**VIA ELECTRONIC FILING**

Ms. Kimberly D. Bose  
Secretary  
Federal Energy Regulatory Commission  
888 First Street, NE  
Washington, D.C. 20426

**Re: *North American Electric Reliability Corporation,  
Docket No. RM06-16-000***

Dear Ms. Bose:

The North American Electric Reliability Corporation (“NERC”) hereby submits this petition in accordance with Section 215(d)(1) of the Federal Power Act (“FPA”) and Part 39.5 of the Federal Energy Regulatory Commission’s (“FERC”) regulations seeking approval of the following proposed Interconnection Reliability Operating Limit (“IRO”) standards set forth as **Exhibit A** to this petition that were approved by the NERC Board of Trustees on October 17, 2008:

- IRO-008-1 — Reliability Coordinator Operational Analyses and Real-time Assessments;
- IRO-009-1 — Reliability Coordinator Actions to Operate Within IROLs; and
- IRO-010-1a<sup>1</sup> — Reliability Coordinator Data Specification and Collection.

---

<sup>1</sup> The NERC Board of Trustees approved the proposed IRO-010-1 Reliability Standard on October 17, 2008. Subsequently, on August 5, 2009, the NERC Board of Trustees approved an interpretation to the proposed IRO-010-1 standard. Accordingly, NERC is herein requesting approval of both the proposed standard and the appended interpretation, and has designated the proposed standard and appended interpretation in this filing as IRO-010-1a.

In developing the “new” standards proposed in this filing, the standard drafting team also addressed some of FERC’s directives in Order No. 693.<sup>2</sup> In doing so, the standard drafting team determined that it was necessary to revise some additional requirements in FERC-approved Reliability Standards so that the requirements are consistent with and not duplicative of the new standards being proposed in this filing. Accordingly, as explained below, the Implementation Plan for the new IRO standards calls for modifications to or deletions of the following standards:

- EOP-001-0<sup>3</sup> — Emergency Operations Planning
  - Retire Requirement R2
- IRO-002-1 — Reliability Coordination — Facilities
  - Retire Requirement R2
- IRO-004-1 — Reliability Coordination — Operations Planning
  - Retire Requirements R1 through R6
- IRO-005-2 — Reliability Coordination — Current Day Operations
  - Retire Requirements R2, R3, and R5; modify Requirements R9, R13, and R14; retire R16 and R17
- TOP-003-0 — Planned Outage Coordination
  - Modify Requirement R1.2

---

<sup>2</sup> See *Mandatory Reliability Standards for the Bulk-Power System*, 18 CFR Part 40, Docket No. RM06-16-000 (March 16, 2007) (“Order No. 693”) at PP 627-630, 636-638.

<sup>3</sup> NERC recognizes that revised standard EOP-001 is included for approval in this filing as well as in the filing requesting approval of Emergency Preparedness and Operations Reliability Standards (“System Restoration and Blackstart Filing”) of December 31, 2009. The modifications proposed to the EOP-001 standard in this filing and in the System Restoration and Blackstart Filing include changes unique to each project. NERC cannot predict the outcome or sequence in which FERC will act on these filings. Therefore, NERC includes in Exhibit A a proposed Version 1 of EOP-001 that exclusively contains the changes directed by the IRO project in the event FERC acts on this filing before the System Restoration and Blackstart Filing or if the System Restoration and Blackstart Filing is remanded before the IRO filing is acted upon. In the event that FERC acts to approve the System Restoration and Blackstart Filing first, NERC also includes in Exhibit B Version 2 of EOP-001 that contains both the System Restoration and Blackstart team directed changes and those proposed in this IRO filing. Because EOP-001-0 is the currently-approved standard in effect, the changes proposed in this filing are applied against this Version 0. Should the System Restoration and Blackstart Filing be affirmatively acted upon first, NERC modifies its requests for FERC approval of EOP-001-2 as provided in Exhibit B.

- TOP-005-1 — Operational Reliability Information
  - Retire Requirements R1 and R1.1
  - Modify Attachment 1
- TOP-006-1 — Monitoring System Conditions
  - Modify Requirement R4

Therefore, revised Reliability Standards EOP-001-1, IRO-002-2, IRO-004-2, IRO-005-3, TOP-003-1, TOP-005-2 and TOP-006-2 are also proposed for approval in this filing.

NERC is also requesting in this filing approval of the following two new definitions:

- Operational Planning Analysis
- Real-time Assessment

This filing discusses each of the three new standards (IRO-008-1, IRO-009-1 and IRO-010-1a), including how the standards meet the criteria identified by FERC in Order No. 672<sup>4</sup> for approving Reliability Standards, and the basis for the proposed changes to the other listed standards.

This filing consists of the following:

- This transmittal letter;
- A table of contents ;
- A narrative description explaining how the proposed Reliability Standards meet FERC's requirements;
- Reliability Standards and definitions submitted for approval or modification (**Exhibit A**);

---

<sup>4</sup> See *Rules Concerning Certification of the Electric Reliability Organization; Procedures for the Establishment, Approval and Enforcement of Electric Reliability Standards*, FERC Stats. & Regs., ¶ 31,204 at PP 320-338 (“Order No. 672”), *order on reh’g*, FERC Stats. & Regs. ¶ 31,212 (2006) (“Order No. 672-A”).

Ms. Kimberly D. Bose

## I. INTRODUCTION

The North American Electric Reliability Corporation (“NERC”)<sup>1</sup> hereby requests the Federal Energy Regulatory Commission (“FERC”) to approve, in accordance with Section 215(d)(1) of the Federal Power Act (“FPA”)<sup>2</sup> and Section 39.5 of FERC’s regulations, 18 C.F.R. § 39.5 the following new Reliability Standards:

- IRO-008-1 — Reliability Coordinator Operational Analyses and Real-time Assessments;
- IRO-009-1 — Reliability Coordinator Actions to Operate Within IROLs; and
- IRO-010-1a — Reliability Coordinator Data Specification and Collection.

Additionally, NERC requests FERC approval of conforming changes to additional standards reflected in the proposed Reliability Standards EOP-001-1, IRO-002-2, IRO-004-2, IRO-005-3, TOP-003-1, TOP-005-2 and TOP-006-2. Specifically, these changes are:

- Retire IRO-004-1 Requirements R1 and R2 when IRO-008-1 becomes effective;
- Retire EOP-001-1 Requirement R2 when IRO-009-1 becomes effective;
- Retire IRO-004-1 Requirements R3 and R6 when IRO-009-1 becomes effective;
- Modify IRO-005-2 Requirement R14 when IRO-009-1 becomes effective;
- Retire IRO-005-2 Requirements R16 and R17 when IRO-009-1 becomes effective;
- Modify IRO-005-2 Requirements R9 and R13 when IRO-009-1 becomes effective;
- Retire IRO-002-1 Requirement R2 when IRO-010-1a becomes effective;
- Retire IRO-005-2 Requirement R2 when IRO-010-1a becomes effective;

---

<sup>1</sup> NERC has been certified by FERC as the electric reliability organization (“ERO”) authorized by Section 215 of the Federal Power Act. FERC certified NERC as the ERO in its order issued July 20, 2006 in Docket No. RR06-1-000. 116 FERC ¶ 61,062 (2006) (“ERO Certification Order”).

<sup>2</sup> 16 U.S.C. 824o.

- Modify TOP-003-0 Requirement R1.2 when IRO-010-1a becomes effective;
- Modify TOP-005-1 Requirements R1 and R1.2 and modify Attachment 1 when IRO-010-1a becomes effective; and
- Modify TOP-006-1 Requirement R4 and Attachment 1 when IRO-010-1a becomes effective.

The NERC Board of Trustees approved the listed new or modified Reliability Standards on October 17, 2008, and the subsequent interpretation to IRO-010-1a on August 5, 2009. In this filing, NERC requests that FERC approve the proposed Reliability Standards and make them effective in accordance with the implementation plan accompanying this filing.

NERC also requests that FERC apply existing and FERC-approved Violation Risk Factors (“VRFs”) and Violation Severity Levels (“VSLs”) to the modified requirements proposed in this filing. This filing also identifies and seeks FERC approval for definitions for the following terms:

- Operational Planning Analysis; and
- Real-time Assessment.

**Exhibit A** to this filing sets forth the proposed Reliability Standards and definitions. **Exhibit B** includes the Reliability Standard EOP-001-2 proposed for approval, if necessary, for the reasons discussed in footnote 3, above. **Exhibit C** presents the roster for the drafting team that developed the proposed Reliability Standards. **Exhibit D** contains the complete development record of the proposed Reliability Standards. **Exhibit E** contains the complete development record for the interpretation to IRO-010-1. NERC is also filing these proposed Reliability Standards and interpretation with applicable governmental authorities in Canada.

## III. BACKGROUND

### a. Regulatory Framework

By enacting the Energy Policy Act of 2005,<sup>3</sup> Congress entrusted FERC with the duties of approving and enforcing rules to ensure the reliability of the Nation’s bulk power system, and with the duties of certifying an ERO that would be charged with developing and enforcing mandatory Reliability Standards, subject to FERC approval. Section 215 states that all users, owners and operators of the bulk power system in the United States will be subject to the FERC-approved Reliability Standards.

The principal purpose of the proposed Reliability Standards, and associated conforming modifications to other existing approved Reliability Standards, is to prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the

---

<sup>3</sup> Energy Policy Act of 2005, Pub. L. No. 109-58, Title XII, Subtitle A, 119 Stat. 594, 941 (2005 (codified at 16 U.S.C. § 824o)).

interconnection by ensuring prompt action to prevent or mitigate instances of exceeding Interconnection Reliability Operating Limits (“IROLs”). Many elements contained in the set of proposed “Operate within IROL Standards” address the same or similar performance objectives as currently-existing requirements in FERC-approved Reliability Standards. To resolve potential discrepancies, and to better ensure prompt action to prevent or mitigate instances of exceeding IROLs, NERC recommends the retirement or revision of seven existing FERC-approved Reliability Standards coincident with the implementation of the proposed standards, as addressed in section IV of this filing.

#### **b. Basis for Approval of Proposed Reliability Standard**

Section 39.5(a) of FERC’s regulations requires the ERO to file with FERC for its approval each Reliability Standard that the ERO proposes to become mandatory and enforceable in the United States, and each modification to an approved Reliability Standard that the ERO proposes to be made effective. FERC has the regulatory responsibility to approve standards that protect the reliability of the bulk power system. In discharging its responsibility to review, approve, and enforce mandatory Reliability Standards, FERC is authorized to approve those proposed Reliability Standards that meet the criteria detailed by Congress:

*The Commission may approve, by rule or order, a proposed reliability standard or modification to a reliability standard if it determines that the standard is just, reasonable, not unduly discriminatory or preferential, and in the public interest.*<sup>4</sup>

When evaluating proposed Reliability Standards, FERC is required by statute to give “due weight” to the technical expertise of the ERO. Order No. 672 provides guidance on the fifteen factors FERC will consider when determining whether proposed Reliability Standards meet the statutory criteria.<sup>5</sup>

---

<sup>4</sup> Section 215(d)(2) of the FPA, 16 U.S.C. § 824o(d)(2) (2000).

<sup>5</sup> Order No. 672 at PP 320-338.

The new or modified standards proposed in this filing serve an important reliability goal: (1) to ensure the Reliability Coordinator is prepared to act to prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection by using data and information to determine how the bulk power system is operating in real-time, by looking ahead to see how the bulk power system is expected to operate through the next day, and (2) by having and executing action plans to either prevent or mitigate instances of exceeding IROLs.

### **c. Reliability Standards Development Procedure**

NERC develops Reliability Standards in accordance with Section 300 (Reliability Standards Development) of its Rules of Procedure and the NERC *Reliability Standards Development Procedure*, which is incorporated into the Rules of Procedure as Appendix 3A. In its ERO Certification Order, FERC found that NERC's proposed rules provide for reasonable notice and opportunity for public comment, due process, openness, and a balance of interests in developing Reliability Standards and thus satisfies certain of the criteria for approving Reliability Standards.<sup>6</sup>

The Development Process is open to any person or entity with a legitimate interest in the reliability of the bulk power system. NERC considers the comments of all stakeholders and a vote of stakeholders and the NERC Board of Trustees is required to approve a Reliability Standard for submission to FERC.

The work culminating in this filing originated in 2002, predating the Version 0 Reliability Standards that took effect in April 2005. The description of the development history for the Reliability Standards focuses on the standard drafting team's activities since April 2005. However, from 2005 to 2007, the standard drafting team for the IRO project was primarily on

---

<sup>6</sup> Order No. 672 at PP 268, 270.

hold due to the fact that the FAC-010-1, FAC-011-1 and FAC-014-1 standards were under development at that time and required much of the same resources that were required in developing the IRO standards. The proposed Reliability Standards and definitions set out in **Exhibit A** have been developed and approved by industry stakeholders using NERC's *Reliability Standards Development Procedure*.<sup>7</sup> A narrative of this process appears in section VI of this filing. These proposed Reliability Standards were approved by the NERC Board of Trustees on October 17, 2008 and the proposed interpretation to IRO-010-1 was approved by the NERC Board of Trustees on August 5, 2009.

#### **d. Progress in Improving Proposed Reliability Standards**

NERC continues to develop new and revised Reliability Standards that address the issues NERC identified in its initial filing of proposed Reliability Standards on April 4, 2006, the concerns noted in the FERC Staff Report issued on May 11, 2006, and the directives FERC has made in several subsequent orders pertaining to Reliability Standards.<sup>8</sup> NERC has incorporated these activities into its *Reliability Standards Development Plan: 2009-2011*, submitted to FERC on February 3, 2009 and its *Reliability Standards Development Plan: 2010-2012*, submitted to FERC on December 2, 2009.

NERC has filed with the regulatory authorities in the U.S. and Canada petitions to approve numerous Reliability Standards that were proposed as new, modified, or retired

---

<sup>7</sup> NERC's *Reliability Standards Development Procedure* is available on NERC's website at [http://www.nerc.com/fileUploads/File/Standards/RSDP\\_V6\\_1\\_12Mar07.pdf](http://www.nerc.com/fileUploads/File/Standards/RSDP_V6_1_12Mar07.pdf).

<sup>8</sup> *Rules Concerning Certification of the Electric Reliability Organization: Procedures for the Establishment, Approval and Enforcement of Electric Reliability Standards*, Order No. 672, 71 FR 8662 (February 17, 2006), FERC Stats. & Regs. ¶ 31,204 (2006), *order on reh'g*, Order No. 672-A, 71 FR 19814 (April 18, 2006), FERC Stats. & Regs. ¶ 31,212 (2006). (*Order 672*).  
*Mandatory Reliability Standards for the Bulk-Power System*, 118 FERC ¶ 61,218, FERC Stats. & Regs. ¶ 31,242 (2007) ("Order No. 693"), *order on reh'g*, *Mandatory Reliability Standards for the Bulk-Power System*, 120 FERC ¶ 61,053 ("Order No. 693-A") (2007).

Reliability Standards, as well as several interpretations, and, in the U.S., FERC has taken action on a large number of these standards and interpretations.

**e. Fundamental Issues Supporting the New IRO Standards**

Work in developing the IRO standards was initiated prior to the development of the Version 0 standards. In developing the IRO standards, the drafting team worked on the following assumptions:

- The IRO standards support the authorities and tasks identified in the NERC Functional Model;
- The IRO standards coordinate with other standards either already approved or also under development;
- Reliability Coordinators have either been through NERC’s organization certification process or have been through a reliability readiness audit to verify that the entity has the “capability” to perform the tasks assigned to the Reliability Coordinator; and
- New standards identify “what” performance is required without necessarily focusing on the details of “how” to accomplish the required performance.

As explained below, each of these assumptions had a significant impact on the work done to develop the IRO standards.

**i. The IRO standards support the authorities and assignment of tasks identified in the NERC Functional Model**

The NERC Functional Model was developed by first identifying all of the operating tasks necessary for reliability, and then assigning each of these operating tasks to a single functional entity.<sup>9</sup> This approach results in a clear identification of a single functional entity with responsibility for each reliability task.

The Functional Model clarified the hierarchy of authorities for both operating and planning entities. As identified in the August 2003 blackout investigation, a clear understanding of each entity’s authority and responsibility for each reliability task, especially during abnormal

---

<sup>9</sup> While the early versions of the Functional Model also assigned a single planning task to just one planning entity, later versions of the Functional Model do assign some activities to more than one planning entity.

operating conditions, is essential to reliability. During the events that led to the August 2003 blackout, the authority of the various operating entities was, at times, unclear. Shortly after the blackout, each Reliability Coordinator and each entity operating a control area was asked to review the authority of its system operators.<sup>10</sup> The development of the IRO standards formalizes this authority.

Under the NERC Functional Model, the Reliability Coordinator is the functional entity with the highest level of responsibility and authority for real-time reliability of the bulk power system. The Reliability Coordinator is responsible for identifying the subset of System Operating Limits (“SOLs”) that are known as IROs, and may direct its Transmission Operators to take actions associated with IROs. Under the NERC Functional Model, the Transmission Operator is not required to have the tools necessary to identify IROs. Therefore, in assigning a single task to a single functional entity, the Reliability Coordinator is the sole functional entity responsible for developing IROs and for actions to prevent/mitigate instances of exceeding IROs. While the Transmission Operator has no “direct” responsibility for developing IROs, the Transmission Operator may be assigned the task of developing some IROs, monitoring real-time values against identified IROs, and taking actions to prevent reaching an IRO or to mitigate an instance of exceeding an IRO. However, the Transmission Operator only performs these tasks when directed to do so by its Reliability Coordinator. The IRO standards were developed in support of this authority and assignment of tasks. While Reliability Coordinators will assign their Transmission Operators tasks associated with IROs, it is the Reliability Coordinator with ultimate responsibility for these tasks, and it is the Reliability Coordinator that will be sanctioned if these tasks are not performed as required by the standards.

---

<sup>10</sup> October 15, 2003 letter from Michael R. Gent, President and CEO of North American Electric Reliability Council to the CEO of all NERC control areas and Reliability Coordinators.

In a similar fashion, the NERC Functional Model assigns responsibility for other SOLs to the Transmission Operator. Again, this is a “shared” responsibility. Where the Transmission Operator has primary responsibility for developing the SOLs within its Transmission Operator Area, the Transmission Operator may request the assistance of its Reliability Coordinator in developing these SOLs. It is the Reliability Coordinator that is held responsible for ensuring that SOLs are developed for its Reliability Coordinator Area in accordance with a methodology developed by the Reliability Coordinator. The Transmission Operator must share its SOLs with its Reliability Coordinator, and the Reliability Coordinator must share any SOLs it develops with its Transmission Operator. The Reliability Coordinator monitors the status of some, but not all, SOLs. The Reliability Coordinator’s visualization tools are not expected to display all SOLs within the Wide-Area that the Reliability Coordinator monitors, as this would be unduly burdensome and duplicative, mixing SOLs that have little impact on the bulk power system with those SOLs that are associated with facilities that are important to the bulk power system. The Reliability Coordinator’s visualization tools are expected to display the real-time status of parameters against all IROs that the Reliability Coordinator monitors and display the subset of SOLs associated with facilities that are most critical to the portions of the bulk power system that are monitored by the Reliability Coordinator.

## **ii. The IRO Standards Coordinate with other Standards**

The Version 0 NERC Reliability Standards included the development of approximately 10-15 standards that, in total, would support reliable planning and operation of the bulk power system. The development of these standards was initiated before the development of the Version 0 Standards, and the intent was to have the set of standards work cooperatively to ensure reliability. No one standard was intended to be implemented by itself. The IRO Standards were

designed to work closely with the “Coordinate Operations” standards, which were also assigned to the Reliability Coordinator, with the “Facilities” standards, and the Personnel (System Operator Training and Certification) standards. Over time, and with the implementation of mandatory and enforceable Reliability Standards, the path to develop the original set of standards has been modified. Most of the other standards originally envisioned in the “set” of 10-15 standards developed to address the reliable planning and operation of the bulk power system have not yet been developed but are included, in part, in the requirements of the Version 0 standards. Thus, the requirements in the IRO Standards work cooperatively with requirements in Version 0 IRO standards. Following are just a few of many examples of this coordination.

The IRO Standards require the Reliability Coordinator to collect the data and information it needs to perform studies to determine if the operations within its Reliability Coordinator Area are likely to result in approaching or exceeding any IROLs. If the studies show that an IROL may be approached or exceeded, the Reliability Coordinator is required to have an action plan to prevent and to mitigate the exceedance so that no IROL is ever exceeded for a time greater than the IROL’s  $T_v$ . The IROL  $T_v$  is defined as follows:

The maximum time that an Interconnection Reliability Operating Limit can be violated before the risk to the interconnection or other Reliability Coordinator Area(s) becomes greater than acceptable. Each Interconnection Reliability Operating Limit’s  $T_v$  shall be less than or equal to 30 minutes.

The Facility Ratings standards require the Reliability Coordinator to have a methodology for developing IROLs and establishing a  $T_v$  for each of these IROLs, and require the Reliability Coordinator to share the values of its IROLs with other entities. The Training Standard (PER-005-1) requires that the Reliability Coordinator verify that its real-time system operators can perform reliability-related tasks to meet a specified degree of competence. This competence should assure that the Reliability Coordinator’s system operators recognize when to take action,

and make appropriate decisions about what actions to take. The Operating Personnel Credentials standard (PER-003-0) provides a basic level of assurance that the Reliability Coordinator’s real-time system operators have a demonstrated understanding of NERC’s requirements for real-time operations, including the authorities and required interactions of all the operating entities.

**iii. Reliability Coordinators Certified or Capabilities Verified by Reliability Readiness Audit**

The vision in the development of the Version 0 standards included developing standards that would address the certification of Reliability Coordinators, Transmission Operators and Balancing Authorities. The certification requirements included in draft versions of the Version 0 standards were aimed at ensuring that each entity assuming responsibility for one of these functions could demonstrate that it had the tools, procedures, and agreements in place to be capable of assuming the responsibility for that function. Before the Version 0 standards were approved by FERC, the certification requirements were moved into Section 500 and Appendix 5 of the NERC Rules of Procedure,<sup>11</sup> rather than in the form of a standard, and they retain the concept that entities must demonstrate that they have the tools and capabilities necessary to operate as the functional entities for which they are registered. Entities that were already performing the duties of the Reliability Coordinator, Transmission Operator or Balancing Authority were not forced to go through the full organization certification process. Instead, each of these entities underwent a “readiness audit” or “readiness evaluation” to verify that they had the tools and processes in place to operate reliably. An entity that was not operating as a Reliability Coordinator, Transmission Operator, or Balancing Authority at the time NERC was

---

<sup>11</sup> See the NERC Rules of Procedure Section 500 – Organization Registration and Certification, and Appendix 5, *Organization Registration and Certification Manual*, Version 3.3 (January 18, 2007), available at [http://www.nerc.com/files/NERC\\_Rules\\_of\\_Procedure\\_EFFECTIVE\\_20091002.pdf](http://www.nerc.com/files/NERC_Rules_of_Procedure_EFFECTIVE_20091002.pdf).

certified to be the ERO must undergo the full organization certification process in order to demonstrate its capabilities to perform the assigned reliability function.

Drafting teams continue to assume that the requirements in Reliability Standards apply to entities that have already demonstrated that they have the tools, processes, and agreements in place that are necessary to operate reliably. As new standards are developed and as existing Version 0 standards are revised, the basic capability requirements that were prevalent in the Version 0 standards are being recommended for retirement, provided that appropriate tools, procedures, and facilities, are used in support of an operating entity's daily operations. There is no degradation to reliability as a consequence because these operating entities use the necessary tools, procedures, and facilities on a regular basis to meet performance-based requirements in Reliability Standards. However, if some basic facility requirements, such as those used for communications during emergencies or those monitoring capabilities that a Reliability Coordinator uses to prevent instances of exceeding IROLs, are not used on a routine basis and are not measured through other performance-based requirements, it would not be appropriate to retire these Version 0 requirements.

- iv. The IRO standards identify “what” performance is required without necessarily focusing on the details of “how” to accomplish the required performance.**

Before becoming the ERO, NERC developed Compliance Templates for some of its former Operating Policies and Planning Standards. The drafting team developing these templates noted that the use of passive language and the use of ambiguous language in some of the policies (precursors of the Version 0 Reliability Standards) made the development of Compliance Templates challenging.

This experience highlighted the importance of writing the new standards with a greater degree of clarity, describing only the “required” performance, and using other documents, such as guidelines and job aids, to describe the details of “how” to comply. Where only one way of achieving an objective is possible or only one way of achieving an objective is required, then that way would be included in the requirement, but where more than one way of achieving the objective is possible, the intent was to refrain from specifying “how” to achieve the objective. In this manner, entities will not be required to change existing tools and practices except in those rare instances in which the change will lead to an improvement in reliability. The proposed standards were prepared following this concept. They define the “required” performance but do not identify the details of “how” to achieve that performance. In some instances this may give the appearance, when comparing a set of Version 0 requirements with the requirements in a new standard, of “eliminating” details that were “helpful” to some entities. The IRO drafting team agrees that details are “helpful” but disagrees that these detail are necessary to be included in a Reliability Standard. Rather, Reliability Standards are appropriately focused on the end performance necessary to provide an adequate level of reliability. Accordingly, details useful to the regulated entities and others will be incorporated not into the standards but rather into guidelines that can be employed to support compliance with the Standards.

#### **IV. JUSTIFICATION FOR APPROVAL OF PROPOSED RELIABILITY STANDARDS**

##### **a. Section Overview**

This section summarizes the development of the three proposed IRO Reliability Standards and identifies the associated necessary changes or retirements to other FERC-approved Reliability Standards as discussed in section VI, below. The discussion in this section is also intended to demonstrate that the proposed Reliability Standards meet the criteria for

approval established by FERC. That is, the proposed Reliability Standards are just, reasonable, not unduly discriminatory or preferential and in the public interest.<sup>12</sup>

The standard drafting team roster is provided in **Exhibit C**. The complete development record for the proposed Reliability Standards, including the Implementation Plan referenced in this filing, is available in **Exhibit D**. This extensive development record includes *ten* successive drafts of the Operate within Interconnection Reliability Standards, the Implementation Plan, the ballot pool, and the final ballot results by registered ballot body members, and stakeholder comments received during the development of these Reliability Standards, as well as a discussion regarding how those comments were considered in developing them.

The discussion of each of the three proposed Reliability Standards presented sequentially below is followed by discussion of the various requirements that are recommended for retirement or revision when the new Reliability Standard becomes effective. If a requirement recommended for retirement was addressed in Order No. 693, the directive has been identified, and the work done to meet the directive is described.

### **IRO-008-1 — Reliability Coordinator Operational Analyses and Real-time Assessments**

NERC proposes the addition of a new standard, IRO-008-1, to the current suite of FERC-approved Reliability Standards. IRO-008-1 is presented in **Exhibit A** of this filing.

#### **a. Demonstration that the proposed Reliability Standard is just, reasonable, not unduly discriminatory or preferential and in the public interest**

In order to approve a Reliability Standard proposed by the ERO, FERC must determine, after notice and opportunity for public hearing, that the standard is just, reasonable, not unduly discriminatory or preferential and in the public interest.<sup>13</sup> In Order No. 672, FERC identified a number of criteria it will use to analyze Reliability Standards proposed for approval to ensure

---

<sup>12</sup> See Order No. 672.

<sup>13</sup> Section 215(d)(2)(A) of the FPA; 18 C.F.R. §39.5.

they are just, reasonable, not unduly discriminatory or preferential, and in the public interest.

Consideration of how the proposed standard IRO-008-1 meets the guidelines identified by FERC in Order No. 672 as necessary to concluding a Reliability Standard meets the statutory criteria follows:

***1. Proposed Reliability Standards must be designed to achieve a specified reliability goal***

*Order No. 672 at P 321. The proposed Reliability Standard must address a reliability concern that falls within the requirements of section 215 of the FPA. That is, it must provide for the reliable operation of Bulk-Power System facilities. It may not extend beyond reliable operation of such facilities or apply to other facilities. Such facilities include all those necessary for operating an interconnected electric energy transmission network, or any portion of that network, including control systems. The proposed Reliability Standard may apply to any design of planned additions or modifications of such facilities that is necessary to provide for reliable operation. It may also apply to Cyber security protection.*

IRO-008-1 is designed to prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection by ensuring that the bulk power system is assessed during the operations horizon.

***2. Proposed Reliability Standards must contain a technically sound method to achieve the goal***

*Order No. 672 at P 324. The proposed Reliability Standard must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve this goal. Although any person may propose a topic for a Reliability Standard to the ERO, in the ERO's process, the specific proposed Reliability Standard should be developed initially by persons within the electric power industry and community with a high level of technical expertise and be based on sound technical and engineering criteria. It should be based on actual data and lessons learned from past operating incidents, where 13 appropriate. The process for ERO approval of a proposed Reliability Standard should be fair and open to all interested persons.*

IRO-008-1 uses analyses and assessments as methods of achieving the stated goal. The standard requires:

- Analysis of the Reliability Coordinator's Wide-Area ahead of time,
- Assessment of the Reliability Coordinator's Wide-Area during real-time, and
- Communication with the entities that need to take specific operational actions based on analyses and assessments.

The term “Wide-Area” is an approved term and includes not only the Reliability Coordinator’s Area, but also critical flow and status information from adjacent Reliability Coordinator Areas as determined by detailed system studies to allow the calculation of IROLs. Upon FERC- approval of the proposed IRO-008-1, the currently-effective IRO-004-1, Requirement R1 should be retired because this requirement only requires a next-day reliability analysis of the Reliability Coordinator’s own Reliability Coordinator Area.

The standard drafting team’s intent in using the term “Wide-Area” in the development of the proposed IRO-008-1 was to ensure that the Reliability Coordinator looks beyond its boundaries into the adjacent Reliability Coordinator Areas to determine if there are activities that it has planned, or that its adjacent Reliability Coordinators have planned, that may bring some facility to approach or exceed an IROL. This may be caused by combinations of forced and scheduled outages, planned interchange transactions, or other activities.

Additionally, the new requirement enhances and works cooperatively with other currently FERC-approved IRO standards. For example, if the Reliability Coordinator conducts an Operational Planning Analysis and notes a possible problem in an adjacent Reliability Coordinator’s Area, even though IRO-008-1 does not require the Reliability Coordinator to notify the other Reliability Coordinator, under IRO-014-1, the Reliability Coordinator that sees any potential operating problem involving another Reliability Coordinator Area is required to notify the adjacent Reliability Coordinator and work cooperatively to resolve the issue. Because the proposed IRO-008-1 requires the Reliability Coordinator to assess a wider area than is currently required by IRO-004-1, the Reliability Coordinator is required to continuously look beyond its own area boundaries and assess a broader portion of the interconnected bulk power system. This gives the Reliability Coordinators a better opportunity to support one another.

The terms “Operational Planning Analysis” and “Real-time Assessment” are new terms with the following definitions:

**Operational Planning Analysis:** An analysis of the expected system conditions for the next day’s operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, *etc.*).

The definition of Operational Planning Analysis was designed to provide greater specificity regarding the day-ahead study. The language in the predecessor standard, IRO-004-1, was unclear with respect to the need for a “unique” study for each operating day. The use of the term “Operational Planning Analysis” clarifies that, if there were no changes to the expected conditions from one day to the next, the Reliability Coordinator would not be forced to conduct a new analysis of the expected system conditions solely to have documentation for compliance.

The proposed term “Real-time Assessment” is defined as follows:

**Real-time Assessment:** An examination of existing and expected system conditions, conducted by collecting and reviewing immediately available data.

The definition of Real-time Assessment was designed to assure that, under all circumstances, the Reliability Coordinator is required to conduct a real-time assessment, including situations when the Reliability Coordinator is operating without its primary control facilities, by collecting and reviewing available data.

***3. Proposed Reliability Standards must be applicable to users, owners, and operators of the bulk power system, and not others***

Order No. 672 at P 322. *The proposed Reliability Standard may impose a requirement on any user, owner, or operator of such facilities, but not on others.*

Reliability Standard IRO-008-1 specifically applies to the Reliability Coordinator and no other functional entities.

**4. Proposed Reliability Standards must be clear and unambiguous as to what is required and who is required to comply**

Order No. 672 at P 325. *The proposed Reliability Standard should be clear and unambiguous regarding what is required and who is required to comply. Users, owners, and operators of the Bulk-Power System must know what they are required to do to maintain reliability.*

Each of the requirements in IRO-008-1 is clear in identifying the required performance (what) and the responsible entity (who).

- R1.** Each Reliability Coordinator shall perform an Operational Planning Analysis to assess whether the planned operations for the next day within its Wide Area, will exceed any of its Interconnection Reliability Operating Limits (IROLs) during anticipated normal and Contingency event conditions. *(Violation Risk Factor: Medium)*
- R2.** Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs. *(Violation Risk Factor: High)*
- R3.** When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions. *(Violation Risk Factor: Medium)*

**5. Proposed Reliability Standards must include clear and understandable consequences and a range of penalties (monetary and/or non-monetary) for a violation**

Order No. 672 at P 326. *The possible consequences, including range of possible penalties, for violating a proposed Reliability Standard should be clear and understandable by those who must comply.*

Each primary requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines. The table below shows the VRFs and VSLs resulting in the indicated range of penalties for violations.

Violation Risk Factors	Violation Severity Levels			
	Lower Range	Moderate Range	High Range	Severe Range
Lower	\$1-3k	\$2-7.5k	\$3-15k	\$5-25k
Moderate	\$2-30k R1	\$4-100k R1 R3	\$6-200k R1	\$10-335k R1 R3
High	\$4-125k R2	\$8-300k R2	\$12-625k R2	\$20-1,000k R2

**6. Proposed Reliability Standards must identify clear and objective criterion or measure for compliance, so that it can be enforced in a consistent and non-preferential manner**

Order No. 672 at P 327. *There should be a clear criterion or measure of whether an entity is in compliance with a proposed Reliability Standard. It should contain or be accompanied by an objective measure of compliance so that it can be enforced and so that enforcement can be applied in a consistent and non-preferential manner.*

The proposed Reliability Standard identifies clear and objective criteria in the language of the requirements so that that the standards can be enforced in a consistent and non-preferential manner. The language in the requirements is unambiguous with respect to the applicable entity expectations. Each requirement has a single associated measure.

- M1.** The Reliability Coordinator shall have, and make available upon request, the results of its Operational Planning Analyses. (R1)
- M2.** The Reliability Coordinator shall have, and make available upon request, evidence to show it conducted a Real-Time Assessment at least once every 30 minutes. This evidence could include, but is not limited to, dated computer log showing times the assessment was conducted, dated checklists, or other evidence. (R2)
- M3.** The Reliability Coordinator shall have and make available upon request, evidence to confirm that it shared the results of its Operational Planning Analyses or Real-Time Assessments with those entities expected to take actions based on that information. This evidence could include, but is not limited to, dated operator logs, dated voice recordings, dated transcripts of voice records, dated facsimiles, or other evidence. (R3)

The measures require the Reliability Coordinator to have evidence for each of the three requirements. The measures are clear in stating that the Reliability Coordinator must have

evidence of day-ahead analyses, evidence of Real-time Assessments, and evidence of communicating information under specific conditions. The measures provide samples of what constitutes acceptable evidence and allow for other types of evidence. The measures are written so that the Reliability Coordinator is required to conduct the Real-time Assessment even if its energy management system is not operational. The definition of Real-time Assessment was written to allow the assessment to be conducted either through the energy management system or manually. The measures are specific in asking only for a demonstration that that system was analyzed and assessed. The requirements and associated measures are designed to allow the Reliability Coordinator the ability to perform a level of analysis applicable to the actual situation, focusing on the “situational awareness” aspect of the requirement.

***7. Proposed Reliability Standards should achieve a reliability goal effectively and efficiently, but do not necessarily have to reflect “best practices” without regard to implementation cost***

*Order No. 672 at P 328. The proposed Reliability Standard does not necessarily have to reflect the optimal method, or “best practice,” for achieving its reliability goal without regard to implementation cost or historical regional infrastructure design. It should however achieve its reliability goal effectively and efficiently.*

The proposed Reliability Standard achieves its reliability goal effectively and efficiently, not necessarily reflecting “best practices” without regard to implementation costs. Reliability Coordinators must have tools to conduct analyses and assessments. This standard requires that the Reliability Coordinator perform an Operational Planning Analysis of its Wide-Area, and thus requires modeling beyond that currently required for Reliability Coordinator certification,<sup>14</sup> as well as beyond what is required to comply with the requirements of IRO-004. The proposed standard supports the implementation of the Reliability Coordinator function as described in the Functional Model. The Functional Model identifies the Reliability Coordinator as the

---

<sup>14</sup> The certification requirements for the Reliability Coordinator only require that the Reliability Coordinator have a view of the Reliability Coordinator Area and facilities of other Reliability Coordinators that may have IROs.

operational entity with a “Wide-Area” view – and to implement this Wide-Area view modeling beyond the Reliability Coordinator’s own Reliability Coordinator Area is required. Without a “Wide-Area” view, the Reliability Coordinator cannot determine IROLs appropriately.

The standard has requirements to achieve the purpose – preventing instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection – by ensuring that the bulk power system is assessed during two specific time periods within the operations horizon. The 30-minute time period was selected to establish a reasonable assessment frequency. This limits the amount of risk to the bulk power system. The 30-minute interval is consistent with the Disturbance Control Standard’s requirements and the maximum time (IROL  $T_v$ ) for resolving an instance of exceeding an IROL. The day-ahead time period was selected to identify any potential issues in a time frame where actions could be taken proactively.

**8. *Proposed Reliability Standards cannot be “lowest common denominator,” i.e., cannot reflect a compromise that does not adequately protect bulk power system reliability***

*Order No. 672 at P 330. A proposed Reliability Standard may take into account the size of the entity that must comply with the Reliability Standard and the cost to those entities of implementing the proposed Reliability Standard. However, the ERO should not propose a “lowest common denominator” Reliability Standard that would achieve less than excellence in operating system reliability solely to protect against reasonable expenses for supporting this vital national infrastructure. For example, a small owner or operator of the Bulk-Power System must bear the cost of complying with each Reliability Standard that applies to it.*

The standard does not aim at “lowest common denominator.” The requirements are independent of any particular Reliability Coordinator’s situation. The proposed IRO-008-1 Requirement R1 requires a broader model and view than is currently required under IRO-004-1. There is no existing requirement to conduct a Real-time Assessment, thus IRO-008-1 Requirement R2 is requiring something that does not currently exist in any current FERC-approved Reliability Standard, thereby raising the threshold for reliability performance.

**9. Proposed Reliability Standards may consider costs to implement for smaller entities but not at consequence of less than excellence in operating system reliability**

Order No. 672 at P 330. *A proposed Reliability Standard may take into account the size of the entity that must comply with the Reliability Standard and the cost to those entities of implementing the proposed Reliability Standard. However, the ERO should not propose a “lowest common denominator” Reliability Standard that would achieve less than excellence in operating system reliability solely to protect against reasonable expenses for supporting this vital national infrastructure. For example, a small owner or operator of the Bulk-Power System must bear the cost of complying with each Reliability Standard that applies to it.*

The proposed Reliability Standards do not reflect any differentiation in requirements based on size. There are no small Reliability Coordinators.

**10. Proposed Reliability Standards must be designed to apply throughout North America to the maximum extent achievable with a single Reliability Standard while not favoring one area or approach**

Order No. 672 at P 331. *A proposed Reliability Standard should be designed to apply throughout the interconnected North American Bulk-Power System, to the maximum extent this is achievable with a single Reliability Standard. The proposed Reliability Standard should not be based on a single geographic or regional model but should take into account geographic variations in grid characteristics, terrain, weather, and other such factors; it should also take into account regional variations in the organizational and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.*

The requirements in this standard apply throughout North America, with no exceptions.

**11. Proposed Reliability Standards should cause no undue negative effect on competition or restriction of the grid**

Order No. 672 at P 332. *As directed by section 215 of the FPA, the Commission itself will give special attention to the effect of a proposed Reliability Standard on competition. The ERO should attempt to develop a proposed Reliability Standard that has no undue negative effect on competition. Among other possible considerations, a proposed Reliability Standard should not unreasonably restrict available transmission capability on the Bulk-Power System beyond any restriction necessary for reliability and should not limit use of the Bulk-Power System in an unduly preferential manner. It should not create an undue advantage for one competitor over another.*

The requirements in the standard support competition by assuring that the system is analyzed and assessed, with a goal of keeping the transmission system available and stable.

**12. The implementation time for the proposed Reliability Standards must be reasonable**

Order No. 672 at P 333. *In considering whether a proposed Reliability Standard is just and reasonable, the Commission will consider also the timetable for implementation of the new requirements, including how the proposal balances any urgency in the need to implement it against the reasonableness of the time allowed for those who must comply to develop the necessary procedures, software, facilities, staffing or other relevant capability.*

The Implementation Plan (see **Exhibit C**) does not allow a lengthy time period for entities to become fully compliant. This standard assumes that the Reliability Coordinator currently has the tools to meet the performance in the requirements, and no new tools are needed. The three-month implementation period will allow entities to develop internal procedures to support collection of evidence needed for the measures.

**13. The Reliability Standard development process must be open and fair**

Order No. 672 at P 334. *Further, in considering whether a proposed Reliability Standard meets the legal standard of review, we will entertain comments about whether the ERO implemented its Commission-approved Reliability Standard development process for the development of the particular proposed Reliability Standard in a proper manner, especially whether the process was open and fair. However, we caution that we will not be sympathetic to arguments by interested parties that choose, for whatever reason, not to participate in the ERO's Reliability Standard development process if it is conducted in good faith in accordance with the procedures approved by the Commission.*

NERC develops Reliability Standards in accordance with Section 300 (Reliability Standards Development) of its Rules of Procedure and the NERC *Reliability Standards Development Procedure*, which was incorporated into the Rules of Procedure as Appendix 3A. In its ERO Certification Order, FERC found that NERC's proposed rules provide for reasonable notice and opportunity for public comment, due process, openness, and a balance of interests in developing Reliability Standards. The development process is open to any person or entity with a legitimate interest in the reliability of the bulk power system. NERC considers the comments of all stakeholders and a vote of stakeholders and the NERC Board of Trustees is required to approve a Reliability Standard for submission to FERC. The drafting team developed this

standard by following the *Reliability Standards Development Procedure*, without exception. In this case, the process has been extensive, with nine draft versions of the standards prepared before the proposed Reliability Standards presented in this filing were developed. The standard was publicly posted for five different comment periods, and the standard drafting team responded to every comment submitted during each of these comment periods. With each posting, the commenters were advised that there is an appeals process, and no stakeholder has asked for an appeal.

***14. Proposed Reliability Standards must balance with other vital public interests***

Order No. 672 at P 335. *Finally, we understand that at times development of a proposed Reliability Standard may require that a particular reliability goal must be balanced against other vital public interests, such as environmental, social and other goals. We expect the ERO to explain any such balancing in its application for approval of a proposed Reliability Standard.*

The standard does not conflict with any vital public interests. Compliance with this standard supports preventing instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection.

***15. Proposed Reliability Standard must not conflict with prior FERC Rules or Orders.***

Order No. 672 at P.444. *a potential conflict between a Reliability Standard under development and a Transmission Organization function, rule, order, tariff, rate schedule, or agreement accepted, approved, or ordered by the Commission should be identified and addressed during the ERO's Reliability Standard Development Process.*

During the January 2, 2007 to February 15, 2007 public comment period, stakeholders were asked to identify any conflicts between the proposed standard and any regulatory function, rule order, tariff, rate schedule, legislative requirement or agreement – and all stakeholders who responded to the question indicated there were no identified conflicts.

#### ***16. Proposed Reliability Standards must consider any other relevant factors***

*Order No. 672 at P 323. In considering whether a proposed Reliability Standard is just and reasonable, we will consider the following general factors, as well as other factors that are appropriate for the particular Reliability Standard proposed.*

*Order No. 672 at P 337. In applying the legal standard to review of a proposed Reliability Standard, the Commission will consider the general factors above. The ERO should explain in its application for approval of a proposed Reliability Standard how well the proposal meets these factors and explain how the Reliability Standard balances conflicting factors, if any. The Commission may consider any other factors it deems appropriate for determining if the proposed Reliability Standard is just and reasonable, not unduly discriminatory or preferential, and in the public interest. The ERO applicant may, if it chooses, propose other such general factors in its ERO application and may propose additional specific factors for consideration with a particular proposed Reliability Standard.*

No other factors for FERC's consideration were identified in the development of these proposed Reliability Standards.

#### **IRO-009-1 — Reliability Coordinator Actions to Operate Within IROLs**

NERC proposes the addition of a new Reliability Standard, IRO-009-1 to the current suite of FERC-approved Reliability Standards. IRO-009-1 is presented in **Exhibit A** of this filing.

##### **a. Demonstration that the proposed reliability standard is just, reasonable, not unduly discriminatory or preferential and in the public interest**

In order to approve a Reliability Standard proposed by the ERO, FERC must determine, after notice and opportunity for public hearing, that the standard is just, reasonable, not unduly discriminatory or preferential and in the public interest.<sup>15</sup> In Order No. 672, FERC identified a number of criteria it will use to analyze Reliability Standards proposed for approval to ensure they are just, reasonable, not unduly discriminatory or preferential, and in the public interest.

---

<sup>15</sup> Section 215(d)(2)(A) of the FPA; 18 C.F.R. §39.5.

Discussion regarding how the proposed IRO-009-1 standard meets the guidelines identified by FERC in Order No. 672 as necessary to concluding a Reliability Standard meets the statutory criteria follows.

***1. Proposed Reliability Standards must be designed to achieve a specified reliability goal***

*Order No. 672 at P 321. The proposed Reliability Standard must address a reliability concern that falls within the requirements of section 215 of the FPA. That is, it must provide for the reliable operation of Bulk-Power System facilities. It may not extend beyond reliable operation of such facilities or apply to other facilities. Such facilities include all those necessary for operating an interconnected electric energy transmission network, or any portion of that network, including control systems. The proposed Reliability Standard may apply to any design of planned additions or modifications of such facilities that is necessary to provide for reliable operation. It may also apply to Cyber security protection.*

IRO-009-1 is designed to prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection by mandating that action plans be developed and implemented to prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection.

***2. Proposed Reliability Standards must contain a technically sound method to achieve the goal***

*Order No. 672 at P 324. The proposed Reliability Standard must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve this goal. Although any person may propose a topic for a Reliability Standard to the ERO, in the ERO's process, the specific proposed Reliability Standard should be developed initially by persons within the electric power industry and community with a high level of technical expertise and be based on sound technical and engineering criteria. It should be based on actual data and lessons learned from past operating incidents, where 13 appropriate. The process for ERO approval of a proposed Reliability Standard should be fair and open to all interested persons.*

Requirements R1 through R4 use advance planning as a method for preparing the Reliability Coordinator to take preventive and corrective actions relative to instances of approaching or exceeding IROLs. Technically, having advance plans in place to use under specific conditions provides a greater likelihood of appropriate action if the studied conditions occur. The fifth requirement (R5) of the proposed IRO-009-1 standard uses a dispute resolution

process as a method of bringing closure when involved Reliability Coordinators cannot agree on the correct value of an IROL or IROL  $T_v$ . The dispute resolution process requires all involved Reliability Coordinators to use the more conservative of the IROL values because this minimizes the risk to the grid until the issue is resolved.

**3. Proposed Reliability Standards must be applicable to users, owners, and operators of the bulk power system, and not others**

Order No. 672 at P 322. *The proposed Reliability Standard may impose a requirement on any user, owner, or operator of such facilities, but not on others.*

Reliability Standard IRO-009-1 applies to the Reliability Coordinator and no other functional entities.

**4. Proposed Reliability Standards must be clear and unambiguous as to what is required and who is required to comply**

Order No. 672 at P 325. *The proposed Reliability Standard should be clear and unambiguous regarding what is required and who is required to comply. Users, owners, and operators of the Bulk-Power System must know what they are required to do to maintain reliability.*

Each of the requirements is clear in identifying the required performance (what) and the responsible entity (who).

- R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs. (*Violation Risk Factor: Medium*)
- R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's  $T_v$ . (*Violation Risk Factor: Medium*)
- R3.** When an assessment of actual or expected system conditions predicts that an IROL in its Reliability Coordinator Area will be exceeded, the Reliability Coordinator shall implement one or more Operating Processes, Procedures or Plans (not limited to the Operating Processes, Procedures, or Plans developed for Requirements R1) to prevent exceeding that IROL. (*Violation Risk Factor: High*)

- R4.** When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL’s T<sub>v</sub>. (*Violation Risk Factor: High* )
- R5.** If unanimity cannot be reached on the value for an IROL or its T<sub>v</sub>, each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration. (*Violation Risk Factor: High*)

**5. Proposed Reliability Standards must include clear and understandable consequences and a range of penalties (monetary and/or non-monetary) for a violation**

Order No. 672 at P 326. *The possible consequences, including range of possible penalties, for violating a proposed Reliability Standard should be clear and understandable by those who must comply.*

Each primary requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines. The table below shows the VRFs and VSLs, resulting in the indicated range of penalties for violations.

Violation Risk Factors	Violation Severity Levels			
	Lower Range	Moderate Range	High Range	Severe Range
Lower	\$1-3k	\$2-7.5k	\$3-15k	\$5-25k
Moderate	\$2-30k	\$4-100k	\$6-200k	\$10-335k R1 R2
High	\$4-125k	\$8-300k	\$12-625k R4	\$20-1,000k R3 R4 R5

**6. Proposed Reliability Standards must identify clear and objective criterion or measure for compliance, so that it can be enforced in a consistent and non-preferential manner**

Order No. 672 at P 327. *There should be a clear criterion or measure of whether an entity is in compliance with a proposed Reliability Standard. It should contain or be accompanied by an objective measure of compliance so that it can be enforced and so that enforcement can be applied in a consistent and non-preferential manner.*

Each requirement of IRO-009-1 has a single associated measure. Some measures address more than one requirement. The measures require the Reliability Coordinator to have evidence for each of the five requirements.

- M1.** Each Reliability Coordinator shall have, and make available upon request, evidence to confirm that it has Operating Processes, Procedures, or Plans to address both preventing and mitigating instances of exceeding IROLs in accordance with Requirement R1 and Requirement R2. This evidence shall include a list of any IROLs (and each associated  $T_v$ ) identified in advance, along with one or more dated Operating Processes, Procedures, or Plans that that will be used. (R1 and R2)
- M2.** Each Reliability Coordinator shall have, and make available upon request, evidence to confirm that it acted or directed others to act in accordance with Requirement R3 and Requirement R4. This evidence could include, but is not limited to, Operating Processes, Procedures, or Plans from Requirement R1, dated operating logs, dated voice recordings, dated transcripts of voice recordings, or other evidence. (R3 and R4)
- M3.** For a situation where Reliability Coordinators disagree on the value of an IROL or its  $T_v$  the Reliability Coordinator shall have, and make available upon request, evidence to confirm that it used the most conservative of the values under consideration, without delay. Such evidence could include, but is not limited to, dated computer printouts, dated operator logs, dated voice recordings, dated transcripts of voice recordings, or other equivalent evidence. (R5)

The measures for the first two requirements are very specific, requiring a list of IROLs and the associated action plans (called Operating Processes, Procedures, or Plans). The measures for the other requirements provide examples of what constitutes acceptable evidence, and they allow for other evidence.

**7. Proposed Reliability Standards should achieve a reliability goal effectively and efficiently — but do not necessarily have to reflect “best practices” without regard to implementation cost**

Order No. 672 at P 328. *The proposed Reliability Standard does not necessarily have to reflect the optimal method, or “best practice,” for achieving its reliability goal without regard to implementation cost or historical regional infrastructure design. It should however achieve its reliability goal effectively and efficiently.*

The Reliability Standard has requirements to achieve the purpose – to mandate actions intended to prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection. The actions required in the standard do not require any new capital investments in facilities. The only significant implementation costs are those associated with human labor.

**8. Proposed Reliability Standards cannot be “lowest common denominator,” i.e., cannot reflect a compromise that does not adequately protect bulk power system reliability**

Order No. 672 at P 330. *A proposed Reliability Standard may take into account the size of the entity that must comply with the Reliability Standard and the cost to those entities of implementing the proposed Reliability Standard. However, the ERO should not propose a “lowest common denominator” Reliability Standard that would achieve less than excellence in operating system reliability solely to protect against reasonable expenses for supporting this vital national infrastructure. For example, a small owner or operator of the Bulk-Power System must bear the cost of complying with each Reliability Standard that applies to it.*

The Reliability Standard does not aim at a “lowest common denominator.” The requirements apply equally to all Reliability Coordinators without regard to differences in any Reliability Coordinator’s tools, size of Reliability Coordinator Area, or any other factors. Each requirement is written to specify that the required performance is on a “per IROL” basis, not in performance with IROLs “in general.” The drafting team assumed that any entity operating as a Reliability Coordinator has the training, tools, and authorities needed to calculate IROLs and associated IROL  $T_{vs}$ , to conduct analyses and assessments, to communicate with other operating entities, and to develop and implement action plans to either prevent or mitigate instances of exceeding IROLs.

**9. Proposed Reliability Standards may consider costs to implement for smaller entities but not at consequence of less than excellence in operating system reliability**

Order No. 672 at P 330. *A proposed Reliability Standard may take into account the size of the entity that must comply with the Reliability Standard and the cost to those entities of implementing the proposed Reliability Standard. However, the ERO should not propose a “lowest common denominator” Reliability Standard that would achieve less than excellence in operating system reliability solely to protect against reasonable expenses for supporting this vital national infrastructure. For example, a small owner or operator of the Bulk-Power System must bear the cost of complying with each Reliability Standard that applies to it.*

The proposed Reliability Standards do not reflect any differentiation in requirements based on size. There are no small Reliability Coordinators.

**10. Proposed Reliability Standards must be designed to apply throughout North America to the maximum extent achievable with a single Reliability Standard while not favoring one area or approach**

Order No. 672 at P 331. *A proposed Reliability Standard should be designed to apply throughout the interconnected North American Bulk-Power System; to the maximum extent this is achievable with a single Reliability Standard. The proposed Reliability Standard should not be based on a single geographic or regional model but should take into account geographic variations in grid characteristics, terrain, weather, and other such factors; it should also take into account regional variations in the organizational and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.*

The requirements in this Reliability Standard apply throughout North America, with no exceptions.

**11. Proposed Reliability Standards should cause no undue negative effect on competition or restriction of the grid**

Order No. 672 at P 332. *As directed by section 215 of the FPA, the Commission itself will give special attention to the effect of a proposed Reliability Standard on competition. The ERO should attempt to develop a proposed Reliability Standard that has no undue negative effect on competition. Among other possible considerations, a proposed Reliability Standard should not unreasonably restrict available transmission capability on the Bulk-Power System beyond any restriction necessary for reliability and should not limit use of the Bulk-Power System in an unduly preferential manner. It should not create an undue advantage for one competitor over another.*

The requirements in the Reliability Standard support competition by assuring that the system is analyzed and assessed, with a goal of keeping the transmission system available and stable.

**12. *The implementation time for the proposed Reliability Standards must be reasonable***

Order No. 672 at P 333. *In considering whether a proposed Reliability Standard is just and reasonable, the Commission will consider also the timetable for implementation of the new requirements, including how the proposal balances any urgency in the need to implement it against the reasonableness of the time allowed for those who must comply to develop the necessary procedures, software, facilities, staffing or other relevant capability.*

The Implementation Plan (see **Exhibit D**) does not allow a long time period for entities to become fully compliant. This standard assumes that the Reliability Coordinator currently has the tools to meet the performance in the requirements, and no new tools are needed. The three-month implementation period will allow entities adequate time to develop internal procedures to support collection of evidence needed to implement the measures.

**13. *The Reliability Standard Development Process must be open and fair***

Order No. 672 at P 334. *Further, in considering whether a proposed Reliability Standard meets the legal standard of review, we will entertain comments about whether the ERO implemented its Commission-approved Reliability Standard development process for the development of the particular proposed Reliability Standard in a proper manner, especially whether the process was open and fair. However, we caution that we will not be sympathetic to arguments by interested parties that choose, for whatever reason, not to participate in the ERO's Reliability Standard development process if it is conducted in good faith in accordance with the procedures approved by the Commission.*

NERC develops Reliability Standards in accordance with Section 300 (Reliability Standards Development) of its Rules of Procedure and the NERC *Reliability Standards Development Procedure*, which was incorporated into the Rules of Procedure as Appendix 3A. In its ERO Certification Order, FERC found that NERC's proposed rules provide for reasonable notice and opportunity for public comment, due process, openness, and a balance of interests in developing Reliability Standards. The Development Process is open to any person or entity with a legitimate interest in the reliability of the bulk power system. NERC considers the comments

of all stakeholders and a vote of stakeholders and the NERC Board of Trustees is required to approve a Reliability Standard for submission to FERC. The drafting team developed this standard by following the Reliability Standards Development Process, without exception. In this case, the process has been extensive, with nine draft versions of the standards prepared before the proposed standards presented in this filing were developed. The standard was publicly posted for five different comment periods, and the standard drafting team responded to every comment submitted during each of these comment periods. With each posting, the commenters were advised that there is an appeals process, and no stakeholder has asked for an appeal.

***14. Proposed Reliability Standards must balance with other vital public interests***

Order No. 672 at P 335. *Finally, we understand that at times development of a proposed Reliability Standard may require that a particular reliability goal must be balanced against other vital public interests, such as environmental, social and other goals. We expect the ERO to explain any such balancing in its application for approval of a proposed Reliability Standard.*

The Reliability Standard does not conflict with any vital public interests. Compliance with this standard supports preventing instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection.

***15. Proposed Reliability Standards must not conflict with prior FERC Rules or Orders***

Order No. 672 at P.444. *a potential conflict between a Reliability Standard under development and a Transmission Organization function, rule, order, tariff, rate schedule, or agreement accepted, approved, or ordered by the Commission should be identified and addressed during the ERO's Reliability Standard Development Process.*

During the January 2, 2007 to February 15, 2007 public comment period, stakeholders were asked to identify any conflicts between the proposed standards and any regulatory function, rule order, tariff, rate schedule, legislative requirement or agreement. All stakeholders who responded to the question indicated there were no identified conflicts.

## ***16. Proposed Reliability Standards must consider any other relevant factors***

Order No. 672 at P 323. *In considering whether a proposed Reliability Standard is just and reasonable, we will consider the following general factors, as well as other factors that are appropriate for the particular Reliability Standard proposed.*

Order No. 672 at P 337. *In applying the legal standard to review of a proposed Reliability Standard, the Commission will consider the general factors above. The ERO should explain in its application for approval of a proposed Reliability Standard how well the proposal meets these factors and explain how the Reliability Standard balances conflicting factors, if any. The Commission may consider any other factors it deems appropriate for determining if the proposed Reliability Standard is just and reasonable, not unduly discriminatory or preferential, and in the public interest. The ERO applicant may, if it chooses, propose other such general factors in its ERO application and may propose additional specific factors for consideration with a particular proposed Reliability Standard.*

No other factors for FERC's consideration were identified in the development of these proposed standards.

### **IRO-010-1a — Reliability Coordinator Data Specification and Collection**

NERC proposes the addition of a new Reliability Standard, IRO-010-1a to the current suite of FERC-approved Reliability Standards. IRO-010-1a is presented in **Exhibit A** of this filing.

#### **a. Demonstration that the proposed Reliability Standard is just, reasonable, not unduly discriminatory or preferential and in the public interest**

In order to approve a Reliability Standard proposed by the ERO, FERC must determine, after notice and opportunity for public hearing, that the standard is just, reasonable, not unduly discriminatory or preferential and in the public interest.<sup>16</sup> In Order No. 672, FERC identified a number of criteria it will use to analyze Reliability Standards proposed for approval to ensure they are just, reasonable, not unduly discriminatory or preferential, and in the public interest.

The consideration of how the proposed standard IRO-010-1a meets the guidelines identified by

---

<sup>16</sup> Section 215(d)(2)(A) of the FPA; 18 C.F.R. §39.5.

FERC in Order No. 672 as necessary to concluding a Reliability Standard meets the statutory criteria follows.

***1. Proposed Reliability Standards must be designed to achieve a specified reliability goal***

*Order No. 672 at P 321. The proposed Reliability Standard must address a reliability concern that falls within the requirements of section 215 of the FPA. That is, it must provide for the reliable operation of Bulk-Power System facilities. It may not extend beyond reliable operation of such facilities or apply to other facilities. Such facilities include all those necessary for operating an interconnected electric energy transmission network, or any portion of that network, including control systems. The proposed Reliability Standard may apply to any design of planned additions or modifications of such facilities that is necessary to provide for reliable operation. It may also apply to Cyber security protection.*

IRO-010-1a is designed to prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection by mandating that the Reliability Coordinator have the data it needs to monitor and assess the operation of its Reliability Coordinator Area.

***2. Proposed Reliability Standards must contain a technically sound method to achieve the goal***

*Order No. 672 at P 324. The proposed Reliability Standard must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve this goal. Although any person may propose a topic for a Reliability Standard to the ERO, in the ERO's process, the specific proposed Reliability Standard should be developed initially by persons within the electric power industry and community with a high level of technical expertise and be based on sound technical and engineering criteria. It should be based on actual data and lessons learned from past operating incidents, where 13 appropriate. The process for ERO approval of a proposed Reliability Standard should be fair and open to all interested persons.*

The requirements in the standard specify a formal request as the method for the Reliability Coordinator to explicitly identify the data and information it needs for reliability; and require the entities with the data to provide it as requested. This method is sound because the Reliability Coordinator is the only entity that knows what data it needs to properly perform its reliability tasks, and the most efficient format for accepting this data. The requirements were written so that the Reliability Coordinator must cooperate with the entities that provide data, so that the format specified is acceptable to both parties. The purpose is to assure that there are

checks and balances protecting the entity that needs the data as well as the entities that must provide the data.

**3. *Proposed Reliability Standards must be applicable to users, owners, and operators of the bulk power system, and not others***

Order No. 672 at P 322. *The proposed Reliability Standard may impose a requirement on any user, owner, or operator of such facilities, but not on others.*

The Reliability Standard applies to the Reliability Coordinator and to the other functional entities that must supply data to the Reliability Coordinator. This includes entities that have been identified as owners, users, or operators of the bulk-power system. The requirements in the standard are specifically applicable to the following functional entities:

- Reliability Coordinator
- Balancing Authority
- Generator Owner
- Generator Operator
- Interchange Authority
- Load-Serving Entity
- Transmission Operator
- Transmission Owner

**4. *Proposed Reliability Standards must be clear and unambiguous as to what is required and who is required to comply***

Order No. 672 at P 325. *The proposed Reliability Standard should be clear and unambiguous regarding what is required and who is required to comply. Users, owners, and operators of the Bulk-Power System must know what they are required to do to maintain reliability.*

Each of the requirements clearly identifies the required performance (what) and the responsible entity (who).

**R1.** The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following: *(Violation Risk Factor: Low)*

**R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.

- R1.2.** Mutually agreeable format.
- R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).
- R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.
- R2.** The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator. *(Violation Risk Factor: Low)*
- R3.** Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. *(Violation Risk Factor: Medium)*

**5. Proposed Reliability Standards must include clear and understandable consequences and a range of penalties (monetary and/or non-monetary) for a violation**

Order No. 672 at P 326. *The possible consequences, including range of possible penalties, for violating a proposed Reliability Standard should be clear and understandable by those who must comply.*

Each primary requirement is assigned a VRF and a VSL. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines. The table below shows the VRFs and VSLs, resulting in the indicated range of penalties for violations.

Violation Risk Factors	Violation Severity Levels			
	Lower Range	Moderate Range	High Range	Severe Range
Lower	\$1-3k R1 R2	\$2-7.5k R1 R2	\$3-15k R1 R2	\$5-25k R1 R2
Moderate	\$2-30k R3	\$4-100k R3	\$6-200k R3	\$10-335k R3
High	\$4-125k	\$8-300k	\$12-625k	\$20-1,000k

**6. Proposed Reliability Standards must identify clear and objective criterion or measure for compliance, so that it can be enforced in a consistent and non-preferential manner**

Order No. 672 at P 327. *There should be a clear criterion or measure of whether an entity is in compliance with a proposed Reliability Standard. It should contain or be accompanied by an objective measure of compliance so that it can be enforced and so that enforcement can be applied in a consistent and non-preferential manner.*

Each requirement has a single associated measure. There are three measures that are clear and objective – requiring the actual specification, requiring evidence that the specification was distributed, and requiring evidence that data and information was provided. The measure for Requirement R1 requires the Reliability Coordinator to have its specification available as evidence. Measures for Requirements R2 and R3 provide examples of what constitutes acceptable evidence and allow for other evidence.

- M1.** The Reliability Coordinator shall have, and make available upon request, a documented data specification that contains all elements identified in Requirement R1. (R1)
- M2.** The Reliability Coordinator shall have, and make available upon request, evidence that it distributed its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator. This evidence could include, but is not limited to, dated paper or electronic notice used to distribute its data specification showing recipient, and data or information requested or other equivalent evidence. (R2)
- M3.** The Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Reliability Coordinator, Transmission Operator and Transmission Owner shall each have, and make available upon request, evidence to confirm that it provided data and information, as specified in Requirement R3. This evidence could include, but is not limited to, dated operator logs, dated voice recordings, dated computer printouts, dated SCADA data, or other equivalent evidence. (R3)

**7. Proposed Reliability Standards should achieve a reliability goal effectively and efficiently - but do not necessarily have to reflect “best practices” without regard to implementation cost**

Order No. 672 at P 328. *The proposed Reliability Standard does not necessarily have to reflect the optimal method, or “best practice,” for achieving its reliability goal without regard to implementation cost or historical regional infrastructure design. It should however achieve its reliability goal effectively and efficiently.*

As written, Requirement R1 supports Reliability Coordinator data and information specifications that include items to support advanced applications (for instance) that may currently be used by some, but not all, Reliability Coordinators. Auditors are limited in assessing compliance based on what is stated in the requirement. On that basis, if the standard included a list of 10 items for inclusion in the data specification, then the auditor would be limited in looking just for those 10 items. As written, Requirement R1 does not include such limitations. Requirement R1 includes checks and balances aimed at assuring that the data and information identified in the specification is limited to what is needed for reliability. By specifying that the format must be mutually agreeable, the standard supports efficiency by precluding the submission of data that is in a format that cannot be used. Similarly, the requirement limits the data and information that can be requested to data and information needed for Real-Time Monitoring, Operational Planning Analyses, and Real-time Assessments. In addition, the requirement includes preparation for loss of automated data, so that there is a plan in place for providing data in advance of actual need.

**8. *Proposed Reliability Standards cannot be “lowest common denominator,” i.e., cannot reflect a compromise that does not adequately protect bulk power system reliability***

*Order No. 672 at P 330. A proposed Reliability Standard may take into account the size of the entity that must comply with the Reliability Standard and the cost to those entities of implementing the proposed Reliability Standard. However, the ERO should not propose a “lowest common denominator” Reliability Standard that would achieve less than excellence in operating system reliability solely to protect against reasonable expenses for supporting this vital national infrastructure. For example, a small owner or operator of the Bulk-Power System must bear the cost of complying with each Reliability Standard that applies to it.*

The Reliability Standard does not aim at “lowest common denominator.” The requirements are based on each Reliability Coordinator developing its own specification, distributing that specification, and then receiving data needed from other entities. Because the standard is based on having each Reliability Coordinator develop its own data specification, the

standard does not attempt to identify the minimum list of data that would be needed by every Reliability Coordinator. To do so would be establishing the “lowest common denominator,” in contradiction of FERC’s directives.

**9. *Proposed Reliability Standards may consider costs to implement for smaller entities but not at consequence of less than excellence in operating system reliability***

*Order No. 672 at P 330. A proposed Reliability Standard may take into account the size of the entity that must comply with the Reliability Standard and the cost to those entities of implementing the proposed Reliability Standard. However, the ERO should not propose a “lowest common denominator” Reliability Standard that would achieve less than excellence in operating system reliability solely to protect against reasonable expenses for supporting this vital national infrastructure. For example, a small owner or operator of the Bulk-Power System must bear the cost of complying with each Reliability Standard that applies to it.*

The proposed Reliability Standard requirements do not differentiate in applicability based on size. There are no small Reliability Coordinators. Entities are already providing one another with data and information today. This standard does not require the installation of any new equipment.

**10. *Proposed Reliability Standards must be designed to apply throughout North America to the maximum extent achievable with a single Reliability Standard while not favoring one area or approach***

*Order No. 672 at P 331. A proposed Reliability Standard should be designed to apply throughout the interconnected North American Bulk-Power System, to the maximum extent this is achievable with a single Reliability Standard. The proposed Reliability Standard should not be based on a single geographic or regional model but should take into account geographic variations in grid characteristics, terrain, weather, and other such factors; it should also take into account regional variations in the organizational and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.*

The requirements in this Reliability Standard apply throughout North America, with no exceptions.

**11. Proposed Reliability Standards should cause no undue negative effect on competition or restriction of the grid**

Order No. 672 at P 332. *As directed by section 215 of the FPA, the Commission itself will give special attention to the effect of a proposed Reliability Standard on competition. The ERO should attempt to develop a proposed Reliability Standard that has no undue negative effect on competition. Among other possible considerations, a proposed Reliability Standard should not unreasonably restrict available transmission capability on the Bulk-Power System beyond any restriction necessary for reliability and should not limit use of the Bulk-Power System in an unduly preferential manner. It should not create an undue advantage for one competitor over another.*

The requirements in the Reliability Standard support competition by assuring that the Reliability Coordinator has the data and information it needs to monitor and assess the system, with a goal of keeping the bulk power system stable and available.

**12. The implementation time for the proposed Reliability Standards must be reasonable**

Order No. 672 at P 333. *In considering whether a proposed Reliability Standard is just and reasonable, the Commission will consider also the timetable for implementation of the new requirements, including how the proposal balances any urgency in the need to implement it against the reasonableness of the time allowed for those who must comply to develop the necessary procedures, software, facilities, staffing or other relevant capability.*

The Implementation Plan (*see Exhibit D*) does not allow a long time period for entities to become fully compliant. This standard assumes that the Reliability Coordinator currently has the tools to meet the performance in the requirements, and no new tools are needed. The three month implementation period will allow entities the time necessary to develop internal procedures to support collection of evidence needed to ensure compliance with the measures.

**13. The Reliability Standard Development Process must be open and fair**

Order No. 672 at P 334. *Further, in considering whether a proposed Reliability Standard meets the legal standard of review, we will entertain comments about whether the ERO implemented its Commission-approved Reliability Standard Development Process for the development of the particular proposed Reliability Standard in a proper manner, especially whether the process was open and fair. However, we caution that we will not be sympathetic to arguments by interested parties that choose, for whatever reason, not to participate in the ERO's Reliability Standard Development Process if it is conducted in good faith in accordance with the procedures approved by the Commission.*

NERC develops Reliability Standards in accordance with Section 300 (Reliability Standards Development) of its Rules of Procedure and the NERC *Reliability Standards Development Procedure*, which was incorporated into the Rules of Procedure as Appendix 3A. In its ERO Certification Order, FERC found that NERC's proposed rules provide for reasonable notice and opportunity for public comment, due process, openness, and a balance of interests in developing Reliability Standards. The Development Process is open to any person or entity with a legitimate interest in the reliability of the bulk power system. NERC considers the comments of all stakeholders and a vote of stakeholders and the NERC Board of Trustees is required to approve a Reliability Standard for submission to FERC. The drafting team developed this standard by following the Reliability Standards Development Process, without exception. In this case, the process has been extensive, with nine draft versions of the standards prepared before the proposed standards presented in this filing were developed. The standard was publicly posted for five different comment periods, and the standard drafting team responded to every comment submitted during each of these comment periods. With each posting, the commenters were advised that there is an appeals process, and no stakeholder has asked for an appeal.

***14. Proposed Reliability Standards must balance with other vital public interests***

Order No. 672 at P 335. *Finally, we understand that at times development of a proposed Reliability Standard may require that a particular reliability goal must be balanced against other vital public interests, such as environmental, social and other goals. We expect the ERO to explain any such balancing in its application for approval of a proposed Reliability Standard.*

The Reliability Standard does not conflict with any vital public interests. Compliance with this standard supports preventing instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection.

***15. Reliability Standard does not conflict with prior FERC Orders, tariffs, etc***

Order No. 672 at P.444. *...a potential conflict between a Reliability Standard under development and a Transmission Organization function, rule, order, tariff, rate schedule, or agreement accepted, approved, or ordered by the Commission should be identified and addressed during the ERO's Reliability Standard Development Process.*

During the January 2, 2007 to February 15, 2007 public comment period, stakeholders were asked to identify any conflicts between the proposed standard and any regulatory function, rule order, tariff, rate schedule, legislative requirement or agreement. All stakeholders who responded to the question indicated there were no identified conflicts.

***Proposed Reliability Standards must consider any other relevant factors***

Order No. 672 at P 323. *In considering whether a proposed Reliability Standard is just and reasonable, we will consider the following general factors, as well as other factors that are appropriate for the particular Reliability Standard proposed.*

Order No. 672 at P 337. *In applying the legal standard to review of a proposed Reliability Standard, the Commission will consider the general factors above. The ERO should explain in its application for approval of a proposed Reliability Standard how well the proposal meets these factors and explain how the Reliability Standard balances conflicting factors, if any. The Commission may consider any other factors it deems appropriate for determining if the proposed Reliability Standard is just and reasonable, not unduly discriminatory or preferential, and in the public interest. The ERO applicant may, if it chooses, propose other such general factors in its ERO application and may propose additional specific factors for consideration with a particular proposed Reliability Standard.*

No other factors for FERC's consideration were identified in the development of these proposed standards.

**b. Violation Risk Factor and Violation Severity Level Assignments**

The proposed Reliability Standards include VRFs and VSLs. The ranges of penalties for violations are based on the applicable VRF and VSLs and will be administered based on the Sanctions table and supporting penalty determination process described in the FERC-approved NERC Sanction Guidelines, included as Appendix 4B in NERC's Rules of Procedure. Each primary requirement is assigned a VRF and a VSL. These elements support the determination of

an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

### **Assignment of Violation Risk Factors**

The IRO Standard Drafting Team applied the following criteria when proposing VRFs for the requirements in IRO-008-1, IRO-009-1 and IRO-010-1a:

#### ***High Risk Requirement***

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

#### ***Medium Risk Requirement***

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

#### ***Lower Risk Requirement***

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

<sup>17</sup>

---

<sup>17</sup> These three levels of risk are defined by NERC and recognized by FERC in the May 18, 2007 Order at P9, and the November 16, 2007 Order at Appendix A.

The team also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:<sup>18</sup>

**Guideline (1) — Consistency with the Conclusions of the Final Blackout Report**

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:<sup>19</sup>

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

**Guideline (2) — Consistency within a Reliability Standard<sup>20</sup>**

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

**Guideline (3) — Consistency among Reliability Standards**

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

**Guideline (4) — Consistency with NERC’s Definition of the Violation Risk Factor Level**

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC’s definition of that risk level.

---

<sup>18</sup> North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh’g and compliance filing, 120 FERC ¶ 61,145 (2007) (“VRF Rehearing Order”).

<sup>19</sup> *Id.* at n. 15.

<sup>20</sup> Of the three new standards proposed for approval, only IRO-010-1a has sub-requirements and the “roll up” approach was used such that the drafting team proposed a single set of VSLs for the requirement “in total.” Thus, this guideline is not applicable to the three new proposed standards.

**Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation**

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the drafting team considered FERC’s VSL Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC’s Reliability Standards and implies that these requirements should be assigned a “High” VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The team believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are three requirements in IRO-008-1:

- R1.** Each Reliability Coordinator shall perform an Operational Planning Analysis to assess whether the planned operations for the next day within its Wide Area, will exceed any of its Interconnection Reliability Operating Limits (IROLs) during anticipated normal and Contingency event conditions. (*Violation Risk Factor: Medium*) (*Time Horizon: Operations Planning*)
- R2.** Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs. (*Violation Risk Factor: High*) (*Time Horizon: Real-time Operations*)
- R3.** When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions. (*Violation Risk Factor: Medium*) (*Time Horizon: Real-time Operations or Same Day Operations*)

Of the three requirements, Requirement R1 and R3 were assigned a “Medium” VRF, and Requirement R2 was assigned a “High” VRF.

