~~4.3.3~~4.3.1 **Responsible Entities~~:~~ listed in 4.1 other than Distribution Providers and Load-Serving Entities**: All BES Facilities.

~~4.3.4~~4.3.2 **Exemptions:** The following are exempt from Standard CIP-~~008~~002-5:

~~4.3.4.1~~4.3.2.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

~~4.3.4.2~~4.3.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

~~4.3.4.3~~ In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.~~-~~R. Section 73.54.

~~4.3.4.4~~4.3.2.3 ~~Responsible Entities that, in compliance with Standard CIP-002-5, identify that they have no BES Cyber Systems.~~

5. Background:

Standard CIP-008-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational, and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

~~Each requirement opens~~Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the ~~required~~applicable items in [Table Reference].*" The referenced table requires the ~~specific elements~~applicable items in the procedures for a common subject matter ~~as applicable~~.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of ~~specific elements required~~applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not ~~infer~~imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e.~~.~~, incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the ~~Standards~~standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the ~~Standards.~~standards. Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies~~.~~ to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- ~~**All Responsible Entities** – Applies to all Responsible Entities listed in the Applicability section of the Standard. This requirement applies at an organizational level rather than individually to each BES Cyber System. Requirements having this applicability comprise basic elements of an organizational CIP cyber security program.~~
- **High Impact BES Cyber Systems –** Applies to BES Cyber Systems categorized as ~~High Impact~~high impact according to the CIP-002-5 identification and categorization processes. ~~Responsible Entities can implement common controls that meet requirements for multiple High and Medium Impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.~~
- **Medium Impact BES Cyber Systems –** Applies to BES Cyber Systems categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.

- **Medium Impact BES Cyber Systems at Control Centers –** Only applies to BES Cyber Systems located at a Control Center and categorized as Medium Impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems with External Routable Connectivity –** Only applies to Medium Impact BES Cyber Systems with External Routable Connectivity. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity.
- **Low Impact BES Cyber Systems with External Routable Connectivity –** Applies to each Low Impact BES Cyber Systems with External Routable Connectivity according to the CIP-002-5 identification and categorization process, which includes all other BES Cyber Systems not categorized as High or Medium.
- **Associated Electronic Access Control or Monitoring Systems –** Applies to each Electronic Access Control or Monitoring System associated with a corresponding High or Medium Impact BES Cyber Systems. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems
- **Associated Physical Access Control Systems –** Applies to each Physical Access Control System associated with a corresponding High or Medium Impact BES Cyber Systems.
- **Associated Protected Cyber Assets –** Applies to each Protected Cyber Asset associated with a corresponding High or Medium Impact BES Cyber Systems.
- **Plans associated with High Impact BES Cyber Systems or Medium Impact BES Cyber Systems -** applies to any plan associated with a corresponding High or Medium Impact BES Cyber Systems.
- **Electronic Access Points –** Applies at Electronic Access Points (with External Routable Connectivity or dial-up connectivity) associated with a referenced BES Cyber System.
- **Electronic Access Points with External Routable Connectivity –** Applies at Electronic Access Points with External Routable Connectivity. This excludes those Electronic Access Points with dial-up connectivity.
- **Locally Mounted Hardware or Devices Associated with Defined Physical Boundaries –** Applies to the locally mounted hardware (e.g. such as motion sensors, electronic lock control mechanisms, and badge readers) associated with a Defined Physical Boundary for High or Medium Impact BES Cyber Systems. These hardware and devices are excluded in the definition of Physical Access Control Systems.

Rationale for R1: So that consistent responses to BES Cyber Security Incidents involving BES Cyber Assets and BES Cyber Systems occur. Preventative activities can lower the number of incidents, but not all incidents can be prevented. A preplanned incident response capability is therefore necessary for rapidly detecting incidents, minimizing loss and destruction, mitigating the weaknesses that were exploited, and restoring computing services. Once the number and severity of events rises to the level of becoming a reportable incident NERC EOP-4 directs further external reporting actions and timing requirements. When a requirement applies to All Responsible Entities, the drafting team proposes that an enterprise or single incident response plan for all BES Cyber Systems may be submitted. An organization may have a common plan for multiple registered entities it owns.

Summary of Changes: (FERC directives, most significant items, summary of smaller items)

B. Requirements and Measures

Rationale for R1: The implementation of an effective Cyber Security Incident response plan mitigates the risk to the reliable operation of the BES caused as the result of a Cyber Security Incident and provides feedback to Responsible Entities for improving the security controls applying to BES Cyber Systems. Preventative activities can lower the number of incidents, but not all incidents can be prevented. A preplanned incident response capability is therefore necessary for rapidly detecting incidents, minimizing loss and destruction, mitigating the weaknesses that were exploited, and restoring computing services. Once the severity of an event or events rises to the level of becoming a Reportable Cyber Security Incident, NERC EOP-004 directs further external reporting actions and timing requirements. An enterprise or single incident response plan for all BES Cyber Systems may be used to meet the Requirement. An organization may have a common plan for multiple registered entities it owns.

Summary of Changes: The requirement to report the incident has been removed and incorporated in the draft EOP-004-2 Standard. Other wording changes have been incorporated based primarily on industry feedback to more specifically describe required actions. These are described below each Requirement Part.

R1. Each Responsible Entity shall ~~have~~document one or more ~~BES~~ Cyber Security Incident response plan(s) that collectively include each of the applicable items in *CIP-008-5 Table R1 – ~~BES~~ Cyber Security Incident Response Plan Specifications*. *[Violation Risk Factor: Lower] [Time Horizon: Long Term Planning~~]~~.*

M1. Evidence must include each of the documented plan(s) that collectively include each of the applicable items in *CIP-008-5 Table R1 – ~~BES~~ Cyber Security Incident Response Plan Specifications*.

CIP-008-5 Table R1 – ~~BES~~ Cyber Security Incident Response Plan Specifications			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	~~All Responsible Entities~~High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Processes to identify, classify, and respond to ~~BES~~ Cyber Security Incidents.	Evidence may include, but is not limited to, dated ~~copies~~documentation of ~~BES~~ Cyber Security Incident response plan(s) that include ~~how~~the process to identify, classify, and respond to ~~BES~~ Cyber Security Incidents ~~targeting the Electronic Security Perimeter or Defined Physical Boundary of a BES Cyber System and covers incidents that impact the reliability of BES~~.
Reference to prior version: *CIP-008, R1.1*		**Change Description and Justification:** ~~*Minor wording changes; essentially unchanged*~~*"Characterize" has been changed to "identify" for clarity. "Response actions" has been changed to "respond to" for clarity.*	
1.2	~~All Responsible Entities~~High Impact BES Cyber Systems Medium Impact BES Cyber Systems	A process to determine if an identified ~~BES~~ Cyber Security Incident is a Reportable ~~BES~~ Cyber Security Incident.	Evidence may include, but is not limited to, dated documentation of ~~process(es~~Cyber Security Incident response plan(s) that provide guidance or thresholds for determining which ~~BES~~ Cyber Security Incidents are also Reportable ~~BES~~ Cyber Security Incidents.

CIP-008-5 Table R1 – ~~BES~~ Cyber Security Incident Response Plan Specifications			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-008, R1.1*		**Change Description and Justification:** *~~Minor wording changes; essentially unchanged~~EOP-004-2 will address the reporting requirements from previous versions of CIP-008. This requirement part only obligates entities to have a process for determining Reportable Cyber Security Incidents.*	
1.3	~~All Responsible Entities~~High Impact BES Cyber Systems Medium Impact BES Cyber Systems	~~Define:~~ ~~1.3.1.~~ The roles and responsibilities of ~~BES~~ Cyber Security Incident response ~~personnel;~~ ~~1.3.2. The BES Cyber Security Incident handling procedures;~~ ~~1.3.3. Internal staff and external organizations that should receive communication of the incident~~groups or individuals.	Evidence may include, but is not limited to, dated ~~BES~~ Cyber Security Incident response process(es) or procedure(s) that ~~addresses~~define roles and responsibilities (e.g., monitoring, reporting, initiating, documenting, etc.) of ~~BES~~ Cyber Security Incident response ~~personnel, BES Cyber Security Incident handling processes~~groups or ~~procedures, and communication processes or procedures~~individuals.
Reference to prior version: *CIP-008, R1.2*		**Change Description and Justification:** *~~Minor wording changes; essentially unchanged~~Replaced incident response teams with incident response "groups or individuals" to avoid the interpretation that roles and responsibilities sections must reference specific teams.*	
1.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Incident handling procedures for Cyber Security Incidents.	Evidence may include, but is not limited to, dated Cyber Security Incident response process(es) or procedure(s) that address incident handling (e.g., containment, eradication, recovery, post-incident analysis).

CIP-008-5 Table R1 – ~~BES~~ Cyber Security Incident Response Plan Specifications			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-008, R1.2*		**Change Description and Justification:** *Conforming change to reference new defined term Cyber Security Incidents.*	
1.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Internal groups or individuals and external organizations that should receive communication of the Cyber Security Incidents.	Evidence may include, but is not limited to, dated Cyber Security Incident response process(es) or procedure(s) that list internal groups or individuals (e.g., other departments, monitoring staff) and external organizations (e.g., law enforcement, ES-ISAC, software vendors, other affected entities) that should receive communication.
Reference to prior version: *CIP-008, R1.2*		**Change Description and Justification:** *Clarified the term "communication plan" by specifying the elements that need to be included.*	

~~**Rationale for R2:** Added testing requirements to verify the REs response plan's effectiveness and consistent application in responding to a BES Cyber Security Incident(s) impacting a BES Cyber System.~~

Rationale for R2: The implementation of an effective Cyber Security Incident response plan mitigates the risk to the reliable operation of the BES caused as the result of a Cyber Security Incident and provides feedback to Responsible Entities for improving the security controls applying to BES Cyber Systems. This requirement ensures implementation of the response plans. Requirement Part 2.3 ensures the retention of incident documentation for post event analysis.

This requirement obligates entities to follow the incident response plan when an incident occurs or when testing, but does not restrict entities from taking needed deviations from the plan. It ensures the plan represents the actual response and does not exist for documentation only. If a plan is written at a high enough level, then every action during the response should not be subject to scrutiny. The plan will likely allow for the appropriate variance in tactical decisions made by incident responders. Deviations from the plan can be documented during the incident response or afterward as part of the review.

Summary of Changes: Added testing requirements to verify the Responsible Entity's response plan's effectiveness and consistent application in responding to a Cyber Security Incident(s) impacting a BES Cyber System.

R2. Each Responsible Entity shall implement its documented ~~BES~~ Cyber Security Incident response plan(s) to collectively include each of the applicable items in *CIP-008-5 Table R2 – ~~BES~~ Cyber Security Incident Response Plan Implementation and Testing. [Violation Risk Factor: Lower] [Time Horizon: Operations Planning and Real-Time Operations~~]~~].*

M2. Evidence must include, but is not limited to, documentation that collectively demonstrates implementation of each of the applicable items in *CIP-008-5 Table R2 – ~~BES~~ Cyber Security Incident Response Plan Implementation and Testing*.

CIP-008-5 Table R2 – ~~BES~~ Cyber Security Incident Response Plan Implementation and Testing			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	~~All Responsible Entities~~High Impact BES Cyber Systems Medium Impact BES Cyber Systems	~~When a~~Test the BES Cyber Security Incident ~~occurs, the incident~~ response ~~plans must be used when incidents occur and include recording~~plan(s) at least once every calendar year, not to exceed 15 months between executions of ~~deviations taken from~~ the plan ~~during the incident~~(s): • By responding to an actual Reportable Cyber Security Incident; • With a paper drill or ~~test~~tabletop exercise; or • With a full operational exercise.	Evidence may include, but is not limited to, ~~incident reports~~dated evidence of a lessons-learned report that includes a summary of the test or a compilation of notes, logs, and ~~notes that were kept during the incident response process, and documentation that lists and justifies deviations taken~~communication resulting from the ~~plan during the incident.~~ test. Types of exercises may include discussion or operations based exercises.
Reference to prior version: *CIP-008, R1.6*		**Change Description and Justification:** ~~-~~*Minor wording changes; essentially unchanged.* ~~*Allows deviation from plan during actual events or testing if deviations are recorded for review.*~~	

CIP-008-5 Table R2 – ~~BES~~ Cyber Security Incident Response Plan Implementation and Testing			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.2	~~All Responsible Entities~~High Impact BES Cyber Systems Medium Impact BES Cyber Systems	~~Implement~~Use the ~~BES Cyber Security Incident~~incident response plan~~(s) initially upon the effective date of the standard and at least once every calendar year thereafter, not to exceed 15 months between executions of the plan(s):~~ • ~~by~~ under Requirement R1 when responding to or performing an ~~actual incident, or~~ • ~~with a paper drill or table top~~ exercise~~, or~~ • ~~with a full operational~~ of a Reportable Cyber Security Incident. Document deviations from the plan during the response to the incident or exercise.	Evidence may include, but is not limited to, ~~dated evidence of implementing~~incident reports, logs, and notes that were kept during the ~~BES Cyber Security Incident~~incident response ~~plan(s) initially upon~~ process, and follow-up documentation that describes deviations taken from the ~~effective date of~~plan during the ~~standard and at least once every calendar year thereafter, not to exceed 15 months, from response to an actual incident,~~incident or ~~with a paper drill or table top~~ exercise~~, or with a full operational exercise.~~.
Reference to prior version: *CIP-008~~,~~ R1.6*		**Change Description and Justification:** ~~*Minor wording changes; essentially unchanged*~~ *Allows deviation from plan(s) during actual events or testing if deviations are recorded for review*.	

CIP-008-5 Table R2 – ~~BES~~ Cyber Security Incident Response Plan Implementation and Testing			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.3	~~All Responsible Entities~~High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Retain relevant ~~documentation~~records related to Reportable ~~BES~~ Cyber Security Incidents~~ for three calendar years.~~.	Evidence may include, but is not limited to, dated documentation; such as security logs, police reports, emails, response forms or checklists, forensic analysis results, restoration records, and post-incident review notes related to Reportable ~~BES~~ Cyber Security Incidents.
Reference to prior version: *CIP-008, R2*		**Change Description and Justification:** ~~*Minor wording changes; essentially unchanged*~~*Removed references to the retention period because the Standard addresses data retention in the Compliance Section*.	

~~**Rationale for R3:** Conduct sufficient reviews, updates and communications to verify the REs response plan's effectiveness and consistent application in responding to a Cyber Security Incident(s) impacting a BES Cyber System.~~

~~**Summary of Changes:** Addressed BES Cyber Security Incident response plan review, update, and communication specifications to ensure that BES Cyber Security Incident response plans remain updated and individuals are aware of the updates.~~

Rationale for R3: Conduct sufficient reviews, updates and communications to verify the Responsible Entity's response plan's effectiveness and consistent application in responding to a Cyber Security Incident(s) impacting a BES Cyber System. A separate plan is not required for those requirement parts of the table applicable to High or Medium Impact BES Cyber Systems. If an entity has a single incident response plan and High or Medium Impact BES Cyber Systems, then the additional requirements would apply to the single plan.

Summary of Changes: Changes here address the FERC Order 706, Paragraph 686, which includes a directive to perform after-action review for tests or actual incidents and update the plan based on lessons learned. Additional changes include specification of what it means to review the plan and specification of changes that would require an update to the plan.

R3. Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in *CIP-008-5 Table R3 – ~~BES~~ Cyber Security Incident Response Plan Review, Update, and Communication*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Assessment~~ and Real-Time Operations~~]*.

M3. Evidence must include each of the applicable documented processes that include each of the applicable items in *CIP-008-5 Table R3 – ~~BES~~ Cyber Security Incident Response Plan Review, Update and Communication* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-008-5 Table R3 – ~~BES~~ Cyber Security Incident Response Plan Review, Update, and Communication			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.1	~~All Responsible Entities~~High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Review and update each ~~BES~~ Cyber Security Incident response plan for accuracy and completeness ~~initially upon the effective date of the standard and~~ at least once each calendar year ~~thereafter~~, not to exceed 15 calendar months between reviews~~, and update if necessary~~.	Evidence may include, but is not limited to, dated documentation of a review of each ~~BES~~ Cyber Security Incident response plan(s) at least once every calendar year, not to exceed 15 calendar months between reviews, and an updated ~~BES~~ Cyber Security Incident response plan if necessary.
Reference to prior version: *CIP-008, R1.5*		**Change Description and Justification:** ~~*Minor wording changes; essentially unchanged*~~*Specified what the annual review entails*.