- **VRF for IRO-008-1, Requirement R1:**
  - FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no subrequirements so only one VRF was assigned. Therefore, there is no conflict.
  - FERC’s Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in IRO-004-1 that is assigned a High VRF. The VRF assigned to IRO-008 Requirement R1 is lower than IRO-004-1 R1. The drafting team recognizes that the VRF for IRO-008-1 Requirement R1 is lower than the VRF for the similar requirement IRO-004-1 which is assigned a High VRF, however the IRO drafting team and stakeholders support the Medium VRF based on NERC’s criteria for VRFs. The assignment of the Medium VRF was made based on the premise that failure to have a single Operational Planning Analysis, by itself, would not directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures. For a requirement to be assigned a “High” VRF, there should be the expectation that failure to meet the required performance “will” result in instability, separation, or cascading failures. This is not the case when a Reliability Coordinator fails to conduct a single Operational Planning Analysis. While the drafting team agrees that, under some circumstances, it is possible that a failure to have a single Operational Planning Analysis may put the Reliability Coordinator in a position where it is not as prepared as it should be to address the operating day, the failure to have a new Operational Planning Analysis would not, by itself, result in instability, separation, or cascading failures. If the Reliability Coordinator failed to conduct an Operational Planning Analysis, it would still be expected to perform Real-time Assessments at least every 30 minutes. The results of these analyses should provide the Reliability Coordinator’s competent system operators with information needed to prevent and/or mitigate instances of exceeding IROLs. The NERC Uniform Compliance Monitoring and Enforcement Program and the Sanctions Guidelines give the Compliance Enforcement Authority the right to provide a higher sanction for failure to meet multiple requirements. And if the Reliability Coordinator failed to have an Operational Planning Analysis and also failed to conduct Real-time Assessments, or if the Reliability Coordinator failed to have an Operational Planning Analysis and also failed to have system operators who were competent in analyzing real-time operating issues, the expectation is that the sanction for noncompliance would be higher than for the failure to conduct a single Operational Planning Analysis with no other violations.
  - FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to perform an analysis for the “next day” could directly affect the electrical state or the capability of the bulk electric system, and could affect the Reliability Coordinator’s ability to effectively monitor and control the bulk electric system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or cascading failures. Because the Reliability Coordinator is also required (under IRO-008-1, Requirement R2) to conduct a real-time assessment every thirty minutes, if there is an instance of approaching or exceeding an IROL, the Reliability Coordinator’s system operators are required to

have the competence (under PER-005-1, Requirement R2) to react to changing system conditions and would be expected to take actions to prevent instability, separation, or cascading failure. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to have an analysis of the next day will not, by itself, lead to instability, separation, or cascading failures.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-008-1 Requirement R1 contains only one objective, therefore only one VRF was assigned.
  
- **VRF for IRO-008-1, Requirement R2:**
  - FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no subrequirements; only one VRF was assigned so there is no conflict.
  - FERC's Guideline 3 — Consistency among Reliability Standards. IRO-008-1 Requirement R2 is a new requirement, so there are no comparable requirements with which to compare VRFs.
  - FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to perform a Real-time Assessment can have an adverse impact on the bulk electric system because IROLs could be approached or exceeded without the Reliability Coordinator knowing in time to take action before instability, separation, or cascading failures occur. This meets NERC's criteria for a High VRF.
  - FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-008-1, Requirement R2 contains only one objective, therefore only one VRF was assigned.
  
- **VRF for IRO-008-1, Requirement R3:**
  - FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no subrequirements; only one VRF was assigned so there is no conflict.
  - FERC's Guideline 3 — Consistency among Reliability Standards. IRO-004-1 Requirement R5 includes actions similar to those required in IRO-008-1, Requirement R3. The VRF for IRO-004-1, Requirement R5 is "High." The drafting team recognizes that the VRF for IRO-008-1 Requirement R3 is lower than the VRF for the similar requirement IRO-004-1 which is assigned a High VRF; however, the IRO drafting team and stakeholders support the Medium VRF based on NERC's criteria for VSLs. IRO-008-1 Requirement R3 requires the Reliability Coordinator to share the results of its analyses with entities that are expected to take actions to prevent or mitigate instances of exceeding an IROL.
  - The assignment of the "Medium" VRF was made based on the premise that failure to share this information, by itself, would not directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures. For a requirement to be assigned a "High" VRF, there should be the expectation

that failure to meet the required performance “will” result in instability, separation, or cascading failures. This is not the case when a Reliability Coordinator fails to share the results of its analyses. While the drafting team agrees that if the Reliability Coordinator fails to share the results of its analyses, this failure will put other entities in a position where they are not as prepared as they should be to address instances of preventing or exceeding IROLs. However, even if the Reliability Coordinator failed to share this information in advance, the Reliability Coordinator is still required, under IRO-009-1, Requirements R1 through R4 to have action plans for preventing and mitigating instances of exceeding IROLs and for implementing action plans to prevent or mitigate exceeding each IROL within IROL  $T_v$ . If IRO-009-1, Requirements R1 through R4 are met, then the failure to meet IRO-008-1, Requirement R3 should not result in instability, separation, or cascading failures. The NERC Uniform Compliance Monitoring and Enforcement Program and the Sanctions Guidelines give the Compliance Enforcement Authority the right to provide a higher sanction for failure to meet multiple requirements – and if the Reliability Coordinator failed to share the results of its analyses and also failed to direct actions to prevent or mitigate exceeding an IROL within its IROL  $T_v$ , the expectation is that the sanction for noncompliance would be higher than for the failure to share the results of analyses with no other violations.

- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to share the results of its analyses or assessments will impact the situational awareness of the operating entities involved, and thus could affect the Transmission Operator’s or Balancing Authority’s ability to effectively monitor and control the BES, however violation of this requirement is unlikely to lead to BES instability, separation or cascading failures. Because the Reliability Coordinator is required to have and implement action plans to mitigate and prevent instances of exceeding each identified IROL (IRO-009-1 Requirements R1 and R2) and the Reliability Coordinator is required to either implement an action plan or direct actions (IRO-009-1 Requirements R3 and R4), the impact of not sharing the analyses and assessments should not result in instability, separation, or cascading failures. Thus, this requirement meets the criteria for a Medium VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-008-1, Requirement R3 contains only one objective, therefore only one VRF was assigned.

There are five requirements in IRO-009-1:

- R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs. (*Violation Risk Factor: Medium*) (*Time Horizon: Operations Planning or Same Day Operations*)

- R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's  $T_v$ . (*Violation Risk Factor: Medium*) (*Time Horizon: Operations Planning or Same Day Operations*)
- R3.** When an assessment of actual or expected system conditions predicts that an IROL in its Reliability Coordinator Area will be exceeded, the Reliability Coordinator shall implement one or more Operating Processes, Procedures or Plans (not limited to the Operating Processes, Procedures, or Plans developed for Requirements R1) to prevent exceeding that IROL. (*Violation Risk Factor: High*) (*Time Horizon: Real-time Operations*)
- R4.** When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's  $T_v$ . (*Violation Risk Factor: High*) (*Time Horizon: Real-time Operations*)
- R5.** If unanimity cannot be reached on the value for an IROL or its  $T_v$ , each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration. (*Violation Risk Factor: High*) (*Time Horizon: Real-time Operations*)

Of the five requirements, the Requirements R1 and R2 were assigned a “Medium” VRF, and Requirements R3 through R5 were assigned a “High” VRF.

- **VRFs for IRO-009-1, Requirements R1 and R2:**
  - FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirements have no subrequirements; only one VRF was assigned to each requirement so there is no conflict.
  - FERC’s Guideline 3 — Consistency among Reliability Standards. IRO-004-1, Requirement R3 includes actions similar to those required in IRO-009-1, Requirements R1 and R2. The VRF for IRO-004-1, Requirement R3 is High. The drafting team recognizes that the VRFs for IRO-009-1 Requirements R1 and R2 are lower than the VRF for the similar requirement IRO-004-1 which is assigned a High VRF, however the IRO drafting team and stakeholders support the Medium VRFs based on NERC’s criteria for VSLs.
  - Action plans are based on a set of assumptions, and often these assumptions do not match the real-time conditions — that is, the further ahead the action plans are developed, the less likely the set of assumptions will match the real-time conditions. System operators are required to be trained and competent to develop and modify action plans in real-time to meet actual operating conditions. The

assignment of the Medium VRF was made based on the premise that failure to develop an action plan (for an IROL identified at least a day ahead of the operating day), by itself, would not directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures. For a requirement to be assigned a “High” VRF, there should be the expectation that failure to meet the required performance “will” result in instability, separation, or cascading failures. This is not the case when a Reliability Coordinator fails to develop an action plan for an IROL that is identified more than a day ahead. While the drafting team agrees that if the Reliability Coordinator fails to develop an action plan, this failure will put its system operators in a position where they are not as prepared as they should be to address instances of preventing or mitigating the exceedance of an IROL. However, even if the Reliability Coordinator has an action plan for an IROL, that action plan will be based on a set of assumptions that may or may not match the real-time conditions, and the action plan may need to be modified or a new action plan may need to be developed. The expectation is that the Reliability Coordinator’s real-time system operators are competent and will be able to make modifications or develop a new action plan based on current conditions. Thus, the failure to have an action plan identified in advance, by itself, will not result in instability, separation, or cascading failures. If the Reliability Coordinator does not take any action to prevent or to mitigate exceeding an IROL, then this is a violation of IRO-009 Requirement R3 or R4 and these are assigned High VRFs.

- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. IRO-009-1 Requirements R1 and R2 mandate that the Reliability Coordinator have action plans to prevent exceeding identified IROLs and action plans to mitigate instances of exceeding identified IROLs. If the Reliability Coordinator fails to develop such plans, this could adversely impact the Reliability Coordinator’s readiness to address an instance of exceeding an IROL that occurred exactly as studied, but this failure would not, by itself, result in instability, separation, or cascading failures. The Reliability Coordinator’s system operators should have the ability to react to real-time conditions, and they can develop action plans as needed to address emerging conditions. As noted earlier, action plans developed in advance of real-time are developed based on a set of assumptions that do not always match the real-time conditions. System operators must be able to modify these plans to bring them into alignment with real-time conditions. The system operator’s competence is addressed in the PER-005-1 standard, Requirement R2.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-009-1, Requirements R1 and R2 each contain only one objective, therefore only one VRF was assigned to each of these requirements.
- **VRFs for IRO-009-1, Requirements R3 and R4:**
  - FERC’s Guideline 2 — Consistency within a Reliability Standard. IRO-009-1 Requirements R3 and R4 do not have any subrequirements. Therefore, only one VRF was assigned to each requirement.

- FERC’s Guideline 3 — Consistency among Reliability Standards. IRO-004-1, Requirement R6 includes actions similar to those required in IRO-009-1, Requirements R3 and R4. The VRF for IRO-004-1, Requirement R6 is High, and this is consistent with the High VRF assigned to IRO-009-1 Requirements R3 and R4.
  - FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. The third and fourth requirements are for the Reliability Coordinator to take action to either prevent or mitigate instances of exceeding IROLs. These are both rated as “High” VRFs since, if the Reliability Coordinator fails to take prompt action, an IROL could be exceeded for a time greater than its  $T_v$ , and by definition, this would be expected to lead to instability, separation, or cascading failures.
  - FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-009-1, Requirements R3 and R4 each contain only one objective. Therefore only one VRF was assigned to each of these requirements.
- **VRF for IRO-009-1, Requirement R5:**
    - FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no subrequirements. Therefore only one VRF was assigned so there is no conflict.
    - FERC’s Guideline 3 — Consistency among Reliability Standards. IRO-005-2, Requirement R13 includes actions similar to those required in IRO-009-1, Requirements R5. The VRF for IRO-005-2, Requirement R5 is High, and this is consistent with the High VRF assigned to IRO-009-1 Requirement R5.
    - FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. IRO-009-1 Requirement R5 addresses the situation where two Reliability Coordinators have different values for the same IROL or the IROL’s  $T_v$  and requires both Reliability Coordinators to use the most conservative value. A violation of this requirement is assigned a “High” VRF because, if the Reliability Coordinator’s system operators use the wrong value of an IROL or its  $T_v$  system parameters could be allowed to exceed the “real” IROL or the “real” IROL’s  $T_v$  and this could lead, without any other violations of any other requirements, to instability, separation, or cascading failures.
    - FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-009-1 Requirement R5 contains only one objective. Therefore only one VRF was assigned the requirement.

**R1. There are three requirements in IRO-010-1a:** The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following:  
*(Violation Risk Factor: Low) (Time Horizon: Operations Planning)*

- R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.
  - R1.2.** Mutually agreeable format.
  - R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).
  - R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.
- R2.** The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator. (*Violation Risk Factor: Low*) (*Time Horizon: Operations Planning*)
- R3.** Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (*Violation Risk Factor: Medium*) (*Time Horizon: Operations Planning; Same-day Operations; Real-time Operations*)

Of the three requirements, Requirement R1 and R2 are assigned a “Lower” VRF, and Requirement R3 is assigned a “Medium” VRF.

- **VRFs for IRO-010-1a, Requirements R1 and R2:**
  - FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement and its subrequirements in Requirement R1 have a single reliability objective, therefore only one VRF was assigned. Requirement R2 has no subrequirements and is assigned a single VRF.
  - FERC’s Guideline 3 — Consistency among Reliability Standards. IRO-002-1, Requirement R2 includes actions similar to those required in IRO-010-1a, Requirements R1 and R2. The VRF for IRO-002-1, Requirement R1 is Medium, and this is inconsistent with the Lower VRF assigned to IRO-010-1a Requirements R1 and R2. The drafting team recognizes that the VRFs for IRO-010-1a Requirements R1 and R2 are lower than the VRF for the similar requirement in IRO-002-1 which is assigned a Medium VRF, however the IRO drafting team and stakeholders support the Lower VRFs based on NERC’s criteria for VSLs. IRO-010-1a, Requirement R1 is an administrative requirement, not a real-time requirement, and if IRO-010-1a, Requirement R1 were violated, by itself, there would be no impact on the bulk electric system and there would be no impact to the ability of the Reliability Coordinator to monitor and control the bulk electric system. This meets NERC’s criteria for a “Lower” VSL.

- IRO-010-1a, Requirement R1 works with other requirements in IRO-010-1a to provide the Reliability Coordinator with the data and information it needs to effectively monitor and control its portion of the bulk electric system.
  - FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. IRO-010-1a Requirements R1 and R2 mandate that the Reliability Coordinator have and distribute a specification for data and information, and the requirements are primarily administrative. If a Reliability Coordinator fails to document its data and information needs, or fails to distribute the specification, the data specification, while a useful construct, is not the only way to identify what data is needed. The Reliability Coordinator has the authority to direct entities to provide whatever data and information it needs and the entities are required to provide that data and information. While the data specification provides a mechanism to provide the data, this is not the only mechanism the Reliability Coordinator has to obtain the data, and the failure to distribute the data specification does not mean that the needed data will not be provided to the Reliability Coordinator.
  - FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-010-1a Requirements R1 and R2 each address a single objective and each has a single VRF.
- **VRFs for IRO-010-1a, Requirement R3:**
    - FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no subrequirements; only one VRF was assigned so there is no conflict.
    - FERC’s Guideline 3 — Consistency among Reliability Standards. TOP-005-1, Requirement R1 includes actions similar to those required in IRO-010-1a, Requirement R3, to provide the Reliability Coordinator with data and information. The VRF assigned to TOP-005-1, Requirement R1 is Medium, which is consistent with the VRF assigned to IRO-010-1a, Requirement R3.
    - FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. IRO-010-1a, Requirement R3 mandates that entities provide data and information to their Reliability Coordinator. A failure to provide this data or information could affect the Reliability Coordinator’s ability to effectively monitor and control the bulk electric system. However, violation of this requirement is unlikely, by itself, to lead to bulk electric system instability, separation, or cascading failures, thus the assignment of a “Medium” VRF.
    - FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-010-1a Requirement R3 addresses a single objective and has a single VRF.

## Violation Severity Levels

The IRO Standard Drafting Team completed its development of IRO-008-1, IRO-009-1, and IRO-010-1a, including the development of VSLs, before FERC issued its June 19, 2008 Order on VSLs.<sup>21</sup> Accordingly, the IRO drafting team did not have the benefit of FERC’s VSL Guidelines when it developed its VSLs. In addition, the team developed its VSLs before NERC made a filing to FERC describing the way in which drafting teams assign VRFs and VSLs. Therefore, some of the proposed VSLs do not comport with FERC’s VSL Guidelines and some do not comport with the guidelines NERC submitted to FERC on August 10, 2009 in NERC’s informational filing on VRFs and VSLs.<sup>22</sup> Each set of VSLs is discussed below, and where there are VSLs that do not meet FERC’s VSL Guidelines or do not match NERC’s revised guidelines, NERC has identified the differences and will propose revisions to the VSLs in its March 1, 2010 VSL Compliance Filing.

In developing the VSLs for the IRO standards, the IROL team anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The drafting team based its assignment of VSLs on the following criteria:

Lower	Moderate	High	Severe
Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full	Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in	Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or	Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the

<sup>21</sup> *Order on Violation Severity Levels Proposed by the Electric Reliability Organization*, 123 FERC ¶ 61,284 (June 19, 2008) (“VSL Guideline Order”).

<sup>22</sup> See NERC’s Information Filing Regarding the Assignment of Violation Risk Factors and Violation Severity Levels, filed with FERC on August 10, 2009.

intent of the requirement.	meeting the intent of the requirement.	product has limited value in meeting the intent of the requirement.	requirement or the product delivered cannot be used in meeting the intent of the requirement.
----------------------------	--	---	---

The VSLs are presented below, followed by an analysis of whether the VSLs meet the FERC Guidelines for assessing VSLs:

**Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance**

Compare the VSLs to any prior Levels of Non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when Levels of Non-compliance were used.

**Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties**

A violation of a “binary” type requirement must be a “Severe” VSL.

Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

**Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement**

VSLs should not expand on what is required in the requirement.

**Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations**

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

**VSLs for IRO-008-1**

R#	Lower	Moderate	High	Severe
R1	Performed an Operational Planning Analysis that covers all aspects of the requirement for all except	Performed an Operational Planning Analysis that covers all aspects of the requirement for all except two of 30 days. (R1)	Performed an Operational Planning Analysis that covers all aspects of the requirement for all except three of 30 days. (R1)	Missed performing an Operational Planning Analysis that covers all aspects of the requirement for four or more of 30 days. (R1)

	one of 30 days. (R1)			
--	----------------------	--	--	--

**Guideline 1 — Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance**

- The most comparable VSLs for a similar requirement to conduct a next-day analysis are for IRO-004-1, Requirement R1. The VSLs for IRO-004-1, Requirement R1 assign a Lower VSL for missing one of 30 analyses, a Moderate for missing two, High for missing three, and a Severe for missing four or more. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already approved.

**Guideline 2 — Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties**

- The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.

**Guideline 3 — Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement**

- The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.

**Guideline 4 — Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations**

- The proposed VSLs do not meet this guideline, as the VSLs are based on a number of violations over a 30-day period. The VSLs will be revised so they are based on a single violation, not on the number of violations in a 30-day period.

**Compliance with NERC’s revised VSL Guidelines**

- Not applicable.

<b>R2</b>	For any sample 24 hour period within the 30 day retention period, a Real-time Assessment was not conducted for one 30-minute period. within that 24-hour period (R2)	For any sample 24 hour period within the 30 day retention period, Real-time Assessments were not conducted for two 30-minute periods within that 24-hour period (R2)	For any sample 24 hour period within the 30 day retention period, Real-time Assessments were not conducted for three 30-minute periods within that 24-hour period (R2)	For any sample 24 hour period within the 30 day retention period, Real-time Assessments were not conducted for more than three 30-minute periods within that 24-hour period (R2)
-----------	--	--	--	--

**Guideline 1 — Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance**

- The proposed requirement is new and there are no comparable VSLs.

**Guideline 2 — Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties**

- The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.

**Guideline 3 — Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement**

- The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.

**Guideline 4 — Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations**

- The proposed VSLs do not meet this guideline, as they are based on a number of violations over a 24 hour period, not on a single violation. Therefore, the VSLs will be revised in NERC’s March 1, 2010 VSL filing so they are based on a single violation, not on the number of violations over a 24-hour period.

**Compliance with NERC’s revised VSL Guidelines**

o Not applicable.				
<b>R3</b>		Shared the results with some but not all of the entities that were required to take action (R3)		Did not share the results of its analyses or assessments with any of the entities that were required to take action (R3).
<p><b>Guideline 1 — Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance</b></p> <p>o The most comparable VSLs for a similar requirement to conduct a next-day analysis are for IRO-004-1, Requirement R5. The VSLs for IRO-004-1, Requirement R5 assign a Lower VSL for failing to share the results for one day during a calendar month; Moderate for failure to share results for two or three days during a calendar month, High for failure to share results for four or five days during a calendar month, and a Severe for failure to share results for more than five days during a calendar month. The VSLs in the proposed standard focus on sharing the results with some, but not all of the required entities and are stricter than the VSLs in IRO-004-1, Requirement R5.</p> <p><b>Guideline 2 — Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties</b></p> <p>o The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.</p> <p><b>Guideline 3 — Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</b></p> <p>o The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.</p> <p><b>Guideline 4 — Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</b></p> <p>o The proposed VSLs meet this guideline, as they are based on the completeness of sharing the results of a single analysis or assessment.</p> <p><b>Compliance with NERC’s revised VSL Guidelines</b></p> <p>o No changes are needed to meet NERC’s revised VSL guidelines.</p>				

**VSLs for IRO-009-1**

<b>R</b>	<b>Lower</b>	<b>Moderate</b>	<b>High</b>	<b>Severe</b>
<b>R1</b>				An IROL in its Reliability Coordinator Area was identified one or more days in advance and the Reliability Coordinator does not have an Operating Process, Procedure, or Plan that identifies actions to prevent exceeding that IROL. (R1)
<b>R2</b>				An IROL in its Reliability Coordinator Area was identified one or more days in advance and the Reliability Coordinator does not have an Operating Process, Procedure, or Plan that identifies actions to mitigate exceeding that IROL within the IROL’s

R	Lower	Moderate	High	Severe
				T <sub>v</sub> . (R2)
R3				An assessment of actual or expected system conditions predicted that an IROL in the Reliability Coordinator's Area would be exceeded, but no Operating Processes, Procedures, or Plans were implemented. (R3)

**Guideline 1 — Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance**

- The only VSL assigned to Requirements R1 through R3 is Severe, in support of the position that any degree of noncompliance with these requirements would result in performance that did not meet the reliability-related intent of the associated requirement. Since these violations are assigned the highest possible VSL, there can be no unintended lowering of the current level of compliance.

**Guideline 2 — Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties**

- The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.

**Guideline 3 — Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement**

- The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.

**Guideline 4 — Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations**

- The proposed VSLs meet this guideline, as each of the single Severe VSLs is based on a single violation – For Requirements R1 and R2, the Severe VSL is based on a failure to have an action plan to either prevent or mitigate an instance of exceeding an identified IROL. For Requirement R3, the single Severe VSL is based on a failure to act when an assessment shows that an IROL may be exceeded.

**Compliance with NERC's revised VSL Guidelines**

No changes are needed to meet NERC's revised VSL guidelines.

R4			Actual system conditions showed that there was an instance of exceeding an IROL in its Reliability Coordinator Area, and there was a delay of five minutes or more before acting or directing others to act to mitigate the magnitude and duration of the instance of exceeding that IROL, however the IROL was mitigated within the IROL T <sub>v</sub> . (R4)	Actual system conditions showed that there was an instance of exceeding an IROL in its Reliability Coordinator Area, and that IROL was not resolved within the IROL's T <sub>v</sub> . (R4)
----	--	--	---	---

**Guideline 1 — Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the**

R	Lower	Moderate	High	Severe
---	-------	----------	------	--------

**Current Level of Compliance**

- The most comparable VSLs for a similar requirement to direct entities to take action to resolve an IROL are for IRO-004-1, Requirement R6. The VSLs for IRO-004-1, Requirement R6 assign a Lower VSL for failing to direct actions to resolve an IROL once in a month; Moderate for failure to direct actions to resolve an IROL two or three times in a calendar month; High for failure to direct actions to resolve an IROL four or five times in a calendar month, and Severe for failure to direct actions to resolve an IROL on more than five occasions in a calendar month. The IRO drafting team’s VSLs have a “zero tolerance” for a total failure to act to resolve an IROL. The only deviation for this is to allow a High VSL for an instance where the Reliability Coordinator delays before taking action but was able to resolve the IROL before the IROL’s T<sub>v</sub>. The VSLs assigned to IRO-009-1 Requirement R4 are much more stringent than those in IRO-004-1.

**Guideline 2 — Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties**

- The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.

**Guideline 3 — Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement**

- The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.

**Guideline 4 — Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations**

- The proposed VSLs meet this guideline, as each of the VSLs is based on a single violation of the requirement to take action to resolve an instance of exceeding an IROL.

**Compliance with NERC’s revised VSL Guidelines**

No changes are needed to meet NERC’s revised VSL guidelines.

R5	Not applicable.	Not applicable.	Not applicable.	There was a disagreement on the value of the IROL or its T <sub>v</sub> and the most conservative limit under consideration was not used. (R5)
----	-----------------	-----------------	-----------------	--

**Guideline 1 — Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance**

- The most comparable VSLs for a similar requirement to direct entities to take action to resolve an IROL are for IRO-005-2, Requirement R13. IRO-005-2, Requirement R13 has a single Severe VSL for a single instance of failure to operate to the most limiting parameter in instances where there is a difference in a limit. The same level of VSL is assigned to IRO-009-1, Requirement R5.

**Guideline 2 — Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties**

- The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.

**Guideline 3 — Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement**

- The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.

**Guideline 4 — Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations**

- The proposed VSL meets this guideline, as the single, Severe VSL is based on a single violation of the requirement to use

R	Lower	Moderate	High	Severe
the most conservative IROL or IROL $T_v$ if there is disagreement on the value of that IROL or disagreement on the $T_v$ .				
<b>Compliance with NERC’s revised VSL Guidelines</b>				
No changes are needed to meet NERC’s revised VSL guidelines.				

**VSLs for IRO-010-1a**

R#	Lower	Moderate	High	Severe
<b>R1</b>	Data specification is complete with the following exception:  Missing the mutually agreeable format. (R1.2)	Data specification is complete with the following exception – no process for data provision when automated Real-Time system operating data is unavailable. (R1.4)	Data specification incomplete (missing either the list of required data (R1.1), or the timeframe for providing data. (R1.3)	No data specification (R1)
<b>R2</b>	Distributed its data specification to greater than or equal to 95% but less than 100% of the entities that have Facilities monitored by the Reliability Coordinator and the entities that provide the Reliability Coordinator with Facility status.	Distributed its data specification to greater than or equal to 85% but less than 95% of the entities that have Facilities monitored by the Reliability Coordinator and the entities that provide the Reliability Coordinator with Facility status. (R2)	Distributed its data specification to greater than or equal to 75% - but less than 85% of the entities that have Facilities monitored by the Reliability Coordinator and the entities that provide the Reliability Coordinator with Facility status. (R2)	Data specification distributed to less than 75% of the entities that have Facilities monitored by the Reliability Coordinator and the entities that provide the Reliability Coordinator with Facility status. (R2)

**Guideline 1 — Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance**

- The most comparable VSLs for a similar requirement to have and distribute a data specification are in IRO-002, Requirement R2, which addresses both having a data specification and distributing that specification. The VSLs for IRO-002, Requirement R2 that address noncompliance with having a data specification assigns a Moderate VSL for having a specification that addresses the “majority” of the required data; a High VSL for having a specification that addresses “less than the majority” of the required data; and a Severe VSL for failure to develop a data specification. The VSLs in IRO-010-1a are more stringent than those in IRO-002-1, Requirement R2 as the VSLs in IRO-010-1, Requirement R1 all require, for the Lower, Moderate, and High VSLs, that the data specification address all of the required data – degrees of noncompliance are based on the additional elements that must be identified in the data specification such as the periodicity of providing the data and the format for providing the data.
- The VSLs for IRO-002-1, Requirement R2 also address noncompliance with distribution of the data specification. The VSLs in IRO-002-1, Requirement R2 are based on sending the data specification to specific functional entities such as Transmission Operators and Transmission Service Providers. The VSLs for IRO-010-1a, Requirement R2 are based on the failure to distribute to all the required entities, using percentages that range from a 5% failure for Lower; up to a 15% failure for Moderate; up to a 25% failure for a High and anything greater than 25% as Severe. Because there is no way of knowing how many entities may be involved in the distribution of the data specification, it is not possible to definitively state that the VSLs in IRO-010-1a Requirement R2 are more or less stringent than those in IRO-002-1, Requirement R2 for the same degree of noncompliant performance.

**Guideline 2 — Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties**

R#	Lower	Moderate	High	Severe
<ul style="list-style-type: none"> <li>The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.</li> </ul> <p><b>Guideline 3 — Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</b></p> <ul style="list-style-type: none"> <li>The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.</li> </ul> <p><b>Guideline 4 — Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</b></p> <ul style="list-style-type: none"> <li>The proposed VSLs meet this guideline because, for Requirement R1 they are based on the completeness of the single data specification, and for R2, they are based on the completeness of the distribution of the data specification.</li> </ul> <p><b>Compliance with NERC’s revised VSL Guidelines</b></p> <ul style="list-style-type: none"> <li>IRO-010-1a Requirement R1 has four parts (R1.1 through R1.4). The VSLs for R1 were developed using the “roll-up” approach where a single set of VSLs is developed to identify a range of noncompliant performance for the requirement “in total.” Noncompliance with each of the four parts of the requirement is addressed in one of the VSLs, based on the contribution that part of the requirement makes to the intent of the overall requirement. This matches NERC’s revised VSL guidelines.</li> <li>The phrasing and percentage of noncompliant performance in the VSLs proposed for Requirement R2 do not match the percentage thresholds that NERC proposed in its August 10, 2009 informational filing. To meet NERC’s guidelines, the VSLs will need to be rephrased so they identify the % of performance that was noncompliant rather than the % of performance that was compliant. In addition, the threshold for the Lower VSL would need to be changed to 5% or less; for a Moderate VSL the noncompliant performance would need to be more than 5% but less than or equal to 10%; for a High VSL the noncompliant performance would need to be more than 10% but less than or equal to 15%; and for a Severe VSL the noncompliant performance would need to be 15 % or more.</li> </ul>				
R3	Provided greater than or equal to 95% but less than 100% of the data and information as specified. (R3)	Provided greater than or equal to 85% but less than 95% of the data and information as specified. (R3)	Provided greater than or equal to 75% but less than 85% of the data and information as specified. (R3)	Provided less than 75% of the data and information as specified. (R3)
<p><b>Guideline 1 — Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance</b></p> <ul style="list-style-type: none"> <li>The most comparable VSLs for a similar requirement to direct entities to take action to resolve an IROL are for TOP-005-1, Requirement R1. TOP-005-1, Requirement R1 has two VSLs, Lower for failure to provide “all” of the requested data, and “Severe” for failure to provide “any” of the requested data. The VSLs in IRO-010-1a provide a Lower VSL for failure to provide 5%, Moderate for failure to provide 15%, High for failure to provide 25%, and Severe for failure to provide more than 25% of the requested data and information. As such, the VSLs in IRO-010-1a, Requirement R3 are more stringent than those in TOP-005-1, Requirement R1.</li> </ul> <p><b>Guideline 2 — Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties</b></p> <ul style="list-style-type: none"> <li>The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.</li> </ul> <p><b>Guideline 3 — Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</b></p> <ul style="list-style-type: none"> <li>The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.</li> </ul> <p><b>Guideline 4 — Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</b></p> <ul style="list-style-type: none"> <li>The requirement is not written in a manner that requires compliance to be assessed based on a single violation, so this guideline is not applicable to Requirement IRO-010-1a, Requirement R3.</li> </ul> <p><b>Compliance with NERC’s revised VSL Guidelines</b></p>				

R#	Lower	Moderate	High	Severe
<p>The phrasing and percentage of noncompliant performance in the VSLs proposed for Requirement R3 do not match the percentage thresholds that NERC proposed in its August 10, 2009 informational filing. **V. Order No. 693 Directives Relative to Retirements or Revisions of Standards Modified as a Result of new Requirements in IRO-008-1, IRO-009-1, and IRO-010-1a**

In addition to seeking approval of the proposed new standards, discussed above, this filing seeks approval to modify several FERC-approved Reliability Standards to simplify and avoid confusion with the newly proposed IRO standards when approved. To avoid having more than one requirement addressing the same activity, the IRO drafting team identified requirements in Version 0 Standards that were redundant with, or no longer needed once the proposed IRO standards were approved. For each Version 0 Standard impacted by the IRO standards, the IRO drafting team reviewed Order No. 693 to identify any FERC directives associated with the requirements recommended for retirement or revision. The drafting team's scope of work was limited to addressing only those directives associated with requirements changed as a result of the IRO Standards effort.

There are seven Version 0 standards with requirements that the IRO drafting team identified as having requirements requiring retirement or revisions in order to avoid conflicts or duplication with the proposed IRO standards. These standards and the relevant directives from FERC's Order 693 are presented in the following table. The directives associated with each of these seven standards and a narrative discussion identifying how the IRO drafting team addressed each of the relevant directives is also provided.

Relationship Between Modifications to Already Approved Standards and Directives in Order No. 693	
Modification to Associated Approved Standards	Paragraph with Associated Directives
EOP-001-0 — Emergency Operations Planning	566
IRO-002-1 — Reliability Coordination – Facilities	908
IRO-004-1 — Reliability Coordination – Operations Planning	935
IRO-005-2 — Reliability Coordination – Current Day Operations	951
TOP-003-0 — Planned Outage Coordination	1626
TOP-005-1 — Operational Reliability Information	1651
TOP-006-1 — Monitoring System Conditions	1665

## Order No. 693 Directives Associated with Requirements That are Proposed for Revision or Retirement in the IROL Implementation Plan

### Directives Associated with Modification of EOP-001-0 – Emergency Operations Planning<sup>23</sup>

Order 693 P 566. *Accordingly, the Commission concludes that Reliability Standard EOP-001-0 is just, reasonable, not unduly discriminatory or preferential and in the public interest and approves it as mandatory and enforceable. In addition, pursuant to section 215(d)(5) of the FPA and § 39.5(f) of our regulations, the Commission directs the ERO to develop a modification to EOP-001-0 through the Reliability Standards development process that: (1) includes the Reliability Coordinator as an applicable entity with responsibilities as described above; (2) clarifies the 30-minute requirement in Requirement R2 of the Reliability Standard to state that load shedding should be capable of being implemented as soon as possible but in no more than 30 minutes; (3) includes definitions of system states to be used by the operators, such as transmission-related “normal,” “alert” and “emergency” states, provides criteria for entering into these states, and identifies the authority that will declare these states and (4) clarifies that the actual emergency plan elements, and not the “for consideration” elements of Attachment 1, should be the basis for compliance. Further, the Commission directs the ERO to consider a pilot program for system states, as discussed above.*

<sup>23</sup> As noted above, NERC recognizes that revised standard EOP-001 is included for approval in this filing as well as in the filing requesting approval of Emergency Preparedness and Operations Reliability Standards (“System Restoration and Blackstart Filing”) of December 31, 2009. The modifications proposed to the EOP-001 standard in this filing and in the System Restoration and Blackstart Filing include changes unique to each project. NERC cannot predict the outcome or sequence in which FERC will act on these filings. Therefore, NERC includes in Exhibit A a proposed Version 1 of EOP-001 that exclusively contains the changes directed by the IRO project in the event FERC acts on this filing before the System Restoration and Blackstart Filing or if the System Restoration and Blackstart Filing is remanded before the IRO filing is acted upon. In the event that FERC acts to approve the System Restoration and Blackstart Filing first, NERC also includes in Exhibit B Version 2 of EOP-001 that contains both the System Restoration and Blackstart team directed changes and those proposed in this IRO filing. Because EOP-001-0 is the currently-approved standard in effect, the changes proposed in this filing are applied against this Version 0. Should the System Restoration and Blackstart Filing be affirmatively acted upon first, NERC modifies its requests for FERC approval of EOP-001-2 as provided in Exhibit B.

The first directive is further clarified in Paragraph 547:

*Order 693 P 547. Given the importance NERC attributes to the reliability coordinator in connection with matters covered by EOP-001-0, the Commission is persuaded that specific responsibilities for the reliability coordinator in the development and coordination of emergency plans must be included as part of this Reliability Standard.*

The IRO drafting team limited its focus to aspects of the first two directives in Order No. 693 Paragraph 566, relative to Reliability Coordinators and the treatment of IROLs. Addressing the remaining directives was outside the scope of work assigned to the IRO drafting team.

The drafting team understood that the intent of the first directive is to ensure that the Reliability Coordinator has a requirement that identifies its responsibility relative to having plans to address operating emergencies, including plans to address the mitigation of instances of exceeding IROLs. The drafting team understood the intent of the second directive is to clarify that operating plans developed to mitigate instances of exceeding an IROL should be implemented to resolve the IROL as soon as possible but within 30 minutes.

Modifying the entire EOP-001-0 Reliability Standard was outside the scope of work assigned to the IRO drafting team. However, the IRO drafting team did modify the responsibility for Requirement R2 so that instead of assigning the Transmission Operator the responsibility for having load reduction plans for resolving IROLs, the Reliability Coordinator is responsible for having action plans that will either prevent or mitigate instances of exceeding IROLs. The Transmission Operator is not required to have the Wide-Area view necessary for developing action plans relative to IROLs. Under the direction of the Reliability Coordinator, the Transmission Operator would implement the load reduction plans. The proposed Requirements R1 and R2 in IRO-009-1 meet the intent of the first directive as it relates to IROLs. There are other types of operating emergencies, such as system restoration, and as these

standards are revised, additional clarity is being added to ensure that the Reliability Coordinator's role, as defined in the Functional Model, is implemented.

When developing the IRO standard, the IRO drafting team determined that there are some IROLs that must be resolved in a timeframe that is shorter than 30 minutes. FAC-010-1 and FAC-011-1 require that each IROL have an associated  $T_v$  with  $T_v$  defined as follows:

The maximum time that an Interconnection Reliability Operating Limit can be violated before the risk to the interconnection or other Reliability Coordinator Area(s) becomes greater than acceptable. Each Interconnection Reliability Operating Limit's  $T_v$  shall be less than or equal to 30 minutes.

IRO-009-1, Requirement R2, requires that each action plan developed to resolve an IROL must be capable of being executed such that the IROL is relieved within the IROL's  $T_v$ . While the drafting team did include a reference to load shedding, the team did not highlight this as the only means of resolving an IROL. IRO-009-1, Requirement R4, requires the Reliability Coordinator to act, without delay, when actual system conditions show that there is an instance of exceeding an IROL. Additionally, as discussed below, EOP-001-1 — Emergency Operations Planning, Requirement R4, which is not recommended for retirement by the IRO drafting team, requires the Transmission Operator to have load reduction plans that can be executed within a specific timeframe.

**R4.** Each Transmission Operator and Balancing Authority shall have emergency plans that will enable it to mitigate operating emergencies. At a minimum, Transmission Operator and Balancing Authority emergency plans shall include:

**R4.1.** Communications protocols to be used during emergencies.

**R4.2.** A list of controlling actions to resolve the emergency. Load reduction, in sufficient quantity to resolve the emergency within NERC-established timelines, shall be one of the controlling actions.

**R4.3.** The tasks to be coordinated with and among adjacent Transmission Operators and Balancing Authorities.

**R4.4.** Staffing levels for the emergency.

The IRO drafting team believes that the proposed requirements collectively provide an equally effective and efficient method of achieving the objective of the second directive in Paragraph 566.

Directives 3 and 4 of paragraph 566 are outside the scope of work assigned to the IRO drafting team.

#### **Directives Associated with Modification of IRO-002-1 — Reliability Coordination — Facilities**

*Order 693 P 908. ... Reliability Standard IRO-002-1 serves an important purpose in ensuring that reliability coordinators have the information, tools and capabilities to perform their functions. The Measures and Levels of Non-Compliance submitted by NERC further enhance the Reliability Standard. Accordingly, the Commission approves Reliability Standard IRO-002-1 as mandatory and enforceable. In addition we direct the ERO to develop a modification to IRO-002-1 through the Reliability Standards development process that requires a minimum set of tools that should be made available to reliability coordinators.*

The IRO drafting team understood the intent of the directive is to ensure that the Reliability Coordinator has a set of tools to support real-time monitoring of the Reliability Coordinator's Area. The modification made to IRO-002-1 does not address any of the requirements associated with "tools" and thus the sole directive is outside the scope of the IRO drafting team's work. Therefore, this directive is being considered in Project 2009-02 — Real-time Tools.

#### **Directives Associated with Modification of IRO-004-1 — Reliability Coordination — Operations Planning**

*Order 693, P 935. Accordingly, we approve Reliability Standard IRO-004-1 as mandatory and enforceable. Further, we direct the ERO to modify IRO-004-1 through the Reliability Standards development process to require the next-day analysis to identify control actions that can be implemented and effective within 30 minutes after a contingency.*

The drafting team understood the intent of the directive is to require that the Reliability Coordinator has an action plan that can be used to resolve any IROL identified during the "day-ahead" study within 30 minutes. The drafting team believes that the intent of this objective is met through the combination of IRO-009-1 Requirements R1 and R2.

- IRO-009-1 Requirement R1 requires the Reliability Coordinator to have one or more operating procedures, processes or plans that identify actions that can be implemented in time to **prevent** exceeding each identified IROL.
- IRO-009-1 Requirement R2 requires the Reliability Coordinator to have one or more operating procedures, processes or plans that identify actions that can be implemented in time to **mitigate** the magnitude and duration of exceeding each identified IROL such that the IROL is relieved within its  $T_v$ , which may be shorter than 30 minutes.

Thus, the proposed IRO-009-1 Requirements R1 and R2 use an equally efficient and effective method of achieving the objective of the FERC directive in paragraph 935. The drafting team did not address action plans to resolve any identified SOLs. Under the Functional Model, (and TOP-002-2, Requirement R11) the Transmission Operator is responsible for conducting analyses to identify where there may be instances of exceeding SOLs, and the Transmission Operator is responsible (under TOP-008-1) for taking actions to either prevent or mitigate instances of exceeding SOLs. Under some circumstances, the Transmission Operator may request the assistance of the Reliability Coordinator in identifying or monitoring SOLs, or in developing action plans to either prevent or mitigate instances of exceeding an SOL. However, under these circumstances, the responsibility for the SOL remains with the Transmission Operator.

When developing the IRO Standards, the IRO and Facility Ratings Standard Drafting Teams determined that some IROLs must be resolved in a timeframe that is shorter than 30 minutes. FAC-010-1 and FAC-011-1 require that each IROL have an associated  $T_v$  with  $T_v$  defined as follows:

The maximum time that an Interconnection Reliability Operating Limit can be violated before the risk to the interconnection or other Reliability Coordinator Area(s) becomes greater than acceptable. Each Interconnection Reliability Operating Limit's  $T_v$  shall be less than or equal to 30 minutes.

IRO-009-1 Requirement R2 requires that each action plan developed to resolve an IROL must be capable of being executed such that the IROL is relieved within the IROL's  $T_v$ .

### **Directives Associated with Modification of IRO-005-2 — Reliability Coordination — Current Day Operations**

*Order 693 P951. Accordingly, the Commission approves Reliability Standard IRO-005-1 as mandatory and enforceable. Further, because IRO-005-1 has no Measures or Levels of Non-Compliance, pursuant to section 215(d)(5) of the FPA and § 39.5(f) of our regulations, the Commission directs the ERO to develop a modification to IRO-005-1 through the Reliability Standards development process that includes Measures and Levels of Non-Compliance. The Commission further directs that the Measures and Levels of Non-Compliance specific to IROL violations must be commensurate with the magnitude, duration, frequency and causes of the violations and whether these occur during normal or contingency conditions. Finally, the Commission directs the ERO to conduct a survey on IROL practices and actual operating experiences by requiring reliability coordinators to report any violations of IROL, their causes, the date and time, the durations and magnitudes in which actual operations exceeds IROLs to the ERO on a monthly basis for one year beginning two months after the effective date of the Final Rule. We may propose further modifications to IRO-005-1 based on the survey results.*

There are two directives in Order No. 693 Paragraph 951. The IRO drafting team understood the intent of the first directive is to ensure that a violation of an IROL (exceeding an IROL for time greater than the IROL's  $T_v$ ) varies with the potential reliability-related impact associated with that violation. The second directive (to conduct a survey) is outside the scope of work assigned to the IRO drafting team and is not addressed here.

The ERO's Sanctions Guidelines identify that VSLs, in conjunction with the VRF, form the starting point for the determination of a penalty or sanction. The NERC Sanction Guidelines identify 12 factors that the Compliance Enforcement Authority may use to increase or decrease the size of a penalty or sanction, including instances of multiple violations, seriousness of the violation, and the frequency and duration of violations. These factors, in combination with the initial assignment of VRFs and VSLs, result in violations with penalties commensurate with the impact to reliability.

The requirements in IRO-009-1 associated with having action plans are assigned a “Medium” VRF and the requirements associated with acting to prevent or mitigate instances of exceeding an IROL are assigned a “High” VRF.

**A “High” Violation Severity Level is applied for the following:**

- Actual system conditions showed that there was an instance of exceeding an IROL, and there was a delay of five minutes or more before acting or directing others to act to mitigate the magnitude and duration of the instance of exceeding that IROL, however the IROL was mitigated within the IROL  $T_v$ . (R4)

**A “Severe” Violation Severity Level is applied for any of the following:**

- An IROL was identified one or more days in advance and the Reliability Coordinator does not have an Operating Process, Procedure, or Plan that identifies actions to prevent exceeding that IROL. (R1)
- An IROL identified one or more days in advance does not have an Operating Process, Procedure, or Plan that identifies actions to mitigate exceeding that IROL within the IROL’s  $T_v$ . (R2)
- An assessment of actual or expected system conditions predicted that an IROL would be exceeded, but no Operating Processes, Procedures, or Plans were implemented. (R3)
- Actual system conditions showed that there was an instance of exceeding an IROL, and that IROL was not resolved within the IROL’s  $T_v$ . (R4)

A delay in acting to mitigate an instance of exceeding an IROL but resolving the IROL within its  $T_v$  is assigned a “High” VSL. A total violation of any of these four requirements to have plans or take actions results in a “Severe” VSL. Applying the violation of the requirements to the sanctions table:

- The violation of a Medium VRF with a Severe VSL has a sanction starting point of \$10-\$335k (failure to have action plans)
- The violation of a High VRF with a Medium VSL has a sanction starting point of \$12-\$625k (delay in acting to mitigate but resolved within  $T_v$ )
- The violation of a High VRF with a Severe VSL has a sanction starting point of \$20-\$1,000k (exceeded IROL for time greater than  $T_v$ )

The IRO Standards have VSLs, not levels of non-compliance. However, the combination of VRFs and VSLs, when applied with the Sanction Guidelines, meet the intent of the directive.

### **Directives Associated with Modification of TOP-003-0 — Planned Outage Coordination**

Order 693 P 1626. *Planned outage coordination is a necessary element of reliable operations, and TOP-003-0 promotes that goal. Accordingly, the Commission approves the Reliability Standard as mandatory and enforceable. In addition, pursuant to section 215(d)(5) of the FPA and § 39.5(f) of our regulations, the Commission directs the ERO to develop a modification to TOP-003-0 through the Reliability Standards development process that: (1) includes a new requirement to communicate longer term outages well in advance to ensure reliability and accuracy of ATC calculation; (2) makes any facility below the voltage thresholds that, in the opinion of the Transmission Operator, Balancing Authority, or Reliability Coordinator, will have a direct impact on the operation of Bulk-Power System, subject to Requirement R1 for planned outage coordination and (3) incorporates an appropriate lead time for planned outages as discussed above.*

There are three directives. The IRO drafting team determined that only the third directive is associated with a requirement related to the work of the IRO drafting team.

The IRO drafting team understood the intent of the third directive is to require the Reliability Coordinator to specify, in its process or procedure for coordinating planned outages, a requirement that Generator Operators and Transmission Operators provide information on planned outages within identified lead times.

The IRO drafting team did not include a requirement to address this directive. In keeping with the original approach for developing Reliability Standards, the IRO drafting team does not believe that having a process or procedure for coordinating planned outages is the core aspect that should be retained in a mandatory, enforceable Reliability Standard. Rather, the IRO drafting team believes that having a requirement to *coordinate* planned outages such that specified criteria are met is the desired performance that leads to an adequate level of reliability. Having a process or procedure that identifies how it will coordinate planned outages is a fundamental expectation that is better suited for inclusion in the certification process for the Reliability Coordinator. Having the capability to coordinate is addressed through the required process or procedure in the entity certification process, while the actual coordination manifests itself in the body of the standard requirements. Requiring the entity applying for certification to

produce its process or procedure for coordinating planned outages ensures that the procedure exists at the point in time when the entity begins operating as a Reliability Coordinator.

Implementation of this practice can be demonstrated through the coordination taking place between entities on a daily basis.

### **Directives Associated with Modification of TOP-005-1 — Operational Reliability Information**

*Order 693 P 1651. Accordingly, the Commission approves Reliability Standard TOP-005-1. In addition, pursuant to section 215(d)(5) of the FPA and § 39.5(f) of our regulations, the Commission directs the ERO to develop a modification to TOP-005-1 through the Reliability Standards development process that: (1) includes information about the operational status of special protection systems and power system stabilizers in Attachment 1 and (2) deletes references to confidentiality agreements, but addresses the issue separately to ensure that necessary protections are in place related to confidential information.*

There are two directives associated with TOP-005-1, and neither of the directives is relative to the proposed modifications the IRO drafting team made to TOP-005. The first directive is associated with Requirement R3, and Requirement R3 is not being revised or retired as a result of approving IRO-008-1, IRO-009-1, or IRO-010-1a. The second directive is associated with Requirement R2, and it is not being revised or retired as a result of approving IRO-008-1, IRO-009-1 or IRO-010-1a.

### **Directives Associated with Modification of TOP-006-1 — Monitoring System Conditions**

*Order 693 P 1665. Accordingly, the Commission approves Reliability Standard TOP-006-1. In addition, pursuant to section 215(d)(5) of the FPA and § 39.5(f) of our regulations, the Commission directs the ERO to develop a modification to TOP-006-1 through the Reliability Standards Development Process that: (1) includes a new requirement related to the provision of minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the Bulk-Power System and (2) clarifies the meaning of “appropriate technical information” concerning protective relays.*

There are two directives associated with TOP-006-1, and neither of the directives relates to the proposed modifications the IRO drafting team made to Requirement R4 in TOP-006. The first directive is associated with specifying a set of minimum facility requirements for the Transmission Operator and is outside the scope of the IRO drafting team. The second directive

is associated with Requirement R3, and it is not being revised or retired as a result of approving IRO-008-1, IRO-009-1, or IRO-010-1a and is, therefore, also outside the scope of the IRO drafting team.

The second directive is relative to TOP-006-1, Requirement R3 which is not being modified or retired as a result of approving IRO-008-1, IRO-009-1, or IRO-010-1a.

**Comparison of New Requirements and Retired or Revised Requirements**

The following discussion compares the proposed IRO Standards with requirements in approved Version 0 standards, and provides an explanation supporting the decision to modify or retire specific Version 0 requirements that are either redundant with, or would conflict with requirements in the IRO standards if left unchanged.

New Standard	Modification to Associated Approved Standards
IRO-008-1 — Reliability Coordination Operational Analyses and Real-time Assessments	IRO-004-1 — Reliability Coordination – Operations Planning <ul style="list-style-type: none"> <li>▪ Retire R1 and R2</li> </ul>

**IRO-004-1**

- R1.** Each Reliability Coordinator shall conduct next-day reliability analyses for its Reliability Coordinator Area to ensure that the Bulk Electric System can be operated reliably in anticipated normal and Contingency event conditions. The Reliability Coordinator shall conduct Contingency analysis studies to identify potential interface and other SOL and IROL violations, including overloaded transmission lines and transformers, voltage and stability limits, etc.
- R2.** Each Reliability Coordinator shall pay particular attention to parallel flows to ensure one Reliability Coordinator Area does not place an unacceptable or undue Burden on an adjacent Reliability Coordinator Area.

**IRO-008-1**

- R1.** Each Reliability Coordinator shall perform an Operational Planning Analysis to assess whether the planned operations for the next day within its Wide Area, will exceed any of its Interconnection Reliability Operating Limits (IROLs) during anticipated normal and Contingency event conditions.

IRO-008-1 Requirement R1 requires the Reliability Coordinator to look at its “Wide-Area” rather than the “Reliability Coordinator Area” in conducting its Operational Planning Analyses. The definition of “Reliability Coordinator Area” is:

The collection of generation, transmission, and loads within the boundaries of the Reliability Coordinator. Its boundary coincides with one or more Balancing Authority Areas.

The definition of “Wide-Area” is:

The entire Reliability Coordinator Area as well as the critical flow and status information from adjacent Reliability Coordinator Areas as determined by detailed system studies to allow the calculation of Interconnected Reliability Operating Limits.

Thus, the definition of “Wide-Area” encompasses a greater scope of facilities, and because each Reliability Coordinator is looking beyond its own borders into its neighboring Reliability Coordinators’ Areas, provides greater protection for the interconnected bulk power systems because the Reliability Coordinators will be assessing overlapping portions of the bulk power system. With IRO-004-1, Requirement R1, each Reliability Coordinator was assigned to look only at a contiguous portion of the bulk power system, and there was no requirement for one Reliability Coordinator to “look over the shoulder” of its neighboring Reliability Coordinator’s Areas.

The purpose of conducting a day-ahead analysis is not to “ensure” but to “assess” the system, making IRO-004-1 Requirement R1 incorrect. As written, IRO-004-1 seems to focus primarily on transmission issues, which should be only one aspect of focus for the Reliability Coordinator’s analysis.

IRO-008-1, Requirement R1 also does not specify any single application program that all Reliability Coordinators must use. The new requirement assumes that the Reliability Coordinator has a suite of applications, verified either as part of the certification process or

through a reliability readiness audit, that it can use to conduct its assessment. Having the *ability* to conduct a day-ahead contingency analysis is a requirement for Reliability Coordinator certification.

IRO-004-1 Requirement R2 stating “to pay particular attention to” is not clear, and is not measurable. The requirement is one facet of real-time monitoring, and impossible to measure objectively. The intent of this requirement is two-fold: to ensure that each Reliability Coordinator acts in the best interests of its interconnection, as a whole, and not based solely on conditions in its own area; and, to ensure that operations between Reliability Coordinator Areas are coordinated. The requirements in IRO-014, IRO-015, and IRO-016 are aimed at ensuring that Reliability Coordinators coordinate their actions with one another and act in the best interest of the interconnection as a whole as follows:

IRO-014-1, Requirement R1 requires the Reliability Coordinators to work together to develop operating processes, procedures and plans to identify what actions they will take when faced with a variety of predictable operating scenarios, including situations where the actions within one Reliability Coordinator Area impact another Reliability Coordinator Area (R1.1.6). Thus, if a particular geographic region has an issue with loop flows or parallel flows that require coordinated action between two or more Reliability Coordinator Areas, IRO-014-1 requires the involved Reliability Coordinators to have a specific operating process, procedure or plan that identifies what actions each will take when faced with that scenario.

IRO-015-1 requires the Reliability Coordinators to communicate with one another under specified conditions. IRO-015-1, Requirement R1.1 requires the Reliability Coordinator to make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas.

IRO-016-1 was written shortly after the August 2003 blackout and requires that, if Reliability Coordinators are faced with a situation where there is a difference of opinion as to whether there is an operating issue, both Reliability Coordinators must act as though the problem exists (R1.1.2). Similarly, if the Reliability Coordinators cannot agree on the best solution to an operating issue, then the involved Reliability Coordinators must act in accordance with the most conservative of the solutions identified (R1.3). In this manner, the requirements force both Reliability Coordinators to act in a manner that best protects reliability.

In addition, under the Functional Model, it is the Transmission Operator that is responsible for the real-time operation of the transmission system. The Reliability Coordinator provides oversight of the Transmission Operator's actions, directing alternate or additional actions when needed. Under TOP-002-2, each Transmission Operator is required to coordinate its operations with neighboring Transmission Operators (R4), is required to have an accurate system model (R19) for conducting system analyses, and each Transmission Operator is required to share the results of analyses with its neighboring Transmission Operators (R11). Through the use of accurate models and as a result of coordinating real-time operations and conducting and sharing its operational analyses, the Transmission Operators should have an understanding of the impact one system's operations has on its neighbor's system. Because PER-005-1 requires both the Reliability Coordinator and Transmission Operator to have training focused on the reliability-related tasks assigned to their operating personnel, these Reliability Coordinators and Transmission Operators are required to have evidence that their real-time operating personnel are competent to address issues such as parallel flows.

The new requirements in the IRO standards focus specifically on IROLs, in support of the Functional Model division of duties, and are inclusive of any reliability implications due to

parallel flows. Under the Functional Model, the Reliability Coordinator is the functional entity with primary responsibility for IROLs and the Transmission Operator is the functional entity with primary responsibility for SOLs. The “tasks” associated with the responsibilities for SOLs and the subset of SOLs that are IROLs are shared between the Reliability Coordinator and the Transmission Operator. While the Transmission Operator has primary responsibility for developing the SOLs within its Transmission Operator Area, the Transmission Operator may request the assistance of its Reliability Coordinator in developing these SOLs. It is the Reliability Coordinator that is held responsible for ensuring that IROLs are developed for its Reliability Coordinator Area in accordance with a methodology developed by the Reliability Coordinator. The Transmission Operator must share its SOLs with its Reliability Coordinator, and the Reliability Coordinator must share any SOLs it develops with its Transmission Operator. The Reliability Coordinator monitors the status of some, but not all, SOLs. The Reliability Coordinator’s visualization tools are not expected to display all SOLs within the Wide-Area that the Reliability Coordinator monitors as this would mix SOLs that have little impact on the bulk power system with those SOLs that are associated with facilities that are important to the bulk power system. The Reliability Coordinator’s visualization tools are expected to display the real-time status of parameters against all IROLs that the Reliability Coordinator monitors and also display the subset of SOLs associated with facilities that are most critical to the portions of the bulk power system that are monitored by the Reliability Coordinator.

These proposed Reliability Standards should not imply that the Reliability Coordinator will not look at its future operations with respect to specific SOLs. Reliability Coordinators must do this to ensure that their Transmission Operators are taking actions at appropriate times, but the primary responsibility for SOLs rests with the Transmission Operators. Having two entities with

the same primary responsibility is not supported by the Functional Model. The Reliability Coordinator retains the overall visibility to all operations within its Wide-Area view, including some SOLs, although the Transmission Operator is primarily responsible for actions related to SOLs.

New Standard	Modification to Associated Approved Standards
IRO-009-1 — Reliability Coordination Actions to Operate within IROLs	EOP-001-0 — Emergency Operations Planning <ul style="list-style-type: none"> <li>▪ Retire R2</li> </ul>

**EOP-001-0**

**R2.** The Transmission Operator shall have an emergency load reduction plan for all identified IROLs. The plan shall include the details on how the Transmission Operator will implement load reduction in sufficient amount and time to mitigate the IROL violation before system separation or collapse would occur. The load reduction plan must be capable of being implemented within 30 minutes.

**IRO-009-1 R1.**

**R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs.

EOP-001-0, Requirement R2 should be retired. The Reliability Coordinator, not the Transmission Operator, is responsible for developing plans for mitigating IROLs. Under the Functional Model, the Transmission Operator is not required to have the capability of determining IROLs, a responsibility assigned clearly to the Reliability Coordinator. Mitigation plans need to be implemented so that the instance of exceeding the IROL is mitigated within the IROL’s  $T_v$ , which can be shorter than 30 minutes. Load reduction plans are just one approach to resolving an IROL.

This clarification of assignment to the Reliability Coordinator should not imply that the Transmission Operator is prohibited from having load reduction plans that can be implemented within 30 minutes. Rather, the Reliability Coordinator is responsible for having an action plan

for each identified IROL that may include many options for mitigation. If an action plan includes load reductions, then the Reliability Coordinator would identify the actions needed, first, to prevent exceeding the IROL, and also have an action plan to identify actions to relieve that IROL when exceeded before reaching the IROL's  $T_v$ . If the Reliability Coordinator's analysis or assessment demonstrates that it may exceed or has exceeded an IROL, under IRO-008-1, Requirement R3, the Reliability Coordinator is required to share this information with the entities required to take action, and, if needed, the Reliability Coordinator is required to direct those entities to take those actions. The Transmission Operator is required to have load reduction plans that can be executed to meet specific plans under EOP-001-0, Requirements R3 and R4 and under EOP-003-1, Requirement R8 as follows:

**EOP-001-0**

**R3:** Each Transmission Operator and Balancing Authority shall:

- R3.1.** Develop, maintain, and implement a set of plans to mitigate operating emergencies for insufficient generating capacity.
- R3.2.** Develop, maintain, and implement a set of plans to mitigate operating emergencies on the transmission system.
- R3.3.** Develop, maintain, and implement a set of plans for load shedding.
- R3.4.** Develop, maintain, and implement a set of plans for system restoration.

**EOP-001-0**

**R4:** Each Transmission Operator and Balancing Authority shall have emergency plans that will enable it to mitigate operating emergencies. At a minimum, Transmission Operator and Balancing Authority emergency plans shall include:

- R4.1.** Communications protocols to be used during emergencies.
- R4.2.** A list of controlling actions to resolve the emergency. Load reduction, in sufficient quantity to resolve the emergency within NERC-established timelines, shall be one of the controlling actions.
- R4.3.** The tasks to be coordinated with and among adjacent Transmission Operators and Balancing Authorities.
- R4.4.** Staffing levels for the emergency.

**EOP-003-1**

**R8:** Each Transmission Operator or Balancing Authority shall have plans for operator controlled manual load shedding to respond to real-time emergencies. The Transmission Operator or Balancing Authority shall be capable of implementing the load shedding in a timeframe adequate for responding to the emergency.

This combination of requirements results in the Reliability Coordinator having responsibility for developing action plans to prevent exceeding or the mitigating an IROL when exceeded. These plans may include load shedding within the  $T_v$  timeframe that the Reliability Coordinator would coordinate with the Transmission Operators who are obligated to provide such load shedding support.

New Standard	Modification to Associated Approved Standards
IRO-009-1 — Reliability Coordination Actions to Operate within IROLs	IRO-004-1 — Reliability Coordination – Operations Planning <ul style="list-style-type: none"><li>▪ Retire R3 and R6</li></ul>

**IRO-004-1**

**R3.** Each Reliability Coordinator shall, in conjunction with its Transmission Operators and Balancing Authorities, develop action plans that may be required, including reconfiguration of the transmission system, re-dispatching of generation, reduction or curtailment of Interchange Transactions, or reducing load to return transmission loading to within acceptable SOLs or IROLs.

**R6.** If the results of these studies indicate potential SOL or IROL violations, the Reliability Coordinator shall direct its Transmission Operators, Balancing Authorities and Transmission Service Providers to take any necessary action the Reliability Coordinator deems appropriate to address the potential SOL or IROL violation.

**IRO-009-1**

**R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs.

**R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's  $T_v$ .

**R3.** When an assessment of actual or expected system conditions predicts that an IROL in its Reliability Coordinator Area will be exceeded, the Reliability Coordinator shall implement one or more Operating Processes, Procedures, or Plans (not limited to the Operating Processes, Procedures, or Plans developed for Requirements R1) to prevent exceeding that IROL.

IRO-004-1, Requirement R3 should be retired. The use of the phrase, “in conjunction with” in this requirement is not supported by the responsibilities of the Reliability Coordinator in the Functional Model. Under the Functional Model, the Reliability Coordinator is responsible for “directing” actions. IRO-009-1 Requirements R1 and R2 require the Reliability Coordinator to have plans to prevent and mitigate instances of exceeding IROLs. Under some conditions, the Reliability Coordinator may not have time to ‘coordinate’ the development of these plans with all of its Transmission Operators and Balancing Authorities. The standard does not “preclude” coordination it just does not “require” coordination.

IRO-004-1, Requirement R6 should be also retired. IRO-009-1 Requirement R3 includes language that is more explicit than the language in IRO-004-1 Requirement R6: The phrase, “results of these studies” is not as specific as “when an assessment of actual or expected system conditions.”

New Standard	Modification to Associated Approved Standards
IRO-009-1 — Reliability Coordination Actions to Operate within IROLs	IRO-005-2 — Reliability Coordination — Current Day Operations <ul style="list-style-type: none"> <li>▪ Retire R3, R5, R16, and R17;</li> <li>▪ Modify R9, R13 and R14</li> </ul>

**IRO-005-2**

**R3.** As portions of the transmission system approach or exceed SOLs or IROLs, the Reliability Coordinator shall work with its Transmission Operators and Balancing Authorities to evaluate and assess any additional Interchange Schedules that would violate those limits. If a potential or actual IROL violation cannot be avoided through proactive intervention, the Reliability Coordinator shall initiate control actions or emergency procedures to relieve the violation without delay, and no longer than 30 minutes. The Reliability Coordinator shall ensure all resources, including load shedding, are available to address a potential or actual IROL violation.

**R5.** Each Reliability Coordinator shall identify the cause of any potential or actual SOL or IROL violations. The Reliability Coordinator shall initiate the control action or emergency procedure to relieve the potential or actual IROL violation without delay, and no longer than 30 minutes. The Reliability Coordinator shall be able to utilize all resources, including load shedding, to address an IROL violation.

#### **IRO-009-1**

**R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs.

**R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's  $T_v$ .

**R3.** When an assessment of actual or expected system conditions predicts that an IROL in its Reliability Coordinator Area will be exceeded, the Reliability Coordinator shall implement one or more Operating Processes, Procedures, or Plans (not limited to the Operating Processes, Procedures, or Plans developed for Requirements R1) to prevent exceeding that IROL.

**R4.** When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's  $T_v$ .

IRO-005-2, Requirement R3 should be retired. First, as written, this requirement should not lead the Reliability Coordinator to believe it has up to 30 minutes to relieve an IROL violation – but some IROLs have a  $T_v$  that is much shorter than 30 minutes. Next, the action plans the Reliability Coordinator is required to have under IRO-009-1 Requirement R1 should include consideration of all available actions, including Interchange Schedules, that is contemplated by IRO-005-2 Requirement R3.

IRO-005-2, Requirement R5 may incorrectly lead the Compliance Enforcement Authority to believe that the Reliability Coordinator has information to see all SOLs. Every

facility in the Transmission Operator’s area has SOLs, and the Transmission Operator provides its SOLs to its Reliability Coordinator, but the Reliability Coordinator is not required to monitor all these limits and may not have information to determine the cause of instances of exceeding these limits. Providing all SOLs to the Reliability Coordinator is not in the best interest of reliability, as some SOLs are associated with facilities that have only a marginal impact to the bulk power system. By maintaining visualization tools that focus on the most critical facilities, the Reliability Coordinator is better able to focus on those tasks that have the greatest impact on the bulk power system.

As written, IRO-005-2, Requirement R5 is unclear regarding whether the 30 minutes is the time the Reliability Coordinator has to take action, or the time the Reliability Coordinator has to return the system to a state where the IROL is no longer violated. In addition, the requirement implies that the Reliability Coordinator must determine the cause of the IROL before taking any action. However, this is not always possible, and in many cases would delay taking action to relieve the instance of exceeding the limit. The new requirement in IRO-009-1 is very clear that the Reliability Coordinator must act without delay and must return the system to within the IROL in a timeframe that is within the IROL’s  $T_v$ .

While the requirements in IRO-005-2 are “reactive” in nature, the requirements in the proposed IRO standards are “proactive” in that they require the Reliability Coordinator to look ahead and develop specific action plans to “prevent” as well as to “mitigate” any instance of exceeding an IROL that has been identified.

New Standard	Modification to Associated Approved Standards
IRO-009-1 — Reliability Coordination Actions to Operate within IROLs	IRO-005-2 — Reliability Coordination — Current Day Operations <ul style="list-style-type: none"> <li>▪ Retire R3, R5, R16, and R17;</li> <li>▪ Modify R9, R13 and R14</li> </ul>

## **IRO-005-2**

- R14.** Each Reliability Coordinator shall make known to Transmission Service Providers within its Reliability Coordinator Area, SOLs or IROLs within its wide-area view. The Transmission Service Providers shall respect these SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.
- R16.** Each Reliability Coordinator shall confirm reliability assessment results and determine the effects within its own and adjacent Reliability Coordinator Areas. The Reliability Coordinator shall discuss options to mitigate potential or actual SOL or IROL violations and take actions as necessary to always act in the best interests of the Interconnection at all times.
- R17.** When an IROL or SOL is exceeded, the Reliability Coordinator shall evaluate the local and wide-area impacts, both real-time and post-contingency, and determine if the actions being taken are appropriate and sufficient to return the system to within IROL in thirty minutes. If the actions being taken are not appropriate or sufficient, the Reliability Coordinator shall direct the Transmission Operator, Balancing Authority, Generator Operator, or Load-Serving Entity to return the system to within IROL or SOL.

## **IRO-009-1**

- R3.** When an assessment of actual or expected system conditions predicts that an IROL in its Reliability Coordinator Area will be exceeded, the Reliability Coordinator shall implement one or more Operating Processes, Procedures, or Plans (not limited to the Operating Processes, Procedures, or Plans developed for Requirements R1) to prevent exceeding that IROL.
- R4.** When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's  $T_v$ .

IRO-005-2, Requirement R14 should be revised, and the first sentence of IRO-005-2, Requirement R14 should be retired. Notifying the Transmission Service Provider of SOLs and IROLs is already addressed under FAC-014-1, Requirement R5.1. Additionally, the second sentence of Requirement R14 requires modification because the current requirement is not correct. The Transmission Service Provider should comply with **both** SOLs and IROLs. However, Requirement R14 as written implies that the Transmission Service Provider must comply with 'either' SOLs or IROLs. NERC therefore proposes that Requirement R14 be modified as follows:

**R14.** The Transmission Service Providers shall respect ~~these SOLs or~~ and IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.

IRO-005-2, Requirement R16 should be retired. The drafting team determined that, as written, Requirement R16 is too vague to be measured. The intent of this requirement is presented more clearly in the proposed IRO-008-1 and IRO-009-1. The Reliability Coordinator is always obligated to act in the best interests of the interconnection, every day and under all conditions. IRO-014-1, IRO-015-1, and IRO-016-1 were developed to require that Reliability Coordinators act in specific ways that best serve the interests of the interconnection. IRO-014-1 requires Reliability Coordinators to develop operating procedures, processes and plans for a variety of predictable scenarios where the actions in one Reliability Coordinator's Area could impact another Reliability Coordinator's Area. By forcing the Reliability Coordinators to develop these 'joint' operating procedures, the requirement forces the Reliability Coordinators to study and agree to actions that best serve the bulk power system. Similarly, IRO-015-1 requires Reliability Coordinators to share real-time information with each another in support of ensuring that the Reliability Coordinators have information needed for situational awareness of the bulk power system beyond their own Reliability Coordinator Areas. IRO-016-1 was developed following the August 2003 blackout and it requires Reliability Coordinators to take specific actions aimed at best protecting reliability in situations when those Reliability Coordinators have a difference of opinion regarding an operating scenario.

IRO-005-2, Requirement R17 should also be retired. The requirement assigns the Reliability Coordinator responsibility for operating within SOLs. However, this is the primary responsibility of the Transmission Operator. The Reliability Coordinator is responsible for ensuring that the Transmission Operator takes appropriate actions and will act or direct the

Transmission Operator to act if needed. Additionally, the requirement can lead the Reliability Coordinator to believe it has up to 30 minutes to relieve an IROL violation – but some IROLs have a  $T_v$  that is shorter than 30 minutes, so the requirement is not technically sound.

New Standard	Modification to Associated Approved Standards
IRO-009-1 — Reliability Coordination Actions to Operate within IROLs	IRO-005-2 — Reliability Coordination — Current Day Operations <ul style="list-style-type: none"> <li>▪ Retire R3, R5, R16, and R17;</li> <li>▪ Modify R9, R13 and R14</li> </ul>

**IRO-005-2**

**R9.** The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS, or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.

**IRO-009-1**

- R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs.
- R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL’s  $T_v$ .
- R3.** When an assessment of actual or expected system conditions predicts that an IROL in its Reliability Coordinator Area will be exceeded, the Reliability Coordinator shall implement one or more Operating Processes, Procedures, or Plans (not limited to the Operating Processes, Procedures, or Plans developed for Requirements R1) to prevent exceeding that IROL.
- R4.** When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL’s  $T_v$ .

IRO-005-2, Requirement R9 should be modified. This requirement actually includes two requirements: one for coordinating outages, and one for coordinating the mitigation of IROLs and other limits. The drafting team is not proposing any modifications to the requirement for coordinating outages, but is proposing a change to the requirement for coordinating the mitigation of IROLs. The first sentence of IRO-005-2, Requirement R9 should be modified as shown below to eliminate the reference to “IROL.” IRO-009-1 includes requirements to have and execute action plans to prevent and mitigate instances of exceeding IROLs. Therefore, if IRO-005-2, Requirement R9 were left unchanged, there would be two requirements addressing the same performance obligation.

**R9.** The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, ~~IROL~~, CPS, or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.

New Standard	Modification to Associated Approved Standards
IRO-009-1 — Reliability Coordination Actions to Operate within IROLs	IRO-005-2 — Reliability Coordination — Current Day Operations <ul style="list-style-type: none"> <li>▪ Retire R3, R5, R16, and R17;</li> <li>▪ Modify R9, R13 and R14</li> </ul>

**IRO-005-2**

**R13.** Each Reliability Coordinator shall ensure that all Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities operate to prevent the likelihood that a disturbance, action, or non-action in its Reliability Coordinator Area will result in a SOL or IROL violation in another area of the Interconnection. In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.

## **IRO-009-1**

- R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs.
- R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's  $T_v$ .
- R3.** When an assessment of actual or expected system conditions predicts that an IROL in its Reliability Coordinator Area will be exceeded, the Reliability Coordinator shall implement one or more Operating Processes, Procedures, or Plans (not limited to the Operating Processes, Procedures, or Plans developed for Requirements R1) to prevent exceeding that IROL.
- R4.** When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's  $T_v$ .
- R5.** If unanimity cannot be reached on the value for an IROL or its  $T_v$ , all Reliability Coordinators who monitor that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration.

IRO-005-2, Requirement R13 should be modified. IRO-005-2, Requirement R13 has two requirements – one requirement to direct actions to ensure SOLs and IROLs are not exceeded that impact other Reliability Coordinator Areas, and one requirement to operate to the most limiting parameter in situations where there is disagreement on a limit. The first requirement in IRO-015, Requirement R13 assumes that the Reliability Coordinator can see all SOLs, and this is not always true. The Reliability Coordinator is responsible for seeing IROLs and controlling operations within its Reliability Coordinator Area so as to prevent instances of exceeding IROLs, but is not responsible for seeing all SOLs. Under the Functional Model, operating within SOLs is primarily assigned to the Transmission Operator.

IRO-014-1, Requirement R1 requires the Reliability Coordinators to work together to develop operating processes, procedures, and plans to identify what actions they will take when faced with a variety of predictable operating scenarios, including situations where the actions within one Reliability Coordinator Area impact another Reliability Coordinator Area (R1.1.6).

IRO-015-1 requires the Reliability Coordinators to follow the procedures, processes, and plans specified under IRO-014-1 and to communicate with one another under specified conditions. IRO-015-1, Requirement R1.1 specifically requires the Reliability Coordinator to make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas.

The second part of IRO-005-2, Requirement R13 requires entities to operate to the most limiting parameter when there is a difference in derived limits. This should be revised so that it is not applicable to the Reliability Coordinator. IRO-009-1, Requirement R5 has a similar requirement that is applicable totally to the Reliability Coordinator and focused solely on IROLs. If IRO-005-2, Requirement R13 is left unchanged, there will be more than one requirement addressing the same performance expectation.

Accordingly, IRO-005-2 Requirement R13 should be modified as follows:

**R13.** ~~Each Reliability Coordinator shall ensure that all Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities operate to prevent the likelihood that a disturbance, action, or non-action in its Reliability Coordinator Area will result in a SOL or IROL violation in another area of the Interconnection.~~ In instances where there is a difference in derived limits, the ~~Reliability Coordinator and its~~ Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.

New Standard	Modification to Associated Approved Standards
IRO-010-1a — Reliability Coordination Data Specification and Collection	IRO-002-1 — Reliability Coordination — Facilities <ul style="list-style-type: none"> <li>▪ Retire R2</li> </ul>

**IRO-002-1**

**R2.** Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.

**IRO-010-1a**

- R1.** The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following:
  - R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.
  - R1.2.** Mutually agreeable format.
  - R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).
  - R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.
- R2.** The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator.

IRO-002-1, Requirement R2 should be retired. IRO-010-1a requires the Reliability Coordinator to develop and distribute a data specification to ensure that entities provide data as needed to support monitoring, analyses and assessments. The proposed requirements are more explicit than the associated requirement in IRO-002-1. Therefore, IRO-002-1 should be retired.

New Standard	Modification to Associated Approved Standards
IRO-010-1a — Reliability Coordination Data Specification and Collection	IRO-004-1 — Reliability Coordination — Operations Planning <ul style="list-style-type: none"> <li>▪ Retire R4 and R5</li> </ul>

### **IRO-004-1**

- R4.** Each Transmission Operator, Balancing Authority, Transmission Owner, Generator Owner, Generator Operator, and Load-Serving Entity in the Reliability Coordinator Area shall provide information required for system studies, such as critical facility status, Load, generation, operating reserve projections, and known Interchange Transactions. This information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.
- R5.** Each Reliability Coordinator shall share the results of its system studies, when conditions warrant or upon request, with other Reliability Coordinators and with Transmission Operators, Balancing Authorities, and Transmission Service Providers within its Reliability Coordinator Area. The Reliability Coordinator shall make study results available no later than 1500 Central Standard Time for the Eastern Interconnection and 1500 Pacific Standard Time for the Western Interconnection, unless circumstances warrant otherwise.

### **IRO-010-1a**

- R1.** The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following:
  - R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.
  - R1.2.** Mutually agreeable format.
  - R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).
  - R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.
- R3.** Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. The data and information is limited to data needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.

IRO-004-1, Requirement R4 should be retired. IRO-004-1 only identifies a fraction of the reliability-related data needed by the Reliability Coordinator either for its own purposes or for sharing with other operating entities. By listing some, but not all types of data and information needed, some entities may default to developing a data specification that only includes those items identified in the standard, and not necessarily that providing for an “adequate level of reliability.” When there is a default set of criteria, the Compliance Enforcement Authority is expected to seek evidence limited to that default set of criteria, in effect driving performance to the lowest common denominator. The IRO drafting team considered developing a more comprehensive list of data and information but determined that any list developed would not meet the needs of all Reliability Coordinators.

IRO-010-1a is based on the philosophy that the Reliability Coordinator needs to know, in advance, what data and information it needs and what data and information it needs to share with other reliability entities. The periodicity for collecting the data is addressed in IRO-010-1a, Requirement R1.3.

IRO-004-1, Requirement R5 should also be retired. There are two different requirements in IRO-004-1. Requirement R5 requires that data be shared with other Reliability Coordinators and the Reliability Coordinator to share data with entities in its Reliability Coordinator Area. The first part of IRO-004-1, Requirement R5 is replaced by the proposed Requirement R3 in IRO-010-1a, requiring Reliability Coordinators to provide data to other Reliability Coordinators. The second part of the requirement in IRO-004-1, Requirement R5 is replaced by IRO-008-1, Requirement R3, requiring the Reliability Coordinator to share the results of its analyses with entities within its Reliability Coordinator Area, if those analyses meet certain conditions.

Because the new requirement is more explicit in identifying the specific conditions under which the results of the analyses is mandated, IRO-004-1, Requirements R4 and R5 should be retired.

New Standard	Modification to Associated Approved Standards
IRO-010-1a — Reliability Coordination Data Specification and Collection	IRO-005-2 — Reliability Coordination — Current Day Operations <ul style="list-style-type: none"> <li>▪ Retire R2</li> </ul>

**IRO-005-2**

**R2.** Each Reliability Coordinator shall be aware of all Interchange Transactions that wheel through, source, or sink in its Reliability Coordinator Area, and make that Interchange Transaction information available to all Reliability Coordinators in the Interconnection.

**IRO-010-1a**

**R1.** The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following:

- R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.
- R1.2.** Mutually agreeable format.
- R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).
- R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.

IRO-005-2, Requirement R2 should be retired. IRO-005-2, Requirement R2 mandates that the Reliability Coordinator “be aware of” Interchange Transactions. This requirement, as written, is not measurable as it is not possible to measure how an entity is “aware of” specific information. In addition, the e-tag system that has been implemented no longer requires the Reliability Coordinator to collect and relay interchange information to other entities. Thus, the implementation of the e-tag system replaced the need for this requirement. In addition, if a

Reliability Coordinator needs this information, the Reliability Coordinator can add this item to the list of data and information on its data specification under IRO-010-1a Requirement R1.

New Standard	Modification to Associated Approved Standards
IRO-010-1a — Reliability Coordination Data Specification and Collection	TOP-003-0 — Planned Outage Coordination <ul style="list-style-type: none"> <li>▪ Modify R1.2</li> </ul>

**TOP-003-0**

**R1.** Generator Operators and Transmission Operators shall provide planned outage information.

**R1.1.** Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements.

**R1.2.** Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements.

**IRO-010-1a**

**R1.** The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following:

**R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.

**R1.2.** Mutually agreeable format.

**R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).

**R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.

**R2.** The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator.

- R3.** Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. The data and information is limited to data needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.

TOP-003-0, Requirement R1.2 should be modified. TOP-003-0, Requirement R1.2 includes two distinctly different activities – a requirement for the Transmission Operator to provide other entities with daily outage information, and a requirement for the Reliability Coordinator to establish outage reporting requirements. Both parts of TOP-003-0 Requirement R1.2 are duplicated in the proposed IRO-010-1a standard.

IRO-010-1a, Requirement R1 requires the Reliability Coordinator to specify what data and information it needs, as well as the frequency and format for providing that data and information. Because the Reliability Coordinator needs outage data for modeling and analysis, the specification will include outage data.

IRO-010-1a, Requirement R3 requires entities to provide data and information to the Reliability Coordinator in accordance with that Reliability Coordinator’s specifications. Outage data is one of the types of data that is expected to be identified on the Reliability Coordinator’s documented data specification. If TOP-003-0 Requirement R1.2 is not modified, it will be redundant with IRO-010-1a, Requirement R3.

TOP-003-0, Requirement R1.2 should therefore be modified as follows:

- R1.2** Each Transmission Operator shall provide outage information daily to ~~its Reliability Coordinator, and to~~ affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. ~~The Reliability Coordinator shall establish the outage reporting requirements.~~

New Standard	Modification to Associated Approved Standards
IRO-010-1a — Reliability Coordination Data Specification and Collection	TOP-005-1 — Operational Reliability Information <ul style="list-style-type: none"> <li>▪ Retire R1 and R1.1</li> <li>▪ Modify Attachment 1</li> </ul>

**TOP-005-1**

**R1.** Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area.

**R1.1** Each Reliability Coordinator shall identify the data requirements from the list in Attachment 1<sup>24</sup>-TOP-005-0 “Electric System Reliability Data” and any additional operating information requirements relating to operation of the bulk power system within the Reliability Coordinator Area.

**IRO-010-1a**

**R1.** The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following:

**R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.

**R1.2.** Mutually agreeable format.

**R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).

**R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.

**R2.** The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator.

**R3.** Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and

---

<sup>24</sup> This Attachment lists the types of data that Reliability Coordinators, Balancing Authorities, and Transmission Operators are expected to provide, and are expected to share with each other.

Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. The data and information is limited to data needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.

TOP-005-1, Requirement R1 and R1.1 should be retired. The intent of TOP-005-1, Requirement R1 is for the Transmission Operator to provide the Reliability Coordinator with the data and information the Reliability Coordinator needs to perform its reliability-related tasks. The intent of TOP-005-1, Requirement R1.1 is for the Reliability Coordinator to have a specification for the data and information it needs to perform its reliability-related tasks. Combining these two very different activities in a single requirement is not appropriate as the requirements occur in different timeframes and involve different operating entities. In addition, TOP-005-1, Requirement R1, as written, implies that the Reliability Coordinator will limit its use of the data and information it collects to operations within the Reliability Coordinator Area. This does not support the Functional Model which requires the Reliability Coordinator to monitor the “Wide-Area” – an area much bigger than the Reliability Coordinator Area. Each Reliability Coordinator is expected to coordinate the activities within its Reliability Coordinator Area with other Reliability Coordinators. This coordination includes exchange of data. IRO-014-1 and IRO-015-1 are just two examples of standards with requirements for Reliability Coordinators to share data and information with other Reliability Coordinators. IRO-014-1 requires Reliability Coordinators to develop operating procedures, processes, and plans for a minimum of six types of activities where coordination between Reliability Coordinators is required. These topics include, among other things, identification of the information to be exchanged between Reliability Coordinators under specified conditions (R1.1.1) and coordination of information needed for reliability assessments (R1.1.5).

Similarly, IRO-015-1, Requirement R1 requires Reliability Coordinators to follow the procedures, plans, and process specified in IRO-014-1 by exchanging reliability-related information with other Reliability Coordinators. This requirement was aimed at ensuring that the Reliability Coordinators have information needed for situational awareness of the bulk power system beyond their own Reliability Coordinator Areas.

Under IRO-010-1a each Reliability Coordinator must document what data and information it needs and which entities must provide that data. The data needed by the Reliability Coordinator is required for reliability assessments and for real-time monitoring. Several entities, beyond the Transmission Operator and Balancing Authority (the only responsible entities identified in TOP-005-1 identified as having a requirement to provide the Reliability Coordinator with data) need to provide data to the Reliability Coordinator. Under the Functional Model, the Reliability Coordinator collects data and information not just from Transmission Operators and Balancing Authorities, but also from Generator Operators, Load-Serving Entities, Transmission Owners, and Generator Owners.

TOP-005-1 has other requirements that are not recommended for retirement. These requirements and TOP-005-0 Attachment 1 are used to support these other requirements. The first paragraph of Attachment 1 for TOP-005-1 includes a statement that the attachment identifies data that the Reliability Coordinator is expected to provide and share with others. This should be modified as shown below to clarify that the intent of the information sharing, pertaining to the retained requirements in TOP-005-1, is between Balancing Authorities and Transmission Operators. The Reliability Coordinator's requirement to share data with other Reliability Coordinators is addressed in IRO-010-1a Requirement R3.

This Attachment lists the types of data that ~~Reliability Coordinators~~, Balancing Authorities, and Transmission Operators are expected to provide, and are expected to share with ~~each other~~ Balancing Authorities and Transmission Operators.

New Standard	Modification to Associated Approved Standards
IRO-010-1a — Reliability Coordination Data Specification and Collection	TOP-006-1 — Monitoring System Conditions <ul style="list-style-type: none"> <li>▪ Modify R4</li> </ul>

**TOP-006-1**

**R4.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system’s near-term load pattern.

**IRO-010-1a**

**R1.** The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following:

**R1.1.** List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.

**R1.2.** Mutually agreeable format.

**R1.3.** Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).

**R1.4.** Process for data provision when automated Real-Time system operating data is unavailable.

**R3.** Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. The data and information is limited to data needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.

TOP-006-1, Requirement R4 should be modified. The information identified in TOP-006-1 Requirement R4 is not inclusive, and is addressed more globally for the Reliability

Coordinator in IRO-010-1a Requirements R1 and R3. The modification should be limited to removal of the Reliability Coordinator as a responsible entity.

**TOP-006-1**

- R4.** Each ~~Reliability Coordinator~~, Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.

**VI. SUMMARY OF THE RELIABILITY STANDARD DEVELOPMENT PROCEEDINGS**

**a. Development History**

The project that resulted in the development of the IRO-008-1 — Reliability Coordinator Operational Analyses and Real-time Assessments, IRO-009-1 — Reliability Coordinator Actions to Operate Within IROs, and IRO-010-1 — Reliability Coordinator Data Specification and Collection was initiated through a Standards Authorization Request in April 2002, well before the development of “Version 0” Reliability Standards. Notably, ten drafts of the standards were prepared and posted in the development of the proposed standards, which were balloted and approved by stakeholders and approved by the NERC Board of Trustees in October 2008.

From 2005 to 2007, the drafting team was on hold due to the linkages of the IRO standards with the FAC-010-1, FAC-011-1, and FAC-014-1 standards that were under development at that time. Upon completion and subsequent approval of the aforementioned FAC standards in 2007, the team re-engaged to finalize the IRO standards. As such, development activity pre-dating 2007 is acknowledged, but the discussion on the development of the IRO standards contained herein focuses on that occurring from 2007 forward, after the team re-engaged.

Draft seven of the proposed IRO standards was posted for a 45-day comment period from January 2, 2007 to February 15, 2007, just prior to the issuance of Order No. 693. There were 15

sets of comments, including comments from more than 59 individuals, representing over 39 companies, and 8 of the 10 industry segments.

The IRO Standard Drafting Team made conforming changes to the drafted standards and believed they had achieved the industry consensus needed to process through a ballot. The team requested, and the Standards Committee approved, the standards (draft 8) for a 30-day pre-ballot posting that began March 22, 2007. However, Order No. 693 was issued and resulted in the need for the team to evaluate the impacts of FERC's directives. The proposed standards were therefore removed from the pre-ballot window. In addition, the team was interested in FERC's then pending ruling on the FAC standards as these are complementary standard sets to the IRO standards. FERC ruled on the FAC standards in December 2007.

After making additional improvements for clarity that resulted from considering this "new" information available in 2007, the drafting team posted the standards (draft 9) for a 30-day comment period from March 26, 2008 through April 25, 2008. During this last posting for comments, there were 15 sets of comments, including comments from more than 100 individuals, representing over 40 companies, and 7 of the 10 industry segments.

Based on the comments received from stakeholders and FERC staff, and the drafting team's consideration of those comments, the drafting team made the following modifications to the standards:

#### **IRO-008-1**

- Added clarifying language to the definition of Operational Planning Analysis to clarify the analysis may be performed a day ahead or as much as 12 months ahead of real time.
- Added clarifying language to the VSLs for R2 to identify the VSLs are based on the review of a specific sample size.

## **IRO-009-1**

- The drafting team removed 4.2 from the Applicability Section (limited applicability to the IROLs associated with contingencies identified in FAC-010 and FAC-014) of the standard because it duplicated information already included in the requirements.
- Modified R1–R5 and associated measures and VSLs to clarify the action plans and actions in this standard are limited to those associated with IROLs in the Reliability Coordinator’s own Reliability Coordinator Area. IRO-016 addresses coordination when there is an IROL in another Reliability Coordinator’s Area, or when there is a need to coordinate development and execution of action plans involving more than one Reliability Coordinator.
- Added a parenthetical phrase to R3 to clarify the Reliability Coordinator may use any action plan at its disposal to prevent or mitigate an instance of exceeding an IROL.
- Added a parenthetical phrase to R5 to clarify “the most conservative value” is the value that has the least impact on reliability.
- Eliminated the “high” VSL for R3 in support of stakeholder comments indicating the requirement is aimed at actions, not at preventing an instance of exceeding an IROL.
- Eliminated one of the two “severe” VSLs for R5 in support of stakeholder comments indicating the two VSLs were redundant.

## **IRO-010-1**

- Modified R1 and R1.1 (in support of comments from FERC staff and stakeholders) by adding words from the purpose and from R3 to clarify the intent of the requirement is to collect data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments to prevent instability, uncontrolled separation, and cascading outages.
- Added a data retention period for R3 based on stakeholder comments. This data retention period matches the period recommended by the Compliance Program.
- Revised the VSLs for R1 by reversing the VSLs for “Lower” and “Moderate” based on stakeholder comments indicating missing the “mutually agreeable format” was less severe than missing the process for data provision when automated Real-Time system operating data is unavailable.

### **Implementation Plan:**

- Removed the recommendation to retire Attachment 1 in TOP-005-2 because stakeholders identified the attachment is still needed to support R3 in TOP-005-2.

### **Definition of Operational Planning Analysis**

- Added language to clarify the Operational Planning Analysis can be performed a day ahead or as much as 12 months ahead.

The drafting team did not adopt the following proposed modifications from stakeholders or from FERC staff:

- Some commenters, who agreed monitoring is a supporting activity, indicated a concern that removing the monitoring requirement may impact other requirements in other standards that rely upon monitoring. The drafting team did not return the monitoring requirements to the standards. Entities that do not have real-time system operators actively monitoring the status of the bulk power system cannot achieve the performance-related requirements in this standard and in other standards.
- Some commenters wanted the “Severe” VSL for failing to resolve an IROL within the IROL’s  $T_v$  to be a “High” VSL when the Reliability Coordinator took action to resolve the IROL but was not successful. The drafting team believes this change would violate the guidelines for setting VSLs. The intent of the requirement is not met if the IROL is not resolved within the IROL  $T_v$ . The guidelines for setting VSLs indicate if the intent of the requirement is mostly or totally unmet, then the VSL should be “Severe.”
- FERC staff interpreted one of the directives in Order No. 693 as requiring the Reliability Coordinator to have action plans to implement if a contingency occurs during the system adjustment period following an instance of exceeding an IROL, but before the IROL  $T_v$  has been reached and before the system has been returned to a stable state. The drafting team did not interpret the directive (paragraph 1601 of Order No. 693) in this manner. The IRO standards require an action plan for all IROLs identified a day or more ahead of the current day for all IROLs within the Reliability Coordinator’s Reliability Coordinator Area. The drafting team does not think it is practical to develop action plans for all possible contingencies that could occur during the adjustment period while the system is being returned to a stable state.
- There were several commenters who indicated the VRFs for requirements associated with having action plans should be modified from “Medium” to “High.” The drafting team had posted the VRFs for comment, and the same commenters had earlier agreed the VRFs should be “Medium.” Because the drafting team had achieved what appeared to be consensus on the VRFs in the earlier posting, the drafting team did not make the requested change. Failure to have an action plan should not, by itself, cause or contribute to uncontrolled separation, instability, or cascading.

The proposed standards (final draft 10) and associated definition were moved to a 30-day pre-ballot review period that commenced on June 20, 2008. Initial ballots were conducted from July 21 to July 30, 2008 and recirculation ballots were conducted from August 12, 2008 to August 21, 2008. As listed below, all ballots achieved a quorum and a high-weighted affirmative-approval percentage. For all three standards, the initial ballots included some

negative ballots submitted with comments, which initiated the need for recirculation ballots.

Some balloters listed more than one reason for their negative ballot. A small number of balloters changed votes from the initial to recirculation ballots; votes moved in both directions but led to a slightly decreased approval percentage.

Standard	Initial Ballots			Recirculation Ballots		
	Quorum	Approval	Negatives	Quorum	Approval	Negatives
IRO-008-1	92.67	91.71	16	93.72	89.49	22
IRO-009-1	92.63	89.44	19	93.68	86.53	27
IRO-010-1	92.71	88.40	23	93.75	85.95	30

The reasons cited for the negative ballots include the following:

**IRO-008-1, IRO-009-1 and IRO-010-1**

- One commenter mentioned the standards introduce new terms that are not defined in the NERC Glossary: “Operations Planning,” “Same Day Operations,” and “Real-time Operations.”

**IRO-008-1**

- Two balloters suggest instead of retiring IRO-004-1, Requirement R2, it should be moved to IRO-008-1; balloters indicated this may clarify the “unacceptable or undue burden” criteria.
- One balloter indicated the revised IRO-008-1, Requirement R1 language does not adequately address the need for the Reliability Coordinator to pay attention to how the actions it takes for its area can affect neighboring Reliability Coordinator areas; the balloter recommends language addressing this be added back to the standard.
- Five balloters indicated “the SDT has taken away the ability of entities to obtain study data from the Reliability Coordinator unless the entities area is specifically expected to take actions for an IROL. The current standard says that we may obtain this data upon request at any time. Entities should be allowed to obtain data from the Reliability Coordinator upon request as they have now.”
- One balloter believes allowing next-day analyses of the expected system conditions to take place as many as 12 months ahead is too long.

## **IRO-009-1**

- Three balloters believe the references directing the Transmission Operator, Balancing Authority, and Transmission Service Provider to take actions should remain.
- One balloter agreed with R4 that the operator should act without delay to mitigate the event but was concerned that this five-minute documentation requirement could distract the operator.
- Seven balloters did not agree with the removal of the references to coordinating with the Transmission Operator and Balancing Authority; one balloter recommended that language be added acknowledging coordination must take place during the Operations Planning Time Horizon.
- One balloter believed the revised language does not make it sufficiently clear the Balancing Authority and Transmission Operator in conjunction with the Reliability Coordinator need to be involved in the development of IROL mitigation plans for their systems.
- Two balloters indicated the standard does not direct the Reliability Coordinator to inform or communicate with facilities that may be part of plans or procedures for an IROL violation forecast, which could invalidate the plans or procedures the Reliability Coordinator is putting in place.
- One balloter indicated Requirements R1 and R2 contradict each other, implying that Requirement R2 allows for a violation of Requirement R1. “R1 states ‘to prevent exceeding those IROLs,’ while R2 states ‘to mitigate the magnitude and duration of exceeding that IROL’.”
- Two balloters disagreed with the revisions to Requirement R3.

## **IRO-010-1**

- Seven balloters believe the proposed replacement requirements (IRO-010-1, Requirements R1, R2, and R3; IRO-008-1, Requirement R3) take away the ability of entities to obtain study data from the Reliability Coordinator unless entities are specifically expected to take actions for an IROL. The balloters state the current standard allows a data request at any time and believe this provision should remain.
- Four balloters believe TOP-003-0 should remain as it stands, stating that having the requirement to report outage data to the Reliability Coordinator in two places is better than not having it in TOP-003-0.
- Five balloters suggested interchange transaction data should be added to the new IRO-010-1, Requirement R1.
- Nine balloters indicated, either generally or specifically to standards and requirements, the Reliability Coordinator should still be required to share data with the Transmission Operators and Balancing Authorities.
  - Four balloters agree data requirements will be more detailed in the new standard, but stated information should not be lost by removing the Reliability Coordinator from TOP-005-1, Attachment 1.

- Four balloters disagree with removing the Reliability Coordinator from TOP-006-1, Requirement R4.
- Three balloters do not believe the IRO-010-1, Section C.M3 text is sufficient to be able to know what is adequate to confirm data were provided, particularly continually updated ICCP data used for situational awareness and online reliability tools.
- Three balloters suggested IRO-010-1 tie the specification of data and information requirements solely to the needs for monitoring and analyzing the control of IROLs.
- One balloter indicated the proposed standard allows for the Reliability Coordinator to ask for the addition of a significant amount of SCADA installations at the expense of the Transmission Owners in transmission areas that are not pertinent to the purpose of IRO-010-1.
- One balloter indicated the phrase “with which it has a reliability relationship” lacks clarity.
- Two balloters indicated the wording change in Requirement R1 from Real-Time Monitoring to Real-time monitoring is inconsistent with other references in the standard.
- AESO indicated it was “concerned the data the RC may decide to be required to be provided may be deemed to be confidential as per laws in Alberta, and hence the AESO will not be allowed by law to provide those to the RC.”

In response to these comments, the drafting team made the following clarifying changes to the standards before the recirculation ballot:

- The drafting team corrected the typographical error in the red line version of IRO-004 — it showed “R7” instead of “R1”.
- The drafting team also updated the references in the measures for IRO-005 to ensure they reference the correct requirements, using the new requirement numbers.

The drafting team did not make any other modifications based on comments submitted with the initial ballot for this standard. The standards proceeded through the recirculation ballot with the results as provided above.

## **VII. SUMMARY OF PROCEEDINGS FOR INTERPRETATION OF IRO-010-1a**

All persons who are directly or materially affected by the reliability of the North American bulk power system are permitted to request an interpretation of the Reliability Standard, as discussed in NERC’s *Reliability Standards Development Procedure*. When

requested, NERC will assemble a team with the relevant expertise to address the interpretation request and, within 45 days, present a formal interpretation for industry ballot. If approved by the ballot pool and the NERC Board of Trustees, the interpretation is appended to the Reliability Standard and filed for approval by FERC and regulatory authorities in Canada to be made effective when approved. When the affected Reliability Standard is next revised using the Reliability Standards Development Process, the interpretation will then be incorporated into the Reliability Standard. In this case, because the interpretation for IRO-010-1 was completed before the filing of IRO-010-1, NERC includes the development discussion of the interpretation in this section and requests FERC approval of the IRO-010-1 standard as interpreted, labeled as IRO-010-1a in **Exhibit E**.

The formal interpretation set out in **Exhibit E** has been developed and approved by industry stakeholders using NERC's *Reliability Standards Development Procedure*; and approved by the NERC Board of Trustees on August 5, 2009. IRO-010-1 — Reliability Coordinator Data Specification and Collection is designed to prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection by mandating that the Reliability Coordinator have the data it needs to monitor and assess the operation of its Reliability Coordinator Area. In Requirement R1, the Reliability Coordinator shall have a documented specification for data and information in a mutually agreeable format (as required by Requirement R1.2) to build and maintain models to support real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. Requirement R3 requires each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner to

provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.

The WECC Reliability Coordination Subcommittee requested clarification on:

1. the type of data to be supplied to the Reliability Coordinator;
2. which entities are ultimately responsible for ensuring data are provided; and,
3. what actions are expected of the Reliability Coordinator regarding a “mutually acceptable format.”

The interpretation team provided the following clarifications:

- The data to be supplied in Requirement R3 applies to the documented specification for data and information referenced in Requirement R1.
- The intent of Requirement R3 is for each responsible entity to ensure that its data and information (as stated in the documented specification in Requirement R1) are provided to the Reliability Coordinator. Another entity may provide that data or information to the Reliability Coordinator on behalf of the Responsible Entity, but the responsibility remains with the Responsible Entity. There is neither intent nor obligation for any entity to compile information from other entities and provide it to the Reliability Coordinator.
- Requirement R1.2 mandates that the parties will reach a mutual agreement with respect to the format of the data and information. If the parties can not mutually agree on the format, it is expected that they will negotiate to reach agreement or enter into dispute resolution to resolve the disagreement.

The initial ballot on the interpretation was conducted from April 22, 2009 to May 1, 2009, and achieved a quorum of 88.64 percent with a weighted affirmative approval of 84.77 percent. There were 24 negative ballots submitted for the initial ballot, and 16 of those ballots included a comment, which initiated the need for a recirculation ballot. The recirculation ballot was conducted from May 26, 2009 to June 5, 2009, and achieved a quorum of 90.45 percent with a weighted affirmative approval of 85.76 percent. There were 22 negative ballots submitted for the recirculation ballot, and 14 of those ballots included a comment.

The primary reasons cited for the negative ballots included the following:

- All balloters who voted negative listed an increased workload as a concern.

- Eleven balloters indicated the language of the interpretation could be read to mean there could be as many different negotiated methods as there are entities providing data to the Reliability Coordinator, or it could be read as requiring one agreement describing what constitutes a “mutually agreeable” format with all parties in the region.
- Six balloters did not support the “dispute resolution” suggestion, indicating these processes are time consuming and do not support reliability objectives of NERC standards.
- Four balloters indicated that Question 2, though it provides clarity, may result in an increased number of entities that perceive an obligation to provide data directly to Reliability Coordinators. The balloters cited duplicative reporting and increased burden on the WECC Reliability Coordinator department as concerns.
- Two balloters indicated the WECC Reliability Coordinator staff believes the current formats are reasonable and work with the current processes and tools; the balloters suggested one agreement with entities under its jurisdiction.

In response to the comments, the IRO standards drafting team that responded to the request stated it did not intend for the interpretation to dictate there be only one mutually agreeable format for all data and information exchange. If the Reliability Coordinator has a current data exchange format or formats with any entity or entities with which they have a reliability relationship, then that is acceptable. Many formats for data exchange exist today. The standard is designed to require “what” an entity must do, not “how” to do it. The statement that the “WECC RC staff believes that the current formats are reasonable and that they work with the current processes and tools” is the intent of the interpretation.

Others offering comments asked for clarification on the dispute resolution process. The drafting team did not think it appropriate to dictate a dispute resolution process in the interpretation. In many cases, the entities in dispute will be from the same Region; therefore, that Region’s dispute resolution process will be appropriate. However, some disputes will cross Regions or even involve more than two Regions. In those cases, the parties could agree to abide by any involved Region’s dispute resolution process.

## VIII. CONCLUSION

For the reasons stated above, NERC requests that FERC approve three new Reliability Standards, IRO-008-1, IRO-009-1, and IRO-010-1a as set out in **Exhibit A**, in accordance with Section 215(d)(1) of the FPA and Part 39.5 of FERC's regulations. NERC also requests that the herein described revisions to TOP-003-0 — Planned Outage Coordination, Requirement R1.2; TOP-005-1 — Operational Reliability Information, Attachment 1; TOP-006-1 — Monitoring System Conditions, Requirement R4; and IRO-005-2 — Reliability Coordination — Current Day Operations, Requirements R9, R13, and R14 be approved. Additionally, NERC requests that the proposed retirement of EOP-001-0 — Emergency Operations Planning, Requirement R2; IRO-002-1 — Reliability Coordination — Facilities, Requirement R2; IRO-004-1 — Reliability Coordination — Operations Planning Requirements R1 through R6; and IRO-005-2 — Reliability Coordination — Current Day Operations Requirements R2, R3, and R5, R16 and R17; and TOP-005-1 — Operational Reliability Information, Requirements R1 and R1, as also set forth in **Exhibit A**, be approved as part of this filing. NERC requests that approvals be made effective in accordance with the effective date provisions set forth in the proposed Reliability Standards. NERC also requests approval of two new definitions: Operational Planning Analysis and Real-time Assessment. Finally, NERC requests that FERC approve the interpretation to the IRO-010 standard, which is designated as IRO-010-1a in this filing.

David N. Cook

Reliability Corporation*

**Exhibit A**

Reliability Standards Proposed for Approval

**Proposed New Standard IRO-008-1**  
**(Includes Proposed Definitions for Operational Planning Analysis**  
**and Real-time Assessment)**

### **Definitions of Terms Used in Standard**

*This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.*

**Operational Planning Analysis:** An analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.).

**Real-time Assessment:** An examination of existing and expected system conditions, conducted by collecting and reviewing immediately available data.

## A. Introduction

1. **Title:** Reliability Coordinator Operational Analyses and Real-time Assessments
2. **Number:** IRO-008-1
3. **Purpose:** To prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection by ensuring that the Bulk Electric System is assessed during the operations horizon.
4. **Applicability**
  - 4.1. Reliability Coordinator.
5. **Proposed Effective Date:**

In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

## B. Requirements

- R1.** Each Reliability Coordinator shall perform an Operational Planning Analysis to assess whether the planned operations for the next day within its Wide Area, will exceed any of its Interconnection Reliability Operating Limits (IROLs) during anticipated normal and Contingency event conditions. (*Violation Risk Factor: Medium*) (*Time Horizon: Operations Planning*)
- R2.** Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs. (*Violation Risk Factor: High*) (*Time Horizon: Real-time Operations*)
- R3.** When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions. (*Violation Risk Factor: Medium*) (*Time Horizon: Real-time Operations or Same Day Operations*)

## C. Measures

- M1.** The Reliability Coordinator shall have, and make available upon request, the results of its Operational Planning Analyses.
- M2.** The Reliability Coordinator shall have, and make available upon request, evidence to show it conducted a Real-Time Assessment at least once every 30 minutes. This evidence could include, but is not limited to, dated computer log showing times the assessment was conducted, dated checklists, or other evidence.

- M3.** The Reliability Coordinator shall have and make available upon request, evidence to confirm that it shared the results of its Operational Planning Analyses or Real-Time Assessments with those entities expected to take actions based on that information. This evidence could include, but is not limited to, dated operator logs, dated voice recordings, dated transcripts of voice records, dated facsimiles, or other evidence.

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance Enforcement Authority**

For Reliability Coordinators that work for the Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

For Reliability Coordinators that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

#### **1.2. Compliance Monitoring Period and Reset Time Frame**

Not applicable.

#### **1.3. Compliance Monitoring and Enforcement Processes**

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

#### **1.4. Data Retention**

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

The Reliability Coordinator shall retain evidence for Requirement R1, Measure M1 and Requirement R2, Measure M2 for a rolling 30 days. The Reliability Coordinator shall keep evidence for Requirement R3, Measure M3 for a rolling three months.

#### **1.5. Additional Compliance Information**

None.

2. Violation Severity Levels

Requirement	Lower	Moderate	High	Severe
<b>R1</b>	Performed an Operational Planning Analysis that covers all aspects of the requirement for all except one of 30 days. (R1)	Performed an Operational Planning Analysis that covers all aspects of the requirement for all except two of 30 days. (R1)	Performed an Operational Planning Analysis that covers all aspects of the requirement for all except three of 30 days. (R1)	Missed performing an Operational Planning Analysis that covers all aspects of the requirement for four or more of 30 days. (R1)
<b>R2</b>	For any sample 24 hour period within the 30 day retention period, a Real-time Assessment was not conducted for one 30-minute period. within that 24-hour period (R2)	For any sample 24 hour period within the 30 day retention period, Real-time Assessments were not conducted for two 30-minute periods within that 24-hour period (R2)	For any sample 24 hour period within the 30 day retention period, Real-time Assessments were not conducted for three 30-minute periods within that 24-hour period (R2)	For any sample 24 hour period within the 30 day retention period, Real-time Assessments were not conducted for more than three 30-minute periods within that 24-hour period (R2)
<b>R3</b>		Shared the results with some but not all of the entities that were required to take action (R3)		Did not share the results of its analyses or assessments with any of the entities that were required to take action (R3).

**Version History**

<b>Version</b>	<b>Date</b>	<b>Action</b>	<b>Change Tracking</b>
1	October 17, 2008	Adopted by Board of Trustees	New

**Proposed New Standard IRO-009-1**

## A. Introduction

1. **Title:** Reliability Coordinator Actions to Operate Within IROLs
2. **Number:** IRO-009-1
3. **Purpose:** To prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection by ensuring prompt action to prevent or mitigate instances of exceeding Interconnection Reliability Operating Limits (IROLs).
4. **Applicability:**
  - 4.1. Reliability Coordinator.
5. **Proposed Effective Date:** In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

## B. Requirements

- R1.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) that can be implemented in time to prevent exceeding those IROLs. (*Violation Risk Factor: Medium*) (*Time Horizon: Operations Planning or Same Day Operations*)
- R2.** For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's  $T_v$ . (*Violation Risk Factor: Medium*) (*Time Horizon: Operations Planning or Same Day Operations*)
- R3.** When an assessment of actual or expected system conditions predicts that an IROL in its Reliability Coordinator Area will be exceeded, the Reliability Coordinator shall implement one or more Operating Processes, Procedures or Plans (not limited to the Operating Processes, Procedures, or Plans developed for Requirements R1) to prevent exceeding that IROL. (*Violation Risk Factor: High*) (*Time Horizon: Real-time Operations*)
- R4.** When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's  $T_v$ . (*Violation Risk Factor: High*) (*Time Horizon: Real-time Operations*)

- R5.** If unanimity cannot be reached on the value for an IROL or its  $T_v$ , each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration. (*Violation Risk Factor: High*) (*Time Horizon: Real-time Operations*)

### **C. Measures**

- M1.** Each Reliability Coordinator shall have, and make available upon request, evidence to confirm that it has Operating Processes, Procedures, or Plans to address both preventing and mitigating instances of exceeding IROLs in accordance with Requirement R1 and Requirement R2. This evidence shall include a list of any IROLs (and each associated  $T_v$ ) identified in advance, along with one or more dated Operating Processes, Procedures, or Plans that that will be used.
- M2.** Each Reliability Coordinator shall have, and make available upon request, evidence to confirm that it acted or directed others to act in accordance with Requirement R3 and Requirement R4. This evidence could include, but is not limited to, Operating Processes, Procedures, or Plans from Requirement R1, dated operating logs, dated voice recordings, dated transcripts of voice recordings, or other evidence.
- M3.** For a situation where Reliability Coordinators disagree on the value of an IROL or its  $T_v$  the Reliability Coordinator shall have, and make available upon request, evidence to confirm that it used the most conservative of the values under consideration, without delay. Such evidence could include, but is not limited to, dated computer printouts, dated operator logs, dated voice recordings, dated transcripts of voice recordings, or other equivalent evidence. (R5)

### **D. Compliance**

#### **1. Compliance Monitoring Process**

##### **1.1. Compliance Enforcement Authority**

For Reliability Coordinators that work for the Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

For Reliability Coordinators that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

##### **1.2. Compliance Monitoring Period and Reset Time Frame**

Not applicable.

##### **1.3. Compliance Monitoring and Enforcement Processes**

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

Exception Reporting

#### 1.4. Data Retention

The Reliability Coordinator, shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The Reliability Coordinator shall retain evidence of Requirement R1, Requirement R2, and Measure M1, for a rolling 12 months.

The Reliability Coordinator shall retain evidence of Requirement R3, Requirement R4, Requirement R5, Measure M2, and Measure M3 for a rolling 12 months.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records, and all IROL Violation Reports submitted since the last audit.

#### 1.5. Additional Compliance Information

**Exception Reporting:** For each instance of exceeding an IROL for time greater than IROL  $T_v$ , the Reliability Coordinator shall submit an IROL Violation Report to its Compliance Enforcement Authority within 30 days of the initiation of the event.

2. Violation Severity Levels

Requirement	Lower	Moderate	High	Severe
<b>R1</b>				An IROL in its Reliability Coordinator Area was identified one or more days in advance and the Reliability Coordinator does not have an Operating Process, Procedure, or Plan that identifies actions to prevent exceeding that IROL. (R1)
<b>R2</b>				An IROL in its Reliability Coordinator Area was identified one or more days in advance and the Reliability Coordinator does not have an Operating Process, Procedure, or Plan that identifies actions to mitigate exceeding that IROL within the IROL's T <sub>v</sub> . (R2)
<b>R3</b>				An assessment of actual or expected system conditions predicted that an IROL in the Reliability Coordinator's Area would be exceeded, but no Operating Processes, Procedures, or Plans were implemented. (R3)
<b>R4</b>			Actual system conditions showed that there was an instance of exceeding an IROL in its Reliability Coordinator Area, and there was a delay of five minutes or more before acting or directing others to act to mitigate the magnitude and duration of the instance of exceeding that IROL, however the IROL was mitigated within the IROL T <sub>v</sub> . (R4)	Actual system conditions showed that there was an instance of exceeding an IROL in its Reliability Coordinator Area, and that IROL was not resolved within the IROL's T <sub>v</sub> . (R4)
<b>R5</b>	Not applicable.	Not applicable.	Not applicable.	There was a disagreement on the value of the IROL or its T <sub>v</sub> and the most conservative limit under consideration was not used. (R5)

**Proposed New Standard IRO-010-1a**

## A. Introduction

1. **Title:**           **Reliability Coordinator Data Specification and Collection**
2. **Number:**       IRO-010-1a
3. **Purpose:**        To prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the interconnection by ensuring the Reliability Coordinator has the data it needs to monitor and assess the operation of its Reliability Coordinator Area.
4. **Applicability**
  - 4.1. Reliability Coordinator.
  - 4.2. Balancing Authority.
  - 4.3. Generator Owner.
  - 4.4. Generator Operator.
  - 4.5. Interchange Authority.
  - 4.6. Load-Serving Entity.
  - 4.7. Transmission Operator.
  - 4.8. Transmission Owner.
5. **Proposed Effective Date:**   In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

## B. Requirements

- R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following: (*Violation Risk Factor: Low*) (*Time Horizon: Operations Planning*)
  - R1.1. List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.
  - R1.2. Mutually agreeable format.
  - R1.3. Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).
  - R1.4. Process for data provision when automated Real-Time system operating data is unavailable.

- R2.** The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator. (*Violation Risk Factor: Low*) (*Time Horizon: Operations Planning*)
- R3.** Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (*Violation Risk Factor: Medium*) (*Time Horizon: Operations Planning; Same-day Operations; Real-time Operations*)

### **C. Measures**

- M1.** The Reliability Coordinator shall have, and make available upon request, a documented data specification that contains all elements identified in Requirement R1.
- M2.** The Reliability Coordinator shall have, and make available upon request, evidence that it distributed its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator. This evidence could include, but is not limited to, dated paper or electronic notice used to distribute its data specification showing recipient, and data or information requested or other equivalent evidence. (R2)
- M3.** The Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Reliability Coordinator, Transmission Operator and Transmission Owner shall each have, and make available upon request, evidence to confirm that it provided data and information, as specified in Requirement R3. This evidence could include, but is not limited to, dated operator logs, dated voice recordings, dated computer printouts, dated SCADA data, or other equivalent evidence.

### **D. Compliance**

#### **1. Compliance Monitoring Process**

##### **1.1. Compliance Enforcement Authority**

For Reliability Coordinators and other functional entities that work for the Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

##### **1.2. Compliance Monitoring Period and Reset Time Frame**

Not applicable.

##### **1.3. Compliance Monitoring and Enforcement Processes**

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

#### **1.4.Data Retention**

The Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Reliability Coordinator, Transmission Operator and Transmission Owner, shall each keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

The Reliability Coordinator shall retain its current, in force data specification for Requirement R1, Measure M1.

The Reliability Coordinator shall keep evidence of its most recent distribution of its data specification and evidence to show the data supplied in response to that specification for Requirement R2, Measure M2 and Requirement R3 Measure M3.

For data that is requested in accordance with Requirement R2, the Balancing Authority, Generator Owner, Generator Operator, Load-Serving Entity, Reliability Coordinator, Transmission Operator and Transmission Owner shall keep evidence used to show compliance with Requirement R3 Measure M3 for the Reliability Coordinator's most recent data specification for a rolling 90 calendar days.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

#### **1.5. Additional Compliance Information**

**1.5.1** None.

2. Violation Severity Levels

Requirement	Lower	Moderate	High	Severe
<b>R1</b>	Data specification is complete with the following exception: Missing the mutually agreeable format. (R1.2)	Data specification is complete with the following exception – no process for data provision when automated Real-Time system operating data is unavailable. (R1.4)	Data specification incomplete (missing either the list of required data (R1.1), or the timeframe for providing data. (R1.3)	No data specification (R1)
<b>R2</b>	Distributed its data specification to greater than or equal to 95% but less than 100% of the entities that have Facilities monitored by the Reliability Coordinator and the entities that provide the Reliability Coordinator with Facility status.	Distributed its data specification to greater than or equal to 85% but less than 95% of the entities that have Facilities monitored by the Reliability Coordinator and the entities that provide the Reliability Coordinator with Facility status. (R2)	Distributed its data specification to greater than or equal to 75% - but less than 85% of the entities that have Facilities monitored by the Reliability Coordinator and the entities that provide the Reliability Coordinator with Facility status. (R2)	Data specification distributed to less than 75% of the entities that have Facilities monitored by the Reliability Coordinator and the entities that provide the Reliability Coordinator with Facility status. (R2)
<b>R3</b>	Provided greater than or equal to 95% but less than 100% of the data and information as specified. (R3)	Provided greater than or equal to 85% but less than 95% of the data and information as specified. (R3)	Provided greater than or equal to 75% but less than 85% of the data and information as specified. (R3)	Provided less than 75% of the data and information as specified. (R3)

**E. Regional Variances**

1. Appendix 1 – Interpretation of Requirements R1.2 and R3

**Version History**

<b>Version</b>	<b>Date</b>	<b>Action</b>	<b>Change Tracking</b>
1	October 17, 2008	Adopted by Board of Trustees	New
1a	August 5, 2009	Added Appendix 1: Interpretation of R1.2 and R3 as approved by Board of Trustees	Addition

## Appendix 1

### Interpretation of Requirements R1.2 and R3

Text of Requirements R1.2 and R3

- R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following:**
- R1.1. List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments.**
  - R1.2. Mutually agreeable format.**
  - R1.3. Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).**
  - R1.4. Process for data provision when automated Real-Time system operating data is unavailable.**
- R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.**

#### Question 1

*Does the phrase, “as specified” in Requirement R3 reference the documented data and information specification in IRO-010-1 Requirement R1, or is the data and information in Requirement R3 “any” data and information that the Reliability Coordinator might request?*

**Response: The data to be supplied in Requirement R3 applies to the documented specification for data and information referenced in Requirement R1.**

#### Question 2

*Is the intent of Requirement R3 to have each responsible entity provide its own data and information to its Reliability Coordinator, or is the intent to have responsible entities provide aggregated data (collected and compiled from other entities at the direction of the Reliability Coordinator) to the Reliability Coordinator?*

**Response: The intent of Requirement R3 is for each responsible entity to ensure that its data and information (as stated in the documented specification in Requirement R1) are provided to the Reliability Coordinator.**

Another entity may provide that data or information to the Reliability Coordinator on behalf of the responsible entity, but the responsibility remains with the responsible entity. There is neither intent nor obligation for any entity to compile information from other entities and provide it to the Reliability Coordinator.

Question 3

*Under Requirement R1.2, what actions (on the part of the Reliability Coordinator) are expected to support the “mutually acceptable format” for submission of data and information?*

**Response: Requirement R1.2 mandates that the parties will reach a mutual agreement with respect to the format of the data and information. If the parties can not mutually agree on the format, it is expected that they will negotiate to reach agreement or enter into dispute resolution to resolve the disagreement.**

**Proposed Clean and Redline of EOP-001-1**

### A. Introduction

1. **Title:**       **Emergency Operations Planning**
2. **Number:**    EOP-001-1
3. **Purpose:**     Each Transmission Operator and Balancing Authority needs to develop, maintain, and implement a set of plans to mitigate operating emergencies. These plans need to be coordinated with other Transmission Operators and Balancing Authorities, and the Reliability Coordinator.
4. **Applicability**
  - 4.1. Balancing Authorities.
  - 4.2. Transmission Operators.
5. **Proposed Effective Dates:**

In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after Board of Trustee adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

### B. Requirements

- R1. Balancing Authorities shall have operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities.
- R2. Each Transmission Operator and Balancing Authority shall:
  - R2.1. Develop, maintain, and implement a set of plans to mitigate operating emergencies for insufficient generating capacity.
  - R2.2. Develop, maintain, and implement a set of plans to mitigate operating emergencies on the transmission system.
  - R2.3. Develop, maintain, and implement a set of plans for load shedding.
  - R2.4. Develop, maintain, and implement a set of plans for system restoration.
- R3. Each Transmission Operator and Balancing Authority shall have emergency plans that will enable it to mitigate operating emergencies. At a minimum, Transmission Operator and Balancing Authority emergency plans shall include:
  - R3.1. Communications protocols to be used during emergencies.
  - R3.2. A list of controlling actions to resolve the emergency. Load reduction, in sufficient quantity to resolve the emergency within NERC-established timelines, shall be one of the controlling actions.
  - R3.3. The tasks to be coordinated with and among adjacent Transmission Operators and Balancing Authorities.
  - R3.4. Staffing levels for the emergency.
- R4. Each Transmission Operator and Balancing Authority shall include the applicable elements in Attachment 1-EOP-001-0 when developing an emergency plan.

- R5.** The Transmission Operator and Balancing Authority shall annually review and update each emergency plan. The Transmission Operator and Balancing Authority shall provide a copy of its updated emergency plans to its Reliability Coordinator and to neighboring Transmission Operators and Balancing Authorities.
- R6.** The Transmission Operator and Balancing Authority shall coordinate its emergency plans with other Transmission Operators and Balancing Authorities as appropriate. This coordination includes the following steps, as applicable:
  - R6.1.** The Transmission Operator and Balancing Authority shall establish and maintain reliable communications between interconnected systems.
  - R6.2.** The Transmission Operator and Balancing Authority shall arrange new interchange agreements to provide for emergency capacity or energy transfers if existing agreements cannot be used.
  - R6.3.** The Transmission Operator and Balancing Authority shall coordinate transmission and generator maintenance schedules to maximize capacity or conserve the fuel in short supply. (This includes water for hydro generators.)
  - R6.4.** The Transmission Operator and Balancing Authority shall arrange deliveries of electrical energy or fuel from remote systems through normal operating channels.

**C. Measures**

- M1.** The Transmission Operator and Balancing Authority shall have its emergency plans available for review by the Regional Reliability Organization at all times.
- M2.** The Transmission Operator and Balancing Authority shall have its two most recent annual self-assessments available for review by the Regional Reliability Organization at all times.

**D. Compliance**

**1. Compliance Monitoring Process**

**1.1. Compliance Monitoring Responsibility**

Regional Reliability Organization.

**1.2. Compliance Monitoring Period and Reset Time Frame**

The Regional Reliability Organization shall review and evaluate emergency plans every three years to ensure that the plans consider the applicable elements of Attachment 1-EOP-001-0.

The Regional Reliability Organization may elect to request self-certification of the Transmission Operator and Balancing Authority in years that the full review is not done.

Reset: one calendar year.

**1.3. Data Retention**

Current plan available at all times.

**1.4. Additional Compliance Information**

Not specified.

## Standard EOP-001-1 — Emergency Operations Planning

### 2. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for less than 25% of the adjacent BAs. Or less than 25% of those agreements do not contain provisions for emergency assistance.	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for 25% to 50% of the adjacent BAs.  Or 25 to 50% of those agreements do not contain provisions for emergency assistance.	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for 50% to 75% of the adjacent BAs.  Or 50% to 75% of those agreements do not contain provisions for emergency assistance.	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for 75% or more of the adjacent BAs.  Or more than 75% of those agreements do not contain provisions for emergency assistance.
R2	The Transmission Operator or Balancing Authority failed to comply with one (1) of the sub-components.	The Transmission Operator or Balancing Authority failed to comply with two (2) of the sub-components.	The Transmission Operator or Balancing Authority has failed to comply with three (3) of the sub-components.	The Transmission Operator or Balancing Authority has failed to comply with four (4) of the sub-components.
R2.1	The Transmission Operator or Balancing Authority's emergency plans to mitigate insufficient generating capacity are missing minor details or minor program/procedural elements.	The Transmission Operator or Balancing Authority's has demonstrated the existence of emergency plans to mitigate insufficient generating capacity emergency plans but the plans are not maintained.	The Transmission Operator or Balancing Authority's emergency plans to mitigate insufficient generating capacity emergency plans are neither maintained nor implemented.	The Transmission Operator or Balancing Authority has failed to develop emergency mitigation plans for insufficient generating capacity.
R2.2	The Transmission Operator or Balancing Authority's plans to mitigate transmission system emergencies are missing minor details or minor program/procedural elements.	The Transmission Operator or Balancing Authority's has demonstrated the existence of transmission system emergency plans but are not maintained.	The Transmission Operator or Balancing Authority's transmission system emergency plans are neither maintained nor implemented.	The Transmission Operator or Balancing Authority has failed to develop, maintain, and implement operating emergency mitigation plans for emergencies on the transmission system.

**Standard EOP-001-1 — Emergency Operations Planning**

<b>Requirement</b>	<b>Lower</b>	<b>Moderate</b>	<b>High</b>	<b>Severe</b>
R2.3	The Transmission Operator or Balancing Authority's load shedding plans are missing minor details or minor program/procedural elements.	The Transmission Operator or Balancing Authority's has demonstrated the existence of load shedding plans but are not maintained.	The Transmission Operator or Balancing Authority's load shedding plans are partially compliant with the requirement but are neither maintained nor implemented.	The Transmission Operator or Balancing Authority has failed to develop, maintain, and implement load shedding plans.
R2.4	The Transmission Operator or Balancing Authority's system restoration plans are missing minor details or minor program/procedural elements.	The Transmission Operator or Balancing Authority's system restoration plans are partially compliant with the requirement but are not maintained.	The Transmission Operator or Balancing Authority's restoration plans are neither maintained nor implemented.	The Transmission Operator or Balancing Authority has failed to develop, maintain, and implement operating emergency mitigation plans for system restoration.
R3	The Transmission Operator or Balancing Authority failed to comply with one (1) of the sub-components.	The Transmission Operator or Balancing Authority failed to comply with two (2) of the sub-components.	The Transmission Operator or Balancing Authority has failed to comply with three (3) of the sub-components.	The Transmission Operator or Balancing Authority has failed to comply with all four (4) of the sub-components.
R3.1	The Transmission Operator or Balancing Authority's communication protocols included in the emergency plan are missing minor program/procedural elements.	N/A	N/A	The Transmission Operator or Balancing Authority has failed to include communication protocols in its emergency plans to mitigate operating emergencies.
R3.2	The Transmission Operator or Balancing Authority's list of controlling actions has resulted in meeting the intent of the requirement but is missing minor program/procedural elements.	N/A	The Transmission Operator or Balancing Authority provided a list of controlling actions, however the actions fail to resolve the emergency within NERC-established timelines.	The Transmission Operator or Balancing Authority has failed to provide a list of controlling actions to resolve the emergency.

**Standard EOP-001-1 — Emergency Operations Planning**

<b>Requirement</b>	<b>Lower</b>	<b>Moderate</b>	<b>High</b>	<b>Severe</b>
R3.3	The Transmission Operator or Balancing Authority has demonstrated coordination with Transmission Operators and Balancing Authorities but is missing minor program/procedural elements.	N/A	N/A	The Transmission Operator or Balancing Authority has failed to demonstrate the tasks to be coordinated with adjacent Transmission Operator and Balancing Authorities as directed by the requirement.
R3.4	The Transmission Operator or Balancing Authority's emergency plan does not include staffing levels for the emergency	N/A	N/A	N/A
R4	The Transmission Operator and Balancing Authority's emergency plan has complied with 90% or more of the number of sub-components.	The Transmission Operator and Balancing Authority's emergency plan has complied with 70% to 90% of the number of sub-components.	The Transmission Operator and Balancing Authority's emergency plan has complied with between 50% to 70% of the number of sub-components.	The Transmission Operator and Balancing Authority's emergency plan has complied with 50% or less of the number of sub-components
R5	The Transmission Operator and Balancing Authority is missing minor program/procedural elements.	The Transmission Operator and Balancing Authority has failed to annually review one of it's emergency plans	The Transmission Operator and Balancing Authority has failed to annually review two of its emergency plans or communicate with one of it's neighboring Balancing Authorities.	The Transmission Operator and Balancing Authority has failed to annually review and/or communicate any emergency plans with its Reliability Coordinator, neighboring Transmission Operators or Balancing Authorities.
R6	The Transmission Operator and/or the Balancing Authority failed to comply with one (1) of the sub-components.	The Transmission Operator and/or the Balancing Authority failed to comply with two (2) of the sub-components.	The Transmission Operator and/or the Balancing Authority has failed to comply with three (3) of the sub-components.	The Transmission Operator and/or the Balancing Authority has failed to comply with four (4) or more of the sub-components.

**Standard EOP-001-1 — Emergency Operations Planning**

Requirement	Lower	Moderate	High	Severe
R6.1	The Transmission Operator or Balancing Authority has failed to establish and maintain reliable communication between interconnected systems.	N/A	N/A	N/A
R6.2	The Transmission Operator or Balancing Authority has failed to arrange new interchange agreements to provide for emergency capacity or energy transfers with required entities when existing agreements could not be used.	N/A	N/A	N/A
R6.3	The Transmission Operator or Balancing Authority has failed to coordinate transmission and generator maintenance schedules to maximize capacity or conserve fuel in short supply.	N/A	N/A	N/A
R6.4	The Transmission Operator or Balancing Authority has failed to arrange for deliveries of electrical energy or fuel from remote systems through normal operating channels.	N/A	N/A	N/A

**Attachment 1-EOP-001-0**

**Elements for Consideration in Development of Emergency Plans**

1. Fuel supply and inventory — An adequate fuel supply and inventory plan that recognizes reasonable delays or problems in the delivery or production of fuel.
2. Fuel switching — Fuel switching plans for units for which fuel supply shortages may occur, e.g., gas and light oil.
3. Environmental constraints — Plans to seek removal of environmental constraints for generating units and plants.
4. System energy use — The reduction of the system's own energy use to a minimum.
5. Public appeals — Appeals to the public through all media for voluntary load reductions and energy conservation including educational messages on how to accomplish such load reduction and conservation.
6. Load management — Implementation of load management and voltage reductions, if appropriate.
7. Optimize fuel supply — The operation of all generating sources to optimize the availability.
8. Appeals to customers to use alternate fuels — In a fuel emergency, appeals to large industrial and commercial customers to reduce non-essential energy use and maximize the use of customer-owned generation that rely on fuels other than the one in short supply.
9. Interruptible and curtailable loads — Use of interruptible and curtailable customer load to reduce capacity requirements or to conserve the fuel in short supply.
10. Maximizing generator output and availability — The operation of all generating sources to maximize output and availability. This should include plans to winterize units and plants during extreme cold weather.
11. Notifying IPPs — Notification of cogeneration and independent power producers to maximize output and availability.
12. Requests of government — Requests to appropriate government agencies to implement programs to achieve necessary energy reductions.
13. Load curtailment — A mandatory load curtailment plan to use as a last resort. This plan should address the needs of critical loads essential to the health, safety, and welfare of the community. Address firm load curtailment.
14. Notification of government agencies — Notification of appropriate government agencies as the various steps of the emergency plan are implemented.
15. Notifications to operating entities — Notifications to other operating entities as steps in emergency plan are implemented.

A. Introduction

1. Title: Emergency Operations Planning

~~1.2.~~ Number: EOP-001-~~0-1~~

Formatted: Bullets and Numbering

~~1.3.~~ Purpose: Each Transmission Operator and Balancing Authority needs to develop, maintain, and implement a set of plans to mitigate operating emergencies. These plans need to be coordinated with other Transmission Operators and Balancing Authorities, and the Reliability Coordinator.

~~1.4.~~ Applicability

4.1. Balancing Authorities.

~~4.1.4.2.~~ Transmission Operators.

Formatted: Bullets and Numbering

5. Effective Date: In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after Board of Trustee adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

Formatted: Indent: Left: 45 pt, No bullets or numbering, Tabs: Not at 46.8 pt + 108 pt

~~5.~~ Twenty four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty four months after Board of Trustees adoption.

B. Requirements

R1. Balancing Authorities shall have operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities.

~~R2.~~ The Transmission Operator shall have an emergency load reduction plan for all identified IROLs. The plan shall include the details on how the Transmission Operator will implement load reduction in sufficient amount and time to mitigate the IROL violation before system separation or collapse would occur. The load reduction plan must be capable of being implemented within 30 minutes.

~~R1.R2.~~ Each Transmission Operator and Balancing Authority shall:

Formatted: Bullets and Numbering

~~R3.1.R2.1.~~ Develop, maintain, and implement a set of plans to mitigate operating emergencies for insufficient generating capacity.

~~R3.1.R2.2.~~ Develop, maintain, and implement a set of plans to mitigate operating emergencies on the transmission system.

~~R3.1.R2.3.~~ Develop, maintain, and implement a set of plans for load shedding.

~~R3.1.R2.4.~~ Develop, maintain, and implement a set of plans for system restoration.

Formatted: Indent: Left: 46.8 pt, No bullets or numbering

~~R4.R3.~~ Each Transmission Operator and Balancing Authority shall have emergency plans that will enable it to mitigate operating emergencies. At a minimum, Transmission Operator and Balancing Authority emergency plans shall include:

Formatted: Bullets and Numbering

~~R4.1.R3.1.~~ Communications protocols to be used during emergencies.

R4.1.R3.2. A list of controlling actions to resolve the emergency. Load reduction, in sufficient quantity to resolve the emergency within NERC-established timelines, shall be one of the controlling actions.

R4.1.R3.3. The tasks to be coordinated with and among adjacent Transmission Operators and Balancing Authorities.

R4.1.R3.4. Staffing levels for the emergency.

R5.R4. Each Transmission Operator and Balancing Authority shall include the applicable elements in Attachment 1-EOP-001-0 when developing an emergency plan.

**R5.** The Transmission Operator and Balancing Authority shall annually review and update each emergency plan. The Transmission Operator and Balancing Authority shall provide a copy of its updated emergency plans to its Reliability Coordinator and to neighboring Transmission Operators and Balancing Authorities.

R5.R6. The Transmission Operator and Balancing Authority shall coordinate its emergency plans with other Transmission Operators and Balancing Authorities as appropriate. This coordination includes the following steps, as applicable:

Formatted: Bullets and Numbering

R7.1.R6.1. The Transmission Operator and Balancing Authority shall establish and maintain reliable communications between interconnected systems.

R7.1.R6.2. The Transmission Operator and Balancing Authority shall arrange new interchange agreements to provide for emergency capacity or energy transfers if existing agreements cannot be used.

R7.1.R6.3. The Transmission Operator and Balancing Authority shall coordinate transmission and generator maintenance schedules to maximize capacity or conserve the fuel in short supply. (This includes water for hydro generators.)

R7.1.R6.4. The Transmission Operator and Balancing Authority shall arrange deliveries of electrical energy or fuel from remote systems through normal operating channels.

### C. Measures

**M1.** The Transmission Operator and Balancing Authority shall have its emergency plans available for review by the Regional Reliability Organization at all times.

M1.M2. The Transmission Operator and Balancing Authority shall have its two most recent annual self-assessments available for review by the Regional Reliability Organization at all times.

Formatted: Bullets and Numbering

### D. Compliance

#### 1. Compliance Monitoring Process

##### 1.1. Compliance Monitoring Responsibility

Regional Reliability Organization.

##### 1.2. Compliance Monitoring Period and Reset Timeframes

The Regional Reliability Organization shall review and evaluate emergency plans every three years to ensure that the plans consider the applicable elements of Attachment 1-EOP-001-0.

The Regional Reliability Organization may elect to request self-certification of the Transmission Operator and Balancing Authority in years that the full review is not done.

Reset: one calendar year.

**1.3. Data Retention**

Current plan available at all times.

**1.4. Additional Compliance Information**

Not specified.

2.1. Violation Severity Levels

Formatted: Bullets and Numbering

Requirement	Lower	Moderate	High	Severe
R1	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for less than 25% of the adjacent BAs. Or less than 25% of those agreements do not contain provisions for emergency assistance.	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for 25% to 50% of the adjacent BAs. Or 25 to 50% of those agreements do not contain provisions for emergency assistance.	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for 50% to 75% of the adjacent BAs. Or 50% to 75% of those agreements do not contain provisions for emergency assistance. Effective Date: TBD

**Attachment 1-EOP-001-0**

**Elements for Consideration in Development of Emergency Plans**

1. Fuel supply and inventory — An adequate fuel supply and inventory plan that recognizes reasonable delays or problems in the delivery or production of fuel.

±2. Fuel switching — Fuel switching plans for units for which fuel supply shortages may occur, e.g., gas and light oil.

Formatted: Bullets and Numbering

±3. Environmental constraints — Plans to seek removal of environmental constraints for generating units and plants.

±4. System energy use — The reduction of the system's own energy use to a minimum.

±5. Public appeals — Appeals to the public through all media for voluntary load reductions and energy conservation including educational messages on how to accomplish such load reduction and conservation.

±6. Load management — Implementation of load management and voltage reductions, if appropriate.

±7. Optimize fuel supply — The operation of all generating sources to optimize the availability.

±8. Appeals to customers to use alternate fuels — In a fuel emergency, appeals to large industrial and commercial customers to reduce non-essential energy use and maximize the use of customer-owned generation that rely on fuels other than the one in short supply.

±9. Interruptible and curtailable loads — Use of interruptible and curtailable customer load to reduce capacity requirements or to conserve the fuel in short supply.

±10. Maximizing generator output and availability — The operation of all generating sources to maximize output and availability. This should include plans to winterize units and plants during extreme cold weather.

±11. Notifying IPPs — Notification of cogeneration and independent power producers to maximize output and availability.

±12. Requests of government — Requests to appropriate government agencies to implement programs to achieve necessary energy reductions.

±13. Load curtailment — A mandatory load curtailment plan to use as a last resort. This plan should address the needs of critical loads essential to the health, safety, and welfare of the community. Address firm load curtailment.

±14. Notification of government agencies — Notification of appropriate government agencies as the various steps of the emergency plan are implemented.

±15. Notifications to operating entities — Notifications to other operating entities as steps in emergency plan are implemented.

**Proposed Clean and Redline of IRO-002-2**

**A. Introduction**

- 1. Title:** **Reliability Coordination — Facilities**
- 2. Number:** IRO 002-2
- 3. Purpose:** Reliability Coordinators need information, tools and other capabilities to perform their responsibilities.
- 4. Applicability**
  - 4.1.** Reliability Coordinators.
- 5. Proposed Effective Date:**

In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after Board of Trustee adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

**B. Requirements**

- R1.** Each Reliability Coordinator shall have adequate communications facilities (voice and data links) to appropriate entities within its Reliability Coordinator Area. These communications facilities shall be staffed and available to act in addressing a real-time emergency condition.
- R2.** Each Reliability Coordinator — or its Transmission Operators and Balancing Authorities — shall provide, or arrange provisions for, data exchange to other Reliability Coordinators or Transmission Operators and Balancing Authorities via a secure network.
- R3.** Each Reliability Coordinator shall have multi-directional communications capabilities with its Transmission Operators and Balancing Authorities, and with neighboring Reliability Coordinators, for both voice and data exchange as required to meet reliability needs of the Interconnection.
- R4.** Each Reliability Coordinator shall have detailed real-time monitoring capability of its Reliability Coordinator Area and sufficient monitoring capability of its surrounding Reliability Coordinator Areas to ensure that potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations are identified. Each Reliability Coordinator shall have monitoring systems that provide information that can be easily understood and interpreted by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.
- R5.** Each Reliability Coordinator shall monitor Bulk Electric System elements (generators, transmission lines, buses, transformers, breakers, etc.) that could result in SOL or IROL violations within its Reliability Coordinator Area. Each Reliability Coordinator shall monitor both real and reactive power system flows, and operating reserves, and the

status of Bulk Electric System elements that are or could be critical to SOLs and IROLs and system restoration requirements within its Reliability Coordinator Area.

- R6.** Each Reliability Coordinator shall have adequate analysis tools such as state estimation, pre- and post-contingency analysis capabilities (thermal, stability, and voltage), and wide-area overview displays.
- R7.** Each Reliability Coordinator shall continuously monitor its Reliability Coordinator Area. Each Reliability Coordinator shall have provisions for backup facilities that shall be exercised if the main monitoring system is unavailable. Each Reliability Coordinator shall ensure SOL and IROL monitoring and derivations continue if the main monitoring system is unavailable.
- R8.** Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages.

### **C. Measures**

- M1.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a document that lists its voice communications facilities with Transmission Operators, Balancing Authorities and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators, that will be used to confirm that it has communication facilities in accordance with Requirements 1 and 3.
- M2.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a data-link facility description document, computer print-out, training-document, or other equivalent evidence that will be used to confirm that it has data links with entities within its Reliability Coordinator Area and with neighboring Reliability Coordinators, as specified in Requirements 1 and 3.
- M3.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, Energy Management System description documents, computer printouts, SCADA data collection system communications performance or equivalent evidence to demonstrate that it has real-time monitoring capability of its Reliability Coordinator Area and monitoring capability of its surrounding Reliability Coordinator Areas to identify potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations.
- M4.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, documentation from suppliers, operating and planning staff training documents, examples of studies, or other equivalent evidence to show that it has analysis tools in accordance with Requirement 6.
- M5.** Each Reliability Coordinator shall provide evidence such as equipment specifications, operating procedures, staff records of their involvement in training, or other equivalent evidence to show that it has a backup monitoring facility that can be used to identify and monitor SOLs and IROLs. (Requirement 7)
- M6.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will

be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement 8 Part 1.

- M7.** Each Reliability Coordinator shall have and provide upon request its current procedures used to mitigate the effects of analysis tool outages as specified in Requirement 8 Part 2.

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance Monitoring Responsibility**

Regional Reliability Organizations shall be responsible for compliance. Monitoring.

#### **1.2. Compliance Monitoring and Reset Time Frame**

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

#### **1.3. Data Retention**

Each Reliability Coordinator shall have current in-force documents used to show compliance with Measures 1 through 7.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

#### **1.4. Additional Compliance Information**

None.

**2. Violation Severity Levels:**

<b>Requirement</b>	<b>Lower</b>	<b>Moderate</b>	<b>High</b>	<b>Severe</b>
R1	The Reliability Coordinator has demonstrated communication facilities for both voice and data exist to all appropriate entities and that they are staffed and available but they are less than adequate.	The Reliability Coordinator has failed to demonstrate that is has: 1) Voice communication links with one appropriate entity or 2) Data links with one appropriate entity.	The Reliability Coordinator has failed to demonstrate that is has: 1) Voice communication links with two appropriate entities or 2) Data links with two appropriate entities.	The Reliability Coordinator has failed to demonstrate that is has: 1) Voice communication links with more than two appropriate entities or 2) Data links with more than two appropriate entities or 3) Communication facilities are not staffed or 4) Communication facilities are not ready.
R2	N/A	The Reliability Coordinator or designated Transmission Operator and Balancing Authority has failed to demonstrate it provided or arranged provision for the exchange of data with one of the other Reliability Coordinators or Transmission Operators and Balancing Authorities.	The Reliability Coordinator or designated Transmission Operator and Balancing Authority has failed to demonstrate it provided or arranged provision for the exchange of data with two of the other Reliability Coordinators or Transmission Operators and Balancing Authorities.	The Reliability Coordinator or designated Transmission Operator and Balancing Authority has failed to demonstrate it provided or arranged provision for the exchange of data with three of the other Reliability Coordinators or Transmission Operators and Balancing Authorities.
R3	N/A	The Reliability Coordinator has failed to demonstrate multi-directional communication capabilities to one of the Transmission Operators and Balancing Authorities in its Reliability Coordinator Area and with neighboring Reliability Coordinators.	The Reliability Coordinator has failed to demonstrate multi-directional communication capabilities to two or more of the Transmission Operators and Balancing Authorities in its Reliability Coordinator Area and with neighboring Reliability Coordinators.	The Reliability Coordinator has failed to demonstrate multi-directional communication capabilities to all of the Transmission Operators and Balancing Authorities in its Reliability Coordinator Area and with all neighboring Reliability Coordinators.

**Standard IRO-002-2 — Reliability Coordination — Facilities**

Requirement	Lower	Moderate	High	Severe
R4	The Reliability Coordinator's monitoring systems provide information in a way that is not easily understood and interpreted by the Reliability Coordinator's operating personnel or particular emphasis was not given to alarm management and awareness systems, automated data transfers and synchronized information systems.	The Reliability Coordinator has failed to demonstrate that is has detailed real-time monitoring capabilities in its Reliability Coordinator Area and sufficient monitoring capabilities of its surrounding Reliability Coordinator Areas to ensure that one potential or actual SOL or IROL violation is not identified.	The Reliability Coordinator has failed to demonstrate that is has detailed real-time monitoring capabilities in its Reliability Coordinator Area and sufficient monitoring capabilities of its surrounding Reliability Coordinator Areas to ensure that two or more potential and actual SOL and IROL violations are not identified.	The Reliability Coordinator has failed to demonstrate that is has detailed real-time monitoring capabilities in its Reliability Coordinator Area and sufficient monitoring capabilities of its surrounding Reliability Coordinator Areas to ensure that all potential and actual SOL and IROL violations are identified.
R5	The Reliability Coordinator failed to monitor: 1) the status, real power flow or reactive power flow of Bulk Electric System elements that could result in one SOL violations or 2) or operating reserves for a small portion of the Reliability Authority Area.	The Reliability Coordinator failed to monitor: 1) the status, real power flow or reactive power flow of Bulk Electric System elements critical to assessing one IROL or to system restoration, 2) the status, real power flow or reactive power flow of Bulk Electric System elements that could result in multiple SOL violations, or 3) operating reserves.	The Reliability Coordinator failed to monitor: 1) the status, real power flow or reactive power flow of Bulk Electric System elements critical to assessing two or more IROLs; or one IROL and to system restoration, 2) the status, real power flow or reactive power flow of Bulk Electric System elements that could result in multiple SOL violations and operating reserves, or 3) the status, real power flow or reactive power flow of Bulk Electric System elements critical to assessing one IROL or system restoration and operating reserves.	The Reliability Coordinator failed to monitor: 1) the status, real power flow or reactive power flow of Bulk Electric System elements critical to assessing all IROLs and to system restoration, or 2) the status, real power flow or reactive power flow of Bulk Electric System elements critical to assessing all SOL violations and operating reserves.

## A. Introduction

1. **Title:** Reliability Coordination — Facilities
2. **Number:** IRO 002-42
3. **Purpose:** Reliability Coordinators need information, tools and other capabilities to perform their responsibilities.
4. **Applicability**
  - 4.1. Reliability Coordinators.

**5. Proposed Effective Date:** January 1, 2007 ~~First day of first quarter, three months after regulatory approvals.~~

Formatted: Bullets and Numbering

In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after Board of Trustee adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

## B. Requirements

**R1.** Each Reliability Coordinator shall have adequate communications facilities (voice and data links) to appropriate entities within its Reliability Coordinator Area. These communications facilities shall be staffed and available to act in addressing a real-time emergency condition.

~~**R2.** Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load Serving Entities, or adjacent Reliability Coordinators.~~

Formatted: Bullets and Numbering

~~**R3-R2.**~~ Each Reliability Coordinator — or its Transmission Operators and Balancing Authorities — shall provide, or arrange provisions for, data exchange to other Reliability Coordinators or Transmission Operators and Balancing Authorities via a secure network.

~~**R4-R3.**~~ Each Reliability Coordinator shall have multi-directional communications capabilities with its Transmission Operators and Balancing Authorities, and with neighboring Reliability Coordinators, for both voice and data exchange as required to meet reliability needs of the Interconnection.

~~**R5-R4.**~~ Each Reliability Coordinator shall have detailed real-time monitoring capability of its Reliability Coordinator Area and sufficient monitoring capability of its surrounding Reliability Coordinator Areas to ensure that potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations are identified. Each Reliability Coordinator shall have monitoring systems that provide information that can be easily understood and interpreted by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.

**R5.** Each Reliability Coordinator shall monitor Bulk Electric System elements (generators, transmission lines, buses, transformers, breakers, etc.) that could result in SOL or IROL violations within its Reliability Coordinator Area. Each Reliability Coordinator shall monitor both real and reactive power system flows, and operating reserves, and the status of Bulk Electric

System elements that are or could be critical to SOLs and IROLs and system restoration requirements within its Reliability Coordinator Area.

~~R7.R6.~~ Each Reliability Coordinator shall have adequate analysis tools such as state estimation, pre- and post-contingency analysis capabilities (thermal, stability, and voltage), and wide-area overview displays.

Formatted: Bullets and Numbering

~~R8.R7.~~ Each Reliability Coordinator shall continuously monitor its Reliability Coordinator Area. Each Reliability Coordinator shall have provisions for backup facilities that shall be exercised if the main monitoring system is unavailable. Each Reliability Coordinator shall ensure SOL and IROL monitoring and derivations continue if the main monitoring system is unavailable.

~~R9.R8.~~ Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages.

### C. Measures

**M1.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a document that lists its voice communications facilities with Transmission Operators, Balancing Authorities and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators, that will be used to confirm that it has communication facilities in accordance with Requirements 1 and 3.

**M2.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a data-link facility description document, computer print-out, training-document, or other equivalent evidence that will be used to confirm that it has data links with entities within its Reliability Coordinator Area and with neighboring Reliability Coordinators, as specified in Requirements 1 and 4.3.

~~R10.~~ Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a letter to Transmission Operators, Balancing Authorities, Transmission Owners, Generator Owners, Generator Operators, and Load Serving Entities, or adjacent Reliability Coordinators, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has requested the data required to support its reliability coordination tasks. (Requirement 2)

Formatted: Measure

~~M4.M3.~~ Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, Energy Management System description documents, computer printouts, SCADA data collection system communications performance or equivalent evidence to demonstrate that it has real-time monitoring capability of its Reliability Coordinator Area and monitoring capability of its surrounding Reliability Coordinator Areas to identify potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations.

Formatted: Bullets and Numbering

~~M5.M4.~~ Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, documentation from suppliers, operating and planning staff training documents, examples of studies, or other equivalent evidence to show that it has analysis tools in accordance with Requirement 7.6.

~~M6.M5.~~ Each Reliability Coordinator shall provide evidence such as equipment specifications, operating procedures, staff records of their involvement in training, or other equivalent evidence to show that it has a backup monitoring facility that can be used to identify and monitor SOLs and IROLs. (Requirement 8.7)

**M7.M6.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement 9.8 Part 1.

**M8.M7.** Each Reliability Coordinator shall have and provide upon request its current procedures used to mitigate the effects of analysis tool outages as specified in Requirement 9.8 Part 2.

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance Monitoring Responsibility**

Regional Reliability Organizations shall be responsible for compliance Monitoring.

#### **1.2. Compliance Monitoring and Reset Time Frame**

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

#### **1.3. Data Retention**

Each Reliability Coordinator shall have current in-force documents used to show compliance with Measures 1 through 8.7.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

#### **1.4. Additional Compliance Information**

None.

~~2. Levels of Non-Compliance for a Reliability Coordinator~~

~~2.1. Level 1: Not applicable.~~

~~2.2. Level 2: Did not confirm that the network used for data exchange to other Reliability Coordinators is secure as specified in R3.~~

~~2.3. Level 3: There shall be a separate Level 3 non-compliance, for every one of the following requirements that is in violation:~~

~~2.3.1 Has not requested the data required to support its reliability coordination tasks. (Requirement 2)~~

~~2.4. Does not control its Reliability Coordinator analysis tools, including the exercising of final approvals for planned maintenance (R7) or does not have current procedures in place to mitigate the effects of analysis tool outages as specified in R9.~~

~~2.5. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~2.5.1 Does not have or could not demonstrate the use of voice communication facilities (or show data links) to one or more Transmission Operators, Generator Operators or Balancing Authorities with authority over Bulk Electrical System equipment or with one or more neighboring Reliability Coordinators. (R1 and R4)~~

~~2.5.2 Does not have real-time monitoring capability of its Reliability Coordinator Area and surrounding Reliability Coordinator Areas as specified in R5.~~

~~1.4.1 Does not have a documented procedure for the use of its backup monitoring facilities. (R8)~~

Violation Severity Levels for this standard were approved by the BOT on February 28, 2008 and they replace the Levels of Non-compliance.

**Proposed Clean and Redline of IRO-004-2**

**A. Introduction**

1. **Title:** **Reliability Coordination — Operations Planning**
2. **Number:** IRO-004-2
3. **Purpose:** Each Reliability Coordinator must conduct next-day reliability analyses for its Reliability Coordinator Area to ensure the Bulk Electric System can be operated reliably in anticipated normal and Contingency conditions. System studies must be conducted to highlight potential interface and other operating limits, including overloaded transmission lines and transformers, voltage and stability limits, etc. Plans must be developed to alleviate System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) violations.
4. **Applicability**
  - 4.1. Balancing Authorities.
  - 4.2. Transmission Operators.
  - 4.3. Transmission Service Providers.
5. **Effective Date:** In those jurisdictions where no regulatory approval is required, the standard shall be retired on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall be retired effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

**B. Requirements**

- R1. Each Transmission Operator, Balancing Authority, and Transmission Service Provider shall comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events.

**C. Measures**

- M1. None

**D. Compliance**

**1. Compliance Monitoring Process**

Entities will be selected for an on-site audit at least every three years. For a selected 30-day period in the previous three calendar months prior to the on site audit, Reliability Coordinators will be asked to provide documentation showing that next-day reliability analyses were conducted each day to ensure the bulk power system could be operated in anticipated normal and Contingency conditions; and that they identified potential interface and other operating limits including overloaded transmission lines and transformers, voltage and stability limits, etc.