Part	**Part**	**Part**	**Part**
3.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Update the BES Cyber Security Incident response plan(s) within thirty calendar days of any organizational, or technology changes that impact that plan.	Acceptable evidence may include, but is not limited to, updated documentation reflecting changes made to the BES Cyber Security Incident response plan in response to organizational or technology changes.
Reference to prior version: *CIP-008 R1.4*		**Change Description and Justification:** *Included additional specification on update of response plan. Addresses FERC Requirement (686) to modify on lessons learned and aspects of the DHS Controls*	
3.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems	Communicate each update to the BES Cyber Security Incident response plan to each person with a defined role in the BES Cyber Security Incident response plan within thirty calendar days of the completion of the update of that plan.	Evidence of communication of updates may include, but is not limited to: • Emails • USPS or other mail service • Electronic distribution system • Training sign-in sheets.
Reference to prior version: *New Requirement*		**Change Description and Justification:** *Added specific timing requirement on communication of plan changes based on review of the DHS Controls*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

- ~~The~~ Regional Entity
- ~~If the Responsible Entity works for~~ shall serve as the Compliance Enforcement Authority ("CEA") unless the ~~Regional Entity, then the~~ applicable entity is owned, operated, or controlled by the Regional Entity ~~will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity) to be responsible for compliance enforcement.~~
- ~~If the Responsible Entity is also a Regional Entity,~~. In such cases the ERO or a Regional ~~Entity~~entity approved by ~~the ERO and~~ FERC or other applicable governmental ~~authorities shall serve as the Compliance Enforcement Authority.~~
- ~~If the Responsible Entity is NERC, a third-party monitor without vested interest in the outcome for NERC~~authority shall serve as the ~~Compliance Enforcement Authority~~CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was ~~complaint~~compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until ~~found compliant~~mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Guidelines and Technical Basis

~~FAQ, SP99, ISA, US-CERT, NIST Guidelines, etc. as a source of materials~~

Requirement R1:

~~A Reportable BES~~The following guidelines are available to assist in addressing the required components of an incident response plan:

- Department of Homeland Security, Control Systems Security Program, *Developing an Industrial Control Systems* *Cyber Security Incident* *Response Capability*, 2009, online at http://www.us-cert.gov/control_systems/practices/documents/final-RP_ics_cybersecurity_incident_response_100609.pdf
- National Institute of Standards and Technology, *Computer Security Incident Handling Guide*, Special Publication 800-61 revision 1, March 2008, online at http://csrc.nist.gov/publications/nistpubs/800-61-rev1/SP800-61rev1.pdf

For Part 1.2, a Reportable Cyber Security Incident is a ~~BES~~ Cyber Security Incident that ~~results~~has compromised or disrupted one or more reliability tasks of a functional entity. It is helpful to distinguish Reportable Incidents as one resulting in a necessary response action. A response action can fall into one of two categories: ~~necessary~~ Necessary or elective. The distinguishing characteristic is whether or not action was taken in response to an event. Precautionary measures that are not in response to any persistent damage or effects may be designated as elective. All other response actions to avoid any persistent damage or adverse effects should be designated as necessary.

The reporting obligations for Reportable Cyber Security Incidents are found in EOP-004-2. This standard only requires the entity to identify such incidents. However, an entity may include identification and reporting procedures in the same plan to comply with both standards.

Requirement R2:

Requirement R2 ensures entities periodically test the incident response plan. This includes the requirement in Part 2.2 to ensure the plan is actually used when testing. The testing requirements are specifically for *Reportable Cyber Security Incidents*.

Entities may use an actual response to a *Reportable Cyber Security Incident* as a substitute for exercising the plan annually. Otherwise, entities must exercise the plan with a paper drill, tabletop exercise, or full operational exercise. For more specific types of exercises, refer to the FEMA Homeland Security Exercise and Evaluation Program (HSEEP). It lists the following four types of discussion-based exercises: seminar, workshop, tabletop, and games. In particular, it defines that, "A tabletop exercise involves key personnel discussing simulated scenarios in an informal setting. TTXs can be used to assess plans, policies, and procedures."

The HSEEP lists the following three types of operations-based exercises: Drill, functional exercise, and full-scale exercise. It defines that, "[A] full-scale exercise is a multi-agency, multi-jurisdictional, multi-discipline exercise involving functional (e.g., joint field office, Emergency

operation centers, etc.) and 'boots on the ground' response (e.g., firefighters decontaminating mock victims)."

In addition to the requirements to implement the response plan, Part 2.3 specifies entities must retain relevant records for *Reportable Cyber Security Incidents*. There are several examples of specific types of evidence listed in the measure. Entities should refer to their handling procedures to determine the types of evidence to retain and how to transport and store the evidence. For further information in retaining incident records, refer to the NIST Guide to Integrating Forensic Techniques into Incident Response (SP800-86). The NIST guideline includes a section (Section 3.1.2) on acquiring data when performing forensics.

Requirement R3:

This requirement ensures entities maintain Cyber Security Incident response plans. There are two requirement parts that trigger plan updates: (1) lessons learned from Part 3.2 and (2) organizational or technology changes from Part 3.4.

The documentation of lessons learned from Part 3.2 is associated with each Reportable Cyber Security Incident and involves the activities as illustrated in Figure 1, below. The deadline to document lessons learned starts after the completion of the incident in recognition that complex incidents on complex systems can take a few days or weeks to complete response activities. The process of conducting lessons learned can involve the response team discussing the incident to determine gaps or areas of improvement within the plan. Any documented deviations from the plan from Part 2.2 can serve as input to the lessons learned. It is possible to have a BES Reportable Cyber Security Incident without any documented lessons learned.

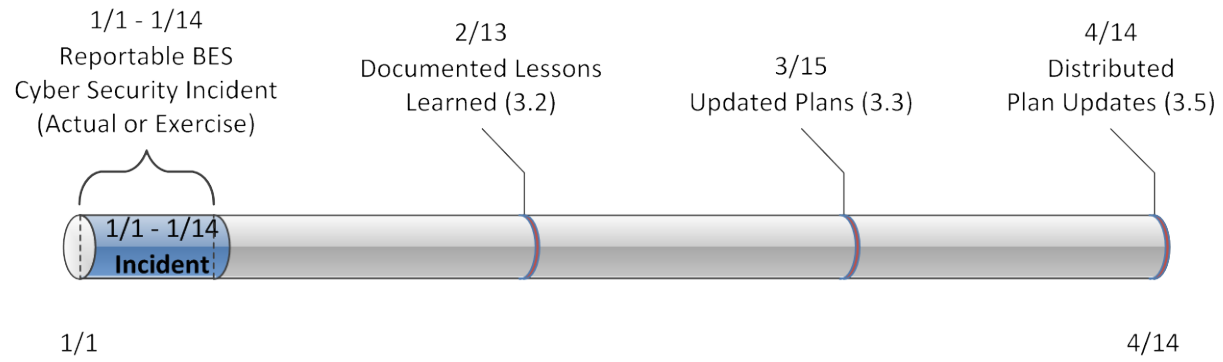

Figure 1: CIP-008-5 R3 Timeline for Reportable Cyber Security Incidents

Part 3.3 requires an entity to update the plan within 30 days of the documented lessons learned. This recognizes the time it may take to propose solutions to the lessons learned and complete the review and approval process.

Part 3.5 requires an entity to distribute the plan within 30 calendar days of the plan update. The measure specifies this can be accomplished through email, USPS, electronic distribution system (e.g., workflow software), or training records.

The plan change requirement in Part 3.4 is associated with organization and technology changes referenced in the plan and involves the activities illustrated in Figure 2, below. Organizational changes include changes to the roles and responsibilities people have in the plan or changes to the response groups or individuals. This may include changes to the names or contact information listed in the plan. Technology changes affecting the plan may include referenced information sources, communication systems or ticketing systems.

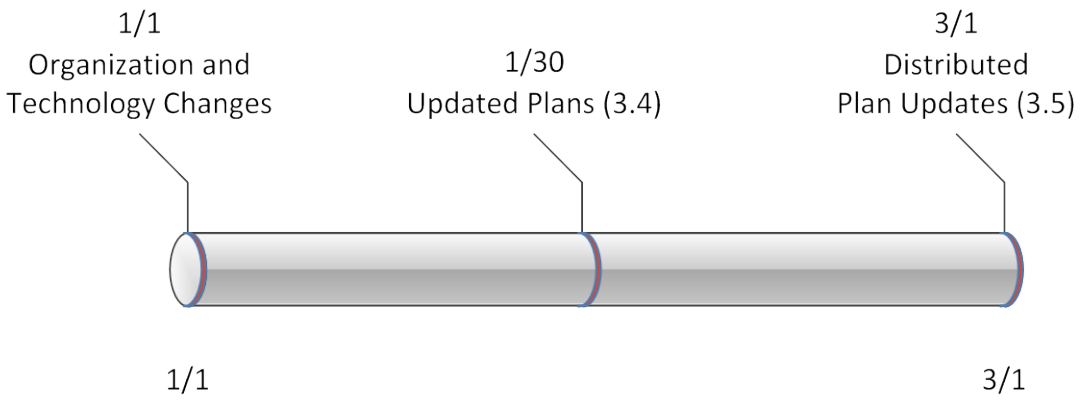

Figure 2: Timeline for Plan Changes in 3.4

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this Implementation Plan.[1]
2. In those jurisdictions where no regulatory approval is required, the Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their Implementation Plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the Implementation Plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center"	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a Responsible Entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3		Updated version number from -2 to -3 In Requirement 1.6, deleted the sentence pertaining to removing component or system from service in order to perform testing, in response to FERC order issued September 30, 2009.	
3	12/16/09	Approved by the NERC Board of Trustees.	Update
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Recovery Plans for BES Cyber Systems

2. Number: CIP-009-5

3. Purpose: To recover reliability functions performed by BES Cyber Systems by specifying recovery plan requirements in support of the continued stability, operability, and reliability of the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

4.1.7 Reliability Coordinator

4.1.8 Transmission Operator

4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

Standard CIP-009-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational, and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the applicable items in [Table Reference].*" The referenced table requires the applicable items in the procedures for a common subject matter.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the standards.
Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:
Each table row has an applicability column to further define the scope to which a specific requirement row applies to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as high impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as medium impact according to the CIP-002-5 identification and categorization processes.
- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.

- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.

B. Requirements and Measures

Rationale for R1: Preventative activities can lower the number of incidents, but not all incidents can be prevented. A preplanned recovery capability is, therefore, necessary for rapidly recovering from incidents, minimizing loss and destruction, mitigating the weaknesses that were exploited, and restoring computing services so that planned and consistent recovery action to restore BES Cyber Assets and BES Cyber Systems occurs.

Summary of Changes: Added provisions to protect data that would be useful in the investigation of an event that results in the need for a Cyber System recovery plan to be utilized.

R1. Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in *CIP-009-5 Table R1 – Recovery Plan Specifications*. *[Violation Risk Factor: Medium] [Time Horizon: Long Term Planning].*

M1. Evidence must include the documented recovery plan(s) that collectively include the applicable items in *CIP-009-5 Table R1 – Recovery Plan Specifications*.

CIP-009-5 Table R1 – Recovery Plan Specifications			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Conditions for activation of the recovery plan(s).	Evidence may include, but is not limited to, one or more plans that include language identifying specific conditions for activation of the recovery plan(s).
Reference to prior version: *CIP-009, R1.1*		**Change Description and Justification:** *Minor wording changes; essentially unchanged.*

1.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	Evidence may include, but is not limited to, dated evidence or logs confirming that the backup process completed successfully.
Reference to prior version: *New Requirement*		**Change Description and Justification:** *Addresses FERC Order Section 739 and 748.*	
1.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Processes to preserve data, except for CIP Exceptional Circumstances, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s).	Evidence may include, but is not limited to, procedures to preserve data; such as preserving a corrupted drive, making a data mirror of the system before proceeding with recovery, or taking the important assessment steps necessary to avoid reintroducing the precipitating or corrupted data.
Reference to prior version: *New Requirement*		**Change Description and Justification:** *Added requirement to address FERC Order No. 706, Paragraph 706.*	

Rationale for R2: To verify the Responsible Entities Recovery Plan's effectiveness. Planned and unplanned maintenance activities may also present opportunities to execute and document an Operational Exercise (see NIST SP 800-84, Functional Exercise). This is often applicable to operational systems where it may be otherwise disruptive to test certain aspects of the system or contingency plan. NIST SP 800-53, Appendix I, contains supplemental guidance.

NIST SP 800-84 identifies the following types of exercises widely used in information system programs by single organizations:

Tabletop Exercises. Tabletop exercises are discussion-based exercises where personnel meet in a classroom setting or in breakout groups to discuss their roles during an Emergency and their responses to a particular Emergency situation. A facilitator presents a scenario and asks the exercise participants questions related to the scenario, which initiates a discussion among the participants of roles, responsibilities, coordination, and decision making. A tabletop exercise is discussion-based only and does not involve deploying equipment or other resources.

Functional Exercises. Functional exercises allow personnel to validate their operational readiness for Emergencies by performing their duties in a simulated operational environment. Functional exercises are designed to exercise the roles and responsibilities of specific team members, procedures, and assets involved in one or more functional aspects of a plan (e.g., communications, Emergency notifications, System equipment setup). Functional exercises vary in complexity and scope, from validating specific aspects of a plan to full-scale exercises that address all plan elements. Functional exercises allow staff to execute their roles and responsibilities as they would in an actual Emergency situation, but in a simulated manner.

Summary of Changes. Added operational testing for recovery of BES Cyber Systems.

R2. Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in *CIP-009-5 Table R2 – Recovery Plan Implementation and Testing. [Violation Risk Factor: Lower] [Time Horizon: Operations Planning and Real-time Operations.]*

M2. Evidence must include, but is not limited to, documentation that collectively demonstrates implementation of each of the applicable items in *CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.*

CIP-009-5 Table R2 – Recovery Plan Implementation and Testing			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Test the recovery plan(s) referenced in Requirement R1 at least once each calendar year, not to exceed 15 calendar months between tests of the plan: • By recovering from an actual incident; • With a paper drill or tabletop exercise; or • With an operational exercise.	Evidence may include, but is not limited to, dated evidence of a test (by recovering from an actual incident, with a paper drill or tabletop exercise, or with an operational exercise) of the recovery plan at least once each calendar year, not to exceed 15 calendar months. For the paper drill or full operational exercise, evidence may include meeting notices, minutes, or other records of exercise findings.
Reference to prior version: *CIP-009, R2*		**Change Description and Justification:** *Minor wording change; essentially unchanged.*	
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Test information used in the recovery of BES Cyber Systems that is stored on backup media at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and is compatible with current system configurations.	Evidence may include, but is not limited to, dated evidence of a test of information used in the recovery of BES Cyber Systems that is stored on backup media when initially stored and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and is compatible with current system configurations.

CIP-009-5 Table R2 – Recovery Plan Implementation and Testing			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-009, R5*		**Change Description and Justification:** *Combined Requirement from CIP-009 R5 included requirement to test when initially stored. Addresses FERC Order No. 706, Paragraphs 739 and 748 related to testing of backups.*	
2.3	High Impact BES Cyber Systems	Test each of the recovery plans referenced in Requirement R1 at least once every 36 calendar months through an operational exercise of the recovery plans in an environment representative of the production environment. An actual recovery response may substitute for an operational exercise.	Evidence may include, but is not limited to Dated evidence of: • An operational exercise prior to the effective date of the standard and at least once every 36 calendar months between exercises, that demonstrates recovery in a representative environment; or • An actual incident response which occurred within the 36 calendar month timeframe that exercised the recovery plans.
Reference to prior version: *CIP-009, R2*		**Change Description and Justification:** *Addresses FERC Order No. 706, Paragraph 725 to add the requirement that the recovery plan test be a full operational test once every 3 years.*	

Rationale for R3: To enable the continued effectiveness of the Responsible Entities response plan's for planned and consistent restoration of BES Cyber System(s).

Summary of Changes: Addressed recovery plan review, update, and communication specifications to ensure that recovery plans remain updated and individuals are aware of the updates.

R3. Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in *CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Assessment].*

M3. Acceptable evidence includes, but is not limited to, each of the applicable items in *CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.*

CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Document any identified deficiencies or lessons learned associated with each recovery plan test or actual incident recovery within 30 calendar days after completion of the test or recovery.	Evidence may include, but is not limited to, dated documentation of identified deficiencies or lessons learned for each recovery plan test or actual incident recovery within 30 calendar days after completion of the test or recovery.
Reference to prior version: *CIP-009, R1 and R3*		**Change Description and Justification:** *Added the time frame for update.*	

CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Update the recovery plan(s) based on any documented deficiencies or lessons learned within 30 calendar days after the documentation required by Part 3.1.	Evidence may include, but is not limited to, dated, documented deficiencies or lessons learned required by Part 3.1 and the dated, revised recovery plan(s) based on that documentation.
Reference to prior version: *CIP-009, R3*		**Change Description and Justification:** *Added the timeframe for update.*	
3.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Update recovery plan(s) within 30 calendar days of any of the following changes that the Responsible Entity determines would impact the plan or the ability to execute the plan: • Roles or responsibilities; or • Technology changes.	Evidence may include, but is not limited to, dated documentation reflecting changes made to the recovery plan(s) in response to the following changes that the responsible entity determined would impact the plan or the ability to execute the plan: • Roles or responsibilities; or • Technology changes.
Reference to prior version: *New Requirement*		**Change Description and Justification:** *Ensures that recovery plans stay updated.*	

CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Distribute recovery plan updates to each individual responsible under R1.2 for the recovery plan efforts within 30 calendar days of the update being completed.	Evidence of distribution of updates may include, but is not limited to: • Emails; • USPS or other mail service; • Electronic distribution system; or • Training sign-in sheets.
Reference to prior version: *New Requirement*		**Change Description and Justification:** *Ensures that recovery personnel are aware of any changes to recovery plans.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Long-term Planning**	**Medium**	N/A	The Responsible Entity has developed recovery plan(s), but the plan(s) do not address all of the requirements included in Parts 1.2 through 1.5.	The Responsible Entity has developed recovery plan(s), but the plan(s) do not address two of the requirements included in Parts 1.2 through 1.5.	The Responsible Entity has not created recovery plan(s) for BES Cyber Systems. OR The Responsible Entity has created recovery plan(s) for BES Cyber Systems, but the plan(s) does not address the conditions for activation in Part 1.1. OR The Responsible Entity has created recovery plan(s) for BES Cyber Systems, but the plan(s) does not address three or more of the requirements in Parts 1.2 through 1.5.
R2	**Operations Planning** **Real-time**	**Lower**	The Responsible Entity has not tested the recovery plan(s) according to R2 Part	The Responsible Entity has not tested the recovery plan(s) within 16 calendar months,	The Responsible Entity has not tested the recovery plan(s) according to R2 Part	The Responsible Entity has not tested the recovery plan(s) according to R2 Part

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
	Operations		2.1 within 15 calendar months, not exceeding 16 calendar months between tests of the plan. (2.1) OR The Responsible Entity has not tested the information used in the recovery of BES Cyber Systems according to R2 Part 2.2 within 15 calendar months, not exceeding 16 calendar months between tests. (2.2) OR The Responsible Entity has not tested the recovery plan according to R2 Part 2.3 within 36 calendar months, not exceeding 37 calendar months between tests. (2.3)	not exceeding 17 calendar months between tests of the plan. (2.1) OR The Responsible Entity has not tested the information used in the recovery of BES Cyber Systems according to R2 Part 2.2 within 16 calendar months, not exceeding 17 calendar months between tests. (2.2) OR The Responsible Entity has not tested the recovery plan according to R2 Part 2.3 within 37 calendar months, not exceeding 38 calendar months between tests. (2.3)	2.1 within 17 calendar months, not exceeding 18 calendar months between tests of the plan. (2.1) OR The Responsible Entity has not tested the information used in the recovery of BES Cyber Systems according to R2 Part 2.2 within 17 calendar months, not exceeding 18 calendar months between tests. (2.2) OR The Responsible Entity has not tested the recovery plan according to R2 Part 2.3 within 38 calendar months, not exceeding 39 calendar months between tests. (2.3)	2.1 within 18 calendar months between tests of the plan. (2.1) OR The Responsible Entity has not tested the information used in the recovery of BES Cyber Systems according to R2 Part 2.2 within 19 calendar months between tests. (2.2) OR The Responsible Entity has not tested the recovery plan(s) according to R2 Part 2.3 within 39 calendar months between tests of the plan. (2.3)

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R3	**Operations Assessment**	**Lower**	The Responsible Entity has not distributed updates of the recovery plan to each person or group with a defined role in the recovery plan(s) within 30 and less than 60 calendar days of the update being completed. (3.4)	The Responsible Entity has not updated the recovery plan(s) based on any documented lessons learned within 30 and less than 60 calendar days after the documentation required by R3 Part 3.1. (3.1) OR The Responsible Entity has not updated the Recovery plan(s)(s) within 30 and less than 60 calendar days of any of the changes listed in R3 Part 3.3 that the responsible entity determines would impact the ability to execute the plan (3.3)	The Responsible Entity has not documented any lessons learned within 30 and less than 60 calendar days of each recovery plan test or actual incident recovery. (3.1) OR The Responsible Entity has not updated the recovery plan(s) based on any documented lessons learned within 60 calendar days after the documentation required by R3 Part 3.2. (3.2) OR The Responsible Entity has not updated the recovery plan(s)(s) within 60 calendar	The Responsible Entity has not documented any lessons learned within 60 calendar days of each recovery plan test or actual incident recovery. (3.1)

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
				OR The Responsible Entity has not distributed updates of the recovery plan(s) to each person or group with a defined role in the recovery plan(s) within 60 calendar days of the update being completed. (3.4)	days of any of the changes listed in R3 Part 3.3 that the responsible entity determines would impact the ability to execute the plan. (3.3)

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. ~~CSO706 SDT appointed (August 7, 2008)~~
4. ~~Version 1 of CIP-002 to CIP-009 approved by FERC (January 18, 2008)~~
5. ~~Version 2 of CIP-002 to CIP-009 approved by FERC (September 30, 2009)~~
6. ~~Version 3 of CIP-002 to CIP-009 approved by FERC (September 30, 2009)~~
7. ~~Version 4 of CIP-002 to CIP-009 approved by NERC Board of Trustees (January 24, 2011) and filed with FERC (February 10, 2011)~~

~~8.~~3. ~~Version 5 of CIP-002 to CIP-011 posted~~First posting for 60-day formal comment period and concurrent ballot (~~mm-dd-yy~~)November 2011).

Description of Current Draft

This is the ~~first~~second posting of Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (Version 5)~~A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012
Recirculation ballot	June 2012

BOT adoption	June 2012

Effective Dates

1. ~~18~~24 **Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this ~~implementation plan~~Implementation Plan.[1]

~~1.~~2. In those jurisdictions where no regulatory approval is required, the ~~standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of ~~Trustees~~Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their ~~implementation plan~~Implementation Plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the ~~implementation plan~~Implementation Plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	1/16/06	R3.2 — Change "Control Center" to "control center"	3/24/06
2	9/30/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a ~~responsible entity.~~Responsible Entity. Rewording of Effective Date. Changed compliance monitor to Compliance Enforcement Authority.	
3		Updated version number from -2 to -3 In Requirement 1.6, deleted the sentence pertaining to removing component or system from service in order to perform testing, in response to FERC order issued September 30, 2009.	
3	12/16/09	Approved by the NERC Board of Trustees.	Update
3	3/31/10	Approved by FERC.	
4	12/30/10	Modified to add specific criteria for Critical Asset identification~~-~~.	Update
4	1/24/11	Approved by the NERC Board of Trustees.	
5	TBD	Modified to coordinate with other CIP standards and to revise format to use RBS Template.	

Definitions of Terms Used in the Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Recovery Plans for BES Cyber ~~Assets and~~ Systems

2. Number: CIP-009-5

~~**3. Purpose:** Standard CIP-009-5 ensures that recovery plan(s) related to the storing of backup information are put in place for BES Cyber Assets and BES Cyber Systems and that these plans support and follow established business continuity and disaster recovery techniques and practices.~~

3. Purpose: To recover reliability functions performed by BES Cyber Systems by specifying recovery plan requirements in support of the continued stability, operability, and reliability of the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

~~4.1.2~~4.1.3 Generator Operator

~~4.1.3~~4.1.4 Generator Owner

~~4.1.4~~4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

~~4.1.5~~4.1.7 Reliability Coordinator

~~4.1.6~~4.1.8 Transmission Operator

~~4.1.7~~4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 ~~that are part of any of the following systems~~Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

~~4.2.1~~4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS program required by a NERC or Regional Reliability Standard
- A UVLSUVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more
- A Special Protection System or Remedial Action Scheme required by a NERC or Regional Reliability Standard
- A Transmission Protection System required by a NERC or Regional Reliability Standard
- Its Transmission Operator's restoration plan

4.2.24.2.3 where the**Generator Operator**

4.2.34.2.4 **Generator Owner**

4.2.44.2.5 **Interchange Coordinator**

4.2.5 Load Serving Entity that owns Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS program required by a NERC or Regional Reliability Standard
- A UVLS program required by a NERC or Regional Reliability Standard

4.2.6 NERC

4.2.7 Regional Entity

4.2.84.2.6 **Reliability Coordinator**

4.2.94.2.7 **Transmission Operator**

4.2.104.2.8 **Transmission Owner**

4.3. Facilities:

4.3.1 Load Serving Entity: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection of the BES:

- A UFLS program required by a NERC or Regional Reliability Standard
- A UVLS program required by a NERC or Regional Reliability Standard

4.3.2 Distribution Providers: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS program required by a NERC or Regional Reliability Standard
- A UVLS program required by a NERC or Regional Reliability Standard
- A Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard

- A ~~Transmission~~ Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard

- ~~Its Transmission Operator's restoration plan~~
- ~~**All other**~~ Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

~~**4.3.3**~~**4.3.1 Responsible Entities~~:~~ listed in 4.1 other than Distribution Providers and Load-Serving Entities**: All BES Facilities.

~~**4.3.4**~~**4.3.2 Exemptions:** The following are exempt from Standard CIP-~~009~~002-5:

~~**4.3.4.1**~~**4.3.2.1** Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

~~**4.3.4.2**~~**4.3.2.2** Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

~~**4.3.4.3**~~**4.3.2.3** In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.~~-~~R. Section 73.54.

~~**4.3.4.4 Responsible Entities that, in compliance with Standard CIP-002-5, identify that they have no BES Cyber Systems.**~~

5. Background:

Standard CIP-009-5 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational, and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

~~Each requirement opens~~Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the ~~required~~applicable items in [Table Reference].*" The referenced table requires the ~~specific elements~~applicable items in the procedures for a common subject matter ~~as applicable~~.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of ~~specific elements required~~applicable items in the documented processes. A numbered list in the measure means the evidence

example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not ~~infer~~imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e.~~.~~, incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the ~~Standards~~standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the ~~Standards.~~standards. Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies~~.~~ to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- ~~**All Responsible Entities –** Applies to all Responsible Entities listed in the Applicability section of the Standard. This requirement applies at an organizational level rather than individually to each BES Cyber System. Requirements having this applicability comprise basic elements of an organizational CIP cyber security program.~~

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~High Impact~~high impact according to the CIP-002-5 identification and categorization processes. ~~Responsible Entities can implement common controls that meet requirements for multiple High and Medium Impact BES Cyber Systems.~~

~~For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.~~

- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.
- ~~**Medium Impact BES Cyber Systems with External Routable Connectivity** – Only applies to Medium Impact BES Cyber Systems with External Routable Connectivity. This also excludes Cyber Assets in the BES Cyber System that cannot be directly accessed through External Routable Connectivity.~~
- ~~**Low Impact BES Cyber Systems with External Routable Connectivity –** Applies to each Low Impact BES Cyber Systems with External Routable Connectivity according to the CIP-002-5 identification and categorization process, which includes all other BES Cyber Systems not categorized as High or Medium.~~
- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding ~~High or Medium Impact BES Cyber Systems.~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.
- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.
- ~~**Associated Protected Cyber Assets –** Applies to each Protected Cyber Asset associated with a corresponding High or Medium Impact BES Cyber Systems.~~
- ~~**Electronic Access Points –** Applies at Electronic Access Points (with External Routable Connectivity or dial-up connectivity) associated with a referenced BES Cyber System.~~
- ~~**Electronic Access Points with External Routable Connectivity –** Applies at Electronic Access Points with External Routable Connectivity. This excludes those Electronic Access Points with dial-up connectivity.~~
- ~~**Locally Mounted Hardware or Devices Associated with Defined Physical Boundaries –** Applies to the locally mounted hardware (e.g. such as motion sensors, electronic lock control mechanisms, and badge readers) associated with a Defined Physical Boundary for High or Medium Impact BES Cyber Systems. These~~

~~hardware and devices are excluded in the definition of Physical Access Control Systems.~~

B. Requirements and Measures

~~**Rationale for R1:** Preventative activities can lower the number of incidents, but not all incidents can be prevented. A preplanned recovery capability is therefore necessary for rapidly recovering from incidents, minimizing loss and destruction, mitigating the weaknesses that were exploited, and restoring computing services so that planned and consistent recovery action to restore BES Cyber Assets and BES Cyber Systems occurs.~~

~~**Summary of Changes:**~~

~~Added provisions to protect data that would be useful in the investigation of an event that results in the need for a cyber system recovery plan to be utilized.~~

R1. Each Responsible Entity shall have one or more documented recovery plans that collectively include each of the applicable items in *CIP-009-5 Table R1 – Recovery Plan Specifications*. *[Violation Risk Factor: Medium] [Time Horizon: Long Term Planning~~]~~].*

M1. Evidence must include the documented recovery plan(s) that collectively include the applicable items in *CIP-009-5 Table R1 – Recovery Plan Specifications*.

CIP-009-5 Table R1 – Recovery Plan Specifications			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Conditions for activation of the recovery plan(s).	Evidence may include, but ~~-~~is ~~-~~not limited to, one or more plans that include language identifying specific conditions for activation of the recovery plan(s).
Reference to prior version: *CIP-009, R1.1*		**Change Description and Justification:** ~~*Reworded to address FERC Order 706 P694 and simplify the*~~*Minor wording*~~.~~ *changes; essentially unchanged.*	

CIP-009-5 Table R1 – Recovery Plan Specifications			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Roles and responsibilities of responders~~, including identification of the individuals, either by name or by title, responsible for recovery efforts~~.	Evidence may include, but is not limited to, one or more recovery plans that include language identifying the roles and responsibilities of responders~~, including identification of the individuals responsible for recovery efforts.~~.
Reference to prior version: *CIP-009, R1.2*		**Change Description and Justification:** *Minor wording changes; essentially unchanged.*	
1.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	One or more processes for the backup~~,~~ and storage~~, and protection~~ of information required to ~~restore~~recover BES Cyber System functionality.	Evidence may include, but is not limited to, documentation of specific processes for the backup, storage, ~~and protection~~ of information required to successfully ~~restore a~~recover BES Cyber System functionality.
Reference to prior version: *CIP-009, R4*		**Change Description and Justification:** *Minor wording changes; essentially unchanged.*	

CIP-009-5 Table R1 – Recovery Plan Specifications			
Part	**~~Part~~Applicable BES Cyber Systems and associated Cyber Assets**	**~~Part~~Requirements**	**~~Part~~Measures**
1.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Information essential to BES Cyber System recovery that is stored on backup media shall be verified initially after backup to ensure that the backup process completed successfully.	Evidence may include, but is not limited to, dated evidence ~~of the verification~~or logs confirming that the backup process completed successfully.
Reference to prior version: *New Requirement*		**Change Description and Justification:** *Addresses FERC Order Section 739 and 748.*	
1.5	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	~~Preserve data, where technically feasible~~Processes to preserve data, except for CIP Exceptional Circumstances, for analysis or diagnosis of the cause of any event that triggers activation of the recovery plan(s~~) as required in Requirement R1. ~~).	Evidence may include, but is not limited to, procedures to preserve data~~,~~; such as preserving a corrupted drive, making a data mirror of the system before proceeding with recovery, or taking the important assessment steps necessary to avoid reintroducing the precipitating or corrupted data.
Reference to prior version: *New Requirement*		**Change Description and Justification:** *Added requirement to address FERC Order No. 706, ~~paragraph~~Paragraph 706.*	

Rationale for R2: To verify the Responsible Entities Recovery Plan's effectiveness. Planned and unplanned maintenance activities may also present opportunities to execute and document an Operational Exercise (see NIST SP 800-84, Functional Exercise). This is often applicable to operational systems where it may be otherwise disruptive to test certain aspects of the system or contingency plan. NIST SP 800-53, Appendix I, contains supplemental guidance.