- 1.1. **Compliance Monitoring Responsibility**
- 1.2. **Compliance Monitoring Period and Reset Time Frame**
- 1.3. **Data Retention**
- 1.4. **Additional Compliance Information**

**2. Violation Severity Levels**

Requirement	Lower	Moderate	High	Severe
R1	The responsible entity failed to comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events on one (1) occasion during a calendar month.	The responsible entity failed to comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events on two (2) to three (3) occasions during a calendar month.	The responsible entity failed to comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events on four (4) to five (5) occasions during a calendar month.	The responsible entity failed to comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events on more than five (5) occasions during a calendar month.

## Standard IRO-004-1-2 — Reliability Coordination — Operations Planning

Style Definition: Requirement:  
Indent: Left: 18 pt, No bullets or numbering, Tabs: Not at 129.6 pt + 162 pt

### A. Introduction

1. **Title:** Reliability Coordination — Operations Planning
2. **Number:** IRO-004-1-2
3. **Purpose:** Each Reliability Coordinator must conduct next-day reliability analyses for its Reliability Coordinator Area to ensure the Bulk Electric System can be operated reliably in anticipated normal and Contingency conditions. System studies must be conducted to highlight potential interface and other operating limits, including overloaded transmission lines and transformers, voltage and stability limits, etc. Plans must be developed to alleviate System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) violations.
4. **Applicability**

Formatted: Bullets and Numbering

#### ~~4.1. Reliability Coordinators.~~

~~4.2.4.1. Balancing Authorities.~~

~~4.3.4.2. Transmission Operators.~~

~~4.4.4.3. Transmission Service Providers.~~

~~4.5. Transmission Owners.~~

~~4.6. Generator Owners.~~

~~4.7. Generator Operators.~~

~~4.8. Load Serving Entities.~~

**5. Effective Date:** ~~November 1, 2006~~

~~5. In those jurisdictions where no regulatory approval is required, the standard shall be retired on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.~~

Formatted: Tabs: Not at 180 pt

~~In those jurisdictions where regulatory approval is required, the standard shall be retired effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.~~

Formatted: Normal, Indent: Left: 46.8 pt, Tabs: Not at 180 pt

Formatted: Font: 12 pt, Not Bold

### B. Requirements

~~R1. Each Reliability Coordinator shall conduct next-day reliability analyses for its Reliability Coordinator Area to ensure that the Bulk Electric System can be operated reliably in anticipated normal and Contingency event conditions. The Reliability Coordinator shall conduct Contingency analysis studies to identify potential interface and other SOL and IROL violations, including overloaded transmission lines and transformers, voltage and stability limits, etc.~~

Formatted: Indent: Left: 18 pt, Hanging: 27 pt

Formatted: Bullets and Numbering

~~R2. Each Reliability Coordinator shall pay particular attention to parallel flows to ensure one Reliability Coordinator Area does not place an unacceptable or undue Burden on an adjacent Reliability Coordinator Area.~~

~~R3. Each Reliability Coordinator shall, in conjunction with its Transmission Operators and Balancing Authorities, develop action plans that may be required, including reconfiguration of the transmission system, re dispatching of generation, reduction or curtailment of Interchange Transactions, or reducing load to return transmission loading to within acceptable SOLs or IROLs.~~

~~R4. Each Transmission Operator, Balancing Authority, Transmission Owner, Generator Owner, Generator Operator, and Load Serving Entity in the Reliability Coordinator Area shall provide~~

~~information required for system studies, such as critical facility status, Load, generation, operating reserve projections, and known Interchange Transactions. This information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.~~

~~R5. Each Reliability Coordinator shall share the results of its system studies, when conditions warrant or upon request, with other Reliability Coordinators and with Transmission Operators, Balancing Authorities, and Transmission Service Providers within its Reliability Coordinator Area. The Reliability Coordinator shall make study results available no later than 1500 Central Standard Time for the Eastern Interconnection and 1500 Pacific Standard Time for the Western Interconnection, unless circumstances warrant otherwise.~~

~~R6. If the results of these studies indicate potential SOL or IROL violations, the Reliability Coordinator shall direct its Transmission Operators, Balancing Authorities and Transmission Service Providers to take any necessary action the Reliability Coordinator deems appropriate to address the potential SOL or IROL violation.~~

~~R7. R1.~~ Each Transmission Operator, Balancing Authority, and Transmission Service Provider shall comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events.

Formatted: Font: Bold

### C. Measures

~~M1. Evidence that the Reliability Coordinator conducted next day contingency analyses for its Reliability Coordinator Area to ensure that the Bulk Electric System could be operated reliably in anticipated normal and Contingency conditions. None~~

Formatted: Bullets and Numbering

### D. Compliance

#### 1. Compliance Monitoring Process

Entities will be selected for an on-site audit at least every three years. For a selected 30-day period in the previous three calendar months prior to the on site audit, Reliability Coordinators will be asked to provide documentation showing that next-day reliability analyses were conducted each day to ensure the bulk power system could be operated in anticipated normal and Contingency conditions; and that they identified potential interface and other operating limits including overloaded transmission lines and transformers, voltage and stability limits, etc.

##### 1.1. Compliance Monitoring Responsibility

~~Self Certification: Each Reliability Coordinator must annually self certify compliance to its Regional Reliability Organization with the completion of the studies and action plans in Requirements R1, R2 and R3.~~

~~Exception Reporting: Reliability Coordinators will prepare a monthly report to the Regional Reliability Organization for each month that system studies were not conducted, indicating the dates that studies were not done and the reason why.~~

##### 1.2. Compliance Monitoring Period and Reset Time Frame

~~One year without a violation from the time of the violation.~~

##### 1.3. Data Retention

~~Documentation shall be available for 3 months to provide verification that system studies were performed as required.~~

##### 1.4. Additional Compliance Information

None identified.

**2. Levels of Non-Compliance**

Formatted: Bullets and Numbering

- ~~2.1. Level 1: System studies were not conducted for one day in a calendar month and/or the action plans were not developed to maintain transmission loading within acceptable limits for potential interface and other IROL violations.~~
- ~~2.2. Level 2: System studies were not conducted for 2-3 days in a calendar month and/or the action plans were not developed to maintain transmission loading within acceptable limits for potential interface and other IROL violations.~~
- ~~2.3. Level 3: System studies were not conducted for 4-5 days in a calendar month and/or the action plans were not developed to maintain transmission loading within acceptable limits for potential interface and other IROL violations.~~
- 1.5. **Level 4:** System studies were not conducted for more than 5 days in a calendar month and/or the action plans were not developed to maintain transmission loading within acceptable limits for potential interface and other IROL violations.

**Proposed Clean and Redline of IRO-005-3**

## A. Introduction

1. **Title:** Reliability Coordination — Current Day Operations
2. **Number:** IRO-005-3
3. **Purpose:** The Reliability Coordinator must be continuously aware of conditions within its Reliability Coordinator Area and include this information in its reliability assessments. The Reliability Coordinator must monitor Bulk Electric System parameters that may have significant impacts upon the Reliability Coordinator Area and neighboring Reliability Coordinator Areas.
4. **Applicability**
  - 4.1. Reliability Coordinators.
  - 4.2. Balancing Authorities.
  - 4.3. Transmission Operators.
  - 4.4. Transmission Service Providers.
  - 4.5. Generator Operators.
  - 4.6. Load-Serving Entities.
  - 4.7. Purchasing-Selling Entities.
5. **Effective Date:** In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

## B. Requirements

- R1. Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following:
  - R1.1. Current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading.
  - R1.2. Current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope.
  - R1.3. Current post-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope.
  - R1.4. System real and reactive reserves (actual versus required).
  - R1.5. Capacity and energy adequacy conditions.
  - R1.6. Current ACE for all its Balancing Authorities.

- R1.7.** Current local or Transmission Loading Relief procedures in effect.
- R1.8.** Planned generation dispatches.
- R1.9.** Planned transmission or generation outages.
- R1.10.** Contingency events.
- R2.** Each Reliability Coordinator shall monitor its Balancing Authorities' parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard and Disturbance Control Standard requirements. If necessary, the Reliability Coordinator shall direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. The Reliability Coordinator shall issue Energy Emergency Alerts as needed and at the request of its Balancing Authorities and Load-Serving Entities.
- R3.** Each Reliability Coordinator shall ensure its Transmission Operators and Balancing Authorities are aware of Geo-Magnetic Disturbance (GMD) forecast information and assist as needed in the development of any required response plans.
- R4.** The Reliability Coordinator shall disseminate information within its Reliability Coordinator Area, as required.
- R5.** Each Reliability Coordinator shall monitor system frequency and its Balancing Authorities' performance and direct any necessary rebalancing to return to CPS and DCS compliance. The Transmission Operators and Balancing Authorities shall utilize all resources, including firm load shedding, as directed by its Reliability Coordinator to relieve the emergent condition.
- R6.** The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, CPS, or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.
- R7.** As necessary, the Reliability Coordinator shall assist the Balancing Authorities in its Reliability Coordinator Area in arranging for assistance from neighboring Reliability Coordinator Areas or Balancing Authorities.
- R8.** The Reliability Coordinator shall identify sources of large Area Control Errors that may be contributing to Frequency Error, Time Error, or Inadvertent Interchange and shall discuss corrective actions with the appropriate Balancing Authority. The Reliability Coordinator shall direct its Balancing Authority to comply with CPS and DCS.
- R9.** Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows. The Transmission Operator shall immediately inform the Reliability

Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected.

- R10.** In instances where there is a difference in derived limits, the Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.
- R11.** The Transmission Service Provider shall respect SOLs and IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.
- R12.** Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated.

### **C. Measures**

- M1.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, Energy Management System description documents, computer printouts, a prepared report specifically detailing compliance to each of the bullets in Requirement 1, EMS availability, SCADA data collection system communications performance or equivalent evidence that will be used to confirm that it monitors the Reliability Coordinator Area parameters specified in Requirements 1.1 through 1.9.
- M2.** If one of its Balancing Authorities has insufficient operating reserves, the Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to computer printouts, operating logs, voice recordings or transcripts of voice recordings, or equivalent evidence that will be used to determine if the Reliability Coordinator directed and, if needed, assisted the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. (Requirement 4 Part 2 and Requirement 10)
- M3.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to determine if it informed Transmission Operators and Balancing Authorities of Geo-Magnetic Disturbance (GMD) forecast information and provided assistance as needed in the development of any required response plans. (Requirement 6)
- M4.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, Hot Line recordings, electronic communications or equivalent evidence that will be used to determine if it disseminated information within its Reliability Coordinator Area in accordance with Requirement 7.

- M5.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, computer printouts, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it monitored system frequency and Balancing Authority performance and directed any necessary rebalancing, as specified in Requirement 8 Part 1.
- M6.** The Transmission Operators and Balancing Authorities shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it utilized all resources, including firm load shedding, as directed by its Reliability Coordinator, to relieve an emergent condition. (Requirement 8 Part 2)
- M7.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, operator logs or equivalent evidence that will be used to determine if it coordinated with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, CPS, or DCS violations including the coordination of pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities and Generator Operators. (Requirement 9 Part 1)
- M8.** If a large Area Control Error has occurred, the Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, Hot Line recordings, electronic communications or equivalent evidence that will be used to determine if it identified sources of the Area Control Errors, and initiated corrective actions with the appropriate Balancing Authority if the problem was within the Reliability Coordinator's Area (Requirement 11 Part 1)
- M9.** If a Special Protection System is armed and that system could have had an inter-area impact, the Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, agreements with their Transmission Operators, procedural documents, operator logs, computer analysis, training modules, training records or equivalent evidence that will be used to confirm that it was aware of the impact of that Special Protection System on inter-area flows. (Requirement 12)
- M10.** If there is an instance where there is a disagreement on a derived limit, the Transmission Operator, Balancing Authority, Generator Operator, Load-serving Entity, Purchasing-selling Entity and Transmission Service Provider involved in the disagreement shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications or equivalent evidence that will be used to determine if it operated to the most limiting parameter. (Part 2 of Requirement 13)
- M11.** The Transmission Service Providers shall have and provide upon request evidence that could include, but is not limited to, procedural documents, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it respected the SOLs or IROLs in

accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.(Requirement 14 Part 2)

**M12.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it issued alerts when it foresaw a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area, to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area as specified in Requirement 15 Part 1.

**M13.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that upon receiving information such as an SOL or IROL violation, loss of reactive reserves, etc. it disseminated the information to its impacted Transmission Operators and Balancing Authorities as specified in Requirement 15 Part 2.

**M14.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it notified all impacted Transmission Operators, Balancing Authorities and Reliability Coordinators when a transmission problem has been mitigated.  
(Requirement 15 Part 3)

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance Monitoring Responsibility**

Regional Reliability Organizations shall be responsible for compliance monitoring.

#### **1.2. Compliance Monitoring and Reset Time Frame**

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

### 1.3. Data Retention

For Measures 1 and 9, each Reliability Coordinator shall have its current in-force documents as evidence.

For Measures 2–8 and Measures 12 through 13, the Reliability Coordinator shall keep 90 days of historical data (evidence).

For Measure 6, the Transmission Operator and Balancing Authority shall keep 90 days of historical data (evidence).

For Measure 10, the Transmission Operator, Balancing Authority, and Transmission Service Provider shall keep 90 days of historical data (evidence).

For Measure 11, the Transmission Service Provider shall keep 90 days of historical data (evidence).

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

### 1.4. Additional Compliance Information

None.

Violation Severity Levels for this standard were approved by the BOT on February 28, 2008 and they replace the Levels of Non-compliance.

**2. Violation Severity Levels:**

Requirement	Lower	Moderate	High	Severe
R1	The Reliability Coordinator failed to monitor one (1) of the elements listed in IRO-005-1 R1.1 through R1.10.	The Reliability Coordinator failed to monitor two (2) of the elements listed in IRO-005-1 R1.1 through R1.10.	The Reliability Coordinator failed to monitor three (3) of the elements listed in IRO-005-1 R1.1 through R1.10.	The Reliability Coordinator failed to monitor more than three (3) of the elements listed in IRO-005-1 R1.1 through R1.10.
R1.1	The Reliability Coordinator failed to monitor the current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading.	N/A	N/A	N/A
R1.2	The Reliability Coordinator failed to monitor current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan’s viability and scope.	N/A	N/A	N/A
R1.3	The Reliability Coordinator failed to monitor current post-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan’s viability and scope.	N/A	N/A	N/A
R1.4	The Reliability Coordinator failed to monitor system real and reactive reserves (actual versus required).	N/A	N/A	N/A

2	October 17, 2008	Adopted by Board of Trustees	Revision

**A. Introduction**

- 1. **Title:** Reliability Coordination — Current Day Operations
- 2. **Number:** IRO-005-23
- 3. **Purpose:** The Reliability Coordinator must be continuously aware of conditions within its Reliability Coordinator Area and include this information in its reliability assessments. The Reliability Coordinator must monitor Bulk Electric System parameters that may have significant impacts upon the Reliability Coordinator Area and neighboring Reliability Coordinator Areas.
- 4. **Applicability**
  - 4.1. Reliability Coordinators.
  - 4.2. Balancing Authorities.
  - 4.3. Transmission Operators.
  - 4.4. Transmission Service Providers.
  - 4.5. Generator Operators.
  - 4.6. Load-Serving Entities.
  - 4.7. Purchasing-Selling Entities.
- 5. **Effective Date:** ~~January 1, 2007~~

In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

Formatted: Normal, Tabs: Not at 180 pt

Formatted: Font: 12 pt, Not Bold

**B. Requirements**

- R1. Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following:
  - R1.1. Current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading.
  - R1.2. Current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope.
  - R1.3. Current post-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope.
  - R1.4. System real and reactive reserves (actual versus required).
  - R1.5. Capacity and energy adequacy conditions.
  - R1.6. Current ACE for all its Balancing Authorities.

- R1.7. Current local or Transmission Loading Relief procedures in effect.
- R1.8. Planned generation dispatches.
- R1.9. Planned transmission or generation outages.
- R1.10. Contingency events.

~~R2. Each Reliability Coordinator shall be aware of all Interchange Transactions that wheel through, source, or sink in its Reliability Coordinator Area, and make that Interchange Transaction information available to all Reliability Coordinators in the Interconnection.~~

Formatted: Bullets and Numbering

~~R3. As portions of the transmission system approach or exceed SOLs or IROLs, the Reliability Coordinator shall work with its Transmission Operators and Balancing Authorities to evaluate and assess any additional Interchange Schedules that would violate those limits. If a potential or actual IROL violation cannot be avoided through proactive intervention, the Reliability Coordinator shall initiate control actions or emergency procedures to relieve the violation without delay, and no longer than 30 minutes. The Reliability Coordinator shall ensure all resources, including load shedding, are available to address a potential or actual IROL violation.~~

R4.R2. Each Reliability Coordinator shall monitor its Balancing Authorities' parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard and Disturbance Control Standard requirements. If necessary, the Reliability Coordinator shall direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. The Reliability Coordinator shall issue Energy Emergency Alerts as needed and at the request of its Balancing Authorities and Load-Serving Entities.

~~R5. Each Reliability Coordinator shall identify the cause of any potential or actual SOL or IROL violations. The Reliability Coordinator shall initiate the control action or emergency procedure to relieve the potential or actual IROL violation without delay, and no longer than 30 minutes. The Reliability Coordinator shall be able to utilize all resources, including load shedding, to address an IROL violation.~~

R6.R3. Each Reliability Coordinator shall ensure its Transmission Operators and Balancing Authorities are aware of Geo-Magnetic Disturbance (GMD) forecast information and assist as needed in the development of any required response plans.

R7.R4. The Reliability Coordinator shall disseminate information within its Reliability Coordinator Area, as required.

R8.R5. Each Reliability Coordinator shall monitor system frequency and its Balancing Authorities' performance and direct any necessary rebalancing to return to CPS and DCS compliance. The Transmission Operators and Balancing Authorities shall utilize all resources, including firm load shedding, as directed by its Reliability Coordinator to relieve the emergent condition.

R9.R6. The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, ~~IROL~~, CPS, or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.

Formatted: Font color: Auto, Not Strikethrough

**R10.R7.** As necessary, the Reliability Coordinator shall assist the Balancing Authorities in its Reliability Coordinator Area in arranging for assistance from neighboring Reliability Coordinator Areas or Balancing Authorities.

**R11.R8.** The Reliability Coordinator shall identify sources of large Area Control Errors that may be contributing to Frequency Error, Time Error, or Inadvertent Interchange and shall discuss corrective actions with the appropriate Balancing Authority. The Reliability Coordinator shall direct its Balancing Authority to comply with CPS and DCS.

**R12.R9.** Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows. The Transmission Operator shall immediately inform the Reliability Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected.

~~**R13.R10.** Each Reliability Coordinator shall ensure that all Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities operate to prevent the likelihood that a disturbance, action, or non-action in its Reliability Coordinator Area will result in a SOL or IROL violation in another area of the Interconnection.~~ In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.

~~**R14.R11.** Each Reliability Coordinator shall make known to Transmission Service Providers within its Reliability Coordinator Area, SOLs or IROLs within its wide area view.~~ The Transmission Service Provider~~s~~ shall respect ~~these~~ SOLs ~~or~~ and IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.

**R15.R12.** Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated.

~~**R16.** Each Reliability Coordinator shall confirm reliability assessment results and determine the effects within its own and adjacent Reliability Coordinator Areas. The Reliability Coordinator shall discuss options to mitigate potential or actual SOL or IROL violations and take actions as necessary to always act in the best interests of the Interconnection at all times.~~

~~**R17.** When an IROL or SOL is exceeded, the Reliability Coordinator shall evaluate the local and wide area impacts, both real-time and post-contingency, and determine if the actions being taken are appropriate and sufficient to return the system to within IROL in thirty minutes. If the actions being taken are not appropriate or sufficient, the Reliability Coordinator shall direct the Transmission Operator, Balancing Authority, Generator Operator, or Load-Serving Entity to return the system to within IROL or SOL.~~

### **C. Measures**

**M1.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, Energy Management System description documents, computer printouts, a prepared report specifically detailing compliance to each of the bullets in Requirement 1, EMS

availability, SCADA data collection system communications performance or equivalent evidence that will be used to confirm that it monitors the Reliability Coordinator Area parameters specified in Requirements 1.1 through 1.9.

~~M2. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, Historical Tag Archive information, Interchange Transaction records, computer printouts, voice recordings or transcripts of voice recordings or equivalent evidence that will be used to confirm that it was aware of and made Interchange Transaction information available to all other Reliability Coordinators, as specified in Requirement 2.~~

Formatted: Bullets and Numbering

~~M3. If a potential or actual IROL violation occurs, the Reliability Coordinator involved in the event shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, system event logs, operator action notes or equivalent evidence that will be used to determine if it initiated control actions or emergency procedures to relieve that IROL violation within 30 minutes. (Requirement 3 Part 2 and Requirement 5)~~

Formatted: Indent: Left: 18 pt, No bullets or numbering

~~M4.M2.~~ If one of its Balancing Authorities has insufficient operating reserves, the Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to computer printouts, operating logs, voice recordings or transcripts of voice recordings, or equivalent evidence that will be used to determine if the Reliability Coordinator directed and, if needed, assisted the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. (Requirement 4 Part 2 and Requirement 10)

Formatted: Tabs: Not at 129.6 pt + 162 pt

Formatted: Bullets and Numbering

~~M5.M3.~~ The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to determine if it informed Transmission Operators and Balancing Authorities of Geo-Magnetic Disturbance (GMD) forecast information and provided assistance as needed in the development of any required response plans. (Requirement 6)

~~M6.M4.~~ The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, Hot Line recordings, electronic communications or equivalent evidence that will be used to determine if it disseminated information within its Reliability Coordinator Area in accordance with Requirement 7.

~~M7.M5.~~ The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, computer printouts, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it monitored system frequency and Balancing Authority performance and directed any necessary rebalancing, as specified in Requirement 8 Part 1.

~~M8.M6.~~ The Transmission Operators and Balancing Authorities shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it utilized all resources, including firm load shedding, as directed by its Reliability Coordinator, to relieve an emergent condition. (Requirement 8 Part 2)

~~M9.M7.~~ The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, operator logs or equivalent evidence that will be used to determine if it coordinated with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, ~~IROL~~, CPS,

Formatted: Font color: Auto, Not Strikethrough

or DCS violations including the coordination of pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities and Generator Operators. (Requirement 9 Part 1)

**M10.M8.** If a large Area Control Error has occurred, the Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, Hot Line recordings, electronic communications or equivalent evidence that will be used to determine if it identified sources of the Area Control Errors, and initiated corrective actions with the appropriate Balancing Authority if the problem was within the Reliability Coordinator's Area (Requirement 11 Part 1)

**M11.M9.** If a Special Protection System is armed and that system could have had an inter-area impact, the Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, agreements with their Transmission Operators, procedural documents, operator logs, computer analysis, training modules, training records or equivalent evidence that will be used to confirm that it was aware of the impact of that Special Protection System on inter-area flows. (Requirement 12)

**M12.M10.** If there is an instance where there is a disagreement on a derived limit, the ~~Reliability Coordinator~~, Transmission Operator, Balancing Authority, Generator Operator, Load-serving Entity, Purchasing-selling Entity and Transmission Service Provider involved in the disagreement shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications or equivalent evidence that will be used to determine if it operated to the most limiting parameter. (Part 2 of Requirement 13)

Formatted: Font color: Auto, Not Strikethrough

~~**M13.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, procedural documents, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it provided SOL and IROL information to Transmission Service Providers within its Reliability Coordinator Area. (Requirement 14, Part 1)~~

**M14.M11.** The Transmission Service Providers shall have and provide upon request evidence that could include, but is not limited to, procedural documents, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it respected the SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes. (Requirement 14 Part 2)

Formatted: Tabs: Not at 129.6 pt + 162 pt

**M15.M12.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it issued alerts when it foresaw a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area, to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area as specified in Requirement 15 Part 1.

**M16.M13.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that upon receiving information such as an SOL or IROL violation, loss of reactive reserves, etc. it disseminated the information to its impacted Transmission Operators and Balancing Authorities as specified in Requirement 15 Part 2.

**M17.M14.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it notified all impacted Transmission Operators, Balancing Authorities and Reliability Coordinators when a transmission problem has been mitigated. (Requirement 15 Part 3)

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance Monitoring Responsibility**

Regional Reliability Organizations shall be responsible for compliance monitoring.

#### **1.2. Compliance Monitoring and Reset Time Frame**

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

#### **1.3. Data Retention**

For Measures 1 and ~~4~~9, each Reliability Coordinator shall have its current in-force documents as evidence.

For Measures 2-~~10-8~~ and ~~Measure 13, and~~ Measures ~~4~~5-12 through ~~4~~613, the Reliability Coordinator shall keep 90 days of historical data (evidence).

For Measure ~~8~~6, the Transmission Operator and Balancing Authority shall keep 90 days of historical data (evidence).

For Measure ~~12~~10, the ~~Reliability Coordinator,~~ Transmission Operator, Balancing Authority, and Transmission Service Provider shall keep 90 days of historical data (evidence).

For Measure ~~4~~411, the Transmission Service Provider shall keep 90 days of historical data (evidence).

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

**1.4. Additional Compliance Information**

None.

Violation Severity Levels for this standard were approved by the BOT on February 28, 2008 and they replace the Levels of Non-compliance.

Formatted: Bullets and Numbering

~~2. Levels of Non-Compliance for a Transmission Operator, Balancing Authority, Generator Operator, Load-serving Entity, Purchasing-selling Entity and Transmission Service Provider~~

~~2.1. Level 1: Not applicable.~~

~~2.2. Level 2: Not applicable.~~

~~2.3. Level 3: Not applicable.~~

~~2.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~2.4.1. Did not follow the Reliability Coordinator's directives in accordance with R8 Part 2).~~

~~2.4.2. Did not operate to the most limiting parameter when a difference in derived limits existed. (R13 Part 2)~~

~~3. Levels of Non-Compliance for a Reliability Coordinator:~~

~~3.1. Level 1: Not applicable.~~

~~3.2. Level 2: Did not make Interchange Transaction information available to all other Reliability Coordinators in the Interconnection. (Requirement 2)~~

~~3.3. Level 3: There shall be a separate Level 3 non-compliance, for every one of the following requirements that is in violation:~~

~~3.3.1. Did not communicate to each of its Balancing Authorities and Transmission Operators to make them aware of GMD forecast information or did not assist in the development of any required response plans to a predicted GMD. (Requirement 6)~~

~~3.3.2. Did not disseminate information within its Reliability Coordinator Area. (Requirement 7)~~

~~3.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~3.4.1. Does not meet one or more of the requirements as specified in requirement 1 (Requirements 1.1 through R1.9)~~

~~3.4.2. Did not make Interchange Transaction information available to all other Reliability Coordinators. (Requirement 2)~~

- ~~3.4.3 Did not initiate control actions or emergency procedures to relieve an IROL violation without delay, and no longer than 30 minutes. (Requirement 3 Part 2 and Requirement 5)~~
- ~~3.4.4 Did not direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. (Requirement 4 Part 2)~~
- ~~3.4.5 Did not monitor the system frequency or each of its Balancing Authorities performance or did not direct rebalancing to return to DCS and CPS compliance. (Requirement 8 Part 1)~~
- ~~3.4.6 Did not coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS, or DCS violations. (Requirement 9)~~
- ~~3.4.7 When it identified a source of large Area Control Errors, it did not initiate corrective actions with the appropriate Balancing Authority if the problem was inside its Reliability Coordinator Area. (Requirement 11 part 1)~~
- ~~3.4.8 Did not provide evidence that it was aware of the impact of the operation of a Special Protection System on inter area flows. (Requirement 12)~~
- ~~3.4.9 Did not operate to the most limiting parameter when a difference in derived limits existed. (Requirement 13 Part 2)~~
- ~~3.4.10 Did not provide Transmission Service Providers with SOLs or IROLs (within the Reliability Coordinator's wide area view) (Requirement 14 Part 1)~~
- ~~3.4.11 Did not issue alerts when it foresaw a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area. (Requirement 15)~~

#### **4. Levels of Non-Compliance for a Transmission Service Provider**

~~4.1. Level 1: Not applicable.~~

~~4.2. Level 2: Not applicable.~~

~~4.3. Level 3: Not applicable.~~

~~4.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~4.4.1 Did not operate to the most limiting parameter when a difference in derived limits existed. (R13 Part 2)~~

~~1.4.1 Did not respect the SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes. (Requirement 14 Part 2)~~

2. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	The Reliability Coordinator failed to monitor one (1) of the elements listed in IRO-005-1 R1.1 through R1.10.	The Reliability Coordinator failed to monitor two (2) of the elements listed in IRO-005-1 R1.1 through R1.10.	The Reliability Coordinator failed to monitor three (3) of the elements listed in IRO-005-1 R1.1 through R1.10.	The Reliability Coordinator failed to monitor more than three (3) of the elements listed in IRO-005-1 R1.1 through R1.10.
R1.1	The Reliability Coordinator failed to monitor the current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading.	N/A	N/A	N/A
R1.2	The Reliability Coordinator failed to monitor current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope.	N/A	N/A	N/A

**Proposed Clean and Redline of TOP-003-1**

**A. Introduction**

1. **Title:** **Planned Outage Coordination**
2. **Number:** TOP-003-1
3. **Purpose:** Scheduled generator and transmission outages that may affect the reliability of interconnected operations must be planned and coordinated among Balancing Authorities, Transmission Operators, and Reliability Coordinators.
4. **Applicability**
  - 4.1. Generator Operators.
  - 4.2. Transmission Operators.
  - 4.3. Balancing Authorities.
  - 4.4. Reliability Coordinators.
5. **Proposed Effective Date:**

In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

**B. Requirements**

- R1. Generator Operators and Transmission Operators shall provide planned outage information.
  - R1.1. Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements.
  - R1.2. Each Transmission Operator shall provide outage information daily to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation.
  - R1.3. Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.
- R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators as required.

- R3.** Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.
- R4.** Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.

**C. Measures**

- M1.** Evidence that the Generator Operator, Transmission Operator, and Balancing Authority reported and coordinated scheduled outage information as indicated in the requirements above.

**D. Compliance**

**1. Compliance Monitoring Process**

Each Regional Reliability Organization shall conduct a review every three years to ensure that each responsible entity has a process in place to provide planned generator and/or bulk transmission outage information to their Reliability Coordinator, and with neighboring Transmission Operators and Balancing Authorities.

Investigation: At the discretion of the Regional Reliability Organization or NERC, an investigation may be initiated to review the planned outage process of a monitored entity due to a complaint of non-compliance by another entity. Notification of an investigation must be made by the Regional Reliability Organization to the entity being investigated as soon as possible, but no later than 60 days after the event. The form and manner of the investigation will be set by NERC and/or the Regional Reliability Organization.

**1.1. Compliance Monitoring Responsibility**

A Reliability Coordinator makes a request for an outage to “not be taken” because of a reliability impact on the grid and the outage is still taken. The Reliability Coordinator must provide all its documentation within three business days to the Regional Reliability Organization. Each Regional Reliability Organization shall report compliance and violations to NERC via the NERC Compliance Reporting process.

**1.2. Compliance Monitoring Period and Reset Timeframe**

One calendar year without a violation from the time of the violation.

**1.3. Data Retention**

One calendar year.

**1.4. Additional Compliance Information**

Not specified.

2. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Generator Operator failed to provide outage information, in accordance with its Transmission Operators established outage reporting requirements, to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW).
R1.1	N/A	N/A	N/A	The Transmission Operator failed to provide outage information, in accordance with its Reliability Coordinators established outage reporting requirement, to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation.

**Standard-TOP-003-1 — Planned Outage Coordination**

Requirement	Lower	Moderate	High	Severe
R1.2	The responsible entity failed to provide the information by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	N/A	N/A	N/A
R1.3	N/A	N/A	N/A	The responsible entity failed to plan or coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators when required.
R2	The responsible entity planned and coordinated scheduled outages of telemetering and control equipment and associated communication channels with its Reliability Coordinator, but failed to coordinate with affected neighboring Transmission Operators, Balancing Authorities, and Generator Operators.	N/A	N/A	The responsible entity failed to plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.

**Standard-TOP-003-1 — Planned Outage Coordination**

Requirement	Lower	Moderate	High	Severe
R3	N/A	N/A	N/A	The Reliability Coordinator failed to resolve any scheduling of potential reliability conflicts.
R4	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 30 minutes but less than or equal to 35 minutes.	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 35 minutes but less than or equal to 40 minutes.	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 40 minutes but less than or equal to 45 minutes.	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 45 minutes.

#### C. Measures

- M1. Evidence that the Generator Operator, Transmission Operator, and Balancing Authority, ~~and Reliability Coordinator~~ reported and coordinated scheduled outage information as indicated in the requirements above.

#### D. Compliance

##### 1. Compliance Monitoring Process

Each Regional Reliability Organization shall conduct a review every three years to ensure that each responsible entity has a process in place to provide planned generator and/or bulk transmission outage information to their Reliability Coordinator, and with neighboring Transmission Operators and Balancing Authorities.

Investigation: At the discretion of the Regional Reliability Organization or NERC, an investigation may be initiated to review the planned outage process of a monitored entity due to a complaint of non-compliance by another entity. Notification of an investigation must be made by the Regional Reliability Organization to the entity being investigated as soon as possible, but no later than 60 days after the event. The form and manner of the investigation will be set by NERC and/or the Regional Reliability Organization.

##### 1.1. Compliance Monitoring Responsibility

A Reliability Coordinator makes a request for an outage to “not be taken” because of a reliability impact on the grid and the outage is still taken. The Reliability Coordinator must provide all its documentation within three business days to the Regional Reliability Organization. Each Regional Reliability Organization shall report compliance and violations to NERC via the NERC Compliance Reporting process.

##### 1.2. Compliance Monitoring Period and Reset Timeframe

One calendar year without a violation from the time of the violation.

##### 1.3. Data Retention

One calendar year.

**1.4. Additional Compliance Information**

Not specified.

Violation Severity Levels for this standard were approved by the BOT on February 28, 2008 and they replace the Levels of Non-compliance.

Formatted: Bullets and Numbering

~~2. Levels of Non-Compliance~~

~~2.1. Level 1: Each entity responsible for reporting information under Requirements R1 and R3 has a process in place to provide information to their Reliability Coordinator but does not have a process in place (where permitted by legal agreements) to provide this information to the neighboring Balancing Authority or Transmission Operator.~~

~~2.2. Level 2: N/A.~~

~~2.3. Level 3: N/A.~~

1.5. **Level 4:**—There is no process in place to exchange outage information, or the entity responsible for reporting information under Requirements R1 to R3 does not follow the directives of the Reliability Coordinator to cancel or reschedule an outage.

2. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Generator Operator failed to provide outage information, in accordance with its Transmission Operators established outage reporting requirements, to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW).

Standard-TOP-003-0-1 — Planned Outage Coordination

Requirement	Lower	Moderate	High	Severe
R1.1	N/A	N/A	N/A	The Transmission Operator failed to provide outage information, in accordance with its Reliability Coordinators established outage reporting requirement, to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation.
R1.2	The responsible entity failed to provide the information by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	N/A	N/A	N/A

Formatted Table

Requirement	Lower	Moderate	High	Severe

<u>1</u>		<u>Modified R1.2</u> <u>Modified M1</u> <u>Replaced Levels of Non-compliance with the Feb 28, BOT approved Violation Severity Levels (VSLs)</u>	<u>Revised</u>

**Proposed Clean and Redline of TOP-005-2**

## A. Introduction

1. **Title:** **Operational Reliability Information**
2. **Number:** TOP-005-2
3. **Purpose:** To ensure reliability entities have the operating data needed to monitor system conditions within their areas.
4. **Applicability**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.
  - 4.3. Purchasing Selling Entities.
5. **Proposed Effective Date:**

In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

## B. Requirements

- R1. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for “Electric System Reliability Data.”
- R2. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005 “Electric System Reliability Data,” unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.
- R3. Each Purchasing-Selling Entity shall provide information as requested by its Host Balancing Authorities and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.

## C. Measures

- M1. Evidence that the Balancing Authority, Transmission Operator, and Purchasing-Selling Entity is providing the information required, within the time intervals specified, and in a format agreed upon by the requesting entities.

## D. Compliance

1. **Compliance Monitoring Process**

**1.1. Compliance Monitoring Responsibility**

Self-Certification: Entities shall annually self-certify compliance to the measures as required by its Regional Reliability Organization.

Exception Reporting: Each Region shall report compliance and violations to NERC via the NERC compliance reporting process.

**1.2. Compliance Monitoring Period and Reset Time Frame**

Periodic Review: Entities will be selected for operational reviews at least every three years. One calendar year without a violation from the time of the violation.

**1.3. Data Retention**

Not specified.

**1.4. Additional Compliance Information**

Not specified.

**2. Violation Severity Levels:**

Requirement	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The ISN data recipient failed to sign the NERC Confidentiality Agreement for “Electric System Reliability Data”.
R2	The responsible entity failed to provide any of the data requested by other Balancing Authorities or Transmission Operators.	N/A	N/A	The responsible entity failed to provide all of the data requested by its host Balancing Authority or Transmission Operator.
R3	The responsible entity failed to provide any of the data requested by other Balancing Authorities or Transmission Operators.	N/A	N/A	The responsible entity failed to provide all of the data requested by its host Balancing Authority or Transmission Operator.

**E. Regional Variances**

## Attachment 1-TOP-005

### Electric System Reliability Data

This Attachment lists the types of data that Balancing Authorities, and Transmission Operators are expected to share with other Balancing Authorities and Transmission Operators.

1. The following information shall be updated at least every ten minutes:
  - 1.1. Transmission data. Transmission data for all Interconnections plus all other facilities considered key, from a reliability standpoint:
    - 1.1.1 Status.
    - 1.1.2 MW or ampere loadings.
    - 1.1.3 MVA capability.
    - 1.1.4 Transformer tap and phase angle settings.
    - 1.1.5 Key voltages.
  - 1.2. Generator data.
    - 1.2.1 Status.
    - 1.2.2 MW and MVAR capability.
    - 1.2.3 MW and MVAR net output.
    - 1.2.4 Status of automatic voltage control facilities.
  - 1.3. Operating reserve.
    - 1.3.1 MW reserve available within ten minutes.
  - 1.4. Balancing Authority demand.
    - 1.4.1 Instantaneous.
  - 1.5. Interchange.
    - 1.5.1 Instantaneous actual interchange with each Balancing Authority.
    - 1.5.2 Current Interchange Schedules with each Balancing Authority by individual Interchange Transaction, including Interchange identifiers, and reserve responsibilities.
    - 1.5.3 Interchange Schedules for the next 24 hours.
  - 1.6. Area Control Error and frequency.
    - 1.6.1 Instantaneous area control error.
    - 1.6.2 Clock hour area control error.
    - 1.6.3 System frequency at one or more locations in the Balancing Authority.
2. Other operating information updated as soon as available.
  - 2.1. Interconnection Reliability Operating Limits and System Operating Limits in effect.

- 2.2. Forecast of operating reserve at peak, and time of peak for current day and next day.
- 2.3. Forecast peak demand for current day and next day.
- 2.4. Forecast changes in equipment status.
- 2.5. New facilities in place.
- 2.6. New or degraded special protection systems.
- 2.7. Emergency operating procedures in effect.
- 2.8. Severe weather, fire, or earthquake.
- 2.9. Multi-site sabotage.

**A. Introduction**

- 1. **Title:** Operational Reliability Information
- 2. **Number:** TOP-005-~~42~~
- 3. **Purpose:** To ensure reliability entities have the operating data needed to monitor system conditions within their areas.
- 4. **Applicability**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.

~~4.3. Reliability Coordinators.~~

~~4.4.4.3.~~ Purchasing Selling Entities.

- 5. **Proposed Effective Date:** ~~November 1, 2006~~

~~In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.~~

~~In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.~~

**B. Requirements**

~~R1. Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area.~~

~~R1.1. Each Reliability Coordinator shall identify the data requirements from the list in Attachment 1-TOP-005-0 “Electric System Reliability Data” and any additional operating information requirements relating to operation of the bulk power system within the Reliability Coordinator Area.~~

**R2.R1.** As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for “Electric System Reliability Data.”

**R3.R2.** Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-0 “Electric System Reliability Data,” unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.

Formatted: Font color: Red, Strikethrough

Formatted: Bullets and Numbering

Formatted: Bullets and Numbering

~~R4.R3.~~ Each Purchasing-Selling Entity shall provide information as requested by its Host Balancing Authorities and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.

**C. Measures**

M1. Evidence that the ~~Reliability Coordinator~~, Balancing Authority, Transmission Operator, and Purchasing-Selling Entity is providing the information required, within the time intervals specified, and in a format agreed upon by the requesting entities.

**D. Compliance**

**1. Compliance Monitoring Process**

**1.1. Compliance Monitoring Responsibility**

Self-Certification: Entities shall annually self-certify compliance to the measures as required by its Regional Reliability Organization.

Exception Reporting: Each Region shall report compliance and violations to NERC via the NERC compliance reporting process.

**1.2. Compliance Monitoring Period and Reset Time Frame**

Periodic Review: Entities will be selected for operational reviews at least every three years. One calendar year without a violation from the time of the violation.

**1.3. Data Retention**

Not specified.

**1.4. Additional Compliance Information**

Not specified.

Violation Severity Levels for this standard were approved by the BOT on February 28, 2008 and they replace the Levels of Non-compliance.

Formatted: Bullets and Numbering

~~2. Levels of Non-Compliance~~

~~2.1. Level 1: — Each entity responsible for reporting information under Requirements R1 to R5 is providing the requesting entities with the data required, in specified time intervals and format, but there are problems with consistency of delivery identified in the measuring process that need remedy (e.g., the data is not supplied consistently due to equipment malfunctions, or scaling is incorrect).~~

~~2.2. Level 2: N/A.~~

~~2.3. Level 3: N/A.~~

1.5. ~~Level 4: — Each entity responsible for reporting information under Requirements R1 to R5 R3 is not providing the requesting entities with data with the specified content, timeliness, or format. The information missing is included in the requesting entity's list of data.~~

2. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
<u>R1</u>	The responsible entity failed to provide all of the data requested by its Reliability Coordinator.	N/A	N/A	The responsible entity failed to provide all of the data requested by its Reliability Coordinator.
<u>R1.1</u>	N/A	N/A	N/A	The Reliability Coordinator failed to identify the data necessary to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area.
<u>R2R1</u>	N/A	N/A	N/A	The ISN data recipient failed to sign the NERC Confidentiality Agreement for “Electric System Reliability Data”.
<u>R3R2</u>	The responsible entity failed to provide any of the data requested by other Balancing Authorities or Transmission Operators.	N/A	N/A	The responsible entity failed to provide all of the data requested by its host Balancing Authority or Transmission Operator.
<u>R4R3</u>	The responsible entity failed to provide any of the data requested by other Balancing Authorities or Transmission Operators.	N/A	N/A	The responsible entity failed to provide all of the data requested by its host Balancing Authority or Transmission Operator.

**Attachment 1-TOP-005-0**  
**Electric System Reliability Data**

This Attachment lists the types of data that ~~Reliability Coordinators~~, Balancing Authorities, and Transmission Operators are expected to ~~provide, and are expected to~~ share with ~~each~~ other Balancing Authorities and Transmission Operators.

1. The following information shall be updated at least every ten minutes:
  - 1.1. Transmission data. Transmission data for all Interconnections plus all other facilities considered key, from a reliability standpoint:
    - 1.1.1 Status.
    - 1.1.2 MW or ampere loadings.
    - 1.1.3 MVA capability.
    - 1.1.4 Transformer tap and phase angle settings.
    - 1.1.5 Key voltages.
  - 1.2. Generator data.
    - 1.2.1 Status.
    - 1.2.2 MW and MVAR capability.
    - 1.2.3 MW and MVAR net output.
    - 1.2.4 Status of automatic voltage control facilities.
  - 1.3. Operating reserve.
    - 1.3.1 MW reserve available within ten minutes.
  - 1.4. Balancing Authority demand.
    - 1.4.1 Instantaneous.
  - 1.5. Interchange.
    - 1.5.1 Instantaneous actual interchange with each Balancing Authority.
    - 1.5.2 Current Interchange Schedules with each Balancing Authority by individual Interchange Transaction, including Interchange identifiers, and reserve responsibilities.
    - 1.5.3 Interchange Schedules for the next 24 hours.
  - 1.6. Area Control Error and frequency.
    - 1.6.1 Instantaneous area control error.
    - 1.6.2 Clock hour area control error.
    - 1.6.3 System frequency at one or more locations in the Balancing Authority.
2. Other operating information updated as soon as available.

- 2.1. Interconnection Reliability Operating Limits and System Operating Limits in effect.
- 2.2. Forecast of operating reserve at peak, and time of peak for current day and next day.
- 2.3. Forecast peak demand for current day and next day.
- 2.4. Forecast changes in equipment status.
- 2.5. New facilities in place.
- 2.6. New or degraded special protection systems.
- 2.7. Emergency operating procedures in effect.
- 2.8. Severe weather, fire, or earthquake.
- 2.9. Multi-site sabotage.

**Proposed Clean and Redline of TOP-006-2**

## A. Introduction

1. **Title:** **Monitoring System Conditions**
2. **Number:** TOP-006-2
3. **Purpose:** To ensure critical reliability parameters are monitored in real-time.
4. **Applicability**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.
  - 4.3. Generator Operators.
  - 4.4. Reliability Coordinators.
5. **Proposed Effective Date:**

In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

## B. Requirements

- R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use.
  - R1.1. Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use.
  - R1.2. Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.
- R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.
- R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel.
- R4. Each Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.
- R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to indicate, if appropriate, the need for corrective action.

- R6.** Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.
- R7.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.

### **C. Measures**

- M1.** The Generator Operator shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Host Balancing Authority and Transmission Operator of all generation resources available for use. (Requirement 1.1)
- M2.** Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use. (Requirement 1.2)
- M3.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, computer printouts or other equivalent evidence that will be used to confirm that it monitored each of the applicable items listed in Requirement 2.
- M4.** Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, printouts, training documents, description documents or other equivalent evidence that will be used to confirm that it has weather forecasts and past load patterns, available to predict the system's near-term load pattern. (Requirement 4)
- M5.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a description of its EMS alarm capability, training documents, or other equivalent evidence that will be used to confirm that important deviations in operating conditions and the need for corrective actions will be brought to the attention of its operators. (Requirement 5)
- M6.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a list of the frequency monitoring points available to the shift-operators or other equivalent evidence that will be used to confirm that it monitors system frequency. (Requirement 7)

### **D. Compliance**

- 1. Compliance Monitoring Process**
  - 1.1. Compliance Monitoring Responsibility**

Regional Reliability Organizations shall be responsible for compliance monitoring.

### **1.2. Compliance Monitoring and Reset Time Frame**

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

### **1.3. Data Retention**

Each Generator Operator shall keep 90 days of historical data (evidence) for Measure 1.

Each Transmission Operator and Balancing Authority shall keep 90 days of historical data (evidence) for Measure 2.

Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have current documents as evidence for Measure 3, 5 and 6.

Each Transmission Operator and Balancing Authority shall have current documents as evidence of compliance to Measure 4.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

### **1.4. Additional Compliance Information**

None.

2. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity failed to know the status of all generation and transmission resources available for use, even though said information was reported by the Generator Operator, Transmission Operator, or Balancing Authority.
R1.1	N/A	N/A	N/A	The Generator Operator failed to inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use.
R1.2	N/A	N/A	N/A	The responsible entity failed to inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.
R2	N/A	The responsible entity monitors the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, but is not aware of the status of rotating and static reactive resources.	The responsible entity fails to monitor all of the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of all rotating and static reactive resources.	The responsible entity fails to monitor any of the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.

**Standard TOP-006-2 — Monitoring System Conditions**

<b>Requirement</b>	<b>Lower</b>	<b>Moderate</b>	<b>High</b>	<b>Severe</b>
R3	The responsible entity failed to provide any of the appropriate technical information concerning protective relays to their operating personnel.	N/A	N/A	The responsible entity failed to provide all of the appropriate technical information concerning protective relays to their operating personnel.
R4	N/A	N/A	The responsible entity has either weather forecasts or past load patterns, available to predict the system's near-term load pattern, but not both.	The responsible entity failed to have both weather forecasts and past load patterns, available to predict the system's near-term load pattern.
R5	N/A	N/A	The responsible entity used monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions, but does not have indication of the need for corrective action.	The responsible entity failed to use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions.
R6	N/A	N/A	N/A	The responsible entity failed to use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.
R7	N/A	N/A	N/A	The responsible entity failed to monitor system frequency.

**E. Regional Variances**

## A. Introduction

1. **Title:** Monitoring System Conditions

2. **Number:** TOP-006-~~4~~2

~~3.~~ **Purpose:**

3. To ensure critical reliability parameters are monitored in real-time.

4. **Applicability**

4.1. Transmission Operators.

4.2. Balancing Authorities.

4.3. Generator Operators.

4.4. Reliability Coordinators.

5. **Proposed Effective Date:** ~~January 1, 2007~~

In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

Formatted: Bullets and Numbering

Formatted: Font: Not Bold

## B. Requirements

**R1.** Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use.

**R1.1.** Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use.

**R1.2.** Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.

**R2.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.

**R3.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel.

**R4.** Each ~~Reliability Coordinator~~, Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.

**R5.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important

deviations in operating conditions and to indicate, if appropriate, the need for corrective action.

- R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.
- R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.

### C. Measures

- M1. The Generator Operator shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Host Balancing Authority and Transmission Operator of all generation resources available for use. (Requirement 1.1)
- M2. Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use. (Requirement 1.2)
- M3. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, computer printouts or other equivalent evidence that will be used to confirm that it monitored each of the applicable items listed in Requirement 2.
- M4. Each ~~Reliability Coordinator~~, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, printouts, training documents, description documents or other equivalent evidence that will be used to confirm that it has weather forecasts and past load patterns, available to predict the system's near-term load pattern. (Requirement 4)
- M5. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a description of its EMS alarm capability, training documents, or other equivalent evidence that will be used to confirm that important deviations in operating conditions and the need for corrective actions will be brought to the attention of its operators. (Requirement 5)
- M6. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a list of the frequency monitoring points available to the shift-operators or other equivalent evidence that will be used to confirm that it monitors system frequency. (Requirement 7)

### D. Compliance

- 1. Compliance Monitoring Process

**1.1. Compliance Monitoring Responsibility**

Regional Reliability Organizations shall be responsible for compliance monitoring.

**1.2. Compliance Monitoring and Reset Time Frame**

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

**1.3. Data Retention**

Each Generator Operator shall keep 90 days of historical data (evidence) for Measure 1.

Each Transmission Operator and Balancing Authority shall keep 90 days of historical data (evidence) for Measure 2.

Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have current documents as evidence for Measure 3, 5 and 6.

Each ~~Reliability Coordinator~~, Transmission Operator and Balancing Authority shall have current documents as evidence of compliance to Measure 4.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

**1.4. Additional Compliance Information**

None.

Violation Severity Levels for this standard were approved by the BOT on February 28, 2008 and they replace the Levels of Non-compliance.

~~2. Levels of Non-Compliance for Reliability Coordinators:~~

~~2.1. Level 1: Not applicable.~~

Formatted: Bullets and Numbering

~~2.2. Level 2: Not applicable.~~

~~2.3. Level 3: Not applicable.~~

~~2.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~2.4.1 Does not monitor all of the applicable items listed in Requirement 2.~~

~~2.4.2 Did not have the information specified in R4.~~

~~2.4.3 Did not bring to the attention of its operators, important deviations in operating conditions and the need for corrective actions. (Requirement 5)~~

~~2.4.4 No evidence it monitors system frequency. (Requirement 7)~~

Formatted: Bullets and Numbering

Formatted: Bullets and Numbering

~~3. Levels of Non-Compliance for Generator Operators:~~

~~3.1. Level 1: Not applicable.~~

~~3.2. Level 2: Not applicable.~~

~~3.3. Level 3: Not applicable.~~

~~3.4. Level 4: Did not inform its Host Balancing Authority and/or the Transmission Operator of all generation resources available for use. (R1.1)~~

~~4. Levels of Non-Compliance for Transmission Operators and Balancing Authorities:~~

~~4.1. Level 1: Not applicable.~~

~~4.2. Level 2: Not applicable.~~

~~4.3. Level 3: Not applicable.~~

~~4.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~4.4.1 Did not inform the Reliability Coordinator and/or other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use in accordance with R1.2.~~

~~4.4.2 Does not monitor all the applicable items listed in R2.~~

~~4.4.3 Did not have the information specified in R4.~~

~~4.4.4 Does not have monitoring to bring to the attention of operating personnel important deviations in operating conditions and the need for corrective actions as specified in R5.~~

~~4.4.5 No evidence it monitors system frequency. (R7).~~

2. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity failed to know the status of all generation and transmission resources available for use, even though said information was reported by the Generator Operator, Transmission Operator, or Balancing Authority.
R1.1	N/A	N/A	N/A	The Generator Operator failed to inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use.
R1.2	N/A	N/A	N/A	The responsible entity failed to inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.
R2	N/A	The responsible entity monitors the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, but is not aware of the status of rotating and static reactive resources.	The responsible entity fails to monitor all of the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of all rotating and static reactive resources.	The responsible entity fails to monitor any of the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.

Requirement	Lower	Moderate	High	Severe
R3	The responsible entity failed to provide any of the appropriate technical information concerning protective relays to their operating personnel.	N/A	N/A	The responsible entity failed to provide all of the appropriate technical information concerning protective relays to their operating personnel.
R4	N/A	N/A	The responsible entity has either weather forecasts or past load patterns, available to predict the system’s near-term load pattern, but not both.	The responsible entity failed to have both weather forecasts and past load patterns, available to predict the system’s near-term load pattern.
R5	N/A	N/A	The responsible entity used monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions, but does not have indication of the need for corrective action.	The responsible entity failed to use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions.
R6	N/A	N/A	N/A	The responsible entity failed to use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.
R7	N/A	N/A	N/A	The responsible entity failed to monitor system frequency.

**Exhibit B**

Reliability Standard EOP-001-2

(to be substituted for proposed EOP-001-1 in the event FERC approves NERC's  
contemporaneous System Restoration and Blackstart Reliability Standards  
filing before acting on EOP-001-1)

### A. Introduction

1. **Title:** **Emergency Operations Planning**
2. **Number:** EOP-001-2
3. **Purpose:** Each Transmission Operator and Balancing Authority needs to develop, maintain, and implement a set of plans to mitigate operating emergencies. These plans need to be coordinated with other Transmission Operators and Balancing Authorities, and the Reliability Coordinator.
4. **Applicability**
  - 4.1. Balancing Authorities.
  - 4.2. Transmission Operators.
5. **Proposed Effective Date:** Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.

### B. Requirements

- R1. Balancing Authorities shall have operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities.
- R2. Each Transmission Operator and Balancing Authority shall:
  - R2.1. Develop, maintain, and implement a set of plans to mitigate operating emergencies for insufficient generating capacity.
  - R2.2. Develop, maintain, and implement a set of plans to mitigate operating emergencies on the transmission system.
  - R2.3. Develop, maintain, and implement a set of plans for load shedding.
- R3. Each Transmission Operator and Balancing Authority shall have emergency plans that will enable it to mitigate operating emergencies. At a minimum, Transmission Operator and Balancing Authority emergency plans shall include:
  - R3.1. Communications protocols to be used during emergencies.
  - R3.2. A list of controlling actions to resolve the emergency. Load reduction, in sufficient quantity to resolve the emergency within NERC-established timelines, shall be one of the controlling actions.
  - R3.3. The tasks to be coordinated with and among adjacent Transmission Operators and Balancing Authorities.
  - R3.4. Staffing levels for the emergency.
- R4. Each Transmission Operator and Balancing Authority shall include the applicable elements in Attachment 1-EOP-001-0 when developing an emergency plan.
- R5. The Transmission Operator and Balancing Authority shall annually review and update each emergency plan. The Transmission Operator and Balancing Authority shall provide a copy of its updated emergency plans to its Reliability Coordinator and to neighboring Transmission Operators and Balancing Authorities.

- R6.** The Transmission Operator and Balancing Authority shall coordinate its emergency plans with other Transmission Operators and Balancing Authorities as appropriate. This coordination includes the following steps, as applicable:
  - R6.1.** The Transmission Operator and Balancing Authority shall establish and maintain reliable communications between interconnected systems.
  - R6.2.** The Transmission Operator and Balancing Authority shall arrange new interchange agreements to provide for emergency capacity or energy transfers if existing agreements cannot be used.
  - R6.3.** The Transmission Operator and Balancing Authority shall coordinate transmission and generator maintenance schedules to maximize capacity or conserve the fuel in short supply. (This includes water for hydro generators.)
  - R6.4.** The Transmission Operator and Balancing Authority shall arrange deliveries of electrical energy or fuel from remote systems through normal operating channels.

**C. Measures**

- M1.** The Transmission Operator and Balancing Authority shall have its emergency plans available for review by the Regional Reliability Organization at all times.
- M2.** The Transmission Operator and Balancing Authority shall have its two most recent annual self-assessments available for review by the Regional Reliability Organization at all times.

**D. Compliance**

**1. Compliance Monitoring Process**

**1.1. Compliance Monitoring Responsibility**

Regional Reliability Organization.

**1.2. Compliance Monitoring Period and Reset Time Frame**

The Regional Reliability Organization shall review and evaluate emergency plans every three years to ensure that the plans consider the applicable elements of Attachment 1-EOP-001-0.

The Regional Reliability Organization may elect to request self-certification of the Transmission Operator and Balancing Authority in years that the full review is not done.

Reset: one calendar year.

**1.3. Data Retention**

Current plan available at all times.

**1.4. Additional Compliance Information**

Not specified.

## Standard EOP-001-2 — Emergency Operations Planning

### 2. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for less than 25% of the adjacent BAs. Or less than 25% of those agreements do not contain provisions for emergency assistance.	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for 25% to 50% of the adjacent BAs.  Or 25 to 50% of those agreements do not contain provisions for emergency assistance.	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for 50% to 75% of the adjacent BAs.  Or 50% to 75% of those agreements do not contain provisions for emergency assistance.	The Balancing Authority failed to demonstrate the existence of the necessary operating agreements for 75% or more of the adjacent BAs.  Or more than 75% of those agreements do not contain provisions for emergency assistance.
R2	The Transmission Operator or Balancing Authority failed to comply with one (1) of the sub-components.	The Transmission Operator or Balancing Authority failed to comply with two (2) of the sub-components.	N/A	The Transmission Operator or Balancing Authority has failed to comply with three (3) of the sub-components.
R2.1	The Transmission Operator or Balancing Authority's emergency plans to mitigate insufficient generating capacity are missing minor details or minor program/procedural elements.	The Transmission Operator or Balancing Authority's has demonstrated the existence of emergency plans to mitigate insufficient generating capacity emergency plans but the plans are not maintained.	The Transmission Operator or Balancing Authority's emergency plans to mitigate insufficient generating capacity emergency plans are neither maintained nor implemented.	The Transmission Operator or Balancing Authority has failed to develop emergency mitigation plans for insufficient generating capacity.
R2.2	The Transmission Operator or Balancing Authority's plans to mitigate transmission system emergencies are missing minor details or minor program/procedural elements.	The Transmission Operator or Balancing Authority's has demonstrated the existence of transmission system emergency plans but are not maintained.	The Transmission Operator or Balancing Authority's transmission system emergency plans are neither maintained nor implemented.	The Transmission Operator or Balancing Authority has failed to develop, maintain, and implement operating emergency mitigation plans for emergencies on the transmission system.

**Standard EOP-001-2 — Emergency Operations Planning**

<b>Requirement</b>	<b>Lower</b>	<b>Moderate</b>	<b>High</b>	<b>Severe</b>
R2.3	The Transmission Operator or Balancing Authority's load shedding plans are missing minor details or minor program/procedural elements.	The Transmission Operator or Balancing Authority's has demonstrated the existence of load shedding plans but are not maintained.	The Transmission Operator or Balancing Authority's load shedding plans are partially compliant with the requirement but are neither maintained nor implemented.	The Transmission Operator or Balancing Authority has failed to develop, maintain, and implement load shedding plans.
R3	The Transmission Operator or Balancing Authority failed to comply with one (1) of the sub-components.	The Transmission Operator or Balancing Authority failed to comply with two (2) of the sub-components.	The Transmission Operator or Balancing Authority has failed to comply with three (3) of the sub-components.	The Transmission Operator or Balancing Authority has failed to comply with all four (4) of the sub-components.
R3.1	The Transmission Operator or Balancing Authority's communication protocols included in the emergency plan are missing minor program/procedural elements.	N/A	N/A	The Transmission Operator or Balancing Authority has failed to include communication protocols in its emergency plans to mitigate operating emergencies.
R3.2	The Transmission Operator or Balancing Authority's list of controlling actions has resulted in meeting the intent of the requirement but is missing minor program/procedural elements.	N/A	The Transmission Operator or Balancing Authority provided a list of controlling actions, however the actions fail to resolve the emergency within NERC-established timelines.	The Transmission Operator or Balancing Authority has failed to provide a list of controlling actions to resolve the emergency.

**Standard EOP-001-2 — Emergency Operations Planning**

<b>Requirement</b>	<b>Lower</b>	<b>Moderate</b>	<b>High</b>	<b>Severe</b>
R3.3	The Transmission Operator or Balancing Authority has demonstrated coordination with Transmission Operators and Balancing Authorities but is missing minor program/procedural elements.	N/A	N/A	The Transmission Operator or Balancing Authority has failed to demonstrate the tasks to be coordinated with adjacent Transmission Operator and Balancing Authorities as directed by the requirement.
R3.4	The Transmission Operator or Balancing Authority's emergency plan does not include staffing levels for the emergency	N/A	N/A	N/A
R4	The Transmission Operator and Balancing Authority's emergency plan has complied with 90% or more of the number of sub-components.	The Transmission Operator and Balancing Authority's emergency plan has complied with 70% to 90% of the number of sub-components.	The Transmission Operator and Balancing Authority's emergency plan has complied with between 50% to 70% of the number of sub-components.	The Transmission Operator and Balancing Authority's emergency plan has complied with 50% or less of the number of sub-components
R5	The Transmission Operator and Balancing Authority is missing minor program/procedural elements.	The Transmission Operator and Balancing Authority has failed to annually review one of it's emergency plans	The Transmission Operator and Balancing Authority has failed to annually review two of its emergency plans or communicate with one of it's neighboring Balancing Authorities.	The Transmission Operator and Balancing Authority has failed to annually review and/or communicate any emergency plans with its Reliability Coordinator, neighboring Transmission Operators or Balancing Authorities.
R6	The Transmission Operator and/or the Balancing Authority failed to comply with one (1) of the sub-components.	The Transmission Operator and/or the Balancing Authority failed to comply with two (2) of the sub-components.	The Transmission Operator and/or the Balancing Authority has failed to comply with three (3) of the sub-components.	The Transmission Operator and/or the Balancing Authority has failed to comply with four (4) or more of the sub-components.

**Standard EOP-001-2 — Emergency Operations Planning**

Requirement	Lower	Moderate	High	Severe
R6.1	The Transmission Operator or Balancing Authority has failed to establish and maintain reliable communication between interconnected systems.	N/A	N/A	N/A
R6.2	The Transmission Operator or Balancing Authority has failed to arrange new interchange agreements to provide for emergency capacity or energy transfers with required entities when existing agreements could not be used.	N/A	N/A	N/A
R6.3	The Transmission Operator or Balancing Authority has failed to coordinate transmission and generator maintenance schedules to maximize capacity or conserve fuel in short supply.	N/A	N/A	N/A
R6.4	The Transmission Operator or Balancing Authority has failed to arrange for deliveries of electrical energy or fuel from remote systems through normal operating channels.	N/A	N/A	N/A

**E. Regional Differences**

<b>Version</b>	<b>Date</b>	<b>Action</b>	<b>Change Tracking</b>
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	October 17, 2008	Deleted R2 Replaced Levels of Non-compliance with the February 28, 2008 BOT approved Violation Severity Levels Corrected typographical errors in BOT approved version of VSLs	Revised
2	To be determined	Removed R2.4 as redundant with EOP-005-2 Requirement R1 for the Transmission Operator; the Balancing Authority does not need a restoration plan.	
2	August 5, 2009	Approved by Board of Trustees	Revised

**Attachment 1-EOP-001-2**

**Elements for Consideration in Development of Emergency Plans**

1. Fuel supply and inventory — An adequate fuel supply and inventory plan that recognizes reasonable delays or problems in the delivery or production of fuel.
2. Fuel switching — Fuel switching plans for units for which fuel supply shortages may occur, e.g., gas and light oil.
3. Environmental constraints — Plans to seek removal of environmental constraints for generating units and plants.
4. System energy use — The reduction of the system's own energy use to a minimum.
5. Public appeals — Appeals to the public through all media for voluntary load reductions and energy conservation including educational messages on how to accomplish such load reduction and conservation.
6. Load management — Implementation of load management and voltage reductions, if appropriate.
7. Optimize fuel supply — The operation of all generating sources to optimize the availability.
8. Appeals to customers to use alternate fuels — In a fuel emergency, appeals to large industrial and commercial customers to reduce non-essential energy use and maximize the use of customer-owned generation that rely on fuels other than the one in short supply.
9. Interruptible and curtailable loads — Use of interruptible and curtailable customer load to reduce capacity requirements or to conserve the fuel in short supply.
10. Maximizing generator output and availability — The operation of all generating sources to maximize output and availability. This should include plans to winterize units and plants during extreme cold weather.
11. Notifying IPPs — Notification of cogeneration and independent power producers to maximize output and availability.
12. Requests of government — Requests to appropriate government agencies to implement programs to achieve necessary energy reductions.
13. Load curtailment — A mandatory load curtailment plan to use as a last resort. This plan should address the needs of critical loads essential to the health, safety, and welfare of the community. Address firm load curtailment.
14. Notification of government agencies — Notification of appropriate government agencies as the various steps of the emergency plan are implemented.
15. Notifications to operating entities — Notifications to other operating entities as steps in emergency plan are implemented.

## A. Introduction

1. **Title:** Emergency Operations Planning
2. **Number:** EOP-001-02
3. **Purpose:** Each Transmission Operator and Balancing Authority needs to develop, maintain, and implement a set of plans to mitigate operating emergencies. These plans need to be coordinated with other Transmission Operators and Balancing Authorities, and the Reliability Coordinator.
4. **Applicability**
  - 4.1. Balancing Authorities.
  - 4.2. Transmission Operators.
5. **Proposed Effective Date:** ~~April 1, 2005~~ Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.

## B. Requirements

- R1. Balancing Authorities shall have operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities.
- ~~R2. The Transmission Operator shall have an emergency load reduction plan for all identified IROLs. The plan shall include the details on how the Transmission Operator will implement load reduction in sufficient amount and time to mitigate the IROL violation before system separation or collapse would occur. The load reduction plan must be capable of being implemented within 30 minutes.~~
- R2. Each Transmission Operator and Balancing Authority shall:
  - R2.1. Develop, maintain, and implement a set of plans to mitigate operating emergencies for insufficient generating capacity.
  - R2.2. Develop, maintain, and implement a set of plans to mitigate operating emergencies on the transmission system.
  - R2.3. Develop, maintain, and implement a set of plans for load shedding.
- R3. Each Transmission Operator and Balancing Authority shall have emergency plans that will enable it to mitigate operating emergencies. At a minimum, Transmission Operator and Balancing Authority emergency plans shall include:
  - R3.1. Communications protocols to be used during emergencies.
  - R3.2. A list of controlling actions to resolve the emergency. Load reduction, in sufficient quantity to resolve the emergency within NERC-established timelines, shall be one of the controlling actions.
  - R3.3. The tasks to be coordinated with and among adjacent Transmission Operators and Balancing Authorities.
  - R3.4. Staffing levels for the emergency.
- R4. Each Transmission Operator and Balancing Authority shall include the applicable elements in Attachment 1-EOP-001-0 when developing an emergency plan.

- R5.** The Transmission Operator and Balancing Authority shall annually review and update each emergency plan. The Transmission Operator and Balancing Authority shall provide a copy of its updated emergency plans to its Reliability Coordinator and to neighboring Transmission Operators and Balancing Authorities.
- R6.** The Transmission Operator and Balancing Authority shall coordinate its emergency plans with other Transmission Operators and Balancing Authorities as appropriate. This coordination includes the following steps, as applicable:
  - R6.1.** The Transmission Operator and Balancing Authority shall establish and maintain reliable communications between interconnected systems.
  - R6.2.** The Transmission Operator and Balancing Authority shall arrange new interchange agreements to provide for emergency capacity or energy transfers if existing agreements cannot be used.
  - R6.3.** The Transmission Operator and Balancing Authority shall coordinate transmission and generator maintenance schedules to maximize capacity or conserve the fuel in short supply. (This includes water for hydro generators.)
  - R6.4.** The Transmission Operator and Balancing Authority shall arrange deliveries of electrical energy or fuel from remote systems through normal operating channels.

**C. Measures**

- M1.** The Transmission Operator and Balancing Authority shall have its emergency plans available for review by the Regional Reliability Organization at all times.
- M2.** The Transmission Operator and Balancing Authority shall have its two most recent annual self-assessments available for review by the Regional Reliability Organization at all times.

**D. Compliance**

**1. Compliance Monitoring Process**

**1.1. Compliance Monitoring Responsibility**

Regional Reliability Organization.

**1.2. Compliance Monitoring Period and Reset ~~Timeframes~~Time Frame**

The Regional Reliability Organization shall review and evaluate emergency plans every three years to ensure that the plans consider the applicable elements of Attachment 1-EOP-001-0.

The Regional Reliability Organization may elect to request self-certification of the Transmission Operator and Balancing Authority in years that the full review is not done.

Reset: one calendar year.

**1.3. Data Retention**

Current plan available at all times.

**1.4. Additional Compliance Information**

Not specified.

## **Exhibit D**

### **Record of Development of Proposed Reliability Standards**

## Standard Authorization Request (SAR) Form

Title of Proposed Standard:	Operate Within Limits - Monitor and Assess Short-term Transmission
Request Date:	March 7, 2002
Authorized for Posting:	March 20, 2002
SAR ID# :	OPER_WITHN_LMTS_01_01

SAR Requestor Information		SAR Type (Put an 'x' in front of one of these selections)	
Name:	Jim Byrd	X	New Standard
Primary Contact:	Jim Byrd		Revision to existing Standard
Telephone:	214-743-6870		Withdrawal of existing Standard
Fax:	972-263-6710		
e-mail:	jbyrd@txu.com		Emergency Action

### Purpose/Industry Need (Provide one or two sentences)

To establish a standard that requires the bulk electric transmission system be operated within established limits.

### Brief Description (A few sentences or a paragraph) Provide enough detail so that an independent entity familiar with the industry could draft a Standard based on this description.)

Establish a standard that requires adherence to operating limits. Requirements shall include items such as real time monitoring of system parameters against operating limits, correcting limit violations, performing short-term (e.g., next-day) and real-time transmission reliability analyses, etc.

**SAR: Operate Within Limits - Monitor and Assess Short-term Transmission Reliability**

**Reliability Functions**

<b>The Standard will Apply to the Following Functions (Put an 'X' in front of each one that applies)</b>		
X	Reliability Authority	Ensures the reliability of the bulk transmission system within its Security Authority Area. This is the highest reliability authority.
X	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within its metered boundary and supports system frequency in real time
	Interchange Authority	Authorizes valid and balanced Interchange Schedules
	Planning Authority	Plans the bulk electric system
	Transmission Service Provider	Provides transmission services to qualified market participants under applicable transmission service agreements
	Transmission Owner	Owns transmission facilities
X	Transmission Operator	Operates and maintains the transmission facilities, and executes switching orders
	Distribution Provider	Provides and operates the "wires" between the transmission system and the customer
	Generator	Owns and operates generation unit(s) or runs a market for generation products that performs the functions of supplying energy and Interconnected Operations Services
	Purchasing-Selling Entity	The function of purchasing or selling energy, capacity and all necessary Interconnected Operations Services as required.
	Load-Serving Entity	Secures energy and transmission (and related generation services) to serve the end user

**SAR: Operate Within Limits - Monitor and Assess Short-term Transmission Reliability**

**Reliability and Market Interface Principles**

<b>Applicable Reliability Principles (Put an 'x' in front of all that apply)</b>	
X	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions.
X	2. The frequency of interconnected bulk electric systems shall be controlled within defined limits through the balancing of electric supply and demand
X	3. Information necessary for planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably
	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented
X	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems
X	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified and have the responsibility and authority to implement actions
X	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis
<b>Does the proposed Standard comply with all of the following Market Interface Principles?</b>	
<i>(Enter 'yes' or 'no')</i>	
	Yes
1.	Interconnected The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy
2.	An Organization Standard shall not give any market participant an unfair competitive advantage
3.	An Organization Standard shall neither mandate nor prohibit any specific market structure
4.	An Organization Standard shall not preclude market solutions to achieving compliance with that Standard
5.	An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards

## Operate Within Limits – Monitor and Assess Short-term Transmission

Other comments:			
The primary comment here is that there is a need to agree on terms and definitions. A clear distinction must be made between the violation of a limit that has no impact on the operation of the interconnected system, and the violation of a limit that threatens the security of the interconnected system.

Is there a reliability-related need for an Organization Standard to be developed on this topic?

Yes  No

Yes  No The scope of the SAR is fine as it is

April 23, 2002

SRP Comments on NERC 11 SAR sent out on April 2, 2002.

All 11 SAR's (this group of 10 plus the one sent out earlier) don't contain enough information to make the kind of judgments requested on the forms. Therefore the forms are not filled out.

We recommend all the SAR's be advanced to the next step to develop the specific standards and associated measurements for each standard so that we can evaluate and comment on them.

All of these SAR's are needed for reliable planning and operation of the bulk electric transmission system and meet the principle requirements.

Comments on the White paper:

1. The paper fails to state what standards are supposed to be. This seems so basic; one has to assume that those drafting the white paper want to redefine the definition contained in the Organizational Standards Manual. This leads to a lot of confusion and is not the place to do that.
2. The Planning Standards were written in a different time period than the Operating Policies with different objectives. Thus they are different and that should be recognized. For instance the development of a Planning Functional model has absolutely nothing to do with whether control areas exist or not and whether companies have restructured or not. The statement about control areas may be true for the Operating Policies but it is not true for the Planning Standards.

The Planning Standards (Templates) were written to meet the definition of a standard in the Organizational Standards Manual, to meet at least one of the Reliability Principles, to comply with all the Market Interface Principles and to contain the compliance administration elements. This is very different than what is contained in the Operating Policies. The Planning Standards need to go through the new process so that both the Operating elements and Planning elements of the Organizational Standards are consistent, are not duplicative and are needed for reliability.

3. The term "core reliability requirement" is used in the white paper but is never mentioned in the Organizational Standards Manual. Using an undefined term is very misleading and should be avoided.
4. The paper in several places address "what performance must be achieved". As noted above, an Organizational Standard can be broader than that and this write up is misleading.
5. The process has been lengthened because of the multiple posting of the SAR's. NERC has a body of reliability requirements written up into Compliance Templates. With very little effort these could be written up into SAR's that would provide sufficient detail for NERC to evaluate them. It is very hard to comprehend why one does not use this work to expedite the process. Instead SAR's are sent out with insufficient information. The process is long enough. We should be looking for all ways possible to speed it up.

Comments on the SAR write-up:

1. The SAR write-up only contains the purpose and brief description of a standard. Where is the Standard? I thought that is what the SAR is for?
2. The descriptions are in most cases extremely vague. The write-ups contain words like "such as" or "as defined in the standard". These are big enough to cover a MAC truck. Once again there is insufficient information to make a good judgment.

April 29, 2002

Guy V. Zito  
Manager, Planning  
Northeast Power Coordinating Council  
1515 Broadway Floor 43  
New York, NY 10036

RE: NEPOOL Compliance Working Group (NCWG) comments pertaining to the 10 Standard Authorization Requests (SARs) posted for open comment

The NCWG has reviewed the 10 SARs posted for open comment and has agreed they are core standards, which serve a purpose in support of reliability.

Standard Title:

Prepare for and Respond to Abnormal or Emergency Conditions  
Prepare for and Respond to Blackout or Island Conditions  
Coordinate Interchange  
Coordinate Operations  
Monitor and Analyze Disturbances, Events and Conditions  
Operate Within Limits – Monitor and Assess Short-term Transmission  
Define (Physical) Connection Requirements  
Design, Install, and Coordinate Control Protection Systems  
Assess Transmission Future Needs and Develop Transmission Plans  
Determine Facility Ratings, Operating Limits, and Transfer Capabilities

We do not agree that the **SAR Type** is a new standard. We suggest that at a minimum the SAR should indicate the existing standard and whether or not it will be withdrawn when the revised standard is adopted. We suggest that NERC stop the open process of reviewing existing policies and standards if these Organizational Standards will replace them. NERC should clearly indicate that one purpose of the Organizational Standards Process is to replace existing standards.

Sincerely,  
Daniel L. Stosick

HL&P is uncertain whether a meaningful standard can be developed in this area. There are likely to be different requirements for different types of transmission systems. For a larger, more complicated system, more extensive short-term assessments are likely to be more justified than for smaller systems.