NIST SP 800-84 identifies the following types of exercises widely used in information system programs by single organizations:

Tabletop Exercises. Tabletop exercises are discussion-based exercises where personnel meet in a classroom setting or in breakout groups to discuss their roles during an ~~emergency~~Emergency and their responses to a particular ~~emergency~~Emergency situation. A facilitator presents a scenario and asks the exercise participants questions related to the scenario, which initiates a discussion among the participants of roles, responsibilities, coordination, and decision making. A tabletop exercise is discussion-based only and does not involve deploying equipment or other resources.

Functional Exercises. Functional exercises allow personnel to validate their operational readiness for ~~emergencies~~Emergencies by performing their duties in a simulated operational environment. Functional exercises are designed to exercise the roles and responsibilities of specific team members, procedures, and assets involved in one or more functional aspects of a plan (e.g., communications, ~~emergency~~Emergency notifications, ~~system~~System equipment setup). Functional exercises vary in complexity and scope, from validating specific aspects of a plan to full-scale exercises that address all plan elements.~~28~~ Functional exercises allow staff to execute their roles and responsibilities as they would in an actual ~~emergency~~Emergency situation, but in a simulated manner.

Summary of Changes. Added operational testing for recovery of BES Cyber Systems.

R2. Each Responsible Entity shall implement its documented recovery plan(s) to collectively include each of the applicable items in *CIP-009-5 Table R2 – Recovery Plan Implementation and Testing. [Violation Risk Factor: Lower] [Time Horizon: ~~Long Term~~Operations Planning~~]~~ and Real-time Operations.]*

M2. Evidence must include, but is not limited to, documentation that collectively demonstrates implementation of each of the applicable items in *CIP-009-5 Table R2 – Recovery Plan Implementation and Testing.*

CIP-009-5 Table R2 – Recovery Plan Implementation and Testing			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	~~Implement~~Test the recovery plan(s) referenced in Requirement R1 ~~initially upon the effective date of the standard and~~ at least once each calendar year ~~thereafter~~, not to exceed 15 calendar months between ~~executions~~tests of the plan: • ~~by~~By recovering from an actual incident~~, or~~; • ~~with~~With a paper drill or tabletop exercise~~,~~; or • ~~with a full~~With an operational exercise.	Evidence may include, but is not limited to, dated evidence of a test (by recovering from an actual incident, with a paper drill or tabletop exercise, or with ~~a full~~an operational exercise) of the recovery plan at least once each calendar year, not to exceed 15 calendar months. For the paper drill or full operational exercise, evidence may include meeting notices, minutes, or other records of exercise findings.
Reference to prior version: *CIP-009, R2*		**Change Description and Justification:** *Minor wording change; essentially unchanged.*	
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems at Control Centers. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	Test ~~any~~ information used in the recovery of BES Cyber ~~systems~~Systems that is stored on backup media ~~initially and~~ at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and ~~reflects~~is compatible with current system configurations.	Evidence may include, but is not limited to, dated evidence of a test of ~~any~~ information used in the recovery of BES Cyber ~~systems~~Systems that is stored on backup media when initially stored and at least once each calendar year, not to exceed 15 calendar months between tests, to ensure that the information is useable and ~~reflects~~is compatible with current system configurations.

CIP-009-5 Table R2 – Recovery Plan Implementation and Testing			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-009, R5*		**Change Description and Justification:** *Combined Requirement from CIP-009 R5 included requirement to test when initially stored. Addresses FERC ~~Requirements (~~Order No. 706, Paragraphs 739~~,~~ and 748~~)~~ related to testing of backups.*	
2.3	High Impact BES Cyber Systems ~~Medium Impact BES Cyber Systems at Control Centers.~~ ~~Associated Physical Access Control Systems~~ ~~Associated Electronic Access Control or Monitoring Systems~~	Test each of the recovery plans referenced in Requirement R1~~, initially upon the effective date of the standard, and~~ at least once every ~~39~~36 calendar months ~~thereafter~~ through an operational exercise of the recovery plans in ~~a~~ an environment representative ~~environment that reflects~~of the production environment. An actual recovery response may substitute for an operational exercise.	Evidence may include, but is not limited to~~:~~ Dated evidence of ~~an~~: • An operational exercise ~~initially upon~~prior to the effective date of the standard and at least once every ~~39~~36 calendar months between exercises, that demonstrates recovery in a representative environment; or • An actual incident response which occurred within the ~~39~~36 calendar month timeframe that ~~implemented~~exercised the recovery plans.
Reference to prior version: *CIP-009, R2*		**Change Description and Justification:** *Addresses FERC ~~Requirement (~~Order No. 706, Paragraph 725~~)~~ to add the requirement that the recovery plan test be a full operational test once every 3 years.*	

Rationale for R3: To enable the continued effectiveness of the Responsible Entities response plan's for planned and consistent restoration of BES Cyber System(s).

Summary of Changes:

Addressed recovery plan review, update, and communication specifications to ensure that recovery plans remain updated and individuals are aware of the updates.

R3. Each Responsible Entity shall maintain each of its recovery plans in accordance with each of the applicable items in *CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication*. *[Violation Risk Factor: Lower] [Time Horizon: ~~Long-Term Planning~~]Operations Assessment].*

M3. Acceptable evidence includes, but is not limited to, each of the applicable items in *CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication.*

CIP-009-5 Table R3 – Recovery Plan Review, Update and Communication			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

- The Regional Entity; or
- If the Responsible Entity works for shall serve as the Compliance Enforcement Authority ("CEA") unless the Regional Entity, then the applicable entity is owned, operated, or controlled by the Regional Entity will establish an agreement with. In such cases the ERO or anothera Regional entity approved by the ERO and FERC (i.e. another Regional Entity) to be responsible for compliance enforcement.
- If the Responsible Entity is also a Regional Entity, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.
- If the Responsible Entity is NERC, a third-party monitor without vested interest in the outcome for NERCauthority shall serve as the Compliance Enforcement AuthorityCEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was complaintcompliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until found compliantmitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance -Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	TBD	Developed to define the configuration management and vulnerability assessment requirements in coordination with other CIP standards and to address the balance of the FERC directives in its Order 706.	

Definitions of Terms Used in Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Configuration Management and Vulnerability Assessments

2. Number: CIP-010-1

3. Purpose: To prevent and detect unauthorized changes to BES Cyber Systems by specifying configuration management and vulnerability assessment requirements in support of protecting BES Cyber Systems from compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

4.1.7 Reliability Coordinator

4.1.8 Transmission Operator

4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that

performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

Standard CIP-010-1 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the applicable items in [Table Reference].*" The referenced table requires the applicable items in the procedures for a common subject matter.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence.

These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the standards.
Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:
Each table row has an applicability column to further define the scope to which a specific requirement row applies to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as high impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as medium impact according to the CIP-002-5 identification and categorization processes.
- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.

- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.
- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column.

B. Requirements and Measures

Rationale – R1:

The configuration change management processes are intended to prevent unauthorized modifications to BES Cyber Systems.

R1. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-010-1 Table R1 – Configuration Change Management*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning].*

M1. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-010-1 Table R1 – Configuration Change Management* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-010-1 Table R1 – Configuration Change Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Develop a baseline configuration, which shall include the following for each Cyber Asset identified, individually or by group: 1.1.1. Operating system(s) (including version) or firmware where no independent operating system exists; 1.1.2. Any commercially available or open-source application software (including version) intentionally installed on the BES Cyber Asset; 1.1.3. Any custom software developed for the entity; 1.1.4. Any logical network accessible ports; and 1.1.5. Any security patches.	Evidence may include, but is not limited to: • A spreadsheet identifying the required items of the baseline configuration for each Cyber Asset; or • A record in an asset management system that identifies the required items of the baseline configuration for each Cyber Asset.
Reference to prior version: *New Requirement*		**Change Rationale:** *The baseline configuration requirement was incorporated from the DHS Catalog for Control Systems Security. The baseline requirement is also intended to clarify precisely when a change management process must be invoked and which elements of the configuration must be examined.*	

CIP-010-1 Table R1 – Configuration Change Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Authorize and document changes that deviate from the existing baseline configuration.	Evidence may include, but is not limited to: • A change request record and associated electronic authorization (performed by the individual or group with the authority to authorize the change) in a change management system for each change; or • Documentation that the change was performed in accordance with the requirement.
Reference to prior version: *CIP-007-3, R9; CIP-003-3, R6*		**Change Rationale:** *The SDT added requirement to explicitly authorize changes. This requirement was previously implied by CIP-003-3, Requirement R6.*	
1.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For a change that deviates from the existing baseline configuration, update the baseline configuration and other documentation required by CIP-005 and CIP-007 as necessary within 30 calendar days of completing the change.	Evidence may include, but is not limited to, updated baseline documentation for changes that impacted CIP-005 or CIP-007 documentation, and relevant CIP-005 or CIP-007 documentation, with a date that is within 30 days of the date of the completion of the change.
Reference to prior version: *CIP-007-3, R9; CIP-005-3, R5*		**Change Rationale:** *Document maintenance requirement due to a BES Cyber System change is equivalent to the requirements in the previous versions of the standard.*	

CIP-010-1 Table R1 – Configuration Change Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For a change that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls identified in CIP-005, CIP-006, and CIP-007 that could be impacted by the change; 1.4.2. Following the change, verify these required controls determined in 1.4.1 and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	Evidence may include, but is not limited to, a list of cyber security controls verified or tested along with the dated test results.
Reference to prior version: *CIP-007-3, R1*		**Change Rationale:** *The SDT attempted to provide clarity on when testing must occur and removed requirement for specific test procedures because it is implicit in the performance of the requirement.*	

CIP-010-1 Table R1 – Configuration Change Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.5	High Impact BES Cyber System	Where technically feasible, for each change that deviates from the existing baseline configuration: 1.5.1. Prior to implementing any change in the production environment, test the changes in a test environment (or in a production environment where the test is performed in a manner that minimizes adverse effects) that models the baseline configuration to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and, if a test environment was used, the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	Evidence may include, but is not limited to, a list of cyber security controls tested along with successful test results and a list of differences between the production and test environments with descriptions of how any differences were accounted for, including of the date of the test.

CIP-010-1 Table R1 – Configuration Change Management			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-007-3, R1*		**Change Rationale:** *This requirement provides clarity on when testing must occur and requires additional testing to ensure that accidental consequences of planned changes are appropriately managed.* *This change addresses FERC Order No. 706, Paragraphs 397, 609, 610, and 611.*	

Rationale – R2:

The configuration monitoring processes are intended to detect unauthorized modifications to BES Cyber Systems.

R2. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-010-1 Table R2 – Configuration Monitoring. [Violation Risk Factor: Lower] [Time Horizon: Operations Planning].*

M2. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-010-1 Table R2 – Configuration Monitoring* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-010-1 Table R2 – Configuration Monitoring			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Where technically feasible, monitor continuously or periodically, not to exceed once every 35 calendar days, for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate detected unauthorized changes.	Evidence may include, but is not limited to, logs from a system that is monitoring the configuration of the BES Cyber System along with records of investigation for any unauthorized changes that were detected by the system.
Reference to prior version: *New Requirement*		**Change Rationale:** *The monitoring of the configuration of the BES Cyber System provides an express acknowledgement of the need to consider malicious actions along with intentional changes.* *This requirement was added after review of the DHS Catalog of Control System Security and to address FERC Order No. 706, Paragraph 397.* *Thirty-five Calendar days allows for a "once-a-month" frequency with slight flexibility to account for months with 31 days or for beginning or endings of months on weekends.*	

Rationale – R3:

The vulnerability assessment processes are intended to act as a component in an overall program to periodically ensure the proper implementation of cyber security controls as well as to continually improve the security posture of BES Cyber Systems.

R3. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-010-1 Table R3– Vulnerability Assessments*. *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning and Operations Planning]*

M3. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-010-1 Table R3 – Vulnerability Assessments* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-010-1 Table R3 – Vulnerability Assessments			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	At least once every calendar year, not to exceed 15 calendar months between assessments, conduct a paper or active vulnerability assessment to determine the extent to which the cyber security controls identified in CIP-005, CIP-006, and CIP-007 are implemented correctly and operating as designed.	Evidence may include, but is not limited to: • A document listing the date of the assessment (performed at least once every calendar year, not to exceed 15 calendar months between assessments), the controls assessed for each BES Cyber System along with the method of assessment, and the individuals who performed the assessment; or • A document listing the date of the assessment and the output of the tools used to perform the assessment.
Reference to prior version: *CIP-005-4, R4; CIP-007-4, R8*		**Change Rationale:** *As suggested in FERC Order No. 706, Paragraph 644, the details for what should be included in the assessment are left to guidance.*	

CIP-010-1 Table R3 – Vulnerability Assessments			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.2	High Impact BES Cyber Systems	Where technically feasible, at least once every 36 calendar months between assessments, perform an active vulnerability assessment in a test environment (or in a production environment where the test is performed in a manner that minimizes adverse effects) that models the baseline configuration of the BES Cyber System in a production environment. If a test environment was used, document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	Evidence may include, but is not limited to, a document listing the date of the assessment (performed at least once every 36 calendar months between assessments), the output of the tools used to perform the assessment, and a list of differences between the production and test environments with descriptions of how any differences were accounted for in conducting the assessment.
Reference to prior version: *New Requirement*		**Change Rationale:** *FERC Order No. 706, Paragraphs 541, 542, 543, 544, 545, and 547.* *As suggested in FERC Order No. 706, Paragraph 644, the details for what should be included in the assessment are left to guidance.*	

CIP-010-1 Table R3 – Vulnerability Assessments			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.3	High Impact BES Cyber Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Except for CIP Exceptional Circumstances and like replacements (same type of Cyber Asset with a baseline configuration that models an existing baseline configuration of the previous or other existing BES Cyber Asset), prior to adding a new Cyber Asset perform an active vulnerability assessment of the new Cyber Asset.	Evidence may include, but is not limited to, a document listing the date of the assessment (performed prior to the commissioning of the new Cyber Asset) and the output of the tools used to perform the assessment.
Reference to prior version: *New Requirement*		**Change Rationale:** *FERC Order No. 706, Paragraphs 541, 542, 543, 544, 545, and 547.*	
3.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of any remediation or mitigation action items.	Evidence may include, but is not limited to, a document listing the results or the review or assessment, a list of action items, documented proposed dates of completion for the action plan, and records of the status of the action items (such as minutes of a status meeting, updates in a work order system, or a spreadsheet tracking the action items).
Reference to prior version: *CIP-005-3, R4.5; CIP-007-3, R8.4*		**Change Rationale:** *Added a requirement for an entity planned date of completion as per the directive in FERC Order No. 706, Paragraph 643.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Operations Planning**	**Medium**	N/A	N/A	The Responsible Entity has established a configuration management program, but failed to authorize any changes to the baseline configuration and to document those changes. OR The Responsible Entity updated the baseline configuration, but failed to update the required documentation within 30-days of the change being completed.	The Responsible Entity has not established any configuration management programs. OR The Responsible Entity did not implement a configuration management program OR The Responsible Entity has established a configuration management program, but failed to establish a documented baseline OR The Responsible Entity has established a configuration management program, but with respect to the

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						changes in the baseline configuration, did not determine the required cyber security controls identified in CIP-005, CIP-006, and CIP-007 that could be impacted by the changes; or did not verify that the controls were not adversely affected when the change was implemented.
R2	**Operations Planning**	**Medium**	N/A	N/A	N/A	The Responsible Entity has not established a configuration monitoring process for changes to the baseline. OR The Responsible Entity has not investigated a detected unauthorized change to the baseline configuration.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						OR The Responsible Entity has established a configuration monitoring process for changes to the baseline but failed to document a detected unauthorized change.
R3	**Long-term Planning and Operations Planning**	**Medium**	The Responsible Entity has established one or more documented vulnerability assessment processes for each of its applicable BES Cyber Systems, but has performed a vulnerability assessment more than 15 months, but less than 18 months, since the last assessment on one of its applicable BES Cyber Systems.	The Responsible Entity has established one or more documented vulnerability assessment processes for each of its applicable BES Cyber Systems, but has not performed an active vulnerability assessment on a new Cyber Asset prior to adding it to an applicable BES Cyber System. OR	The Responsible Entity has established one or more documented vulnerability assessment processes for each of its applicable BES Cyber Systems, but has performed a vulnerability assessment more than 21 months, but less than 24 months, since the last assessment on one of its applicable BES Cyber Systems.	The Responsible Entity has established one or more documented vulnerability assessment processes for each of its applicable BES Cyber Systems, but has performed a vulnerability assessment more than 24 months since the last assessment on one of its applicable BES Cyber Systems. OR

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
				The Responsible Entity has established one or more documented vulnerability assessment processes for each of its applicable BES Cyber Systems, but has performed a vulnerability assessment more than 18 months, but less than 21, months since the last assessment on one of its applicable BES Cyber Systems.		The Responsible Entity has not established any vulnerability assessment processes for one of its applicable BES Cyber Systems. OR The Responsible Entity has established and documented one or more vulnerability assessment processes for each of its applicable BES Cyber Systems, but failed to perform an active vulnerability assessment in a test environment (or in a production environment where the test is performed in a manner that minimizes adverse effects) that models the baseline

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						configuration of its applicable BES Cyber Systems. OR The Responsible Entity has established one or more documented vulnerability assessment processes for each of its applicable BES Cyber Systems, but has not documented the results of the vulnerability assessments, the action plans to remediate or mitigate vulnerabilities identified in the assessments, and the execution status of the mitigation plans.

D. Regional Variances

None.

E. Interpretations

None.

F. Associated Documents

None.

Guidelines and Technical Basis

Requirement R1:

The Control Center test environment (or production environment where the test is performed in a manner that minimizes adverse effects) should model the baseline configuration, but may have a different set of components. For instance, an entity may have a BES Cyber System that runs a database on one component and a web server on another component. The test environment may have the same operating system, security patches, network accessible ports, and software, but have both the database and web server running on a single component instead of multiple components.

Additionally, the Responsible Entity should note that wherever a test environment (or production environment where the test is performed in a manner that minimizes adverse effects) is mentioned, the requirement is to "model" the baseline configuration and not duplicate it exactly. This language was chosen deliberately in order to allow for individual elements of a BES Cyber System at a Control Center to be modeled that may not otherwise be able to be replicated or duplicated exactly; such as, but not limited to, a legacy map-board controller or the numerous data communication links from the field or to other Control Centers (such as by ICCP).

Requirement R2:

The SDT's intent of R2 is to require automated monitoring of the BES Cyber System. However, the SDT understands that there may be some Cyber Assets where automated monitoring may not be possible (such as a GPS time clock). For that reason, automated technical monitoring was not explicitly required, and a Responsible Entity may choose to accomplish this requirement through manual procedural controls.

Requirement R3:

The Responsible Entity should note that the requirement provides a distinction between paper and active vulnerability assessments. The justification for this distinction is well-documented in FERC Order No. 706 and its associated Notice of Proposed Rulemaking. In developing their Vulnerability Assessment processes, Responsible Entities are strongly encouraged to include at least the following elements:

Paper Vulnerability Assessment

1. Network Discovery - A review of all Electronic Access Points to the Electronic Security Perimeter
2. Network Port and Service Identification - A review to verify that all enabled ports and services have an appropriate business justification
3. Vulnerability Review - A review of security rule-sets and configurations including controls for default accounts, passwords, and network management community strings
4. Wireless Review - Identification of common types of wireless networks (such as 802.11a/b/g/n) and a review of their controls if they are in any way used for BES Cyber System communications

Active Vulnerability Assessment

1. Network Discovery - Use of active discovery tools to discover active devices and identify communication paths in order to verify that the discovered network architecture matches the documented architecture.
2. Network Port and Service Identification – Use of active discovery tools (such as Nmap) to discover open ports and services.
3. Vulnerability Scanning – Use of a vulnerability scanning tool to identify network accessible ports and services along with the identification of known vulnerabilities associated with services running on those ports.
4. Wireless Scanning – Use of a wireless scanning tool to discover wireless signals and networks in the physical perimeter of a BES Cyber System. Serves to identify unauthorized wireless devices within the range of the wireless scanning tool.

In addition, Responsible Entities are strongly encouraged to review NIST SP800-115 for additional guidance on how to conduct a vulnerability assessment.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the ~~first~~second posting of Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, Categorizing Cyber Systems — An Approach Based on BES Reliability Functions, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (Version 5)~~A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706 approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **~~18~~24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2 shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, the ~~standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of ~~Trustees~~Trustees' approval, and CIP-003-5, Requirement R2 shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	TBD	Developed to define the configuration management and vulnerability assessment requirements in coordination with other CIP standards and to address the balance of the FERC directives in its Order 706.	

Definitions of Terms Used in Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Configuration Management and Vulnerability Assessments

2. Number: CIP-010-1

3. Purpose: ~~Standard CIP-010-1 requires that Responsible Entities have minimum~~To prevent and detect unauthorized changes to BES Cyber Systems by specifying configuration management and vulnerability assessment ~~controls~~requirements in ~~place to protect BES Cyber Assets and~~support of protecting BES Cyber Systems~~.~~ from compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

~~4.1.2~~4.1.3 Generator Operator

~~4.1.3~~4.1.4 Generator Owner

~~4.1.4~~4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

~~4.1.5~~4.1.7 Reliability Coordinator

~~4.1.6~~4.1.8 Transmission Operator

~~4.1.7~~4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 ~~that are part of any of the following systems~~Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

~~4.2.1~~4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS program required by a NERC or Regional Reliability Standard
- A UVLSUVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more
- A Special Protection System or Remedial Action Scheme required by a NERC or Regional Reliability Standard
- A Transmission Protection System required by a NERC or Regional Reliability Standard
- Its Transmission Operator's restoration plan

4.2.24.2.3 where the Generator Operator

4.2.34.2.4 Generator Owner

4.2.44.2.5 Interchange Coordinator

4.2.5 Load Serving Entity that owns Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS program required by a NERC or Regional Reliability Standard
- A UVLS program required by a NERC or Regional Reliability Standard

4.2.6 NERC

4.2.7 Regional Entity

4.2.84.2.6 Reliability Coordinator

4.2.94.2.7 Transmission Operator

4.2.104.2.8 Transmission Owner

4.3. Facilities:

4.3.1 Load Serving Entity: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection of the BES:

- A UFLS program required by a NERC or Regional Reliability Standard
- A UVLS program required by a NERC or Regional Reliability Standard

4.3.2 Distribution Providers: One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS program required by a NERC or Regional Reliability Standard
- A UVLS program required by a NERC or Regional Reliability Standard
- A Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard

- A ~~Transmission~~ Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard

- ~~Its Transmission Operator's restoration plan~~

- ~~**All other**~~ Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

~~**4.3.3**~~**4.3.1 Responsible Entities**~~:~~ **listed in 4.1 other than Distribution Providers and Load-Serving Entities**: All BES Facilities.

~~**4.3.4**~~**4.3.2 Exemptions:** The following are exempt from Standard CIP-~~010-1~~002-5:

~~**4.3.4.1**~~**4.3.2.1** Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

~~**4.3.4.2**~~**4.3.2.2** Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

~~**4.3.4.3**~~**4.3.2.3** In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.~~-~~R. Section 73.54.

~~**4.3.4.4 Responsible Entities that, in compliance with Standard CIP-002-5, identify that they have no BES Cyber Systems.**~~

5. Background:

Standard CIP-010-1 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

~~Each requirement opens~~Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the ~~required~~applicable items in [Table Reference].*" The referenced table requires the ~~specific elements~~applicable items in the procedures for a common subject matter ~~as applicable~~.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of ~~specific elements required~~applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of

the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not ~~infer~~imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e.~~.~~, incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the ~~Standards~~standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the ~~Standards.~~standards. Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies~~.~~ to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- ~~**All Responsible Entities** – Applies to all Responsible Entities listed in the Applicability section of the Standard. This requirement applies at an organizational level rather than individually to each BES Cyber System. Requirements having this applicability comprise basic elements of an organizational CIP cyber security program.~~

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~High Impact~~high impact according to the CIP-002-5 identification and categorization processes. ~~Responsible Entities can implement common controls that meet requirements for multiple High and~~

- **Medium Impact BES Cyber Systems**~~. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems~~ –

Applies to BES Cyber Systems categorized as medium impact according to the CIP-002-5 identification and categorization processes.

- ~~**Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as Medium Impact according to the CIP-002-5 identification and categorization processes.~~
- ~~**Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as Medium Impact according to the CIP-002-5 identification and categorization processes.~~
- ~~**Low Impact BES Cyber Systems with External Routable Connectivity** – Applies to each Low Impact BES Cyber Systems with External Routable Connectivity according to the CIP-002-5 identification and categorization process, which includes all other BES Cyber Systems not categorized as High or Medium.~~
- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding ~~High or Medium Impact BES Cyber Systems.~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.
- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.
- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column.
- ~~**Electronic Access Points** – Applies at Electronic Access Points (with External Routable Connectivity or dial-up connectivity) associated with a referenced BES Cyber System.~~
- ~~**Electronic Access Points with External Routable Connectivity** – Applies at Electronic Access Points with External Routable Connectivity. This excludes those Electronic Access Points with dial-up connectivity.~~
- ~~**Locally Mounted Hardware or Devices Associated with Defined Physical Boundaries** – Applies to the locally mounted hardware (e.g. such as motion sensors, electronic lock control mechanisms, and badge readers) associated with a Defined Physical Boundary for High or Medium Impact BES Cyber Systems. These hardware and devices are excluded in the definition of Physical Access Control Systems.~~

~~**Rationale – R1:**~~

~~The configuration change management processes are intended to prevent unauthorized modifications~~
~~Systems.~~

B. Requirements and Measures

Rationale – R1:

The configuration change management processes are intended to prevent unauthorized modifications to BES Cyber Systems.

R1. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-010-1 Table R1 – Configuration Change Management*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning~~]~~].*

M1. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-010-1 Table R1 – Configuration Change Management* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-010-1 Table R1 – Configuration Change Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Develop a baseline configuration~~ of the BES Cyber System~~, which shall include the following for each ~~BES~~ Cyber Asset identified, individually or by ~~specified grouping~~group: ~~1.1.1. Physical location;~~ ~~1.1.2.~~1.1.1. Operating system(s) (including version~~);~~) or firmware where no independent operating system exists; ~~1.1.3.~~1.1.2. Any commercially available or open-source application software (including version) intentionally installed on the BES Cyber Asset; ~~1.1.4.~~1.1.3. Any custom software ~~and scripts~~ developed for the entity; ~~1.1.5.~~1.1.4. Any logical network accessible ports; and ~~1.1.6.~~1.1.5. Any security ~~patch levels~~ patches.	Evidence may include, but is not limited to: • A spreadsheet identifying the required items of the baseline configuration for each ~~BES~~ Cyber Asset ~~in the BES Cyber System;~~ or • A record in an asset management system that identifies the required items of the baseline configuration for each ~~BES~~ Cyber Asset ~~in the BES Cyber System~~.

CIP-010-1 Table R1 – Configuration Change Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *New Requirement*		**Change Rationale:** *The baseline configuration requirement was incorporated from the DHS Catalog for Control Systems Security. The baseline requirement is also intended to clarify precisely when a change management process must be invoked and which elements of the configuration must be examined.*	
1.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Authorization, by the CIP Senior Manager or delegate,~~Authorize and document changes ~~to the BES Cyber System~~ that deviate from the existing baseline configuration.	Evidence may include, but is not limited to: • A change request record and associated electronic ~~approval~~ authorization (performed by the individual or group with the authority to authorize the change) in a change management system for each change; or • ~~A record of each change performed along with the minutes of a "change advisory board" meeting (that indicate authorization of the change) where an individual with the authority to authorize the change was in attendance.~~Documentation that the change was performed in accordance with the requirement.
Reference to prior version: *CIP-007-3, R9* *; CIP-003-3, R6*		**Change Rationale:** *The SDT added requirement to explicitly authorize changes. This requirement was previously implied by CIP-003-3, Requirement R6.*	

CIP-010-1 Table R1 – Configuration Change Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Update~~For a change that deviates from the existing baseline configuration, update the baseline configuration and other documentation required by ~~a NERC CIP Standard, including identification~~CIP-005 and ~~categorization of the BES Cyber Systems,~~CIP-007 as necessary within 30 calendar days of completing the change.	Evidence may include, but is not limited to~~:~~ • ~~For~~, updated baseline documentation for changes that impacted ~~the categorization of a BES Cyber System, dated categorization documents, with a date that is within 30 days of the date of the completion of the change;~~ • ~~For changes that impacted the~~ CIP-~~009 required recovery plan of a BES Cyber System, a dated recovery plan~~005 or CIP-007 documentation, and relevant CIP-005 or CIP-007 documentation, with a date that is within 30 days of the date of the completion of the change.
Reference to prior version: *CIP-007-3, R9; CIP-005-3, R5*		**Change Rationale:** *Document maintenance requirement due to a BES Cyber System change is equivalent to the requirements in the previous versions of the standard.*	

CIP-010-1 Table R1 – Configuration Change Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	For a change ~~to the BES Cyber System~~ that deviates from the existing baseline configuration: 1.4.1. Prior to the change, determine required cyber security controls identified in CIP-005, CIP-006, and CIP-007 that could be impacted by the change; 1.4.2. Following the change, verify these required controls determined in 1.4.1 and the BES Cyber System availability are not adversely affected; and 1.4.3. Document the results of the verification.	Evidence ~~includes~~may include, but is not limited to, a list of cyber security controls verified or tested along with the dated test results.
Reference to prior version: *CIP-007-3, R1*		**Change Rationale:** *The SDT attempted to provide clarity on when testing must occur and removed requirement for specific test procedures because it is implicit in the performance of the requirement.*	

CIP-010-1 Table R1 – Configuration Change Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.5	High Impact BES Cyber System	~~For~~Where technically feasible, for each change that deviates from the existing baseline configuration ~~for Control Centers~~: 1.5.1. Prior to implementing any change in the production environment, test the changes ~~to the BES Cyber System~~ in a test environment (or in a production environment where the test is performed in a manner that minimizes adverse effects) that models the baseline configuration ~~of the BES Cyber System~~ to ensure that required cyber security controls are not adversely affected; and 1.5.2. Document the results of the testing and, if a test environment was used, the differences between the test environment and the production environment, including a description of the measures used to account for any differences in operation between the test and production environments.	Evidence ~~includes~~may include, but is not limited to, a list of cyber security controls tested along with successful test results and a list of differences between the production and test environments with descriptions of how any differences were accounted for, including of the date of the test.

~~**Rationale – R2:**~~

~~The configuration monitoring processes are intended to detect unauthorized modifications to BES Cyber Systems.~~

CIP-010-1 Table R1 – Configuration Change Management			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-007-3, R1*		**Change Rationale:** *This requirement provides clarity on when testing must occur and requires additional testing to ensure that accidental consequences of planned changes are appropriately managed.* *This change addresses FERC Order ~~,paragraphs~~No. 706, Paragraphs 397, 609, 610, and 611.*	

R2. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-010-1 Table R2 – Configuration Monitoring. [Violation Risk Factor: Lower] [Time Horizon: Operations Planning~~]~~].*

M2. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-010-1 Table R2 – Configuration Monitoring* and additional evidence to demonstrate implementation as described in the Measures column of the table.

Rationale – R2:

The configuration monitoring processes are intended to detect unauthorized modifications to BES Cyber Systems.