Telephone	330-580-8005	Fax	330-456-3648
E-mail	<a href="mailto:brante@ecar.org">brante@ecar.org</a>		
<p>ECAR has conducted a survey of its member companies regarding the eleven SARs, which NERC has initiated to-date. We recognize that the comment period for the first SAR issued ("Balance Resources and Demand") has already closed. However, considering that the first SAR was issued earlier than the other ten primarily just to get the process started, and further considering that all 11 SARs are viewed by NERC as a possible complete set of Organization Standards (re: the "White Paper"), ECAR believes that comments on the first SAR should still be considered along with those on the other ten.</p> <p>11 of the 18 ECAR Full Members, along with two Associate Members, submitted responses to the SAR survey. Some of the responses were submitted using the NERC "SAR Comment Form", while others were contained in narrative e-mails, and one was faxed to us. Therefore, a complete set of the ECAR member company responses will be sent to the Standards Process Manager at NERC via Fed Ex to arrive at NERC by May 3rd. The Fed Ex package will include a copy of this e-mail. FYI, NERC may also receive some of the ECAR member company responses directly from the companies. Some of the individual company responses will be identical to what will be in the Fed Ex package and some will contain more detailed comments.</p> <p>The ECAR member company responses contain numerous and wide-ranging comments about the need for each of the 11 proposed Organization Standards, as well as comments regarding the scope and applicability of the SARs. As your review of these responses will show, there is general ECAR consensus – but not unanimity -- that the 11 SARs as a set cover the scope of performance needed to ensure reliability of the interconnected North American bulk power systems. Some ECAR members feel that there are performance areas not covered in the proposed set of Organization Standards, and they have provided what they think is missing. Others believe that some of the proposed Organization Standards are not needed, and they explain why they feel that way. Numerous comments were directed at the scope and applicability of the SARs. Several ECAR companies questioned the inclusion of the "Distribution Provider" function in the applicability section of the SARs, believing that NERC should stick to its traditional focus on the bulk power systems and stay out of the distribution arena.</p> <p>The recent call for nominees to serve on SAR Drafting Teams is the appropriate next step. ECAR believes that all 11 SARs need to be refined to reflect industry comments and then posted again for another round of industry comments. Before proceeding into actual development of Organization Standards based on these 11 SARs, NERC must have clear industry consensus on the need for each of the Organization Standards outlined in the 11 SARs, as well as consensus on the scope and applicability of those SARs.</p> <p>If the wide-ranging comments received from ECAR members are any indication, there is still some serious work to be done to achieve the needed clear industry consensus on how to proceed.</p>			

### **East Kentucky Power Cooperative**

EKPC believes our present standards are adequate and therefore is not in favor of developing a new set of standards. We also believe the new process should be revised to provide for a screening committee to evaluate proposed standards before they are presented to all NERC members for comment. However, given that we are going to develop new standards with this process, EKPC endorses all eleven of the SARs.

### **LG&E Energy**

LG&E agrees there is a need for the eleven proposed organization standards. However, we do see a disconnect with their development and operating procedures/protocols of RTO's. Where will this coordination take place to ensure consistency, eliminate redundancy, and application particularly since there will most likely be more than 1 RTO at the time of issuance?

## **VECTRON – Southern Indiana Gas & Electric**

The NERC Proposed Organization Standards appear to me to cover the scope of performance needed to insure reliability of the interconnected grid. The scope of the SARs as proposed, also, look fine to me.

## **Dayton Power & Light**

We are okay with the 11 proposed Standards.

## **Consumers Energy**

Consumers Energy opposes all 10 of the SARs on their present form. We understand that it is too late to vote on the 11th SAR.

The concern that we have is that there is only limited ability to prevent new requirements from being incorporated with the old, standard reliability requirements. The SAR descriptions sound good because they espouse the old, tried and true reliability concepts that we have known and loved from the past. If there was an effective way to limit the resulting practices to those traditional values, I would be the first to support them. Unfortunately, we are not voting here on codification of the current practices. We, instead, are voting to develop a set of practices that will include the currently unknown and possibly oppressive, unacceptable set of future requirements. This vote has nothing to do with the tried and true practices from the past. Its about accepting an unknown set of requirements on faith and trust ... that none of the practice developers will be out to do us harm.

The standard argument here is that the SARs are only scope setting documents and that we will still have a change to shape and to vote on the actual standards when they go through the final approval stage. If we believe this argument, we are totally ignoring the lessons from the past. There is no guarantee that ECAR will have any personnel involved in the development of the final practices. It is unclear how many people will be involved in the drafting of the practices nor how they will be selected.

The biggest single concern is what the final product will look like and how it will be voted on. I would make a modest wager that it will consist of a handful of standard practices that we all could accept (and in fact would insist upon) along with three practices that are new and totally unacceptable. We will be faced with the proposition that we must vote on the "package" of practices where we must accept the bad ones to get the good ones. I can find no reference to a line item voting procedure.

The solution to this problem is to suggest a provision in all ten SARs that the final package of practices will not include any policies that are not already in the NERC approved set of policies and standards. Consumers Energy could then support all ten SARs.

## **Duquesne**

Operate Within Limits – Monitor & Assess – Inappropriate as a stand alone SAR, but should be incorporated with SAR #8. Coordinated operations are required to ensure limits are not violated.

<p>Is there a reliability-related need for an Organization Standard to be developed on this topic?</p> <p><input checked="" type="checkbox"/> Yes <input type="checkbox"/> No</p> <p><input type="checkbox"/> Yes <input type="checkbox"/> No The scope of the SAR is fine as it is</p> <p><input type="checkbox"/> The scope of the SAR should be expanded to include:</p> <p><input type="checkbox"/> The scope of the SAR should be reduced to eliminate: procedures on how to curtail transactions and generation schedules to achieve the reliability objectives stated.</p> <p>Other comments: The existing NERC standard Policy 9, includes a procedure known as "TLR" that must be compliant with FERC tariff obligations to curtail transactions. A core reliability standard should only define the limits and conditions required to achieve a reliable and secure transmission system and allow for market-driven procedures to provide tools for the operators to employ to achieve the core reliability requirements. Further, FERC's upcoming Standard Market Design NOPR will entail new congestion management rules for TPs to adhere to. Procedures for transaction curtailment should be developed with the NAESB process and filed at FERC for approval.</p>

<input type="checkbox"/> The scope of the SAR should be expanded to include:			
<input type="checkbox"/> The scope of the SAR should be reduced to eliminate:			
Other comments: To the extent that this SAR is transitioning an existing standard from the old world to the new world (Functional Model), then the standard should not go beyond the original scope. Consistent with our general comments, once the clarity is achieved on Standard Market Design and RTO formations, then this standard should be revisited and reevaluated.			
Additionally, the "Purpose/Industry Need" statement should be rewritten to be more specific as follows: "To establish a standard that requires the bulk electric transmission system be monitored and operated within established thermal, voltage and stability limits".

Is there a reliability-related need for an Organization Standard to be developed on this topic?

Yes  No

Yes  No The scope of the SAR is fine as it is

The scope of the SAR should be expanded to include:

The scope of the SAR should be reduced to eliminate:

Other comments:

1. The word "Reliability" is missing from the title of the proposed standard.
2. The title and brief description of the proposed standard refer to "Transmission Reliability". This may be misleading and may imply that the new standard would apply to the transmission function only. The standard should address the reliability of the bulk electric system.
3. Various terms for bulk electric system have been used, e.g. "bulk electric transmission system" (Purpose/Industry Need), "bulk transmission system" (Reliability Function) and the "interconnected bulk electric systems" or "bulk electric systems" (Reliability and Market Interface Principles). The terminology should be standardized and consistent.
4. Considering the idea of the NERC White Paper that the description for each proposed standard should identify WHAT performance must be achieved, rather than detailing HOW to achieve that performance, the title of this SAR could be simplified to focus on the "Operating Within Limits".

<p>Is there a reliability-related need for an Organization Standard to be developed on this topic?</p> <p><input type="checkbox"/> Yes <input checked="" type="checkbox"/> No</p> <p><input type="checkbox"/> Yes <input type="checkbox"/> No The scope of the SAR is fine as it is</p> <p><input type="checkbox"/> The scope of the SAR should be expanded to include:</p> <p><input type="checkbox"/> The scope of the SAR should be reduced to eliminate:</p> <p>Other comments: The promulgation for comment of these SARs is premature. The industry "standard making process" is in a transition phase and it is overly burdensome to devote resources at this time. Once legislation or FERC firmly determines which entity(ies) is responsible for standards it will make sense to move forward with said entity.</p> <p>Even if NERC wants to cover reliability standards, almost all standards have a reliability and commercial impact; thereby, necessitating developing a single process that incorporates both commercial and reliability aspects of standards development. The current NERC process risks being changed soon, discounts commercial aspects, and is not part of a finalized overall industry process.</p> <p>Waiting a short while to move forward on a new standards setting process is acceptable and prudent given that NERC standards are currently in place and the industry can continue to use these standards until the new process and standards setting organization(s) are firmly set.</p>

<b>Comments</b>	
<p>This SAR and the other posted SARs provide an appropriate framework for transitioning existing NERC Operating Policies and Planning Standards into new, NERC Organization Standards. Multiple compliance measures may be defined and developed for each of the eleven proposed Organization Standards. The Organization Standards and related compliance measures should focus on what functions must be performed for reliability, on who is responsible for each compliance measure for each required function and not, on how the compliance measure is achieved. The compliance measure must be measurable or demonstrable to ensure compliance.</p> <p>Adherence to transmission system operating limits is a core reliability requirement and should be addressed by a Standard. Requirements for monitoring real time loading against operating limits and compliance measures for determining those limits are certainly appropriate.</p> <p>Compliance measures for correcting limit violations must make allowance for the various mechanisms in place and being developed to provide market solutions to remedy transmission congestion. These mechanisms are very different from the old "command and control" procedures that are the basis of existing NERC policies. All standards must be crafted to allow market solutions to work while still maintaining system reliability.</p>

Viable communications protocol need to be developed and implemented that will correctly monitor and assess the electric system in a real-time mode. Establishment of a dynamic and valid real-time data system that will accurately depict system conditions will further enable our industry to maximize its potential. We must be able to define short term system requirements and operational limits in such a manner as to promote the efficient and reliable use of the transmission grid. Partial path reservations and also real-time modifications of transmission scheduling need to be addressed in a more accurate manner. The accuracy and timely assessment of current operating limits need to be reviewed, studied, and validated in a sequence that will not inhibit the real-time operations of the system. The development of established limits, and the assessment and comparison of those limits in a real-time environment, will insure that transmission operations will be able to react to the current use that is imposed on the system in a reliable and safe manner.</p>

The scope of the SAR should be reduced to eliminate: Today short-term transmission reliability issues are addressed by congestion management either thru TLR curtailments, LMP or other methods. FERC's proposed SMD requires congestion management in all markets using LMP. Congestion management is a market issue. Therefore, this standard should be developed in a process which takes into account market and reliability interests.

<p>Is there a reliability-related need for an Organization Standard to be developed on this topic?</p> <p><input checked="" type="checkbox"/> Yes <input type="checkbox"/> No</p> <p><input type="checkbox"/> Yes <input checked="" type="checkbox"/> No The scope of the SAR is fine as it is</p> <p><input type="checkbox"/> The scope of the SAR should be expanded to include:</p> <p><input checked="" type="checkbox"/> The scope of the SAR should be reduced to eliminate: Balancing Authority: In reviewing a Balancing Authorities responsibilities, it does not appear to Illinois Power that the BA has any responsibility to Monitor and Assess Short-term Transmission Reliability, and therefore would not be subject to this Standard. Eliminate all references to HOW this standard would be met such as real time monitoring, data, communications, particular analysis, and timing. These tend to be issues as to HOW to achieve the standard not what the standard should be.</p> <p>Other comments: The SAR indicates that this standard would apply to Generators and Distribution Providers. Today NERC Policy and Standards do not apply to these Functions. For example, NERC has no authority to require its standards to be applied to determine connection requirements for distribution facilities. And the application of NERC standards to Independent Generators are carried out by transmission owners through interconnection agreements. Is NERC proposing that this will change and they will begin to impose standards directly on distribution providers and generators?</p> <p>There is inadequate detail in the SAR to determine if the scope of the SAR is appropriate and adequate. The scope should not include and requirements on HOW to deal with the prevention or correction of limit violations.</p>

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

**Summary of Comments**

**Background:**

The “Operate Within Limits - Monitor and Assess Short-term Transmission Reliability ” SAR was posted for a 30-day public comment period from April 2 through May 3, 2002. On July 2, 2002 the Standards Authorization Committee (SAC) appointed a team to address the industry’s comments submitted in response to the following questions asked about this SAR:

Look at SAR called: Monitor and Assess Short-term Transmission Reliability - Operate Within Limits Is there a reliability-related need for an Organization Standard to be developed on this topic?  Yes      No  The scope of the SAR is fine as it is The scope of the SAR should be expanded to include: The scope of the SAR should be reduced to eliminate: Other comments:
---

Fifty-six interested industry participants responded to the above questions. Fifty two of those respondents indicated that there is a reliability-related need for an Organization Standard that addresses this topic.

There were many comments submitted on the scope of the SAR. These comments are addressed in this document. The comments can be viewed in their original format at:

[ftp://www.nerc.com/pub/sys/all\\_updl/standards/sar/BalResDemnd\\_Comments.pdf](ftp://www.nerc.com/pub/sys/all_updl/standards/sar/BalResDemnd_Comments.pdf)

In this document the comments have been cut and pasted and organized by central themes.

The SAR DTs consideration of each of the comments submitted follows that comment or suggestion. In cases where there were several comments submitted that made the same or a very similar suggestion, a single response has been provided. The comments submitted by industry participants served as the basis for revising this SAR.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give EVERY comment serious consideration in this process! If you feel there has been an error or omission, you can contact Tom Vandervort in the NERC office. Tom can be reached at 609-452-8060 or at tom.vandervort@nerc.com. Or you can contact the Standards Process Manager, Maureen Long at 305-891-5497 or at spm@nerc.com.

Revised Title: Operate Within Transmission System Limits - Monitor and Assess Short-term Reliability

**Comment:**

We agree this SAR should be a “core reliability” Organization Standard but suggest the title be revised to “Operate Within Thermal, Voltage and Stability Limits”. (Entergy)

**Consideration:**

This SAR addresses transmission system limits. ‘Which’ limits will be established by another SAR DT, and including a list of elements here would restrict the scope of that SAR.

---

**Comment:**

Change title to " Monitor Transmission Reliability - Operate within Limits". (CA ISO)  
The word “Reliability” is missing from the title of the proposed standard.

**Consideration:**

The word “reliability” was accidentally omitted from the last version of this SAR. This has been corrected

---

**Comment:**

Considering the idea of the NERC White Paper that the description for each proposed standard should identify WHAT performance must be achieved, rather than detailing HOW to achieve that performance, the title of this SAR could be simplified to focus on the “Operating Within Limits”. (The IMO)

**Consideration:**

The suggested revision would reduce the intended scope of this SAR.

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

***Suggestions to Change the Purpose/Industry Need of this SAR***

**Original Purpose/Industry Need:**

To establish a standard that requires the bulk electric transmission system be operated within established limits.

**Revised Purpose/Industry Need:**

The purpose of this standard is to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Comment:**

The industry should:

- Develop the criteria for this core reliability Organization Standard,
- Establish measures for measuring conformance to the criteria, and
- Monitor for conformance to the criteria. (Entergy)

**Consideration:**

The SAR DT is trying to do this. Your specific written comments will help ensure that we achieve this.

---

**Comment:**

Additionally, the "Purpose/Industry Need" statement should be rewritten to be more specific as follows: "To establish a standard that requires the bulk electric transmission system be monitored and operated within established thermal, voltage and stability limits". (American Electric Power)

**Consideration:**

The SAR DT revised the purpose to clarify the industry need for this standard. The range of limits to be included will be established by another SAR DT.

---

**Comment:**

Change to: prevent and correct limit violations. (BPA Power Business Line)

**Consideration:**

The industry need section of the SAR addresses the question – Why? The suggested change would answer the question – What? and is addressed in the title of the SAR.

---

**Comment:**

The Industry Need has not been defined for this SAR. (Manitoba Hydro)

**Consideration:**

The Industry Need section of the SAR has been refined so that the reliability-related need for this proposed standard is more clear.

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

---

**Comment:**

The SAR should be re-written to say, "Establish a standard that requires adherence to operating limits. (CA ISO)

**Consideration:**

Both the Purpose/Industry Need section and the Brief Description of the SAR have been revised. The suggested language has been included in the revised Brief Description.

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

***Suggestions to Change the Brief Description of this SAR***

**Original Brief Description:**

Establish a standard that requires adherence to operating limits.

Requirements shall include items such as real time monitoring of system parameters against operating limits, correcting limit violations, performing short-term (e.g., next-day) and real-time transmission reliability analyses, etc.

This standard requires adherence to established operating limits identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Revised Brief Description:**

This standard requires adherence to established operating limits<sup>1</sup> identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

Requirements shall address:

- Real time monitoring of system parameters against operating limits
- Performing short-term and real-time transmission reliability analyses
- Performing corrective actions to mitigate limit violations
- Keeping records and filing reports

**Comment:**

The Organization Standard should include the requirements that appropriate entities:

- Establish thermal, voltage and stability limits for all appropriate facilities and operating conditions,
- The system be operated to respect those limits,
- Measures be developed to assure conformance (Entergy)

**Consideration:**

Establishing limits is being addressed by the “Determine Facility Ratings, Operating Limits, and Transfer Capabilities” SAR DT. This SAR addresses operating within these limits.

Measures will be developed by the Standard Drafting Team that develops the technical language for this proposed standard.

---

**Comment:**

Requirements shall include items such as monitoring of system parameters against operating limits, and correcting limit violations". (CA ISO)

**Consideration:**

The SAR DT included these suggested changes in the revisions made to the SAR.

---

<sup>1</sup> These are the limits established through the standard, “Determine Facility Ratings, Operating Limits and Transfer Capabilities”

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

**Comment:**

Eliminate the item in the Description which states "Do not allow an over-subscription of transfer capability" addresses a business practice and should be eliminated. (Powerex)

**Consideration:**

This referenced text was not included in the SAR and could not be located.

---

**Comment:**

The use of the term "etc." in the SAR description leaves the scope of this SAR open-ended. The scope of the SAR should be stated and complete. (Dairyland) (MAPP Reliability Council)

**Consideration:**

The SAR has been revised to eliminate the "etc.". The details of what will be in the requirements haven't been established.

---

**Comment:**

The purpose/industry need section should start with: The purpose of this standard is to ensure that a consistent, uniformly applied standard is developed for ... (Dynergy)

**Consideration:**

The SAR DT endorsed this concept, but rephrased this to incorporate other suggested changes.

---

**Comment:**

The scope is too broad as stated in the description section of the SAR. More detail is required. Specifying "real time monitoring" and "next-day analysis" crosses into the "how to do it" arena. The standard should simply state the desired results. (Nova Scotia Power)

**Consideration:**

The scope of this SAR is intended to define the boundaries of the proposed standard. Requiring real time monitoring is a "What," not a "How." The industry's comments have indicated that this SAR should focus on identifying "What" performance must be achieved without specifying "How" to achieve that performance.

---

**Comment:**

The title and brief description of the proposed standard refer to "Transmission Reliability". This may be misleading and may imply that the new standard would apply to the transmission function only. The standard should address the reliability of the bulk electric system. (The IMO)

**Consideration:**

This SAR will address transmission only – it will not address distribution or generation. Your comment helped us clarify the description to ensure that it is clear to all.

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

***Detailed Description***

New Detailed Description:

This standard requires that the Reliability Authority and Transmission Operator adhere to established operating limits.

Requirements shall address:

- Real time monitoring of system parameters against operating limits
  - Monitor parameters that indicate the current and expected state of the transmission system (and critical elements)
  - Monitor parameters that indicate the current and expected state of tie lines to other systems and of the overall interconnected transmission system
- Performing short-term and real-time transmission reliability analyses
  - Collect data needed for performing real time reliability analyses
  - Conduct an operating assessment to identify limiting facilities
- Performing corrective actions to mitigate limit violations
  - Have a mitigation plan
  - Implement mitigation plan where necessary
- Keeping records and filing reports
  - Log violations and maintain records for some period of time
  - Report information to NERC based on specified criteria (magnitude, duration, type of violation)

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

**Original List of Applicable Functions:**

X	Reliability Authority	Ensures the reliability of the bulk transmission system within its Security Authority Area. This is the highest reliability authority.
X	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within its metered boundary and supports system frequency in real time
	Interchange Authority	Authorizes valid and balanced Interchange Schedules
	Planning Authority	Plans the bulk electric system
	Transmission Service Provider	Provides transmission services to qualified market participants under applicable transmission service agreements
	Transmission Owner	Owens transmission facilities
X	Transmission Operator (TOP)	Operates and maintains the transmission facilities, and executes switching orders
	Distribution Provider	Provides and operates the “wires” between the transmission system and the customer
	Generator	Owens and operates generation unit(s) or runs a market for generation products that performs the functions of supplying energy and Interconnected Operations Services
	Purchasing-Selling Entity	The function of purchasing or selling energy, capacity and all necessary Interconnected Operations Services as required.
	Load-Serving Entity	Secures energy and transmission (and related generation services) to serve the end user

Revised List of Applicable Functions:

X	Reliability Authority	Ensures the reliability of the bulk transmission system within its Security Authority Area. This is the highest reliability authority.
	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within its metered boundary and supports system frequency in real time
	Interchange Authority	Authorizes valid and balanced Interchange Schedules
	Planning Authority	Plans the bulk electric system
	Transmission Service Provider	Provides transmission services to qualified market participants under applicable transmission service agreements
	Transmission Owner	Owens transmission facilities
X	Transmission Operator (TOP)	Operates and maintains the transmission facilities, and executes switching orders
	Distribution Provider	Provides and operates the “wires” between the transmission system and the customer
	Generator	Owens and operates generation unit(s) or runs a market for generation products that performs the functions of supplying energy and Interconnected Operations Services
	Purchasing-Selling Entity	The function of purchasing or selling energy, capacity and all necessary Interconnected Operations Services as required.
	Load-Serving Entity	Secures energy and transmission (and related generation services) to serve the end user

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability SAR - Summary of Comments and Considerations**

---

**Comment:**

Interchange Authority should be checked because of the definition of "Interchange Schedule" in NERC Operating Policy 3, since schedule implies the actual implemented energy flow. (Calpine) (Southern Company) (Progress Energy) (SERC OPWG)

**Comment:**

Applicability should not be limited to the Reliability Authority, Balancing Authority and Transmission Operator, but should include all operational entities (if you are operating, you have to stay within your defined limits).(Calpine) (Progress Energy) (SERC Compliance Sub)

**Comment:**

The "Assess Transmission future needs and develop transmission plans" SAR does not state a requirement to plan the system so that it can be operated within Operating Limits, therefore, we feel that the Planning Authority should be checked as applicable for this SAR. (Southern Company) (SERC OPWG)

**Comment:**

Add Generator and LSE to the list of Functions to which this standard would apply. (Load dropping can be used as a tool to prevent and correct violations. Generation is critical in the areas of Reactive, Voltage, Frequency, and Reserves. Generators are used extensively in preventing and correcting limit violations.) (BPA Power Business Line)

**Comment:**

Therefore, the "generation operator" reliability function should also apply since they will need to take direction from the Transmission Operator and/or Reliability Authority. (American Transmission Co)

**Comment:**

Planning Authority should be included. (Southeastern Power Adm)

**Consideration:**

The functions checked are the functions that would have performance requirements and associated compliance elements in the proposed standard. At this point, the only functions that would have performance measures as part of this proposed standard are the Reliability Authority and the Transmission Operator.

---

**Comment:**

Eliminate the responsibility of the Balancing Authority, which has no bearing on this standard/objective. (FirstEnergy)

**Comment:**

Eliminate Balancing Authority: In reviewing a Balancing Authorities responsibilities, it does not appear to Illinois Power that the BA has any responsibility to Monitor and Assess Short-term Transmission Reliability, and therefore would not be subject to this Standard. (Illinois Power)

**Consideration:**

The Balancing Authority has been dropped from the applicable functions because their role in maintaining frequency is covered within the SAR on Balance Resources and Demand.

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

---

**Comment:**

The SAR indicates that this standard would apply to Generators and Distribution Providers. Today NERC Policy and Standards do not apply to these Functions. For example, NERC has no authority to require its standards to be applied to determine connection requirements for distribution facilities. And the application of NERC standards to Independent Generators are carried out by transmission owners through interconnection agreements. Is NERC proposing that this will change and they will begin to impose standards directly on distribution providers and generators?

**Consideration:**

This SAR does not include requirements for Generators or Distribution.

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

**Comments Submitted Related to Terminology:**

**Comment:**

Various terms for bulk electric system have been used, e.g. “bulk electric transmission system” (Purpose/Industry Need), “bulk transmission system” (Reliability Function) and the “interconnected bulk electric systems” or “bulk electric systems” (Reliability and Market Interface Principles). The terminology should be standardized and consistent. (The IMO)

**Consideration:**

Some of these terms (those contained within the Reliability Functions and the Reliability and Market Interface Principles) are within the SAR Template and changing these templates is outside of the scope of this SAR DT. This SAR doesn't include distribution or generation; the SAR has been revised to clarify this.

---

**Comment:**

The primary comment here is that there is a need to agree on terms and definitions. A clear distinction must be made between the violation of a limit that has no impact on the operation of the interconnected system, and the violation of a limit that threatens the security of the interconnected system. (MAAC)

**Consideration:**

This concept should be clarified with the revisions to this SAR. This SAR only addresses security limits, that, if exceeded, have significant consequences. (Not necessarily the loss of a single device which may be a local problem. This SAR does cover items such as cascading outages.)

---

**Comment:**

The term "operating limits" is used in this SAR as in the "Determine Facility Ratings" SAR. Please see our comments concerning OSL/OSLV for that SAR and ensure that terms are consistent and defined appropriately. (Calpine) (Southern Company) (Progress Energy) (SERC OPWG)

*(This is the comment submitted on the referenced SAR.)* Common terminology should be used throughout the SARs. If the term "operating limits" is used, a definition is needed. The use of "operating limits" is confusing when past standards have used other terminology such as Operating Security Limits and Operating Security Limit Violations. This standard should address the definition of the terminology used, whether "operating limits" or "Operating Security Limits."

**Consideration:**

The term used in the “Determine Facility Ratings, Operating Limits, and Transfer Capabilities” will be used in this SAR.

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

***Comments about the Level of Detail Within the SAR***

**Comment:**

Add sufficient detail to provide a clear understanding of the specific functions covered by this SAR. (Calpine) (Progress Energy) (SERC Compliance Subcommittee)

**Comment:**

The scope is too general. Would this standard cover operation beyond first-contingency? (Ameren Services)

**Comment:**

There is inadequate detail in the SAR to determine if the scope of the SAR is appropriate and adequate. The scope should not include and requirements on HOW to deal with the prevention or correction of limit violations. (Illinois Power Company)

**Consideration:**

Additional details have been added to the SAR.

***Comments indicating the Focus of the SAR should be on “What” not “How”***

**Comment:**

The Organization Standard should not establish “how” one develops these limits, “how” one operates to meet the limits, “how” one monitors for criteria violations, or “how” one corrects limit violations, or the details of “how” to measure, data warehouse, or “how” to protect against operation outside of the limits. (Entergy)

**Comment:**

Should concentrate on performance instead of procedures such as performing day ahead analysis. An entity could perform day ahead analysis but if no action is taken as a result of the analysis then what good is it? (Cinergy)

**Comment:**

(Eliminate) The procedures on how to alleviate overloads (i.e., TLRs) and other limit violation. (Exelon)

**Comment:**

(Eliminate) procedures on how to curtail transactions and generation schedules to achieve the reliability objectives stated. (Reliant Resources)

**Comment:**

Eliminate all references to HOW this standard would be met such as real time monitoring, data, communications, particular analysis, and timing. These tend to be issues as to HOW to achieve the standard not what the standard should be. (Illinois Power)

**Comment:**

Process and procedures for performing analysis should be part of the certification process and not a standard that has measurement requirements. (Cinergy)

## **First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability SAR - Summary of Comments and Considerations**

### **Consideration:**

The SAR has been revised to indicate that the requirements would address “What” performance must be met without identifying “How” to achieve that performance.

### ***Suggestions to Broaden the Scope of this SAR***

#### **Comment:**

Add redispatch issues. Redispatch is one of the tools the transmission operator will use to make sure the system is operated within the limits. (American Transmission Company)

#### **Consideration:**

Redispatch is a tool that can be used to operate within limits. Specifying the use of a tool would be including details that identified “How” to achieve the required performance. The industry has indicated that this SAR should be written to indicate “What” level of performance must be achieved without indicating “How” to achieve that performance.

### ***Comments Suggesting Additions to Other SARs***

#### **Comment:**

Please note that there should be a companion SAR to this that requires LSEs, distribution providers, and generators to respond to requests that will have the effect of operating the system within Operating Limits. (Calpine) (Southern Company) (Progress Energy) (SERC OPWG)

#### **Consideration:**

This is outside the scope of this SAR DT. You are encouraged to submit a SAR to address this topic if you feel that it should be developed. However, the NERC Organization Certification Task Force (OCTF) is working on a SAR for the certification requirements for the RA – the authority of the RA to direct emergency actions should be contained within the RA’s certification requirements SAR. This could also be addressed within Interconnection Agreements.

### ***Other General Comments on this SAR***

#### **Comment:**

This SAR and the other posted SARs provide an appropriate framework for transitioning existing NERC Operating Policies and Planning Standards into new, NERC Organization Standards. Multiple compliance measures may be defined and developed for each of the eleven proposed Organization Standards. The Organization Standards and related compliance measures should focus on what functions must be performed for reliability, on who is responsible for each compliance measure for each required function and not, on how the compliance measure is achieved. The compliance measure must be measurable or demonstrable to ensure compliance. Adherence to transmission system operating limits is a core reliability requirement and should be addressed by a Standard. Requirements for monitoring real time loading against operating limits and compliance measures for determining those limits are certainly appropriate. Compliance measures for correcting limit violations must make allowance for the various mechanisms in place and being developed to provide market solutions to remedy transmission congestion. These mechanisms are very different from the old “command and control” procedures that are the basis of existing NERC policies. All standards must be crafted to allow market solutions to work while still maintaining system reliability. (ERCOT)

## First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability SAR - Summary of Comments and Considerations

### **Consideration:**

Compliance measures will be identified by the Standards Drafting Team once the SAR's scope is agreed to. However, Compliance Measures are standards of performance and need to be achieved through whatever systems or processes are available within the appropriate timeframe including market solutions. Identifying specific systems or processes would be identifying "How" to achieve a performance goal rather than identifying "What" performance goal to achieve. The industry has stated a preference for new reliability standards that provide the "What" but not the "How."

### **Comment:**

One of the major problems confronting the industry today is in the identification of real-time system limits and operating conditions. Viable communications protocol need to be developed and implemented that will correctly monitor and assess the electric system in a real-time mode. Establishment of a dynamic and valid real-time data system that will accurately depict system conditions will further enable our industry to maximize its potential. We must be able to define short term system requirements and operational limits in such a manner as to promote the efficient and reliable use of the transmission grid. Partial path reservations and also real-time modifications of transmission scheduling need to be addressed in a more accurate manner. The accuracy and timely assessment of current operating limits need to be reviewed, studied, and validated in a sequence that will not inhibit the real-time operations of the system. The development of established limits, and the assessment and comparison of those limits in a real-time environment, will insure that transmission operations will be able to react to the current use that is imposed on the system in a reliable and safe manner. (FirstEnergy)

### **Consideration:**

The SAR DT is trying to develop a SAR that identifies the scope for this standard.

---

### **Comment:**

Would it be appropriate to include comments about operating guides in this standard instead of my comments in the proposed standard to "Determine Facility Ratings, Operating Limits, and Transfer Capabilities?" The transmission operator and Reliability Authority should have some discretion in operating within established limits. I.E. if a line is at it's OSL but the OSL limit was based on summer ratings and it is cool outside, the transmission operator shouldn't be forced into some remedial action. (American Transmission Company)

### **Consideration:**

Operating Guides are used in setting limits. Establishing operating limits is being addressed in the SAR called, "Determine Facility Ratings, Operating Limits, and Transfer Capabilities," and is outside the scope of this SAR DT.

---

### **Comment:**

Will the standards used here to determine if the system is operated within limits be the same standards that will be used to plan the system? (BPA)

### **Consideration:**

Linking the standards used to determine if the system is operated within limits to the standards used to plan the system is outside the scope of the SAR DT's work. The SAR DT is assigned the job of refining this SAR so it meets the industry's needs. If there are specific measures that you feel should be included in this SAR you need to identify those in your comments.

---

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

**Comment:**

HL&P is uncertain whether a meaningful standard can be developed in this area. There are likely to be different requirements for different types of transmission systems. For a larger, more complicated system, more extensive short-term assessments are likely to be more justified than for smaller systems. (HL&P)

**Consideration:**

This SAR will establish standards for the bulk transmission system. These rules are designed to prevent one entity from damaging another. Regional differences that would require more or less stringent requirements than the standard should be highlighted now so they can be included in the SAR.

**Comments Related to FERC and NAESB**

**Comment:**

Today short-term transmission reliability issues are addressed by congestion management either thru TLR curtailments, LMP or other methods. FERC's proposed SMD requires congestion management in all markets using LMP. Congestion management is a market issue. Therefore, this standard should be developed in a process which takes into account market and reliability interests. (Allegheny Energy Supply)

**Comment:**

The establishment of this SAR is premature. All commercial implications of the SAR should be identified and mitigated prior to the drafting. (Elcon)

**Comment:**

The existing NERC standard Policy 9, includes a procedure known as "TLR" that must be compliant with FERC tariff obligations to curtail transactions. A core reliability standard should only define the limits and conditions required to achieve a reliable and secure transmission system and allow for market-driven procedures to provide tools for the operators to employ to achieve the core reliability requirements. Further, FERC's upcoming Standard Market Design NOPR will entail new congestion management rules for TPs to adhere to. Procedures for transaction curtailment should be developed with the NAESB process and filed at FERC for approval. (Reliant Resources)

**Comment:**

To the extent that this SAR is transitioning an existing standard from the old world to the new world (Functional Model), then the standard should not go beyond the original scope. Consistent with our general comments, once the clarity is achieved on Standard Market Design and RTO formations, then this standard should be revisited and reevaluated. (AEP)

**First Posting of Operate Within Limits – Monitor and Assess Short-term Transmission Reliability  
SAR - Summary of Comments and Considerations**

**Comment:**

The promulgation for comment of these SARs is premature. The industry "standard making process" is in a transition phase and it is overly burdensome to devote resources at this time. Once legislation or FERC firmly determines which entity(ies) is responsible for standards it will make sense to move forward with said entity.

Even if NERC wants to cover reliability standards, almost all standards have a reliability and commercial impact; thereby, necessitating developing a single process that incorporates both commercial and reliability aspects of standards development. The current NERC process risks being changed soon, discounts commercial aspects, and is not part of a finalized overall industry process.

Waiting a short while to move forward on a new standards setting process is acceptable and prudent given that NERC standards are currently in place and the industry can continue to use these standards until the new process and standards setting organization(s) are firmly set.  
(Baltimore Gas & Electric)

**Comment:**

It is premature to continue development of this SAR until FERC has specified the organization to be responsible for the development of wholesale electric standards. (Public Service Electric & Gas)

**Consideration:**

The NERC Board of Trustees directed us to move forward in developing core reliability standards. The SAR contains only reliability-related elements. There are no references to TLR or other market mechanisms in this SAR.

**SAR: Op. Within Trans. System Limits - Monitor and Assess Short-term Reliability**

**Standard Authorization Request (SAR) Form**

Title of Proposed Standard:	Operate Within Transmission System Limits - Monitor and Assess Short-term Reliability
Request Date:	March 7, 2002
Authorized for Posting:	March 20, 2002
SAR ID# :	OPER_WITHN_LMTS_01_02

<b>SAR Requestor Information</b>	<b>SAR Type</b> (Put an 'x' in front of one of these selections)	
Name: Jim Byrd (Al DiCaprio as substitute)	X	New Standard
Primary Contact: Al DiCaprio		Revision to existing Standard
Telephone: 610 666-8854 Fax: 610 666-4282		Withdrawal of existing Standard
e-mail: dicapram@pjm.com		Emergency Action

**Purpose/Industry Need**

The purpose of this standard is to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Brief Description** (Provide one or two sentences.)

This standard requires adherence to established operating limits<sup>1</sup> identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

Requirements shall address:

- Real time monitoring of system parameters against operating limits
- Performing short-term and real-time transmission reliability analyses
- Performing corrective actions to mitigate limit violations
- Keeping records and filing reports

<sup>1</sup> These are the limits established through the standard, "Determine Facility Ratings, Operating Limits and Transfer Capabilities"

**SAR: Op. Within Trans. System Limits - Monitor and Assess Short-term Reliability**

**Reliability Functions**

<b>The Standard will Apply to the Following Functions (Put an 'X' in front of each one that applies)</b>		
X	Reliability Authority	Ensures the reliability of the bulk transmission system within its Security Authority Area. This is the highest reliability authority.
	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within its metered boundary and supports system frequency in real time
	Interchange Authority	Authorizes valid and balanced Interchange Schedules
	Planning Authority	Plans the bulk electric system
	Transmission Service Provider	Provides transmission services to qualified market participants under applicable transmission service agreements
	Transmission Owner	Owns transmission facilities
X	Transmission Operator	Operates and maintains the transmission facilities, and executes switching orders
	Distribution Provider	Provides and operates the "wires" between the transmission system and the customer
	Generator	Owns and operates generation unit(s) or runs a market for generation products that performs the functions of supplying energy and Interconnected Operations Services
	Purchasing-Selling Entity	The function of purchasing or selling energy, capacity and all necessary Interconnected Operations Services as required.
	Load-Serving Entity	Secures energy and transmission (and related generation services) to serve the end user

**SAR: Op. Within Trans. System Limits - Monitor and Assess Short-term Reliability**

**Reliability and Market Interface Principles**

<b>Applicable Reliability Principles (Put an 'x' in front of all that apply)</b>	
X	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions.
	2. The frequency of interconnected bulk electric systems shall be controlled within defined limits through the balancing of electric supply and demand
X	3. Information necessary for planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably
	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented
X	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems
X	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified and have the responsibility and authority to implement actions
X	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis
<p><b>Does the proposed Standard comply with all of the following Market Interface Principles?</b></p> <p style="text-align: right;">Yes</p> <p><i>(Enter 'yes' or 'no')</i></p>	
1. Interconnected The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy	
2. An Organization Standard shall not give any market participant an unfair competitive advantage	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards	

## **SAR: *Op. Within Trans. System Limits - Monitor and Assess Short-term Reliability***

### **Detailed Description**

This standard requires that the Reliability Authority and Transmission Operator adhere to established operating limits.

Requirements shall address:

- Real time monitoring of system parameters against operating limits
  - Monitor parameters that indicate the current and expected state of the transmission system
  - Monitor parameters that indicate the current and expected state of tie lines to other systems and of the overall interconnected transmission system
- Performing short-term and real-time transmission reliability analyses
  - Collect data needed for performing real time reliability analyses
  - Conduct an operating assessment to identify limiting facilities
- Performing corrective actions to mitigate limit violations
  - Have a mitigation plan
  - Implement mitigation plan where necessary
- Keeping records and filing reports
  - Log violations and maintain records for some period of time
  - Report information to NERC based on specified criteria (magnitude, duration, type of violation)

### **Related SARs**

<b>SAR ID</b>	<b>Explanation</b>
FACILITY_RATINGS_01_01	The “Determine Facility Ratings, Operating Limits, and Transfer Capabilities” SAR identifies how operating limits are established. The operating limits established within this proposed standard are referenced in the proposed “Operate Within Transmission System Limits - Monitor and Assess Short-term Reliability” standard.
COORD_OPERATIONS_01_01	The “Coordinate Operations” SAR identifies what reliability-related information to exchange between Functions. Some of the information collected within the proposed “Operate Within Transmission System Limits - Monitor and Assess Short-term Reliability” standard will be used in the proposed “Coordinate Operations” standard.
ABNML_&_EM_COND_01_01	The “Prepare for and respond to Abnormal or Emergency Conditions” SAR will be implemented where this one stops. The two SARs are related.

**Background**

The “Monitor and Assess Short-term Transmission Reliability - Operate Within Limits” SAR was posted for a 30-day public comment period from April 2 through May 3, 2002. On July 2, 2002 the Standards Authorization Committee (SAC) appointed a team to address the industry’s comments submitted in response to the following questions asked about this SAR:

**Second Posting of Operate Within Transmission System Limits – Monitor and Assess Short-term Reliability SAR - Comment Form**

---

Look at SAR called: Monitor and Assess Short-term Transmission Reliability - Operate Within Limits

Is there a reliability-related need for an Organization Standard to be developed on this topic?

Yes  No

The scope of the SAR is fine as it is

The scope of the SAR should be expanded to include:

The scope of the SAR should be reduced to eliminate:

*Other comments: This may be a glitch in the process. The 'yes' to "Does the proposed Standard comply with all the Market Interface Principles" is premature. The actual wording of the standard may in fact violate Market Interface Principle #4. Until the Standard is final, we can't answer the question!!*

**Second Posting of Operate Within Transmission System Limits – Monitor and  
Assess Short-term Reliability SAR - Comment Form**

---

Comments were received from many different sources, including individuals, small and large utilities, groups of utilities, Regional Councils, and NERC Subcommittees. The SAR DT considered the comments submitted by industry participants and revised the SAR to conform with the changes that were technically sound and appeared to be requested by or to represent a consensus of the participants.

There were relatively few changes suggested to the SAR, and the SAR DT has addressed through the revisions made to the SAR. The SAR DT feels that this SAR is ready to go to the Standards Authorization Committee for their approval to develop this standard.

The revised SAR has been re-posted from August 19 – September 18, 2002. Please review the revised SAR and complete this form to let the SAR DT know if you agree or disagree with the SAR DT's assessment that this SAR is ready to be developed into a standard.

**Second Posting of Operate Within Transmission System Limits – Monitor and Assess Short-term Reliability SAR - Comment Form**

---

**1. Do you agree with the SAR DT that this SAR is ready to be developed into a standard?**

Yes

No

**2. If you feel that the scope of this SAR needs additional refinement, please identify specifically what needs to be changed:**

Each requirement in the detailed description should have an objective or desired outcome. For example the existing SAR has the following listing under the Detailed Description:

- + Performing corrective actions to mitigate limit violations
  - Have a mitigation plan

A possible rewrite to include an objective or desired outcome would be

- + Performing corrective actions to mitigate limit violations
  - Have a mitigation plan that can be activated and is expected to restore the system to within limits in a specified time frame.

Having a mitigation plan of 'say a prayer' satisfies the original requirement. Each entry in the Detailed Description needs an objective or desired outcome.

**Background**

The “Monitor and Assess Short-term Transmission Reliability - Operate Within Limits” SAR was posted for a 30-day public comment period from April 2 through May 3, 2002. On July 2, 2002 the Standards Authorization Committee (SAC) appointed a team to address the industry’s comments submitted in response to the following questions asked about this SAR:

Look at SAR called: Monitor and Assess Short-term Transmission Reliability - Operate Within Limits

Is there a reliability-related need for an Organization Standard to be developed on this topic?

Yes    No

The scope of the SAR is fine as it is

The scope of the SAR should be expanded to include:

The scope of the SAR should be reduced to eliminate:

Other comments:

**Second Posting of Operate Within Transmission System Limits – Monitor and  
Assess Short-term Reliability SAR - Comment Form**

---

Comments were received from many different sources, including individuals, small and large utilities, groups of utilities, Regional Councils, and NERC Subcommittees. The SAR DT considered the comments submitted by industry participants and revised the SAR to conform with the changes that were technically sound and appeared to be requested by or to represent a consensus of the participants.

There were relatively few changes suggested to the SAR, and the SAR DT has addressed through the revisions made to the SAR. The SAR DT feels that this SAR is ready to go to the Standards Authorization Committee for their approval to develop this standard.

The revised SAR has been re-posted from August 19 – September 18, 2002. Please review the revised SAR and complete this form to let the SAR DT know if you agree or disagree with the SAR DT's assessment that this SAR is ready to be developed into a standard.

**Second Posting of Operate Within Transmission System Limits – Monitor and Assess Short-term Reliability SAR - Comment Form**

**Second Posting of Operate Within Transmission System Limits – Monitor and Assess Short-term Reliability SAR - Comment Form**

---

**1. Do you agree with the SAR DT that this SAR is ready to be developed into a standard?**

- Yes  
 No

**2. If you feel that the scope of this SAR needs additional refinement, please identify specifically what needs to be changed:**

Illinois Power is still concerned, as it was in its comments on the initial draft of the SAR, that the SAR still includes a number of references to HOW. To correct this, IP suggests the following changes.

Suggested changes to the Brief Description:

This standard requires adherence to established operating limits<sup>1</sup> identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

Requirements shall address:

- Documentation of operating limits identified to prevent instability, uncontrolled separation or cascading outages readily available to the Reliability Authority and Transmission Operator
- ~~Real time m~~Monitoring of necessary system parameters against the identified operating limits
- Performing ~~short term and real time~~ transmission reliability analyses relative to the identified operating limits
- Performing corrective actions, including identification and use of operating guides to mitigate limit violations
- Keeping records and filing reports

<sup>1</sup> These are the limits established through the standard, "Determine Facility Ratings, Operating Limits and Transfer Capabilities" that are further identified to prevent instability, uncontrolled separation or cascading outages

Suggested Changes to the Detailed Description:

This standard requires that the Reliability Authority and Transmission Operator adhere to established operating limits identified to prevent instability, uncontrolled separation or cascading outages.

Requirements shall address:

- 1 Demonstration that the RA and TO have current information on the identified operating limits

**Second Posting of Operate Within Transmission System Limits – Monitor and Assess Short-term Reliability SAR - Comment Form**

---

-- Process in place for updating the RA/TO when changes are made in the identified operating limit

2 Real-time monitoring of necessary system parameters against the identified operating limits

– Monitor parameters that indicate the current and expected state of the identified operating limit transmission system

– ~~Monitor parameters that indicate the current and expected state of tie lines to other systems and of the overall interconnected transmission system~~

3 Performing short-term and real-time transmission reliability analyses relative to the identified operating limits

– Collect data needed for performing ~~real-time~~ reliability analyses

-- Have the capability to perform necessary studies relative to the identified operating limits

– ~~Conduct an operating assessment to identify limiting facilities~~

4 Direct or performing corrective actions to to mitigate return the system within the identified operating limits violations

– Have ~~a mitigation documented plans and operating guides~~

– Implement ~~mitigation plans~~ when necessary

5 Keeping Maintenance of records and filing reportings

– Document applicable operating guides and their use

- ~~Log violations and maintain records for some period of time~~ Document instances of exceeding the identified operating limits

- Document actions taken to limit the risk of instability, uncontrolled separation and cascading outages

– ~~Make Reports required by information to~~ NERC based on specified criteria (magnitude, duration, type of violation risk)

6 The standard will not address

- loss of a single device

- cascading outages

- security limits that if exceed will not have significant consequences

- distribution and generation

With respect to the deletion of the bullet on monitoring the state of tielines, IP does not believe this should be a requirement of this standard. Within the scope of this standard, these lines might only need to be monitored if the were an identified operating limit.

With respect to the addition of Item 6, IP felt that the decisions by the SAR drafting team, documented in the responses to the comments received on the prior draft of this SAR, to specifically exclude these items from the standard needs to be made a part of the SAR so it is communicated to the standard drafting team.

IP also believes that Reliability Principle 4 applies since the standard would address plans for emergency operation

**Background**

The “Monitor and Assess Short-term Transmission Reliability - Operate Within Limits” SAR was posted for a 30-day public comment period from April 2 through May 3, 2002. On July 2, 2002 the Standards Authorization Committee (SAC) appointed a team to address the industry’s comments submitted in response to the following questions asked about this SAR:

**Second Posting of Operate Within Transmission System Limits – Monitor and Assess Short-term Reliability SAR - Comment Form**

---

Look at SAR called: Monitor and Assess Short-term Transmission Reliability - Operate Within Limits

Is there a reliability-related need for an Organization Standard to be developed on this topic?

X Yes            No

The scope of the SAR is fine as it is

x The scope of the SAR should be expanded to include: Generators and loads

The scope of the SAR should be reduced to eliminate:

**Other comments:** Generators and Loads are to be addressed in the Coordination of Operations SAR. These entities can also affect reliability of operation as they are tightly connected and a failure to do the right thing by either of these entities can result in operation outside of transmission system limits. Therefore these entities need to be included in this SAR to ensure that they comply to instructions provided by the operator and follow commitments made at the scheduling stage.

**Second Posting of Operate Within Transmission System Limits – Monitor and  
Assess Short-term Reliability SAR - Comment Form**

---

Comments were received from many different sources, including individuals, small and large utilities, groups of utilities, Regional Councils, and NERC Subcommittees. The SAR DT considered the comments submitted by industry participants and revised the SAR to conform with the changes that were technically sound and appeared to be requested by or to represent a consensus of the participants.

There were relatively few changes suggested to the SAR, and the SAR DT has addressed through the revisions made to the SAR. The SAR DT feels that this SAR is ready to go to the Standards Authorization Committee for their approval to develop this standard.

The revised SAR has been re-posted from August 19 – September 18, 2002. Please review the revised SAR and complete this form to let the SAR DT know if you agree or disagree with the SAR DT's assessment that this SAR is ready to be developed into a standard.

**Second Posting of Operate Within Transmission System Limits – Monitor and  
Assess Short-term Reliability SAR - Comment Form**

---

**1. Do you agree with the SAR DT that this SAR is ready to be developed into a standard?**

Yes

No

**2. If you feel that the scope of this SAR needs additional refinement, please identify specifically what needs to be changed:**

Standards arising from this SAR must apply to all entities operating in the system. In reality, this means the following:

- the Balancing Authority has obligations to ensure correct schedules and ensure resource allocations which avoid limits
- the Interchange Authority is required to ensure transmission line limits are respected
- the Generator is required to adhere to limits and expectations (i.e. providing Q)
- the Load Serving Entities will be required to drop load if required.

Reliability principle 3 also applies - frequency is another element of operation that needs to stay within limits.

The standard should also address the supply of critical information.

Look at SAR called: Monitor and Assess Short-term Transmission Reliability - Operate Within Limits

Is there a reliability-related need for an Organization Standard to be developed on this topic?

Yes    No

The scope of the SAR is fine as it is

The scope of the SAR should be expanded to include: The basic assumptions that establish the authority of the RA and TP to act, the operational requirements to accomplish the standard and so forth. These items are assumed to be covered in the Certification requirements. Also the 3 related SAR's are not developed yet and it is difficult to have confidence that they will mesh with this one.

The scope of the SAR should be reduced to eliminate:

---

**1. Do you agree with the SAR DT that this SAR is ready to be developed into a standard?**

Yes

No

**2. If you feel that the scope of this SAR needs additional refinement, please identify specifically what needs to be changed:**

Regarding the Detailed Description:

1. Some of the requirements are the responsibility of the Reliability Coordinator and some are the responsibility of the Transmission Provider. The requirements need to clearly delineate the responsibilities of Transmission Provider vs. Reliability Coordinator.
2. A requirement for conformance to NERC Reliability Criteria should be included.
3. In the wording for the first bullet regarding Real-Time Monitoring, the words "and expected" should be deleted. Expected conditions are part of the data gathered for the reliability analysis covered under the second bullet, rather than for Real-Time Monitoring.

**Background**

The “Monitor and Assess Short-term Transmission Reliability - Operate Within Limits” SAR was posted for a 30-day public comment period from April 2 through May 3, 2002. On July 2, 2002 the Standards Authorization Committee (SAC) appointed a team to address the industry’s comments submitted in response to the following questions asked about this SAR:

Look at SAR called: Monitor and Assess Short-term Transmission Reliability - Operate Within Limits

Is there a reliability-related need for an Organization Standard to be developed on this topic?

Yes            No

The scope of the SAR is fine as it is

The scope of the SAR should be expanded to include:

The scope of the SAR should be reduced to eliminate:

*Other comments:*

**SAR Comment Form for 2<sup>nd</sup> Posting of the Operate Within Limits – Monitor and Assess Short-term Transmission Reliability SAR**

---

Comments were received from many different sources, including individuals, small and large utilities, groups of utilities, Regional Councils, and NERC Subcommittees. The SAR DT considered the comments submitted by industry participants and revised the SAR to conform with the changes that were technically sound and appeared to be requested by or to represent a consensus of the participants.

There were relatively few changes suggested to the SAR, and the SAR DT has addressed through the revisions made to the SAR. The SAR DT feels that this SAR is ready to go to the Standards Authorization Committee for their approval to develop this standard.

The revised SAR has been re-posted from August 20 – September 18, 2002. Please review the revised SAR and complete this form to let the SAR DT know if you agree or disagree with the SAR DT's assessment that this SAR is ready to be developed into a standard.

On July 2, 2002 the Standards Authorization Committee (SAC) appointed a team to address the industry’s comments submitted in response to the following questions asked about this SAR:

Look at SAR called: Monitor and Assess Short-term Transmission Reliability - Operate Within Limits

Is there a reliability-related need for an Organization Standard to be developed on this topic?

Yes    No

The scope of the SAR is fine as it is

The scope of the SAR should be expanded to include: There are two important dimensions missed in the Purpose/Brief Description. 1) Protect transmission equipment from damage due to overloading and 2) protect public health, safety, welfare or national security. (this is spelled out in the OSPM) The Requirement - corrective action to mitigate limit violations addresses these and other dimensions of this proposed standard.

The scope of the SAR should be reduced to eliminate:

Detailed Description

It still appears that this SAR is merely a set of procedures to implement limits that will be established in another SAR, the FACILITY RATINGS SAR.

Although there is certainly a need to have procedures to ensure that Facility Ratings, Operating Limits, and Transfer Capabilities are not violated, Reliant still questions whether it is appropriate to embark on a distinct STANDARD to enforce those limits? What then would be the enforcement mechanism for the FACILITY RATINGS Standard? Could it possibly be:

- 1) Real time monitoring of system parameters against operating limits
  - Monitor parameters that indicate the current and expected state of the transmission system
  - Monitor parameters that indicate the current and expected state of tie lines to other systems and of the overall interconnected transmission system
- 2) Performing short-term and real-time transmission reliability analyses
  - Collect data needed for performing real time reliability analyses
  - Conduct an operating assessment to identify limiting facilities
- 3) Performing corrective actions to mitigate limit violations
  - Have a mitigation plan
  - Implement mitigation plan where necessary
- 4) Keeping records and filing reports
  - Log violations and maintain records for some period of time
  - Report information to NERC based on specified criteria (magnitude, duration, type of violation)

These of course are conveniently the items in the Detailed Description of the operate Within Transmission Limits SAR

???????

Assumption that operating limit definition and all associated definitions are captured may leave a void. Under "Brief Description" Performing corrective actions to mitigate limit violations. (assumes limit violations has a definition). Might use performing corrective actions to mitigate exceeding operating limits. Wouldn't the standard apply to Balancing Authority? In integrating plan it should be required to adhere to operating plan taking into consideration system limits?

**SAR Comment Form for 2<sup>nd</sup> Posting of the Operate Within Limits – Monitor and Assess Short-term Transmission Reliability SAR**

---

**1. Do you agree with the SAR DT that this SAR is ready to be developed into a standard?**

Yes

No

SARs, per the Standards manual, are supposed to define the scope of the standard. Standards are the requirements that necessary to ensure the NERC reliability principles are met. Thus the SAR should provide us enough information, that is at least the requirements, so the industry and the SAC can judge whether standard as described in the SAR is acceptable.

The brief and detailed description says what the "requirements shall address" not what they are. The only statement that comes close to a requirement is the SAR says the standard requires adherence to established limits. What does that mean? The title say more about the standard than the description.

This SAR falls short and needs to be redrafted.

**2. If you feel that the scope of this SAR needs additional refinement, please identify specifically what needs to be changed:**

I really can not address the second question because as indicated above, I do not know what the requirements of the standard are. The WECC RMS standard can be used as an example of requirements should be.

Other comments:

1. Once again not being able to know the specifics of what's proposed it is hard to know what is proposed.

2. Page SAR-4, For record keeping the correct language is to say the records will be maintained for the "retention period".

3. Page SAR-4, Under record keeping the reporting of security violations should be reported to reliability authorities and the region(s) as well as NERC.

4. On page SAR-6 sections of the operating policies that will be retired are listed.

a. What are these policies? Is everything in these sections to be retired? Do we have to go and research the policies to know what is being proposed? More information should be given about what is to be deleted and we should not have to go look for it.

b. If all of the listed sections are retired, is there any other material in these sections that should be retained somewhere in some form?

c. The major heading of Implementation Plan indicates plans are to be provided for implementation of the proposed standard including training requirements. No such information was provided.

The “Monitor and Assess Short-term Transmission Reliability - Operate Within Limits” SAR was posted for a 30-day public comment period from April 2 through May 3, 2002. On July 2, 2002 the Standards Authorization Committee (SAC) appointed a team to address the industry’s comments submitted in response to the following questions asked about this SAR:

**Second Posting of Operate Within Transmission System Limits – Monitor and Assess Short-term Reliability SAR - Comment Form**

---

Look at SAR called: Monitor and Assess Short-term Transmission Reliability - Operate Within Limits  
Is there a reliability-related need for an Organization Standard to be developed on this topic?

Yes  No

The scope of the SAR is fine as it is

The scope of the SAR should be expanded to include:

The members of the Compliance Process Task Force (CPTF) of the Western Electricity Coordinating Council believe the purpose of the Operate Within Limit should include:

Actual power flow and net scheduled power flow over an interconnection or transfer path shall be maintained within Operating Transfer Capability (Security) Limits ("OTC"). The purpose of the proposed standard is to prevent actual path flow from exceeding its limit. Operating above a path's limit can result in loss of load, uncontrolled separation, and damage to transmission facilities when a system element (e.g. transmission line) outage occurs. When net schedules exceed the path limit, it can result in inadvertant flow and overloads on other system facilities.

The industry need for major transmission paths is as follows.

Transmission Path Operators, Transmission Owners, and Control Area Operators shall operate major transmission paths (the transmission system) within security limits so that instability, uncontrolled separation or cascading outages will not occur as a result of the most severe outage or single contingency. Several widespread system outages have occurred when major path limits were exceeded.

A brief description of the proposed standard is as follows.

Actual power flow or schedules on transmission paths identified by the Regional Reliability Organization shall at no time exceed the OTC for more than 20 minutes for paths that are stability limited, or for more than 30 minutes for paths that are thermally limited.

The scope of the SAR should be reduced to eliminate:

*Other comments:*

*A detailed discription of the proposed standard develop by CPTF is as follows.*

*Operating Transfer Capability Limit Standard*

*Actual power flow and net scheduled power flow over interconnections or transfer paths defined by the Regional Reliability Organization shall be maintained within Operating Transfer Capability Limits ("OTC"). The OTC is the maximum amount of actual power that can be transferred over direct or parallel transmission elements comprising:*

- 1. An interconnection from one Control Area to another Control Area; or*
- 2. A transfer path within a Control Area.*

*The net schedule over an interconnection or transfer path within a Control Area shall not exceed the OTC, regardless of the prevailing actual power flow on the interconnection or transfer path.*

*a. Operating limits. No elements within the interconnection shall be scheduled above*

**Second Posting of Operate Within Transmission System Limits – Monitor and Assess Short-term Reliability SAR - Comment Form**

---

*continuous operating limits. An element is defined as any generating unit, transmission line, transformer, bus, or piece of electrical equipment involved in the transfer of power within an interconnection.*

*b. Stability. The interconnected power system shall remain stable upon loss of any one single element without system cascading that could result in the successive loss of additional elements. The system voltages shall be within acceptable limits defined in the Regional and NERC Planning Standards. If a single event could cause loss of multiple elements, these shall be considered in lieu of a single element outage. This could occur in exceptional cases such as two lines on the same right-of-way next to an airport. In either case, loss of either single or multiple elements should not cause uncontrolled, widespread collapse of the interconnected power system. For purposes of this section, stability shall include transient stability, post transient stability or dynamic stability whichever is most limiting to OTC.*

*c. System contingency response. Following the outage and before adjustments can be made:*

- (i) No remaining element shall exceed its short-time emergency rating.*
- (ii) The steady-state system voltages shall be within emergency limits.*

*The limiting event shall be determined by conducting power flow and stability studies while simulating various operating conditions. These studies shall be updated as system configurations introduce significant changes in the interconnection.*

**3. Data Reporting Requirement**

*By no later than 5:00 p.m. on the first Business Day following the day on which an instance of noncompliance occurs or other such date defined by the region, a transmission path operator or owner shall submit to the regional office operating transfer capability data (see attachment 1) for each such instance of noncompliance. On or before the tenth day of each calendar quarter (or such other date specified by the region, the path operator or owner (including entities with no reported instances of noncompliance) shall submit to the regional office a completed OTC summary compliance form (see attachment 2) for the immediately preceding calendar quarter.*

**4. Compliance Standard**

*Actual power flow on all transmission paths shall at no time exceed the OTC for more than 20 minutes for paths that are stability limited, or for more than 30 minutes for paths that are thermally limited.*

**5. Noncompliance Levels**

*For each separate incident violating the OTC compliance standard, the level of the violation shall be as set forth in the Noncompliance Levels for Operating Transfer Capability table (Attachment 3):*

**6. Sanctions**

*For purposes of applying the sanctions for violations of this criterion, the "Sanction Measure" is Normal Path Rating and the "Specified Period" is the most recent calendar month.*

**Second Posting of Operate Within Transmission System Limits – Monitor and  
Assess Short-term Reliability SAR - Comment Form**

---

**Second Posting of Operate Within Transmission System Limits – Monitor and  
Assess Short-term Reliability SAR - Comment Form**

---

Comments were received from many different sources, including individuals, small and large utilities, groups of utilities, Regional Councils, and NERC Subcommittees. The SAR DT considered the comments submitted by industry participants and revised the SAR to conform with the changes that were technically sound and appeared to be requested by or to represent a consensus of the participants.

There were relatively few changes suggested to the SAR, and the SAR DT has addressed through the revisions made to the SAR. The SAR DT feels that this SAR is ready to go to the Standards Authorization Committee for their approval to develop this standard.

The revised SAR has been re-posted from August 19 – September 18, 2002. Please review the revised SAR and complete this form to let the SAR DT know if you agree or disagree with the SAR DT's assessment that this SAR is ready to be developed into a standard.

**Second Posting of Operate Within Transmission System Limits – Monitor and Assess Short-term Reliability SAR - Comment Form**

---

**1. Do you agree with the SAR DT that this SAR is ready to be developed into a standard?**

Yes

No

**2. If you feel that the scope of this SAR needs additional refinement, please identify specifically what needs to be changed:**

Please see detailed description provided in the other comments, above, for additional refinements.

Attachment 1  
**Operating Transfer Capability  
Reporting Form**

<b>1. Transfer Path Operator</b>					
<b>2. Transfer Path Name</b>					
<b>3. Path Number</b>	No.				
<b>4. Flow Direction</b>	Term 1		Term 2		
<b>5. Date and time of incident</b>	Date:		Time:		
<b>6. OTC Limit at time of incident - MW</b>			Time zone:		
<b>7. Actual Path Flow - MW</b>					
<b>8. Scheduled Path Flow - MW</b>					
<b>9. MW over limit</b>			Percent over limit		_____
<b>10. Duration of incidents - minutes</b>					
<b>11. Type of Limit</b>					

Reporting Instructions:

1. Transfer Path Operator - Enter regional acronym for the Transfer Path Operator. (Acronyms and transfer paths for the WECC region are defined in Table 2 (attachment 4).
2. Transfer Path Name - Enter name from Table 2 (attachment 4).
3. Path Number - Enter path number from Table 2 (attachment 4).
4. Flow Direction - Table 2 defines the path to be monitored for reporting purposes, each path must have a Terminal 1 (sending bus or area) name and a Terminal 2 (receiving bus or area) name. Positive flow direction is from Term 1 to Term 2. Use this convention to report scheduled and actual flow. For example, if TOT2 Term 1 was named South, Term 2 was named North, and there was - 700 MW reported on line 7; the flow across TOT2 would be 700 MW North to South.
5. Date and time of incident - Date: Enter 2 digits each for Month, Day, and Year. Time: Enter 2 digits each for hour, minute, and second. Time zone enter MST, PST, MAST, PAST, etc.
6. Operating Transfer Capability Limit at time of incident - Enter the MW transfer capability at the time of the incident.
7. Actual Path Flow at time of incident - Enter the actual value of the MW flow at the 20-minute duration point for flows exceeding a stability limit and at the 30 minute duration point for flows exceeding a thermal limit.
8. Scheduled Path Flow at time of incident - Enter the MW scheduled flow from Term 1 to Term 2.
9. MW over limit - Line 7 minus Line 6.
10. Duration of incident - Time in hours, minutes, and seconds that actual flow exceeded OTC.
11. Type of Limit - Enter Stability or Thermal to identify the type of limit for the Path.

Attachment 2  
**Operating Transfer Capability Compliance Notification**

1. Reporting Path Operator or Path Owner: \_\_\_\_\_
2. Contact Person's Name: \_\_\_\_\_
3. Contact Person's Phone No.: \_\_\_\_\_
4. Reporting Period: \_\_\_\_\_

5.  The Path Operator or Path Owner was fully compliant with the Operating Transfer Capability compliance criteria of RMS for the reporting period.
6.  The Reporting Path Operator or Path Owner is not an operator of one of the transmission paths identified for compliance reporting
7.  The Reporting Path Operator or Path Owner experienced reportable Operating Transfer Capability incidents for the reporting period. The Operating Transfer Capability incidents have been submitted as specified in the detailed compliance reporting instructions.
8.  The Reporting Path Operator or Path Owner experienced reportable Operating Transfer Capability incidents for the reporting period. The Operating Transfer Capability incidents have **not** been submitted as specified in the detailed reporting instructions.

Reporting Instructions:

1. Reporting Path Operator or Path Owner - Enter the acronym for the Path Operator or Path Owner.
2. Contact Person's Name - Enter the name of the reporting Path Operator or Path Owner employee.
3. Contact Person's Phone No. - Enter the employee's telephone number.
4. Reporting Period - Enter the quarter being reported (i.e. July 1 through September 30, 2002).
5. Check the box if no reportable OTC incidents were experienced during the reporting period.
6. Check the box if the Path Operator or Path Owner does not operate one of the major transmission paths identified in the compliance reporting instructions.
7. Enter the number of reportable OTC incidents that were reported by the Path operator or Path Owner for the reporting period.
8. Enter the number of reportable OTC incidents that were not reported by the Path Operator or Path Owner for the reporting period.

Attachment 3

**Noncompliance Levels for Operating Transfer Capability**

Thermal Limited Paths:	Limit exceeded for more than 30 minutes, up to 35 minutes	Limit exceeded for more than 35 minutes, up to 40 minutes	Limit exceeded for more than 40 minutes, up to 45 minutes	Limit exceeded for more than 45 minutes
Stability Limited Paths:	Limit exceeded for more than 20 minutes, up to 25 minutes	Limit exceeded for more than 25 minutes, up to 30 minutes	Limit exceeded for more than 30 minutes, up to 35 minutes	Limit exceeded for more than 35 minutes
Percentage by which net scheduled or actual flows <u>exceed</u> OTC*				
greater than 0%, up to and including 5%	Level 1	Level 2	Level 2	Level 3
greater than 5%, up to and including 10%	Level 2	Level 2	Level 3	Level 3

\*\* The SCIT and COI/PDCI-North of John Day Cutplane are paths that are operated in accordance with nomograms identified in WECC's Path Rating Catalog.

**Summary of Comments, Organized By Question Number**

**Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission System Limits SAR  
Second Posting Summary of Comments**

**Background**

The Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission System Limits SAR was posted for a second public comment period from August 20 through September 23, 2002. The SAR DT asked industry participants to provide feedback on the revisions made to the SAR through a special SAR Comment Form. There were 26 sets of comments submitted via this special SAR Comment Form. The comments can be viewed in their original format at:

<http://www.nerc.com/~filez/sar-approved.html>

In this document, the comments have been cut and pasted under the two questions:

1. Do you agree with the SAR DT that this SAR is ready to be developed into a standard?
2. If you feel that the scope of this SAR needs additional refinement, please identify specifically what needs to be changed?

The SAR DT's consideration of comments is provided in blue text immediately under each question.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact Tom Vandervort in the NERC office at 609-452-8060 or at [tom.vandervort@nerc.com](mailto:tom.vandervort@nerc.com). You can also contact either the Director of Standards, Tim Gallagher at 609-452-8060 or at [tim.Gallagher@nerc.com](mailto:tim.Gallagher@nerc.com), or Maureen Long at 305-891-5497 or at [spm@nerc.com](mailto:spm@nerc.com).

**Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR**

Company	Ready to be developed into a standard?		Comments
	YES	NO	
AEP	X		There is a need and the scope is fine as it is
BPA		X	<p>Regarding the Detailed Description:</p> <ol style="list-style-type: none"> <li>Some of the requirements are the responsibility of the Reliability Coordinator and some are the responsibility of the Transmission Provider. The requirements need to clearly delineate the responsibilities of Transmission Provider vs. Reliability Coordinator. <i>Consideration:</i> We appreciate your comments. We recognize that confusing terminology has been used to describe the reliability functions in the last year. The functions in the new standards will be applied to the functions in the Functional Model. The Reliability Coordinator is not one of these functions. In the standard, each requirement will be clearly assigned to one of the functions. The Transmission Service Provider may have some supporting duties, but will not be responsible for complying with the measures in this standard, and is therefore, not listed as one of the functions for which this standard will apply.</li> <li>A requirement for conformance to NERC Reliability Criteria should be included. <i>Consideration:</i> This is a very good point. This requirement is expected to be addressed within reliability legislation or in a formal agreement between NERC and the involved entities and is outside the SAR process.</li> <li>In the wording for the first bullet regarding Real-Time Monitoring, the words "and expected" should be deleted. Expected conditions are part of the data gathered for the reliability analysis covered under the second bullet, rather than for Real-Time Monitoring. <i>Consideration:</i> The SAR will be revised to eliminate the phrase, "as expected."</li> </ol>

**Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR**

Company	Ready to be developed into a standard?		Comments
	YES	NO	
Manitoba Hydro		X	<p>Standards arising from this SAR must apply to all entities operating in the system. In reality, this means the following:</p> <ul style="list-style-type: none"> <li>- the Balancing Authority has obligations to ensure correct schedules and ensure resource allocations which avoid limits</li> <li>- the Interchange Authority is required to ensure transmission line limits are respected</li> <li>- the Generator is required to adhere to limits and expectations (i.e. providing Q)</li> <li>- the Load Serving Entities will be required to drop load if required.</li> </ul> <p><b>Consideration:</b></p> <p>Taken as a whole, the 11 SARs currently under development address these issues partially. The BA is addressed in the Balance Resources and Demand SAR. Generators and LSEs are expected to have contractual arrangements with the Reliability Authority (as part of the certification of the RA). The requirement to establish transfer capability is in the Determine Facility Ratings SAR, as stated in the Brief Description footnote. This SAR states the requirements to monitor and assess the transmission system within these limits.</p> <p>Reliability principle 3 also applies – frequency is another element of operation that needs to stay within limits.</p> <p><b>Consideration:</b></p> <p>Frequency control is addressed within the Balance Resources and Demand SAR.</p> <p>The standard should also address the supply of critical information</p> <p><b>Consideration:</b></p> <p>We agree that this is important and necessary to include in the appropriate SAR. This SAR DT expects “the supply of critical information” to be addressed in the Coordinating Operations SAR and will give this comment to that SAR DT.</p>

**Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR**

Company	Ready to be developed into a standard?		Comments
	YES	NO	
			<p>Other Comments:</p> <p>Generators and Loads are to be addressed in the Coordination of Operations SAR. These entities can also affect reliability of operation as they are tightly connected and a failure to do the right thing by either of these entities can result in operation outside of transmission system limits. Therefore these entities need to be included in this SAR to ensure that they comply to instructions provided by the operator and follow commitments made at the scheduling stage.</p> <p><i>Consideration:</i></p> <p>The SAR DT notes the commenter’s concern. Generators and Loads are not aspects of this SAR. The requirements that Generators and Loads comply with operating orders issued by higher level functions (per the Functional Model) are expected to be addressed in Agreements with those higher level functions. The Certification Requirements for the Reliability Authority, Balancing Authority, Interchange Authority and Transmission Operator are all expected to include a list of agreements that must be in place as a condition for being awarded certification.</p>

National Grid USA	X		
New England ISO	X		

**Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR**

Company	Ready to be developed into a standard?		Comments
	YES	NO	
ONCOR	X		<p>There are two important dimensions missed in the Purpose/Brief Description. 1) Protect transmission equipment from damage due to overloading and 2) protect public health, safety, welfare or national security. (this is spelled out in the OSPM) The Requirement - corrective action to mitigate limit violations addresses these and other dimensions of this proposed standard.</p> <p><i>Consideration:</i></p> <p>This must be addressed, however, this falls within the scope of another SAR. The parameters that establish the transmission operating system limits are addressed in the Determine Facility Ratings, Operating Limits and Transfer Capabilities SAR.</p> <p>Relationships among RA, T Operator, T Owner, TSP - need to be identified and addressed as well as data requirements from market participants necessary for monitoring and analysis. While these may be provided through Certification or other Standards, this standard can not be done without those relationships/linkages identified and in place. It IS unclear to me if this is part of the SAR, Standard DT, or some other responsibility.</p> <p><i>Consideration:</i></p> <p>In the new standard's making process, terminology can be confusing and "where everything is being addressed" is not obvious at times. At this point, we expect that the Certification standards will include requirements that the RA, BA, IA and TOP have agreements in place with lower level functions. These agreements are expected to outline the operating responsibilities and authorities as they relate to controlling operations to maintain reliability.</p>
PGE	X		

**Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR**

Company	Ready to be developed into a standard?		Comments
	YES	NO	
PSEG			<p>This may be a glitch in the process. The 'yes' to "Does the proposed Standard comply with all the Market Interface Principles" is premature. The actual wording of the standard may in fact violate Market Interface Principle #4. Until the Standard is final, we can't answer the question!!</p> <p><i>Consideration:</i></p> <p>There is a mechanism in the standards-making process which addresses this possibility. The standards development process requires that the Market Interface Principles be reviewed and considered before the Standards Authorization Committee (SAC) approves the initial posting of a SAR. This is intended to prohibit the development of standards that will have an unnecessary adverse impact on markets. If, during the standards development process, a SAR or draft standard looks as though it were going to have an unnecessary adverse impact on markets, you should submit a specific comment highlighting why you feel this way. During each of its meetings, the SAC asks if there have been any challenges to the integrity of the standards development process, and such a comment would be brought forward to the SAC for their consideration. If the SAC reviewed the comment and felt that it were justified, the SAC has the authority to take corrective action by directing that the SAR be revised, withdrawn or by rejecting the SAR. If the actions of the SAC don't resolve the conflict, there is an appeals process that can be used to highlight the conflict and bring the conflict to resolution. The appeals process is described in the Standards Process Manual, page 23.</p>
Reliant		X	<p>See Comment B</p> <p><i>Consideration:</i> See Comment B</p>

**Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR**

Company	Ready to be developed into a standard?		Comments
	YES	NO	
Southern Company Services	X		<p>Assumption that operating limit definition and all associated definitions are captured may leave a void. Under "Brief Description" Performing corrective actions to mitigate limit violations. (assumes limit violations has a definition). Might use performing corrective actions to mitigate exceeding operating limits. Wouldn't the standard apply to Balancing Authority? In integrating plan it should be required to adhere to operating plan taking into consideration system limits?</p> <p><i>Consideration:</i></p> <p>First Sentence: This is addressed in the Determine Facility Ratings, Operating Limits and Transfer Capabilities SAR.</p> <p>Second Sentence: The SAR will be modified to include the suggested language “performing corrective actions to mitigate exceeding operating limits.”</p> <p>Third and Fourth Sentence: The functional model does not assign the responsibility for overseeing reliability to the Balancing Authority. Frequency control is being addressed within the Balance Resources and Demand SAR. Frequency is not one of the limits included in this SAR. Therefore the BA does not have compliance duties associated with this SAR.</p>
SRP		X	<p>See Comment C</p> <p><i>Consideration:</i> See Comment C</p>
We Energies			<p>Expand the scope to include the basic assumptions that establish the authority of the RA and TP to act, the operational requirements to accomplish the standard and so forth. These items are assumed to be covered in the Certification requirements. Also the 3 related SAR's are not developed yet and it is difficult to have confidence that they will mesh with this one.</p> <p><i>Consideration:</i></p> <p>The responsibilities of the RA and TP to take actions are anticipated to be included in the Certification Requirements SARs for those functions. Those SARs should be posted in early October and we encourage you to submit specific comments on this aspect.</p>
WECC	X		<p>See Comment D</p> <p><i>Consideration:</i> See Comment D</p>

**Comment A (Illinois Power)**

Illinois Power is still concerned, as it was in its comments on the initial draft of the SAR, that the SAR still includes a number of references to HOW. To correct this, IP suggests the following changes.