~~2.1~~	~~High Impact BES Cyber Systems~~ ~~Medium Impact BES Cyber Systems.~~ ~~Associated Physical Access Control Systems~~ ~~Associated Electronic Access Control or Monitoring Systems~~ ~~Associated Protected Cyber Assets~~	~~Where technically feasible, monitor for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate the detection of any unauthorized changes.~~	~~Evidence may include, but is not limited to, logs from a system that is monitoring the configuration of the BES Cyber System along with records of investigation for any unauthorized changes that were detected by the system.~~
~~**Reference to prior version:**~~ ~~*New Requirement*~~		~~**Change Rationale:** *The monitoring of the configuration of the BES Cyber System provides an express acknowledgement of the need to consider malicious actions along with intentional changes.*~~ ~~*This requirement was added after review of the DHS Catalog of Control System Security and to address FERC Order 706, paragraph 397.DHS Catalog & addresses FERC Order 706, paragraph 397.*~~	

~~**Rationale – R3:**~~

~~The vulnerability assessment processes are intended to act as a component in an overall program to periodically ensure the proper implementation of security controls as well as to continually improve the security posture of BES Cyber Systems.~~

CIP-010-1 Table R2 – Configuration Monitoring			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Where technically feasible, monitor continuously or periodically, not to exceed once every 35 calendar days, for changes to the baseline configuration (as defined per CIP-010 R1, Part 1.1) and document and investigate detected unauthorized changes.	Evidence may include, but is not limited to, logs from a system that is monitoring the configuration of the BES Cyber System along with records of investigation for any unauthorized changes that were detected by the system.
Reference to prior version: *New Requirement*		**Change Rationale:** *The monitoring of the configuration of the BES Cyber System provides an express acknowledgement of the need to consider malicious actions along with intentional changes.* *This requirement was added after review of the DHS Catalog of Control System Security and to address FERC Order No. 706, Paragraph 397.* *Thirty-five Calendar days allows for a "once-a-month" frequency with slight flexibility to account for months with 31 days or for beginning or endings of months on weekends.*	

Rationale – R3:

The vulnerability assessment processes are intended to act as a component in an overall program to periodically ensure the proper implementation of cyber security controls as well as to continually improve the security posture of BES Cyber Systems.

R3. Each Responsible Entity shall implement one or more documented processes that collectively include each of the applicable items in *CIP-010-1 Table R3– Vulnerability Assessments*. *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning and Operations Planning]*

M3. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-010-1 Table R3 – Vulnerability Assessments* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-010-1 Table R3 – Vulnerability Assessments			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	~~Initially upon the effective date of the standard and at~~At least once every calendar year~~ thereafter~~, not to exceed 15 calendar months between assessments, conduct a paper or active vulnerability assessment ~~of the security controls~~ to determine the extent to which the ~~controls~~cyber security controls identified in CIP-005, CIP-006, and CIP-007 are implemented correctly and operating as designed.	Evidence may include, but is not limited to: • A document listing the date of the assessment (performed at least ~~each~~once every calendar year, not to exceed 15 calendar months between assessments), the controls assessed for each BES Cyber System along with the method of assessment, and the individuals who performed the assessment; or • A document listing the date of the assessment and the output of the tools used to perform the assessment.
Reference to prior version: *CIP-005-4, R4 ~~and~~;* *CIP-007-4, R8*		**Change Rationale:** *As suggested in FERC Order No. 706 ~~paragraph~~, Paragraph 644, the details for what should be included in the assessment are left to guidance.*	

CIP-010-1 Table R3 – Vulnerability Assessments			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.2	High Impact BES Cyber Systems	~~Initially upon the effective date of the standard and~~Where technically feasible, at least once every ~~3 calendar years thereafter, not to exceed 39~~36 calendar months between assessments, perform an active vulnerability assessment in a test environment (or in a production environment where the test is performed in a manner that minimizes adverse effects) that models the baseline configuration of the BES Cyber System in a production environment. ~~Document~~ If a test environment was used, document the differences between the test environment and the production environment including a description of the measures used to account for any differences in operation between the test and production environments.	Evidence may include, but is not limited to, a document listing the date of the assessment (performed ~~within 39~~at least once every 36 calendar months ~~of the previous assessment~~between assessments), the output of the tools used to perform the assessment, and a list of differences between the production and test environments with descriptions of how any differences were accounted for in conducting the assessment.
Reference to prior version: *New Requirement*		**Change Rationale:** *FERC Order No. 706 ~~p.~~, Paragraphs 541, 542, 543, 544, 545, and 547.* *As suggested in FERC Order No. 706 ~~paragraph~~, Paragraph 644, the details for what should be included in the assessment are left to guidance.*	

CIP-010-1 Table R3 – Vulnerability Assessments			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
3.3	High Impact BES Cyber Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Except for CIP Exceptional Circumstances~~,~~ and like replacements (same type of Cyber Asset with a baseline configuration that models an existing baseline configuration of the previous or other existing BES Cyber Asset), prior to adding a new Cyber Asset ~~to a BES Cyber System or Electronic Access Control or Monitoring System,~~ perform an active vulnerability assessment of the new Cyber Asset.	Evidence may include, but is not limited to, a document listing the date of the assessment (performed prior to the commissioning of the new ~~BES~~ Cyber Asset) and the output of the tools used to perform the assessment.
Reference to prior version: *New Requirement*		**Change Rationale:** *FERC Order No. 706 ~~p.~~, Paragraphs 541, 542, 543, 544, 545, and 547.*	
3.4	High Impact BES Cyber Systems Medium Impact BES Cyber Systems. Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Document the results of the assessments and the action plan to remediate or mitigate vulnerabilities identified in the assessments including the planned date of completing the action plan and the execution status of ~~that~~any remediation or mitigation action ~~plan~~items.	Evidence may include, but is not limited to, a document listing the results or the review or assessment, a list of action items ~~with~~, documented proposed dates of completion for the action plan, and records of the status of the action items (such as minutes of a status meeting, updates in a work order system, or a spreadsheet tracking the action items).
Reference to prior version: *CIP-005-3, R4.5* *; CIP-007-3, R8.4*		**Change Rationale:** *Added a requirement for an entity planned date of completion as per the ~~FERC~~ directive in FERC Order No. 706, ~~paragraph~~Paragraph 643.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

- The Regional Entity; or
- If the Responsible Entity works for shall serve as the Compliance Enforcement Authority ("CEA") unless the Regional Entity, then the applicable entity is owned, operated, or controlled by the Regional Entity will establish an agreement with. In such cases the ERO or another a Regional entity approved by the ERO and FERC (i.e. another Regional Entity) to be responsible for compliance enforcement.
- If the Responsible Entity is also a Regional Entity the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.
- If the Responsible Entity is NERC, a third-party monitor without vested interest in the outcome for NERCauthority shall serve as the Compliance Enforcement AuthorityCEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was complaintcompliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for since the last completed auditeach requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a RegisteredResponsible Entity is found non-compliant, it shall keep information related to the non-compliance until found compliantmitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit

- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

None.

Guidelines and Technical Basis

Requirement R1:

~~The physical location referred to in the baseline configuration is geographically where the BES Cyber Asset is located (e.g. Pine Valley Control Room, Generator X, Substation Y) and should be used to ensure that BES Cyber Systems receive the controls that are applicable to the environment in which the components are located (e.g. control center, transmission facility, generation facility). The physical location is not intended to be a specific floor plan location (e.g., panel A, rack B). As such, the physical location of virtual component should identify where the virtual components are being executed (e.g. Pine Valley Control Room, Generator X, Substation Y).~~

The Control Center test environment (or production environment where the test is performed in a manner that minimizes adverse effects) should model the baseline configuration, but may have a different set of components. For instance, an entity may have a BES Cyber System that runs a database on one component and a web server on another component. The test environment may have the same operating system, ~~patch level~~security patches, network accessible ports, and software, but have both the database and web server running on a single component instead of multiple components.

Additionally, the ~~entity~~Responsible Entity should note that wherever a test environment (or production environment where the test is performed in a manner that minimizes adverse effects) is mentioned, the requirement is to "model" the baseline configuration and not duplicate it exactly. This language was chosen deliberately in order to allow for individual elements of a ~~control center~~ BES Cyber System ~~which~~at a Control Center to be modeled that may not otherwise be able to be replicated or duplicated exactly; such as, but not limited to, a legacy map-board controller or the numerous data communication links from the field or to other ~~control centers~~Control Centers (such as by ICCP).

Requirement R2:

~~It should be understood that the~~The SDT's intent of R2 is to require automated monitoring of the BES Cyber System. However, the ~~Standards Drafting Team~~SDT understands that there may be some Cyber Assets where automated monitoring may not be possible (such as a GPS time clock). ~~It is for this~~ For that reason ~~that~~, automated technical monitoring was not explicitly required, and ~~an entity~~a Responsible Entity may choose to accomplish this requirement through manual procedural controls.

Requirement R3:

The Responsible Entity should ~~not~~note that the requirement provides a distinction between paper and active vulnerability assessments. The justification for this distinction is well-documented in ~~the initial NOPR from FERC as well as~~ FERC Order No. 706 and its associated Notice of Proposed Rulemaking. In developing their Vulnerability Assessment processes, Responsible Entities are strongly encouraged to include at least the following elements:

Paper Vulnerability Assessment

1. Network Discovery - A review of all Electronic Access Points to the Electronic Security Perimeter
2. Network Port and Service Identification - A review to verify that all enabled ports and services have an appropriate business justification
3. Vulnerability Review - A review of security rule-sets and configurations including controls for default accounts, passwords, and network management community strings
4. Wireless Review - Identification of common types of wireless networks (such as 802.11a/b/g/n) and a review of their controls if they are in any way used for BES Cyber System communications

Active Vulnerability Assessment

1. Network Discovery - Use of active discovery tools to discover active devices and identify communication paths in order to verify that the discovered network architecture matches the documented architecture.
2. Network Port and Service Identification – Use of active discovery tools (such as Nmap) to discover open ports and services.
3. Vulnerability Scanning – Use of a vulnerability scanning tool to identify network accessible ports and services along with the identification of known vulnerabilities associated with services running on those ports.
4. Wireless Scanning – Use of a wireless scanning tool to discover wireless signals and networks in the physical perimeter of a BES Cyber System. Serves to identify unauthorized wireless devices within the range of the wireless scanning tool.

In addition, Responsible Entities are strongly encouraged to review NIST SP800-115 for additional guidance on how to conduct a vulnerability assessment.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Note: On May 8, 2012, NERC was alerted that the text contained in the Rationale box for Requirement R1 of CIP-011-1 appeared to be incomplete.

This revised draft corrects the text box size to display all of the text (none of the text was changed).

No other changes were made to this standard or any of the other CIP V5 standards currently posted.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the second posting of Version 5 of the CIP Cyber Security Standards for a 40-day formal comment period. An initial concept paper, *Categorizing Cyber Systems — An Approach Based on BES Reliability Functions*, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706, approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
40-day Formal Comment Period with Parallel Successive Ballot	April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. **24 Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2015, or the first calendar day of the ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ninth calendar quarter following Board of Trustees' approval, and CIP-003-5, Requirement R2, shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	TBD	Developed to define the information protection requirements in coordination with other CIP standards and to address the balance of the FERC directives in its Order 706.	

Definitions of Terms Used in Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the "Guidelines and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Information Protection

2. Number: CIP-011-1

3. Purpose: To prevent unauthorized access to BES Cyber System Information by specifying information protection requirements in support of protecting BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

4.1.3 Generator Operator

4.1.4 Generator Owner

4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

4.1.7 Reliability Coordinator

4.1.8 Transmission Operator

4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS or UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that

performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- A Special Protection System or Remedial Action Scheme where the Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard
- A Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard
- Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

4.2.3 Responsible Entities listed in 4.1 other than Distribution Providers and Load-Serving Entities: All BES Facilities.

4.2.4 Exemptions: The following are exempt from Standard CIP-002-5:

4.2.4.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.4.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.4.3 In nuclear plants, the Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.R. Section 73.54.

5. Background:

Standard CIP-011-1 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational, and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the applicable items in [Table Reference].*" The referenced table requires the applicable items in the procedures for a common subject matter.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of applicable items in the documented processes. A numbered list in the measure means the evidence example includes all of the items

in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the standards.
Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:
Each table row has an applicability column to further define the scope to which a specific requirement row applies to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as high impact according to the CIP-002-5 identification and categorization processes.
- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as medium impact according to the CIP-002-5 identification and categorization processes.
- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.

- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.
- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding high impact BES Cyber System or medium impact BES Cyber System in the applicability column.

Rationale – R1:

The SDT's intent of the information protection program is to prevent unauthorized access to BES Cyber System Information.

Summary of Changes: CIP 003-4 R4, R4.2, and R 4.3 have been moved to CIP 011 R1. CIP-003-4, Requirement R4.1 was moved to the definition of BES Cyber System Information.

B. Requirements and Measures

R1. Each Responsible Entity shall implement an information protection program that includes each of the applicable items in *CIP-011-1 Table R1 – Information Protection*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning.]*

M1. Evidence for the information protection program must include the applicable items in *CIP-011-1 Table R1 – Information Protection* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-011-1 Table R1 – Information Protection			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	One or more documented and implemented methods to identify BES Cyber System Information.	Evidence may include, but is not limited to, • Indications on information (e.g., labels) that identify it as BES Cyber System Information; • Training materials that provide personnel with sufficient knowledge to recognize BES Cyber System Information; or • Repository or designated electronic and physical location.
Reference to prior version: *CIP-003-3, R4; CIP-003-3, R4.2*		**Change Rationale:** *The SDT removed the explicit requirement for classification as there was no requirement to have multiple levels of protection (*e.g., confidential, public, internal use only, etc.) *This modification does not prevent having multiple levels of classification, allowing more flexibility for entities to incorporate the CIP information protection program into their normal business.*	

CIP-011-1 Table R1 – Information Protection			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirement**	**Measure**
1.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	One or more documented and implemented procedures for handling BES Cyber System Information, including storage, transit, and use.	Evidence may include, but is not limited to: • Records indicating that BES Cyber System Information is handled in a manner consistent with the entity's documented procedure; or • Procedures for handling, which include topics such as the storage, transit, and use of BES Cyber System Information.
Reference to prior version: *CIP-003-3, R4; CIP-003-3 R5.3*		**Change Rationale:** *The SDT removed the language to "protect" information and replaced it with "handling" to clarify the protection that is required.*	

CIP-011-1 Table R1 – Information Protection			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirement**	**Measure**
1.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems	At least once every calendar year, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection program, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	Evidence may include, but is not limited to, once every calendar year, not to exceed 15 months between assessments, the documented review of adherence to its BES Cyber System Information protection program, assessment results, action plan, and evidence to demonstrate that the action plan was implemented.
Reference to prior version: *CIP-003-3, R4.3*		**Change Rationale:** *No significant changes.*	

Rationale – R2:

The intent of the BES Cyber Asset reuse and disposal process is to prevent the unauthorized dissemination of BES Cyber System Information upon reuse or disposal.