**Suggested changes to the Brief Description:**

This standard requires adherence to established operating limits<sup>1</sup> identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

Requirements shall address:

- Documentation of operating limits identified to prevent instability, uncontrolled separation or cascading outages readily available to the Reliability Authority and Transmission Operator

***Consideration:***

The Determine Facility Ratings, Operating Limits and Transfer Capabilities SAR is expected to address and include these requirements.

- Real time monitoring of necessary system parameters against the identified operating limits
- Performing short-term and real-time transmission reliability analyses relative to the identified operating limits
- Performing corrective actions, including identification and use of operating guides to mitigate limit violations
- Keeping records and filing reports

<sup>1</sup> These are the limits established through the standard, “Determine Facility Ratings, Operating Limits and Transfer Capabilities” that are further identified to prevent instability, uncontrolled separation or cascading outages

**Suggested Changes to the Detailed Description:**

This standard requires that the Reliability Authority and Transmission Operator adhere to established operating limits identified to prevent instability, uncontrolled separation or cascading outages.

Requirements shall address:

- 1 Demonstration that the RA and TO have current information on the identified operating limits
- Process in place for updating the RA/TO when changes are made in the identified operating limit

***Consideration:***

The Determine Facility Ratings, Operating Limits and Transfer Capabilities SAR is expected to include these requirements. We will forward these suggestions to that SAR DT.

## Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR

---

- 2 Real time monitoring of necessary system parameters against the identified operating limits
  - Monitor parameters that indicate the current and expected state of the identified operating limits transmission system
  - Monitor parameters that indicate the current and expected state of tie lines to other systems and of the overall interconnected transmission system
- 3 Performing short-term and real-time transmission reliability analyses relative to the identified operating limits
  - Collect data needed for performing real time reliability analyses
  - Have the capability to perform necessary studies relative to the identified operating limits
  - Conduct an operating assessment to identify limiting facilities

### *Consideration:*

The second bullet should be addressed in the Certification Requirements for the RA. We will forward this suggestion to the OCTF.

The suggestion to add “relative to the identified operating limits” is welcomed and will be added to the SAR.

- 4 Direct or performing corrective actions to mitigate return the system within the identified operating limits violations
  - Have a mitigation documented plans and operating guides
  - Implement mitigation plans where necessary
- 5 Keeping Maintenance of records and filing reports
  - Document applicable operating guides and their use
  - Log violations and maintain records for some period of time
  - Document instances of exceeding the identified operating limits
  - Document actions taken to limit the risk of instability, uncontrolled separation and cascading outages
  - Make reports required by information to NERC based on specified criteria (magnitude, duration, type of violation risk)

### *Consideration:*

The SAR DT used the word “perform” assuming that the named function would either perform the respective action(s) themselves or have an agreement in place that another entity satisfactorily performs the action(s) for them.

Have a documented mitigation plan is an excellent suggestion. The SAR will be modified to reflect this comment. Documentation of Operating Guides is addressed sufficiently within this requirement.

The comment to include a requirement to document instances of exceeding identified operating limits is also very helpful and will be incorporated into the SAR.

- 6 The standard will not address
  - loss of a single device
  - cascading outages
  - security limits that if exceed will not have significant consequences
  - distribution and generation

## Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR

---

### *Consideration:*

The Standard DT will address the transmission operating limit parameters that are specified in the Determine Facility Ratings, Operating Limits and Transfer Capabilities SAR. Without knowing these parameters it is premature to incorporate generic exclusionary language as suggested.

With respect to the deletion of the bullet on monitoring the state of tielines, IP does not believe this should be a requirement of this standard. Within the scope of this standard, these lines might only need to be monitored if they were an identified operating limit.

### *Consideration:*

The Transmission Operator has the responsibility to monitor the tielines within its boundaries. Even though there may be transmission lines within the TOP boundary that may not have operating limits, the tie lines are anticipated to have operating limits at all times since these meter points connect to the respective Interconnection.

With respect to the addition of Item 6, IP felt that the decisions by the SAR drafting team, documented in the responses to the comments received on the prior draft of this SAR, to specifically exclude these items from the standard needs to be made a part of the SAR so it is communicated to the standard drafting team.

### *Consideration:*

The SAR DT appreciates the comment. The Standard DT will address the transmission operating limit parameters that are specified in the Determine Facility Ratings, Operating Limits and Transfer Capabilities SAR. Without knowing these parameters it is premature to incorporate generic exclusionary language as suggested.

IP also believes that Reliability Principle 4 applies since the standard would address plans for emergency operation

### *Consideration:*

The Prepare for and Respond to Abnormal or Emergency Conditions SAR addresses emergency operation. This SAR is bounded for normal operations.

### **Comment B (Reliant)**

It still appears that this SAR is merely a set of procedures to implement limits that will be established in another SAR, the FACILITY RATINGS SAR.

Although there is certainly a need to have procedures to ensure that Facility Ratings, Operating Limits, and Transfer Capabilities are not violated, Reliant still questions whether it is appropriate to embark on a distinct STANDARD to enforce those limits? What then would be the enforcement mechanism for the FACILITY RATINGS Standard? Could it possibly be:

- 1) Real time monitoring of system parameters against operating limits
  - Monitor parameters that indicate the current and expected state of the transmission system
  - Monitor parameters that indicate the current and expected state of tie lines to other systems and of the overall interconnected transmission system
- 2) Performing short-term and real-time transmission reliability analyses
  - Collect data needed for performing real time reliability analyses
  - Conduct an operating assessment to identify limiting facilities
- 3) Performing corrective actions to mitigate limit violations
  - Have a mitigation plan
  - Implement mitigation plan where necessary
- 4) Keeping records and filing reports
  - Log violations and maintain records for some period of time
  - Report information to NERC based on specified criteria (magnitude, duration, type of violation)

These of course are conveniently the items in the Detailed Description of the operate Within Transmission Limits SAR

#### ***Consideration:***

The structure of the eleven initial SARs is outside of the responsibilities of this SAR DT. Your comment is appreciated. However, at this time, the Determine Facility Ratings, Operating Limits and Transfer Capabilities SAR addresses more than just operating limits. If the Determine Facility Ratings, Operating Limits and Transfer Capabilities SAR is eventually broken into three separate SARs, then the comment takes on more importance.

### **Comment C (SRP)**

SARs, per the Standards manual, are supposed to define the scope of the standard. Standards are the requirements that necessary to ensure the NERC reliability principles are met. Thus the SAR should provide us enough information, that is at least the requirements, so the industry and the SAC can judge whether standard as described in the SAR is acceptable.

The brief and detailed description says what the "requirements shall address" not what they are. The only statement that comes close to a requirement is the SAR says the standard requires adherence to established limits. What does that mean? The title say more about the standard than the description.

This SAR falls short and needs to be redrafted.

No. 2 I really can not address the second question because as indicated above, I do not know what the requirements of the standard are. The WECC RMS standard can be used as an example of requirements should be.

Other comments:

1. Once again not being able to know the specifics of what's proposed it is hard to know what is proposed.

#### ***Consideration:***

The SAR DT purpose is to assist the requester in developing and enhancing a specific standard scope in accordance with the OSPM. It is the SAR DT understanding that the Standard DT will fill in the details and you will have an opportunity to comment on the details of the standard through public postings.

2. Page SAR-4, For record keeping the correct language is to say the records will be maintained for the "retention period".

#### ***Consideration:***

The SAR will be modified to reflect the "retention period."

3. Page SAR-4, Under record keeping the reporting of security violations should be reported to reliability authorities and the region(s) as well as NERC.

#### ***Consideration:***

The SAR DT believes that at this time, NERC is the only designated recipient of the SAR specific data. Currently this is a NERC standard for NERC reliability issues. Through future data sharing agreements, the SAR DT is confident the data will be shared and appropriate modifications will be made to the standard.

4. On page SAR-6 sections of the operating policies that will be retired are listed.

a. What are these policies? Is everything in these sections to be retired? Do we have to go and research the policies to know what is being proposed? More information should be given about what is to be deleted and we should not have to go look for it.

## Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR

---

b. If all of the listed sections are retired, is there any other material in these sections that should be retained somewhere in some form?

***Consideration:***

The SAR DT has followed the methodology to identify existing policies that will be superseded by this standard. This is the mechanism that is instituted within the new process to retire the existing procedures. Where a section of the policy is listed, the entire section is being proposed for retirement.

c. The major heading of Implementation Plan indicates plans are to be provided for implementation of the proposed standard including training requirements. No such information was provided.

***Consideration:***

What we have provided is just the beginning of the implementation plan. At this point, we are giving the industry a 'heads up' so that everyone can see what we think will be retired when this new standard is implemented. Regions that develop their standards to synchronize with NERC's standards are expected to be particularly interested in this early information.

As the standard is drafted and more is known about the efforts associated with achieving and measuring compliance, the implementation plan will be enhanced. The full implementation plan will become part of the standard that is posted for comment and then for approval.

## **Comment D (WECC)**

The members of the Compliance Process Task Force (CPTF) of the Western Electricity Coordinating Council believe the purpose of the Operate Within Limit should include:

Actual power flow and net scheduled power flow over an interconnection or transfer path shall be maintained within Operating Transfer Capability (Security) Limits (“OTC”). The purpose of the proposed standard is to prevent actual path flow from exceeding its limit. Operating above a path's limit can result in loss of load, uncontrolled separation, and damage to transmission facilities when a system element (e.g. transmission line) outage occurs. When net schedules exceed the path limit, it can result in inadvertant flow and overloads on other system facilities.

The industry need for major transmission paths is as follows.

Transmission Path Operators, Transmission Owners, and Control Area Operators shall operate major transmisssion paths (the transmission system) within security limits so that instability, uncontrolled separation or cascading outages will not occur as a result of the most severe outage or single contingency. Several widespread system outages have occurred when major path limits were exceeded.

A brief description of the proposed standard is as follows.

Actual power flow or schedules on transmission paths identified by the Regional Reliability Organization shall at no time exceed the OTC for more than 20 minutes for paths that are stability limited, or for more than 30 minutes for paths that are thermally limited.

### ***Consideration:***

The SAR DT appreciates the comments. The details provided in these comments are beyond SAR DT scope. We think the WECC standard is an excellent example of a standard and the Standard DT needs to review it. These comments and your standard will be forwarded onto the Standard DT for their consideration.

A transmission path and the respective limits are no different than any other line and line limit. We will forward the comment to the Standard DT.

## **Other Comments: (WECC)**

*A detailed description of the proposed standard develop by CPTF is as follows.*

### *Operating Transfer Capability Limit Standard*

*Actual power flow and net scheduled power flow over interconnections or transfer paths defined by the Regional Reliability Organization shall be maintained within Operating Transfer Capability Limits ("OTC"). The OTC is the maximum amount of actual power that can be transferred over direct or parallel transmission elements comprising:*

- 1. An interconnection from one Control Area to another Control Area; or*
- 2. A transfer path within a Control Area.*

*The net schedule over an interconnection or transfer path within a Control Area shall not exceed the OTC, regardless of the prevailing actual power flow on the interconnection or transfer path.*

*a. Operating limits. No elements within the interconnection shall be scheduled above continuous operating limits. An element is defined as any generating unit, transmission line, transformer, bus, or piece of electrical equipment involved in the transfer of power within an interconnection.*

*b. Stability. The interconnected power system shall remain stable upon loss of any one single element without system cascading that could result in the successive loss of additional elements. The system voltages shall be within acceptable limits defined in the Regional and NERC Planning Standards. If a single event could cause loss of multiple elements, these shall be considered in lieu of a single element outage. This could occur in exceptional cases such as two lines on the same right-of-way next to an airport. In either case, loss of either single or multiple elements should not cause uncontrolled, widespread collapse of the interconnected power system. For purposes of this section, stability shall include transient stability, post transient stability or dynamic stability whichever is most limiting to OTC.*

*c. System contingency response. Following the outage and before adjustments can be made:*

- (i) No remaining element shall exceed its short-time emergency rating.*
- (ii) The steady-state system voltages shall be within emergency limits.*

*The limiting event shall be determined by conducting power flow and stability studies while simulating various operating conditions. These studies shall be updated as system configurations introduce significant changes in the interconnection.*

### *3. Data Reporting Requirement*

*By no later than 5:00 p.m. on the first Business Day following the day on which an instance of noncompliance occurs or other such date defined by the region, a transmission path operator or owner shall submit to the regional office operating transfer capability data (see attachment 1) for each such instance of noncompliance. On or before the tenth day of each calendar quarter (or such other date specified by the region, the path operator or owner (including entities with no reported instances of noncompliance) shall*

## **Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR**

---

*submit to the regional office a completed OTC summary compliance form (see attachment 2) for the immediately preceding calendar quarter.*

### **4. Compliance Standard**

*Actual power flow on all transmission paths shall at no time exceed the OTC for more than 20 minutes for paths that are stability limited, or for more than 30 minutes for paths that are thermally limited.*

### **5. Noncompliance Levels**

*For each separate incident violating the OTC compliance standard, the level of the violation shall be as set forth in the Noncompliance Levels for Operating Transfer Capability table (Attachment 3):*

### **6. Sanctions**

**For purposes of applying the sanctions for violations of this criterion, the “Sanction Measure” is Normal Path Rating and the “Specified Period” is the most recent calendar month.**

**Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR**

**Attachment 1**

**Operating Transfer Capability Reporting Form**

<b>1. Transfer Path Operator</b>					
<b>2. Transfer Path Name</b>					
<b>3. Path Number</b>		No.			
<b>4. Flow Direction</b>	Term 1		Term 2		
<b>5. Date and time of incident</b>	Date:		Time:		
<b>6. OTC Limit at time of incident - MW</b>			Time zone:		
<b>7. Actual Path Flow - MW</b>					
<b>8. Scheduled Path Flow - MW</b>					
<b>9. MW over limit</b>			Percent over limit		
<b>10. Duration of incidents - minutes</b>					
<b>11. Type of Limit</b>					

Reporting Instructions:

- Transfer Path Operator - Enter regional acronym for the Transfer Path Operator. (Acronyms and transfer paths for the WECC region are defined in Table 2 (attachment 4).
- Transfer Path Name - Enter name from Table 2 (attachment 4).
- Path Number - Enter path number from Table 2 (attachment 4).
- Flow Direction - Table 2 defines the path to be monitored for reporting purposes, each path must have a Terminal 1 (sending bus or area) name and a Terminal 2 (receiving bus or area) name. Positive flow direction is from Term 1 to Term 2. Use this convention to report scheduled and actual flow. For example, if TOT2 Term 1 was named South, Term 2 was named North, and there was - 700 MW reported on line 7; the flow across TOT2 would be 700 MW North to South.
- Date and time of incident - Date: Enter 2 digits each for Month, Day, and Year. Time: Enter 2 digits each for hour, minute, and second. Time zone enter MST, PST, MAST, PAST, etc.
- Operating Transfer Capability Limit at time of incident - Enter the MW transfer capability at the time of the incident.
- Actual Path Flow at time of incident - Enter the actual value of the MW flow at the 20-minute duration point for flows exceeding a stability limit and at the 30 minute duration point for flows exceeding a thermal limit.
- Scheduled Path Flow at time of incident - Enter the MW scheduled flow from Term 1 to Term 2.
- MW over limit - Line 7 minus Line 6.
- Duration of incident - Time in hours, minutes, and seconds that actual flow exceeded OTC.
- Type of Limit - Enter Stability or Thermal to identify the type of limit for the Path.

**Operating Transfer Capability Compliance Notification**

1. Reporting Path Operator or Path Owner: \_\_\_\_\_
2. Contact Person's Name: \_\_\_\_\_
3. Contact Person's Phone No.: \_\_\_\_\_
4. Reporting Period: \_\_\_\_\_

5.  ***The Path Operator or Path Owner was fully compliant with the Operating Transfer***  
Capability compliance criteria of RMS for the reporting period.
6.  The Reporting Path Operator or Path Owner is not an operator of one of the transmission paths identified for compliance reporting
7.  The Reporting Path Operator or Path Owner experienced reportable Operating Transfer Capability incidents for the reporting period. The Operating Transfer Capability incidents have been submitted as specified in the detailed compliance reporting instructions.
8.  The Reporting Path Operator or Path Owner experienced reportable Operating Transfer Capability incidents for the reporting period. The Operating Transfer Capability incidents have **not** been submitted as specified in the detailed reporting instructions.

Reporting Instructions:

1. Reporting Path Operator or Path Owner - Enter the acronym for the Path Operator or Path Owner.
2. Contact Person's Name - Enter the name of the reporting Path Operator or Path Owner employee.
3. Contact Person's Phone No. - Enter the employee's telephone number.
4. Reporting Period - Enter the quarter being reported (i.e. July 1 through September 30, 2002).
5. Check the box if no reportable OTC incidents were experienced during the reporting period.
6. Check the box if the Path Operator or Path Owner does not operate one of the major transmission paths identified in the compliance reporting instructions.
7. Enter the number of reportable OTC incidents that were reported by the Path operator or Path Owner for the reporting period.

**Summary of Comments on Second Posting of Monitor and Assess Short-term Transmission Reliability - Operate Within Transmission System Limits SAR**

---

8. Enter the number of reportable OTC incidents that were not reported by the Path Operator or Path Owner for the reporting period.

**Standard Authorization Request (SAR) Form**

Title of Proposed Standard:	Monitor and Assess Short-term Reliability - Operate Within Transmission System Limits -
Request Date:	March 7, 2002
Authorized for Posting:	March 20, 2002
SAR ID# :	OPER_WITHN_LMTS_01_03

<b>SAR Requestor Information</b>	<b>SAR Type</b> (Put an 'x' in front of one of these selections)	
Name: Jim Byrd (Al DiCaprio as substitute)	X	New Standard
Primary Contact: Al DiCaprio		Revision to existing Standard
Telephone: 610 666-8854 Fax: 610 666-4282		Withdrawal of existing Standard
e-mail: dicapram@pjm.com		Emergency Action

**Purpose/Industry Need**

The purpose of this standard is to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Brief Description**

This standard requires adherence to established operating limits<sup>1</sup> identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

Requirements shall address:

- Real time monitoring of system parameters against operating limits
- Performing short-term and real-time transmission reliability analyses relative to the identified operating limits
- Performing corrective actions to mitigate exceeding operating limits
- Keeping records and filing reports

<sup>1</sup> These are the limits established through the standard, "Determine Facility Ratings, Operating Limits and Transfer Capabilities"

**Reliability Functions**

<b>The Standard will Apply to the Following Functions</b> (Put an 'X' in front of each one that applies)		
X	Reliability Authority	Ensures the reliability of the bulk transmission system within its Security Authority Area. This is the highest reliability authority.
	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within its metered boundary and supports system frequency in real time
	Interchange Authority	Authorizes valid and balanced Interchange Schedules
	Planning Authority	Plans the bulk electric system
	Transmission Service Provider	Provides transmission services to qualified market participants under applicable transmission service agreements
	Transmission Owner	Owns transmission facilities
X	Transmission Operator	Operates and maintains the transmission facilities, and executes switching orders
	Distribution Provider	Provides and operates the "wires" between the transmission system and the customer
	Generator	Owns and operates generation unit(s) or runs a market for generation products that performs the functions of supplying energy and Interconnected Operations Services
	Purchasing-Selling Entity	The function of purchasing or selling energy, capacity and all necessary Interconnected Operations Services as required.
	Load-Serving Entity	Secures energy and transmission (and related generation services) to serve the end user

***Reliability and Market Interface Principles***

<b>Applicable Reliability Principles</b> (Put an 'x' in front of all that apply)	
X	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions.
	2. The frequency of interconnected bulk electric systems shall be controlled within defined limits through the balancing of electric supply and demand
X	3. Information necessary for planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably
	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented
X	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems
X	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified and have the responsibility and authority to implement actions
X	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis
<b>Does the proposed Standard comply with all of the following Market Interface Principles?</b>	
<i>(Enter 'yes' or 'no')</i>	
	Yes
1.	Interconnected The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy
2.	An Organization Standard shall not give any market participant an unfair competitive advantage
3.	An Organization Standard shall neither mandate nor prohibit any specific market structure
4.	An Organization Standard shall not preclude market solutions to achieving compliance with that Standard
5.	An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards

**Detailed Description**

This standard requires that the Reliability Authority and Transmission Operator adhere to established operating limits.

Requirements shall address:

- Real time monitoring of system parameters against operating limits
  - Monitor parameters that indicate the current state of the transmission system
  - Monitor parameters that indicate the current state of tie lines to other systems and of the overall interconnected transmission system
- Performing short-term and real-time transmission reliability analyses relative to the identified operating limits
  - Collect data needed for performing real time reliability analyses
  - Conduct an operating assessment to identify limiting facilities
- Performing corrective actions to mitigate exceeding operating limits
  - Have a documented mitigation plan
  - Implement mitigation plan where necessary
- Keeping records and filing reports
  - Document instances of exceeding identified operating limits
  - Log violations and maintain records for the retention period
  - Report information to NERC based on specified criteria (e.g. magnitude, duration, type of violation, instances of exceeding limits<sup>2</sup>)

**Related SARs**

<b>SAR ID</b>	<b>Explanation</b>
FACILITY_RATINGS_01_01	The “Determine Facility Ratings, Operating Limits, and Transfer Capabilities” SAR identifies how operating limits are established. The operating limits established within this proposed standard are referenced in the proposed “Operate Within Transmission System Limits - Monitor and Assess Short-term Reliability” standard.
COORD_OPERATONS_01_01	The “Coordinate Operations” SAR identifies what reliability-related information to exchange between Functions. Some of the information collected within the proposed “Operate Within Transmission System Limits - Monitor and Assess Short-term Reliability” standard will be used in the proposed “Coordinate Operations” standard.
ABNML_&_EM_COND_01_01	The “Prepare for and respond to Abnormal or Emergency Conditions” SAR will be implemented where this one stops. The two SARs are related.

<sup>2</sup> If an area bounces over a limit, whether it is caused by a contingency or not, this doesn’t need to be reported to NERC as long as the area re-prepares within the NERC guidelines. If the NERC criteria are not met, then these violations should be reported.

**200. Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

The purpose of this standard is to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**201 (a) Requirement**

The Reliability Authority (RA) shall monitor (in real time<sup>1</sup>) system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data<sup>2</sup> associated with those limits.

**201 (b) Measure(s)**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**201 (c) Outcome(s)**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**201 (d) Regional Differences**

None identified.

**201 (e) Compliance Monitoring Process**

The Reliability Authority shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance.

The performance-reset period shall be one year. The Reliability Authority shall keep data on limits for three years. The Compliance Monitor shall keep audited data for three years.

The RA shall have the following available upon the request of the Compliance Monitor:

- Real time system operating limits identified
- Display(s) with real time data associated with real time system operating limits

**201 (f) Levels of Non-compliance**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

---

<sup>1</sup> Real time could be continuous analog data or data sampled at a rate greater than or equal to one minute (this sampling rate is compatible with the characteristics of a steam generator and is consistent with the NERC control performance measures.)

<sup>2</sup> Data may be real, state-estimated or other calculated values

**Draft Standard 200 – Version A With Each Requirement Listed Separately**

**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

**201 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**202 (a) Requirement**

The Transmission Operator (TOP) shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**202(b) Measure(s)**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**202 (c) Outcome(s)**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**202 (d) Regional Difference(s)**

None identified.

**202 (e) Compliance Monitoring Process**

The TOP shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance. The performance reset period shall be one year. The Transmission Operator shall keep data on limits for three years. The Compliance Monitor shall keep audited data for three years.

The TOP shall have the following available upon the request of the Compliance Monitor:

- Real time system operating limits identified
- Display(s) with real time data associated with real time system operating limits

**202 (f) Levels of Non-compliance**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**202 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**203 (a) Requirement**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>3</sup>

The RA shall specify when to supply data (based on the RA’s hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**203 (b) Measure(s)**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**203 (c) Outcome(s)**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>4</sup> The RA shall maintain a record that shows data requested but not received.

**203 (d) Regional Difference(s)**

None identified.

**203 (e) Compliance Monitoring Process**

The Reliability Authority shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance.

The performance-reset period shall be one year. The Reliability Authority shall keep specification document(s) for three years. The Compliance Monitor shall keep audited data for three years.

The RA shall have available upon request of its Compliance Monitor:

- Specification for data needed to implement changes to existing system models
- Specification for data needed to implement changes for real time monitoring
- Record of correspondence requesting new data needed and indication of data not received

---

<sup>3</sup> Reliability analyses includes both real time and operational planning analyses

<sup>4</sup> Reliability analyses includes both real time and operational planning analyses

**203 (f) Levels of Non-compliance**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**203 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**204 (a) Requirement**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>5</sup>

The TOP shall specify when to supply data (based on the TOP’s hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

**204 (b) Measure(s)**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**204 (c) Outcome(s)**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses<sup>6</sup>. The TOP shall maintain a record that shows data requested but not received.

**204 (d) Regional Differences**

None identified.

**205 (e) Compliance Monitoring Process**

The TOP shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance.

The performance-reset period shall be one year. The TOP shall keep specification document(s) for three years. The Compliance Monitor shall keep audited data for three years.

The TOP shall have available upon request of its Compliance Monitor:

- Specification for data needed to implement changes to existing system models
- Specification for data needed to implement changes for real time monitoring
- Record of correspondence requesting new data needed and identification of data not received

---

<sup>5</sup> Reliability analyses includes both real time and operational planning analyses

<sup>6</sup> Reliability analyses includes both real time and operational planning analyses

**Draft Standard 200 – Version A With Each Requirement Listed Separately**

**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

**205 (f) Levels of Non-compliance**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

**204 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**205 (a) Requirement**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**205 (b) (Measure(s))**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**205 (c) Outcome(s)**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**205 (d) Regional Difference(s)**

None identified.

**205 (e) Compliance Monitoring Process**

The RA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance-reset period is 12 months without a violation from the time of the last violation. The RA shall provide data to its associated RAs and/or TOP. The RA and/or TOP that requested the data shall keep data for three years.

**205 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**205 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**206 (a) Requirement**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**206 (b) Measure(s)**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**206 (c) Outcome(s)**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**206 (d) Regional Differences**

None identified.

**206 (e) Compliance Monitoring Process**

The BA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance-reset period is 12 months without a violation from the time of the last violation. The BA shall provide data to its associated RA and/or TOP. The RA and/or TOP that requested the data shall keep data for three years.

**206 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**206 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**207 (a) Requirement**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**207 (b) Measure(s)**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**207 (c) Outcome(s)**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**207 (d) Regional Difference(s)**

None identified.

**207 (e) Compliance Monitoring Process**

The IA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance-reset period is 12 months without a violation from the time of the last violation. The IA shall provide data to its associated RA and/ or TOP. The RA and/or TOP that requested the data shall keep data for three years.

**207 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**207 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**208 (a) Requirement**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**208 (b) Measure(s)**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**208 (c) Outcome(s)**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**208 (d) Regional Difference(s)**

None identified.

**208 (e) Compliance Monitoring Process**

The TOW shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance reset period is 12 months without a violation from the time of the last violation. The TOW shall provide data to its associated RA and/or TOP. The RA and/or TOP that requested the data shall keep data for three years.

**208 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**208 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**209 (a) Requirement**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**209 (b) Measure(s)**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**209 (c) Outcome(s)**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**209 (d) Regional Difference(s)**

None identified.

**209 (e) Compliance Monitoring Process**

The Generator Owner shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance reset period is 12 months without a violation from the time of the last violation. The Generator Owner shall provide data to its associated RA and/or TOP. The RA and/or TOP that requested the data shall keep data for three years.

**209 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**209 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**210 (a) Requirement**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**210 (b) Measure(s)**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**210 (c) Outcome(s)**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**210 (d) Regional Difference(s)**

None identified

**210 (e) Compliance Monitoring Process**

The Reliability Authority shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance. The performance reset period shall be one year. The Compliance Monitor shall keep audited data for three years.

The RA shall demonstrate that analysis program(s) run(s) when requested by the Compliance Monitor.

**210 (f) Levels of Non-compliance**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**210 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**211 (a) Requirement**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**211 (b) Measure(s)**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**211 (c) Outcome(s)**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**211 (d) Regional Difference(s)**

None identified.

**211 (e) Compliance Monitoring Process**

The TOP shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance. The performance reset period shall be one year. The Compliance Monitor shall keep audited data for three years.

The TOP shall demonstrate that analysis program(s) run(s) when requested by the Compliance Monitor.

**211 (f) Levels of Non-compliance**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**211 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**212 (a) Requirement**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**212 (b) Measure(s)**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**212 (c) Outcome(s)**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**212 (d) Regional Difference(s)**

None identified.

**212 (e) Compliance Monitoring Process**

The Reliability Authority shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance. The performance reset period shall be one year. The Compliance Monitor shall keep audited data for three years.

The RA shall have documentation available upon request of the Compliance Monitor that shows that actions were taken when there was an identified problem (that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**212 (f) Levels of Non-compliance**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**212 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**213 (a) Requirement**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**213 (b) Measure(s)**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**213 (c) Outcome(s)**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**213 (d) Regional Difference(s)**

None identified.

**213 (e) Compliance Monitoring Process**

The TOP shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance.

The performance reset period shall be one year. The Compliance Monitor shall keep audited data for three years.

The TOP shall have documentation available upon request of the Compliance Monitor that shows that actions were taken when there was an identified problem (that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**213 (f) Levels of Non-compliance**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**213 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**214 (a) Requirement**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**214 (b) Measure(s)**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**214 (c) Outcome(s)**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**214 (d) Regional Difference(s)**

None Identified

**214 (e) Compliance Monitoring Process**

The RA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and spot reporting. The compliance reset period is 12 months. The Reliability Authority shall keep the mitigation plan and/or procedure for three years.

The RA shall provide its mitigation plan and/or procedures to its Compliance Monitor. The Compliance Monitor shall evaluate the mitigation plan and/or procedures.

**214 (f) Levels of Non-compliance**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**214 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**215 (a) Requirement**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**215 (b) Measure(s)**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**215 (c) Outcome(s)**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**215 (d) Regional Difference(s)**

None identified.

**215 (e) Compliance Monitoring Process**

The TOP shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and spot reporting. The compliance reset period is 12 months. The TOP shall keep the mitigation plan and/or procedure for three years.

The TOP shall provide its mitigation plan and/or procedures to its Compliance Monitor. The Compliance Monitor shall evaluate the mitigation plan and/or procedures.

**215 (f) Levels of Non-compliance**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**215 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**216 (a) Requirement**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**216 (b) Measure(s)**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**216 (c) Outcome(s)**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceeded for a specified time period. The report shall be filed within 72 hours of the event.

**216 (d) Regional Difference(s)**

None identified.

**216 (e) Compliance Monitoring Process**

The RA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and spot reporting. The compliance reset period is 12 months. The RA shall keep logs and reports for three years.

The RA shall provide the following data when requested by its Compliance Monitor:

- Documentation for all cases where system operating limits were exceeded (usually EMS historical data)
- Daily operating logs and supporting documentation for each system operating limit violation (identified system operating limit exceeded for a specified period of time)
- Complete report indicating event has occurred with description of event

**216 (f) Levels of Non-compliance**

1. Report filed on time but incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation

**Draft Standard 200 – Version A With Each Requirement Listed Separately**

**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

– An incident occurred and there was no report within 72 hours

4. Documentation didn't exist

**216 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**217 (a) Requirement**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**217 (b) Measure(s)**

Data exists and is retrievable

**217 (c) Outcome(s)**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**217 (d) Regional Difference(s)**

None identified.

**217 (e) Compliance Monitoring Process**

The TOP shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and spot reporting.

The compliance reset period is 12 months. The TOP shall keep data for three years.

The TOP shall provide its Compliance Monitor with documentation for all cases where system operating limits were exceeded (usually EMS historical data).

**217 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**217 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

### **Sanctions Table**

The following table is an approved table of Compliance Sanctions. This table of sanctions was developed by the Compliance Subcommittee as part of the NERC Compliance Program and was approved by the NERC Board of Trustees. The SDT does not need to develop new sanctions, but needs to be cognizant of the sanctions that will be applied for the various levels of non-compliance.

Levels of non-compliance are tied to this Enforcement Matrix. The matrix is divided into four levels of increasing non-compliance vertically and the number of violations in a defined period at a given level horizontally.

In the enforcement matrix, note that there are three sanctions that can be used: a letter, a fixed fine, and a \$\$ per MW fine.

#### **Letter**

The letter is a sanction used to notify company executives, Regional officers, and regulators when an entity is non-compliance. The distribution of the letter varies depending on the severity of the non-compliance. It is used first to bring non-compliance to light to people who can influence the operation to become compliant.

- Letter (A) - Letter to the entity's Vice President Level or equivalent informing the entity of non-compliance, with copies to the data reporting contact, and the entity's highest ranking Regional Council representative.
- Letter (B) - Letter to the entity's Chief Executive Officer or equivalent, with copies to the data reporting contact, the entity's highest ranking Regional Council representative, and the Vice President over the area in which non-compliance occurred.
- Letter (C) - Letter to the entity's Chief Executive Officer and Chairman of the Board, with copies to the NERC President, regulatory authorities having jurisdiction over the non-compliant entity if requested by such regulatory authorities, the data reporting contact, the entity's highest ranking Regional Council representative, and the Vice President over the area in which non-compliance occurred.

#### **Fixed Dollars**

This sanction is used when a letter is not enough and a stronger message is desired. Fixed dollars are typically assigned as a one-time fine that is ideal for measures involving planning-related standards. Many planning actions use forward-looking assumptions. If those assumptions prove wrong in the future, yet they are made in good faith using good practices, entities should not be harshly penalized for the outcome.

#### **Dollars per MW**

Dollars per MW sanctions are oriented toward operationally-based standards. The MW can be load, generation, or flow on a line. Reasonableness of a sanction needs to be figured into assessing \$/MW penalties. Assessing large financial penalties is not the goal, but sending a message with proper emphasis on \$\$\$ can be controlled with the multiplier.

**Draft Standard 200 – Version A With Each Requirement Listed Separately**

**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

<b>Occurrence Period Category</b>	<b>Number of Violations in Occurrence Period at a Given Level</b>			
1 <sup>st</sup> Period of Violations (Fully Compliant Last Period)	1	2	3	4 or more
2 <sup>nd</sup> Consecutive Period of Violations		1	2	3 or more
		\$ Sanction from Table; Letter ( C ) only if Letter (B) previously sent		
3 <sup>rd</sup> Consecutive Period of Violations		1	2 or more	
		\$ Sanction from Table; Letter ( C ) only if Letter (B) previously sent		
4 <sup>th</sup> or greater Consecutive Period of Violations		1		
		\$ Sanction from Table; Letter ( C )		

<b>Level of Non-Compliance</b>	<b>Sanctions Associated with Non-compliance</b>			
Level 1	Letter (A)	Letter (A)	Letter (B) and \$1,000 or \$1 Per MW	Letter (B) and \$2,000 or \$2 Per MW
Level 2	Letter (A)	Letter (B) and \$1,000 or \$1 Per MW	Letter (B) and \$2,000 or \$2 Per MW	Letter (B) and \$4,000 or \$4 Per MW
Level 3	Letter (B) and \$1,000 or \$1 Per MW	Letter (B) and \$2,000 or \$2 Per MW	Letter (B) and \$4,000 or \$4 Per MW	Letter (B) and \$6,000 or \$6 Per MW
Level 4	Letter (B) and \$2,000 or \$2 Per MW	Letter (B) and \$4,000 or \$4 Per MW	Letter (B) and \$6,000 or \$6 Per MW	Letter (B) and \$10,000 or \$10 Per MW

**Interpreting the Tables:**

- These tables address penalties for violations of the same measure occurring in consecutive compliance reporting periods.
- If a participant has non-compliant performance in consecutive compliance reporting periods, the sanctions applied are more punitive.

**200. Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

The purpose of this standard is to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**201 (a) Requirement**

The Reliability Authority (RA) shall monitor and assess system operating limits against actual real time<sup>1</sup> data<sup>2</sup> associated with those limits. The RA shall use the results of analyses to take actions to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall:

- Monitor (in real time) the system operating limits (identified to prevent cascading outages, instability, uncontrolled separation that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.
- Specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses<sup>3</sup>
- Specify when to supply data (based on the RA’s hardware and software requirements, and the time needed to do the operational planning analysis).
- Notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.
- Perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.
- Use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent and/or mitigate an actual or potential problem that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system. Document actions taken.

**201 (b) Measures**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits
3. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and that data be technically accurate and complete.)

---

<sup>1</sup> Real time could be continuous analog data or data sampled at a rate greater than or equal to one minute (this sampling rate is compatible with the characteristics of a steam generator and is consistent with the NERC control performance measures.)

<sup>2</sup> Data may be real, state-estimated or other calculated values

<sup>3</sup> Reliability analyses includes both real time and operational planning analyses

## **Draft Standard 200 – Version B With Related Requirements Combined**

### **Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

4. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and that data be technically accurate and complete.)
5. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.
6. Reliability analysis program(s) analyze all system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.
7. Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.
8. Documentation for actions taken to mitigate/prevent identified problem(s) that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

#### **201 (c) Outcomes**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses<sup>4</sup>. The RA shall maintain a record that shows data requested but not received.

The RA shall run reliability analysis program(s) and the programs shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

#### **201 (d) Regional Differences**

None identified.

#### **201 (e) Compliance Monitoring Process**

The Reliability Authority shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance.

The performance-reset period shall be one year. The Reliability Authority shall keep data for three years. The Compliance Monitor shall keep audited data for three years.

The RA shall have the following available upon the request of the Compliance Monitor:

- Real time system operating limits identified
- Display(s) with real time data associated with real time system operating limits

---

<sup>4</sup> Reliability analyses includes both real time and operational planning analyses

## **Draft Standard 200 – Version B With Related Requirements Combined**

### **Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

- Specification for data needed to implement changes to existing system models
- Specification for data needed to implement changes for real time monitoring
- Record of correspondence requesting new data needed and not received
- Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation and cascading outages that adversely impact the reliability of the bulk transmission system.
- Reliability analysis program(s) analyze(s) all system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.
- Documentation for actions taken when there was an identified problem (that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

#### **201 (f) Levels of Non-compliance**

1. Any one of the following:
  - Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate value was monitored for up to 24 hours
  - Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
  - Reliability analysis did not run when requested, but ran within 8 hours
2. Any one of the following:
  - Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
  - Data was not requested
  - There was no record of specification
  - Reliability analysis did not run when requested, but ran in 8 - 24 hours
  - Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no system operating limit violations occurred.
3. Any one of the following:
  - Reliability analysis did not run when requested, and did not run within 24 hrs
  - No analysis tool was available for use by system operators
  - Monitoring and/or reliability analyses identified a problem – no actions(or incorrect actions) were taken but no violation occurred
  - There was a system operating limit violation, but it did not result in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system.
4. Any one of the following:
  - System operating limit(s) were not being compared to actual data
  - System operating limit was violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system.

**Draft Standard 200 – Version B With Related Requirements Combined**  
**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

**201 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

### **202 (a) Requirement**

The Transmission Operator (TOP) shall monitor and assess system operating limits against actual real time data associated with those limits and shall use the results of analyses to take actions to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall:

- Monitor (in real time) the system operating limits (identified to prevent instability, cascading outages, or uncontrolled separation that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.
- Specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses<sup>5</sup>
- Specify when to supply data (based on the TOP’s hardware and software requirements, and the time needed to do the operational planning analysis).
- Notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.
- Perform short-term reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.
- Use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent and/or mitigate an actual or potential problem that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system. Document actions taken.

### **202 (b) Measures**

1. System operating limits are available in real time
2. Actual real time data available in a form that can be compared to the system operating limits
3. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
4. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
5. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.
6. Reliability analysis program(s) analyze(s) all system operating limits that, if exceeded, could cause instability, uncontrolled separation and cascading outages that adversely impact the reliability of the bulk transmission system.
7. Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation and cascading outages that adversely impact the reliability of the bulk transmission system.

---

<sup>5</sup> Reliability analyses includes both real time and operational planning analyses

9. Documentation shows actions taken to mitigate/prevent identified problem(s) that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**202 (c) Outcome(s)**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses<sup>6</sup>

The TOP shall run reliability analysis program(s) that identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**202 (d) Regional Differences**

None identified.

**202 (e) Compliance Monitoring Process**

The TOP shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor may also use Periodic Reviews (on site, per a schedule), with Spot Reports/Reviews and Triggered Investigations to assess performance.

The performance-reset period shall be one year. The TOP shall keep data for three years. The Compliance Monitor shall keep audited data for three years.

The TOP shall have the following available upon the request of the Compliance Monitor:

- Real time system operating limits identified
- Display(s) with real time data associated with real time system operating limits
- Specification for data needed to implement changes to existing system models
- Specification for data needed to implement changes for real time monitoring
- Record of correspondence requesting new data needed with identification of data not received
- Reliability analysis program(s) to analyze all system operating limits that, if exceeded, could cause instability, uncontrolled separation and cascading outages that adversely impact the reliability of the bulk transmission system.
- Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation and cascading outages that adversely impact the reliability of the bulk transmission system.

---

<sup>6</sup> Reliability analyses includes both real time and operational planning analyses

**Draft Standard 200 – Version B With Related Requirements Combined**  
**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

- Documentation for actions taken to mitigate/prevent identified problem(s) that could cause instability, uncontrolled separation and cascading outages that adversely impact the reliability of the bulk transmission system.

**201 (f) Levels of Non-compliance**

1. Any one of the following:
  - Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate value was monitored for up to 24 hours
  - Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
  - Reliability analysis did not run when requested, but ran within 8 hours
2. Any one of the following:
  - Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
  - Data was not requested
  - No record of specification
  - Reliability analysis did not run when requested, but ran in 8 - 24 hours
  - Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Any one of the following:
  - Reliability analysis did not run when requested, and did not run within 24 hrs
  - No analysis tool was available for use by system operators
  - Monitoring and/or reliability analyses identified a problem – no actions(or incorrect actions) were taken but no violation occurred
  - A system operating limit was violated but did not result in instability, uncontrolled separation and cascading outages that adversely impacted the reliability of the bulk transmission system.
4. Any one of the following:
  - System operating limit(s) were not being compared to actual data
  - A system operating limit was violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system.

**202 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**203 (a) Requirement**

The Reliability Authority (RA) shall have an approved, documented mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**203 (b) Measure(s)**

There is an approved, documented mitigation plan/procedure(s) that identifies actions the RA shall take to remain/return to within system operating limits

**203 (c) Outcome(s)**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**203 (d) Regional Difference(s)**

None identified.

**203 (e) Compliance Monitoring Process**

The RA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and spot reporting. The compliance-reset period is 12 months. The Reliability Authority shall keep the mitigation plan and/or procedure for three years.

The RA shall provide its mitigation plan and/or procedures to its Compliance Monitor. The Compliance Monitor shall evaluate the mitigation plan and/or procedures.

**203 (f) Levels of Non-compliance**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**203 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**204 (a) Requirement**

The Transmission Operator (TOP) shall have an approved, documented mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**204 (b) Measure(s)**

There is an approved, documented mitigation plan/procedure(s) that identifies actions the RA shall take to remain/return to within system operating limits

**204 (c) Outcome(s)**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**204 (d) Regional Difference(s)**

None identified.

**203 (e) Compliance Monitoring Process**

The TOP shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and spot reporting.

The compliance reset period is 12 months. The TOP shall keep the mitigation plan and/or procedure for three years.

The TOP shall provide its mitigation plan and/or procedures to its Compliance Monitor. The Compliance Monitor shall evaluate the mitigation plan and/or procedures.

**204 (f) Levels of Non-compliance**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**204 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**205 (a) Requirement**

The Reliability Authority (RA) shall:

1. Document instances of exceeding identified system operating limits.
2. Document and log (daily operating log) violations (instances where a system operating limit has been exceeded for a specified period of time) and maintain the record for at least 3 years)
3. File a report with its Compliance Monitor when a violation has occurred (an identified system operating limit has been exceeded for a specified time period).

**205 (b) Measure(s)**

1. Data exists and is retrievable
2. Record of violations is in existence for at least three years
3. Complete report filed with applicable Compliance Monitor within 72 hours (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**205 (c) Outcome(s)**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The RA shall file the report within 72 hours of the event.

**205 (d) Regional Differences**

None identified.

**205 (e) Compliance Monitoring Process**

The RA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and spot reporting. The compliance reset period is 12 months. The RA shall keep logs and reports for three years.

The RA shall provide the following data when requested by its Compliance Monitor:

- Documentation for all instances where system operating limits were exceeded (usually EMS historical data)
- Daily operating logs and supporting documentation for each system operating limit violation (identified system operating limit exceeded for a specified period of time)
- Complete report indicating event (identified system operating limit exceeded for a specified period of time) has occurred with description of violation

**205 (f) Levels of Non-compliance**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable

**Draft Standard 200 – Version B With Related Requirements Combined**  
**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

- Supporting documentation indicated unlogged violation(s)
  - An incident occurred and there was no report within 72 hours
4. One of the following:
- Documentation didn't exist
  - Logs/supporting documentation was not available

**205 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**206 (a) Requirement**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits.

**206 (b) Measure(s)**

Data exists and is retrievable

**206 (c) Outcome(s)**

The TOP shall have retrievable information that documents instances when it exceeds identified system operating limits.

**206 (d) Regional Differences**

None identified.

**206 (e) Compliance Monitoring Process**

The TOP shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and spot reporting.

The compliance reset period is 12 months. The TOP shall keep data for three years.

The TOP shall provide its Compliance Monitor with documentation for all cases where system operating limits were exceeded (usually EMS historical data).

**206 (f) Levels of Non-compliance**

5. Not Applicable
6. Not Applicable
7. Not Applicable
8. Documentation didn't exist

**206 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**Draft Standard 200 – Version B With Related Requirements Combined**  
**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

**207 (a) Requirement**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**207 (b) Measure(s)**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**207 (c) Outcome(s)**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**207 (d) Regional Differences**

None identified.

**207 (e) Compliance Monitoring Process**

The RA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance reset period is 12 months without a violation from the time of the last violation. The RA shall provide data to its associated RAs and/or TOP. The RA and/or TOP that requested the data shall keep data for three years.

**207 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**207 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**Draft Standard 200 – Version B With Related Requirements Combined**  
**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

**208 (a) Requirements**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**208 (b) Measure(s)**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**208 (c) Outcome(s)**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**208 (d) Regional Differences**

None identified.

**208 (e) Compliance Monitoring Process**

The BA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance reset period is 12 months without a violation from the time of the last violation. The BA shall provide data to its associated RA and/or TOP. The RA and/or TOP that requested the data shall keep data for three years.

**208 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**208 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**Draft Standard 200 – Version B With Related Requirements Combined**  
**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

**209 (a) Requirement**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**209 (b) Measure(s)**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**209 (c) Outcome(s)**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**209 (d) Regional Differences**

None identified.

**209 (e) Compliance Monitoring Process**

The IA shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance reset period is 12 months without a violation from the time of the last violation. The IA shall provide data to its associated RA and/or TOP. The RA and/or TOP shall keep data for three years.

**209 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**209 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**210 (a) Requirement**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**210 (b) Measure(s)**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**210 (c) Outcome(s)**

The TOP shall provide data, as requested, to its (associated) RA and/or TOP.

**210 (d) Regional Differences**

None identified.

**210 (e) Compliance Monitoring Process**

The TOW shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance reset period is 12 months without a violation from the time of the last violation. The TOW shall provide data to its associated RA and/or TOP. The RA and/or TOP that requested the data shall keep data for three years.

**210 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**210 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

**Draft Standard 200 – Version B With Related Requirements Combined**  
**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

---

**211 (a) Requirement**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**211 (b) Measure(s)**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**211 (c) Outcome(s)**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**211 (d) Regional Differences**

None identified.

**211 (e) Compliance Monitoring Process**

The Generator Owner shall demonstrate compliance through self-certification with re-certification on a schedule established by the Compliance Monitor. The Compliance Monitor shall ask the requesting RA or TOP to confirm the accuracy and timeliness of the data. Performance shall be measured periodically (on site, per a schedule), with triggered investigations and exception reporting.

The compliance reset period is 12 months without a violation from the time of the last violation. The Generator Owner shall provide data to its associated RA and/or TOP. The RA and/or TOP shall keep data for three years.

**211 (f) Levels of Non-compliance**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**211 (g) Sanctions**

Sanctions shall be applied consistent with the NERC Compliance and Enforcement Matrix (*attached at the end of this draft standard for reference and comment.*)

## **Sanctions Table**

The following table is an approved table of Compliance Sanctions. This table of sanctions was developed by the Compliance Subcommittee as part of the NERC Compliance Program and was approved by the NERC Board of Trustees. The SDT does not need to develop new sanctions, but needs to be cognizant of the sanctions that will be applied for the various levels of non-compliance.

Levels of non-compliance are tied to this Enforcement Matrix. The matrix is divided into four levels of increasing non-compliance vertically and the number of violations in a defined period at a given level horizontally.

In the enforcement matrix, note that there are three sanctions that can be used: a letter, a fixed fine, and a \$\$ per MW fine.

### **Letter**

The letter is a sanction used to notify company executives, Regional officers, and regulators when an entity is non-compliance. The distribution of the letter varies depending on the severity of the non-compliance. It is used first to bring non-compliance to light to people who can influence the operation to become compliant.

- Letter (A) - Letter to the entity's Vice President Level or equivalent informing the entity of non-compliance, with copies to the data reporting contact, and the entity's highest ranking Regional Council representative.
- Letter (B) - Letter to the entity's Chief Executive Officer or equivalent, with copies to the data reporting contact, the entity's highest ranking Regional Council representative, and the Vice President over the area in which non-compliance occurred.
- Letter (C) - Letter to the entity's Chief Executive Officer and Chairman of the Board, with copies to the NERC President, regulatory authorities having jurisdiction over the non-compliant entity if requested by such regulatory authorities, the data reporting contact, the entity's highest ranking Regional Council representative, and the Vice President over the area in which non-compliance occurred.

### **Fixed Dollars**

This sanction is used when a letter is not enough and a stronger message is desired. Fixed dollars are typically assigned as a one-time fine that is ideal for measures involving planning-related standards. Many planning actions use forward-looking assumptions. If those assumptions prove wrong in the future, yet they are made in good faith using good practices, entities should not be harshly penalized for the outcome.

### **Dollars per MW**

Dollars per MW sanctions are oriented toward operationally-based standards. The MW can be load, generation, or flow on a line. Reasonableness of a sanction needs to be figured into assessing \$/MW penalties. Assessing large financial penalties is not the goal, but sending a message with proper emphasis on \$\$\$ can be controlled with the multiplier.

**Draft Standard 200 – Version B With Related Requirements Combined**  
**Monitor and Assess Short-term Transmission Reliability – Operate within Transmission Limits**

<b>Occurrence Period Category</b>	<b>Number of Violations in Occurrence Period at a Given Level</b>			
1 <sup>st</sup> Period of Violations (Fully Compliant Last Period)	1	2	3	4 or more
2 <sup>nd</sup> Consecutive Period of Violations		1	2	3 or more
		\$ Sanction from Table; Letter ( C ) only if Letter (B) previously sent		
3 <sup>rd</sup> Consecutive Period of Violations		1	2 or more	
		\$ Sanction from Table; Letter ( C ) only if Letter (B) previously sent		
4 <sup>th</sup> or greater Consecutive Period of Violations		1		
		\$ Sanction from Table; Letter ( C )		

<b>Level of Non-Compliance</b>	<b>Sanctions Associated with Non-compliance</b>			
Level 1	Letter (A)	Letter (A)	Letter (B) and \$1,000 or \$1 Per MW	Letter (B) and \$2,000 or \$2 Per MW
Level 2	Letter (A)	Letter (B) and \$1,000 or \$1 Per MW	Letter (B) and \$2,000 or \$2 Per MW	Letter (B) and \$4,000 or \$4 Per MW
Level 3	Letter (B) and \$1,000 or \$1 Per MW	Letter (B) and \$2,000 or \$2 Per MW	Letter (B) and \$4,000 or \$4 Per MW	Letter (B) and \$6,000 or \$6 Per MW
Level 4	Letter (B) and \$2,000 or \$2 Per MW	Letter (B) and \$4,000 or \$4 Per MW	Letter (B) and \$6,000 or \$6 Per MW	Letter (B) and \$10,000 or \$10 Per MW

**Interpreting the Tables:**

- These tables address penalties for violations of the same measure occurring in consecutive compliance reporting periods.
- If a participant has non-compliant performance in consecutive compliance reporting periods, the sanctions applied are more punitive.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments:

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

Comments:

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

**Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

**16. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

**17. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**40. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:** As a Generator I may not be aware of all the differences that could occur in various regional interconnections

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:** As a Generator, I may not be aware of all requirements that promote grid reliability

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comments:** Version A is streamline and forthright, but version B lays out the requirements in such fashion that an auditee should know what the documentation requirements are and have agreement with an auditor when a finding of non-compliance is reported

**47. If you have comments on the format of the standard, please share them with us.**

Subject: Standard Comment-Operate Within Transmission Limits

I have a comment on the very first page of the Draft Standard in 201 (a) Requirement.

The present text requires monitoring limits against real time data. I believe the thought is stated in reverse. What should be monitored is the real time data, against limits. My rationale is that limits are typically static, and don't require "monitoring". Real time data is dynamic and is what needs monitoring against operating limits which typically are fixed.

The same concept also appears in the first indented item under 201(a).

Thanks for the opportunity to comment.

Lee A. Gladish,

Springfield, Ill. CWLP TDU Segment

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**No**

**Comments:** This is an area of concern for many. In the past there was an IEEE standard interchange format to share power flow data. Recently there have been numerous upgrades in

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

power flow modeling programs and their associated data structures. Unfortunately the IEEE standard format has not kept pace. At the other extreme are program developers that insist on changing data structures on nearly a regular basis to provide program "enhancements". This creates conversion problems for those using older or different power flow programs. A standard data interchange data model needs to be developed to allow free interchanging of model data between different programs. The structure would only be changed though committee agreement. If this cannot be achieved, program developers should be required to provide data structure information and make it available to any party upon request. The data structure should also allow programs to be backward compatible. That is a newer program should always be able to read an older data format and perform satisfactorily.

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments:

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Yes**

**No**

**Comments:**

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

If possible, please provide us with a definition for each of these terms.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

- BA
- TOP
- Generator
- Planning Authority

Comments

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

- RA
- BA
- Generator
- Planning Authority

Comments

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** At what point does telemetered data being unavailable constitute non-compliance (1 second, 1minute, 1 hour, etc.)?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** At what point does telemetered data being unavailable constitute non-compliance (1 second, 1minute, 1 hour, etc.)?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:** The RA should utilize existing data models whenever available. Collection of data should be coordinated with other data model building efforts to minimize duplication of efforts.

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

Comments:

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

Comments:

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**40. Do you agree with this requirement?**

- Yes  
 No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

X  **Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

X  **Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

X  **Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

X  **Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments:

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

Comments: Operating outside thermal, voltage, or stability criteria that is defined by OSL, but operating such that instability, uncontrolled separation, or cascading outages will not occur to more than localized area as a result of most severe contingency is a non-reportable OSLV.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

Non-Reportable Operating Security Limit Violation

Reportable Operating Security Limit Violation

**If possible, please provide us with a definition for each of these terms.**

- **NON-REPORTABLE OPERATING SECURITY LIMIT VIOLATION** - Operating outside the thermal, voltage, or stability criteria that defines the OPERATING SECURITY LIMIT, but operating so that instability, uncontrolled separation, or cascading outages will not occur to more than a localized area as a result of the most severe single contingency.
- **REPORTABLE OPERATING SECURITY LIMIT VIOLATION** - Operating outside the thermal, voltage, or stability criteria that defines the OPERATING SECURITY LIMIT, in a manner such that instability, uncontrolled separation, or cascading outages could occur to a widespread area as a result of the most severe single contingency.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

BA

TOP

Generator

Planning Authority

Comments

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

RA

BA

Generator

Planning Authority

Comments

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** The operating limits should be associated with the ratings, or both should be defined for clarification.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** Are Operating limits the same as ratings?

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** coordination should be required so that TOP or RA doesn't fall out of step

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:**

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** Energization is testing or commercial date, needs definition.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**40. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:** Need to further define what real data means.

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:** This definition is too vague. Please elaborate to ensure that compliance is achieved. Please give specific examples

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:** Why is it necessary to make sure that updates are provided for? The RA/TOP certification process should be enough to ensure that the entity is performing the functions including updates. To add this requirement adds a layer of compliance which is redundant and not required.

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

No

**Comments:** Each RA/TOP should use whatever format that is acceptable to its constituencies.

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:**

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**Generator Owner**

"real" data

real-time

**If possible, please provide us with a definition for each of these terms.**

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

BA

TOP

Generator

Planning Authority

**Comments**

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

RA

BA

Generator

Planning Authority

**Comments**

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

*Please use Version A of the draft standard to answer these questions.*

### **Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### **Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### **Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

### **10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** ISO New England does not believe that we should identify specific limits which must be reported on. Rather, we advocate internally reporting on every violation which does not clear within 30 minutes (as defined in NERC policy). Subsequently, each reported violation will be studied/examined to see if it would have caused instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the bulk power transmission system (have an Inter-Area impact outside of the New England Area following next contingency). If so, ISO New England would report this "OSL violation" to NPCC and NERC within 72 hours. If there would not have been an Inter-Area impact (i.e. the impact would have been localized within the offending Control Area's boundary), no external reporting will occur. We suggests this approach be adopted.

By restricting reporting to pre-identified limits, NERC may not be getting the information they seek through this Standard. Only through a post-operational assessment, can a true analysis (with the correct system configuration) be performed and an adequate judgement be made on the potential impact to the bulk power system.

We also believe that data should not be archived unless the limit is not cleared within 30 minutes. We do not advocate archiving data for every limit violation if it cleared in less than 30 minutes.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** This non-compliance matrix is completely inappropriate and ineffective. What is the scope of the telemetering unavailability required to achieve these levels of non-compliance? Is the goal here to achieve compliance with reliability standards or measure the amount of redundant telemetering equipment? It is clearly possible to maintain reliability absent some telemetering as long as an effective State Estimator is in use. Additionally, how much telemetering must be unavailable in order to be non-compliant: One point, five points, 5,000 points, etc.? Compliance should be measured against how many violations that an area had which were not cleared over a specified period of time. Only the RA should make the determination of how much telemetering is enough to have effective limit management.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** This standard should recognize that the RA, CA and TOP functions may all be performed at one location with primary responsibility enforced at the RA.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** This non-compliance matrix is completely inappropriate and ineffective. What is the scope of the telemetering unavailability required to achieve these levels of non-compliance? Is the goal here to achieve compliance with reliability standards or measure the amount of redundant telemetering equipment? It is clearly possible to maintain reliability absent some telemetering as long as an effective State Estimator is in use. Additionally, how much telemetering must be unavailable in order to be non-compliant: One point, five points, 5,000 points, etc.? Compliance should be measured against how many violations that an area had which were not cleared over a specified period of time. Only the RA should make the determination of how much telemetering is enough to have effective limit management.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:** In general we agree with the requirement. However, it is up to the RA when and how the data will be collected and determined to be reliable. The primary issue we have with this requirement is the need to maintain a record of requested data and an identification of data not delivered.

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**No**

**Comments:** See above.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

**Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

**16. Do you agree with this requirement?**

Yes

No

**Comments:** Same comments as 14 and 15

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

**17. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Same comments as 14 and 15

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** Seven days advanced notice may not be feasible for updates to real-time (EMS) systems due to the impact to operations during 'cut-over' activities. The time-frame requirement may vary widely depending on database requirements, support staffing, impact to real-time operations, etc. We believe the timing should be left to the RAs.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** Seven days advanced notice may not be feasible for updates to real-time (EMS) systems due to the impact to operations during 'cut-over' activities. The time-frame requirement may vary widely depending on database requirements, support staffing, impact to real-time operations, etc. We believe the timing should be left to the RAs.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** Seven days advanced notice may not be feasible for updates to real-time (EMS) systems due to the impact to operations during 'cut-over' activities. The time-frame requirement may vary widely depending on database requirements, support staffing, impact to real-time operations, etc. We believe the timing should be left to the RAs.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** The term Generator Owner has not been defined anywhere. There may be cases where, depending upon the Agreements in-place, that the actual owner of a generator is not responsible for providing anything but, rather, a third party performs this function on their behalf.

Seven days advanced notice may not be feasible for updates to real-time (EMS) systems due to the impact to operations during 'cut-over' activities. The time-frame requirement may vary widely depending on database requirements, support staffing, impact to real-time operations, etc. We believe the timing should be left to the RAs.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

- Yes  
 No

**Comments:** This needs clarification. Who is requesting that these programs be run? What type of programs? If there is no request, and nothing is done to study a potential reliability problem, is there non-compliance?

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** From the information the writer has provided we would suggest that the level of non compliance be based on findings that the system was found to be in an operating state that could have resulted in "instability, uncontrolled separation etc" due to the fact that an effective reliability analysis was not done, that would have identified the condition.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** This needs clarification. Who is requesting that these programs be run? What type of programs? If there is no request, and nothing is done to study a potential reliability problem, is there non-compliance?

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** From the information the writer has provided we would suggest that the level of non compliance should be based on findings that the system was found to be in an operating state that could have resulted in "instability, uncontrolled separation etc" due to the fact that an effective reliability analysis was not done, that would have identified the condition.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **32. Do you agree with this requirement?**

Yes

No

**Comments:** Please also make provisions for mitigating actions which were not previously identified by a study, but cleared the limit violation.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Levels two and three appear to be identical.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:** Please also make provisions for mitigating actions which were not previously identified by a study, but cleared the limit violation.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Levels two and three appear to be identical.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** Please also make provisions for mitigating actions which were not previously identified by a study, but cleared the limit violation.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Please also make provisions for mitigating actions which were not previously identified by a study, but cleared the limit violation.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** Please also make provisions for mitigating actions which were not previously identified by a study, but cleared the limit violation.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Please also make provisions for mitigating actions which were not previously identified by a study, but cleared the limit violation.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

Yes

No

**Comments:** ISO New England does not believe that we should identify specific limits which must be reported on. Rather, we advocate internally reporting on every violation which does not clear within 30 minutes (as defined in NERC policy). Subsequently, each reported violation will be studied/examined to see if it would have caused instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the bulk power transmission system (have an Inter-Area impact following next contingency). If so, ISO New England would report this "OSL violation" to NPCC and NERC with 72 hours. If there would not have been an Inter-Area impact (i.e. the impact would have been localized within the offending Control Area's boundary), no external reporting will occur. We suggest this approach be adopted.

By restricting reporting to pre-identified limits, NERC may not be getting the information they seek through this Standard. Only through a post-operational assessment, can a true analysis (with the correct system configuration) be performed and an adequate judgement be made on the potential impact to the bulk power system.

We also believe that data should not be archived unless the limit is not cleared within 30 minutes. We do not advocate archiving data for every limit violation regardless of the time in which this was cleared.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

- 2. Not Applicable
- 3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
- 4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** ISO New England does not believe that we should identify specific limits which must be reported on. Rather, we advocate internally reporting on every violation which does not clear within 30 minutes (as defined in NERC policy). Subsequently, each reported violation will be studied/examined to see if it would have caused instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the bulk power transmission system (have an Inter-Area impact following next contingency). If so, ISO New England would report this "OSL violation" to NPCC and NERC with 72 hours. If there would not have been an Inter-Area impact (i.e. the impact would have been localized within the offending Control Area's boundary), no external reporting will occur. We suggest this approach be adopted.

By restricting reporting to pre-identified limits, NERC may not be getting the information they seek through this Standard. Only through a post-operational assessment, can a true analysis (with the correct system configuration) be performed and an adequate judgement be made on the potential impact to the bulk power system.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:** In the current format of the existing draft SARs, it appears as though two very fundamental reliability requirements may be lost: (1) a Reserve Requirement; and (2) a CPS2-like requirement (a standard which accounts for ACE variations in addition to frequency control).

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comments:**

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** Additional comments: ISO New England, nor NPCC members, subscribe to the use of monetary penalties to enforce compliance and we (ISO New England) in no way are a party to any contracts which allows NERC to do so.

**1. The draft standard uses the term 'data' to allow for real, state-estimated or other calculated values. Do you agree?**

Yes

No

Comments:

**2. The draft standard uses the term 'Reliability Analysis' to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

Do you agree?

# STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

Yes

No

Comments:

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

Comments:

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

Comments:

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments:

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

Comments:

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**Local Areas**

**Reliability Authority Area**

**Wide Area**

**If possible, please provide us with a definition for each of these terms.**

Clearly differentiate between electrical areas that can cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system and those areas that don't (Local Areas).

Reliability Authority Area consists of one or more Control Areas for which a single Reliability Authority is responsible.

A Wide Area impact is one that goes beyond the Reliability Authority Area.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

BA

TOP

Generator

Planning Authority

**Comments**

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

RA

BA

Generator

Planning Authority

**Comments**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** Loss of a few telemetered quantities does not constitute an inability of the RA to perform his "monitoring "(and analysis) functions if the State Estimator remains functional. (In fact State estimated quantities are deemed to be often more accurate than telemetered quantities .) Reporting of loss of actual telemetry should only be required when the RA can no longer perform these functions. Furthermore, reporting each actual telemetry loss will create too much overhead for the RA, the Regions and/or NERC.

For a loss of the RA's "monitoring function", a minimum time standard should be built into this compliance issue similar to "Exceeding an Operating Limit but Not a Reportable Violation" (question 5 & 6). There should be a time allowance for short term failures (i.e. < 30 minutes) of failure before reporting is required.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 2:

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### Measure(s):

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### Outcome(s) (100% Compliance):

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

### 12. Do you agree with this requirement and its associated performance/outcome and measure/s?

Yes

No

**Comments:** Yes ,only if it is recognized that in some jurisdictions, the TOP may be the same entity as the RA but does not necessarily perform all of the roles(eg. switching,maintenance,outage & construction notification) that the Functional Model defines for the TOP.

Where the RA and the TOP are different, there needs to be a clear distinction of which system limits each are accountable for. This document should be reworked to be consistent with the recently issued OLD TF report.

### Levels of Non-compliance for this Requirement:

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### 13. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** Loss of a few telemetered quantities does not constitute an inability of the TOP to perform his "monitoring "(and analysis) functions if the State Estimator remains functional. (In fact State estimated quantities are deemed to be often more accurate than telemetered quantities .) Reporting of loss of actual telemetry should only be required when the TOP can no longer perform these functions. Furthermore, reporting each actual telemetry loss will create too much overhead for the TOP, the Regions and/or NERC.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

For a loss of the TOPs "monitoring function", a minimum time standard should be built into this compliance issue similar to "Exceeding an Operating Limit but Not a Reportable Violation" (question 5 & 6). There should be a time allowance for short term failures (i.e. < 30 minutes) of failure before reporting is required.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

**Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

**16. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

**17. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** The data needs to be defined before we can say yes. It could well be that the requested data is not readily available in the EMS or telemetered and may take much longer and could be costly if the providing RA did not feel it was important for his own purposes.

See also comments in questions 20, 22, 24 and 26. To meet this requirement the RA needs the data sooner (say in 10 days).

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The data needs to be defined before we can say yes. It could well be that the requested data is not readily available in the EMS or telemetered and may take much longer and could be costly if the providing RA did not feel it was important for his own purposes.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** Requirement "5" states that the RA has to notify other associated RA's and TOP's no less than 7 days prior to energization of new/changed facilities. If the Balancing Authority has the same time line requirement and gives the minimum notice (7 days) this does not allow time for the RA to complete their requirements of passing on the information to the associated RA's and TOP's. Therefore I suggest increasing the Transmission Operating Authority time line to 10 days.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** Requirement "5" states that the RA has to notify other associated RA's and TOP's no less than 7 days prior to energization of new/changed facilities. If the Interchange Authority has the same time line requirement and gives the minimum notice (7 days) this does not allow time for the RA to complete their requirements of passing on the information to the associated RA's and TOP's. Therefore I suggest increasing the Interchange Authority time line to 10 days.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** Requirement "5" states that the RA has to notify other associated RA's and TOP's no less than 7 days prior to energization of new/changed facilities. If the Transmission Owner has the same time line requirement and gives the minimum notice (7 days) this does not allow time for the RA to complete their requirements of passing on the information to the associated RA's and TOP's. Therefore I suggest increasing the Transmission Owners time line to 10 days.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** Requirement "5" states that the RA has to notify other associated RA's and TOP's no less than 7 days prior to energization of new/changed facilities. If the Generator Owner has the same time line requirement and gives the minimum notice (7 days) this does not allow time for the RA to complete their requirements of passing on the information to the associated RA's and TOP's. Therefore I suggest increasing the Generator Owners time line to 10 days.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** A minimum time standard should be built into this compliance issue similar to "Exceeding an Operating Limit but Not a Reportable Violation" (question 5 & 6). There should be a time allowance for short term failures (i.e. < 30 minutes) of the run of reliability analysis programs, under normal system conditions, before reporting is required.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** Yes ,only if it is recognized that in some jurisdictions, the TOP may be the same entity as the RA but does not necessarily perform all of the roles(eg. switching,maintenance,outage & construction notification) that the Functional Model defines for the TOP.

Where the RA and the TOP are different, there needs to be a clear distinction of which system limits each are accountable for. This document should be reworked to be consistent with the recently issued OLD TF report.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** A minimum time standard should be built into this compliance issue similar to "Exceeding an Operating Limit but Not a Reportable Violation" (question 5 & 6). There should be a time allowance for short term failures (i.e. < 30 minutes) of the run of reliability analysis programs, under normal system conditions, before reporting is required.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** A more descriptive or clearer definition is required to differentiate between level 2 and level 3.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **34. Do you agree with this requirement?**

Yes

No

**Comments:** Yes ,only if it is recognized that in some jurisdictions, the TOP may be the same entity as the RA but does not necessarily perform all of the roles(eg. switching,maintenance,outage & construction notification) that the Functional Model defines for the TOP.

Where the RA and the TOP are different, there needs to be a clear distinction of which system limits each are accountable for. This document should be reworked to be consistent with the recently issued OLD TF report.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** A more descriptive or clearer definition is required to differentiate between level 2 and level 3.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

Yes

No

**Comments:** Clarify the distinction between "document" and "log". I would think that logging is sufficient.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** Is logging not sufficient? Whats the distinction between "document" & "log"?

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

**Yes**

**No**

**Comments:** Understanding that different companies have different operational setups and duties/requirements can sometimes cross boundry lines between different authorities (i.e. RA/TOP/TOW). In some case the RA and the TOP perform the same functions as defined in this SAR but that entity may not perform other duties such as switching, maintenance or notification of outages or construction plans which are also described as roles that the TOP is accountable for in the Functional Model.

In other case, some duties as defined in the SAR process may be duplicated or shared or the accountabilites for which limits may need to be clarified.

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

**Yes**

**No**

**Comments:** Local Areas

**If yes, please identify what you feel should be added.**

**Clearly differentiate between electrical areas that can cause instability, uncontrolled seperation or cascading outages that advesely impact the reliability of the bulk transmission system and those areas that don't (Local Areas).**

**46. Which form of the Standard do you prefer?**

**Version A – Each Requirement Separate**

**Version B – Related Requirements Combined**

**Comments:** I prefer that the Standard have all RA requirements/information together. Same for TOP's, TOW's, BA's, IA's and Generator Owners. In other words a different section of the standard for each of the different authorities/owners where all their requirements are stated in one place.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**47. If you have comments on the format of the standard, please share them with us.**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

Yes

No

**Comments:** It is recommended that “data” mean something specific vs. a “very general” reference to items. Being more specific would provide for us to give a more definitive answer on whether we agree or not.

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

Yes

No

**Comments:** See answer to question #1.

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

Yes

No

**Comments:** See answer to question #1.

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

Yes

No

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

**Comments:** See answer to question #1.

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:**

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**If possible, please provide us with a definition for each of these terms.**

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

**BA**

**TOP**

**Generator**

**Planning Authority**

**Comments**

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

**RA**

**BA**

**Generator**

**Planning Authority**

**Comments**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** Levels of non-compliance should not be determined by the availability of data. It should be based more on the RA's capability to monitor System Operating Limits and whether they took appropriate action to resolve issues preventing the RA from doing the monitoring.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** See answer to question # 11.

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### **Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### **Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### **14. Do you agree with this requirement?**

Yes

No

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

### **15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Is there a standard or requirement for the TOP, BA, or IA to provide this data to

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

the RA so that the RA is not captive. There needs to be some compliance requirement on those entities to provide the data (Maybe a criteria requirement in the certification SARs).

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### **Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### **Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### **16. Do you agree with this requirement?**

Yes

No

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### **17. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** However, my comments to question #15 applies here also.

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** A 7 day lead time is not adequate. It would be better for coordination to require no less than 1 month lead time.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** More lead time should be required such as 1 month.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** More time such as 1 month should be considered.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** Again, more time such as 1 month is more appropriate.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** More time such as 1 month is more appropriate.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:** Agree with the requirement, but there is insufficient information on the analysis and how often it would be performed.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** We agree with the form of non-compliance but without complete knowledge of how often the studies will be performed, we're not sure that the timeframes are adequate or not.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** However we have the same comments as in question #28.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** We have the same comments as in question #29

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** However, is there a coordinated effort between the RA and TOP to mitigate an OSL? Or, do the RA and TOP perform the mitigation plan completely independent of one another.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**40. Do you agree with this requirement?**

Yes

No

**Comments:** Are there current reports available to better identify what the cause was for exceeding the security limit and would this report be available within 72 hours to meet the documentation requirement above. If not, maybe the timeframe should be changed.

**Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments:

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

Comments:

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

If possible, please provide us with a definition for each of these terms.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

- BA
- TOP
- Generator
- Planning Authority

Comments

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

- RA
- BA
- Generator
- Planning Authority

Comments

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

**Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

**16. Do you agree with this requirement?**

- Yes  
 No

**Comments:** The TOP should collect generator data from the RA.

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

**17. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** What kinds of "changes" to facilities are we talking about? If this is defined somewhere else it should be included here. If it is not defined, it should be.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:** Would like to see language in the Measure to the effect this documentation of actions taken will be readily available to all participants. This would help insure that potential discriminatory actions do not occur, and if they do, will be discoverable. If it is not readily available then the RA is non-compliant. The Measure and Non-compliance levels should also contain a time period when the documentation will be available.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** The Requirement sentence seems to be poorly constructed. Suggest this alternative: "The Reliability Authority (RA) shall have a mitigation plan that includes procedures designed to prevent operating limits from being exceeded, and to mitigate the effects of periods when the limits are exceeded."

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** See #37 language.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**40. Do you agree with this requirement?**

- Yes  
 No

**Comments:** Suggest changing "instances of exceeding identified system operating limits" to "instances of identified system operating limits being exceeded" Also, in the Measures #1, "Data exists and is retrievable" retrievable by whom? Should be all interested parties.

**Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:** This is not included in the scope of the RA certification functions. The RA certification function will verify if the processes and procedures are in place to perform the analysis. The certification SAR drafting team will depend the standards to assure that the appropriate data is available.

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

No

Comments:

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments:

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

Comments:

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

"Actual data" and "Actual telemetered data"

If possible, please provide us with a definition for each of these terms.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

BA

TOP

Generator

Planning Authority

Comments The Generator should be responsible for getting the data to the RA. How it is accomplished should not be an issue. I would guess that in most situations it will be supplied by Planning.

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

RA

BA

Generator

Planning Authority

Comments The Generator should be responsible for getting the data to the RA. How it is accomplished should not be an issue. I would guess that in most situations it will be supplied by Planning.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:** I am very confused by this Standard. Who is going perform these functions the TOP or the RA. The Standard appears to have both performing the same function. The Standard needs to define the relationship between the RA and TOP. Maybe that could be accomplished in a opening paragraph. The requirements on the limits may be too broad. For example, an operating limit should also protect the safety of the public. If a facility was loaded to the point where it no longer met clearance requirements, the RA should respect these limits. The standards also seem to ignore voltage limits. There are limits to how high or low the voltage should be allowed to go before action is required. In addition to steady-state voltages, there should be a limit on transient voltages as well. It is not clear from this standard that these limits apply.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** I am assuming that the RA will not get the data directly but will receive the data from another source. It does not seem appropriate to sanction them for something they do not control. Maybe the non-compliance should be associated with the equipment the RA uses for monitoring the system. In addition the levels of non-compliance use the term "Actual telemetered data" while the footnote to the measures states that real-time, state estimated or calculated data is acceptable. There is at a minimum confusion with the way these terms are stated if not outright

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

conflict. The standard needs to be consistent between the measurement and level of non-compliance.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 2:

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### Measure(s):

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### Outcome(s) (100% Compliance):

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

### 12. Do you agree with this requirement and its associated performance/outcome and measure/s?

Yes

No

**Comments:** I am very confused by this Standard. Who is going perform these functions the TOP or the RA. The Standard appears to have both performing the same function. The Standard needs to define the relationship between the RA and TOP. Maybe that could be accomplished in a opening paragraph. The requirements on the limits may be too broad. For example, an operating limit should also protect the safety of the public. If a facility was loaded to the point where it no longer met clearance requirements, the RA should respect these limits. The standards also seem to ignore voltage limits. There are limits to how high or low the voltage should be allowed to go before action is required. In addition to steady-state voltages, there should be a limit on transient voltages as well. It is not clear from this standard that these limits apply.