R2. Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in *CIP-011-1 Table R2 – BES Cyber Asset Reuse and Disposal*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning].*

M2. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-011-1 Table R2 – BES Cyber Asset Reuse and Disposal* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-011-1 Table R2 – BES Cyber Asset Reuse and Disposal			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Prior to the release for reuse of applicable Cyber Assets that contain BES Cyber System Information (except in other high impact or medium impact BES Cyber Systems, Associated Physical Access Control Systems, Associated Electronic Access Control or Monitoring Systems, or Associated Protected Cyber Asset), the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the Cyber Asset. If an applicable Cyber Asset is removed from the Physical Security Perimeter prior to action taken to prevent the unauthorized retrieval of BES Cyber System Information, the responsible entity shall maintain chain of custody, which identifies who has possession of the device while it is outside of a Physical Security Perimeter.	Evidence may include, but is not limited to: • Records of actions taken to prevent unauthorized retrieval of BES Cyber System Information; or • If removed from the Physical Security Perimeter prior to action taken to prevent unauthorized retrieval of information, a chain of custody record that was maintained.
Reference to prior version: *CIP-007-3, R7.2*		**Change Rationale:** *Consistent with FERC Order No. 706, Paragraph 631, the SDT clarified that the goal was to prevent the unauthorized retrieval of information from the media, removing the word "erase" since, depending on the media itself, erasure may not be sufficient to meet this goal.*	

CIP-011-1 Table R2 – Media Reuse and Disposal			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Prior to the disposal of applicable Cyber Assets that contain BES Cyber System Information, the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the Cyber Asset or destroy the data storage media. If an applicable Cyber Asset is removed from the Physical Security Perimeter prior to action taken to prevent the unauthorized retrieval of BES Cyber System Information or destroying the data storage media, the responsible entity shall maintain chain of custody, which identifies who has possession of the device while it is outside of a Physical Security Perimeter.	Evidence may include, but is not limited to: • Records that indicate that data storage media was destroyed prior to the disposal of a an applicable Cyber Asset; • Records of actions taken to prevent unauthorized retrieval of BES Cyber System Information prior to the disposal of a an applicable Cyber Asset; • Other records showing actions taken to prevent unauthorized retrieval such as encrypting, retaining in the Physical Security Perimeter; or • If removed from the Physical Security Perimeter prior to action taken to prevent unauthorized retrieval of information, chain of custody record that was maintained.

CIP-011-1 Table R2 – Media Reuse and Disposal			
Part	**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-007-3, R7.1*		**Change Rationale:** *Consistent with FERC Order No. 706, Paragraph 631, the SDT clarified that the goal was to prevent the unauthorized retrieval of information from the media, removing the word "erase" since, depending on the media itself, erasure may not be sufficient to meet this goal.* *The SDT also removed the requirement explicitly requiring records of destruction/redeployment as this was seen as demonstration of the existing requirement and not a requirement in and of itself.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

The Regional Entity shall serve as the Compliance Enforcement Authority ("CEA") unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases the ERO or a Regional entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Operations Planning**	**Medium**	N/A	The Responsible Entity has implemented a BES Cyber System Information protection program that includes one or more methods to identify BES Cyber System Information, one or more handling procedures for BES Cyber System Information, and has assessed adherence periodically as stated in Part 1.3, but has failed to implement an action plan to remediate deficiencies identified during the assessment.	The Responsible Entity has implemented a BES Cyber System Information protection program that includes one or more methods to identify BES Cyber System Information and one or more handling procedures for BES Cyber System Information, but has failed to assess adherence periodically as stated in Part 1.3, to its BES Cyber System Information protection program.	The Responsible Entity has not implemented a BES Cyber System Information protection program. OR The Responsible Entity has implemented a BES Cyber System Information protection program, but has not implemented one or more methods to identify BES Cyber System Information OR The Responsible Entity has implemented a BES Cyber System Information

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						protection program, but has not implemented one or more procedures for handling BES Cyber System Information.
R2	**Operations Planning**	**Lower**	N/A	The Responsible Entity failed to maintain chain of custody for Cyber Assets that contain BES Cyber System Information that have been removed from the Physical Security Perimeter prior to action taken to prevent unauthorized retrieval or destroying the data storage media.	The Responsible Entity has documented one or more processes, including both reuse and disposal, to prevent the unauthorized retrieval of BES Cyber System Information from the BES Cyber Assets, but the Responsible Entity either failed to take action to prevent the unauthorized retrieval of BES Cyber System Information from a Cyber Asset that contained BES Cyber System Information or failed to destroy the	The Responsible Entity has not documented or implemented any disposal or reuse processes to prevent the unauthorized retrieval of BES Cyber System Information from the BES Cyber Asset.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
					data storage media.	

D. Regional Variances

None.

E. Interpretations

None.

F. Associated Documents

None.

Guidelines and Technical Basis

Requirement R1:

Assumptions: Responsible Entities are free to utilize existing change management and asset management systems. However, the information contained within those systems must be evaluated, as the information protection requirements still apply.

This requirement mandates that BES Cyber System Information be identified. The Responsible Entity has flexibility in determining how to implement the requirement. For example, the Responsible Entity may decide to mark or label the documents. The Responsible Entity may retain all of the information about BES Cyber Systems in a separate repository or physical or electronic location with access control implemented for both the repository and the BES Cyber Assets. Additional methods for implementing the requirement are suggested in the measures section.

While separating BES Cyber System Information into separate classifications is not required as it was in version 4, a Responsible Entity maintains that flexibility if desired. As long as the Responsible Entity's information protection program includes all applicable items, additional classification levels (e.g., confidential, public, internal use only, etc.) can be created that go above and beyond the requirements.

The SDT does not intend that this requirement cover publicly available information, such as vendor manuals that are available via public websites or information that is deemed to be publicly releasable.

Information protection pertains to both digital and hardcopy information. Topics that are appropriate for information handling procedures include access, sharing, copying, transmittal, distribution, and disposal or destruction of BES Cyber System Information.

Requirement R2:

Media sanitization is generally classified into four categories: Disposal, clearing, purging, and destroying. For the purposes of this requirement, disposal by itself, with the exception of certain special circumstances such as the use of strong encryption on a drive used in a SAN or other media, should never be considered acceptable. The use of clearing techniques may provide a suitable method of sanitization for media that is to be reused, whereas purging techniques may be more appropriate for media that is ready for disposal. Entities are strongly encouraged to review NIST SP800-88 for guidance on how to develop acceptable media sanitization processes.

This requirement allows for BES Cyber Systems to be removed from service and analyzed with their media intact, as that should not constitute a release for reuse. However, following the analysis, if the media is to be reused outside of a BES Cyber System or disposed of, it must be properly cleared using a method to prevent the unauthorized retrieval of BES Cyber System Information from the media.

Standard Development Timeline

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Note: On May 8, 2012, NERC was alerted that the text contained in the Rationale box for Requirement R1 of CIP-011-1 appeared to be incomplete.

This revised draft corrects the text box size to display all of the text (none of the text was changed).

No other changes were made to this standard or any of the other CIP V5 standards currently posted.

Development Steps Completed

1. SAR posted for comment (March 20, 2008).
2. SC authorized moving the SAR forward to standard development (July 10, 2008).
3. First posting for 60-day formal comment period and concurrent ballot (November 2011).

Description of Current Draft

This is the ~~first~~second posting of Version 5 of the CIP Cyber Security Standards for a ~~45~~40-day formal comment period. An initial concept paper, *Categorizing Cyber Systems — An Approach Based on BES Reliability Functions*, was posted for public comment in July 2009. An early draft consolidating CIP-002 – CIP-009, numbered CIP-010-1 and CIP-011-1, was posted for public informal comment in May 2010. ~~This version (Version 5)~~A first posting of Version 5 was posted in November 2011 for a 60-day comment period and first ballot. Version 5 reverts to the original organization of the standards with some changes and addresses the balance of the FERC directives in its Order 706, approving Version 1 of the standards. This posting for formal comment and parallel successive ballot addresses the comments received from the first posting and ballot.

Anticipated Actions	Anticipated Date
~~45-day Formal Comment Period with Parallel Initial Ballot~~	~~11/03/2011~~
~~30~~40-day Formal Comment Period with Parallel Successive Ballot	~~March~~April 2012
Recirculation ballot	June 2012
BOT adoption	June 2012

Effective Dates

1. ~~18~~24 **Months Minimum** – The Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the later of ~~January~~July 1, 2015, or the first calendar day of the ~~seventh~~ninth calendar quarter after the effective date of the order providing applicable regulatory approval. CIP-003-5, Requirement R2, shall become effective on the later of July 1, 2016, or the first calendar day of the 13th calendar quarter after the effective date of the order providing applicable regulatory approval. Notwithstanding any order to the contrary, CIP-002-4 through CIP-009-4 do not become effective, and CIP-002-3 through CIP-009-3 remain in effect and are not retired until the effective date of the Version 5 CIP Cyber Security Standards under this implementation plan.[1]
2. In those jurisdictions where no regulatory approval is required, ~~the standards~~Version 5 CIP Cyber Security Standards, except for CIP-003-5, Requirement R2, shall become effective on the first day of the ~~seventh~~ninth calendar quarter following Board of ~~Trustees~~Trustees' approval, and CIP-003-5, Requirement R2, shall become effective on the first day of the 13th calendar quarter following Board of Trustees' approval, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

[1] In jurisdictions where CIP-002-4 through CIP-009-4 have not yet become effective according to their implementation plan (even if approved by order), this implementation plan and the Version 5 CIP Cyber Security Standards supersede and replace the implementation plan and standards for CIP-002-4 through CIP-009-4.

Version History

Version	Date	Action	Change Tracking
1	TBD	Developed to define the information protection requirements in coordination with other CIP standards and to address the balance of the FERC directives in its Order 706.	

Definitions of Terms Used in Standard

See the associated "Definitions of Terms Used in Version 5 CIP Cyber Security Standards," which consolidates and includes all newly defined or revised terms used in the proposed Version 5 CIP Cyber Security Standards.

When this standard has received ballot approval, the text boxes will be moved to the ~~Application~~ "Guidelines ~~Section~~and Technical Basis" section of the Standard.

A. Introduction

1. Title: Cyber Security — Information Protection

2. Number: CIP-011-1

3. Purpose: ~~Standard CIP-011-1 requires that Responsible Entities have protection controls in place~~To prevent unauthorized access to ~~protect~~ BES Cyber System Information~~.~~ by specifying information protection requirements in support of protecting BES Cyber Systems against compromise that could lead to misoperation or instability in the BES.

4. Applicability:

4.1. Functional Entities: For the purpose of the requirements contained herein, the following list of Functional Entities will be collectively referred to as "Responsible Entities." For requirements in this standard where a specific Functional Entity or subset of Functional Entities are the applicable entity or entities, the Functional Entity or Entities are specified explicitly.

4.1.1 Balancing Authority

4.1.2 Distribution Provider that owns Facilities described in 4.2.2

~~4.1.2~~4.1.3 Generator Operator

~~4.1.3~~4.1.4 Generator Owner

~~4.1.4~~4.1.5 Interchange Coordinator

4.1.6 Load-Serving Entity that owns Facilities described in 4.2.1

~~4.1.5~~4.1.7 Reliability Coordinator

~~4.1.6~~4.1.8 Transmission Operator

~~4.1.7~~4.1.9 Transmission Owner

4.2. Facilities:

4.2.1 ~~that are part of any of the following systems~~Load Serving Entity: One or more of the UFLS or UVLS Systems that are part of a Load shedding program required by a NERC or Regional Reliability Standard and that perform automatic load shedding under a common control system, without human operator initiation, of 300 MW or more.

~~4.2.1~~4.2.2 Distribution Provider: One or more of the Systems or programs designed, installed, and operated for the protection or restoration of the BES:

- A UFLS ~~program required by a NERC~~ or ~~Regional Reliability Standard~~

- ~~A UVLS~~UVLS System that is part of a Load shedding program required by a NERC or Regional Reliability Standard and that performs automatic Load shedding under a common control system, without human operator initiation, of 300 MW or more

- ~~A~~ A Special Protection System or Remedial Action Scheme ~~required by a NERC or Regional Reliability Standard~~
- ~~A Transmission Protection System required by a NERC or Regional Reliability Standard~~
- ~~Its Transmission Operator's restoration plan~~

~~4.2.2~~4.2.3 where the~~Generator Operator~~

~~4.2.3~~4.2.4 ~~Generator Owner~~

~~4.2.4~~4.2.5 ~~Interchange Coordinator~~

~~4.2.5 Load Serving Entity~~ ~~that owns Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

~~4.2.6 NERC~~

~~4.2.7 Regional Entity~~

~~4.2.8~~4.2.6 ~~Reliability Coordinator~~

~~4.2.9~~4.2.7 ~~Transmission Operator~~

~~4.2.10~~4.2.8 ~~Transmission Owner~~

4.3. ~~Facilities:~~

~~4.3.1 Load Serving Entity:~~ ~~One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~

~~4.3.2 Distribution Providers~~: ~~One or more Facilities that are part of any of the following systems or programs designed, installed, and operated for the protection or restoration of the BES:~~

- ~~A UFLS program required by a NERC or Regional Reliability Standard~~
- ~~A UVLS program required by a NERC or Regional Reliability Standard~~
- ~~A~~ A Special Protection System or Remedial Action Scheme is required by a NERC or Regional Reliability Standard

- A ~~Transmission~~ Protection System that applies to Transmission where the Protection System is required by a NERC or Regional Reliability Standard

- ~~Its Transmission Operator's restoration plan~~
- ~~All other~~ Each Cranking Path and group of Elements meeting the initial switching requirements from a Blackstart Resource up to and including the first interconnection point of the starting station service of the next generation unit(s) to be started.

~~4.3.3~~4.3.1 **Responsible Entities~~:~~ listed in 4.1 other than Distribution Providers and Load-Serving Entities**: All BES Facilities.

~~4.3.4~~4.3.2 **Exemptions:** The following are exempt from Standard CIP-~~011-1~~002-5:

~~4.3.4.1~~4.3.2.1 Cyber Assets at Facilities regulated by the Canadian Nuclear Safety Commission.

~~4.3.4.2~~4.3.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

~~4.3.4.3~~4.3.2.3 In nuclear plants, the ~~systems~~Systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F.~~-~~R. Section 73.54.

~~4.3.4.4 Responsible Entities that, in compliance with Standard CIP-002-5, identify that they have no BES Cyber Systems.~~

5. Background:

Standard CIP-011-1 exists as part of a suite of CIP Standards related to cyber security. CIP-002-5 requires the initial identification and categorization of BES Cyber Systems. CIP-003-5, CIP-004-5, CIP-005-5, CIP-006-5, CIP-007-5, CIP-008-5, CIP-009-5, CIP-010-1, and CIP-011-1 require a minimum level of organizational, operational, and procedural controls to mitigate risk to BES Cyber Systems. This suite of CIP Standards is referred to as the *Version 5 CIP Cyber Security Standards*.

~~Each requirement opens~~Most requirements open with, "*Each Responsible Entity shall implement one or more documented [processes, plan, etc] that include the ~~required~~applicable items in [Table Reference].*" The referenced table requires the ~~specific elements~~applicable items in the procedures for a common subject matter ~~as applicable~~.

Measures for the initial requirement are simply the documented processes themselves. Measures in the table rows provide examples of evidence to show documentation and implementation of ~~specific elements required~~applicable items in

the documented processes. A numbered list in the measure means the evidence example includes all of the items in the list. In contrast, a bulleted list provides multiple options of acceptable evidence. These measures serve to provide guidance to entities in acceptable records of compliance and should not be viewed as an all-inclusive list.

The term *documented processes* refers to a set of required instructions specific to the Responsible Entity and to achieve a specific outcome. This term does not ~~infer~~imply any particular naming or approval structure beyond what is stated in the requirements. An entity should include as much as they feel necessary in their documented processes, but they must address the applicable requirements in the table.

The terms *program* and *plan* are sometimes used in place of *documented processes* where it makes sense and is commonly understood. For example, documented processes describing a response are typically referred to as *plans* (i.e~~.~~., incident response plans and recovery plans). Likewise, a security plan can describe an approach involving multiple procedures to address a broad subject matter.

Similarly, the term *program* may refer to the organization's overall implementation of its policies, plans and procedures involving a subject matter. Examples in the ~~Standards~~standards include the personnel risk assessment program and the personnel training program. The full implementation of the CIP Cyber Security Standards could also be referred to as a program. However, the terms *program* and *plan* do not imply any additional requirements beyond what is stated in the ~~Standards.~~standards. Responsible Entities can implement common controls that meet requirements for multiple high and medium impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.

Applicability Columns in Tables:

Each table row has an applicability column to further define the scope to which a specific requirement row applies~~.~~ to BES Cyber Systems and associated Cyber Assets. The CSO706 SDT adapted this concept from the National Institute of Standards and Technology ("NIST") Risk Management Framework as a way of applying requirements more appropriately based on impact and connectivity characteristics. The following conventions are used in the applicability column as described.

- ~~**All Responsible Entities –** Applies to all Responsible Entities listed in the Applicability section of the Standard. This requirement applies at an organizational level rather than individually to each BES Cyber System. Requirements having this applicability comprise basic elements of an organizational CIP cyber security program.~~
- **High Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~High Impact~~high impact according to the CIP-002-5 identification and categorization processes. ~~Responsible Entities can implement common controls~~

~~that meet requirements for multiple High and Medium Impact BES Cyber Systems. For example, a single training program could meet the requirements for training personnel across multiple BES Cyber Systems.~~

- **Medium Impact BES Cyber Systems** – Applies to BES Cyber Systems categorized as ~~Medium Impact~~medium impact according to the CIP-002-5 identification and categorization processes.

- ~~**Medium Impact BES Cyber Systems at Control Centers** – Only applies to BES Cyber Systems located at a Control Center and categorized as Medium Impact according to the CIP-002-5 identification and categorization processes.~~

- ~~**Low Impact BES Cyber Systems with External Routable Connectivity** – Applies to each Low Impact BES Cyber Systems with External Routable Connectivity according to the CIP-002-5 identification and categorization process, which includes all other BES Cyber Systems not categorized as High or Medium.~~

- **Associated Electronic Access Control or Monitoring Systems** – Applies to each Electronic Access Control or Monitoring System associated with a corresponding ~~High or Medium Impact BES Cyber Systems.~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column. Examples include, but are not limited to firewalls, authentication servers, and log monitoring and alerting systems.

- **Associated Physical Access Control Systems** – Applies to each Physical Access Control System associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System with External Routable Connectivity in the applicability column.

- **Associated Protected Cyber Assets** – Applies to each Protected Cyber Asset associated with a corresponding ~~High or Medium Impact BES Cyber Systems~~high impact BES Cyber System or medium impact BES Cyber System in the applicability column.

- ~~**Electronic Access Points** – Applies at Electronic Access Points (with External Routable Connectivity or dial-up connectivity) associated with a referenced BES Cyber System.~~

- ~~**Electronic Access Points with External Routable Connectivity** – Applies at Electronic Access Points with External Routable Connectivity. This excludes those Electronic Access Points with dial-up connectivity.~~

- ~~**Locally Mounted Hardware or Devices Associated with Defined Physical Boundaries** – Applies to the locally mounted hardware (e.g. such as motion sensors, electronic lock control mechanisms, and badge readers) associated with a Defined Physical Boundary for High or Medium Impact BES Cyber Systems. These hardware and devices are excluded in the definition of Physical Access Control Systems.~~

~~**Rationale – R1:**~~

~~The intent of the information protection processes is to prevent unauthorized access to BES Cyber Syste~~

~~**Summary of Changes:**~~

~~Requirement R4.1 was moved to the definition of BES Cyber System Information.~~

Rationale – R1:

The SDT's intent of the information protection program is to prevent unauthorized access to BES Cyber System Information.

Summary of Changes: CIP 003-4 R4, R4.2, and R 4.3 have been moved to CIP 011 R1. CIP-003-4, Requirement R4.1 was

B. Requirements and Measures

R1. Each Responsible Entity shall implement ~~one or more documented processes~~an information protection program that ~~collectively include~~includes each of the applicable items in *CIP-011-1 Table R1 – Information Protection*. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning~~].~~]*

M1. Evidence ~~must include each of~~for the ~~applicable documented processes that collectively~~information protection program must include the applicable items in *CIP-011-1 Table R1 – Information Protection* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-011-1 Table R1 – Information Protection			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
1.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	One or more documented and implemented methods to identify BES Cyber System Information.	Evidence may include, but is not limited to, • Indications on information (e.g., labels) that identify it as BES Cyber System Information; • Training materials that provide personnel with sufficient knowledge to recognize BES Cyber ~~Security~~System Information; or • Repository or designated electronic and physical location.
Reference to prior version: *CIP-003-3, R4* *; CIP-003-3, R4.2*		**Change Rationale:** *The SDT removed the explicit requirement for classification as there was no requirement to have multiple levels of protection~~.~~ (e.g., confidential, public, internal use only, etc.) This modification does not prevent having multiple levels of classification, allowing more flexibility for entities to incorporate the CIP information protection program into their normal business.*	

CIP-011-1 Table R1 – Information Protection			
Part	**~~Part~~Applicable BES Cyber Systems and associated Cyber Assets**	**~~Part~~Requirement**	**~~Part~~Measure**
1.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	~~Access control~~One or more documented and ~~handling~~implemented procedures for handling BES Cyber System Information~~.~~, including storage, transit, and use.	Evidence may include, but is not limited to: • Records indicating ~~information~~ that BES Cyber System Information is ~~stored, transported, and disposed~~handled in a manner consistent with the entity's documented ~~process;~~ procedure; or • ~~Records from an information management system containing electronic copies~~Procedures for handling, which include topics such as the storage, transit, and use of BES Cyber System Information ~~with user access implemented on a need-to-know basis;~~. • ~~Hardcopies of information stored in a locked file cabinet with keys provided to only authorized individuals.~~
Reference to prior version: *CIP-003-3~~,~~ R4* *~~;~~ CIP-003-3 R5.3*		**Change Rationale:** *The SDT removed the language to "protect" information and replaced it with "~~Implement~~ handling ~~and access control~~" to clarify the protection that is required.*	

CIP-011-1 Table R1 – Information Protection			
Part	**~~Part~~Applicable BES Cyber Systems and associated Cyber Assets**	**~~Part~~Requirement**	**~~Part~~Measure**
1.3	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems ~~Associated Protected Cyber Assets~~	~~Initially upon the effective date of the standard and at~~At least once every calendar year ~~thereafter~~, not to exceed 15 months between assessments, assess adherence to its BES Cyber System Information protection ~~process~~program, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.	Evidence may include, but is not limited to, once every calendar year, not to exceed 15 months between assessments, the documented review of adherence to its BES Cyber System Information protection program, assessment results, action plan, and evidence to demonstrate that the action plan was implemented.
Reference to prior version: *CIP-003-3, R4.3*		**Change Rationale:** *No significant changes.*	

Rationale – R2:

The intent of the ~~media~~BES Cyber Asset reuse and disposal ~~processes~~process is to prevent the unauthorized dissemination of BES Cyber System Information upon ~~media~~ reuse or disposal.

R2. Each Responsible Entity shall implement one or more documented processes that collectively include the applicable items in *CIP-011-1 Table R2 – ~~Media~~BES Cyber Asset Reuse and Disposal*. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning~~]~~].*

M2. Evidence must include each of the applicable documented processes that collectively include each of the applicable items in *CIP-011-1 Table R2 – ~~Media~~BES Cyber Asset Reuse and Disposal* and additional evidence to demonstrate implementation as described in the Measures column of the table.

CIP-011-1 Table R2 – ~~Media~~BES Cyber Asset Reuse and Disposal			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.1	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Prior to the release for reuse of applicable Cyber Assets that contain BES Cyber System Information (except in other high impact or medium impact BES Cyber Systems, Associated Physical Access Control Systems, Associated Electronic Access Control or Monitoring Systems, or Associated Protected Cyber Asset ~~media[2],~~), the Responsible Entity shall take action to prevent the unauthorized retrieval of BES Cyber System Information from the ~~media.~~Cyber Asset. If an applicable Cyber Asset is removed from the Physical Security Perimeter prior to action taken to prevent the unauthorized retrieval of BES Cyber System Information, the responsible entity shall maintain chain of custody, which identifies who has possession of the device while it is outside of a Physical Security Perimeter.	Evidence may include, but is not limited to~~, records that indicate that~~: • Records of actions taken to prevent unauthorized retrieval of BES Cyber ~~Asset media was cleared~~System Information; or • If removed from the Physical Security Perimeter prior to ~~its reuse.~~ action taken to prevent unauthorized retrieval of information, a chain of custody record that was maintained.

~~[2] For the purposes of this Standard, media should be considered to be any mass storage device onto which information from a BES Cyber Asset is recorded and stored electronically, including, but not limited to, magnetic tapes, optical disks, solid-state drives, and magnetic disks.~~

CIP-011-1 Table R2 – ~~Media~~BES Cyber Asset Reuse and Disposal			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-007-3, R7.2*		**Change Rationale:** *~~(FERC Order 706, p. 631)~~ Consistent with FERC Order No. 706, ~~paragraph~~Paragraph 631, the SDT clarified that the goal was to prevent the unauthorized retrieval of information from the media, removing the word "erase" since, depending on the media itself, erasure may not be sufficient to meet this goal.*

Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**

CIP-011-1 Table R2 – Media Reuse and Disposal			
Part	**~~Applicability~~Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
2.2	High Impact BES Cyber Systems Medium Impact BES Cyber Systems~~.~~ Associated Physical Access Control Systems Associated Electronic Access Control or Monitoring Systems Associated Protected Cyber Assets	Prior to the disposal of ~~BES~~applicable Cyber ~~Asset media~~Assets that contain BES Cyber System Information, the Responsible Entity shall ~~destroy or~~ take action to prevent the unauthorized retrieval of BES Cyber System Information from the ~~media.~~Cyber Asset or destroy the data storage media. If an applicable Cyber Asset is removed from the Physical Security Perimeter prior to action taken to prevent the unauthorized retrieval of BES Cyber System Information or destroying the data storage media, the responsible entity shall maintain chain of custody, which identifies who has possession of the device while it is outside of a Physical Security Perimeter.	Evidence may include, but is not limited to~~, records~~: • Records that indicate that ~~BES Cyber Asset~~data storage media was ~~purged or~~ destroyed prior to ~~its~~the disposal~~.~~ of a an applicable Cyber Asset; • Records of actions taken to prevent unauthorized retrieval of BES Cyber System Information prior to the disposal of a an applicable Cyber Asset; • Other records showing actions taken to prevent unauthorized retrieval such as encrypting, retaining in the Physical Security Perimeter; or • If removed from the Physical Security Perimeter prior to action taken to prevent unauthorized retrieval of information, chain of custody record that was maintained.

CIP-011-1 Table R2 – Media Reuse and Disposal			
Part	~~**Applicability**~~**Applicable BES Cyber Systems and associated Cyber Assets**	**Requirements**	**Measures**
Reference to prior version: *CIP-007-3, R7.1*		**Change Rationale:** *Consistent with FERC Order No. 706, ~~paragraph~~Paragraph 631, the SDT clarified that the goal was to prevent the unauthorized retrieval of information from the media, removing the word "erase" since, depending on the media itself, erasure may not be sufficient to meet this goal.* *The SDT also removed the requirement explicitly requiring records of destruction/redeployment as this was seen as demonstration of the existing requirement and not a requirement in and of itself.*	

C. Compliance

1. Compliance Monitoring Process:

1.1. Compliance Enforcement Authority:

- The Regional Entity; or
- If the Responsible Entity works for shall serve as the Compliance Enforcement Authority ("CEA") unless the Regional Entity, then the applicable entity is owned, operated, or controlled by the Regional Entity will establish an agreement with. In such cases the ERO or another a Regional entity approved by the ERO and FERC (i.e. another Regional Entity) to be responsible for compliance enforcement.
- If the Responsible Entity is also a Regional Entity the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.
- If the Responsible Entity is NERC, a third-party monitor without vested interest in the outcome for NERCauthority shall serve as the Compliance Enforcement AuthorityCEA.

1.2. Evidence Retention:

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

- Each Responsible Entity shall retain data or evidence for each requirement in this standard for three calendar years or for the duration of any regional or Compliance Enforcement Authority investigation; whichever is longer.
- If a Responsible Entity is found non-compliant, it shall keep information related to the non-compliance until found compliantmitigation is complete and approved or for the duration specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes:

- Compliance Audit
- Self-Certification
- Spot Checking
- Compliance Investigation
- Self-Reporting
- Complaint

1.4. Additional Compliance Information:

- None

Table of Compliance Elements

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	**Operations Planning**	**Medium**	N/A	~~N/A~~The Responsible Entity has implemented a BES Cyber System Information protection program that includes one or more methods to identify BES Cyber System Information, one or more handling procedures for BES Cyber System Information, and has assessed adherence periodically as stated in Part 1.3, but has failed to implement an action plan to remediate deficiencies identified during the assessment.	The Responsible Entity has implemented ~~one or more~~a BES Cyber System Information protection ~~processes~~program that ~~include~~includes one or more methods to identify BES Cyber System Information and one or more ~~access control and~~ handling procedures for BES Cyber System Information, but has failed to assess adherence~~, either initially upon the effective date of the standard or~~ periodically as stated in Part 1.3, to its BES Cyber System Information protection ~~processes~~program.	The Responsible Entity has not implemented ~~one or more~~a BES Cyber System Information protection ~~processes~~program. OR The Responsible Entity has implemented ~~one or more~~a BES Cyber System Information protection ~~processes~~program, but has not ~~included~~implemented one or more methods to identify BES Cyber System Information OR The Responsible Entity has

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
						implemented ~~one or more~~a BES Cyber System Information protection ~~processes~~program, but has not ~~included~~implemented one or more ~~access control and handling~~ procedures for handling BES Cyber System Information.
R2	**Operations Planning**	**Lower**	N/A	~~N/A~~ The Responsible Entity failed to maintain chain of custody for Cyber Assets that contain BES Cyber System Information that have been removed from the Physical Security Perimeter prior to action taken to prevent unauthorized retrieval or destroying the data storage media.	The Responsible Entity has documented ~~or implemented~~ one or more ~~media~~processes, including both reuse and disposal ~~or reuse processes,~~ to prevent the unauthorized retrieval of BES Cyber System Information from the ~~media~~BES Cyber Assets, but the ~~media disposal or~~	The Responsible Entity has not documented or implemented any ~~media~~ disposal or reuse ~~process~~processes to prevent the unauthorized retrieval of BES Cyber System Information from the ~~media~~BES Cyber Asset.

R #	Time Horizon	VRF	Violation Severity Levels			
			Lower VSL	Moderate VSL	High VSL	Severe VSL
					~~reuse processes, including~~ Responsible Entity either failed to take action to prevent the ~~recording~~unauthorized retrieval of BES Cyber System Information from a Cyber Asset that contained BES Cyber System Information or failed to destroy the ~~media purge or destruction, were not followed~~data storage media.

Guidelines and Technical Basis

Requirement R1:

Assumptions: Responsible Entities are free to utilize existing change management and asset management systems. However, the information contained within ~~these~~those systems must be evaluated, as the information protection requirements still apply.

This requirement mandates that BES Cyber System Information be identified. The Responsible Entity has flexibility in determining how to implement the requirement. For example, the Responsible Entity may decide to mark or label the documents. The Responsible Entity may retain all of the information about BES Cyber Systems in a separate repository or physical or electronic location with access control implemented for both the repository and the BES Cyber Assets. Additional methods for implementing the requirement are suggested in the measures section.

While separating BES Cyber System Information into separate classifications is not required as it was in version 4, ~~responsible entities still have the~~a Responsible Entity maintains that flexibility ~~to do this~~ if ~~they so desire.~~desired. As long as the ~~entity's~~Responsible Entity's information protection program includes all ~~required elements~~applicable items, additional classification levels (e.g., confidential, public, internal use only, etc.) can be created that go above and beyond the requirements.

~~This~~The SDT does not intend that this requirement ~~is not intended to~~ cover publicly available information, such as vendor manuals that are available via public websites or information that is deemed to be publicly releasable.

Information protection pertains to both digital and hardcopy information. ~~Information~~Topics that are appropriate for information handling procedures ~~should detail~~include access, sharing, copying, transmittal, distribution, and disposal or destruction of BES Cyber System Information.

Requirement R2:

Media sanitization is generally classified into ~~4~~four categories: ~~disposal~~Disposal, clearing, purging, and destroying. For the purposes of this requirement, disposal by itself, with the exception of certain special circumstances such as the use of strong encryption on a drive used in a SAN or other media, should never be considered acceptable. The use of clearing techniques may provide a suitable method of sanitization for media that is to be reused, whereas purging techniques may be more appropriate for media ~~which~~that is ready for disposal. Entities are strongly encouraged to review NIST SP800-88 for guidance on how to develop acceptable media sanitization processes.

This requirement allows for BES Cyber Systems to be removed from service and analyzed with their media intact, as ~~this~~that should not constitute a release for reuse. However, following the analysis, if the media is to be reused outside of a BES Cyber System or disposed of, it ~~should~~must be properly ~~erased~~cleared using a method to prevent the unauthorized retrieval of BES Cyber System Information from the media.