### Levels of Non-compliance for this Requirement:

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### 13. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** The levels of non-compliance use the term "Actual telemetered data" while the footnote to the measures states that real-time, state estimated or calculated data is acceptable. There is at a minimum confusion with the way these terms are stated if not outright conflict. The standard needs to be consistent between the measurement and level of non-compliance.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 3:

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### Measure(s):

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### 14. Do you agree with this requirement?

Yes

No

**Comments:** The standard should state what type of information may be required by the RA. A list similar to that in NERC Operating Policy 4 should be included and the RA could identify what data from this list is required. In addition the RA must make the request with sufficient time for the BA, IA, TOP or other RA to implement the data request.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

### 15. Do you agree with these levels of non-compliance for this requirement?

Yes

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**No**

**Comments:** There is no compliance measure to track the RA's reporting data that was requested but not received.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** The standard should state what type of information may be required by the TOP. A list similar to that in NERC Operating Policy 4 should be included and the TOP could identify what data from this list is required. In addition the TOP must make the request with sufficient time for the BA, IA, other TOP or RA to implement the data request.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Comments:** There is no compliance measure to track the TOP's reporting data that was requested but not received.

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** Seven days prior to energization may be an unrealistic expectation. What type of data will the RA be providing to another RA or TOP on new or modified facilities? Will the data originate with the RA? If not the standard should be that the RA pass the data on within a specified period of time, but the requirement to provide the data belongs to the entity that owns the facility. Depending on the type of data you are talking about 7 days might be realistic.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The level of non-compliance does not seem appropriate. Start at level one and then escalate up through the the different levels depending on how late it is seems to be more appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** Seven days prior to energization may be an unrealistic expectation. What type of data will the BA be providing to an associated RA or TOP on new or modified facilities? Will the data originate with the BA? If not the standard should be that the BA pass the data on within a specified period of time, but the requirement to provide the data belongs to the entity that owns the facility. Depending on the type of data you are talking about 7 days might be realistic.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The level of non-compliance does not seem appropriate. Starting at level one and then escalate up through the the different levels depending on how late it is seems to be more appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** Seven days prior to energization may be an unrealistic expectation. What type of data will the IA be providing to an associated RA or TOP on new or modified facilities? Will the data originate with the IA? If not the standard should be that the IA pass the data on within a specified period of time, but the requirement to provide the data belongs to the entity that owns the facility. Depending on the type of data you are talking about 7 days might be realistic.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The level of non-compliance does not seem appropriate. Starting at level one and then escalate up through the the different levels depending on how late it is seems to be more appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** Depending on the type of data seven days prior to energization may be a unrealistic expectation.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The level of non-compliance does not seem appropriate. Starting at level one and then escalate up through the the different levels depending on how late it is seems to be more appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** Depending on the type of data seven days prior to energization may be a unrealistic expectation.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The level of non-compliance does not seem appropriate. Starting at level one and then escalate up through the the different levels depending on how late it is seems to be more appropriate.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

### **Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **28. Do you agree with this requirement?**

Yes

No

**Comments:** The measures and outcomes should be related to violating System Operating Limits and not be limited to instability, uncontrolled separation or cascading outages. See comments to question no. 10 above.

### **Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

### **29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Is there a difference between "run" and converge? A program can run but not produce useful results. It also seems there should be some period of time to permit the solution to converge prior to being out of compliance. It is not realistic to get convergence 100% of the time on real-time programs.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** The measures and outcomes should be related to violating System Operating Limits and not be limited to instability, uncontrolled separation ore cascading outages. See comments to question no. 10 above.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Is there a difference between "run" and converge? A program can run but not produce useful results. It also seems there should be some period of time to permit the solution to converge prior to being out of compliance. It is not realistic to get convergence 100% of the time on real-time programs

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

- Yes
- No

**Comments:** The measures and outcomes should be related to violating System Operating Limits and not be limited to instability, uncontrolled separation or cascading outages. See comments to question no. 10 above.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:** What is the difference between two and three? If it is the difference between documenting and reporting a violation (the amount of time over the limit), this needs to be clarified in the standard. The items in No. 4 need to be expanded based on comments to question No. 10.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **34. Do you agree with this requirement?**

Yes

No

**Comments:** The measures and outcomes should be related to violating System Operating Limits and not be limited to instability, uncontrolled separation or cascading outages. See comments to question no. 10 above.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** What is the difference between two and three? If it is the difference between documenting and reporting a violation (the amount of time over the limit), this needs to be clarified in the standard. The items in No. 4 need to be expanded based on comments to question No. 10.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

### **Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

### **Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **36. Do you agree with this requirement?**

Yes

No

**Comments:** Who has to approve the plan? The RA, compliance monitor, TOP or someone else? Who approves needs to be identified in the standard.

### **Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

### **37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Who has to approve the plan? The RA, compliance monitor, TOP or someone else? Who approves needs to be identified in the standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** Who has to approve the plan? The RA, compliance monitor, TOP or someone else? Who approves needs to be identified in the standard.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Who has to approve the plan? The RA, compliance monitor, TOP or someone else? Who approves needs to be identified in the standard.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### **Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### **Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### **40. Do you agree with this requirement?**

Yes

No

**Comments:** What is the "specified period of time"? Will this period be defined in this standard? What is the importance of getting this information to the Compliance Monitor in 72 hours? What will the compliance monitor do with the report? What is the basis for having the data available for three years?

### **Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### **41. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Why is the timing of the report so important?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:** The Standard does not require the RA or TOP to provide evidence that they have the authority to take necessary actions. This requirement is currently included in the Certification SARs.

**If yes, please identify what you feel should be added.**

**This Standard should reference the Certification Standard and any other applicable Standards.**

**46. Which form of the Standard do you prefer?**

**Version A – Each Requirement Separate**

**Version B – Related Requirements Combined**

**Comments:** Version A is very clear and easy to understand the Requirement, Measurement, Outcomes,etc for the particular requirement.

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** Version A is very clear easy to follow. Version B is harder to follow and relate the Measurement, Outcomes,etc for the particular requirement. This is reflected in this response form because it requests that Version A be used to provide the response. Please note that version B has two 201 (f) sections and no 202 (f) section.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

- Yes
- No

**Comments:** To me the graph is unclear. For someone who has not seen this graph before, it is not obvious what it is trying to show. That is, are the bad areas along the x or y axis? It would be better to have a graph with three regions: the allowable (green) region within a deadband, a yellow region that may need documentation, and a red region that is a reportable violation. For example, if a quantity has a deadband of -100 to +100, a yellow range may go from -110 to -100 and from +100 to +110, while the red range may be anything less than -110 and greater than +110.

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

- Yes
- No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

If possible, please provide us with a definition for each of these terms.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

BA

TOP

Generator

Planning Authority

Comments

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

RA

BA

Generator

Planning Authority

Comments

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

**Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

**16. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

**17. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** There should be a reminder sent out if the data is not sent initially before going directly to Level 4.

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**40. Do you agree with this requirement?**

- Yes  
 No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:**

No

**Comments:** There should be a reminder sent out if the data is not sent initially before going directly to Level 4.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comments:**

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** The organization of the document makes it very difficult to read. Much of the data is similar and repetitive. Maybe the document should be organized differently, either separate standards applicable to RA only, the IA only, the BA only, and the TOP only. Then each entity would have to read and comply only with the standard that is applicable to him. An alternative method would be to state in each section that this is applicable to RA, IA, BA or TOP.

<b>Name</b>	<b>Company</b>	<b>Industry Segment #</b>

**1. The draft standard uses the term 'data' to allow for real, state-estimated or other calculated values. Do you agree?**

Yes  
 No

**Comments:**

**2. The draft standard uses the term 'Reliability Analysis' to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

Yes

No

Comments:

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

Comments:

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

Comments:

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments:

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

Comments:

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**If possible, please provide us with a definition for each of these terms.**

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

- BA
- TOP
- Generator
- Planning Authority

**Comments Regardless of who receives and distributes the data, the generator owner should only have to provide the data to one group.**

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

- RA
- BA
- Generator
- Planning Authority

**Comments See comment on #8**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

- Yes  
 No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** This requirement is too subjective. The necessary actions are not identified to assess compliance. Some results, such as voltage outside a defined limit, should require notice to nuclear generators so that regulatory Technical Specification requirements for continued operation can be met. Otherwise, the units could either be forced offline or into limited operation. This standard should include the requirement that a written agreement be established between the RA, TOP and generators identifying the actions to be taken by mutual agreement. Reference IEEE Std 765-2002 Annex A for further details on this proposed change.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

**Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

**16. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** #1. Cannot properly evaluate until data requirements are specified.  
#2. Is it practical for all parties to meet the 7 day data turn around requirements (see Requirements 5-9)? The common time frame indicates the data may have to be submitted by the facility owner to all parties.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** These are non traditional requirements on generation owners (maybe not on the type of data but on the group or groups in which the generator must coordinate).

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**40. Do you agree with this requirement?**

- Yes  
 No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:** The standard clearly identifies the obligation of generators to provide data to the RA's and TOP's stating in the background that there are various ways generators may be obligated to provide data. A requirement needs to be added addressing the obligation of the RA's and TOP's to likewise provide data to the generators. Additions, deletions, or other changes to the bulk transmission system can impact the accuracy of models used to monitor and assess the adequacy of generating plants, their protective schemes and their interconnections to the grid. An example is any system changes affecting system impedance or changes in transmission relay settings that require coordination with plant relays. One miscoordination between plant relays and transmission relays could result in the tripping of an entire four unit 4000MW plant which is not a contingency normally planned for. Another is any system impedance changes that can affect generator excitation system settings (MEL and URAL) which can result in reactive limits being reached and cascading unit trips.

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comments:**

**47. If you have comments on the format of the standard, please share them with us.**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

Yes

No

**Comments:** 'data' should include real-time, state estimated, calculated or manually monitored values. It should allow a Reliability Coordinator/Transmission Operator/Generator to station an individual at a plant or substation to directly monitor values.

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

Yes

No

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

Yes

No

**Comments:** (1) This assumption needs to be clearly stated at the front end of the standard. (2) The standard should define the data that needs to be provided similar to NERC Appendix 4B - Electric System Security Data.

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

Yes

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

No

Comments:

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:** First this graph is a great aid in understanding this standard. I really like it. The following suggestions are for making a good thing better. I voted yes because of my interpretation of the graph. I'm not sure my interpretation is completely correct. I recommend that the graph (and the description of the graph) also be done in various shades of grey because not everybody has a color printer and many operators would get a black and white copy of the graph. The pointers for Dactual, tgood, and limit should be closer to the curve or line that they represent. I don't know why there is a dotted blue line representing the max value of the monitored value; it doesn't seem to be used anywhere. I think it would be of value to state that a reportable violation does not exist until the Operating Security Limit has been consecutively violated for  $t_{defined}$ . I think it would be of value to state that the exceeding of the operating limit for any period of time must be documented. Under existing NERC Policy I assume that there would not be a reportable Operating Security Limit Violation if the Operating Security Limit were exceeded for 28 minutes, then it was not exceeded for 1 minute, then it was exceeded for another 28 minutes, then it was not exceeded for 1 minute and this pattern

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

continued for the next 24 hours. I'm teasing a little here because you can't cover every circumstance in detail. In fact I do think that the above example would be a reportable Operating Security Limit Violation. If in the graph the monitored value dipped below the Operating Security Limit for an instance and then exceeded the limit for the rest of the period and that was still an Operating Security Limit Violation, another loophole will have been addressed.

**6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?**

Yes

No

**Comments: I thought that there wasn't an Operating Security Limit Violation until an Operating Security Limit was exceeded for a period of time (tdefined). I wasn't aware of an Operating Security Limit Violation that occurred for an instantaneous exceeding of a limit. Maybe I don't fully understand the Standard. Need to better describe what is a violation versus what is a reportable violation. The concept of a violation in the red zone is confusing.**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**(1) Occurrence Period, (2) Operating Security Limit Violation, (3) Transmission Operator**

**If possible, please provide us with a definition for each of these terms.**

(1) Occurrence Period - I'm not sure what you mean when you refer to an Occurrence Period,  
(2) Operating Security Limit Violation - A limit that results in instability, uncontrolled separation, or cascading outages if exceeded for more than one hour. I believe this definition is appropriate for the existings NERC template on Operating Security Limit Violation.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

BA

TOP

Generator

Planning Authority

**Comments** The Generator is the entity closest to the physical facilities so he should be the best possible resource. However, the Reliability Coordinator (RC) should use data from the BA, the TOP, or the Planning Authority, if he can't get the data from the Generator. The Generator also may prefer to supply all his data via the BA or the TOP. This should be allowed. As long as the data is accurately supplied, it doesn't matter who supplies it. I don't think the standard should be too prescriptive on who supplies the data.

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

RA

BA

Generator

Planning Authority

**Comments** The Generator is the entity closest to the physical facilities so he should be the best possible resource. However, the TOP should use data from the Reliability

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Coordinator (RC), the BA, or the Planning Authority if he can't get the data from the Generator. The Generator also may prefer to supply all his data via the BA or the RC. This should be allowed. As long as the data is accurately supplied I don't care who supplies it. I don't think the standard should be too proscriptive on who supplies the data.**

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

**Please use Version A of the draft standard to answer these questions.**

### **Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### **Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### **Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

### **10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** I agree with the intent of this requirement and associated performance/outcome but the written words need to be changed. (1) Operating Security Limits are not usually monitored in real time. They are usually fixed values that are determined from operating studies. The only limits that might be monitored in real time are those that are dependent on actual weather conditions. It is not a requirement to determine Operating Security Limits based on weather conditions. Actual Operating Measurements are what need to be monitored in real time and compared to the Operating Security Limit. This standard should be updated to reflect the difference between a limit, a monitored value, and a monitored value that exceeds a limit. This concept also needs to be reflected in section 201 (e) Compliance Monitoring Process. (2) Delete the paranthetical phrases, (in real time) and (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system), in Requirement 1. We have already commented that it was allowable for monitoring to be done via voice communications from a manned substation which is not real time monitoring. The standard needs to add a more detailed definition of an Operating Security Limit. If this were done one of the paranthetical expressions would not be needed. The comments to Question 45 also apply to this question.

### **Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### **11. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

**Comments:** . (1) Operating Security Limits are not usually monitored in real time. They are usually fixed values that are determined from operating studies. The only limits that might be monitored in real time are those that are dependent on actual weather conditions. It is not a requirement to determine Operating Security Limits based on weather conditions. Actual Operating Measurements are what need to be monitored in real time and compared to the Operating Security Limit. This standard should be updated to reflect the difference between a limit, a monitored value, and a monitored value that exceeds a limit. (2) There should not be a non-compliance at level 1 or 2 when a Reliability Coordinator (RC) or Transmission Operator (TOP) stations an operator at a substation or plant to monitor operating data if the telecommunications equipment is not working. The existing standard forces a non-compliance whenever the telecommunications equipment is not working. (3) Note 1 says - 'Real Time could be continuous analog data or data sampled at a rate greater than or equal to one minute -----'. One minute is a unit of time not a rate. I think it should say - 'Real time could be continuous analog data or data sampled faster than or equal to once a minute-----'. (4) Requirements 201 and 202 are very similar. Requirement 201 applies to Reliability Coordinators. Requirement 202 applies to Transmission Operators. The requirements are duplicative. The standard should require system conditions to be monitored by either the Reliability Coordinator or the Transmission Operator, but not both of them. There is nothing wrong with both of them doing the monitoring if they so wish, but both of them should not be forced to do so. There is nothing wrong with a Transmission Operator delegating this responsibility to a Reliability Coordinator or a Reliability Coordinator delegating this responsibility to a Transmission Operator. (5) The description of Level 1 Non-compliance and Level 2 Non-compliance under 'Levels of Non-compliance for this Requirement' should be changed. Level 1 non-compliance should read 'Actual telemetered data or a surrogate for actual telemetered data needed for monitoring deviations from system operating limits was unavailable for 24 hours'. Level 2 non-compliance should read 'Actual telemetered data or a surrogate for actual telemetered data needed for monitoring deviations from system operating limits was unavailable for 48 hours'. There is nothing wrong with using a manual reading phoned in from a substation or using a value calculated from surrounding parameters. A value calculated from surrounding parameters might be better than an incorrect telemetered value. Some State Estimation systems use a value calculated from surrounding parameters instead of the telemetered value for certain circumstances.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** I agree with the intent of this requirement and associated performance/outcome but the written words need to be changed. (1) Operating Security Limits are not usually monitored in real time. They are usually fixed values that are determined from operating studies. The only limits that might be monitored in real time are those that are dependent on actual weather conditions. It is not a requirement to determine Operating Security Limits based on weather conditions. Actual Operating Measurements are what need to be monitored in real time and compared to the Operating Security Limit. This standard should be updated to reflect the difference between a limit, a monitored value, and a monitored value that exceeds a limit. This concept also needs to be reflected in section 202 (e) Compliance Monitoring Process. (2) Delete the paranthetical phrases, (in real time) and (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system), in Requirement 1. We have already commented that it was allowable for monitoring to be done via voice communications from a manned substation which is not real time monitoring. The standard needs to add a more detailed definition of an Operating Security Limit. If this were done one of the paranthetical expressions would not be needed. The comments to Question 45 also apply to this question.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

**Comments:** (1) Operating Security Limits are not usually monitored in real time. They are usually fixed values that are determined from operating studies. The only limits that might be monitored in real time are those that are dependent on actual weather conditions. It is not a requirement to determine Operating Security Limits based on weather conditions. Actual Operating Measurements are what need to be monitored in real time and compared to the Operating Security Limit. This standard should be updated to reflect the difference between a limit, a monitored value, and a monitored value that exceeds a limit. (2) There should not be a non-compliance at level 1 or 2 when a Reliability Coordinator (RC) or Transmission Operator (TOP) stations an operator at a substation or plant to monitor operating data if the telecommunications equipment is not working. The existing standard forces a non-compliance whenever the telecommunications equipment is not working. (3) Note 1 says - 'Real Time could be continuous analog data or data sampled at a rate greater than or equal to one minute-----'. One minute is a unit of time not a rate. Some State Estimation systems use a value calculated from surrounding parameters instead of the telemetered value for certain circumstances.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:** I recommend making one change to Measures 1 and 2. Currently Measures 1 and 2 state '----- timeframe, and notation that data be technically accurate and complete'. I would rewrite these measures to state '-----timeframe, and notation that data be accurate and complete'. What is the difference between accurate data and technically accurate data? Is technically accurate data better than accurate data? Is technically accurate data different than accurate data?

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Yes

No

**Comments:** . Requirements 203 and 204 are very similar. Requirement 203 applies to Reliability Coordinators. Requirement 204 applies to Transmission Operators. The requirements are duplicative. The standard should require accurate models to be maintained by either the Reliability Coordinator or the Transmission Operator, but not both of them. There is nothing wrong with both of them maintaining accurate models if they so wish, but both of them should not be forced to do so. There is nothing wrong with a Transmission Operator delegating this responsibility to a Reliability Coordinator or a Reliability Coordinator delegating this responsibility to a Transmission Operator.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** I recommend making one change to Measures 1 and 2. Currently Measures 1 and 2 state '----- timeframe, and notation that data be technically accurate and complete'. I would rewrite these measures to state '-----timeframe, and notation that data be accurate and complete'. What is the difference between accurate data and technically accurate data? Is technically accurate data better than accurate data? Is technically accurate data different than accurate data?

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

Yes

No

**Comments:** Requirements 203 and 204 are very similar. Requirement 203 applies to Reliability Coordinators. Requirement 204 applies to Transmission Operators. The requirements are duplicative. The standard should require accurate models to be maintained by either the Reliability Coordinator or the Transmission Operator, but not both of them. There is nothing wrong with both of them maintaining accurate models if they so wish, but both of them should not be forced to do so. There is nothing wrong with a Transmission Operator delegating this responsibility to a Reliability Coordinator or a Reliability Coordinator delegating this responsibility to a Transmission Operator.

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** (1) Change the Requirement from (providing specified data no less than 7 days prior to the energization of new facilities) to (providing specified data prior to the energization of new facilities). I can just see someone delaying the installation of a needed facility for 7 days because they didn't want to get a non-compliance. There was not complete agreement on this comment. Seven companies voted in favor of this comment. One company voted against this comment. (2) Change 'by an (associated) RA' to 'by another RA'. Less words, more descriptive. (3) Change 'industry accepted format, timeframe, and technically accurate and complete' to 'industry accepted format, accurate and complete'. Timeframe is already specified in the standard. It doesn't need to be repeated. Delete the description of 'technically'. What is the difference between accurate data and technically accurate data? Is technically accurate data better than accurate data? Is technically accurate data different than accurate data?

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** (1) Change the Requirement from (providing specified data no less than 7 days prior to the energization of new facilities) to (providing specified data prior to the energization of new facilities). I can just see someone delaying the installation of a needed facility for 7 days because they didn't want to get a non-compliance. There was not complete agreement on this comment. Seven companies voted in favor of this comment. One company voted against this comment. (2) I'm not sure if 'shall provide data as specified by an (associated ) Reliability Coordinator' means that any Reliability Coordinator can request the data or that only the Reliability Coordinator that has jurisdiction over the area operated by the BA can request the data. The standard needs to be clear on which meaning is correct. (3) Change 'industry accepted format, timeframe, and technically accurate and complete' to 'industry accepted format, accurate and complete'. Timeframe is already specified in the standard. It doesn't need to be repeated. Delete the description of 'technically'. What is the difference between accurate data and technically accurate data? Is technically accurate data better than accurate data? Is technically accurate data different than accurate data?

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

- Yes  
 No

**Comments:** (1) Change the Requirement from (providing specified data no less than 7 days prior to the energization of new facilities) to (providing specified data prior to the energization of new facilities). I can just see someone delaying the installation of a needed facility for 7 days because they didn't want to get a non-compliance. There was not complete agreement on this comment. Seven companies voted in favor of this comment. One company voted against this comment. (2) I'm not sure if 'shall provide data as specified by an (associated ) Reliability Coordinator' means that any Reliability Coordinator can request the data or that only the Reliability Coordinator that has jurisdiction over the area operated by the IA can request the data. The standard needs to be clear on which meaning is correct. (3) Change 'industry accepted format, timeframe, and technically accurate and complete' to 'industry accepted format, accurate and complete'. Timeframe is already specified in the standard. It doesn't need to be repeated. Delete the description of 'technically'. What is the difference between accurate data and technically accurate data? 2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** (1) Change the Requirement from (providing specified data no less than 7 days prior to the energization of new facilities) to (providing specified data prior to the energization of new facilities). I can just see someone delaying the installation of a needed facility for 7 days because they didn't want to get a non-compliance. There was not complete agreement on this comment. Seven companies voted in favor of this comment. One company voted against this comment. (2) I'm not sure if 'shall provide data as specified by an (associated ) Reliability Coordinator' means that any Reliability Coordinator can request the data or that only the Reliability Coordinator that has jurisdiction over the area operated by the Generation Owner can request the data. The standard needs to be clear on which meaning is correct. (3) Change 'industry accepted format, timeframe, and technically accurate and complete' to 'industry accepted format, accurate and complete'. Timeframe is already specified in the standard. It doesn't need to be repeated. Delete the description of 'technically'. What is the difference between accurate data and technically accurate date? Is technically accurate data better that accurate data? Is technically accurate data different than accurate data?

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

- Yes  
 No

**Comments:** Requirements 210 and 211 are very similar. Requirement 210 applies to Reliability Coordinators. Requirement 211 applies to Transmission Operators. The requirements are duplicative. The standard should require a reliability analysis to be performed by either the Reliability Coordinator or the Transmission Operator, but not both of them. There is nothing wrong with both of them doing a reliability analysis if they so wish, but both of them should not be forced to do so. There is nothing wrong with a Transmission Operator delegating this responsibility to a Reliability Coordinator or a Reliability Coordinator delegating this responsibility to a Transmission Operator.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** The Reliability Coordinator should be allowed to use a previous reliability analysis that covered similar system conditions if the reliability analysis could not be run because of computer problems or was duplicative of a previous reliability analysis. Such action should not result in a non-compliance.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 11:

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### Measure(s):

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

### Outcome(s) (100% Compliance):

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### 30. Do you agree with this requirement?

Yes

No

**Comments:** (1) Requirements 210 and 211 are very similar. Requirement 210 applies to Reliability Coordinators. Requirement 211 applies to Transmission Operators. The requirements are duplicative. The standard should require a reliability analysis to be performed by either the Reliability Coordinator or the Transmission Operator, but not both of them. There is nothing wrong with both of them doing a reliability analysis if they so wish, but both of them should not be forced to do so. There is nothing wrong with a Transmission Operator delegating this responsibility to a Reliability Coordinator or a Reliability Coordinator delegating this responsibility to a Transmission Operator. (2) The Transmission Operator may not have the wide area data that is available to a Reliability Coordinator and may not have as extensive a model as the Reliability Coordinator. There may be differences between the reliability analysis done by the Transmission Operator and the Reliability Coordinator. There needs to be coordination between the Transmission Operator and Reliability Coordinator on these analysis.

### Levels of Non-compliance for this Requirement:

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

### 31. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** The Transmission Operator should be allowed to use a previous reliability analysis that covered similar system conditions if the reliability analysis could not be run because of computer problems or was duplicative of a previous reliability analysis. Such action should not result in a non-compliance.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

- Yes
- No

**Comments:** (1) Requirements 212 and 213 are very similar. Requirement 212 applies to Reliability Coordinators. Requirement 213 applies to Transmission Operators. The requirements are duplicative. The standard should require actions be taken to prevent/mitigate identified problems by either the Reliability Coordinator or the Transmission Operator, but not both of them. It should be clear in the agreement between the Transmission Operator and their Reliability Coordinator who has authority to take the action to correct or mitigate a problem. Having two different entities responsible to take action to correct a problem is troublesome. The possibility exists that the two entities may decide on different courses of action to solve the problem. Valuable minutes may be squandered by the two different entities attempting to coordinate actions. Only one entity should have the responsibility to take action and that responsibility needs to be clearly delineated.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:** I agree with Non-compliance levels 1, 2, and 3. Non-compliance level 4 is where I have a problem. I don't think that the Reliability Coordinator should be charged with a level 4 non-compliance when he took the action necessary to prevent the problem but some other entity did not take the necessary required action. For instance, if the Reliability Coordinator ordered a

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Balancing Authority to drop load because of low or declining frequency and the Balancing Authority did not drop the load, then the level 4 non-compliance should be charged to the Balancing Authority not the Reliability Coordinator.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:** (1) Requirements 212 and 213 are very similar. Requirement 212 applies to Reliability Coordinators. Requirement 213 applies to Transmission Operators. The requirements are duplicative. The standard should require actions be taken to prevent/mitigate identified problems by either the Reliability Coordinator or the Transmission Operator, but not both of them. It should be clear in the agreement between the Transmission Operator and their Reliability Coordinator who has authority to take the action to correct or mitigate a problem. Having two different entities responsible to take action to correct a problem is troublesome. The possibility exists that the two entities may decide on different courses of action to solve the problem. Valuable minutes may be squandered by the two different entities attempting to coordinate actions. Only one entity should have the responsibility to take action and that responsibility needs to be clearly delineated.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** I agree with Non-compliance levels 1, 2, and 3. Non-compliance level 4 is where I have a problem. I don't think that the Transmission Operator should be charged with a level 4 non-compliance when he took the action necessary to prevent the problem but some other entity did not take the necessary required action. For instance, if the Transmission Operator ordered a

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Balancing Authority to drop load because of low or declining frequency and the Balancing Authority did not drop the load, then the level 4 non-compliance should be charged to the Balancing Authority not the Transmission Operator.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

### **Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

### **Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **36. Do you agree with this requirement?**

Yes

No

**Comments:** Requirements 214 and 215 are very similar. Requirement 214 applies to Reliability Coordinators. Requirement 215 applies to Transmission Operators. The Reliability Coordinator Plan and the Transmission Operator Plan must be coordinated. These plans must clearly state the responsibilities of the Reliability Coordinator and the responsibilities of the Transmission Operator. There must not be any confusion as to who has the responsibility to take specific actions.

### **Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

### **37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Version A and Version B of this questionnaire have different descriptions of non-compliance for this requirement. The standard needs to define which description is correct.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** Requirements 214 and 215 are very similar. Requirement 214 applies to Reliability Coordinators. Requirement 215 applies to Transmission Operators. The Reliability Coordinator Plan and the Transmission Operator Plan must be coordinated. These plans must clearly state the responsibilities of the Reliability Coordinator and the responsibilities of the Transmission Operator. There must not be any confusion as to who has the responsibility to take specific actions.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Version A and Version B of this questionnaire have different descriptions of non-compliance for this requirement. The standard needs to define which description is correct.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

Yes

No

**Comments:** (1) The existing NERC template on Operating Security Limits is confusing. This standard is much, much, much more confusing. There are many system operating limits. This standard does not say which system operating limit has to be reported and under what conditions it has to be reported. Do you have to report a system operating limit exceedance that has little impact on bulk power reliability. If so you'll get thousands of irrelevant reports every week for minor system operating limit exceedances. A report should be filed when a Operating Security Limit has been exceeded for 30 minutes per the existing NERC Policy. See the definition of an Operating Security Limit Violation under item 7 of this questionnaire. Requirement 216 has to be much more specific. If one cannot supply the specifics then this standard is not ready for balloting. (2) Requirements 216 and 217 are very similar. Requirement 216 applies to Reliability Coordinators. Requirement 217 applies to Transmission Operators. The requirements are duplicative. The standard should require the documenting of Operating Security Limit violations by either the Reliability Coordinator or the Transmission Operator, but not both of them. There is nothing wrong with both documenting the violations if they so wish, but both of them should not be forced to do so. There is nothing wrong with a Transmission Operator delegating this responsibility to a Reliability Coordinator or a Reliability Coordinator delegating this responsibility to a Transmission Operator. (3) The standard needs to clarify the difference between a reportable incident and an incident that is not reportable but must be documented.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

- Logs were available but supporting documentation was unavailable
- Supporting documentation indicated unlogged violation
- An incident occurred and there was no report within 72 hours

4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** 1) The existing NERC template on Operating Security Limits is confusing. This standard is much, much, much more confusing. There are many system operating limits. This standard does not say which system operating limit has to be reported and under what conditions it has to be reported. Do you have to report a system operating limit exceedance that has little impact on bulk power reliability. If so you'll get thousands of irrelevant reports every week for minor system operating limit exceedances. A report should be filed when a Operating Security Limit has been exceeded for 30 minutes per the existing NERC Policy. See the definition of an Operating Security Limit Violation under item 7 of this questionnaire. Requirement 216 has to be much more specific. If one cannot supply the specifics then this standard is not ready for balloting. (2) Requirements 216 and 217 are very similar. Requirement 216 applies to Reliability Coordinators. Requirement 217 applies to Transmission Operators. The requirements are duplicative. The standard should require the documenting of Operating Security Limit violations by either the Reliability Coordinator or the Transmission Operator, but not both of them. There is nothing wrong with both documenting the violations if they so wish, but both of them should not be forced to do so. There is nothing wrong with a Transmission Operator delegating this responsibility to a Reliability Coordinator or a Reliability Coordinator delegating this responsibility to a Transmission Operator. (3) The standard needs to clarify the difference between a reportable incident and an incident that is not reportable but must be documented.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:** (1) Throughout the standard the term Reliability Authority is used. This term is out of date and has been replaced by Reliability Coordinator. Is the Reliability Authority in this questionnaire identical to the Reliability Coordinator function? This issue needs clarification. If the Reliability Authority in this questionnaire is different than the Reliability Coordinator function, there needs to be an explanation of the difference. (2) Throughout the standard the term 'system operating limit' is used. This term should be replaced with the term 'Operating Security Limit'. There are many different system operating limits. These standards do not apply to all of them. This standard only applies to Operating Security Limits violations. The term Operating Security Limit should be used and defined to distinguish it from the multitude of system operating limits that are routinely used in everyday operation.

**If yes, please identify what you feel should be added.**

**(1) Throughout the standard replace the term Reliability Authority with Reliability Coordinator.  
(2) Throughout the standard replace the term 'system operating limit' with Operating Security Limit. Write a definition of Operating Security Limit.**

**46. Which form of the Standard do you prefer?**

**Version A – Each Requirement Separate**

**Version B – Related Requirements Combined**

**Comments:** It will be easier to modify the standards if each requirement is a stand alone item. There was not complete agreement on this item. Eight companies preferred Version A - Each Requirement Separate. Two companies preferred Version B - Related Requirements Combined.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** (1) The application of the Sanctions table is difficult to understand. A few examples on how to apply sanctions would be helpful. (2) Add descriptive titles to the subsections.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

- Yes
- No

**Comments:** Please refer to the Operating Limits Definition Task Force report, "NERC Operating Limit Definitions and Reporting." The Task Force considers this report to be an integral part of its comments to Standard Drafting Team.

The OLDTF has defined "Limit Compliance Violation" for reporting IRL violations to the Regional Council and NERC.

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

- Yes
- No

**Comments:** See comment to Q5 above.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**Instability**

**Uncontrolled Separation**

**Cascading Outages**

**Widespread Area**

**Local Area**

**If possible, please provide us with a definition for each of these terms.**

The OLDTF has defined these terms in its attached report.

The OC has directed the Reliability Coordinators to use these definitions as a "field test" this summer, and to work with the Standard Drafting Team to incorporate these definitions into the Reliability Standard.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

**BA**

**TOP**

**Generator**

**Planning Authority**

**Comments At least in ERCOT, the T. Op does not receive all of the generator data; some is provided to the T. Op in an Interconnection Agreement, but more is required to be provided to the ERCOT in its role as the RA.**

**The BA may well provide the data if the generators are under a contractual obligation to do so with the BA.**

**The Generator Owner and Transmission Owner provides data for their facilities.**

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

**RA**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

BA

Generator

Planning Authority

Comments ERCOT performs these analysis as the RA, BA, and Planning Authority.

Not certain why the T. Op performs system analyses. That's the RA's function. The RA may or may not accept the T. Op's analysis.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** Please refer to the OLDTF report. The RA must ensure that the SOLs and IRLs are established.

The Measures don't relate to the Requirement. The requirement is that the RA "shall monitor" not that "the limits be available" or "data is available." Those measures should pertain to the function(s) responsible for providing the limits and ratings, such as the Generator Owner or Transmission Owner.

The measure should be that the RA did indeed monitor the limits. What's unstated is over what time frame. Continuous monitoring? Hourly?

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Please refer to our comments to Q10. The RA typically cannot control whether the data is provided, but may have acceptable and prudent measures in place to require the data.

This comment would apply through the document.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

- Yes  
 No

**Comments:** Same comments as Q10. The Measures don't relate to the Requirement.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** Same comment at Q11.

It appears to that there will likely have numerous Level 1 non-compliances unless a threshold is established. Anyone who has been a system operator knows that metering signals fall in and out. If level 1 indicates that every time you lose a signal for metering you are non-compliant, I think it needs reconsideration. The drafting team should consider that state estimators can supply some of this data in the short term.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:** The Requirement should be refocused to state that the RA needs to maintain accurate models and run studies to determine IRLs rather than directing the RA to collect the data it needs. There should be Requirements of the T. Owner, G. Owner, LSE, and T. Operator to provide the RA with the data it needs for its studies.

Under Requirements 6 and 7 minimum times are specified for provision of "monitoring" data provision. However no similar minimum time line is stated for this requirement. For consistency, a minimum time should also be stated. This time specification, should provide sufficient time for the RA etc to perform data base modelling and development and confirmation of limits.

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

3. Not Applicable

4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** Please see the first paragraph in our comment to Q14 above.

The RA typically has no control of whether the data is provided, but may have prudent and acceptable measures in place which require the data.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### **Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### **Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### **16. Do you agree with this requirement?**

Yes

No

**Comments:** Same comment as Q 14, but with focus on T. Op. Also, the T. Op. does not need to collect any information from the IA. The IA has next-hour bilateral and market dispatch interchange information, but it's not of any use to the T. Op.

Under Requirements 6 and 7 minimum times are specified for provision of "monitoring" data provision. However no similar minimum time line is state for this requirement. For consistency, a minimum time should also be stated. This time specification, should provide sufficient time for the RA etc to perform data base modelling and development / confirmation of limits.

### **Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

4. Not Applicable

**17. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:** Please see comment for Q 15.

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

- Yes
- No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** The timing of this requirement conflicts with Requirement 5. That is, the seven days does not leave the RA any time to complete its obligations under requirement 5.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** This Requirement makes no sense. The IA authorizes next-hour bilateral Transactions and Market dispatch that are ready for physical implementation.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** The timing of this requirement conflicts with Requirement 5. That is the seven days does not leave the RA any time to complete their obligations under requirement 5.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** The timing of this requirement conflicts with Requirement 5. That is the seven days does not leave the RA any time to complete their obligations under requirement 5.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

- Yes  
 No

**Comments:** Agree with the Requirement, but as the Outcome is written, assumes that all RAs have online reliability analysis programs to identify the applicable limits. In fact many use off-line studies to perform base case analysis which are translated into cyclic computer calculations.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** Please refer to our response to Q28. Also, we would have treated this requirement as more important. Instead of skipping level 4, we would have used levels 2, 3, and 4 with the caveat of having appropriate predetermined analyses to take the place of real-time analyses.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** In the ERCOT Region, the primary responsibility for such analysis is ERCOT as the RA. This is in conjunction with any analysis the TOP performs, but the TOP does not have the primary responsibility. In other words, the RA is responsible for these analysis.

Also, please refer to our comments to Q28.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Please refer to our comments to Q29.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:** Agrees with OLDTF report.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Level 2 and 3 appear to be the same.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:** This requirement does not adequately address the coordination that must take place between the T. Op and the RA. Furthermore, the T. Op may not include a wide enough scope to determine these limits.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See response to Q 33. 2 and 3 appear to be the same.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** Re Outcomes: We believe that this should read "procedure or policy" to ensure "Operating within limits and associated mitigating actions are taken." We don't know how you can have a "documented, approved mitigation plan" for unknown contingencies. Furthermore, Requirement 14 is awkward -- such a plan should be part of the Certification requirements, not this standard.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** Same a response to Q36.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

- Yes  
 No

**Comments:** First, we believe this applies to IRL Compliance Violations only. Also, should split into a Preliminary Report and a "complete" Report. Preliminary Report should be submitted within 72 hours. A longer time is required for the "complete" report; probably a minimum of one month.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**Comments:** Level 3 implies a log is kept, but the information could be kept in some other form. The important point is that the supporting documents be available.

Also, please refer to our response to Q40 and suggestion that the report be split into

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

preliminary and final versions.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** This Requirement needs to be reviewed with respect to the OLDTF report. If the Requirement refers to documenting SOL violations as defined by the OLDTF, then reporting may be required to the Regional Council. If the requirement refers to IRL Compliance Violations, then the RA needs to submit that report to the Regional Council and NERC.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:** In the ERCOT Region, ERCOT uses ratings provided by the equipment owners to determine the limits. The TOP doesn't determine them.

**If yes, please identify what you feel should be added.**

**In some Regions or Interconnections, the RA may delegate certain tasks to other functions, though the RA is responsible for ensuring that these tasks are performed. There needs to be some kind of general statement to this effect. This is being addressed in the Functional Model.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:** Should consider the definitions and recommendations developed by the Operating Limit Definition Task Force as endorsed by the Operating Committee.

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comments:** Neither version provides a completely orderly and logical flow. That being said, if there is a requirement to pick one over the other, Version B is much more preferable. (follows a more logical flow of the two). Requirements are not buried like requirements 10 / 11 / 12 in version "A".

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** Building upon comments above, no entities should have to search through a number of Compliance templates to find all of the requirements applicable to them. Version B still has this in that 207 remains buried after TOP requirements.

  - 9 - Federal, State, and Provincial Regulatory or other Govt. Entities

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Yes

No

**Comments:**

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

**Comments:** Need to allow for requesting additional data not previously requested for the original database, but not necessarily associated with a new facility. Very often a State Estimator or Operational Planning studies will identify the need for additional information for an area where the solution is not as good as desired, and additional information for existing facilities to improve the model or additional real-time measurements will be requested to allow a better solution.

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

**Comments:** an “Industry Accepted Format” does not exist.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

X  Yes

No

**Comments:** A diagram such as this should be part of the Standard, but the green solid line and the blue dashed line should be deleted as they have no relevance and are confusing.

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

X  Yes

No

**Comments:** If you mean the red slashed zone, then yes. The solid red should be removed as it is irrelevant and confusing.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.

REAL

Surrogate (requirement 2)

DATA

“Problems” (requirement 10)

If possible, please provide us with a definition for each of these terms.

8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)

Please check all that apply.

BA

TOP

X  Generator

Planning Authority

Comments The generator Owner or Operator should provide the unit characteristics and the real-time data.

9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)

Please check all that apply.

RA

BA

X  Generator

Planning Authority

Comments The generator Owner or Operator should provide the unit characteristics and the real-time data.

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

**Please use Version A of the draft standard to answer these questions.**

### **Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### **Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### **Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

### **10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** Thermal Overloads are not specifically mentioned. Is that assumed to be the cause of the Cascading Outages?

### **Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### **11. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** # 4 is reasonable, but the other levels of non-compliance are related to data availability, not to the requirement that the RA monitor limits and associated data. The responsibility for data availability rests with those providing the data. At the most, the RA should have processes and procedures (and alarms?) in place to make them aware of when the data is bad...ie, when a real-time measurement has not been available for xx minutes, or when a data point value has not changed for xx minutes. (It is possible for the data link to be bad and for data to still be coming in but not updating).

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** According to the Functional Model,

“The **Transmission Operator** operates and maintains the transmission facilities, and is responsible for local reliability functions. The Transmission Operator under the Reliability Authority’s direction can take action, such as implementing voltage reductions, to help mitigate an Energy Emergency.”

This does not say that the Transmission Operator is responsible for the reliability of the bulk Power System. Does the term “operate” in the functional model include the responsibility to “monitor”?

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See response to Requirement 1

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 3:

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### Measure(s):

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### 14. Do you agree with this requirement?

Yes

No

**Comments:** In the text of the Requirement, the term "Generators" is not definitive enough to describe who is responsible for providing the "data". A Generator Operator may not have access to the dynamic model, and the Generator Owner may not have access to the real-time data.

TOW needs to be added to the text of the requirement as one of the entities responsible for providing data to the RA.

The words "Industry Accepted Format" and "technically accurate" should be deleted from the Measures, since an Industry Accepted Format does not exist, and at times Technically Accurate information is not available. There may not be generator test data available, so default data is used in the studies. Maybe "best available data" would be more realistic. Actually, I suggest that the text for measures 1 & 2 be modified to end at 'timeframe', and the rest of the sentence be deleted.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

some data technically inaccurate or incomplete )

2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Re-word #1 to remove “Industry accepted format” and “technically inaccurate”. Very often the initial data specification will include what is perceived as necessary at the time, and later additional data will be requested. I don’t think a data request from the RA could ever be considered ‘complete’, if that means that every bit of information has been specified that ever could possibly be needed. # 2 seems ok.

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** In the text of the Requirement, the term "Generators" is not definitive enough to describe who is responsible for providing the "data". A Generator Operator may not have access to the dynamic model, and the Generator Owner may not have access to the real-time data.

TOW needs to be added to the text of the requirement as one of the entities responsible for providing data to the TOP.

The words "Industry Accepted Format" and "technically accurate" should be deleted from the Measures, since an Industry Accepted Format does not exist, and at times Technically Accurate information is not available. There may not be generator test data available, so default data is used in the studies. Maybe "best available data" would be more realistic. Actually, I suggest that the text for measures 1 & 2 be modified to end at 'timeframe', and the rest of the sentence be deleted.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

- 2. Data was not requested **OR** there was no record of specification
- 3. Not Applicable
- 4. Not Applicable

**17. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:** Re-word #1 to remove “Industry accepted format” and “technically inaccurate”. Very often the initial data specification will include what is perceived as necessary at the time, and later additional data will be requested. I don’t think a data request from the RA could ever be considered ‘complete’, if that means that every bit of information has been specified that ever could possibly be needed. # 2 seems ok.

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

- Yes
- No

**Comments:**The requirement for providing data should rest with the entity energizing the new equipment. Maybe should change the “no less than 7 days” language to say “as specified by the requesting entity, but no less than 7 days”. The RA may not legally be able to pass data that it received from one TOP to another TOP because of confidentiality requirements. A TOP that needs data from another TOP should make arrangements to get that data directly. The RA to RA link is ok. Also, data requests may not necessarily be limited to “new facilities or changes to existing facilities”.

**Levels of Non-compliance for this Requirement:**

- 1. Not Applicable
- 2. Not Applicable
- 3. Not Applicable
- 4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:** Again, a data request may not necessarily pertain to new or revised facilities. Requirement must be made more generic.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** The language “no less than 7 days prior to the energization of new facilities or changes to existing facilities” is not relevant to BA data, since the BA is not normally involved with new facilities and the data requested from a BA is very different than from the other functions.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** delete new/revised facilities

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** The language “no less than 7 days prior to the energization of new facilities or changes to existing facilities” is not relevant to IA data, since the IA is not normally involved with new facilities and the data requested from a IA is very different than from the other functions.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** delete new/revised facilities

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** Data provision should not be limited to “the energization of new facilities or changes to existing facilities” and the timeline should be set by the data requestor.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** delete “for new/revised facilities”

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** requirement should be on Generator Owner or Operator, and the timeline specified by the requesting entity. Delete “the energization of new facilities or changes to existing facilities”. BA should receive data from Generator also...timeline as specified by requesting party, but no less than 7 days...

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** delete new/revised facilities

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### **Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

### **Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **28. Do you agree with this requirement?**

Yes

No

**Comments:** Lots of comments here....what is the definition of "problems"? Is the requirement saying that studies must be done until they come up with a scenario that would cause instability, etc? Taken literally, that is what this requirement is asking for. Must the studies run until they identify the 6-line, 3-substation outage combination that would tip the system over the edge? Realistically, the requirement should specify "n-1, n-2" types of studies, or "credible contingencies", etc. Required analyses should be in line with the NERC Reliability Criteria. The requirement seems to be backwards. The RA should evaluate its current operating condition to assess that the system is secure from instability, etc. If the Operational Planning studies were done correctly, no "problem" should be identified that could cause instability, etc. Also, there is nothing in the requirement that indicates a "program should run", but that is what the measure and the compliance levels are related to. This seems to have been made (inadvertently?) very specific to real-time analysis programs, and I don't believe that is the intent. The outcome mentions "shall run programs" but nothing is said about this in the requirement. Having a dispatcher (operator) assess the condition of the power system is valid "reliability analyses" according to the explanation of terms at the front of this comment form, but I don't believe this could be considered running an analysis program.

### **Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

### **29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Compliance levels are not related to the requirement. A better measure would be whether the RA recognized (or didn't) that there was a need to perform analysis, and whether the analysis was done (or wasn't). The measures and compliance should assess whether the RA did analysis rather than program performance.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** Again, according to the Functional Model the TOP has no responsibilities related to the bulk transmission system. Also see comments to Requirement 10.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See comments to Requirement 10

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 12:

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

### Measure(s):

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### Outcome(s) (100% Compliance):

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### 32. Do you agree with this requirement?

Yes

No

**Comments:** Functional Model requires RA to “direct” actions rather than “take” actions. TOP or BA would be the entities actually “taking” action. Again, need to know definition of “problems”. Is there a requirement for 3-year retention of information associated with this requirement?

### Levels of Non-compliance for this Requirement:

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### 33. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** Suggest revising as follows:

1. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no reportable violations occurred
2. Monitoring and/or reliability analyses identified a problem – correct action was taken but not to the extent necessary. Reportable violation occurred.
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken. Reportable violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:** TOP has no responsibility for the bulk transmission system. Functional Model says that “Transmission Operator under the Reliability Authority’s direction can take action, such as implementing voltage reductions, to help mitigate an Energy Emergency.” This does not indicate that the TOP can react unilaterally based on real-time monitoring or reliability analyses.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** TOP does not have this responsibility

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** Requirement does not specify “documented, approved” mitigation plan but the Outcome and Levels of Non-Compliance use this language. Who is responsible for approving the plan?

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** #1 is not consistent with the requirement. #4 is ok.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** Requirement does not state that the documented plan must be approved. Requirement states that actions “prevent exceeding” but the outcome says “remain/return to within”. These are not consistent. Again, TOP has no responsibility for the bulk transmission system.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan’t approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** #1 is not consistent with the requirement. #4 is ok

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

Yes

No

**Comments:** Requirement should state that “report within 72 hours” on instances...

Rather than use “where a system operating limit has been exceeded for a specified period of time” should use “where a reportable violation occurred” and define “reportable violation” elsewhere. In Measure 3, “magnitude” of violation is mentioned for the first time in this standard. I can find no place that includes magnitude as a characteristic of a reportable violation. Suggest moving (EMS or other source of data) to be directly after “supporting documentation” to make it clear that this is what is meant by “supporting documentation”. Duration of violation must be defined...is it just the time of the red-hash mark area of the chart, or is it the yellow area plus the red-hashed area? In measure 3, should “event” be replaced with “reportable violation”?

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

Yes

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**No**

**Comments:** need to clearly define "supporting documentation" vs. "documentation". What about if a complete report was filed but it came after 72 hours? Is it preferable to file an incomplete report on time and follow up with a complete report later? Also – should "incident" be replaced with "reportable violation"?

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** Requirement is for TOP to document exceeding system limits, regardless of duration? What is "data" in the measure referring to?

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**Requirement that “TOP Shall Provide” data, as specified**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comments:** Liked Version B because it lays out separately the requirements for each entity, but the compliance information should be associated with each requirement rather than in the big list at the bottom. It is difficult to sort out which compliance refers to which requirement.

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** highlighting the requirements better and using tabs and font sizes to delineate between the different sections could improve format.

**48. Please list any other comments you may have in the space below.**

**Comments:** there were content differences in addition to format differences between Version A and Version B. These differences should be resolved. I will use Version B as the reference:

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

1. Page 1 of 19, footnote 1 – data can be analog or digital
2. Page 2 of 19, 201(b) 6. does not appear in Version A. “Reliability Analysis Programs analyze all system operating limits....”
3. Page 3 of 19, 201(e), third mark – the language “and identifies any problems...” Does not appear in Version A
4. Page 3 of 19, 201(e), 6<sup>th</sup> mark does not appear in Version A. “Reliability analysis programs analyze all system operating limits
5. Page 3 of 19, 201(f) 3, second mark is not in Version A “No analysis tool was available for use...”
6. Page 3 of 19, 201(f) 3, fourth mark is not in version A “there was a system operating limit violation, but...”
7. Page 5 of 19, 202(b) #6, is not in Version A
8. footnote at bottom of page 5 should include operator assessment as part of the definition of Reliability Analyses
9. Page 7 of 19, 201(f)3, second mark is not in version A “no analysis tool was available”
10. Page 8 of 19, 203(a) : words “approved, documented” were not in Version A
11. Page 8 of 19, 203(b) language is different than in Version A
12. Page 9 of 19, 204(a) word “approved ” was not in Version A
13. Page 9 of 19, 204(b) shoul reference TOP instead of RA
14. Page 10 of 19, 205(a) Requirement is written much differently than in Version A
15. Page 10 of 19, 205(b) Version A uses better language for the Measures
16. page 11 of 19, 205(f)4, second mark – does not exist in Version A

General comment: please get rid of the “marks” and make every item clearly identifiable with a number or letter reference.

That’s all for this round of comments....

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:** Data should be defined

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:** Describe what a manual study will consist of. Reliability analysis should only be performed by the RA, not the TOP.

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**No**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

Comments:

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments: Wait until the OLDTF defines this.

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

Comments: Wait until the OLDTF defines this

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

If possible, please provide us with a definition for each of these terms.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

BA

TOP

Generator

Planning Authority

Comments

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

RA

BA

Generator

Planning Authority

Comments

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 3:

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### Measure(s):

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### 14. Do you agree with this requirement?

Yes

No

**Comments:** Collection of data should be an RA responsibility

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

### 15. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:**

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** TOP is not required to gather and provide data to the RA.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:**

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** Seven days is not enough time.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** Seven days is not enough time.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:** Define how often the studies should be performed.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** The RA should perform this analysis

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:** RA should prevent an identified problem beforehand. He can only mitigate when there is an actual emergency.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **34. Do you agree with this requirement?**

Yes

No

**Comments:** See #32. The TOP should resolve an identified problem with the cooperation of the RA.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** Contingency plan is a better choice of wording for this requirement than mitigation plan.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** Same as #36

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

- Yes  
 No

**Comments:** Wait until the OLDTF study is complete.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** See #40.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

**Yes**

**No**

**Comments:**

**If yes, please identify what you feel should be added.**

**It has been shown that there are significant regional differences both in agreements between TOPs and RAs, and in the modeling capabilities and programs available. The SAR states that regional differences are 'none identified'. This is not true. RA audits in SERC for one identified many differences that should be taken into consideration.**

**45. Is the draft standard missing any requirements that should be added?**

**Yes**

**No**

**Comments:**

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

**Version A – Each Requirement Separate**

**Version B – Related Requirements Combined**

**Comments:**

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:**

**48. Please list any other comments you may have in the space below.**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:** We agree however would urge the terms used in the standards be explicitly defined and quantified.

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:** We recommend substituting Reliability Analysis with operational planning analysis and real time assessment as appropriate to short term or long term studies. Also the term real time needs to be explicitly defined. Although the footnote appearing on page one of Version A defines "Real Time" it is still unclear if this is restricted to data extracted from the Energy Management Systems.

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:** The certification process for the RA/TOP is in itself an insufficient vehicle to attain correct modeling data. It is felt that the submission of data reflecting changes to the system may reduce documentation but may unnecessarily restrict the RA's to a potentially incomplete data collection process. For example, in some cases the RA may choose to create study models as new base cases on a seasonal basis. Therefore, the exchange of information has to be handled differently to ensure all parties receive the information in a timely manner such that the operating models in adjoining regions do not lead to different results.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

**Comments:** Yes, however "Industry Accepted Format" must not be overly perscrutive and must not preclude mutually agreed upon data exchange methods between adjoining areas. Also how is it proposed to handle "proprietary data"?

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:** This aspect of the standard should be coordinated with the NERC OLD, Operating Limit Definition, Task Force . Presenting a standard that doesn't represent the current intentions of the OLD TF may produce RS that may be in conflict with the current understanding of the NERC Operating

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Committee. Therefore we recommend delay of further development of this RS until the work of the OLD TF is complete and approved.

**6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?**

**Yes**

**No**

**Comments: This aspect of the standard should be coordinated with the NERC OLD, Operating Limit Definition, Task Force . Presenting a standard that doesn't represent the current intentions of the OLD TF may produce RS that may be in conflict with the current understanding of the NERC Operating Committee. Therefore we recommend delay of further development of this RS until the work of the OLD TF is complete and approved.**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**Real Time**

**Self-Certification**

**Compliance Reset Period**

**Instability**

**Cascading Outages**

**Uncontrolled Separation**

**If possible, please provide us with a definition for each of these terms.**

The Compliance reset period should be defined as 12 months without a violation from the time of the last violation.

Either provide a definition with "actual telemetered data" or replace it with "real time data", throughout this document.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

BA

TOP

Generator

Planning Authority

**Comments**

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

RA

BA

Generator

Planning Authority

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

- Yes  
 No

**Comments:** The levels of non-compliance should not be gauged by the availability of telemetered data but should be measured by the RA's ability to monitor System Operating limits.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** Level 4 is the most important metric for this Requirement and we feel that Level 1, 2 and 3 are unnecessary.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

- Yes  
 No

**Comments:** The levels of non-compliance should not be gauged by the availability of telemetered data but should be measured by the RA's ability to monitor System Operating limits.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** Level 4 is the most important metric for this Requirement and we feel that Level 1, 2 and 3 are unnecessary.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:** A form needs to be developed to allow the different authorities to submit this data.

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Comments:** See previous comment on the term "industry accepted format". We also felt that compliance monitoring doesn't belong in the requirement section of this document but may reside in another document pertaining to compliance.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** A form needs to be developed to allow the different authorities to submit this data.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** See previous comment on the term "industry accepted format". We also felt that

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

compliance monitoring doesn't belong in the requirement section of this document but may reside in another document pertaining to compliance.

### **Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

### **Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

### **Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

### **18. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

### **19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

- Yes  
 No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:** We are unsure what type of analysis would be required here and it is unclear how often it would need to be performed. From a reliability standpoint, operational planning studies would be done that considers adequacy and system outages. We agree with the requirement but there is insufficient detail to measure compliance

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** We are unsure what type of analysis would be required here and it is unclear how often it would need to be performed. From a reliability standpoint, operational planning studies would be done that considers adequacy and system outages. We agree with the requirement but there is insufficient detail to measure compliance

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:** It should be noted that prevention and mitigation are actions that may be undertaken in two different timeframes.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

Further clarification is requested regarding the difference between violation and limit violation.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:** It should be noted that prevention and mitigation are actions that may be undertaken in two different timeframes.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

Further clarification is requested regarding the difference between violation and limit violation.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** It is only necessary to have a procedure in place that relieves the SOL violation. It is unclear if a mitigation plan requires external approvals and by whom.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** It is only necessary to have a procedure in place that relieves the SOL violation. It is unclear if a mitigation plan requires external approvals and by whom.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

- Yes  
 No

**Comments:** This aspect of the standard should be coordinated with the NERC OLD, Operating Limit Definition, Task Force . Presenting a standard that doesn't represent the current intentions of the OLD TF may produce RS that may be in conflict with the current understanding of the NERC Operating Committee. Therefore we recommend delay of further development of this RS until the work of the OLD TF is complete and approved.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** This aspect of the standard should be coordinated with the NERC OLD, Operating Limit Definition, Task Force . Presenting a standard that doesn't represent the current intentions of the OLD TF may produce RS that may be in conflict with the current understanding of the NERC Operating Committee. Therefore we recommend delay of further development of this RS until the work of the OLD TF is complete and approved.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**We are questioning whether voltage collapse reqts. should be acknowledged.**

**Confidentiality issues could be addressed**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comments:**

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** Subtitles should be added to sectionalize the standard and a table of contents added.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments:

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

Comments: Assuming that the term “limit” is appropriately defined.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

NERC OC has a special task force, the Operating Limit Definition Task Force that is specially addressing definitions for System Operating Limit and Interconnected Reliability Limit. The results of this task force, if approved by NERC OC should be reflected in the terminology used in this standard.

1. Define uncontrolled separation
2. Define uncontrolled cascading
3. Define controlled separation
4. Define controlled cascading
5. Define instability
6. Define System Operating Limit
7. Define System Operating Limit Violation
8. Define Interconnected Reliability Limit
9. Define Interconnected Reliability Limit Violation
10. Facility Rating Methodology and Triggering Criteria for above conditions
11. RA, BA, IA roles need to be clarified

**If possible, please provide us with a definition for each of these terms.**

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

- BA
- TOP
- Generator
- Planning Authority

Comments

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

- RA
- BA

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Generator**

**Planning Authority**

**Comments**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** The applicable term "system operating limit" needs clarification.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** There should be some realistic acceptable period for failed telemetry before Level 1 violation occurs.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** The applicable term "system operating limit" needs clarification.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** There should be some realistic acceptable period for failed telemetry before Level 1 violation occurs.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### **Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### **Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### **16. Do you agree with this requirement?**

Yes

No

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### **17. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **34. Do you agree with this requirement?**

Yes

No

**Comments:** Action taken must be coordinated with RA.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**40. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

1. The draft standard uses the term 'data' to allow for real, state-estimated or other calculated values. Do you agree?

x  Yes  
 No

Comments:

2. The draft standard uses the term 'Reliability Analysis' to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.

Do you agree?

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Yes

No

Comments:

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

**Comments:** These assumptions work in the new NERC model but don't apply to a small utility (G & T) that is not separated and serves as its own control area. Since non separated utilities are prevented from receiving data from RA's, some of these studies are conducted by the RA using data provided by us to them.

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

Comments:

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:** The above graph is unlabeled and I can't tell anything about it.

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

**Comments:** The above graph is unlabeled and I can't tell anything about it.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

If possible, please provide us with a definition for each of these terms.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

BA

TOP

Generator

Planning Authority

Comments

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

RA

BA

Generator

Planning Authority

Comments

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

- Yes  
 No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** In Measures 1 & 2, if comparing real-time data to predefined limits in the EMS computer is acceptable, then I am in agreement. Otherwise I am not in agreement.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** I think that there needs to be some way to accommodate short term data outages such as a loss of a transducer, an RTU failure or a telecom failure without causing non-compliance. Maybe a loss of data up to 24 hours would be compliant while those exceeding 24 hours are not. At some point everyone will have some equipment failures.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** These assumptions work in the new NERC model but don't apply to a small utility (G & T) that is not separated and serves as its own control area. Since non separated utilities are prevented from receiving data from RA's, some of these studies are conducted by the RA using data provided by us to them. We currently don't receive data from other entities, although we provide data to them, and yet our study needs are being met. Since we have no current need for this data, we have no specifications and we have no record of correspondence. According to these measures we would be level 2 non-compliant, yet our study needs are met. I would like a statement in all three measures that states "as required" or "if needed".

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**17. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** See # 16 above.

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

- Yes  
 No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:**

2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** In outcomes you say that the mitigation plan must be approved. Approved by whom?

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Level 1: Approved by whom?

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### **Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### **Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### **40. Do you agree with this requirement?**

- Yes  
 No

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### **41. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** If you had no instance of exceeding an operating limit, no documentation would exist and you would be Level 4 non-compliant.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

Yes

No

**Comments:** "Data" should also include manually monitored values. That is the standard should allow a Reliability Coordinator/Transmission Operator/Generator to station an individual at a plant or substation to directly monitor values.

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

Yes

No

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

Yes

No

**Comments:** This standard should define the minimum type of data that is to be provided to the RA, similar to Policy 4B and Appendix 4B requirements today. Additionally, we disagree with the proposal that TOP functions need to be certified and stated such during the first comment period for the organizational SARs.

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

Yes

No

**Comments:**

**5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?**

Yes

No

**Comments:** See comments about the graph in the white comment boxes above on the graph. The graph is hard to understand and interpret.

**6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?**

Yes

No

**Comments:** We agree that operating above the limit and to the right of T-defined is a reportable violation. We do not agree with the concept of having the Facility Ratings

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Standard adopt a magnitude componet to the definition of a SOL violation. We do not believe a momentary or short term deviation above the dotted blue line should be defined as a reportable event. Further, what should be defined as the "limit?" The goal is to prevent operating above a reliability limit, that if exceeded could lead to instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system. So is the "limit" that value as determined by either the Planning Authority or the RA via their analysis or is it the value that the TOP provides and indicates that he is willing to load his equipment to, recognizing that some TOP's may specifiy a value that is less then true reliability limit?**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**Identified problem**

**If possible, please provide us with a definition for each of these terms.**

Identified problem: Does the term "identified problem" as used in this standard refer to a problem identified through reliability analysis, either for actual conditions or on a first contingency basis, that if it were to occur could lead to instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system or does it also include thermal overloads and voltage conditions that do not lead to instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system?

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

- BA
- TOP
- Generator
- Planning Authority

**Comments** The Generator is the best possible resource to provide the data. The Generator must have an interconnection agreement with a TOP, and said agreement should require the Generator to provide this information. Thus, the RA should be able to receive this type of information from the TOP. The PA should also have this information, which they may have received from the TOP or the Generator directly.

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

- RA
- BA
- Generator
- Planning Authority

**Comments** Should be required via the TOP's interconnection agreement with the Generator.

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

Please use Version A of the draft standard to answer these questions.

### Requirement 1:

The RA shall monitor (in real time) the data associated with facilities that have defined the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system). and the actual real time data associated with those limits.

### Measure(s):

1. System operating limits are defined and available. in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### Outcome(s) (100% Compliance):

The RA shall monitor in real time facilities with system operating limits and compare these against the actual data associated with those limits.

### 10. Do you agree with this requirement and its associated performance/outcome and measure/s?

- Yes  
 No

**Comments:** We agree with the intent, but it is not written clearly. The RA should monitor, in real time, the data associated with the facilities that have defined system operating limits that if exceeded for a defined time limit (to be defined by the Facility Ratings Standard) could lead to instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

Additionally, the RA should be required to monitor the system and facilities for the impact of the next contingency.

This standard requires the RA to only monitor the data associated with facilities that have defined operating limits identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system. What about those thermal overloads and voltage conditions that do not result in catastrophic events? Should this standard ignore those thermal overloads and voltage conditions that will not result in instability or catastrophic events?

### Levels of Non-compliance for this Requirement:

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### 11. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Comments:** Loss of telemetry should not result in a non-compliance. Taking no action to correct the problem of missing data or to obtain the data via another means, such as requiring the TOP to station an operator at the station or plant to monitor and report the data until such time that telemetry is restored, should be a non-compliance. Additionally, the problem could be due to a telemetry problem at the TOP, so why would the RA be penalized? Also, the problem could be within the ISN, again not within the direct control of the RA. Define "surrogate value" and "surrogate data"

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** This requirement is duplicative to Requirement 1 for the RA. The standard should require that system conditions be monitored to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system. The standard should require either the RA or the TOP to do this, but not require that they both do this. We prefer for the standard to require the RA perform this function, and that this is not a function that the RA can delegate to a TOP. The RA has a bigger picture, and can analysis the impact of one TOP on another TOP better then the TOP's can. Further, the RA has the real-time data required to monitor Regional conditions, that a TOP will not have.

This requirement should be re-worded to require that the TOP provide real time data, equipment limits, and model updates to their RA as specified by their RA.

This standard requires the TOP to only monitor the data associated with facilities that have defined operating limits identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system. What about those thermal overloads and voltage conditions that do not result in catastrophic events? Should this standard ignore those thermal overloads and voltage conditions that will not result in instability or catastrophic events?

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Yes

No

**Comments:** If the requirement was changed to the TOP providing real time data, equipment limits, and model updates to their RA as specified by their RA, then the levels of non-compliance could be:

1) Actual TOP telemetered data specified is not be provided by the TOP to the RA and the RA determines that the loss of the data prevents the RA from performing a reliability analysis or ensuring the system is operating within system operating limits for up to 24 hrs and no provision was made by the TOP to manually supply the data (i.e. by staffing the station or plant).

2) Actual TOP telemetered data specified is not be provided by the TOP to the RA and the RA determines that the loss of the data prevents the RA from performing a reliability analysis or ensuring the system is operating within system operating limits for a period of 24-36 hrs and no provision was made by the TOP to manually supply the data (i.e. by staffing the station or plant).

3) Actual TOP telemetered data specified is not be provided by the TOP to the RA and the RA determines that the loss of the data prevents the RA from performing a reliability analysis or ensuring the system is operating within system operating limits for a period of 36-48 hrs and no provision was made by the TOP to manually supply the data (i.e. by staffing the station or plant).

4) Actual TOP telemetered data specified is not be provided by the TOP to the RA and the RA determines that the loss of the data prevents the RA from performing a reliability analysis or ensuring the system is operating within system operating limits for a period greater than 48 hrs and no provision was made by the TOP to manually supply the data (i.e. by staffing the station or plant), or

the TOP did not station personnel at the Station or Plant as directed by the RA to provide this data while telemetry was being restored, or

the TOP did not provide equipment limits as requested, or

The TOP did not provide modeling update information until after the energization of new facilities.

Note: the idea is that depending on system conditions, the RA may be able to rely on their previous operational planning analysis (next day analysis) for a day or so. However, if system conditions warrant, the RA should have the authority to direct the TOP to man the station and if the TOP refuses that should be considered a significant infraction.

Need to define "surrogate value" and "surrogate data".

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 3:

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### Measure(s):

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### 14. Do you agree with this requirement?

Yes

No

**Comments:** There needs to be an industry minimum specification for the type of data required, similar to Appendix 4B "Electric System Security Data." This is required to ensure a minimum standard is set for the type and quality of reliability analysis that the RA's are to perform. Additionally, as worded this requirement is too vague and burdensome to the TOP. Basically, it implies that if the RA requests a piece of information, the TOP is to provide that information regardless of cost or actual benefit to the RA of having the data (though nowhere in this standard is there a requirement for them to explicitly do so). There should be a requirement that the data requested meet an industry reasonability standard for being classified as reliability related data. An update of Appendix 4B could accomplish this.

Once the above commnet are addressed, then it is appropriate for the RA to specify and collect the data it needs, within the guidelines set forth in Appendix 4B, to maintian the models needed to support real time monitoring and reliability analysis.

There needs to be a requirement in this standard for the BA, IA, Generator and TOP to provide this data to the RA on an ongoing basis and the associated penalties for them if they do not. What good is it for the RA to specify the data they need if the those who have the data are

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

not required to continually supply it? Yes, this requirement does specify that the RA is to notify the Compliance Monitor if these entities do not provide the data requested. And yes, Requirement #8 requires the TOP to provide data no less than 7 days prior to energization of new facilities. But where is the requirement that says they must continually provide the data?

Additionally, without an industry minimum standard similar in concept to Appendix 4B, how do we resolve the issue where a RA desires individual unit dispatch information but the Generator and BA only desire to provide zonal dispatch data?

Also, the requirement of the RA to "collect the data it needs" is too vague. Also, the requirement of the RA specifying when to supply data is too vague. The data supplied should be data that is mutually agreed upon between the RA and respective party along with the timing of the request. The respective party should not have to obtain the same hardware and software as RA.

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### **Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### **Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### **16. Do you agree with this requirement?**

Yes

No

**Comments:** Unlike our position on Requirement #3, we support the vagueness of this requirement for the TOP. However, it needs to be reworded such as not to place a burden on the data providers. The data required by the TOP from the Generators will be specified in interconnection agreements between the TOP and Generator. These agreements are individually negotiated by each party, hence the Generator has the ability to minimize the burden of the data request and verify the need for the data via negotiations. Hence the support for keeping this requirement vague so as not to dictate the content of interconnection agreements. There may be an opportunity for an industry standard for the type of data to be provided by the BA and RA to the TOP, similar to Appendix 4B. This would help ensure that a TOP is only receiving data it really needs.

Additionally, without an industry minimum standard similar in concept to Appendix 4B, how do we resolve the issue where a TOP desires individual unit dispatch information but the Generator and BA only desire to provide zonal dispatch data?

Also, the requirement of the TOP to "collect the data it needs" is too vague. Also, the requirement of the TOP specifying when to supply data is too vague. The data supplied should be data that is mutually agreed upon between the TOP and respective party along with the timing

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

of the request. The respective party should not have to obtain the same hardware and software as TOP.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

Comments:

### Requirement 5:

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

### Measures:

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

### Outcomes (100% Compliance):

The RA shall provide data as requested, to its (associated) RA and/or TOP.

### 18. Do you agree with this requirement?

Yes

No

**Comments:** A RA should have to share data (modeling information) with their TOPs and any other RA that requests the information. The requirement needs to be clear that a TOP that desires data from an RA other than its own RA should ask their own RA for that data and then their RA would ask the other RA. The other RA (the RA with the data) then should have to notify and receive approval from the owner of the data (TOP or Generator) before providing the data for use by a non-associated TOP.

Why 7 days? If the intent is to ensure the requestor knows about the new facilities and can update their model before energization of the new facilities, then more than 7 days notice should be required. If the intent is to ensure the requestor is receiving the real-time data associated with the new facilities, then 7 days may be adequate.

Generally speaking, the TOP and Generator should be required to push data up to the RA, BA, and IA. The RA, BA, and IA should be required to specify the data they require within industry guidelines for reasonability.

### Levels of Non-compliance for this Requirement:

1. Not Applicable
2. Not Applicable

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

3. Not Applicable

4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** What if they provide the data, but it is 3 days prior to energization? Or they provide it 3 days after energization? Or 3 weeks after energization? What if they provide only partial data? Or only incorrect data? Are all these non-compliance events truly equal?

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear whether the BA must supply this data to any requesting RA or just of the RA that has jurisdiction over the BA's area. We propose that the BA should only have to supply this information to his RA. Other RA's should contact the BA's RA for the information. Further, we suggest this requirement be changed similar to our comments provided on Requirement #2 under our response to question #13.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** What if they provide the data, but it is 3 days prior to energization? Or they provide it 3 days after energization? Or 3 weeks after energization? What if they provide only partial data? Or only incorrect data? Are all these non-compliance events truly equal?

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

- Yes
- No

**Comments:** It is not clear whether the IA must supply this data to any requesting RA or just of the RA that has jurisdiction over the IA's area. We propose that the IA should only have to supply this information to his RA. Other RA's should contact the IA's RA for the information.

We suggest this requirement be changed similar to our comments provided on Requirement #2 under our response to question #13.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:** What if they provide the data, but it is 3 days prior to energization? Or they provide it 3 days after energization? Or 3 weeks after energization? What if they provide only partial data? Or only incorrect data? Are all these non-compliance events truly equal?

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

- Yes
- No

**Comments:** It is not clear whether the TOW must supply this data to any requesting RA or just of the RA that has jurisdiction over the TOW's area. We propose that the TOW should only have to supply this information to his RA. Other RA's should contact the TOW's RA for the information.

Why 7 days? If the intent is to ensure the requestor knows about the new facilities and can update their model before energization of the new facilities, then more than 7 days notice should be required. If the intent is to ensure the requestor is receiving the real-time data associated with the new facilities, then 7 days may be adequate.

We suggest this requirement be changed similar to our comments provided on Requirement #2 under our response to question #13.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:** What if they provide the data, but it is 3 days prior to energization? Or they provide it 3 days after energization? Or 3 weeks after energization? What if they provide only partial data? Or only incorrect data? Are all these non-compliance events truly equal?

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear whether the Generator Owner must supply this data to any requesting RA/TOP or just to the RA/TOP that has jurisdiction over the Generator. We propose that the Generator should only have to supply this information to his RA and TOP that he is connected to. Other RA's should contact the Generator Owner's RA for the information.

Why 7 days? If the intent is to ensure the requestor knows about the new facilities and can update their model before energization of the new facilities, then more than 7 days notice should be required. If the intent is to ensure the requestor is receiving the real-time data associated with the new facilities, then 7 days may be adequate.

We suggest this requirement be changed similar to our comments provided on Requirement #2 under our response to question #13.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** What if they provide the data, but it is 3 days prior to energization? Or they provide it 3 days after energization? Or 3 weeks after energization? What if they provide only partial data? Or only incorrect data? Are all these non-compliance events truly equal?

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

### **Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **28. Do you agree with this requirement?**

Yes

No

**Comments:** This requirement is too vague. How often should the RA perform a reliability analysis? How often should the RA request the program to run? Once a hour? Once a day? Once a week? Should the reliability analysis program be running every 5 minutes or every 10 minutes. Per this requirement, if the RA so chooses, he could perform the analysis every other day and argue that is enough. Is it? The requirement should be clear that there is an expectation that the RA is performing an operational planning analysis on a daily basis looking at next day to next week projected conditions. Further, the RA must have the capability to perform a reliability analysis on demand in order to identify problems either real-time or on a next contingency basis. Finally, the RA should have a reliability analysis program (state estimator) that runs (which means it solves) a minimum of every 10 minutes.

The Measure(s) section states the "program(s) run(s) when requested and identifies any problems that could cause instability", . . . etc. "Any problems" is pretty broad. Often, a reliability analysis program (state estimator and operator load flow) does not perform an analysis on all possible contingencies but rather only credible contingencies identified by the operator from other system performance appraisals performed by a Planning Authority, a Transmission Owner's Planning Section, RTO, or inter-regional study team. Do you really mean that the RA's analysis program must be able to perform an analysis for all possible single contingency events within their network model? Many real-time analysis programs do not do this, but most RA's also have access to off-line analysis programs that can meet this requirement. What is the intent here?

We would suggest the requirement be that the reliability analysis program have the ability to identify first contingency problems (problems that could cause instability, uncontrolled separation, etc.) based upon credible first contingency scenarios identified by performance appraisals conducted by the PA or TOW's Transmission Planning section.

Also, define the time horizon.

### **Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**29. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** Non-compliance measures are too vague. What if the reliability analysis did not run when requested but ran within 5 or 10 minutes? What if the reliability analysis ran but the solution did not converge due to missing data, etc? There should be a different requirement and measure for real-time reliability analysis and operational planning analysis. Also, by the definition you provided, reliability analysis also includes system operator assessments. So by strict interpretation, as long as the RA's system operator assesses the situation, he would never be in violation of this requirement. As we said, this requirement and its measures are too vague.

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 11:

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### Measure(s):

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

### Outcome(s) (100% Compliance):

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### 30. Do you agree with this requirement?

Yes

No

**Comments:** This is duplicative to Requirement #10. Why should the RA and TOP be required to perform the same analysis? We do not dispute that redundancy is good nor that many TOP's will perform this function. However, a NERC Reliability standard should not require the TOP to do this as this is clearly within the scope and function identified for the RA. The TOP should be clearly required to implement and follow the directives that an RA may issue due to their performance of a reliability analysis for their footprint. Further, we do not believe this is a function that the RA should be allowed to delegate to another party.

Define the time horizon.

### Levels of Non-compliance for this Requirement:

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

### 31. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** Non-compliance measures are too vague. What if the reliability analysis did not run when requested but ran within 5 or 10 minutes? What if the reliability analysis ran but the solution did not converge due to missing data, etc? There should be a different requirement and measure for real-time reliability analysis and operational planning analysis. Also, by the definition you provided, reliability analysis also includes system operator assessments. So by strict interpretation, as long as the RA's system operator assesses the situation, he would never be in violation of this requirement. As we said, this requirement and its measures are too vague. Define the time horizon.

Should the concern be limited to those thermal overloads and voltage conditions that lead only to catastrophic events?

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 12:

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take **and direct** actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken **or directed**.

### Measure(s):

Documentation showing that actions were taken **or directed** to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### Outcome(s) (100% Compliance):

The RA shall document actions taken **or directed** to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### 32. Do you agree with this requirement?

Yes

No

**Comments:** We agree with the overall intent of this requirement. However, additional language is required. It seems the only desired outcome of this requirement is that the RA have documentation. Shouldn't another desired outcome be that the system is operated reliably? Hence a key component missing is that of the RA directing the TOP or BA to take action, as the RA typically cannot take any actions other than to give directives.

Should the concern be limited to monitoring only those levels of thermal overloads and/or voltage conditions that lead to catastrophic events?

How does this requirement fit with the current NERC TLR process?

### Levels of Non-compliance for this Requirement:

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### 33. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** Level 2 states "no actions or incorrect actions were taken . . ." The determination that the RA's actions were incorrect would be by after the fact analysis performed by whom? Additionally, would it be necessary to determine whether the actions taken were due to gross negligence or due to an "honest" error or misinterpretation of the data? Would non-compliance sanctions differ based upon gross negligence vs. honest error?

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

We are not sure what the difference between Level 2 and Level 3 is. Please clarify.

Some "what ifs": What if the system operating limit (SOL) was violated and thus the bulk transmission system was at risk but actual instability, uncontrolled separation, or cascading outages did not occur? What level of non-compliance should this be?

What if the SOL was violated, and the RA had directed the TOP and/or BA to take action but the TOP and/or BA did not take the action? As stated above, the RA is non-compliant. But, in reality the TOP and/or BA should be found non-compliant.

What if the SOL is violated, and the RA has directed the TOP and/or BA to take action, and they are in the midst of taking that action, but prior to the action being fully implemented, instability, uncontrolled separation or cascading outages occur? Is anyone non-compliant and if so at what level?

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 13:

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses performed by either the RA or TOP, to take actions or follow directives of the RA as necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### Measure(s):

Documentation showing that actions were taken or RA directives followed to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### Outcome(s) (100% Compliance):

The TOP shall document actions taken or RA directives followed to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### 34. Do you agree with this requirement?

- Yes  
 No

**Comments:** We believe having the duplicity of Requirement #12 and #13 is dangerous and could impede system reliability. The NERC reliability standards need to be clear where the authority resides. Having duplicate requirements for the RA and the TOP implies neither has the final say. The RA should and must have the final say. This requirement for the TOP needs to be reworded to show their subordinate role to the RA. The TOP shall follow the directives of the RA in order to prevent/mitigate identified problems.

How does this requirement fit with the current NERC TLR process?

Should the concern be limited to monitoring only those levels of thermal overloads and/or voltage conditions that lead to catastrophic events?

### Levels of Non-compliance for this Requirement:

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### 35. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**Comments:** Level 2 states "no actions or incorrect actions were taken . . ." The determination that the actions were incorrect would be by after the fact analysis performed by whom? Additionally, would it be necessary to determine whether the actions taken were due to gross negligence or due to an "honest" error or misinterpretation of the data or misinterpretation of

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

the directive given by the RA? Would non-compliance sanctions differ based upon gross negligence vs. honest error?

We are not sure what the difference between Level 2 and Level 3 is. Please clarify.

Some "what ifs": What if the system operating limit (SOL) was violated and thus the bulk transmission system was at risk but actual instability, uncontrolled separation, or cascading outages did not occur? What level of non-compliance should this be?

What if the SOL was violated, and the RA had directed the TOP to take action but the TOP did not take the action? As stated above, this is either a level 2 or level 3 non-compliance. But, what if the RA directed the TOP and the BA to take action and the TOP took the action but the BA did not? The TOP is compliant and the BA should be found non-compliant. But, per the above, the TOP is non-compliant too because the SOL was violated.

What if the SOL is violated, and the RA has directed the TOP and/or BA to take action, and they are in the midst of taking that action, but prior to the action being fully implemented, instability, uncontrolled separation or cascading outages occur? Is anyone non-compliant and if so at what level?

What if monitoring and/or reliability analysis identified a problem, and the RA directs the TOP to take specific action, but the TOP does not take the action? Does it matter whether the SOL was violated or not?

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 14:

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

### Measures(s):

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

### Outcome(s) (100% Compliance):

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### 36. Do you agree with this requirement?

Yes

No

**Comments:** We agree with the intent of this requirement. However, the language of the requirement needs to be modified. First, the wording in Version A and Version B are different. Which is correct? Version B explicitly states the plan must be approved in the requirement section, whereas version A only mentions the plan needing to be approved in the levels of non-compliance section. If the mitigation plan is to be approved, then by whom? We would hope by the Regions. Second, is it intended that this Plan replace the Region and/or RA Reliability Plans? Is this Plan just a section of those Plans? If so, isn't this part of the organizational requirement of the RA and thus covered elsewhere?

Third, how detailed do you want these plans? Are they just to state the congestion management procedures available to the RA, such as redispatch (LMP) and NERC TLR procedures? The requirement seems too vague as worded. Based upon what is expected to be included in reliability analysis under previous requirements in this document, it seems unreasonable to expect that all problems can have a one size fits all scenarios solution (mitigation plan). It does seem reasonable that the RA have a plan that states their congestion management practices and tools available. But that should be a requirement of be certified as a RA.

Define "mitigation plan".

### Levels of Non-compliance for this Requirement:

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

### 37. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** However, you need to define in the requirements section who is to approve the

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

plan and be more specific as to what the approval requirements are. That is just how detailed does this plan need to be. However, if the intent is that each identified credible contingency scenario has its own action plan, that seems unrealistic unless this is at a superficial highlevel and then what is the point of the plan?

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** The development of mitigation plans and strategies should be a joint effort between the RA and TOP. But the responsibility should reside with the RA. If both are responsible for developing and having plans, what is to prevent them from having vastly different plans for the same problem? Who determines which plan is implemented?

Should the concern be limited to thermal overloads and/or voltage conditions that only lead to catastrophic events?

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** However, you need to define in the requirements section who is to approve the plan and be more specific as to what the approval requirements are. That is just how detailed does this plan need to be. However, if the intent is that each identified credible contingency scenario has its own action plan, that seems unrealistic unless this is at a superficial highlevel and then what is the point of the plan?

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits (limits that if exceeded could lead to instability, etc.) and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

- Yes  
 No

**Comments:** We agree with the intent of this requirement but believe modification to the language is required. Version A and B of this requirement differ slightly. Which is correct?

The requirement is not clear on whether the RA is to log and report just system operating limit (SOL) violations (i.e. the limit is violated for the time specified in the Facilities Rating SAR) of both violations and instances where the limit is exceed though a violation per the Facilities Rating SAR has not occurred. We believe the RA should complete a report for all SOL violations as defined in the Facilities Rating SAR, but momentary excursions should not have to be reported to the NERC CM.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

- Yes

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** We agree with the intent, but for this requirement the language is too brief. How long must the TOP keep this data?

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**1) There is no requirement that reliability data recipients have to be a signatory to the NERC Data Confidentiality agreement. This needs to be codified somewhere in the new standards.**

**2) This standard should define the minimum type of data that is to be provided to the RA, similar to Policy 4B and Appendix 4B requirements today.**

**3) There should be a requirement that the TOP, BA, IA, PA, and Generators provide data on a continuing basis as requested (or as per the defined minimum data requirements suggested in #2 above) and needed by the RA to perform their reliability analysis.**

**4) There needs to be a definition of operational planning analysis and a requirement that sets the minimum standards of scope and frequency for such analysis.**

**5) There needs to be a requirement for the minimum frequency of performance of real-time analysis.**

**46. Which form of the Standard do you prefer?**

**Version A – Each Requirement Separate**

**Version B – Related Requirements Combined**

**Comments:** We prefer neither of the versions. Neither version allows the reader to easily know what each Authority or entity is responsible for. Version B comes the closest.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** As one reviewer stated, "this draft standard is worse then reading the Federal Register."

**48. Please list any other comments you may have in the space below.**

**Comments:** Obviously, we believe this draft is not yet ready for going to ballot. Of course, that wasn't your intent at this point. However, we question the wisdom of this standard ever going to ballot before the Facilities Rating Standard is also developed and ready to go to ballot. We would suggest that this standard should be developed the Facility Rating Standard. Otherwise assumptions regarding limits and violations made by this standard may turn out to be vastly different then the intent of the Facility Ratings Standard.

We appreciate the hard work of the standards drafting team and look forward to the next draft.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:** We agree however would urge the terms used in the standards be explicitly defined and quantified.

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:** We recommend substituting Reliability Analysis with operational planning analysis and real time assessment as appropriate to short term or long term studies. Also the term real time needs to be explicitly defined. Although the footnote appearing on page one of Version A defines Real time it is still unclear if this is restricted to data extracted from the Energy Management Systems.

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:** The certification process for the RA/TOP is in itself an insufficient vehicle to attain correct modeling data. It is felt that the submission of data reflecting changes to the system may reduce documentation but may unnecessarily restrict the RA's to a potentially incomplete data collection process. For example, in some cases the RA may choose to create study models as new base cases on a seasonal basis. Therefore, the exchange of information has to be handled differently to ensure all parties receive the information in a timely manner such that the operating models in adjoining regions do not lead to different results.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

**Comments:** Yes, however "Industry Accepted Format" must not be overly perscrutive and must not preclude mutually agreed upon data exchange methods between adjoining areas. Also how is it proposed to handle "proprietary data"?

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:** This aspect of the standard should be coordinated with the NERC OLD, Operating Limit Definition, Task Force . Presenting a standard that doesn't represent the current intentions of the OLD TF may produce RS that may be in conflict with the current understanding of the NERC Operating

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Committee. Therefore we recommend delay of further development of this RS until the work of the OLD TF is complete and approved.

**6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?**

**Yes**

**No**

**Comments: This aspect of the standard should be coordinated with the NERC OLD, Operating Limit Definition, Task Force . Presenting a standard that doesn't represent the current intentions of the OLD TF may produce RS that may be in conflict with the current understanding of the NERC Operating Committee. Therefore we recommend delay of further development of this RS until the work of the OLD TF is complete and approved.**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**Real Time**

**Self-Certification**

**Compliance Reset Period**

**Instability**

**Cascading Outages**

**Uncontrolled Separation**

**If possible, please provide us with a definition for each of these terms.**

The Compliance reset period should be defined as 12 months without a violation from the time of the last violation.

Either provide a definition with "actual telemetered data" or replace it with "real time data", throughout this document.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

BA

TOP

Generator

Planning Authority

**Comments**

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

RA

BA

Generator

Planning Authority

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

- Yes  
 No

**Comments:** The levels of non-compliance should not be gauged by the availability of telemetered data but should be measured by the RA's ability to monitor System Operating limits.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** Level 4 is the most important metric for this Requirement and we feel that Level 1, 2 and 3 are unnecessary.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** The levels of non-compliance should not be gauged by the availability of telemetered data but should be measured by the RA's ability to monitor System Operating limits. Please see our comments under item # 44 (Regional and Interconnection Differences).

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Level 4 is the most important metric for this Requirement and we feel that Level 1, 2 and 3 are unnecessary.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:** A form needs to be developed to allow the different authorities to submit this data.

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Comments:** See previous comment on the term "industry accepted format". We also felt that compliance monitoring doesn't belong in the requirement section of this document but may reside in another document pertaining to compliance.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** A form needs to be developed to allow the different authorities to submit this data. Please see our comments under item # 44 (Regional and Interconnection Differences).

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** See previous comment on the term "industry accepted format". We also felt that

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

compliance monitoring doesn't belong in the requirement section of this document but may reside in another document pertaining to compliance.

### **Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

### **Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

### **Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

### **18. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

### **19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

### **Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

### **Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

### **24. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

### **25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** It is not clear what type of data is being referred to in this requirement and clarification is needed if it is data derived from testing or some realtime operation or if it is engineering data, manufacturer's data, etc.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:** We are unsure what type of analysis would be required here and it is unclear how often it would need to be performed. From a reliability standpoint, operational planning studies would be done that considers adequacy and system outages. We agree with the requirement but there is insufficient detail to measure compliance

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** We are unsure what type of analysis would be required here and it is unclear how often it would need to be performed. From a reliability standpoint, operational planning studies would be done that considers adequacy and system outages. We agree with the requirement but there is insufficient detail to measure compliance. Please see our comments under item # 44 (Regional and Interconnection Differences).

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:** It should be noted that prevention and mitigation are actions that may be undertaken in two different timeframes.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

Further clarification is requested regarding the difference between violation and limit violation.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **34. Do you agree with this requirement?**

Yes

No

**Comments:** It should be noted that prevention and mitigation are actions that may be undertaken in two different timeframes. Please see our comments under item # 44 (Regional and Interconnection Differences).

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

Further clarification is requested regarding the difference between violation and limit violation.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** It is only necessary to have a procedure in place that relieves the SOL violation. It is unclear if a mitigation plan requires external approvals and by whom.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** It is only necessary to have a procedure in place that relieves the SOL violation. It is unclear if a mitigation plan requires external approvals and by whom. Please see our comments under item # 44 (Regional and Interconnection Differences).

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

- Yes  
 No

**Comments:** This aspect of the standard should be coordinated with the NERC OLD, Operating Limit Definition, Task Force . Presenting a standard that doesn't represent the current intentions of the OLD TF may produce RS that may be in conflict with the current understanding of the NERC Operating Committee. Therefore we recommend delay of further development of this RS until the work of the OLD TF is complete and approved.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** This aspect of the standard should be coordinated with the NERC OLD, Operating Limit Definition, Task Force . Presenting a standard that doesn't represent the current intentions of the OLD TF may produce RS that may be in conflict with the current understanding of the NERC Operating Committee. Therefore we recommend delay of further development of this RS until the work of the OLD TF is complete and approved. Please see our comments under item # 44 (Regional and Interconnection Differences).

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** It was felt that in order to properly address the compliance issues the RS must be well defined and more development is needed before a determination can be made whether these levels are appropriate.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

**Yes**

**No**

**Comments:** There are differences in some Areas. For example, in Ontario the IMO is solely responsible to determine operating limits and to direct the operation of the IMO-Controlled Grid within these limits. The Transmission owners/operators operate their respective systems under the IMO's direction. They only provide the IMO with equipment ratings which the IMO must respect. The transmission operators do not determine operating limits or monitor/report their compliance.

**If yes, please identify what you feel should be added.**

**The standard should reflect jurisdictional differences in the responsibilities assigned to the RA and TOP in some areas.**

**45. Is the draft standard missing any requirements that should be added?**

**Yes**

**No**

**Comments:**

**If yes, please identify what you feel should be added.**

**We are questioning whether voltage collapse and underfrequency loadshedding reqts.**

**Confidentiality issues could be addressed**

**46. Which form of the Standard do you prefer?**

**Version A – Each Requirement Separate**

**Version B – Related Requirements Combined**

**Comments:**

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** Subtitles should be added to sectionalize the standard and a table of contents added.

Comments:

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

Comments:

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

Comments:

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

**Please use Version A of the draft standard to answer these questions.**

### **Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### **Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### **Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

### **11. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** Since limits may specify both magnitude and duration, real time data may need to be integrated to compare to limits. That should be made more apparent here or in the definition of data.

### **Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### **12. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**13. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** See Requirement 1 comment.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**14. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**15. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**16. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### **Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### **Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### **17. Do you agree with this requirement?**

Yes

No

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### **18. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**29. Do you agree with this requirement?**

Yes

No

**Comments:** Do the analyses include the calculation of operating limits?

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**33. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**34. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### **Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### **Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### **41. Do you agree with this requirement?**

Yes

No

**Comments:** Who specifies the "specified period of time"?

### **Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### **42. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**1. The draft standard uses the term 'data' to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:** 1) The TS agrees with the term "data" used, but it should be explicitly defined and quantified. 2) Consideration should be given to establishing a minimum performance or accuracy and frequency criteria for the "calculated values" and accuracy and frequency criteria

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

of telemetered data values. 3) Footnotes should be repeated at least once for each requirement to remind the reader of the definition.

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

Do you agree?

Yes

No

**Comments:** 1) RAs should be required to run (on-line/real-time) automated studies and off-line operational planning studies to identify and/or forecast bulk reliability concerns, but TOPs should not be subject to such requirements. The standard does not read as though manual analysis is sufficient, as it references "analysis tool" availability and then makes mention of "reliability analysis did not run" in multiple locations. This verbiage indicates that manual reliability analysis is not sufficient. Therefore, modifications should be made to alter this requirement for the TOPs. Expecting every TOP to acquire and maintain on-line reliability analysis tools is too expensive and too obtrusive without adequate reliability benefit to justify such a universal requirement - particularly since the RAs will be required to use such tools anyway. 2) What is the scope of the term "real time"? The footnote appearing on pg.1 of Version A defines "real time" but it is still not clear if this is restricted to data extracted from the Energy Management Systems, and does a reference to "real-time" conceptually imply data, or processes, or both? 3) What is the definition and scope of "operational planning analysis"? 4) It seems the Reliability Analysis definition above is an attempt to conceal the fact that many existing entities performing Reliability Authority Functions do not have a working state estimator. The RA should explain what type of analysis tool(s), the frequency, the type of input data (off-line or real-time), etc. that is used to perform "reliability analysis". 4) Why are the analysis requirements of the RA and the TOP identical? If this is true, why do we need an RA and a TOP? 5) Why isn't there a standard for the TOP to provide telemetered data? There should be some type of performance standard established to assess the accuracy of telemetered data.

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

Yes

No

**Comments:** 1) The focus is only on providing specifications for the data required. It appears to be unclear that there is no requirement to actually provide the real-time data. For example, the TOPs are required to specify and require data, but they do not appear to be required to actually PROVIDE data to RAs. 2) The certification process for the RA/TOP is not the proper means to obtain correct modeling data. It may be appropriate for real-time metering data, but much of the static data for

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

system modelling and analysis is the same as the planning function. It should be consistent with those modelling requirements also. 3) The standard does not distinctly identify the areas of responsibility between the Reliability Authority and the Transmission Operator. Application of the standard to multiple parties ("Authorities") should clearly delineate the primary source of responsibility and ownership of any data, information, control and responsibility. What follows in the Standard are many requirements that duplicate the RA and TOP responsibilities -- who has the primary responsibility/requirement/authority for each? 4) The only provision in this standard is that data on new facilities must be provided seven days before it is energized. If operational planning studies have a scope of greater than seven days (possibly one year), then a seven-day notice is inadequate for these studies. There appears to be a requirement to have a standard that requires entities to provide the base data used to populate the models, in addition to the requirement to provide information on changes. 5) All assumptions should be listed in the Standard's document.

4. The draft standard uses the term "Industry Accepted Format" to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

**Comments:** ...as long as this does not lead to the creation of another "industry accepted format" or require a significant change from the way data has routinely been exchanged in the past. (typically using PSS/e or PSLF powerflow raw-data formats for representational data, etc.)

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:** The TS recommends waiting until the OLDTF work is complete.

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

**Comments:** The TS recommends waiting until the OLDTF work is complete.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.

Real Time

Self-Certification

Instability

Cascading Outages

Uncontrolled Separation

Actual telemetered data, or real-time data?

Real-Time Monitoring

Frequency of Real-Time Monitoring

System Operator Limits

If possible, please provide us with a definition for each of these terms.

System operator limits as defined is appropriate for RAs, but should not be defined as provided for TOPs. For TOPs, system operating limits should not include only those ~~limits which~~ limits, which have been identified as leading to cascading outages, instability, or uncontrolled separation. This is a major issue in terms of the scope. As conceived, this standard does not result in any entity assuring that bulk power system is operating within limits. It only results in operating within those limits for which violations result in instability/cascading outage risk. That is inappropriate. Any defined operating limit, which has been identified as potentially threatening bulk reliability and thereby requiring consistent monitoring and adherence, should be covered by this standard.

8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)

Please check all that apply.

BA

TOP

Generator

Planning Authority

Comments Are you referring to Generator Owner or Generator Operator or both above?

9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)

Please check all that apply.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

- RA
- BA
- Generator
- Planning Authority

**Comments** 1) What do you mean by "system analysis"? 2) What type of "system analysis" is the TOP supposed to perform? 3) Are you referring to Generator Owner or Generator Operator or both above?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

- Yes  
 No

**Comments:** 1) The levels of non-compliance should not be determined by the availability of telemetered data; compliance should be based on the RA's capability to monitor System Operating Limits. 2) What do you mean by "actual real-time data"? Does it mean something different than "real-time data"? For consistency, the word actual should be removed from Measure 2.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** 1) Levels 1 and 2 imply that use of substitute data is unacceptable. 2) The only important level of non-compliance listed above is level 4. 3) There seems to be no penalty for failing to identify a System Operating Limit. If an entity identifies limits and then does not monitor them, then the entity is subject to a greater penalty than an entity who fails to identify the limits. Need a process to identify SOLs and to assess system conditions, both real-time and forecast. The measures should be: a) do you have the data; b) do you have the limits; c) are you monitoring the data. 4) What does "surrogate value" mean? Levels 1 and 2 should be rewritten to consider the suggested measures listed in these comments.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 2:

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### Measure(s):

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### Outcome(s) (100% Compliance):

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

### 12. Do you agree with this requirement and its associated performance/outcome and measure/s?

Yes

No

**Comments:** 1) Whose responsibility is it to ". . . monitor (in real time) the system operating limits . . ." - the RA or the TOP? 2) Whose compliance is more significant than the other? 3) This requirement should be for the TOP to provide to the RA telemetry data and to monitor system limits and OSLs under the direction of the RA.

### Levels of Non-compliance for this Requirement:

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### 13. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** 1) Levels 1 and 2 imply that use of substitute data is unacceptable. 2) The only important level of non-compliance listed above is level 4. 3) Loss of telemetry for short periods is an unfortunate but fairly routine matter - with all that telemetry equipment in the field, it cannot be expected that none of it ever has down-time. 4) If this requirement is changed as suggested above, then there should be some type of measures defined to capture the need for a certain level of observe-ability and accuracy of the telemetry data. The TOP should also have a list of identified limits on the SCADA system that is being monitored on a periodic basis. The TOP should also have a list of "RA assigned" Operating Security Limits identified by the RA and instructions on mitigation actions to perform if the OSL is reached and/or violated.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:** The TS believes the collection and processing of the data requirements could be a RA data management responsibility.

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Comments:** Regardless of format, either the RA receives the data specified, or it does not. Shouldn't the RA show that the data is being used in the analysis?

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** The TS suggests measuring the TOP non-compliance at gathering and providing the data to the RA, rather than a redundant requirement for the TOP to collect the data.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** 1) Either the TOP provided the data, or it did not provide the data to the RA. 2)

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Compliance monitoring does not belong in the requirement section of this document. It may belong in another document pertaining to compliance.

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** The TS does not believe the language is clear enough. For example some members interpreted the requirement to read differently than others (as follows) - A seven (7) day lead time is not sufficient for integration of data for a new facility. A more appropriate time-frame might be several months (given the time it takes to line up the telecommunications, etc., for transmission of a new quantity). If the data is going to be used for operational planning analysis, then this may require at least a one-year lead time.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** In general there should be at least two levels of non-compliance identified. Why does the data have to be requested? How often should an entity request data? Should data requests be a ~~one-time~~one-time declaration in writing asking for data on new facilities? Is this requirement needed since there is not enough detail to assess non-compliance?

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 6:

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

### Measure(s):

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

### Outcome(s) (100% Compliance):

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

### 20. Do you agree with this requirement?

Yes

No

**Comments:** The TS does not believe the language is clear enough. See number 18 comments, it is not apparent the types of data being referred to in this requirement. Clarification is needed to specify the required data - from testing, real-time operation, engineering specifications, manufacturer's specifications, etc.

### Levels of Non-compliance for this Requirement:

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

### 21. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** The TS believes that until numbers 18 and 20 are resolved (clarification of language) the levels of non-compliance cannot be determined.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

- Yes
- No

**Comments:** The TS suggest clarification language is necessary. Same as 18, 20, 21 above.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:** See 22.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** See 22.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See 22.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** The TS suggest clarification language is necessary. Same as 18, 20, 21, 22 above.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** 1) See 26. 2) As an example of the need for clarification language, the ". . . no less than 7 days prior . . ." was challenged by members with the following comment: In a market-based system, there are aspects of adding a new market entity that need considerably more than days-to-months lead time; for compliance a generator might be prohibited from operating commercially until all data and interconnection issues are resolved.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

- Yes  
 No

**Comments:** 1) The TS suggests clarification language to identify the type of analysis required. Also, define the periodicity of the analysis - how often it needs to be performed. 2) From a reliability standpoint, operational planning studies are recommended to be performed to determine the adequacy during system outages. We agree with the requirement but there is insufficient detail to measure compliance

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** 1) The TS believes that number 28 needs to be addressed before non-compliance can be determined. 2) Based on the ~~time-frame~~time frames specified, the ~~levels of non-compliance implies~~levels of non-compliance imply different compliance than the requirement does. Clarification should consider: Is the requirement based on real-time operating concerns, or is it based on a short-term reliability/scheduling concern?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** The TS believes this requirement should be eliminated - Requirement 10 (at the RA level) is adequate. See Question number 2, and the TS response.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See 30.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **32. Do you agree with this requirement?**

Yes

No

**Comments:** The TS questions the combination of "prevention" and "mitigation" in the same requirement/measure unless the language is clear to eliminate potential ambiguity. Prevention and mitigation are actions that may be undertaken in two different timeframes. Without clear language, the requirement/measure should be separated into two separate requirements to address the prevention and mitigation as separate issues.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Question 32 needs to be addressed and resolved before the levels of non-compliance can be determined.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **34. Do you agree with this requirement?**

Yes

No

**Comments:** 1) See 32. 2) How are conflicting results from an RAs analysis vs. the TOPs analysis to be resolved?

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Question 34 needs to be addressed and resolved before the levels of non-compliance can be determined.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** 1) The TS believes the requirement can be enhanced. See the following comments as examples: 2) It should be clarified that these plans need to include system intact and applicable prior-outage conditions. 3) It is only necessary to have a procedure in place that relieves the SOL violation. If a mitigation plan requires external approvals, then by whom? Will security constrained generation redispatch be an acceptable prevention or mitigation action?

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Question 36 needs to be addressed and resolved before the levels of non-compliance can be determined..

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** 1) The TS recommends clarification to specify these plans need to include system intact and applicable prior-outage conditions. 2) System Operating Limit should be in capital letters to be consistent with the definition on page 2. 3) There may be potential conflict between the RA and TOP in prevention/mitigation actions. 4) Is this requirement necessary?

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but ~~wasn't~~ approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Question 38 needs to be addressed and resolved before the levels of non-compliance can be determined.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

- Yes  
 No

**Comments:** The TS recommends delaying this requirement until the OLDTF collaborates with the SDT to define "operating limits". These new limit definitions must also go through the standards process before formal implementation.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**Comments:** Question 40 needs to be addressed and resolved before the levels of non-compliance can be determined.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** See 40.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Question 42 needs to be addressed and resolved before the levels of non-compliance can be determined.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

**Yes**

**No**

**Comments:**

**If yes, please identify what you feel should be added.**

**The work of the OLDTF has shown that there are differences in the interpretation and response to limit determinations and violations among the interconnections and Regions. The Standard and its compliance measurements should not dictate whether a particular RA should operate in a predictive or a responsive mode (i.e., take action in advance to prevent an overload based on predictive analysis, or take steps to mitigate an actual overload only on occurrence)**

**45. Is the draft standard missing any requirements that should be added?**

**Yes**

**No**

**Comments:**

**If yes, please identify what you feel should be added.**

**1) The OLDTF has definitions that need to be considered prior to finalizing this standard.**

**2) Operating limits that should be secured should include voltage collapse transfer limits in addition to equipment ratings violations.**

**3) Confidentiality of data needs to be addressed. Transmission line flows and generator outputs have commercial implications in real-time market-based systems. The Standard should recognize this concern.**

**46. Which form of the Standard do you prefer?**

**Version A – Each Requirement Separate**

**Version B – Related Requirements Combined**

**Comments:** The TS believes Version B is written more clearly than Version A and is easier to follow. The TS believes that the entities that are responsible for complying with this standard will find it easier to determine what is required of them for compliance. In addition, the levels of non-compliance are spelled out more clearly; there is less room for interpretation.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:**

1) Subtitles should be added to sectionalize the standard and a table of contents added.

2) Jim Byrd presented Functional model issues to the NERC PC/OC/MIC on March 19, 2003 in Birmingham and stated that one of the major issues with the Functional model is that the functions are perceived to be organizations. Jim stated that efforts will be made to clarify that the functions are not organizations. Since all references to functions, such as, RA, BA, PA, TOP, etc. are listed in standards documents as "entities" for convenience; for example, sentences begin: "The RA shall..." instead of "Entities responsible for RA functions shall...", then all NERC standards documents should contain a clarification statement explaining that the functions are not organizations and that all references to the functions should be interpreted as "entities responsible for --- function".

3) All assumptions should be listed in the standards document.

4) Footnotes of definitions should be repeated for each requirement write-up.

5) There should always be at least two levels of non-compliance defined.

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

Yes

No

Comments:

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

Comments: Standard should allow requesting of whatever data is needed at any time to run operational studies.

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

Comments: An “Industry Accepted Format” does not exist

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?**

**Yes**

**No**

**Comments:**

**6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?**

**Yes**

**No**

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.

If possible, please provide us with a definition for each of these terms.

8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)

Please check all that apply.

BA

TOP

Generator

Planning Authority

Comments Generator Owner or Operator should provide the unit characteristics and the real time data

9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)

Please check all that apply.

RA

BA

Generator

Planning Authority

Comments Generator Owner or Operator should provide the unit characteristics and the real time data

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** Levels 1 & 2. The RA has no control as to availability of telemetered data. This responsibility should rest with the providing entity. The RA should monitor the data, be able to monitor the availability of telemetered data and be able to measure availability of data.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### **Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### **Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### **16. Do you agree with this requirement?**

Yes

No

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### **17. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** The entity who owned the information should provide it to who needs it. The RA may be constrained due to confidentiality agreements from passing the data on to entities other than another RA.

The RA should be able to request data at any time, not just prior to energization of new facilities.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** This requirement should be for any data request, not just for new or revised facilities.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

**Yes**

**No**

**Comments:** Should pertain to any facilities at any time with the timeframe defined by the RA according to its needs.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** Should pertain to all facilities

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

**Yes**

**No**

**Comments:** This requirement should be for any data request, not just for new or revised facilities. Should pertain to all facilities. The timeframe should be specified by the RA in accordance with its own needs.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** Should pertain to all facilities

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** This requirement should be for any data request, not just for new or revised facilities. Time frame to be specified by the RA according to its own needs.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Should pertain to all facilities

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** The time to provide data should be specified by the RA since everyone has different time requirement to make EMS & model changes. Should pertain to all facilities, not just new facilities.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Should pertain to all facilities

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

- Yes  
 No

**Comments:** The RA should perform reliability analyses on the current operating system only to determine if the system is operating in a secure mode. This means running N-1, N-2 or credible contingency studies.

The requirement should also include running an analysis program to mesh with the Measures and Outcome(s) requirement to run a reliability analysis program

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** Compliance levels should measure the recognition that there was a need to perform analysis, and whether the analysis was or wasn't done.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

**Yes**

**No**

**Comments:** The RA should direct rather than take action.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** Levels of non-compliance should measure whether or not the RA identified a reliability problem, were actions (correct or incorrect) taken, and did a reportable violation occur

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

**Yes**

**No**

**Comments:** The requirement does not require an approved mitigation plan. Who is responsible for approving the mitigation plan?

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**40. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

**41. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

Comments:

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

Comments: Provided it is for a facility that is covered by the purpose of this standard. That is, if it is violating an operating limit established to prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the bulk transmission system.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 4:**

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

**Measures:**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

**16. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

**17. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

**Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

**Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Yes

No

**Comments:** I agree that the term should include both manual and automated process, however the standard did not read that way to me. Perhaps the drafting team should better clarify their intent in the standard

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

**Comments:** Assumptions should be avoided, and drafting team should better clarify their intent in the document.

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

**Comments:**

**Comments**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** Levels of non-compliance should focus on what the RA does with the data not if it gets it or not.

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 2:

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### Measure(s):

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### Outcome(s) (100% Compliance):

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

### 12. Do you agree with this requirement and its associated performance/outcome and measure/s?

Yes

No

**Comments:** I agree with requirements, but I do not agree that it written exactly the same as the RAs. As a matter of fact, my opinion of the entire draft is that a distinction is made between the requiremnt of an RA and a TOP. Why have two entities required doing the same thing?

### Levels of Non-compliance for this Requirement:

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### 13. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** Levels of non-compliance should focus on what the TOP does with the data not if it gets it or not.

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### **Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### **Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### **14. Do you agree with this requirement?**

Yes

No

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

### **15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** There is not compliance level measuring what the RA actually does with the

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

data. Also, the RA should only be measured on things they can affect. For example, would it be the RA's fault if on of its TOPs submitted data that was technically inaccurate or incomplete?

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

Comments:

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

Comments: There is not compliance level measuring what the TOP actually does with the data. Also, the TOPs should only be measured on things they can affect. For example, would it

---

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

be the TOP's fault if on of its BAs submitted data that was technically inaccurate or incomplete?

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** I agree with the requirement, but I question the value of making a hard 7-day rule. Why not 14 days or 21 days???

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Seems like there should be more than one level of non-compliance. What if the data was incomplete for example? Shouldn't merit some non-compliance penalty?

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** See comments for Requirement 5

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See comments for requirement 5

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** See comments for requirement 5

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See comments for requirement 5

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** See comments for requirement 5

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See comments for requirement 5

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** See comments for requirement 5

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See comments for requirement 5

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** See comment for question 12.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

- Yes
- No

**Comments:** We do not agree with this requirement. Furthermore we do not agree that NERC has the authority to force such a requirement onto the RAs. As written, the requirement essentially bestows functional control to the RA. This is something the South Carolina PSC has expressly ruled is the responsibility of the TSP and no one else. Actual and functional control of the transmission system is the responsibility of SCE&G's transmission department. This responsibility can not and will not be transferred to any other entity without expressed approval of the Public Service Commission. This approval has not been given nor is it expected to be given, regardless of SCE&G's desires

We recommend that drafting team should instead write a standard that requires the RA to notify the TSP of a imminent situation and provide assistance, if requested, so the TSP can implement their own mitigation plans.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Comments:** NERC does not have the authority to require RAs to take action on TSP equipment for which they are not allowed to have functional control

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** See comments for questions 32. State laws may prohibit RAs from taking action on a TOPs system

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** There should be some level of compliance for how well an approved plan was followed.

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### **Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### **Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### **40. Do you agree with this requirement?**

Yes

No

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### **41. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** Why would the TOP do this if the RA is already doing it in Requirement 16?  
There is not need for the duplication.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comments:**

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:**

**48. Please list any other comments you may have in the space below.**

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

1. The draft standard uses the term 'data' to allow for real, state-estimated or other calculated values. Do you agree?

Yes

No

Comments:

2. The draft standard uses the term 'Reliability Analysis' to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.

Do you agree?

Yes

No

Comments:

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this "base data" that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

Comments:

4. The draft standard uses the term "Industry Accepted Format" to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

Comments: The definition could lead some to believe that there is a pre-defined format somewhere. A more acceptable phrase would be "mutually agreeable format". That way if a new

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

format were to arise that the RA wants to use and the data suppliers are willing to use, then NERC should not care what format is used.

As long as the definition recognizes the agreement between the consenting parties to mean 'Industry accepted' then there is no issue.

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

- Yes  
 No

**Comments:** The idea of ‘documenting’ near-misses and not treating them as non-compliance is a good one. It will ensure that the industry can access such information if needed (for example if there is a question of too many near misses).

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

- Yes  
 No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.

If possible, please provide us with a definition for each of these terms.

8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)

Please check all that apply.

BA

TOP

Generator

Planning Authority

**Comments** Generator Operator is the responsible party.

9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)

Please check all that apply.

RA

BA

Generator

Planning Authority

**Comments** In the framework of the Functional Model, the TOP in its role as TOP does not have the responsibility for doing system analysis. To the extent that the TOP does local analysis that information must come from the RA (unless the TOP has its own agreements to access that data.)

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** The measure has to do with monitoring while the non-compliance has to do with data quality. Monitoring compliance is difficult – how does one say that the system is not being monitored correctly. However, the measures focus on whether or not the monitor is using good data.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See comments to #11

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 3:

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### Measure(s):

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### 14. Do you agree with this requirement?

Yes

No

Comments:

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

### 15. Do you agree with these levels of non-compliance for this requirement?

Yes

No

Comments: The requirements for computing limits comes from the SAR on Facility Ratings et al. This Standard focuses on response and on Model maintenance (in real-time environment)

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** See response to # 9

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** This Matrix is for data handling not for operations.

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** By allowing the RA to define the data required for its needs properly places the responsibility on the RA and avoids the problem of developing a standard that includes identifying specific data.

The need to exclude the TOP is still noted.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** The Functional Model only assigns the BA responsibility for Balancing not for facility data.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** IA is not involved with facility data – (only Interchange Schedules)

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** As noted above the TOP is not responsible for system analysis (which is the only way it could identify an OSL). Therefore in the Reliability Standards process that responsibility still lies with the RA. The RA can provide the data to the TOP as needed or as agreed to (e.g. they can agree that the TOP gets the data directly)

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **32. Do you agree with this requirement?**

Yes

No

**Comments:** As written this requirement mandates the RA to take action (while at the same time leaving the procedures, services and processes up to the individual RAs).

The requirement also allows preventive and well as corrective actions to be taken.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** There is a definite need here to recognize that NO ACTION “can be” a definitive activity (ergo not to be held as a non-compliance indicator)

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **34. Do you agree with this requirement?**

Yes

No

**Comments:** This is an RA responsibility. Of course the RA may assign that function to the TOP (but in the end the RA is still the responsible party)

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** Again, this is an RA responsibility.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

Yes

No

Comments:

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

Yes

No

Comments: This requirement is a documentation requirement not a filing requirement (i.e. Level 1 is inappropriate)

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** The TOP may do this for the RA, but it need not be a TOP function.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Yes

No

Comments:

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

Comments:

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

Comments:

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**If possible, please provide us with a definition for each of these terms.**

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

- BA
- TOP
- Generator
- Planning Authority

**Comments**

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

- RA
- BA
- Generator
- Planning Authority

**Comments**

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

**Please use Version A of the draft standard to answer these questions.**

### **Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### **Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### **Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** This is a RA responsibility, although TOP will physically monitor actual conditions.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** In many cases, state estimator data are an adequate replacement for telemetered data.

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 3:**

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

**Measure(s):**

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

**Outcome(s) (100% Compliance):**

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

**14. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

**15. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** RA builds and maintains models

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:**

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** BA is not responsible for facility data

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** IA is responsible for interchange information, not facility data

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

## Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 16:**

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### **Measure(s):**

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### **Outcome(s) (100% Compliance):**

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### **40. Do you agree with this requirement?**

Yes

No

**Comments:**

### **Levels of Non-compliance for this Requirement:**

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### **41. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

Yes  
 No

**Comments:** There are other references to “actual” data. (For example, Requirement 1 states “The RA shall monitor real time system operating limits and compare these against actual data associated with those limits”.) If “actual” data is the same as “real” data, then we suggest using the term “actual” data throughout the standard to avoid confusion in the future.

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

operational planning analyses.

Do you agree?

Yes

No

Comments:

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

Comments:

4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

Yes

No

**Comments:** Since there are numerous formats that can be qualified as “Industry Accepted Formats”, the entities performing the related RA, BA, TOP, IA, TOW, Generator functions should agree on a set of common formats to be used for data exchange to avoid unnecessary duplication of work.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:** Some clarification is needed. The System Operating Limit itself can be defined with a magnitude and a time limit, so the magnitude limit can be a step function. e.g., the allowable loading magnitude “X” for a 1-hour limit would be higher than the allowable loading “Y” for a 4-hour limit, so there should be a violation only if the yellow portion is above “X” for more than 1 hour, or above “Y” for more than 4 hours.

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

**Comments:** See comment in response to Question #5. Also, it is not clear what is the basis of the “red zone” above the “yellow” zone in the time period  $t_0$  -  $t_{\text{defined}}$

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**If possible, please provide us with a definition for each of these terms.**

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

- BA
- TOP
- Generator
- Planning Authority

**Comments** It would also be acceptable for the generator to provide identical data concurrently to the TOP and the RA. Our recommendation is to minimize any possibility of the TOP and the RA having conflicting data.

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

- RA
- BA
- Generator
- Planning Authority

**Comments**

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

Please use Version A of the draft standard to answer these questions.

### Requirement 1:

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### Measure(s):

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### Outcome(s) (100% Compliance):

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

### 10. Do you agree with this requirement and its associated performance/outcome and measure/s?

- Yes  
 No

**Comments:** The “requirement”, “measures(s)” and “outcome(s)” should state that the RA monitor *and take corrective action to ensure the system is operated within the system operating limits*. The RA System operating limits can also be established to avoid violating thermal facility limits affecting safety and reliability. Specifying that the system operating limits as “identified to prevent instability, uncontrolled separation or cascading outages” may be interpreted to exclude operating within limits based on other factors such as thermal overload.

### Levels of Non-compliance for this Requirement:

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### 11. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**Comments:** Non-compliance Levels 1 and 2 need to include a lower limit before the non-compliance level would be in effect. For example, as written, the RA function would be in Level 1 violation if it misses 1 second of actual telemetered data. This does not seem reasonable. We suggest adding the phrase “and no proper corrective action was taken” to the end of both Levels 1 and 2. Thus:

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours *and no proper corrective action was taken*
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours *and no proper corrective action was taken*

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

- Yes  
 No

**Comments:** System operating limits can also be established to avoid violating thermal facility limits. Specifying that the system operating limits as “identified to prevent instability, uncontrolled separation or cascading outages” may be interpreted to exclude operating within limits based on other factors such as thermal overload.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** Non-compliance Levels 1 and 2 need to include a lower limit before the non-compliance level would be in effect. For example, as written, the TOP function would be in Level 1 violation if it misses 1 second of actual telemetered data. This does not seem reasonable. We suggest adding the phrase “and no proper corrective action was taken” to the end of both Levels 1 and 2. Thus:

3. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours and no proper corrective action was taken
4. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours and no proper corrective action was taken

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 3:

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### Measure(s):

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### 14. Do you agree with this requirement?

Yes

No

**Comments:** There needs to be agreement among the various functions on the exact acceptable format and timing for data transfer to void unnecessary duplication of work. The generator function should provide data to the RA through the TOP, instead of to both the RA and the TOP, to avoid unintended inconsistency. Please add "the format and timing for data transfer should be coordinated and agreed to by the impacted parties".

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

### 15. Do you agree with these levels of non-compliance for this requirement?

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Yes

No

**Comments:** Non-compliance Level 1 states “data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete)”. It is not clear why the RA should be held in non-compliance for “technically inaccurate or incomplete” data submitted by other functions. We suggest deleting “or some data technically inaccurate or incomplete”.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** There needs to be agreement among the various functions on the exact acceptable format and timing for data transfer to avoid unnecessary duplication of work. The generator function should provide data to the RA through the TOP, instead of to both the RA and the TOP, to avoid unintended inconsistency. Please add "the format and timing for data transfer should be coordinated and agreed to by the impacted parties".

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**No**

1. **Comments:** : Non-compliance Level 1 states “data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete)”. It is not clear why the TOP should be held in non-compliance for “technically inaccurate or incomplete” data submitted by other functions. We suggest deleting “or some data technically inaccurate or incomplete”.

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

**Yes**

**No**

**Comments:** “Data” is open-ended. If the “data” refer to system parameters, then they would have to be calculated data and not “actual” or “state estimated”. If the requirement is for test data, some of them may not be available until after energization. We suggest adding qualifications to limit the universe of “data” required.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** We are not sure what kind of data the BA function can provide before energization. An example would be helpful.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

Yes

No

**Comments:**

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 10:

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### Measure(s):

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

### Outcome(s) (100% Compliance):

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### 28. Do you agree with this requirement?

Yes

No

**Comments:** Please modify the sentence to read:

“The RA shall run reliability analysis program(s) and ~~the program(s)~~ shall identify *potential* problems, *if any*, that could cause *generation and transmission facility overloads*, instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.” We should not lose sight of the responsibility of the RA to take proper actions to correct the problems that it has identified.

### Levels of Non-compliance for this Requirement:

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

### 29. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** These levels of non-compliance are not clear to us. Who is “requesting” the reliability analysis and what is the basis? How does this relate to the actual operation of the system? In WECC, we require the system be adjusted within 20 minutes to reduce flows on stability limited paths to be within their operational limits for the system conditions. We would expect the reliability analysis be requested and performed well in advance so the RA is prepared to monitor and take corrective actions.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 11:

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### Measure(s):

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

### Outcome(s) (100% Compliance):

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### 30. Do you agree with this requirement?

Yes

No

**Comments:** Please modify the sentence to read:

"The TOP shall run reliability analysis program(s) and ~~the program(s)~~ shall identify *potential* problems, *if any*, that could cause *generation and transmission facility overloads*, instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system." We should not lose sight of the responsibility of the TOP to take proper actions to correct the problems that it has identified.

### Levels of Non-compliance for this Requirement:

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

### 31. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** : These levels of non-compliance are not clear to us. Who is "requesting" the reliability analysis and what is the basis? How does this relate to the actual operation of the system? In WECC, we require the system be adjusted within 20 minutes to reduce flows on stability limited paths to be within their operational limits for the system conditions. We would expect the reliability analysis be requested and performed well in advance so the RA is prepared to monitor and take corrective actions.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Non-compliance Levels 2 and 3 do not seem reasonable. For example, during emergencies, the correct action may be “no action”. In any case, If no limit violation has occurred, what is the basis of the “non-compliance”. They should be changed to “not applicable”.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **34. Do you agree with this requirement?**

Yes

No

**Comments:** The TOP needs to take necessary actions to prevent equipment overloads as well.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Non-compliance Levels 2 and 3 do not seem reasonable. For example, during emergencies, the correct action may be “no action”. In any case, If no limit violation occurred, what is the basis of the “non-compliance”. They should be changed to “not applicable”.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** In the sentence, "The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits." We may want to replace the word "approved" with "finalized". If not, we suggest identifying the approving party. Otherwise, it could introduce confusion in implementation.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** We need to specify the party that would do the approving.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** In the sentence, "The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits." We may want to replace the word "approved" with "finalized". If not, we suggest identifying the approving party. Otherwise, it could introduce confusion in implementation.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** We need to specify the party that would do the approving.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

- Yes  
 No

**Comments:** The 72 hours time requirement to file a complete report may not provide allowance for emergencies.

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**Comments:** The requirement for producing supporting document and corresponding unlogged violation seems too prescriptive and do not make allowance for emergencies, when keeping the system together should be more important than filling out forms.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**45. Is the draft standard missing any requirements that should be added?**

Yes

No

**Comments:**

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

Version A – Each Requirement Separate

Version B – Related Requirements Combined

**Comments:**

**47. If you have comments on the format of the standard, please share them with us.**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

1. The draft standard uses the term 'data' to allow for real, state-estimated or other calculated values. Do you agree?

Yes

No

Comments:

2. The draft standard uses the term 'Reliability Analysis' to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.

Do you agree?

Yes

No

Comments:

3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this "base data" that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?

Yes

No

**Comments:** Manitoba Hydro agrees that this Standard has to address the requirement for updating the data in a timely fashion. However we believe that the requirement for "base data" is not and should not be addressed in the certification process. The requirement for the "base data" should be included in this Standard. The process to be defined by the RA and TOP to obtain data for reliability analysis purposes should address both "base data" and changes to this data to ensure accuracy of the models used for reliability analysis.

4. The draft standard uses the term "Industry Accepted Format" to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.

Do you agree?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

Yes

No

**Comments:** Manitoba Hydro believes that as much as possible the appropriate Standard should specify what the acceptable format should be. For parameters where this is not possible the term “Industry Accepted Format” should be acceptable.

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:** Based on the above graph the terminology used is correct. However Manitoba Hydro believes that the concept of operation related to operating limits and reportable violations should be defined by the Standard Drafting Team for Standard “Determine Facility Ratings, System Operating Limits, and Transfer Capabilities”. The concepts that they develop should then be integrated in this Standard

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Yes**

**No**

**Comments:** see comment for #5.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

If possible, please provide us with a definition for each of these terms.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

- BA
- TOP
- Generator
- Planning Authority

**Comments:** Manitoba Hydro believes that the generator owner must provide this data since as owner of the asset he is responsible for protecting that asset and establishing ratings consistent with the risk level he is willing to assume.

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

Please check all that apply.

- RA
- BA
- Generator
- Planning Authority

**Comments:** see comment in #8

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

*Please use Version A of the draft standard to answer these questions.*

### **Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### **Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### **Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

### **10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** Manitoba Hydro believes that the performance requirement objective is correct; however there are instances where real time data is not readily available and may have to be inferred or synthesized from other measurements. The measures section above should be modified to reflect this reality.

### **Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### **11. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Manitoba Hydro agrees with using a set of levels to define non-compliance. However the set of limits defined here may not be appropriate and should be related to the risk on the system. In the event of loss of data, perhaps a lower set of limits should be applied till the regular data can be re-established.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:** see comment in #10.

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** see comment in #11.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 3:

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### Measure(s):

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### 14. Do you agree with this requirement?

Yes

No

**Comments:** Manitoba Hydro agrees with the requirement to provide data to the RA. The accuracy of this data is not referenced here. Generally data should be accurate. There are all sorts of reasons why it may not be accurate and a process should be in place to keep improving the data and having a means to identify bad or questionable data.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

### 15. Do you agree with these levels of non-compliance for this requirement?

Yes

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**No**

**Comments:** Manitoba Hydro believes that the industry accepted format should be more clearly defined in some Standard to ensure minimum acceptable level of quality.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** same comment as in #14 but for TOP.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** same comment as in #15.

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** Manitoba Hydro questions the 7 day period specified. Some processes would require significantly more lead time than that while some require less; how was the 7 day time chosen. The issue is one of supplying data on a timely basis. Isn't that covered by another requirement.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** see comment in #18.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** see comment in #18

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** see comment in #18.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

Yes

No

**Comments:** Manitoba Hydro agrees with the use of online reliability analysis programs to identify possible instability, uncontrolled separation or cascading outages that could adversely impact the reliability of the bulk transmission system. The analysis performed will identify the possibility of problems occurring but will not determine the secure operating limit for the system. Steps should then be taken by the RA to put the system in an operating mode to ensure that Operating Security Limits will not be violated.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Manitoba Hydro believes that the times referenced are artificial and don't relate to system need and risk. Time frames should be determined based on system need and the relative risk posed to the system of not having these tools operational.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** see comment for #28

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** see comment for #29.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The issue should not be one of violation not occurring because the contingencies considered didn't happen. The issue should be one of risk and recognition of the impacts of the contingencies such that operation must be to limits based on these contingencies.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### **Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

### **Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

### **34. Do you agree with this requirement?**

Yes

No

**Comments:** Manitoba Hydro believes that TOP actions should be subject to RA oversight and approval for any actions that are identified as possibly adversely impacting the reliability of the bulk transmission system.

### **Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

### **35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** see comment for #33

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

Yes

No

**Comments:** Manitoba Hydro is concerned about the amount of data that may be required to be collected for this requirement. Perhaps there needs to be some sampling process or investigation only when multiple violations occur or when a system disturbance results

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:** see comment for #40

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

**Yes**

**No**

**Comments:** Manitoba Hydro believes that the requirements for monitoring system operating limits in real time in a thermally constrained network and for a stability constrained network are significantly different. The time limitations in a stability constrained network does not allow the RA or TOP to use online reliability analysis tools in the same way as they can be used in a thermally constrained tight network. The RA in a stability constrained network will be required to operate to predefined operating limits which have been determined from extensive operational planning analysis. The RA in a thermally constrained network can operate to real time defined limits because of the much slower system reaction time.

**If yes, please identify what you feel should be added.**

**Requirement 1 and Requirement 2 must be worded in a manner to ensure that both the RA and TOP for thermally constrained and for stability constrained networks can meet the requirements of the Standard.**

**45. Is the draft standard missing any requirements that should be added?**

**Yes**

**No**

**Comments:**

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

**Version A – Each Requirement Separate**

**Version B – Related Requirements Combined**

**Comments:**

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term ‘data’ to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:**

**2. The draft standard uses the term ‘Reliability Analysis’ to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

**Yes**

**No**

**Comments:**

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

**Yes**

**No**

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

- Yes
- No

**Comments:** The CAISO agrees with this requirement as long as the term "Documentable" refers to the entities' internal process of documentation.

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

- Yes
- No

**Comments:**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**Problem versus violation**

**If possible, please provide us with a definition for each of these terms.**

Problem = exceed limits but not for defined time, there for it is not a reportable event.

Violation = exceed limit for defined time, there for it is a reportable event.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

BA

TOP

Generator

Planning Authority

**Comments**

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

RA

BA

Generator

Planning Authority

**Comments**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Please use Version A of the draft standard to answer these questions.**

**Requirement 1:**

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

**10. Do you agree with this requirement and its associated performance/outcome and measure/s?**

**Yes**

**No**

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**11. Do you agree with these levels of non-compliance for this requirement?**

**Yes**

**No**

**Comments:** The CAISO feels that the compliance with Standards should be addressed separately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 2:**

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

**Measure(s):**

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

**Outcome(s) (100% Compliance):**

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

**12. Do you agree with this requirement and its associated performance/outcome and measure/s?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

**13. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed separately from the Standards themselves. There for this section should be removed from the Standard.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 3:

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### Measure(s):

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### 14. Do you agree with this requirement?

Yes

No

**Comments:** Wording in the second paragraph of the Requirements should be changed to read "The RA shall specify when the data is to be supplied"

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

### 15. Do you agree with these levels of non-compliance for this requirement?

Yes

No

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed seperately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed seperately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed seperately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

- Yes  
 No

**Comments:** The types of reports that would be needed to identify "problems that could cause instability, uncontrolled separation or cascading outages.." are not done quickly, making it difficult to perform them in real-time. The wording of the Requirement sounds like these would be required in real-time, and it is not possible for a RA to complete them in this time-frame.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

- Yes  
 No

**Comments:** The CAISO feels that the compliance with Standards should be addressed separately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** See response to question #28.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed seperately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

Yes

No

**Comments:** See response to #28

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**33. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed seperately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 13:**

The Transmission Operator (TOP) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The TOP shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The TOP shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**34. Do you agree with this requirement?**

Yes

No

**Comments:** See response to question #28.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system

**35. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed separately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 14:**

The Reliability Authority (RA) shall have a mitigation plan that includes actions to take to prevent and mitigate exceeding system operating limits.

**Measures(s):**

Mitigation plan/procedure(s) that identify actions the RA shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The RA shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**36. Do you agree with this requirement?**

Yes

No

**Comments:** IF the Requirement and Outcome are modified so that where reference is made to a "mitigation plan", it says "mitigation plan/procedure".

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wasn't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**37. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed separately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 15:**

The Transmission Operator (TOP) shall have a documented mitigation plan that identifies actions to be taken to prevent exceeding an identified system operating limit.

**Measure(s):**

Mitigation plan/procedure(s) that identify actions the TOP shall take to remain/return to a state that is within system operating limits.

**Outcome(s) (100% Compliance):**

The TOP shall have a documented, approved mitigation plan that identifies actions to remain/return to within system operating limits. (Note: an emergency operations plan may be used to satisfy this requirement if the emergency operations plan addresses actions to take to prevent exceeding identified system operating limits that, if exceeded, could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.)

**38. Do you agree with this requirement?**

Yes

No

**Comments:** See response to question #36.

**Levels of Non-compliance for this Requirement:**

1. Mitigation Plan and/or procedure(s) exists but wan't approved
2. Not Applicable
3. Not Applicable
4. No mitigation plan or procedure exists

**39. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed seperately from the Standards themselves. There for this section should be removed from the Standard.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 16:

The Reliability Authority (RA) shall document instances of exceeding identified system operating limits and shall document, log and report on instances where a system operating limit has been exceeded for a specified period of time.

### Measure(s):

1. Data exists and is retrievable that documents instances of exceeding identified system operating limits
2. Record of violations is in existence for at least three years that identifies violations (instances where a system operating limit has been exceeded for a specified period of time)
3. Complete report filed with applicable Compliance Monitor within 72 hours of exceeding a system operating limit for a specified period of time (includes data and time of event, magnitude and duration of violation, actions taken and explanation of results of actions)

### Outcome(s) (100% Compliance):

The RA shall have retrievable information that documents exceeding identified system operating limits. The RA shall have daily operating logs and supporting documentation to show the magnitude and duration of violations (EMS or other source of data). Logs and supporting documentation shall be available for review for at least three years. The RA shall file a complete report (including date and time of event, magnitude and duration of violation, actions taken and explanation of results of actions) with its Compliance Monitor when a defined limit has been exceed for a specified time period. The report shall be filed within 72 hours of the event.

### 40. Do you agree with this requirement?

- Yes  
 No

**Comments:** The Requirement should be amended to add the following on the end: "..and action taken to return the system to normal status".

Also, although the CAISO is recommending removal of the compliance portions, it would like to take the opportunity to suggest a more practical and reasonable time frame for the requirement on filing a report in the event of a violation. The CIASO would like to suggest that in place of "72 hours" that the body that establishes the compliance requirements consider changing the requirement to "5 business days".

### Levels of Non-compliance for this Requirement:

1. Report was filed on time but was incomplete
2. Not Applicable
3. One of the following:
  - Logs were available but supporting documentation was unavailable
  - Supporting documentation indicated unlogged violation
  - An incident occurred and there was no report within 72 hours
4. Documentation didn't exist

### 41. Do you agree with these levels of non-compliance for this requirement?

- Yes  
 No

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Comments:** The CAISO feels that the compliance with Standards should be addressed separately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 17:**

The Transmission Operator (TOP) shall document instances of exceeding identified system operating limits

**Measure(s):**

Data exists and is retrievable

**Outcome(s) (100% Compliance):**

The TOP shall have retrievable information that documents instances when it exceeded identified system operating limits.

**42. Do you agree with this requirement?**

Yes

No

**Comments:**

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Documentation didn't exist

**43. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** The CAISO feels that the compliance with Standards should be addressed separately from the Standards themselves. There for this section should be removed from the Standard.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**44. Are you aware of any Regional or Interconnection Differences that should be included in this Standard?**

**Yes**

**No**

**Comments:** The usage and definition of the term "violation" varies between the different entities.

**If yes, please identify what you feel should be added.**

**See definitions offered in comments on question #7.**

**45. Is the draft standard missing any requirements that should be added?**

**Yes**

**No**

**Comments:**

**If yes, please identify what you feel should be added.**

**46. Which form of the Standard do you prefer?**

**Version A – Each Requirement Separate**

**Version B – Related Requirements Combined**

**Comments:** See comment below - question #47.

**47. If you have comments on the format of the standard, please share them with us.**

**Comments:** The CAISO would like to suggest a third option for the organization of the Standard, dividing the requirements up by function, such as Reliability Authority, Transmission Operator, etc., rather than by task.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**1. The draft standard uses the term 'data' to allow for real, state-estimated or other calculated values. Do you agree?**

**Yes**

**No**

**Comments:** The term "data" should be explicitly defined and quantified. Consideration should be given to establishing a minimum performance or accuracy and frequency criteria for the "calculated values" and accuracy and frequency criteria of telemetered data values. Footnotes should be repeated at least once for each requirement to remind the reader of the definition.

**2. The draft standard uses the term 'Reliability Analysis' to mean those manual or automated studies, and system operator assessments. Reliability analyses includes both real time and operational planning analyses.**

**Do you agree?**

**Yes**

**No**

**Comments:**

1) RAs should be required to run (on-line/real-time) automated studies and off-line operational planning studies to identify and/or forecast bulk reliability concerns, but TOPs should not be subject to such requirements. The standard does not read as though manual analysis is sufficient, as it references "analysis tool" availability and then makes mention of "reliability analysis did not run" in multiple locations. This verbiage indicates that manual reliability analysis is not sufficient. Therefore, modifications should be made to alter this requirement for the TOPs. Expecting every TOP to acquire and maintain on-line reliability analysis tools is too expensive and too obtrusive without adequate reliability benefit to justify such a universal requirement - particularly since the RAs will be required to use such tools anyway.

2) What is the scope of the term "real time"? The footnote appearing on pg.1 of Version A defines "real time" but it is still not clear if this is restricted to data extracted from the Energy Management Systems, and does a reference to "real-time" conceptually imply data, or processes, or both?

3) What is the definition and scope of "operational planning analysis"?

4) It seems the Reliability Analysis definition above is an attempt to conceal the fact that many existing entities performing Reliability Authority Functions do not have a working state estimator. The RA should explain what type of analysis tool(s), the frequency, the type of input data (off-line or real-time), etc. that is used to perform "reliability analysis".

5) Why are the analysis requirements of the RA and the TOP identical? If this is true, why do we need an RA and a TOP?

6) Why isn't there a standard for the TOP to provide telemetered data? There should be

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

some type of performance standard established to assess the accuracy of telemetered data.

**3. This draft standard assumes that data needed to run reliability analyses has been provided as part of certification for the RA and/or TOP functions. This standard only addresses the changes to this “base data” that occur following the certification award – such as additions, deletions, or other changes to system facilities that would impact the accuracy of models used to monitor and assess the bulk transmission system. The intent is to minimize unnecessary documentation. Do you agree with this assumption?**

Yes

No

**Comments:**

1) The focus is only on providing specifications for the data required. It appears to be unclear that there is no requirement to actually provide the real-time data. For example, the TOPs are required to specify and require data, but they do not appear to be required to actually PROVIDE data to RAs.

2) The certification process for the RA/TOP is not the proper means to obtain correct modeling data. It may be appropriate for real-time metering data, but much of the static data for system modelling and analysis is the same as the planning function. It should be consistent with those modelling requirements also.

3) The standard does not distinctly identify the areas of responsibility between the Reliability Authority and the Transmission Operator. Application of the standard to multiple parties ("Authorities") should clearly delineate the primary source of responsibility and ownership of any data, information, control and responsibility. What follows in the Standard are many requirements that duplicate the RA and TOP responsibilities -- who has the primary responsibility/requirement/authority for each?

4) The only provision in this standard is that data on new facilities must be provided seven days before it is energized. If operational planning studies have a scope of greater than seven days (possibly one year), then a seven-day notice is inadequate for these studies. There appears to be a requirement to have a standard that requires entities to provide the base data used to populate the models, in addition to the requirement to provide information on changes.

5) All assumptions should be listed in the Standard's document.

**4. The draft standard uses the term “Industry Accepted Format” to mean a generally accepted format used by the electric power industry to specify the parameters that must be addressed in development of the system model and/or to transmit data.**

**Do you agree?**

Yes

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

No

**Comments:** ...as long as this does not lead to the creation of another "industry accepted format" or require a significant change from the way data has routinely been exchanged in the past. (typically using PSS/e or PSLF powerflow raw-data formats for representational data, etc.)

5. Based on the above graph, do you agree with the concept that operation within the “yellow zone” is exceeding an operating limit, but not a reportable violation?

Yes

No

**Comments:** Wait until the OLDTF work is complete.

6. Based on the above graph, do you agree with the concept that operating within the “red zone” is a reportable violation?

Yes

No

**Comments:** Wait until the OLDTF work is complete.

**7. If you feel there are additional terms used in this draft standard that should be formally defined, please list those terms here.**

**Real Time**

**Self-Certification**

**Instability**

**Cascading Outages**

**Uncontrolled Separation**

**Actual telemetered data, or real-time data?**

Real-Time Monitoring

Frequency of Real-Time Monitoring

System Operator Limits

**If possible, please provide us with a definition for each of these terms.**

System operator limits as defined is appropriate for RAs, but should not be defined as provided for TOPs. For TOPs, system operating limits should not include only those limits which have been identified as leading to cascading outages, instability, or uncontrolled separation. This is a major issue in terms of the scope. As conceived, this standard does not result in any entity assuring that bulk power system is operating within limits. It only results in operating within those limits for which violations result in instability/cascading outage risk. That is inappropriate. Any defined operating limit, which has been identified as potentially threatening bulk reliability and thereby requiring consistent monitoring and adherence, should be covered by this standard.

**8. Who should provide the RA with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

BA

TOP

Generator

Planning Authority

**Comments** Are you referring to Generator Owner or Generator Operator or both above?

**9. Who should provide the TOP with generation data needed for system analyses? (This data consists of the generator operational characteristics.)**

**Please check all that apply.**

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

RA

BA

Generator

Planning Authority

**Comments 1) What do you mean by "system analysis"?**

**2) What type of "system analysis" is the TOP supposed to perform?**

**3) Are you referring to Generator Owner or Generator Operator or both above?**

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

Please use Version A of the draft standard to answer these questions.

### Requirement 1:

The RA shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### Measure(s):

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### Outcome(s) (100% Compliance):

The RA shall monitor real time system operating limits and compare these against actual data associated with those limits.

### 10. Do you agree with this requirement and its associated performance/outcome and measure/s?

Yes

No

**Comments:** 1) The levels of non-compliance should not be determined by the availability of telemetered data; compliance should be based on the RA's capability to monitor System Operating Limits.

2) What do you mean by "actual real-time data"? Does it mean something different than "real-time data"? For consistency, the word actual should be removed from Measure 2.

### Levels of Non-compliance for this Requirement:

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### 11. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** 1) Levels 1 and 2 imply that use of substitute data is unacceptable.

2) The only important level of non-compliance listed above is level 4.

3) There seems to be no penalty for failing to identify a System Operating Limit. If an entity identifies limits and then does not monitor them, then the entity is subject to a greater penalty than an entity who fails to identify the limits. Need a process to identify SOLs and to assess system conditions, both real-time and forecast. The measures should be: a) do you have the data; b) do you have the limits; c) are you monitoring the data.

4) What does "surrogate value" mean? Levels 1 and 2 should be rewritten to consider the

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

suggested measures listed in these comments.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 2:

The TOP shall monitor (in real time) the system operating limits (identified to prevent instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system) and the actual real time data associated with those limits.

### Measure(s):

1. System operating limits are available in real time
2. Actual real time data is available in a form that can be compared to the system operating limits

### Outcome(s) (100% Compliance):

The TOP shall monitor real time system operating limits and compare these against actual data associated with those limits.

### 12. Do you agree with this requirement and its associated performance/outcome and measure/s?

Yes

No

**Comments:** 1) Whose responsibility is it to ". . . monitor (in real time) the system operating limits . . ." - the RA or the TOP?

2) Whose compliance is more significant than the other?

3) This requirement should be for the TOP to provide to the RA telemetry data and to monitor system limits and OSLs under the direction of the RA.

### Levels of Non-compliance for this Requirement:

1. Actual telemetered data needed for monitoring system operating limits unavailable, so surrogate value was monitored for up to 24 hours
2. Actual telemetered data needed for monitoring system operating limits was unavailable, so surrogate data was monitored for up to 48 hours
3. Not Applicable
4. System operating limit(s) were not being compared to actual data

### 13. Do you agree with these levels of non-compliance for this requirement?

Yes

No

#### Comments:

1) Levels 1 and 2 imply that use of substitute data is unacceptable.

2) The only important level of non-compliance listed above is level 4.

3) Loss of telemetry for short periods is an unfortunate but fairly routine matter - with all that telemetry equipment in the field, it cannot be expected that none of it ever has down-time.

4) If this requirement is changed as suggested above, then there should be some type of

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

---

measures defined to capture the need for a certain level of observe-ability and accuracy of the telemetry data. The TOP should also have a list of identified limits on the SCADA system that is being monitored on a periodic basis. The TOP should also have a list of "RA assigned" Operating Security Limits identified by the RA and instructions on mitigation actions to perform if the OSL is reached and/or violated.

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 3:

The Reliability Authority (RA) shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other associated RAs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>1</sup>

The RA shall specify when to supply data (based on the RA's hardware and software requirements, and the time needed to do the operational planning analysis.)

The RA shall notify the Compliance Monitor if an RA, BA, IA Generator or TOP does not provide data as requested.

### Measure(s):

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The RA shall specify and collect the data it needs [from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators and Transmission Operators (TOPs) and other RAs] to maintain the models needed to support real time monitoring and reliability analyses. The RA shall maintain a record that shows data requested but not received.

### 14. Do you agree with this requirement?

Yes

No

**Comments:** The collection and processing of the data requirements could be a RA data management responsibility. Isn't there a need to develop a requirement to show that the data is used in the analysis? Instead of evaluating the supply of data, shouldn't the focus be on monitoring and assessing transmission reliability?

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested or there was no record of specification
3. Not Applicable
4. Not Applicable

### 15. Do you agree with these levels of non-compliance for this requirement?

Yes

<sup>1</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**No**

**Comments:** Regardless of format, either the RA receives the data specified, or it does not. Shouldn't the RA show that the data is being used in the analysis?

## STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard

### Requirement 4:

The Transmission Operator (TOP) shall specify and collect the data it needs (from its associated Balancing Authorities (BAs), Interchange Authorities (IAs), Generators, Reliability Authority (RA) and other associated TOPs] to maintain the models needed to support real time monitoring and reliability analyses.<sup>2</sup>

The TOP shall specify when to supply data (based on the TOP's hardware and software requirements, and the time needed to do the operational planning analysis.)

The TOP shall notify the Compliance Monitor if an RA, BA, IA, Generator or TOP does not provide data as requested.

### Measures:

1. Documented specification for data needed to implement changes to existing system models (Specification shall include industry-accepted format, timeframe, and notation that data be technically accurate and complete.)
2. Documented specification for data needed to implement changes for real time monitoring (Specification shall include industry accepted format, timeframe, and notation that data be technically accurate and complete.)
3. Record of correspondence requesting new data needed (for monitoring and reliability analyses) with identification of data not received.

### Outcome(s) (100% Compliance):

The TOP shall specify and collect the data it needs [from its associated Balancing Authorities (BAs, Interchange Authorities (IAs), Generators, TOPs and Reliability Authorities (RAs)] to maintain the models needed to support real time monitoring and reliability analyses. The TOP shall maintain a record that shows data requested but not received.

### 16. Do you agree with this requirement?

Yes

No

**Comments:** Suggest measuring the TOP non-compliance at gathering and providing the data to the RA, rather than a redundant requirement for the TOP to collect the data.

### Levels of Non-compliance for this Requirement:

1. Data specification(s) was not complete (missing either industry accepted format, timeframe or some data technically inaccurate or incomplete )
2. Data was not requested **OR** there was no record of specification
3. Not Applicable
4. Not Applicable

### 17. Do you agree with these levels of non-compliance for this requirement?

Yes

No

**Comments:** 1) Either the TOP provided the data, or it did not provide the data to the RA. 2)

<sup>2</sup> Reliability analyses includes both real time and operational planning analyses

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

Compliance monitoring does not belong in the requirement section of this document. It may belong in another document pertaining to compliance.

**Requirement 5:**

The Reliability Authority (RA) shall provide data, as specified, by an (associated) RA and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measures:**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to requesting RA or TOP, no less than 7 days prior to the energization of new facilities/changes to existing facilities.

**Outcomes (100% Compliance):**

The RA shall provide data as requested, to its (associated) RA and/or TOP.

**18. Do you agree with this requirement?**

Yes

No

**Comments:** The language is not clear enough. For example some might interpret the requirement to read differently than others (as follows) - A seven (7) day lead time is not sufficient for integration of data for a new facility. A more appropriate time-frame might be several months (given the time it takes to line up the telecommunications, etc., for transmission of a new quantity). If the data is going to be used for operational planning analysis, then this may require at least a one-year lead time.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**19. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** In general there should be at least two levels of non-compliance identified. Why does the data have to be requested? How often should an entity request data? Should data requests be a one time declaration in writing asking for data on new facilities? Is this requirement needed since there is not enough detail to assess non-compliance?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 6:**

The Balancing Authority (BA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The BA shall provide data, as requested, to its (associated) RA and/or TOP.

**20. Do you agree with this requirement?**

Yes

No

**Comments:** The language is not clear enough. See number 18 comments, it is not apparent the types of data being referred to in this requirement. Clarification is needed to specify the required data - from testing, real-time operation, engineering specifications, manufacturer's specifications, etc.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**21. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** Until numbers 18 and 20 are resolved (clarification of language) the levels of non-compliance cannot be determined. In general there should be at least two levels of non-compliance identified..

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 7:**

The Interchange Authority (IA) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The IA shall provide data, as requested, to its (associated) RA and/or TOP.

**22. Do you agree with this requirement?**

Yes

No

**Comments:** Clarification language is necessary. Same as 18, 20, 21 above.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**23. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See 22. In general there should be at least two levels of non-compliance identified.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 8:**

The Transmission Owner (TOW) shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The TOW shall provide data, as requested, to its (associated) RA and/or TOP.

**24. Do you agree with this requirement?**

Yes

No

**Comments:** See 22.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**25. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See 22. In general there should be at least two levels of non-compliance identified.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 9:**

The Generator Owner shall provide data, as specified by an (associated) Reliability Authority (RA) and/or Transmission Operator (TOP), no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Measure(s):**

Provide specified data, as requested (industry accepted format, timeframe, and technically accurate and complete), to the requesting RA or TOP, no less than 7 days prior to the energization of new facilities or changes to existing facilities.

**Outcome(s) (100% Compliance):**

The Generator Owner shall provide data, as requested, to its (associated) RA and/or TOP.

**26. Do you agree with this requirement?**

Yes

No

**Comments:** Clarification language is necessary. Same as 18, 20, 21, 22 above.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Not Applicable
3. Not Applicable
4. Data for new/revised facilities was not provided as requested

**27. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** 1) See 26. In general there should be at least two levels of non-compliance identified.

2) As an example of the need for clarification language, the ". . . no less than 7 days prior.":

In a market-based system, there are aspects of adding a new market entity that need considerably more than days-to-months lead time; for compliance a generator might be prohibited from operating commercially until all data and interconnection issues are resolved.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 10:**

The Reliability Authority (RA) shall perform reliability analyses to identify where on its system the RA may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The RA shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**28. Do you agree with this requirement?**

- Yes
- No

**Comments:** 1) Clarification language is needed to identify the type of analysis required. Also, define the periodicity of the analysis - how often it needs to be performed.

2) From a reliability standpoint, operational planning studies are recommended to be performed to determine the adequacy during system outages.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis did not run when requested, but ran within 8 hours
2. Reliability analysis did not run when requested, but ran in 8 - 24 hours
3. Reliability analysis did not run when requested, and did not run within 24 hours
4. Not Applicable

**29. Do you agree with these levels of non-compliance for this requirement?**

- Yes
- No

**Comments:** 1) Number 28 needs to be addressed before non-compliance can be determined.

2) Based on the time-frames specified, the levels of non-compliance imply different compliance than the requirement does. Clarification should consider: Is the requirement based on real-time operating concerns, or is it based on a short-term reliability/scheduling concern?

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 11:**

The Transmission Operator (TOP) shall perform reliability analyses to identify where on its system the TOP may encounter problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Measure(s):**

Analysis program(s) run(s) when requested and identifies any problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system

**Outcome(s) (100% Compliance):**

The TOP shall run reliability analysis program(s) and the program(s) shall identify problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**30. Do you agree with this requirement?**

Yes

No

**Comments:** This requirement should be eliminated - Requirement 10 (at the RA level) is adequate. See response to Question number 2.

**Levels of Non-compliance for this Requirement:**

1. Reliability analysis does not run when requested, but runs within 8 hours
2. Reliability analysis does not run when requested, but runs in 8 - 24 hours
3. Reliability analysis does not run when requested, and does not run within 24 hrs
4. Not Applicable

**31. Do you agree with these levels of non-compliance for this requirement?**

Yes

No

**Comments:** See 30.

**STD Comment Form for 1st Posting of Monitor and Assess Short-term Transmission Reliability – Operate Within Transmission Limits Standard**

---

**Requirement 12:**

The Reliability Authority (RA) shall use the results of real time monitoring and/or reliability analyses to take actions necessary to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

The RA shall document actions taken.

**Measure(s):**

Documentation showing that actions were taken to prevent/mitigate identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**Outcome(s) (100% Compliance):**

The RA shall document actions taken to mitigate/prevent identified problems that could cause instability, uncontrolled separation or cascading outages that adversely impact the reliability of the bulk transmission system.

**32. Do you agree with this requirement?**

- Yes
- No

**Comments:** Should not combine the terms "prevention" and "mitigation" in the same requirement/measure unless the language is clear to eliminate potential ambiguity. Prevention and mitigation are actions that may be undertaken in two different timeframes. Without clear language, the requirement/measure should be separated into two separate requirements to address the prevention and mitigation as separate issues. This requirement and requirement 14 should be combined and rewritten to require that the RA have procedures in place that specifies actions needed to preserve reliable operation of the system.

**Levels of Non-compliance for this Requirement:**

1. Not Applicable
2. Monitoring and/or reliability analyses identified a problem – no actions or incorrect actions were taken but no limit violations occurred
3. Monitoring and/or reliability analyses identified a problem – no actions (or incorrect actions) were taken but no violation occurred
4. System operating limit violated and resulted in instability, uncontrolled separation or cascading outages that adversely impacted the reliability of the bulk transmission system
